We continued our Journey the ſame Day through *Leerdam*, (about three Hours diſtant from *Vianen*) and the 19th of *June*, through *Aſperen*, below which we croſſed the River *Wale* or *Vahalis* in a Ferry-boat, and came to a very pleaſant walled Town called *Bommel*, ſeated in an Iſland; a ſmall Diſtance thence we ferried over the *Maeſe*, and paſſing in Sight of two ſtrong Forts near the River ſide, one called *Crevecœur*, and the other *Engelen*, came in four Hours to *Hertogenboſc*, *Sylva Ducis*, or *Bois-le-duc*, as the *French* call it, and by which Name it is generally known. As this City is ſeated upon a Kind of a Hill, ſurrounded with Fens of a large Extent, the greateſt Part of which was then (and is generally) covered with Water, we paſſed upon Cauſeways through a Moat, and over two Draw-bridges, before we entered the Town. Beſides which, being ſtrengthened by a good Wall and deep Ditch, and defended by a regular Citadel, this, with its Situation, ſeems to render it impregnable, and yet it has been taken in the late Wars. In the Choir of the Church of St. *John* are to be ſeen the Arms of many of the Knights of the *Golden Fleece*, and over the upper Stalls an Inſcription in *French*, importing, That *Philip*, ſurnamed the *Good*, Duke of *Burgundy*, *Lorrain*, and *Brabant*, had, in 1429, inſtituted in the City of *Bruges*, an Order of Honourable Knights, unto whom he had given the Name of *Knights of the Golden Fleece*, limiting their Number to twenty four, their Chief to be the Duke of *Burgundy*, or Supreme Lord of the *Low Countries* for the Time being. The Houſes here are for the moſt Part covered with Boards on the Outſide; the Marſhes about it produce great Abundance of Wild-fowl, and the ſandy gravelly Banks the *Herniaria hirſuta*.

10. *June* the 20th, we travelled in a Kind of Waggon in ſix Hours to *Eindhoven*, and thence in four Hours more to *Haumont*, both ſmall but walled Towns, the laſt of which belongs to the Biſhop of *Liege*.

June the 21ſt, we travelled for three Hours through Heaths to *Bry*, a ſmall walled Town, and afterwards aſcending the Hills, had a full View of *Maeſtricht*, and the River *Maeſe*, where we arrived that Evening, after ſeven Hours riding. It is a ſtrong well fortified City, ſtrengthened with very good Out-works. The Magiſtracy here are half *Proteſtants* and half *Romaniſts*, and of the laſt are the greateſt Part of the Inhabitants; though the *Dutch Proteſtants* have alſo three Churches, and the *Engliſh* and *French* one, which they uſe by Turns. The *Catholicks* have twenty Convents here, and are allowed the publick Exerciſe of their Religion. Moſt of the old Houſes are of the ſame Fabrick with thoſe of *Hertogenboſch*, but many new Brick Houſes have been built of late Years. They were then alſo building a very ſtately ſquare Structure, intended for their Town-houſe. The River *Maeſe*, which divides the City into two Parts, is joined to both by a large Stone Bridge, ſuſtained by nine Arches, and the leſſer Part on the other Side is called the *Wick*, being not inferior in Strength to the other Part.

As to what relates to the common People of *Holland*, it muſt be confeſſed they are ſurly and ill bred, which is the Reaſon that no Strangers that know the Country will deal with Inn-keepers, Waggoners, Boatmen, Porters, and ſuch like, without bargaining before-hand. The Men are generally very large boned and bulky, and theſe, as well as the Women, are conſtantly eating as they travel. At their common Entertainments, a Sallad leads the Van, a Kind of ſtew'd Meat is the main Part of the Dinner, and it concludes with ſome boiled and buttered Herbs. The chief Food of the ordinary People is Cod-fiſh and pickled Herring, which they cure better than the *Engliſh*. In the publick Houſes you commonly meet with ſmoaked Beef, cut in thin Slices, good Bread and Butter, and four or five Sorts of Cheeſes. Their ſtrong Drink (they call it *Dick* Beer, and very properly, for it is ſeldom clear) is ſold for three Pence a Quart; the Dearneſs of which ariſes partly from the heavy Exciſe laid upon this, as well as all other Proviſions; partly from the Plenty of Money in thoſe Provinces, which makes Land ſold here at between thirty and forty Years Purchaſe. Moſt of their Beds are made cloſe like Cabins, narrow and ſhort, and yet you pay an exceſſive Rate for them in the Inns. Their Houſes are kept exceeding neat, even to the Outſide of Pots and Pot-hooks, nay, the very Tiles of the Pent-houſes; yet has it been obſervable, that in dreſſing their Meats, they are not ſo clean and curious as the *Engliſh*. They uſe Organs in moſt of their Churches, collect Money for the Poor in Sermon-time, with a Purſe faſtened to a Stick, and a Bell hanging to it. The Pſalms to be ſung are ſet down upon Slates, hung upon the Walls of the Church for that Purpoſe. They ſeldom travel on Horſeback, but generally in Waggons, ſome covered, others not, but moſt by Water; and this on *Sundays* as well as other Days. Beggars are very ſeldom ſeen in *Holland*, notwithſtanding the vaſt Multitude of People, this Province containing no leſs than twenty-four walled Towns and Cities, ſix of which (beſides *Amſterdam*) are bigger than any in *England*, except *London*. And upon this Occaſion, I cannot but give you the Heads of ſome Obſervations made by *Francis Barnham*, Eſq; who was in *Holland* with my

Lord Ambaſſador *Hollis*, which have been eſteemed ſenſible and curious.

11. “ There is, ſays he, a continual Watch kept on the Steeples in all the Cities of the United Provinces: The Differences ariſing among Boatſmen and Waggoners, who ſhall go firſt, are decided by caſting a Die. They gather the Rain Water by Pipes from the Houſes, and preſerve it in Ciſterns, as they do in *Venice.* The *Dutch* ſtand much in Awe of their Superiors, becauſe Juſtice is done there without Delay. They are ſtrangely addicted to Novelties, and mightily taken with any Thing that is gay. They are extremely greedy of Profit, yet very juſt in their Bargains. The Knowledge how to get Money, is what they eſteem above all other Things, and ſcarce ever apply themſelves to any Thing beſides that and Politicks, in which they are generally well verſed; the meaneſt of them being qualified by his Birthright to become a Burgomaſter. They fight bravely at Sea, though naturally they are of a phlegmatick Temper, and conſequently not fit for brave Exploits by Land. They allow of Liberty of Religion, but keep a watchful Eye over them to ſecure the publick Peace; which is the Reaſon that it is more difficult to hatch a Plot here, than in other Parts; though at the ſame Time, the People ſay and print almoſt what they pleaſe, the ſame being included within the general Notion of Liberty. Moſt of them have little Senſe of Honour or Generoſity, being guided merely by the Proſpect of Advantage or Intereſt. They don't proſecute Murder with ſo much Violence as Theft. The *Dutch* are always careful to ſolemnize any great Action done by them, with all the publick Marks of Honour and Rejoicings, to imprint into the common People an Idea of the Ability and Wiſdom of their Governors; which is the Reaſon they frequently erect Monuments to thoſe who have deſerved well of the Commonwealth. The ordinary Sort of Women (if not all) ſeem to be more pleaſed with obſcene Diſcourſes than the *Engliſh* or *French*; they have alſo the Reputation of making not ſo ſevere an Account of Chaſtity before Marriage, but of being very faithful to their Huſbands. Even the better Sort of Women are not backward of admitting Men, though of very little Acquaintance, to a Salute; and kiſſing paſſes current here, not only at Parting and Returns, but alſo in Frolicks and familiar Converſation. Moſt Women are let into all the Actions of their Huſbands, who ſeldom undertake any thing without their Knowledge and Approbation. They have abundance of Chiming in their Cities, and vaſt Multitudes of Storks building their Neſts upon the Tops of the Chimnies. This however is not only obſervable in *Holland*, but alſo at *Louvain*, and in other Towns of the King of *Spain*'s Dominions, as well as in ſeveral Places belonging to Sovereign Princes in *Germany*, which contradicts that commonly received Opinion, that thoſe Birds never build their Neſts but in Commonwealths.

June the 22d. We went from *Maeſtricht* to *Liege*, four Leagues diſtant. As we paſſed up the Hills, we obſerved at ſome Diſtance from *Maeſtricht* an arched Paſſage into a Vault, but being by the wet Seaſon prevented from taking a View of it ourſelves, I will here give you the Senſe of our Royal Society concerning it. This Quarry, ſay they, lies within a Cannon-ſhot of *Maeſtricht*, being covered with twenty-five Fathoms of Rock or Earth; its Length along the River towards *Liege* being of ſome Miles, and having one Entry near the River Side, Carts can, with a great deal of Eaſe, unload the Stones upon the Banks of the River, the Quarry within lying parallel to the Horizon or Level, and very little elevated above the River. After you have entred the Vault with Torches, it affords a moſt ſurprizing Proſpect to the Beholders, who ſee ſome thouſands of ſquare Pillars in ſpacious level Walks, generally twenty Feet (and ſome more) high, ſo regularly wrought, that one would imagine that the whole was deſigned for one of the ſubterraneous Palaces of the ancient *Roman* Emperors; whereas the whole is no more than the Effect of the Miners Labours, who come here to get Stone. This noble Quarry has another remarkable Uſe, ſerving People for a retreating Place when Armies are marching that Way, being able to hold forty thouſand Men, who by the many Pillars and Labyrinths, are able to defend themſelves with their Fire-arms, againſt any Power that may attack them.

Further upon the Downs, we obſerved three or four more of thoſe Paſſages, and came before Night to *Liege*, a City though very large, yet for Beauty and Riches not comparable to any of thoſe of *Holland*; the Houſes being covered on the Sides either with Boards or Clay, and the Streets narrow and very ill kept. The River *Maeſe* divides itſelf, and runs through the Town in two or three Branches, which are joined by ſeveral Bridges. It is however very pleaſantly ſituated, but ſurrounded with Hills, on one of which ſtands the Citadel, the Sides of thoſe Hills covered with Orchards and Vineyards. Proviſions are very cheap here, and the People very courteous: The Women are not ſo fair as in *Holland*, and do a great deal of Drudgery. They have Coal-pits near the Town, ſome of which are an hundred and fifty Yards deep. The Cathedral Church dedicated to St. *Lambert* has ſixty Canons or Prebendaries, who muſt be all of noble Extraction, except that they admit a few Men of Learning among them. Theſe elect the Biſhop of *Liege.* Beſides theſe, there belongs to it twelve *Canonici mediocres*, and twelve more ſtiled *minores ſive parvæ Menſæ.* The three States of this Dioceſe, compoſed of the Clergy, Gentry, and Commons, have a conſiderable Share in the Government, no Tax being to be impoſed, or other Matters of great Weight tranſacted without their Concurrence and Approbation.

This City is in a Manner filled up with religious Houſes: In the *Engliſh* Jeſuits College Garden we ſaw ſeveral Dials, the Invention of the ingenious *Franciſcus Linus*; and in the Cloiſter of the *Williamites*, without the Walls, the Tomb-ſtone of our Countryman Sir *John Mandeville*, with this Inſcription:

HIC JACIT VIR NOBILIS D̄N̄S JŌĒS̄ DE MANDEVILLE AL' DICTUS AD BARBAM MILES D̄N̄S DE CĀPDI NATUS DE ANGLIA, MEDICINÆ PROFESSOR, DEVOTISSIMUS ORATOR, ET BONORUM LARGISSIMUS PAUPERIBUS EROGATOR, QUI TOTO QUASI ORBE LUSTRATO, LEODII DIEM VITE SUE CLAUIST EXTREMUM ANNO D̄N̄Ī M°. CCC°. LXXI°. MENSIS NOVEMBRIS DIE XVII.

On the ſame Tomb-ſtone was alſo to be ſeen the Figure of an armed Man treading on a Lion, with a forked Beard, and his Hand lifted upwards in a Bleſſing Poſture, with theſe Words going out of his Mouth, *Vos ki paſſeis ſor mi, pour l'amour Deiu preyes por mi*; which being old *French*, ſignifies, *You that paſs over me, for the Love of God pray for me.*

13. We left *Liege* the 26th of *June*, and travelling for ſeven Hours over hilly and rocky Places, arrived at the *Spàa*, a pleaſant little walled Place, ſituate in a deep Valley. It is very well built, by reaſon of the Concourſe of many Strangers here, for the drinking of Mineral Waters, of which there are four ſeveral Springs.

We purſued our Journey *June* the 28th, to *Aken*, through *Limbourgh*, three Hours from the *Spàa*, a Place of great Strength for its Situation, being ſituate on the Side of a very difficult Acceſs, but it has but one Street, and the Houſes only of Wood. *Aken*, or *Aix la Chapelle*, as the *French* call it, to diſtinguiſh it from *Aix* in *Provence*, is a large and ſtrong Place, and a free Imperial City, being ſtrengthened by a double Wall, and adorned with no leſs than thirty Churches. The Chair wherein the Emperor ſits when he is crowned here, has its Sides of Ivory, and they ſay, that the Bottom is made of a Piece of Wood belonging to *Noah*'s Ark. The Government of this City is adminiſtred by a Major, two Burgomaſters, fourteen Eſchevins, and one hundred and twenty Counſellors. The Major has the Preſidence among the Eſchevins, is put in by the Duke of *Juliers*, and continues in his Place *quam diu ſe bene geſſerit*. The Burgomaſters are elected by the Majority of the Companies of the City, and adminiſter this Office two Years, a new one being choſen every Year. The Eſchevins officiate in Quality of Judges, during Life, another being choſen in the Place of him who dies. The Counſellors are alſo choſen by the ſeveral Companies (of which there are fourteen or fifteen). The Territories belonging to this City are very large, comprehending near two hundred Villages, encloſed on all Sides with Mountains; which producing abundance of *Lapis Calaminaris*, this is employed here in great Quantity to turn Copper into Braſs. But what renders this Town moſt famous, are the *Mineral hot Baths*, ſome of which are within, the reſt without the Town, at a Village called *Borcet*; theſe latter, both in Heat, and in Abundance of Water, much exceed ours in *England*, being ſo hot, that one may boil an Egg in them. Their Taſte was ſaltiſh; and they were uſed both inwardly and outwardly. One Day as we were walking to *Borcet*, we ſaw a certain Pool whoſe Waters were lukewarm, by reaſon of a ſmall Stream of one of the Springs of the hot Baths paſſing through it; they told us that it bred very good Fiſh, but that they were obliged to put them into cold Water for two Months before they eat them. Of the Nature, different Kinds, Ingredients, and Uſes of thoſe Baths, both within and without the City, *Francis Blondel*, M. D. has treated admirably, as well as at large, in his Epiſtolary Diſcourſe, publiſhed in *French*, of which the Subſtance follows:

14. *An Extract from Dr.* Francis Blondel's *Diſcourſe concerning the Baths of* Aix la Chapelle.

Not to trouble the Reader with the various Opinions of ancient and modern Philoſophers concerning the Cauſe of the actual Heat of natural Baths, our Author's Account thereof in Reference to theſe of *Aken* is in Brief as follows.

Theſe Waters (ſaith he) paſſing through a certain argillaceous Earth, pregnant with a kind of nitrous Salt, almoſt of the ſame Taſte with the Waters of the Baths (which is to be found in good Quantity in the Lands about this City) charge themſelves therewith, and ſo become a *Menſtruum* capable of diſſolving ſuch mineral Metals as are contained in the Veins of the Earth thro' which they run. This Solution he conceives is made by piercing and corroding the Minerals after the ſame Manner as Spirit of Nitre and other *Aquæ Stygiæ* are wont to do, which uſually cauſes a great Ebullition and Heat. So then the actual Heat of theſe Springs proceeds from the Mixture and Encounter of their Waters (impregnated as is before intimated) with the mineral and metallic Subſtances, Juices, and Spirits contained in the Veins of the Earth through which they have their Courſe. The nitrous Salt beforementioned may perhaps be the *Hermetic* Salt of Monſieur *Rochas*, or the *Eſurine* Salt of *Helmont*. Now the Water once heated, being contained in the Vaults of the Mountains as in a Stove, continues hot a long Time, the Eruption thereof being, it is likely, at a good Diſtance from the Place where it did at firſt conceive its Heat.

At the long Continuance and Duration of the Heat of theſe Waters, for ſo many Ages paſt, no Man need Wonder: For *Firſt*, It is generally taken for granted, that all Sorts of Mines grow and increaſe purely by Addition, converting the more refined, ſubtile Part of the Earth, and which hath a ſeminal Diſpoſition to ſuch a Change, into their own Nature. *Secondly*, The nitrous Salts, the firſt Ingredients of theſe Waters, are alſo reſtored in their *Matrices*, after the ſame Manner as we ſee it happens in the *Caput mortuum* of Vitriol, which though the Vitriol hath been once or twice extracted from it, will, by being expoſed to the Air, again recover more and more; whether it be by Converſion of its *Matrix* into its own Nature, by a kind of Aggeneration and Tranſmutation, or by imbibing and retaining thoſe ſubtile and volatile ſaline Exhalations, which continually aſcend out of the Earth, or wander up and down in the Air.

As for the Ingredients of theſe hot Waters in general, he ſaith, that beſides a threefold Salt-nitre *fixed*, *volatile*, and *mingled*, or *Armoniack*, they partake of a fixed and volatile *Sulphur*, a *Manna* of Allum, ſome Vitriol, divers Metals, as Copper and Iron, a very little volatile Earth, a certain *Argilla*, Sand and Calaminary Flowers. That they participate of Copper he proves, in that, the Territory of *Aken* abounds in divers Places with *Lapis Calaminaris*, which is, as it were, the Aliment of Copper: For being mingled in the Furnaces with red Copper, it augments it by the Addition of thirty Pound Weight *per Cent.* and gives it a yellow or golden Tincture. As for Iron, the many ferrugineous Springs, that are found within and without the City, are an evident Teſtimony that there are Plenty of Iron Mines hereabout; and therefore moſt likely it is, if not certain, that theſe hot Waters charge themſelves with that Metal. That they contain a threefold nitrous Salt, he proves from their natural Evaporations. *Firſt*, the fixed is found in the Wells of *Borcet*, and the *Emperor*, chryſtallized into ſmall ſhining Square Grains, mingled with a little Flour of Sulphur, ſticking to the Covers of thoſe Wells, which have not been of a long Time opened. It may be alſo found in the chemical Examination of the Waters by Evaporation or Diſtillation. *Secondly*, The *volatile* is carried up by the volatile Sulphur, as it is hereafter ſhewed in the Deſcription of the firſt Sort of theſe Baths. *Thirdly*, The *Mingled* or *Armoniack*, is daily ſeen in all the Waters of the City, and of *Borcet*, ſwimming in little Cylinders on the Surface of the Waters, and this is that Cream, or Scum, which is ordinarily found upon the Waters in the Baſons. That they contain the reſt of the beforementioned Ingredients, ſhall be ſhewn in the Deſcription of the particular Baths: The Waters whereof our Author reduces to four Sorts.

Firſt, *Nitro-ſulphureous*, ſuch are thoſe of the *Emperor*'s Bath, the *little* Bath, and St. *Quirin*'s Bath. Secondly, *Sulphureo-nitrous*, ſuch are thoſe of *Compus*, or the *Poor-men*'s Bath, the *Roſe*, and St. *Cornelius*'s Bath. Thirdly, *Sulphureo-nitro-vitriolick*, ſuch is another Bath of the ſame St. *Cornelius*. Fourthly, *Salſo-alumino-nitrous*, *viz.* thoſe of *Borcet*, a Village adjoining to *Aken*.

Firſt, As for the *Nitro ſulphureous* kind, thoſe of the *Emperor's* Bath, and the *little* Bath, are but one Water, coming from the ſame Source, and collected in one and the ſame Well. That Part reſerved in the *Emperor*'s Bath is divided into five great Baſons, or Receptacles: That in the *little* Bath into three. All which might be renewed daily, if Time would permit, the Spring is ſo copious. But by reaſon of the exceſſive Heat of the Waters, it is neceſſary oftentimes that they ſtand in the Baſon ſixteen or eighteen Hours to cool, before they be fit for the Patient's Uſe. Notwithſtanding, when they are come to a juſt Temper, one may bathe in them, and endure them a long Time, as thoſe of *Borcet*, without any Inconvenience. This Source hath this Quality peculiar to itſelf, that in its Well one may find diſtinctly a Quantity of *Nitre* coagulated, and good Plenty of Flowers of *Sulphur* very light, purely fine, and well ſcented. The *Nitre* ſticks to the Sides of the Well, and ſo do the Flowers of *Sulphur* above that: The which ſometimes, whether by the extraordinary boiling up of the Fountain, or by the Impetuoſity of the aſcending Vapours, or by their own Weight are broken off, and fall back into the Source; from whence being no more diſſolved by the Water, they come forth intire into the Baſons. If you take of this Water, and let it ſtand in a Veſſel certain Days, it will precipitate of theſe yellow Flowers of *Sulphur*, to the Bottom of the Veſſel. Beſides theſe *volatile* Flowers, theſe Waters contain alſo fixed Flowers of *Sulphur*, a competent Quantity of *Nitre*, both *volatile*, *fixed*, and *mixed*, or *Armoniack*, a little *Allum*, leſs *Vitriol*, the Spirits and Principles of *Copper* and *Iron*, a very little *volatile* Earth, *Argilla* and Sand: No *Bitumen*, for let them ſtand as long as you pleaſe, you ſhall find no fatty Subſtance ſwimming upon them, as upon the *Spàa* Waters. The volatile *Sulphur* evaporates ſo ſtrongly, that it carries up with it a Quantity of *Nitre*, as one may ſee after the Solution of the Vapours, congealed and frozen in Winter Time, when it remains incorporated upon the Walls, in the Places where the Icicles were. Theſe Waters are in Weight equal to thoſe of the *Spàa*; coming freſh out of the Source, they appear whitiſh, or bluiſh, but having ſtood a-while and grown cold, greeniſh. They are vey pure, and leave no Kind of Mud, or *Lutum thermale*, behind them; in cooling they yield a ſmall Scum or Cream of *Nitre*. Far from their Source, being wrought upon by the Air, they let fall a little whitiſh Sediment as thoſe of *Borcet* do a blackiſh one. They preſerve the Colour of Roſes put into them, and cauſe them not to wither, as doth common Water. The Vapours aſcending from them make Silver Plate black, as thoſe of *Borcet* make it white. The other Source of St. *Quirin*'s Bath differs from theſe in no other Reſpect, ſave that the Water thereof is cooler. It is reſerved in three Baſons. In this Well you find neither *Sulphur* nor *Salt petre* ſticking to the Sides, probably becauſe it is open or uncovered.

II. The ſecond, or *ſulphureo-nitrous* Sort of *Compus*, &c. though they ſpring up in ſeveral Places, and have different Wells, yet is the Nature of them all, their Compoſition, and mineral Ingredients the ſame. The *Poor Men*'s Bath hath one great Baſon or Receptacle, the *Roſe* Bath four, whereof two only are uſed, and St. *Cornelius*'s Bath of this Mine two. Theſe Waters are fit for uſe at all Seaſons, being of a temperate Heat, more efficacious, and of greater Force in their Operations, than the firſt Sort; they weigh two *per Cent.* more than they, and are of a ſtronger Scent. In theſe is never found any *Sulphur* condenſed, no not in their Wells, though they be covered: But when they are emptied, and new Water let in (as in the *Roſe* Bath) the Water running down along the Walls and Seats, into the Bottoms of the Baſons or Conſervatories, the external Air prevailing upon it, ſo ſpread, and in ſuch little Quantity arreſts, fixes and condenſes its *Sulphur* all along the ſaid Walls and Seats, refreſhing the Eyes of the Spectators with its Beauty and Luſtre. But the Water riſing in the beforementioned Baſons, and covering the Seats and Walls, the Sulphur again unites and incorporates with its Diſſolvent, and diſappears and hides itſelf therein. The Water of theſe Sources contains great Quantity of Sulphur, very fine and ſweet, leſs nitrous Salt, a little Vitriol, and leſs Allum, more of the other Minerals and Metals, than of the firſt Sort, or thoſe of *Borcet*. So that they are more compounded, oleous and bituminous, than any of the other Sources; and though they come out of the Earth very temperate, as to actual Heat, yet can ſick Perſons hardly endure them for any long Time, for the moſt Part ſcarce half an Hour.

III. The third Sort, which I call *Sulphureo-nitro vitriolic*, and is alſo of St. *Cornelius*, differs from the Precedent, in that the Taſte is a little more acid, the Smell ſweeter, and liker that of Spirit of Vitriol, and the Touch leſs oily. It is of leſs Efficacy in Uſe than the ſecond Sort, and of more than the firſt. Of this Source there are three Baſons, which, with the two others of St. *Cornelius* beforementioned, make five in this Houſe. Theſe Waters agree much in their Compoſition with the Precedent. They are very pure and clear, eſpecially in their Wells; and though they ſeem troubled in their Baſons, yet taken in a Glaſs, they appear clear.

IV. The *fourth*, or *Salſo-alumino-nitrous* Kind, are thoſe of the Neighbourhood, or *Borcet*. Theſe come out of the Earth extreme hot, and in great Abundance, are all of the ſame medicinal Quality, have ſeveral Wells, and are reſerved in ten or twelve Houſes, each whereof hath two Baſons, or Receptacles; beſides which, there is a common Bath expoſed to the Air, for the Uſe of poor People. Theſe Waters caſt off a copious Excrement or Tartar, which yet is not Stone, but only a Sand mingled with, and united to the nitrous and aluminous Salt of the Water, coagulated by the Beating of the cold Air on its Superficies, to which alſo concurs the Cold of the Walls expoſed to the ſame Air. Theſe Excreſcences are found in the ſubterranean Conduits, not only of theſe, but the other Baths in the City; being held to the Fire, they ſoon become friable, and are nothing but a pure round Sand like the common. The higher Houſes and Baſons have the more of this Tartar, yet is it ſo little, that it is not to be ſeen or perceived in the Water. Theſe Waters are of a different *Species*, Virtue, and Operation, from thoſe of the City, are very eaſy to ſuffer, and ſerve often for Divertiſement and Recreation to Perſons that are in Health. The Contents of them are a great Quantity of Sea-Salt and Allum, leſs nitrous Salt, very little Sulphur, and not much of metallick Subſtances.

Concerning the Virtues and Effects of theſe Waters inwardly taken, he diſcourſes to this Purpoſe:

Theſe Waters taken inwardly are very available in the Phthiſick, *Aſthma*, or Difficulty of Breathing, occaſion'd by tough Phlegm lodging in the Branches of the Wind pipe; againſt the Weakneſs of the Stomach, Indigeſtion, Crudities, Flatulencies, Vomitings, Hiccoughs, and inveterate Cholicks. They diſſipate and dry up all Manner of Catarrhs and ſerous Defluxions; and are very proper to be drank by thoſe that are troubled with the Palſy, before the Uſe of the Baths. They quicken the Appetite, cleanſe the Blood, and open the Obſtructions of the Meſentery. They are of excellent Uſe againſt hypochondriacal Maladies, eſpecially in ſuch as have weak and cold Stomachs. They mollify the Hardneſs of the Liver, Spleen and Meſentery. They diſſolve and bring away the Gravel of the Reins, and leſſer Stones: And here he produces many Examples of ſuch as voided Stones upon the Drinking theſe Waters, and among the reſt, of ſome that had drank the *Spàa* Waters, and came from thence without receiving any Benefit. They cleanſe the Ulcers of the Bladder, diſſolving not only the groſs, phlegmatick and viſcous Humours which coagulate the Stone, but even the Stone itſelf, whilſt it is yet tender. They have ſometimes cured intermittent Fevers of long Continuance, and ſcrophulous Tumours. They dry up and heal the Itch, Leproſy, and other Affections of the Skin. They ſtop the immoderate Flowing of the *Menſes* in Women, and cure the Jaundice, the Paleneſs and Diſcolouring of the Skin in Virgins: And finally, they give Eaſe and Relief in the Gout. Of all theſe Faculties, he brings Inſtances and Examples of Perſons that have been cured. Particularly, that theſe Waters drank may have a Power of diſſolving the Stone, he proves by this Experiment: Taking a Stone voided by a Man about two Years before, and infuſing it in Water hot from the Fountain, for the Space of three Days, we found it (ſaith he) mollified and reduced into a ſoft Phlegm. Which Virtue of the Waters was further confirmed to us by a late Accident: For opening the Vault of a Well, there was found a certain Glue or Mucilage, which, it is to me probable, came from the Solution of the Mortar of Lime and Sand in long Time, by the volatile and diſſolvent Spirits of the Waters; eſpecially there being found no other Cement between the Stones, and in that this ſame Glue or Mucilage mingled itſelf intirely with the Waters of the Fountains, without any Appearance of Scum or Fat ſwimming on the Top, as Gum of Cherry, or the like is wont to do in Water, and being caſt into the Fire burnt not, but dried up. Theſe Experiments and Obſervations were made upon Occaſion of a Burgomaſter of *Riga* (who being afflicted with the Stone, drank theſe Waters) his paſſing his Urine through a Linen Cloth, and finding therein a certain thick Phlegm left behind, which being kept a while upon Paper, harden'd into a ſtony Subſtance.

15. From *Aken* we continued our Journey to *Juliers*, five Hours thence, a ſmall but neat City, the Houſes low, but of Brick, the Streets are ſomewhat narrow, yet it has a fair Market place. Its Fortifications are conſiderable, but the Citadel, in which is the Ducal Palace, may compare for Beauty, Bigneſs and Strength,

with any of *Europe*. The chief Employment of the Inhabitants here is the making of Malt. *June* the 30th, we went hence towards *Cologne*, and paſſing thro' *Berchem*, a little walled Town, met by the Highways, among the Woods and Hedges, with *Mezereon Germanicum*, *Mollugo montana latifolia ramoſa*, *Pulmonorio maculoſa*, *Galeopſis ſive Urtica iners flore purpuraſcente majore, folio non maculato*, and among the Corn, with *Vaccaria Germ.*

Cologne, dignified with the Title of an Archbiſhoprick, is a free Imperial City, and perhaps the biggeſt in all *Germany*, in which however are included three hundred Acres, planted with Vines, beſides many other empty Spaces. The middle Part of the City is very well built, having two handſome Market-places: The Walls are lofty and of Stone, with two deep Trenches and ſeveral Out-works. In the Cathedral of St. *Peter* are preſerved the Bodies of the three Wiſe Men, that came to bring their Offerings to our Saviour, encloſed in a Cheſt of Gold. The Number of the Noble Canons belonging to this Church, conſiſts of fifty-four, beſides eight Canons Preſbyters; theſe ſixty-two, in Conjunction with the Dean (who has two Voices) and two Burgomaſters Regent (who have four Voices) of this City, chuſe the Archbiſhop. The Government of the City is in the Hands of ſix Burgomaſters, ſeven Eſchevins, and one hundred and fifty Counſellors; they all continue during Life; but of the firſt two are only Regents at a Time for a Year: The Eſchevins are choſen by the Archbiſhop, as the Counſellors are by the Companies of the City, and fifty only are in Power yearly, ſo that it returns to the ſame Perſons every third Year. If a Burgomaſter dies, the Counſellors have Power to chuſe another in his Room. The Inhabitants are generally *Roman Catholicks*, yet have the *Lutherans* a Church within the Walls, but the *Calviniſts* are obliged to go to Church on the other Side of the *Rhine*. At *Cologne* we took a Boat, drawn by Men, which carried us up the *Rhine* to *Vidich*, an inconſiderable Village; hereabouts we found among the Corn, *Delphinium flore purpuro-cæruleo vulgare*, and *Nigella arvenſis*; and in the barren Grounds adjoining to the River, *Stœchas citrina Germanica latiore folio*.

16. Next Morning we paſs'd by *Bonn* upon the ſame River, the ordinary Reſidence of the Electors of *Cologne*, and lodged at Night at a poor Town called *Briſaca*. *July* the 6th, we paſſed by *Rhineck* to our Right, and came to *Andernach*, over-againſt which is the Caſtle of *Hammerſtein*, belonging to the Elector of *Treves*. Further we paſs'd betwixt two Caſtles belonging to the Count *de Weets*, that on the right Hand being ſeated upon a high Rock, with a Cloiſter adjoining to it. Two Leagues from *Andernach* we paſſed by *Engers*, and the ſame Night came to *Coblentz*.

This City, which is the moſt conſiderable belonging to the Archbiſhop of *Treves*, is called in *Latin*, *Confluentes*, from its Situation at the Conflux of the Rivers the *Moſelle* and the *Rhine*; over the firſt of which there is a Bridge here of thirteen Arches, as there is over the *Rhine* a Bridge of Boats to the ſtrong Caſtle of *Hermanſtein*, ſituate upon a Rock, with a very ſumptuous Palace below it, belonging to the ſame Archbiſhop. Not far from *Coblentz* are the mineral Springs, near *Helſenſtein* Caſtle, of which Kind there are ſeveral in thoſe Parts; as for Inſtance, one at *Anthony*'s *Stone*, four Hours from *Andernach*, and another at *Zwolbach*, four Miles from *Francfort*; they are generally drank mix'd with Wine, unto which they give a pleaſant Taſte and purging Quality, but I did not obſerve in them what Dr. *Blondel* affirms, that they ſmoak, or are hot when they are mixed with Wine.

July the 7th, we paſſed by ſeveral Caſtles and ſmall Places upon the *Rhine*, as the Town and Caſtle of *Rodeſheim* on the Left, and *Capelle* on the right Hand; next the ſmall Town of *Rens* and *Browbach*, *Boppart* on the ſame Side, and the Caſtle of *Bornholm* on the Left. Taking up our Quarters in the Village of *Hertſnatch*, we came, *July* the 8th, in the Morning, to St. *Goer*, a pretty ſmall Town, under the Juriſdiction of the Landgrave of *Heſſe*, who has a very handſome Caſtle here, built upon a Rock. The Magiſtrates and moſt of the Inhabitants are *Calviniſts*, yet the *Lutherans*, as well as the *Catholicks*, have each their Church. Juſt oppoſite to St. *Goer* you ſee the Town and Caſtle of *Wellnich*, and further to the Right, the Town and Caſtle of *Weſel*, under the Juriſdiction of the Elector of *Treves*; and higher up on the left Hand, the Town and Caſtle of *Cub*, the latter upon a Rock belonging to the Elector *Palatine*. The next Place of any Note we came to was *Bacharach*, a walled Town, adorned with many Towers, famous for the Excellence of its Wine, as is likewiſe a certain Track of Ground about *Rhingaw*, a Town near *Mayence*. Our Boatmen paid Toll in this, as well as ſeveral other Places on the *Rhine*. We paſs'd the ſame Day in Sight of ſome mean Towns and Villages, and *July* the 9th, by *Aſpithouſe* Caſtle, and immediately after by the *Mouſe-Tower*, built in a little Iſland of the *Rhine*. Further up the River on the right Hand we left *Bing*, a tolerable good Town, and paſſing by *Rhodes*, *Giſon*, *Elveldt*, and *Wallop*, to the Left Hand, arrived the ſame Night at *Mayence* or *Mentz*.

From *Cologne*, as far as to the Village *Vidich*, the River is very broad, but thence up to the *Mouſe-Tower* much narrower, from the many Hills and Rocks on both Sides, ſome of which are cover'd with Woods, others with Vines and Orchards. The Vines are ty'd to Poles much lower than thoſe we uſe in our Hop-gardens. The City of *Mayence* (or as we now call it *Mentz*) is very large and well fortified; but the Houſes are very old, the Streets narrow and ill paved: The Cathedral of St. *Martin*'s has twenty-four Canons, all Noble, who chuſe the Archbiſhop. The Arms of this Archbiſhoprick is a Wheel, which they derive from *Willigeſus*, a *Saxon*, their firſt Archbiſhop, who being a *Wheelwright*'s Son, gave this Wheel for his Arms. Near this Place, the River *Maine* joining its Current with the *Rhine*, we went up the firſt of theſe two Rivers in a Boat, and paſſing by *Rudſheim*, a well built Fort on the right Hand, belonging to the Landgrave of *Heſſe Darmſtadt*, and another walled Town called *Hoeſt*, to the Left, arrived the 13th of *July* at *Francfort*, five Leagues diſtant from *Mayence* or *Mentz*.

This City is very rich and populous, and not ill-built, though moſt of the Houſes are of Timber: Its Fortifications, which conſiſt in divers ſtrong Baſtions and a deep Ditch, are very conſiderable and well kept: The River *Maine* dividing the City into two Parts, that which lies oppoſite to *Francfort* is called *Saxonhauſen*, which are joined by a very noble Stone Bridge, ſuſtain'd by fourteen Arches. In the great Market-place are three noble Fountains. The Emperors are in our Days choſen here in the Senate houſe, and crown'd in the Church of St. *Bartholomew*.

I had the good Fortune to get Sight of the *Aurea Bulla*, or *Golden Bull* of the Emperor *Charles* IV. which inſtead of a Seal had a large golden Medal hanging on it, with the Effigies of *Charles* IV. on one Side, with this Inſcription, *Carolus quartus, divinâ favente clementiâ, Romanorum Imperator ſemp. Aug.* on the Reverſe the City of *Rome*, and underneath, *Aurea Roma*, and round it this Verſe, *Roma caput mundi regit orbis fræna rotundi.* The Government of this City is in the Hands of a *Prætor*, twelve *Burgomaſters*, fourteen *Eſchevins*, and forty-two Counſellors. The whole Senate is divided into three *Scamna* or Benches, Firſt, *Sabinorum*, Secondly, *Literatorum*, and Thirdly, *Opificum*: When a Place happens to be vacant in the Bench of the *Eſchevins*, it is ſupplied out of the ſecond Bench of the *Literatorum*; but the *Scamnum Opificum* riſes no higher. The Senate has the Power of chooſing yearly two *Burgomaſters* out of their own Number. The *Jews*, of whom there are great Numbers here, have their peculiar Quarters aſſigned them, from whence they dare not ſtir in the Night-time; they wear a Piece of yellow Cloth to diſtinguiſh them from other People. The Magiſtracy and moſt of the Inhabitants are *Lutherans*, unto whom belong five Churches. Yet have the *Romans* the free Exerciſe of their Religion here, and are poſſeſs'd of two Convents for Men and one for Women;

men; but the *Calviniſts* have their Church a good Way from the Town; the *Engliſh* Church, firſt eſtabliſh'd here under the Reign of Queen *Mary*, is fallen much to Decay, as well as the *Engliſh* Houſe, which is turned into a Store-houſe. In the Country hereabouts, which is exceeding pleaſant, we found growing wild, *Gramen amoris dictum, & Iſchemon vulgare, Portulaca ſylveſtris,* and in the Hedges, *Alcine baccifera,* which I met with no where elſe in all my Travels.

July 17. We took the Poſt-Coach going to *Frankendhal*; we had ſcarce left *Francfort* half an Hour, when we travelled all that Day, for three *German* Leagues, through Pine-Woods, and lodged that Night at the Village of *Geirſheim*.

July 18. We ferried over the *Rhine* at *Kernſheim*, and at ſix Leagues End came to *Worms*, a large and ancient City, but much decayed. The Canons of the Cathedral (who are twenty in Number) chooſe the Biſhop. The Government of the City is in the Hands of the *Lutherans*. From hence we came, after an Hour's travelling, to *Frankendhal*, a Place chiefly conſiderable for its Strength, being ſituate in a Plain near the *Rhine*, and provided with good Walls and Out-works. It is under the Juriſdiction of the Elector *Palatine*; and has three Churches; one *High Dutch*, another *Low-Dutch*, and the third *French*.

July 20. We travelled along the Banks of the *Rhine*, by the Way of *Oberſheim* to *Spire*, two Leagues and a half diſtant from *Frankendhal*. *Spire*, though dignified with the Title of a Biſhoprick, yet is an imperial City, under the Government of its own Magiſtrates. The Houſes here are generally large, but not very convenient, and of Wood: The chief, if not the only Thing that makes this Place conſiderable, is the *Imperial Chamber*, which is kept here, conſiſting of an Imperial Preſident and thirty-ſix Aſſeſſors, beſides three other Preſidents, choſen by the Emperor out of the Delegates; each of the Electors, as well as the ten Circles, ſending two Delegates or Aſſeſſors. There is ſuch another Chamber belonging to the Imperial Court at *Vienna*, either of which (without any Appeal from one to the other) determines Controverſies ariſing betwixt the Princes and States of the Empire, and betwixt them and their Subjects in ſome Caſes: But the Elector *Palatine* enjoys the Prerogative, *Jus non appellandi*, of not being cognizable by theſe Tribunals.

July 21. We paſs'd the *Rhine* to *Manheim*, ſeated upon the very Conflux of the *Rhine* and *Neckar*; it belongs to the Elector *Palatine*, ſtrongly fortified, and now ſtrengthening by a new Citadel, almoſt finiſhed. Who was the Founder of this City, you will ſee out of the Inſcription over the *Neckar Gate*:

Quod felix faxit Jehova,
Fredericus IIII. *Elector*
Palatinus Rheni, Dux Bavariæ,
E veteri Pago Manhemio
Ad Rheni Necrique confluvium
Juſta ſpatiorum dimenſione
Nobilem Urbem molitus,
Vallo, foſſa, muro clauſit,
Portam bonis civibus aperuit,
Anno Domini M. DC. X.

From hence we continued our Journey to *Heidelberg*, where we paſs'd over the *Neckar* into the City by a wooden Bridge, covered over with a *Tectum* to preſerve the Timber. *Heidelberg* is not a very large, but a neat and populous City, the Capital of the whole *Palatinate* and Reſidence of its Princes; the Houſes are of Wood, but handſomely built; it is ſeated at the Foot of a Hill, on the right Side of the River *Neckar*, and is divided into five different Juriſdictions, independent of one another. *Firſt*, *Aulica*, under which are all the Princes and Noblemen; the Marſhal of the Court ſits here as Preſident. *Secondly*, *Cancellaria*, under which belong all Counſellors, and other Officers of the Courts, Advocates, Doctors, &c. *Thirdly*, *Bellica*, for the Soldiers where the General preſides. *Fourthly*, *Academica*, for the Students, the *Rector Magnificus*, or Vice-Chancellor for the Time being, is their Preſident; and *Fifthly*, *Civica*, for the Citizens. The Members of each of theſe Juriſdictions are not obliged to appear before any other Court but their own. The City is alſo divided into four Wards, under the Government of a *Prætor* and *Burgomaſter*.

About the Middle of the Aſcent of the Hill call'd *Koningſthal*, ſtands the Royal Palace, a large and ſtately Structure, encloſed with a Wall and deep Ditch, hewn out of the Rock, which they may fill with Water when they pleaſe; here the Prince keeps his Court. According to the Inſcription in *High Dutch* upon the Gate, it was begun to be built by *Lewis* V. in 1519, but ſeveral Pieces have been added ſince, one of which is called the *Engliſh Building*. In a Cellar under one of the Towers belonging to this Caſtle ſtood the famous great *Tun of Heidelberg*, containing 132 Fudders, one of which is equal to four of our Hogſheads; but this Tun is taken to Pieces of late and a new one Building, which is to contain 150 Fudders, or 600 Hogſheads. We were invited to dine in the Palace, where we obſerved every Thing to be done with great Regularity, and after Dinner the Elector was pleaſed to ſhew us the Curioſities of his Cloſet, and among the reſt, a Purſe made of *Alumen plumoſum*, which being made red hot, received not the leaſt Harm, but appeared the ſame it was before, after it was cool'd: Two Unicorn's Horns of eight or ten Feet long, wreathed, and hollow to the Top, being the Horns of a Fiſh, and not a Quadruped, as the Ancients vainly imagin'd. An Imperial Crown and Globe, belonging to the Emperor *Rupert* (who was of this Family) richly ſet with precious Stones: A choice Collection of ancient and modern Coins and Medals; and among the reſt a Copper *Swediſh Dollar*, of the Bigneſs of a ſquare Trencher, with the King's Arms and Effigies ſtampt at the four Corners. The great Church (which formerly contained the famous Library of this Place) as alſo that of the *Franciſcans*, have ſeveral very noble Monuments of the Princes of this Family, as that of St. *Peter* ſhews many of learned Perſons.

The Univerſity of *Heidelberg*, was founded, *A. D.* 1346, and has three or four Colleges for the Subſiſtence of poor Scholars. The whole Management of it is committed to the *Academical Senate*, compoſed of Sixteen Profeſſors, *viz.* three for Divinity, four for the Law, three for Phyſick, and ſix for Philoſophy, but no more than four of them ſit in the Senate, for Fear they ſhould make too ſtrong a Party. If a Profeſſor dies, the Senate preſents two Perſons to the Prince, out of whom he chooſes one. The Senate alſo chooſes every Year a *Rector magnificentiſſimus*, a Honorary Title, not unlike that of Chancellor of our Univerſity, as the *Rector Magnificus*, the chief of the Senate is equivalent to Vice-Chancellor; beſides which, they elect two or four more Officers out of their own Number, to manage the Concerns of the Univerſity. The Senate hath its own Juriſdiction, and unlimited Power in criminal Caſes, extending to Life and Death, the Prince reſerving to himſelf only the Prerogative of Pardoning after Sentence paſt. In Philoſophy they have no other Degeees but Maſters, and thoſe but few of late Years: In *Law* and *Medicine* they create both *Licentiates* and *Doctors*; and in Divinity, *Batchelors*, *Licentiates* and *Doctors*. They have not the leaſt Regard to the ſtanding of the Candidates, all they have to do being to undergo two Examinations, one of which is called the *Examen tentatorium*, before the Faculty, in which he is to commence, and in the Preſence of the *Rector Magnificus*; the ſecond the *Examen rigoroſum*, before the whole Body of the Profeſſors and the *Rector Magnificus*. After all this, he is to hold a publick Diſputation *ſub Præſide*, to make a Lecture in his own Faculty, and a Speech. The Ceremony is performed with a great deal of Pomp, and concludes with a ſumptuous Feaſt, at which are preſent all the Profeſſors, and ſometimes the Prince in Perſon, or elſe he ſends the Marſhal of his Court to repreſent his Perſon, which is the Reaſon that oftentimes, when the Candidates have not very ſtrong Purſes, two or three join to ſave

Charges. Here alſo the Profeſſors publiſh an annual Catalogue of their Names and intended publick Lectures.

The Elector *Palatine* is abſolute in his Dominions, having alſo the Supremacy in Eccleſiaſtical Affairs, which formerly belonged to the Biſhop of *Spiers*, but ſince the Reformation the Eccleſiaſtical Juriſdiction has been annexed to the Sovereignty: He is the univerſal Patron of all vacant Benefices, tho' he permits the Eccleſiaſtical Council, (compoſed of two Clergymen and two Laymen) to preſent unto him two, out of whom he chooſes one. The Generality of the Palatinate are of the Reformed Religion, and divided into three *Præfectures* (the biggeſt of which is ſubdivided into leſs) each of which has an Inſpector, who is one of the Paſtors of that *Præfecture*, and differs not from the other in Rank or Power, but hath only a larger Salary. Each conſiderable Town has alſo a peculiar *Præfecture*, or Preſbytery: Thus that of *Heidelberg* is compoſed of five Miniſters of that City, two Deputies from each of the before-mentioned Juiſdictions, except the *Aulica*, and two from each of the four Wards of the City, making in all twenty-one, in which the Laymen have equal Voices with the Miniſters, theſe enjoying no other Prerogative in this Point, than that one of them preſides always in his Turn. They can't inflict any Church Cenſure, unleſs it be making the Tranſgreſſor ſubmit to a publick Confeſſion at the Church Door, and to promiſe Amendment, the reſt is left to the Determination of the Civil Magiſtrate. As the Elector is univerſal Patron, ſo he is Maſter of all the Tithes, which for Conveniency ſake, he allows to ſome Miniſters in certain Places, but provides ſettled Salaries for the reſt out of the Church Revenues.

19. *July* 25. We hired a Coach, which was to carry us in three Days to *Straſbourg:* We had ſcarce travelled three Leagues, but we paſs'd in Sight of the celebrated Fortreſs of *Philipſbourg*, ſeated in a Plain near the *Rhine*; a League further we paſs'd through *Graffe*, and lodged that Night at the Village of *Linknom.*

July 26. After a Journey of four Leagues, we baited at *Raſpach*, two Leagues further paſſed through *Stolhoven*, and a League more through *Lichtenaw*, all inconſiderable Places; we lodged that Night at the Village called *Sertz.*

July 27. We croſs'd the *Rhine* over a Bridge laid over the two Channels, made of Fir-trees laid cloſe together, inſtead of Boats, and ſoon after came to *Straſbourg*. In our Journey thither we ſaw Abundance of *Indian* Wheat planted, as alſo ſome *Lathyrus ſativus*, and *Carthamus*, or Baſtard Saffron. The *Blatteria, Solidago Saracenica*, are wild hereabouts, and in the adjacent Meadows of *Straſbourg*, *Carduus Pratenſis Tragi.*

Straſbourg is a free Imperial City, rich and populous, of a great Circumference, and well fortified with regular Out works. It is govern'd by two Councils, one conſiſting of ſeventy-one, in which are ſix *Burgomaſters*, as many *Stadtmaſters*, fifteen *Patres Patriæ*, and thirteen ſelected out of the Militia. The greater Council is compoſed of three hundred Citizens, choſen by the ſeveral Companies of the City. The Women are generally handſome, and the Inhabitants *Lutherans*, though the *Roman Catholicks* have alſo a Church and four Convents, two for Men, and two for Women. The Reformed have their Church at ſome Diſtance out of the Town. It is an Epiſcopal See; the Biſhop has a Palace in the City, but is not allowed to ſtay there above three Days at a Time, but may continue in an Inn for eight Days together. The Armory or Arſenal here, may compare with any in *Germany*, and is not much inferior to any I ſaw elſewhere. The publick Granaries, Store-houſes and Wine cellars, are worth ſeeing. The *Domo*, or Cathedral Church, is a noble Structure, with a Pair of folding Doors of Braſs at the Weſt End. Here is the famous Clock deſcribed by ſeveral Authors, which is a Piece of moſt excellent Workmanſhip, made by a Citizen of this Place, whoſe Name was *Iſaac Harbrecht*. But what is moſt remarkable, is the Steeple, the higheſt that ever I met with, and curiouſly built of carved Stone, having ſix hundred and ſixty-two Steps from the Bottom to the Top; we went up ſix hundred and forty Steps to a Place they call the *Crown*, from whence we took a View of the adjacent Country at a great Diſtance.

About ten Hours diſtant from *Straſbourg*, towards the Side of *Stutgard*, are very good acid mineral Springs, the Waters of which they drink here and in other Cities with Wine. In this, as well as other Imperial Cities in thoſe Parts, the Inhabitants, but eſpecially the Women, adhere ſtill to an odd Way of Dreſſing, which yet is very different one from another, each having their peculiar Habits; ſo that their Condition may be diſtinguiſhed at Sight. *July* 31. We continued our Journey towards *Baſil*, paſſing the ſame Day through the Village of *Tivelſheim*, and *Auguſt* 1, through *Markelſheim*, and two Leagues thence in Sight of the ſtrong Town and Fortreſs of *Briſac*, ſeated upon a Rock, and lodged that Night at *Ladeſheim.*

20. *Aug.* 2. After a League and a half riding, we arrived at *Baſil*, a large and noble City, well built of Stone, the Houſes very high, and painted for the moſt Part on the Outſide. It is divided by the River *Rhine* into two Parts (that on the North-ſide being called *Little Baſil*) join'd together by a Bridge ſuſtained by fourteen Arches. The chief Ornaments of this populous and rich City are its Fountains, of which it has above three hundred. It is one of the XIII. *Swiſs Cantons*, its Territories comprehending above one hundred Villages. The Biſhop of *Baden* has not the leaſt Juriſdiction in the Town, being not ſuffered to lodge here one Night, but keeps his Reſidence at *Broudint*. The Government is adminiſtred by a greater and leſſer Council; the laſt conſiſts of ſixty-four Perſons, choſen by the fifteen Companies, and the greater, of all the Magiſtrates and the leſſer Council. The Univerſity of this Place was founded by Pope *Pius* II. in which are ſeventeen Profeſſors, three of Divinity, three of Law, three of Phyſick, and eight in Philoſophy and polite Literature. They keep Lectures every Day in the Week in Term-time, except *Thurſdays* and *Saturdays*, but have very ſmall Salaries. The Eccleſiaſtical Government is in the Hands of three Profeſſors of Divinity, four *Scholarchæ*, and the Miniſters. The Senate have the Power of nominating three Perſons to any vacant Benefice, out of whom the Miniſters chooſe one. In theſe Cities the Miniſters live upon their yearly Salaries, but in the Country they have half in Tythes and the other half in Money. The Miniſters here are at Liberty to change their Profeſſion and become Laymen whenever they pleaſe. They are of the Reformed Religion, as are all the other Proteſtant Cantons.

Eraſmus lived Part of his latter Days, and ended his Life in this City; his Monument, which is of Marble, on the North Side of the Communion Table in the great Church, being to be ſeen to this Day. He was the Founder of a College in *Baſil* for twenty Students of Divinity (in which Number are however comprehended the Beadle and a School-maſter) ten of whom are to be Natives of *Baſil*; they may ſtay there as long as they continue unmarried, though the Magiſtrates have a Power to command any of them thence, if they think it convenient. They are under the Inſpection of a Regent, without whoſe Leave none of them dare ſtay out of the College one Night. In the ſame Church where *Eraſmus* lies interr'd is alſo his Library, commonly called *Bibliotheca Amberbachiana*, becauſe *Eraſmus* gave it by his laſt Will to one Mr. *Amberbach*. I ſaw the ſaid Teſtament written with his own Hand in half a Sheet of Paper, bearing Date 12 *Feb.* 1536. In his Library are alſo ſeveral very curious Pieces of Painting, done by that famous Maſter *Johannes Holbenius*, a Native of this City; ſome Diplomata of the Pope to *Eraſmus*, his Seal and Ring, a fine Gold Medal ſent to him by the Kind of *Poland*, beſides other good Coins and Medals, both ancient and modern; three Rappers of Copper (worth about a Farthing a-piece) turned into Gold, as they ſay, by that famous Alchymiſt *Leonard Turnitius*, who tranſmuted the famous Nail of *Florence*; ſeveral ancient *Intaglio*; ſome Manuſcripts of *Amberbach*, containing the Antiquities of *Auguſta Rauracorum*, anciently a great City, but now turned into a Village called *Augſt*, near *Baſil*. The Profeſſors and Miniſters wear Ruffs, and a Kind of Caps painted like Sugar-loaves (in which they are imitated by the graver ſort of the Inhabitants) and Gowns which reach juſt below their Knees. The Women wear their Petticoats very ſhort, and Caps not unlike the young Scholars at *Cambridge*, with a Tin Girdle. We took alſo a View of the Muſæum of Dr. *Platerus*, where we met with many both natural and artificial Curioſities of Minerals, Stones, Metals, Animals preſerved, *&c.* The famous Fanatick *David George* ended his Days in this City. We found divers Plants growing wild about *Baſil*, the chief of which were, *Scrophularia*, *Ruta canina dicta*, and *Paſſerina Tragi*, among the Corn; *Phalangium parvo flore ramoſius*, *Blitum minus album*, among the Hedges; *Cymbularia Italica hederacea*, on the Town Walls near the *Straſbourg* Gate; *Stæbe major calyculis non ſplendentibus*, in the Grounds betwixt *Frankendhal* and *Baſil*, *Polium montanum Lavendulæ folio Conſolida media Genevenſis & Cneorum Matthioli ſeu Thymelæa minor Cordi.* But of theſe and other Plants growing about *Baſil*, ſee *C. Bauhini Catalogus Plantarum.*

We went hence, *Auguſt* the 10th, towards *Zurich*, and in our Way, about a *German* League from *Baſil*, paſſed through *Augſt*, ſuppoſed by *Ambachius*, to be the ancient *Auguſta Rauracorum* of the *Romans*, where we ſaw the Ruins of an Amphitheatre. We travelled afterwards in Sight of a walled Town upon the *Rhine*, and many Hills covered with wild Fir-trees, and paſſing through *Bruck*, a pretty handſome well built, but ſmall Town, lodged the ſame Night at the Baths of *Baden*, about ſix *German* Leagues from *Baſil*; here we firſt got Sight of ſmall green *Tree Frogs*. Theſe hot Baths, about ſixty in Number, are not above half an *Engliſh* Mile from *Baden*, a City ſeated upon the River *Limagus*, on the Side of a Hill, famous for the general Meetings of the *Swiſs Cantons* here.

21. From hence we continued our Journey, *Auguſt* the 11th, along the *Limagus* on one, and very fair Vineyards on the other Side, to *Zurich*, another City belonging to the *Swiſs Cantons*, ſcarce ſo big, but much more populous than *Baden*. Its Fortification is extraordinary pleaſant, near the *Zurich-Sea* or Lake, being divided by the River *Limagus* (which owes its Riſe to this Lake) into two Parts, which are joined together by two Bridges, one for Foot Paſſengers, the other for Carriages, and very broad. The Houſes here, though of Timber and Clay, yet are well built, handſomely painted, and lofty; the Streets indeed are none of the broadeſt, but very well paved, and the whole Body of the City encloſed with a ſtrong Wall and many Outworks of Earth, after the modern Way; the River *Sele* (which below this City falls into the *Limagus*) ſerving for a Ditch on the Southſide. The Inhabitants are Proteſtants, much addicted to Commerce, and generally rich. What is worth a Traveller's Curioſity here is, the Colour of the *Zurich-Sea*, which is green approaching near that of Sea-Water, though it has not the leaſt brackiſh Taſte, to which in Sea-Water this Colour is commonly aſcribed. Finding afterwards the Water of the Rivers and Lakes near the *Alps* of the ſame Colour, we could not attribute it to any other Cauſe but the melted Snow of thoſe Mountains, with which they are (at leaſt the higher Parts of them) covered for ſix Months in the Year, which containing a nitrous Salt, may be ſufficient to give the Water this Colour, though not to affect our Taſte.

The Government of this City is adminiſtered by two Councils, *viz. The greater* and *the leſſer.* The laſt is compoſed of fifty Members, *viz.* twenty-four Tribunes, choſen by the twelve Tribes or Companies of the City, two out of each: Theſe they call the *Twelvers*, becauſe twelve of them have only their Share in the Government at a Time; twelve Senators, *viz.* one out of each Company, choſen by the *leſſer Council*, as *Simler* tells us, but according to our Information, by the *great Council*, ſix Members more taken indifferently out of the Commonalty, and thoſe likewiſe choſen by the *great Council*, as we were credibly told; but according to *Simler*, by the *leſſer*; four Tribunes and two Senators choſen from among the Gentlemen, and two *Burgomaſters* elected by the *great Council* of 200. Half this Council governs by Turns, and that Part which rule, is ſtiled *Concilium novum*, or the *new Council*, as that which goes out is called *Concilium vetus*, or the *old Council*: Yet if any Decree be to be made, the ſame is dated in the Preſence of both, for which Reaſon the whole Fifty meet once a Week: For the reſt, one half of this Council is choſen every half Year, *viz.* at *Midſummer* and *Chriſtmas*, and as the *Concilium vetus* goes out, it chooſes the *Concilium novum*, compoſed for the moſt Part of the ſame Perſons that were choſen before.

The whole Council of Fifty determines civil Actions (though *Simler* ſays, no more than eight ſelected out of their Number) as the new Council judges in criminal Caſes alone. The *greater Council* is compoſed of 200 Perſons, *viz.* Twelve out of each Tribe, making in all forty four, eighteen choſen by the Gentlemen, from among themſelves, twenty-four Twelvers, four *Tribuni nobilium*, two *Senatores nobilium*, the ſix before mentioned choſen by the great Council out of the People. Theſe chooſe Governors (called by them *Landvoghts*) and are always conſulted upon any Emergency, which relates to the whole Commonwealth. They alſo chooſe four *Proconſuls* out of the twenty-four Maſters of the Companies; and two Treaſurers, either out of the Number of the twelve Senators, or of the twelve *Tribunes* of the *new Council.*

Auguſt 12. In our Way from *Zurich* to *Schaffhauſen* we paſſed by a Cataract or Water-fall of the *Rhine*, which is ſo dangerous for the many Rocks that lie under Water, that the Veſſels muſt unload here, and by the Way found the *Orobus ſylvaticus purpureus vernus*, the *Hepatica nobilis*, and *Ulmaria major ſive Barba capri*, growing wild. The City of *Schaffhauſen* is ſituate upon the River *Rhine*, over which is a Bridge, half of Wood, half of Stone, and ſo are moſt of the Houſes, very well built; eſpecially in the two great Streets, which are handſomely paved. The Citizens of this Place, as well as of *Zurich*, wear Swords conſtantly: Thoſe of the firſt being divided into twelve Companies, each of theſe elect two *Tribuni Plebis*, and theſe twenty-four make up the *leſſer Council*, having each a yearly Allowance of fifty-two *Florins*, and nine Meaſures of Corn.

The *great Council* is compoſed out of thoſe twenty-four, and ſixty more, (*viz.*) five choſen out of each of the *Tribes*. Theſe elect every Year two *Burgomaſters*, two Treaſurers, one Proconſul, and one *Ædilis*, but for the moſt Part the ſame Perſons: A Father and Son, or two Brothers, cannot be choſen at the ſame time into this Council.

From hence we travelled to *Conſtance*, *Auguſt* the 13th, a free Imperial City, in a ſmall Plain near the *Rhine*, at the End of the *Boden* Sea, or Lake of *Conſtance*, known anciently under the Names of *Lacus Brigantinus*, and *Lacus Acronius*, over which is laid a very long Bridge, Part of Wood, and Part of Stone: The Streets here are very regular and handſome, and the Buildings of Stone. But what makes this Place moſt famous is the Council that was held here, 1417, in which the Doctrine of *John Huſs* was rejected, and he condemned to the Fire. It is very ſtrong by Situation, having the Lake on one, and the Fens on the other Side, but its Fortifications are very old and inconſiderable.

22. *Auguſt* 15. We paſſed over the Lake in a Boat, to the City of *Lindaw* (in Sight of the ſtrong Town of *Oberlingen*) ſituated in the Middle of the Lake, and ſurrounded by its Waters on all Sides, being joined to the Continent by a Bridge of two hundred and ninety Paces long, one half of which is of Stone, the other, *viz.* that to the Town-ſide, of Wood, ſo that it may be taken down in caſe of Neceſſity. This Place, beſides its natural Strength of Situation, is fortified with ſtrong Bulwarks, and Stakes driven into the Ground to prevent the Approach of any Boats. It is for the moſt Part handſomely built, and the Streets are adorned with Fountains, yet theſe laſt are not ſo ſpacious, or their Buildings ſo lofty as at *Conſtance*: It has on one Side a double Wall, between which is encloſed a large Space of Ground planted with Vines, which produce commonly, as we are told, about three hundred *Engliſh* Hogſheads *per Annum*. They have eight Villages belonging to their Juriſdiction.

Auguſt 17. Taking Poſt-horſes at *Conſtance*, in order to our Journey to *Munich*; we changed our Horſes at *Lindaw*, an Imperial City, two *German* Leagues thence; at *Laykirk*, another Imperial City, two Leagues further; at *Memmingen*, both for Strength and Bigneſs, one of the chief of the Circle of *Suabia*, and dignified with the Title of a free Imperial City, and at *Mindleſheim*, where we lodged that Night. From hence we travelled to *Landſberg*, four Leagues further, a very fair Town, with a handſome Fountain in the Market-place; after which, without meeting with any conſiderable Town, we paſſed by the Lake of *Ammerſee*, in Sight of the *Alps*, to *Munchen* or *Munich*.

23. This being a ſtrong and well fortified City, and the ordinary Reſidence of the Electors of *Bavaria*, no Strangers are permitted to enter the Gates without the Conſent of the Governor: *Cluverius* is not in the wrong, when he calls this City the faireſt of all *Germany*, the Splendor and Beauty of its Buildings, both publick and private, eſpecially of the Electoral Palace (which may compare with any in *Europe*) and of ſeveral magnificent Churches and Convents, being ſuch as ſurpaſſes any Thing in *Germany* for its Bigneſs, its Streets being the broadeſt and moſt regular I have met with. Among other Varieties, you ſee in the Electoral Gardens a vaſt Number of *Aloe-trees* (for ſuch they may be called by reaſon of the Bigneſs of their Stalks, which ſhoot up in one Year) the like perhaps all *Europe* cannot produce in Number both for their Stalks and Flower. Here alſo we met with a Convent of *Engliſh* Nuns, and found in their Churches Pews and Seats, as is cuſtomary in *England*, whereas otherwiſe, the *Romaniſts* make uſe only in their Sermons of moveable Chairs and Benches, and clear the Churches ſo ſoon as Sermon is over.

We took a Turn from hence to *Augſbourg*, and paſſing by the Abbey of *Bernardines* called *Pruck*, and the little Town of *Fridbergh*, arrived there the 21ſt of *Auguſt*.

This is a ſtately and ſtrong City, ſeated upon the River *Lech*, being about eight *Engliſh* Miles in Compaſs: Its Houſes are well built, its Streets fair, and beautified with many Fountains. Its Arſenal conſiſts of twelve Rooms, not inferior to that of *Straſbourg*, as its Townhouſe may challenge the ſecond Rank next to that of *Amſterdam*; the upper Room eſpecially being very remarkable for its Loftineſs, Gilding, and Paintings, in which it exceeds any I have yet ſeen. The Inhabitants are partly *Romaniſts*, partly *Lutherans*, but the laſt are double the Number of the firſt, though theſe are in Poſſeſſion of ſeven Convents here, among which there is one *Engliſh*: Some *Calviniſts* there are here, but few. It is a free Imperial City, under the Juriſdiction of its own Magiſtrates; yet ſeems ſomewhat decayed of late Years, the Number of its Inhabitants being ſcarce proportionable to its Bigneſs; in the Plains near *Augſbourg*, leading to *Munchen*, we ſaw many rare Plants.

Auguſt 28. We left *Augſbourg*, and travelling three Days out of our Way, in order to take a View of the famous City of *Nurenbergh*, we croſſed the *Danube* the firſt Day, about ſix Leagues from *Augſbourg*, at a Place called *Donawert*, belonging to the Elector of *Bavaria*, where there is a wooden Bridge over that River. The 29th, we paſſed through *Manheim* and *Papenheim*, two pretty walled Towns, and having made five *German* Leagues that Day, lodged at *Weiſſenbergh*, an Imperial City, inhabited by *Lutherans*; near which is alſo a ſtrong Fort upon a Hill, belonging to the Marquiſs of *Anſpach*, a *Lutheran* Prince.

24. The 30th, We paſſed through a ſmall Town called *Pleinfeldt*, and after a Journey of three Leagues further, cloſe by another little walled Town called *Rotte*, and ſo, after two Hours riding more, arrived at *Nurenbergh*, which we were no ſooner in Sight of, but we highly applauded the Epithet *Cluverius* beſtowed upon it, when he ſtiles it *Germanicarum ſuperbiſſimam*, it being beyond Queſtion, that for its Buildings, which are very ſtately, it exceeds all, and for its Bigneſs may compare with any in *Germany*; and were its Houſes, which are of Free-ſtone, as uniform as the Buildings in the Low Countries, would even out vie them for Beauty; beſides, that under its Dominion, are at leaſt an hundred Towns and Villages. It is true, the Ground where it is ſituated is very barren, and the River upon which it ſtands but very ſmall, and not navigable; notwithſtanding which, by the Induſtry of the Inhabitants, who are generally very excellent in all Sorts of Handicraft Works, this City is very rich and populous. They are generally *Lutherans*, and their Churches more adorned and beautified after the Faſhion of the *Romaniſts*, than ever we ſaw in any other Place where this Religion is profeſſed. The *Roman Catholicks* have one Church allowed them, but the *Reformed* none. Their great Market place, and the Town houſe, are worth a Traveller's Obſervation; it is fortified with a good Wall and Ditches: Their Senate and their whole Government is ſaid to approach very near that of the *Venetians*, being for the reſt a free Imperial City.

September 3. We ſet out from *Nurenbergh* towards *Ratiſbon*, and came to *Altorff*, a Town and Univerſity under the Juriſdiction of *Nurenbergh*. It has a very good Phyſic Garden, the Catalogue of the Plants therein, as well as another of what Plants grow wild hereabouts, the World ſtands indebted for to Dr. *Maurice Hoffman*. Over the Cloiſter of the College, in which are maintained thirty-ſix Students, at the Charge of the City of *Nurenbergh*, you ſee an Inſcription in *Latin*, giving a ſhort Account of the Foundation of this Univerſity and College, *viz.* That the ſaid College was founded by the Senate of *Nurenbergh* in 1575, under the Reign of the Emperor *Maximilian* II. that in 1578, under the Reign of *Rodolph* II. a *Gymnaſium* was eſtabliſhed here, which in 1633, under the Reign of the Emperor *Ferdinand* II. was dignified with the Title and Privileges of an Univerſity.

Dr. *Hoffman* ſhewed us ſeveral *Cornua Ammonis*, or Serpent-ſtones, beſides many Cockle and Muſcle-ſhells found near *Altorff*, of which we alſo ſaw ſome the next Day in our Way to *Nieu-markt*; upon which Occaſion I cannot forbear to give, by way of Digreſſion, a brief Account, (1.) In what Places they are found. (2.) The different Opinions concerning them. In *England*, thoſe petrified Shells are found at *Whitby* or *Whitebay*, in the North-riding of *Yorkſhire*; at *Huntley-Nab*, more Northward on the ſame Coaſt; at *Alderley* in *Glouceſterſhire*; at *Cainſham* in *Somerſetſhire*, not far from *Alderley*; at *Farnham* in *Surry*; at *Richmond* in *Yorkſhire*; and in ſeveral other Places; as for Inſtance, at *Lyme* in *Dorſetſhire, Adderbury* in *Oxfordſhire*, at *Brickworth* in *Northamptonſhire*, about *Daventry*, *Verulam* in *Hertfordſhire*, *Shuckborough* in *Warwickſhire*, nay, even the *Peak* of *Derbyſhire*. Beſides theſe petrified Shells, other congenerous Bodies are found in ſeveral Parts of *England*, *viz.* 1. The *Star-Stones*, called by ſome *Aſtroites*, *Lapis Stellaris*, and *Stella judaica*. 2. St. *Cuthbert*'s Beads, or *Trochites*, and, 3. The *Capſtone*, or *Echinites*, called *Lapides Brontiæ* by ſome, and conſidering that Sharks are often taken upon our Coaſt, it is a Wonder that no *Gloſſopetræ* ſhould be found in *England*. As for the *Star-ſtones* (ſo called from their five Angles reſembling ſo many Rays) they are found at *Shuckborough* in *Warwickſhire*, at *Caſſington* near *Glouceſter*, and *Belvoir* Caſtle in *Lincolnſhire*. The *Trochites* are to be met with on the Weſtern Shore of the *Holy Iſland*, and in the Chinks of ſome Stones found in the Bottom of the Channel of the River *Tees*, the common Boundary between *Yorkſhire* and the Biſhoprick of *Durham*; theſe are of a round Figure, and not angular like the former. The *Echinites* or *Brontiæ*, are found in divers Places of *England*, of ſeveral Magnitudes and Shape; and beyond Sea, at *Breſcia* in *Lombardy*, upon the Banks of the River *Tanaro* in *Piedmont*, four Miles below *Aſte*, but eſpecially in the Iſle of *Maltha*, where are alſo many *Gloſſopetræ*, reſembling Sharks-teeth, petrified.

As for theſe laſt, *Boetius* ſays, they are found near *Deventer*, in the Province of *Overyſſel*; and in *Germany*, in the *Alum-mines* near *Lunenburgh*. *Gropius Becanus* tells us, that they were digged up in the Ditches of *Antwerp*, and are found in great Numbers on a Hill near *Aix-la-Chapelle* in *Germany*, which he uſes as an Argument, that they cannot be real Shark's Teeth petrified.

fied. *Georgius Agricola* affirms, that the petrified Cockles, and other Sea-Shells, are found in the Stone Quarries of *Galgenbergh*, and in thoſe beyond Mount *Maurice*, in the Biſhoprick of *Hildeſheim* in *Germany*. (2.) At *Alfeld*, a Town of *Saxony*. (3.) At *Hanover*, in the Lime-Pits, and near the Village of *Lindaw*. (4.) In a Village called *Rabſchyts*, near the Rivulet of *Trebitia* in *Miſnia*. (5.) At a Place called the *Roſe-Garden* in *Pruſſia*. (6.) Near the Caſtle of *Spangenbergh* in *Heſſia*. (7.) In a Mountain of *Italy* near *Verona*. (8.) On the Banks of the River *Elſa*; and (according to *Pauſanias*) in the Quarries near *Megara*, and they are alſo found in *Theſſaly*, *Macedonia*, and the Mountains of *Calabria*. *Bernardus Paliſſius* ſays, that thoſe petrified Shells are found in *France*, near the Suburb of St. *Martial* near *Paris*; in the Mountains of the Foreſt of *Arden*, but eſpecially about *Sedan*, in the Provinces of *Valois*, *Xantcigne* and *Champaign*, and in the Mountains near *Soiſſons*.

Joannes de Laet tells us alſo of a Rock near *Dijon* in *Burgundy*, and ſpeaks much of the Fields about *Sauvignac*, upon this Account. Beſides the beforementioned Places of *Italy*, they are found in the Mountain of *Nicani*, in the *Modeneſe*, and in the Channel of a Rivulet near *Udine* in *Friuli*; *Gerepius Becanus* names *Limburgh*, *Liege*, *Namur*, *Tournay*, and divers other Places in the *Low Countries*: Beſides all which Places, there is not the leaſt Queſtion, but that, if ſtrict Obſervations were made in the other Parts of the World, the ſame might be diſcovered there as well as in *Europe*.

We will now proceed to give you a ſhort Hint of the Opinions maintained concerning them. The firſt, and which was generally received among the Ancients, was, That they were originally the natural Bones or Shells of living Creatures, bred in the Sea, which by Deluges, Inundations, Earthquakes, or other ſuch like Means, being caſt up into thoſe Places, being filled with Clay, and ſome petrifying Water or Subſtance, were in Length of Time, hardened into the ſame Shape and Figures they bore before; this Opinion they ſupport by divers Experiments, as the finding of a petrified Pearl-bearing Shell, in *Tuſcany*, with the Pearl yet ſticking to the Shell: Of a Piece of the greater Seanacre (*Pinna marina*) in which the Silk like Subſtance within the Shell being conſumed, the Colour of that Subſtance remained in the Clay that had filled the Shell. Another Experiment is, that about the City of *Volterra*, there are many Beds of Earth not ſtony, but full of true Cockle ſhells, which have not undergone the leaſt Alteration, though they have lain there at leaſt three thouſand Years, from whence they would evince, that *Tuſcany* was in former Ages cover'd by the Sea, and conſequently ſo might thoſe other Countries in which thoſe petrified Shells are found. Againſt his Opinion are two conſiderable Objections, not eaſily to be reſolved.

The firſt is, that at this Rate the whole Body of the Earth muſt once have been covered with Water, ſince theſe petrified Shells are found at a vaſt Diſtance from the Sea, nay, even upon the very Tops of the *Alps*. Some pretend to anſwer this by the general Deluge; but as that proceeded from the Rains, theſe were more likely to carry off into the Seas thoſe Shells, than to bring them in. What ſome argue from the Words of the Scripture, (*The Fountains of the Deep were broken up*) will not anſwer the Point neither; for ſuppoſing that by the breaking in of the Rivers and Seas, thoſe Shells were brought, the ſame muſt of Neceſſity have been ſcattered indifferently over the whole Surface of the Earth. Others are for ſolving this Difficulty, by referring the ſame to ſome particular Inundations, alledging, That thoſe Places, where they are found now, might, in moſt ancient Times, have been low Places, which, by Earthquakes, have been raiſed up to Mountains; but tho' this, perhaps, may take Place in reſpect of ſome inconſiderable Eminencies or Hills, it is not applicable to thoſe mountainous Bulks, ſuch as the *Alps*, *Pyrenees*, *Apennines*, it being evident from the moſt ancient Records, that though the Face of the Earth may have undergone ſome Change; yet the ſame Mountains, Iſlands, Promontories, Rivers and Lakes of any Note, are ſtill remaining, without any Removal in their ancient Stations.

The ſecond Objection againſt this Opinion is, That among all theſe petrified Cockles or Shells, there are many Sorts not to be found any where now; nay, ſome go farther, that among all our Shell-Fiſhes, there are none found like thoſe petrified Shells; unto which, if it be anſwered, that thoſe Species are loſt, it is a Thing which will ſcarce be admitted by many; for though it may be granted, that ſome few Species were loſt, yet it ſeems next to an Impoſſibility, that a whole Genus, of which there were ſo many Species ſcattered in ſo many far diſtant Places from one another, ſhould be utterly extinct. As for Inſtance, of the *Serpentine* Stones, or *Cornua Ammonis*, I have myſelf ſeen at leaſt ſix ſeveral Species, and ſome of them of a Foot Diameter, being much beyond the Bigneſs of any Shell-Fiſh now living in our Seas. Hence it is, that many of our modern Naturaliſts have attributed theſe Bodies to the Effects of a plaſtic Power in the Earth, and that they are produced and framed after the ſame Manner as precious Stones, Cryſtals, and coagulated Salts, by ſhooting up into divers Figures. What makes for their Opinion is, that in the Earth are found many figured Stones, ſuch as the *Lapides Lyncurii*, *Belemnites*, *Lapides Judaici*, *Trochites*, and others, which have not the leaſt Reſemblance to any Shells, Bones, Roots, or Fruits; to ſalve up which, no other Recourſe is to be had, than to the before-mentioned Loſs of thoſe Species out of the World.

I cannot but mention, upon this Occaſion, what I was told by a very credible Perſon, *viz.* That he had ſeen a Stone reſembling a Cockle-ſhell, found in the Stomach of an Ox, which, if it be admitted, there is not the leaſt Doubt, but that the like may be ſo generated in Quarries and other Places. Theſe two different Opinions have given Occaſion to a third, *viz.* That ſome of thoſe Shells have been truly petrified, and that others are really Stones formed by ſome Plaſtic Power in the Earth, imitating the others in their Shapes and Figures. But as this ſeems to be rather a Shift than a Diſſolution of the Objections to be made againſt either of the two former Opinions, I am inclinable to adhere to the firſt, as ſeeming to me more conſonant to the Nature of the Thing, though at the ſame Time I ſhould be very glad to hear the Objections made againſt it, more ſolidly anſwered than they have been hitherto. The Academical Senate of *Altorff* was compoſed at that Time of thirteen Profeſſors, three in Divinity, as many in Law, two in Phyſick, and five in Philoſophy, who publiſh every Year a printed Catalogue of the Lectures they intend to keep the next enſuing Year.

25. *September* 4. We ſet out from *Altorff* for *Regenſpurgh*, or *Ratiſbon*, and paſſing through *Nieu-markt* and *Heinmaw*, two little walled Towns, came to *Ratiſbon* the 5th at Night, by a fair Bridge built here over the *Danube*. This City, which receives its Name from the River *Regen*, which here joins its Current with the *Danube*, is very large and well built with Stone-houſes, the Roofs of which are flat, after the *Italian* Manner. It is well fortified, but the Streets ſomewhat narrow. As it is an Imperial City, it is under the Government of its own Magiſtrates; who, as well as the greateſt Part of the Inhabitants, are *Lutherans*, though their Biſhop is of the *Romiſh* Religion, the Members of which have ſome Convents here, and a College of Jeſuits. It is chiefly famous for the Imperial Diet, which is uſually held here.

September 11. We took Boat for *Vienna*, and paſſed on the left Hand of the River, by a Village and ſtony Caſtle on the Hill called *Thonaſtein*, and three Leagues and a half below *Ratiſbon*, in Sight of the Caſtle of *Wert*, ſeated at the Conflux of the River *Wiſent*, and the *Danube*, belonging to the Biſhop of *Ratiſbon*; we took up our Quarters one *German* League and a half thence, at *Straubingen*, a handſome wall'd Town, belonging to the Elector of *Bavaria*.

September 12. In the Morning we paſſed by *Pogen*, and four Leagues below *Straubingen*, under a wooden Bridge laid over the *Danube*, ſomewhat lower we ſaw the ſmall City of *Dreckendorf*, belonging to the Elector of *Bavaria*, and having paſs'd by the Mouth of the River *Iſer*, and in Sight of *Oſterhoven* on our left Hand, and the Caſtle of *Hilkerſberg* on the ſame Side, we lodg'd that Night at a little wall'd *Bavarian* Town called *Vilſhoven*.

September 13. We came to *Paſſau* or *Paſſovia*, four Leagues diſtant from *Vilſhoven*, a City conſiderable for its Strength, Bigneſs, and noble Buildings, the laſt of which were very near all conſumed by Fire, about nine Months before our Arrival. It is under the Juriſdiction of the Archduke of *Inſpruck*, ſituate at the Confluence of the Rivers *In* and the *Danube*, over the firſt of which is a Bridge to the Town of *Inſtadt*. Below *Paſſau*, the *Danube* being ſtreightned by Hills and Rocks on both Sides, begins to run with a much ſwifter Stream than before; ſeven Leagues below *Paſſau*, paſſing by the Caſtle of *Newhouſe*, we took up our Lodgings at the Village of *Aſh*, on the right Side of the River.

26. *September* 14. Paſſing through an open Country on both Sides, for four Leagues together, we came to *Lintz*, a City neatly built after the *Italian* Manner, with a ſquare ſpacious *Piazza*, adorned with two noble Fountains, the Imperial Palace ſtanding upon a riſing Ground, from whence you have a fair Proſpect of the *Danube* and adjacent Country. Three Leagues below it we paſſed by a very fine Village called *Mathauſen*, and in Sight of the City of *Intz*, ſeated on our right Hand upon the River *Ens*, ſeven Leagues below *Lintz*, the Country begins to be hilly again on both Sides of the *Danube*, near the Caſtle of the Prince of *Lichtenſtein*, by a Village called *Greine*; a little below which Place we paſſed a Kind of Cataract, the Current being nearly encloſed between the Rocks on both Sides, and render'd boiſterous by thoſe under Water; and ſomething lower a Whirlpool is made there by the jetting out of Rocks into the River. Afterwards, paſſing by a ſmall Town called *Ips*, we lodged that Night at the Village of *Morpatch*, about eleven *German* Leagues from *Lintz*.

September 15. Early in the Morning we paſſed in Sight of the rich Convent called *Melk*, on our right Hand, and about ſix Leagues further the Seat of Count *Dietrichſtein* on our left, within Sight of the rich Abbey of *Ketwein*, famous for its ſtony Situation, and the brave Reſiſtance it made againſt the *Swedes*. Nine Leagues from our laſt Night's Lodging, we paſſed under a wooden Bridge, near the City of *Stein*, not far from whence we came to *Krembs*, a very handſome, ſtrong, well built City, ſeated at the Foot of a Hill. From hence, being an open Country, the Channel of the River began to be much broader. Six Leagues below *Krembs*, we paſſed by a ſmall City called *Deuln*, and in Sight of the Caſtle of *Greitenſtein*, ſituate upon a Hill, at ſome Diſtance from the River, on the left Hand, and we ſaw alſo the City of *Cornburgh*. Here, and afterwards in other Places, we ſaw Abundance of Mills in Boats, the Wheels lying betwixt two Boats, placed at a convenient Diſtance one from another; ſo that the Stream being by Degrees ſtreightned between the Boats, forces the Wheel to turn. One of the Boats is with Chains, or ſtrong Cables, faſtened to the Bank. Within a League and a half of *Vienna*, we paſſed by the noble and rich Abbey called *Cloyſter Newburg*, with a little wall'd Town of the ſame Name belonging to it; and having by the Swiftneſs of the Current made nineteen *German* Leagues that Day, arrived at *Vienna*, the Capital of *Auſtria*, and now the Capital of the Empire.

This City, which, in Proportion to its Bigneſs, is the moſt populous we had ſeen yet in our Travels, is the ordinary Reſidence of the Emperor, ſeated upon the *Danube*, though it receives its Name from the River *Wien*, which below it, *viz.* on the Eaſt ſide, falls into the former. The Body of the City is not above four or five *Engliſh* Miles in Compaſs, but the Suburbs are very ſpacious, ſome of the Houſes of which were lately pulled down, upon the Approach of the *Turks* towards *Preſburgh* (not above forty *Engliſh* Miles from thence) after the taking of *Newheuſel*. *Vienna* has a moſt regular Fortification, the Wall of Earth, but very high and thick, faced with Bricks, ſtrengthened by a broad and deep Ditch, and defended by many Half-moons and Horn-works. The Houſes are lofty and well built, with flat Roofs, after the *Italian* Way: The Markets very well furniſhed with Proviſions, but the Streets none of the broadeſt. The Emperor's Palace, the Cathedral, and other publick Buildings, are very magnificent. The Emperor himſelf (*Leopold*) is low of Stature, of a very dark Complexion, black Hair, and thin viſaged, with a thick hanging Under-lip, not unlike his Effigies on his Coin. In the Market we firſt met here with the Fruit of *Sorbus legitima*, with Tortoiſes, for Six-pence a-piece, found here in muddly Places; and here we alſo ſaw the *Silurus*, or *Sheat-fiſh*, the biggeſt of all freſh Water Fiſh I ever ſaw, ſome of them weighing near an hundred Pounds.

27. *September* 24. We took Coach for *Venice*, and lodged that Night at a great Village called *Trayſkerk*, four Leagues thence; by the Way we ſaw great Store of *Abſinthium Auſtriacum tenuifolium*, Clauſ.

The 24th, after we had travell'd four Leagues, we came to *Newſtadt*, (*Neapolis Auſtriaca*) a pretty ſtrong ſquare Town, well built, but of no great Extent; having a fair Market-place, and very regular Streets. At three of the Corners it is defended by ſo many Baſtions, but on the fourth it has a Caſtle or Citadel. Near this Place I met with the *Aſperula cœrulea*. After we had travell'd two Leagues beyond *Newſtadt*, we began to enter among the Hills, and lodged that Night at *Glucknitz*, four Leagues from *Newſtadt*.

The 26th, We had ſcarce made two Leagues, when coming to the Village of *Shadwin*, our Coachman hired ten Oxen (which were ready at hand for that Purpoſe) to draw the Coach up the ſteep Hills, which are the common Boundaries betwixt *Auſtria* and *Stiria*. After we had travell'd for ſome Time among the Hills, we paſs'd through *Mertzſuchlag*, a ſmall City ſeated upon the River *Muercz* (where we ſaw many Mills) and afterwards through *Langenwang* and *Kriegla*, each of which have a Caſtle built on Hills. We croſs'd the River near the laſt, and paſſing through a pleaſant Valley ſurrounded with woody Mountains, lodged that Night at the Village of *Kimberg*, ſix long *German* Leagues from *Glocknitz*.

The 27th, We continued our Journey through the ſame Valley, through the Valley of *Kapſuberg*, in Sight of ſeveral Villages, Caſtles, and Country-Seats upon the Sides of the Hills, and at three Leagues End came to the City call'd *Pruck en der Mure*, i. e. *Pons Muræ*, a neat Place, defended by a Wall, having a ſpacious Market-place: The Inhabitants are moſtly concerned in Iron-work Here we paſs'd the River *Mure* twice, and after we had left *Lewben*, paſs'd over a Hill, and ſo following the Courſe of the River among the Mountains, lodged that Night at the Village called St. *Michael*. Here it was we ſaw many Men and Women with large Tumours hanging down under their Chins and Throats, ſome of which were ſingle, ſome double, call'd in *Latin*, *Bronchocele*, and by ſome *Engliſh* the *Bavarian Pokes*. This, it ſeems, is a Diſeaſe natural, and of old belonging to the *Alpine* Inhabitants: *Quis tumidum guttur miretur in Alpibus?* Though the *Griſons* inhabiting the higheſt Parts of theſe Mountains, are either not at all, or at leaſt not near ſo much ſubject to this Evil Diſtemper. Some attribute the Source of this Evil to the Snow-water which comes from the *Alps*; others to the virulent mercurial Particles which are mix'd with theſe Waters; but as this Diſtemper is not frequent among other Nations inhabiting mountainous Countries, where the Snow lies as long as here, nay, where their Waters are nothing but melted Snow, neither among the *Hungarians* and *Tranſylvanians*, (where they abound in Minerals, and eſpecially in Mercury) we had better ſuſpend our Judgment, till ſome ingenious Phyſician, reſiding in thoſe Countries, ſhall aſſign us the true Cauſe and Cure of this Diſtemper. We alſo ſaw more Idiots and delirious Perſons here than any where elſe, which

I

I attributed chiefly to the venomous and malignant mercurial Vapours, which will, beyond all Queſtion, affect the Brains and Nerves, as is obvious in Goldſmiths, Gilders, Miners and Painters; though they generally attribute this to the Uſe of Snow-water, and of the vaſt Quantity of Cabbage, which is their daily Food here.

The 28th, We continued our Journey for three Leagues along the River *Mure* to *Knittlefield*, a ſmall City, and then paſſing through a Valley in Sight of many Noblemens Seats and Caſtles, lodged that Night at the Village of St. *Georgio*, upon the *Mure*, four Leagues from *Knittlefield*. The 29th, We continued our Journey along the River *Mure*, through the ſame Valley, as far as *Newmarket*, four Leagues from St. *Georgio*, and following the Track of another River, which near *Volcmarck* falls into the River *Drave*, we paſſed through *Freiſach*, a conſiderable City in thoſe Parts, ſeated in a little Valley betwixt high Hills, and after a League's travelling further, lodged at *Heirt* in *Carinthia*.

The 30th, For three *German* Leagues after, we travell'd ſtill through rockey Valleys as far as St. *Veit*, where the Emperor has a Mint: Three Leagues further we came to *Vilkirchen*, a Town of Note, but quite ruined by an accidental Fire three Years before. *October* the 1ſt, We paſſed over rugged Rocks, and Mountains all along the Lake *Oſtſukerſea*, at the further End of which Count *Dietrickſtein* has a ſtrong Caſtle built upon a Hill. After that, paſſing through a pleaſant Valley, we croſs'd the River *Drave*, which begins to be navigable here, and waſhes the Walls of *Villach*, a Town of Note in this Country, three Leagues from *Vilkirck*. At ſome Diſtance from *Villach*, we paſs'd the River *Guile*, which joins its Current with the *Drave*. Hence we travelled again over very rocky Mountains to *Orleſteiana*, where we lodged that Night.

October the 2d, We travell'd on for two Leagues through the Mountains to *Klein Tarvis*, and thence to the River *Timent*, which exonerates itſelf into the *Adriatick Sea*, and took up our Quarters that Night at *Pontieba*, the laſt Place in the Emperor's Territories, Part of it being ſubject to the Emperor, from whence it is called *Pontieba Imperiale*, as that Part which belongs to the *Venetians* is thence called *Pontieba Veneta*; here we were obliged to take a Bill of Health. Between this Place and *Klein Tarvis* obſerving ſeveral Herds of Goats following the Goat-herds like Dogs, it put us in Mind of what our Saviour ſays, *And he goeth before his Sheep, and they follow him, for they know his Voice*; which proves that the ſame was uſual in thoſe Days in *Judea*. *October* the 3d, we paſſed the River *Timent* by a Bridge, which here parts *Carinthia* from *Friuli*. About a *German* League thence, we came to a ſmall Fort, called *Clauſen*, where they ſtopped us till we delivered our Bill of Health. As we travell'd on along the River, we ſaw many Timber Trees floating down the Stream, which being fell'd in the *Alps*, are brought to the next Rivulet or Brook, and when the next ſtrong Rain Shower falls, forced down into the greater Rivers. We paſſed the ſame Day through *Venſonga*, a pretty little City, and lodged that Night at the Village of *Hoſpitaletto*, and ſo entred *Italy*.

The Circumſtances of this worthy Gentleman, at the Time of his going Abroad, were of a Nature that qualified him to enter into ſuch Inquiries, and to make ſuch Sort of Obſervations as are moſt worthy of a Reader's Attention, as being moſt likely to convey to him the Advantages of Travelling, without the Fatigue of it. Mr. *Ray* was in the Flower of his Age; he had reaped all the Advantages of a learned and general Education. He had ſeen the greateſt Part of his own Country before he went into foreign Parts, and the ſole Reaſon of his going thither, was, for his own Improvement. It is very natural, therefore, to expect from ſuch a Man, Remarks and Reflections, very different from thoſe of other Travellers; and the Reader will find, that his Expectations in this Reſpect are fully anſwered. All his Remarks are curious and important, moſt of his Reflections are very ſenſible and judicious; he did not dwell on the Superficies of Things, but went to the Bottom. He knew before he went Abroad, all that was worth knowing of the Countries he viſited from Books, and he made it his Buſineſs to prepare the Materials for his Inquires, before he came to the Places where they were to be made; ſo that we find him ſometimes commending and ſometimes correcting the Authors that he had read; which enable us to judge of other Books as well as his own, as it alſo enabled him to bring together, in a very narrow Compaſs, an infinite Number of curious and learned Obſervations. It is indeed true, that this gives an Air of Singularity to his Writings, which differences them extremely from moſt other Books of like Titles; but this is ſo far from being any Way prejudicial to, that in the Opinion of the beſt Judges, it adds greatly to the Merit of his Performance.

Another Advantage Mr. *Ray* had beyond moſt Travellers, which was derived from the Company in which he travelled; and in Order to place this in a proper Light, it becomes neceſſary for us to ſay ſomewhat of his Fellow-Travellers. *Francis Willoughby*, Eſq; Anceſtor to the preſent Lord *Middleton*, was a Gentleman no leſs diſtinguiſhed by his eminent Virtues and Knowledge, in all Degrees of Learning, than by his Deſcent from an ancient and honourable Family, and his Poſſeſſion of a large hereditary Eſtate. He was from his Childhood addicted to Study, and when he came to the Uſe of Reaſon was ſo great a Huſband of his Time, that he ſuffered no Opportunities of improving himſelf, to ſlip unemployed; and though he had a Tincture of moſt other Sciences, yet thoſe that were the chief Objects of his Affections were the Mathematicks and natural Philoſophy. In order to cultivate theſe, he undertook this Journey with Mr. *Ray*, in which he kept his Pencil continually in his Hand, and drew with great Exactneſs whatever offered itſelf to his View, worthy of Obſervation. His accurate Hiſtory of Birds, his noble Specimen of the Hiſtory of Fiſhes, both of which were publiſhed after his Deceaſe, by the Care of his learned Friend, are the laſting Monuments of his Fame and Learning, together with Abundance of curious and learned Eſſays, that are to be met with in the *Philoſophical Tranſactions*; and theſe will appear to us the more extraordinary, when we reflect that he died but a young Man, on the 3d of *July*, 1672, at the Age of Thirty-ſeven. As to Mr. *Skippon*, afterwards Sir *Philip Skippon*, who was alſo a Companion with Mr. *Ray* in theſe Travels, we ſhall have Occaſion to mention him more particularly, when we come to ſpeak of his Journey through *Spain*, and therefore it is only requiſite to obſerve here, that his Talents, his Induſtry, and his Accuracy, were not inferior to thoſe of his Companions; from whence we may ſafely collect, that though theſe Gentlemen had each of them his particular View, to which he chiefly attended, yet their Converſation contributed not a little to help each of their Inquiries, and enabled them to puſh their Diſcoveries much farther than they could have done, if they had travelled alone, or if they had travelled in Company, where, while ſome were engag'd in ſerious and ſolid Studies, others had purſued only ſenſual Pleaſures, or trivial Amuſements.

It muſt be acknowledged, that many Paſſages in this Section, and many more in the ſucceeding Sections, relate to Places already mentioned and deſcribed, and therefore it may ſeem ſomewhat unneceſſary, more eſpecially conſidering how much we are ſtraitned for Room, to ſuffer theſe Repetitions. But to this, ſeveral Anſwers may be made, as for Inſtance: There is ſuch a Connection runs through the whole of Mr. *Ray*'s Travels, that the Reader will very eaſily diſcern there was no Choice left for us to make, but whether we would receive or reject all; and he will certainly ſee good Reaſon to think that he had been very ill treated, if the latter had been our Reſolution. It muſt be alſo obſerved, that his Obſervations are of a very different Nature from thoſe of *Miſſon* or *Burnet*, more eſpecially as we have taken Care to leave out a few Paſſages, which it was impoſſible ſhould not be the ſame in Relations reſpecting the ſame Places; ſo that by this Means, Repetitions are for the moſt Part avoided, at the ſame Time that the Connection, neceſſary for underſtanding Mr. *Ray*'s Narrative of his Travels, is maintained throughout. *Laſtly*, it contributes not a little to the Variety and Entertainment, as well as the Utility and Inſtruction of a Work like this, to bring together as great a Diverſity of Travels as is poſſible, becauſe as the old *Proverb* ſays, *Many Men, many Minds.* One Traveller makes his Remarks in one Manner, another in another; one ſhews himſelf an Antiquary, another is an Hiſtorian, a third a Critic, a fourth a Politician, a fifth a Philoſopher; and in reading their ſeveral Remarks, we profit by them all. Beſides, it ought to be remembred, that as Travellers differ in their Notions, ſo Readers vary alſo in their Sentiments of Things. Such as have a View to traverſe theſe Countries themſelves, cannot avoid ſetting a high Value upon *Miſſon*'s Manner of Writing; ſuch as have a Taſte for Hiſtory and Politicks, muſt be charmed with *Burnet*'s Method; and thoſe again, who are in Love with philoſophick Inquiries, moral Reflections, and Diſcoveries that are uſeful to Society, will very probably prefer the Accounts given by Mr. *Ray*, to *Miſſon* and *Burnet* both. General Readers who graſp at all, will receive Satisfaction from comparing theſe different Methods, and find in Variety, what they would have miſſed, if we had given them the very beſt Relation that could have been ſelected, and that in its utmoſt Extent. It was our Buſineſs to gratify the Deſires of every Reader, and this alone is a ſufficient Apology for the Method that is here taken. A Library of Voyages and Travels implies that ſuch Method ſhould be taken, and it always has been, and ſhall be our Study to fulfil the Title of this Work, to make it as far as we can all that we have promiſed, ſo as to leave no Room for objecting, that we have been ſparing in our Pains to accompliſh what we propoſed, and to comply with the Expectations of the Publick, which in all Caſes is unjuſt, and in ours would be highly ungrateful, conſidering the kind Reception we have hitherto met with, and which as it encourages, ſo it lays us under an Obligation to uſe our Endeavours at leaſt, to deſerve it.

SECTION VI.

The TRAVELS of the Reverend Mr. JOHN RAY, through the Dominions of the State of *Venice*, *Lombardy*, *Tuſcany*, the Kingdom of *Naples*, the Iſlands of *Sicily* and *Malta*, the Eccleſiaſtical State, the Biſhoprick of *Trent*, the Country of the *Griſons*, *Switzerland*, &c.

Interſperſed throughout with Hiſtorical, Political, Philoſophical, Phyſical, and Moral Reflections, together with an Account of Abundance of Curioſities ſeen and examined in the Courſe of the Author's Voyages and Travels, and many other entertaining and inſtructive Particulars.

1. *An Introductory Account of what is to be expected from the following Section.* 2. *Obſervations on the Situation, Extent, Number of People, Revenues, &c. of* Venice. 3. *Some curious Remarks on the Government of that Republick.* 4. *Curioſities of different Kinds ſeen by the Author there, with a very diſtinct and particular Account of the Art of making* Venice *Soap.* 5. *A ſuccinct Deſcription of* Padua, *and of the Hot Baths at* Abona. 6. *An Account of* Vicenza, *and of the chief Commodities in the Country round it.* 7. *The Cave of* Cuſtoza *deſcribed, together with the Manner of making Ventiducts.* 8. *The City of* Verona, *and the Country about it deſcribed.* 9. *Some very curious Remarks on the State of* Mantua. 10. Ferrara *and* Bologna *deſcribed, with an Account of the Country and Trade.* 11. *Some Remarks on the Dutchy of* Modena, *and of the reigning Family.* 12. *The Cities of* Reggio, Parma, *and* Placentia, *deſcribed, with many uſeful Remarks.* 13. *An Account of* Breſcia, Bergamo, *and of the Country about thoſe Cities.* 14. *Remarks upon* Milan, *and the Curioſities the Author ſaw there.* 15. *A Deſcription of* Turin, *and of the Country of* Piedmont. 16. *A very large and accurate Deſcription of the City and Republick of* Genoa. 17. *The Author's Journey from thence to* Leghorn, *including a Deſcription of the principal Places in the Grand Dutchy of* Tuſcany. 18. *The Author's Voyage to* Naples, *giving an Account of that City and Kingdom.* 19. *A Deſcription of the principal Places in the Iſland of* Sicily. 20. *The Author's Voyage from thence to the Iſland of* Malta, *and a Deſcription of that Place, its principal Commodities and Manufactures.* 21. *An Account of the City of* Valetta, *of the Knights of* Malta, *together with various Remarks on the Country and Inhabitants.* 22. *The Author's Return to, and farther Obſervations in, the Iſland of* Sicily. 23. *His Voyage from thence to* Naples, *with ſome curious Remarks on the different Provinces of that Kingdom through which he paſſed.* 24. *A Deſcription of* Florence, *with ſome hiſtorical Notes as to the Family, Power, and Revenues of the Grand Dukes of* Tuſcany. 25. *The Author's Journey from* Florence *to* Rome. 26. *His Obſervations on the principal Edifices in that famous Capital.* 27. *A ſuccinct Deſcription of the Place, and of the Country adjacent.* 28. *The Author's Journey from thence to* Ancona, *with Remarks upon ſuch Places as he paſſed through in his Way.* 29. *An Account of his Journey continued from* Ancona *to* Trent. 30. *A Deſcription of that City, with the Copy of a remarkable Inſcription relating to the laſt General Council held there.* 31. *Several Remarks of our Author on the Country, Produce, and Manufactures of* Italy, *and on the Diſpoſition, Manners and Cuſtoms of its Inhabitants.* 32. *Obſervation on the* Swiſs-Cantons, *and on the City of* Geneva. 33. *Concluſion of this Section, and Remarks.*

1. THE Deſign of this Section is to extract ſo much of Mr. *Ray's* Travels through *Italy*, as may inform the Reader, in many Particulars, that were either omitted by, or did not occur to the Authors whoſe Works have been already inſerted, as alſo to enlarge the Accounts already given, with the Deſcriptions of the Kingdoms of *Naples*, the Iſlands of *Sicily* and *Malta*, and many other Places thro' which he paſſed, and which were not mentioned by the former Writers. The Reader will alſo obſerve, that in regard to the Curioſities of Art and Nature which are mentioned in theſe Travels, they are more cloſely and thoroughly examined than in thoſe of *Miſſon*, *Burnet*, or indeed any other; becauſe they were what theſe Gentlemen particularly ſought after, and perfectly underſtood; neither may it be improper to take Notice, that in Conſequence of many uſeful Diſcoveries made by them in their Travels, and communicated to their Countrymen after their Return, ſeveral uſeful Trades were ſet up, and new Manufactures introduced in this Kingdom. It were to be wiſhed, that the ſame beneficent and publick Spirit was more common among modern Travellers, and that they would accuſtom themſelves to think of bringing Home ſome valuable Invention, in Return for great Sums of Money ſpent in their Travels, and which muſt be conſidered as intirely thrown away, by ſuch as carry their Views no higher than bare Amuſement. But let us now return to our Author, and continue the Story of his Travels as near as may be in his own Words.

October 4. Quitting the Mountains, we entered the Plains of *Friuli*, paſſing by *Limonia*, ſituated at the Foot of the Mountains, and ſome Leagues further through St. *Daniele*; after which we forded the River *Timent* in ſeveral Places, though in Time of Rain, or when the melted Snow comes down from the Mountains, it is of a conſiderable Breadth. The firſt Time we paſſed the River we came to *Spilemberg*, ſeated upon a Cliff, where we ſaw Cloiſters under the Houſes on both Sides of the Streets (a Thing common in *Lombardy*) and after ten *Italian* Miles travelling, took up our Lodgings in the Village of St. *Avogio*.

October 5. We travelled for ten Miles to a walled Town called *Saribe*, encompaſſed by the River *Livenza*, which divides itſelf into two Branches. We travelled for two *German* Leagues, and lodged at *Conegliano*, a ſmall City, ſeated on a Ridge of a Hill. Whilſt we travelled in *Italy*, we met rarely with any wheaten Bread, that which we uſed being made of *Sorghum*, a certain Grain, the Blade of which grows ſeven or eight Feet high, of the Thickneſs of a Finger, bearing a large Panicle on the Top, the Seed being bigger than Wheat, of a duſky Colour.

October 6. A *German* League from hence we ferried over the River *Anaxus* (*Piave*) and ten *Italian* Miles further came to the large and famous City of *Treviſo*, the Capital of the Province called *Marca Treviſana*. Hence we continued our Journey through a fertile Country to *Meſtre*, a ſmall Place ſeated near the *Lagunes*, or Flats about *Venice*, which are dry at low, but covered with Water at high Tide. From whence we paſſed in a Boat to *Venice*. Throughout the greateſt Part of *Friuli*, the *Marca Treviſana*, and *Lombardy*, we ſaw the Corn-fields planted with Trees as thick as our Orchards, againſt each Tree a Vine, the Branches of which draw from Tree to Tree in Rows, and make a Kind of a Hedge; their Soil being ſo rich, that it ſuffices for the Production of Corn and Grapes, the Trees not giving the leaſt Hindrance to the Corn, either by their Droppings or Shadow, becauſe little Rain falls here in the Summer, and the Leaves keep off the ſcorching Heat of the Sun, which notwithſtanding this ſuffices to bring it to Maturity. This Part of *Italy* has for its Beauty and amazing Fertility, juſtly deſerved the Name of the *Garden* of *Europe*.

2. The famous City of *Venice* is built upon ſeveral little Iſlands in the Middle of Shallows, ſurrounded by the Sea, called by them *Lagunes*. Theſe *Lagunes* are ſeparated from the Gulph of *Venice* by a certain Landbank (which they call the *Lido*) about thirty eight or forty Miles in Extent, and reſembling the Space contained in a bent Bow, ſuppoſing the firſt to be the Continent, and the String the *Lido*. *Venice* itſelf is at an equal Diſtance of five Miles from each: The *Lido* ſerves as a Fence againſt the Violence of the Sea, and has ſeven Inlets or ſmall Harbours, two only being capable of receiving Veſſels of any great Burthen, *viz.* Thoſe of *Malamocco* and *Lio*. Not far from the *Lagunes* moſt of the conſiderable Rivers of *Italy* diſcharge themſelves into the Gulph, viz. *Padus* the *Po*, *Atheſis* or *Adige*, *Meduacus major* or *Brenta*, *Meduacus minor* or *Bacchilione*, *Tiliaventum* or *Tajamento*, *Liquentia* or *Livenza*, *Silis* or *Sile*, *Anaſſus* or *Piave*; and theſe carrying along with them a vaſt Quantity of Earth, may in Time fill up the *Lagune*; for *Gianotti* tells us, that in ancient Times the City of *Venice* was ten Miles from the Continent *Oriago* (*Ora lacus*) then lying upon the Shoar of the *Lagune*, which is now five Miles from *Fuſina*, where they take Boat for *Venice*. The firſt Origin of *Venice* may be traced as far as the Irruption of the *Huns* into *Italy*, under *Attila*, when many of the beſt Families fled for Shelter into theſe Iſlands, and at laſt erected here a noble City. Certain it is, that this City has maintained its Sovereignty theſe 1200 Years, though it be not ſtrengthened by any Fortification, but what the Sea affords it, no great Ships being able to approach nearer than the Harbour of *Malamocco*; thoſe Inlets where ſmall Veſſels may paſs, being defended by ſtrong Forts; beſides, the Channels are ſo difficult to paſs, that none but their own Pilots dare venture to navigate through them. The Circumference of *Venice* (taking in the *Giudecha*) is of about eight *Italian* Miles, being divided into two Parts by the *grand Canal*, which paſſes through the Middle of it in the Form of the Letter S. Each Side is ſubdivided into three Wards, called by them *Seſtieri*, viz. *Caſtello*, St. *Marco*, and *Canarejo*, on one Side, and *San Paolo*, *Santa Croce* and *Dorſo duro* on the other Side. In the whole it contains 70 or 72 Pariſhes, and 67 Convents, according to a Survey taken in the Year 1581, according to which there were then in the City, of Noblemen 1843, Women 1659, Boys 1420, Girls 1230: Of common Citizens, Men 2117, Women 1936, Boys 1708, Girls, 1418: Servants, 3732, Maids 5753: Of Artiſans, Men 32887, Women 31617, Boys 22765, Girls 18227: Of Beggars, Men 75, Women 112, Monks 945, Nuns 2508, Prieſts 516, Poor of the Hoſpital 1290, *Jews* 1043. The Sum total of which amounts to 134,871. *Sanſovino* makes the Number of Souls in his Time to have been 180,000, in which I ſuppoſe he comprehends the Suburb of *Murano* and ſome other ſmall Iſlands. Some of our modern Writers have increaſed this Number to 300,000, but without much Probability, nothing being more common than to magnify the Number of Inhabitants of great Cities; thus I have heard ſay frequently, that in *Paris* there is a Million and a half of People, whereas there is ſcarce half a Million. The whole City is divided into many Iſlands, by ſmall Channels, thro' which you convey yourſelf and Goods by Boats from one Place to another, there being no Uſe of Carts, Horſes, Coaches, Litters, or Aſſes, except that they employ now and then Porters in the Alleys, which run acroſs the City for the Paſſage on Foot, for Conveniency of which 450 Bridges are built croſs the Channels of one Arch each, and moſt of Stone. The Bridge called *Ponte di Rialto*, built over the *grand Canal*, excels all the reſt. The Number of Boats for the Convenience of Carriage in the Canal, ſome make amount to 10,000, ſome ſwell them to 12,000, ſome to 15,000. The Buildings here are generally lofty and beautiful, eſpecially thoſe along the *grand Canal*, and the Noblemen's Palaces, which though not very ſpacious, yet are very handſomely contrived; they all ſtand upon Piles of Wood, like the Houſes of *Amſterdam*. The Arſenal of *Venice* has above two Miles in Circumference, containing a great Store of all Manner of warlike Proviſions, 20000 Pieces of great and ſmall Cannon, and Arms for 250,000 Men. Here they build and lay up their Galleys (of which, as they ſay, they have 200)

and among the reſt the *Bucentaure*, in which the Duke of *Venice* every Year eſpouſes the Sea at three Mile Diſtance from the City, by caſting into it a Ring, with theſe Words, *I eſpouſe thee in Token of perpetual Dominion.* In this Arſenal are maintained at the Charge of the Publick, 1550 Workmen of all Sorts, ſuch as Shipwrights, Carpenters, Smiths, *&c.*

This City, according to its Epithet, *Venice the Rich*, once ſurpaſſed in Wealth all the Cities of *Europe*, till the Paſſage to the *Eaſt Indies* by the Cape of *Good Hope* was diſcovered, at which Time they were not the ſole Maſters of the *Eaſt India* Trade only, but were alſo in Poſſeſſion of all *Lombardy* and *Friuli*, of *Iſtria* and *Dalmatia*, on the Continent, beſides the Iſles of *Cyprus* and *Candia, Zant, Cephalonia, Corfu*, and ſeveral other Iſles in the *Archipelago:* But ſince the Loſs of that Trade, and their heavy Wars with the *Turks*, (in which they loſt *Cyprus* and *Candia*) their publick Treaſure has been much exhauſted, yet the Inhabitants, who have never been ſubject to any Ravages or Change of Government, are very rich, and the Government remains ſtill in Poſſeſſion of the following Dominions, *viz.* 1. The *Dogado*, in which is the City of *Venice.* 2. The City and Territories of *Padua.* 3. Of *Vicenza.* 4. Of *Verona.* 5. Of *Breſcia.* 6. Of *Bergamo.* 7. Of *Crema.* 8. *Marca Trevisana*, under which are comprehended the Territories and Cities of *Feltre* and *Belluno.* 9. *Friuli.* 10. *Iſtria.* 11. The Territory of *Rovigo*, formerly belonging to the Duke of *Ferrara*; the whole extending 250 Miles in Length, and 125 in Breadth. Out of *Italy* they are poſſeſſed of Part of *Dalmatia*, the Iſlands of *Zant, Cephalonia*, and *Corfu*, beſides others of leſs Note. We were credibly informed that the ordinary annual Revenue of the whole Republick amounted to 5,320,000 *Venetian* Ducats, one of their Ducats being ſomewhat leſs than a *French* Crown: Of which *Venice* produces 1,400,000 yearly, *Breſcia* 1,000,000, *Bergamo* 140,000, *Padua* 140,000, *Vicenza* 200,000, *Verona* 230,000, *Bergamo* 140,000, *Crema* 100,000, *Rovigo* 70,000, *Iſtria* 150,000, *Il Friuli* 100,000, *La Marca Trevisana*, 190,000, *Gli ſtati di Mare* 450,000, *La Zecca* 150,000.

Venice abounds in Proviſions of all Sorts, eſpecially Fiſh and Water fowl, and excepting freſh Water, which muſt be brought from the Land, and their Rain Water they preſerve in Ciſterns. The Air of *Venice* is very ſharp in Winter by its Vicinity to the *Alps*. This City is famous for the beſt Treacle, for Paper, Turpentine, Needle-work Laces, Soap, and above all, for the beſt Drinking and Looking-glaſſes; theſe are made at *Murano*, a Town of three Miles in Circuit, in an Iſle about a Mile diſtant from *Venice*.

Women of any Faſhion are kept in great Reſtraint here, ſeldom appearing Abroad, except it be at Church, when they are ſure to have an old Woman for their Guardian. Their Daughters are put at ſeven or eight Years of Age into ſome Nunnery, where they are educated, and ſeldom ſtir from thence till they are married.

3. The Government is *Ariſtocratical* in reſpect to the whole, the common People have not the leaſt Share in the Government, but in Reference to the Nobility may be called *Democratical*, every one pretending to his Share in it, the *Doge* or *Duke* being no more than an empty Title, without any princely Authority. The whole Adminiſtration of the Government is in the Great Council, the Senate, or Council of *Pregadi*, the College, the Council of Ten, and the *Signioria*; beſides ſeveral other Magiſtrates for the Adminiſtration of Juſtice; all which, together with their Method of chuſing by Lot, and other Ways of tranſacting publick Affairs, are particularly deſcribed by *Contarini*, *Giarotti*, and *Sanſovinus*. The Procurators of St. *Mark*, though not to be numbered among thoſe who have the Adminiſtration of the Republick, yet are in great Reputation in this City, this Dignity continuing for Life, and ſince its firſt Eſtabliſhment, there having been but few Dukes who were not firſt Procurators of St. *Mark*. In ancient Times there was but one Procurator of St. *Mark*, whoſe Buſineſs was to provide for the Church of St. *Mark*, and the Treaſure belonging to it, which increaſing by Degrees, one more was added, and *A. D.* 1270, a third, and not long after a fourth, till their Number was increaſed to ſix, and afterwards in 1423 to nine, and in 1509 to fifteen.

4. Here we ſaw, firſt, the little *Diabolus in Carcere*, as ſome call it, being no more than an *Icuncula*, or Glaſs Bubble, put into a Cylindrical Glaſs Tube full of Water, the Bubble having, in the heavier End of it, a little Hole of ſuch a Poiſe, as juſt to keep it ſwimming upon the Water; the Glaſs Tube being ſtopt at one End, they clap their Hand to the Mouth of the Tube, and ſo preſſing down the Air upon the Superficies of the Water, the ſame preſſes upon the Air in the Bubble, which giving Way, makes Room for the Water to enter through the Hole in the Bubble, which becoming heavier, ſinks to the Bottom, but upon the Removal of the Hand, the Air in the Bubble, by its elaſtick Power expanding itſelf, forces out the Water, and aſcends again; ſo, that in proportioning the Force, they can make it deſcend or aſcend, as much or as little as they pleaſe. For the further Elucidation of which, I refer to Dr. *Cornelius* of *Naples Progymnaſmata Phyſica*, in his Epiſtle *de Circumpulſione Platonica*. Among other Curioſities, we ſaw here a Boy, who by bending his Head betwixt his Legs to the Ground, charged his Belly with Wind, and afterwards diſcharged it at Pleaſure. A certain noble *Venetian* alſo ſhewed us a fulminating Powder, not much inferior to the *Aurum fulminans*, of which he gave us the following Receipt. ℞. *Salt of Tartar* one *Part*, *of common Brimſtone* two *Parts*, and *Saltpetre* three *Parts*, *beat them fine and mix them well:* This Powder put into an Iron Veſſel or Pan, and held over the Fire, as ſoon as it melts, will explode with almoſt as much Noiſe as the fulminating Powder of Gold.

The ſame Gentleman introduced us to a Place where we ſaw the whole Proceſs of making *Venice* Soap, which is accounted as good as *Caſtile* Soap. The whole Compoſition is made of Oil of Olives, and a certain Lye; the laſt they make thus: Take of the Aſhes of the Herb *Kali*, known in *England* by the Name of *Beriglia*, two thirds; of *Kelp*, i. e. the Aſhes of the ordinary Sea-wrack, one third; theſe beaten with a Mallet into ſmall Pieces, and well mingled, are ground to a Powder in a Mill, not unlike our Cyder Mills, and being ſifted afterwards, they mix ſome ſlacked Lime with the Powder, and make it up into Pellets, which they put into Troughs, and pouring Sea-water upon it, (freſh Water would do as well) makes the *Lixivium* or Lye. The Cauldrons wherein they boil their Soap are very large, the Bottoms of Copper, but the Side made of Stone, bound about with Iron Hoops, and encloſed in a wooden Caſe. One third Part of thoſe Cauldrons they fill with Oil, and the remaining Part with the Lye, then putting Fire under it, let it boil continually till the Oil be all boiled away, ſtill filling up the Defect of the Lye as it boils away; by which Means Part of the Oil, uniting itſelf with the Salt of the Lye, riſes up to the Top in Form of a Scum, which condenſing by the Coolneſs of the Air, produces that which we call Soap. The Trial they make of the Strength of the *Lixivium* is, when an Egg will ſwim in it. The Cruſt or Soap they take from the Surface of the Liquor, they ſpread upon a Floor, whereon Lime Duſt is ſtrewed (to hinder the Soap from ſticking to it) then ſmooth it, and let it dry in a Bed of about the Thickneſs of a good Brick. This, when dried, they cut in leſſer Pieces, and having cleanſed them by paring the adhering Impurities, ſeal them with a Seal.

N. B. That *Beriglia* alone would make the Soap too ſoft, as the *Kelp* alone would render it too brittle. The green Colour (of which the *Germans* are very fond) is given by putting a certain Quantity of Juice of Beet into the Cauldron, with the Oil and Lye.

5. *Padua*, watered by the two Rivers *Brenta* and *Bacchilio*, is of great Antiquity, and if we credit *Livy*, who was born here, owes its Foundation to *Antenor*, after the Deſtruction of *Troy*, which is alſo confirmed, not only by *Virgil*, but alſo by *Martial*, when he addreſſes himſelf to *Valerius Flaccus*, a Poet, and Native of *Padua*, in theſe Words, *Antenorei ſpes & alumne laris.* Notwithſtanding which, ſome will have the City of *Altinum*

Altinum to be founded by *Antenor*, and *Padua* by *Patavius*, a King of *Veneti*. This City, after having borne its Share in the Devaſtations made by the *Huns* and *Lombards*, and having obtained its Liberty under the Emperor *Otho* I. was governed by its own Magiſtrates, till *Ezzellinus* the Tyrant, and not many Years after the *Carrareſi* lorded it over them, and at laſt, in 1405, fell under the *Venetian* Juriſdiction. It is ſurrounded by two Walls, the firſt is called to this Day *Antenor*'s Wall, though of a far later Structure, being about three Miles in Circumference, the outward comprehending, with all its Fortifications and Ditches, a Compaſs of ſix Miles, built by the *Venetians*, at the Time of the League of *Cambray*, as may be ſeen by the *Latin* Inſcription over the Gate of *All-Saints*. *Hanc antiquiſſimam Urbem literarum omnium Aſylum cujus agrum fertilitatis ſemen natura eſſe voluit*, Antenor *condidit: Senatus autem* Venetus *his belli propugnaculis ornavit*, Leonardo Lauredano *Duce* Venetorum *invictiſſimo, cujus Principatus varias Fortunæ vices excipiens quam glorioſe ſuperavit.*

However, this City is neither rich nor populous, in any Proportion to its Bigneſs, containing, according to my Opinion, not above thirty thouſand Souls, though ſome ſay, thirty eight thouſand. There is a large and fertile Plain belonging to this City, ſo that their Bread is both very cheap and good, according to the *Italian* Proverb, that *Bread of* Padua, *Wine of* Vicenza, *Tripe of* Treviſo, and *Courtezans of* Venice, *are the beſt in their Kind*. No Trees are allowed to be planted within a Mile of its Fortifications, the Ground which they call the *Waſte*, being preſerved for Corn; for as there is little Ground near this Place for Paſturage, Milk is exceſſive dear here. For the Uſe of the Poor, they make Bread of *Indian* Wheat, and of *Sorgum*.

It has ſeveral goodly publick Structures, as, 1. The *Palazzo della Raggeohe*, or Town-hall, where the Courts of Juſtice are kept, being two hundred and fifty-ſix Feet long, and eighty-ſix broad, unto which you aſcend by many Steps, having Shops underneath it; ſome will have this to be the largeſt Room in *Europe*, though, according to our Eye-ſight, we thought it not quite ſo big as *Weſtminſter-Hall*. 2. The publick Schools. 3. The Church of St. *Anthony*. 4 The Church of St. *Juſtina*, with the Convent of *Benedictines*. 5. The Palace of the *Arena* or Amphitheatre. 6. The Magazine of Corn and Ammunition. 7. The *Ponte Molino*, where there are about thirty Mills together upon the River *Brenta*. 8. The Palace of the *Capitaneo*. 9. *Antenor*'s Tomb, as they would make us believe, for the particular Deſcription of which, I refer to *Schottus* and others. There is one remarkable Building here near the *Domo*, called *Mons Pietatis*, where they tell you a Stock of Money of forty thouſand Crowns is kept for the Uſe of ſuch poor People as have Occaſion to borrow upon Pawns, for which, if the Sum be ſmall, they pay no Intereſt, if it be conſiderable, they allow only five *per Cent.* which defrays the Charges of the Clerks, and other Attendance, the Overplus, if any, being diſtributed among the Poor, the Bank always remaining entire. The like Foundations are in many other Cities of *Italy*.

But what renders this City moſt famous is its Univerſity, which acknowledges the Emperor *Frederick* II. for its Founder, *Anno* 1220, for a compleat Account of which, I will recommend the *Gymnaſium Patavinum* of *Thomaſinus*. Such is the outrageous Temper of the Students here, that no Inhabitant or Stranger dare appear in the Streets in the Night-time, which if they happen to do, and meet with a Troop of thoſe Nocturnal Vagabonds, they cry to them, Who goes there? and if they anſwer, they bid them turn back, which if they do not inſtantly, they muſt expect to be ſaluted with their Piſtols they carry with them; nay, nothing is more common, than if two Parties of thoſe Students happen to meet, they retire behind the Poſts of the Portico's or Cloiſters, which are on both Sides, and ſo let fly one at another.

The Phyſick Garden is well ſtored with Simples, but its Fame is chiefly owing to thoſe excellent Men which have had the Management of it, as *Aloyſius Mundella*, *Aloyſius Anguillara*, *Melchior Guilandinus*, *Jacobus Antonius Cortuſus*, *Proſper Alpinus*, and *Joannes Veſlingius*.

The Government of *Padua* is adminiſtered by a *Podeſta* or Major, and a *Capitanno*, the firſt for Civil, the ſecond for Military Affairs. They are both ſent by the *Venetians*.

6. From *Padua* we took a Turn to *Albano*, anciently *Apona*, five Miles hence, to view the hot Springs there, which ariſing in a rocky Hillock, conſiſting of a porous Stone, furniſh ſuch Plenty of Water, that one of them drives an overſhot Mill; and by the Poroſity of the Rock and the Salt it contains, waſhes off certain ſmall Particles of the Stone, which by Degrees it lets fall again, and precipitates to the Bottom of the Channels through which it runs, ſo that they pick Abundance of Stone of a dark grey Colour off the Mill wheel every Month. The Water is ſo hot, that in one of thoſe Springs the Inhabitants ſcald their Hogs to get off the Hair, being full of white Salt, which coagulates upon the Surface of the Water. The Waters of *Albano* are uſed only for Bathing.

February 3. We continued our Journey to *Vicenza*, a City not quite ſo big, but more populous than *Padua*, its Compaſs being no more than four Miles, but containing between thirty and forty thouſand Souls. It is ſeated upon the River *Bacchilio*, and watered by the *Rero* or *Eretenus*, as alſo by two Rivulets called *Aſtichello* and *Seriola*, but is of no great Strength, being ſurrounded only by a Brick Wall. It is inhabited by Nobility and Gentry, of which there are ſaid to be above two hundred Families here. I will not pretend to give an exact Account of the ſeveral Changes of their Government, referring myſelf as to this Point to *Schottus* and *Leander Albertus*. I will only add, that after they had recovered their Liberty, they ſubmitted voluntarily to the Protection of the *Venetians*, which is the Reaſon they enjoy greater Privileges than any of the neighbouring Cities. The Theatre of the Academy, called the *Olympic*, is a very neat Structure, the Inhabitants live chiefly by Silk-worms, and winding, twiſting, and dying of Silks. Their Wines hereabouts are both rich and agreeable, eſpecially what they call *Dolce & Piccante*.

7. Hence we travelled ſix Miles to the famous Cave of *Cuſtoza*, being ſix hundred and fifty Perches, or four thouſand Feet long, and four hundred and ninety Perches, or three thouſand Feet broad, and about three Miles in Circumference. The whole ſeems to be nothing elſe but a Cave left from the digging of Stones, as *Triſſinus* has very well obſerved, it being certain, that the ancient Buildings of *Padua* and *Vicenza* are of the ſame Stone, and the Roof of this Cave is at Diſtances, ſometimes greater, and ſometimes leſſer, ſupported by above one thouſand huge Pillars of the Quarry, of three Perches ſquare; beſides, that to this Day, you ſee great ſquare Pieces of Stone cut round about, and the Tracks of Cart-wheels, whereas there has been no Cart there in the Memory of Man. We ſaw great Numbers of Bats clinging to the Roof and Sides of the Cave, and ſome ſtanding Waters, with a Kind of Fiſh, or rather Inſect, in them, called by them *Squillæ Venetianæ*, though they properly were the ſame called by the Naturaliſts *Pulices marini*, or *aquatici*, i. e. *Sea-flees*, or *Water-flees*.

In the ſame Village we had alſo a Sight of the famous Ventiduct belonging to a Nobleman of *Vicenza*, contrived for the Coolneſs of his Palace during the Heat of the Summer: To effect which, Channels are cut thro' the Rocks, from a ſpacious high-roofed Grotto to the Palace, ſo that when they intend to let in the cool Air, they ſhut up the Gate at the Cave, and by opening a Door at the End of the Channel, convey the *Freſco* into the Rooms of the Palace, each of which has a Conduit or Hole to receive it.

8. From *Vicenza* we went to *Verona*, ſeated upon the River *Atheſis* or *Adige*, which being very broad here, has a Stone Bridge built over it, reckoned among the faireſt of *Europe*, beſides three leſſer ones. Its Circumference (without the Suburbs) is ſeven Miles, and is very populous and ſtrong both by Nature and Art, being defended by good Baſtions, Towers, and deep Ditches water'd by the *Adige*, beſides which, it is ſtrength-

ned by three Forts. We ſaw here, among other Things, the Collection of Rarities of an Apothecary, one *Mepheus Cuſanus*, conſiſting of many *Egyptian* Idols, petrified Shells, Coins and Medals, and among the laſt, a *Maximilian* and *Diocleſian*, with this Inſcription on the Reverſe, *Veronæ Amphitheatrum.*

Another we ſaw of *Muſcardo*, a Gentleman of *Verona*, who had Abundance of Lachrymal Urns and Lamps, Shells and Fruits petrified, Ores and Gems, but eſpecially of *Roman* Medals, among which he ſhewed us an *Otho* of Gold, telling us at the ſame Time, that thoſe of Braſs were all ſpurious. But a Deſcription of this Collection being already publiſhed in *Italian*, I will not inſiſt upon the further Particulars thereof, or of the *Muſæum* of *Mario Sala*, an Apothecary here, which contains only certain Remnants of the Collection of *Calceolarius*, publiſhed long ago.

The Amphitheatre of *Verona* is a Structure worth a curious Traveller's Obſervation, being both ſtately and ſpacious, and in outward Appearance, not inferior for Beauty or Capaciouſneſs to that of *Titus* at *Rome*. Of the outward Wall is left only a ſmall Piece, from whence you may make an Eſtimate of the whole. But the Remainder of the other Buildings is kept in very good Repair; the *Arena* being thirty-four Perches (each of which is ſomething more than ſix Feet) long, and twenty-two and an half broad, ſurrounded by forty-two Rows of Stone Benches, raiſed above one another in the Nature of Steps, capable of containing twenty-three thouſand Perſons. For the more ample Deſcription of which, I will refer myſelf to *Schottus*, *Torellus Sariana*, and *Lipſius*. This City, as well as *Padua* and *Vicenza*, after many Changes of Government, was at laſt forced to ſubmit to the *Venetians*. Here are excellent White-wines, eſpecially that they call *Garganico*. The Air is very ſerene and healthy, but ſharp in the Winter, from the Vicinity of the Mountains, among which *Baldus* has got the greateſt Reputation, not ſo much for the Variety of the Simples that grow there (for the *Alps* are not inferior in that Point) but chiefly by the Induſtry of the *Paduan* Herbaliſts, who, but eſpecially *John Pona*, an Apothecary here, have, in Reſpect to them, obliged the World with a perfect Catalogue. Near *Verona* is the Lake *Lago di Garda*, (*Bacus Lenacus*) which affords great Quantities of Fiſh, but eſpecially Trouts, ſome of which were a Foot long.

9. We travelled from *Verona* to *Mantua*, *February* the 9th, being twenty-four Miles, through ſeveral good Villages, but not any Towns of Note. Six Miles on this Side of *Mantua*, we ſaw the Duke's Palace at *Marmirola*, a neat Structure, and well furniſhed with Pictures, and adorned with Statues: This City itſelf is very ancient, and ſtrong by Situation, being ſeated in the Middle of a Lake, and well fortified. It is about four Miles in Extent, but not populous in Proportion, containing ſcarce fifty thouſand Souls; it has no leſs than eight Gates. A little Way from this City is a Country Seat belonging to the Duke called *Pelazzo del Te*, wherein you ſee a ſquare Room, the Roof arched in the Nature of a Cupola, called the *Giants-hall*, in which, if two Perſons ſtand in the oppoſite Corners, one having his Ear to the Wall, may hear what the other whiſpers, with his Face to the Corner; which he that ſtands in the Middle, or in the Corner of the ſame Side of the Room, ſhall not. They told us the Duke of *Parma* had ſuch another Contrivance in his Palace of *Caprarola*, but our Whiſpering-place in the Cathedral of *Glouceſter*, is of a different Nature. *Virgil*, the great *Latin* Poet, was born at *Andes* (now *Petula*) a Village near *Mantua*. Here are two Academies of *Virtuoſi*, called the *Acceſi* and *Timidi*. This City, after many Changes of Government, was at laſt brought under Subjection in 1328, by *Lewis Gonzaga*, by the Favour of the common People, from whom the preſent Dukes deſcended, this Title being conferred upon *Frederick Gonzaga* in 1530, by the Emperor *Sigiſmund* IV. The Revenue of the Duke is about 400,000 Crowns a Year; but as the Expences of the Dukes have exceeded their Incomes, they are much indebted to the *Venetians*. The common People have this peculiar Cuſtom, that their Children have an equal Share in their Parents Eſtates, eſpecially ſuch as are perſonal: A Widow, after the Death of her Huſband, takes her Dowry back; but if ſhe dies firſt, the ſame is divided Share and Share alike among her Children: If ſhe dies without Iſſue, one half of her Dowry falls to her Huſband, the other to her next Kin. If a Woman has Children by a former Huſband, and marries another, and has likewiſe Children by him, one half of her Dowry goes to the Children of the firſt Marriage, the other to thoſe of the ſecond.

Taking Boat here for *Ferrara*, we paſſed by the Way of the Lake into the Channel of the River *Mincio*, which coming out of the *Lago di Garda*, near a ſtrong Fort of the *Venetians* called *Peſchiera*, and coming to *Mantua*, ſpreads itſelf into a Lake of five Miles in Length, and at ſixteen Miles End, coming to a Bridge and Sluice at a Place called *Governo*, entered the River *Po*, and paſſing down the Stream, came by *Oſtia*, ten Miles from *Governo*, and ten Miles farther by *Maſſa*, both on the Left-hand, and ſeven Miles lower to *Stellata*, a large Village belonging to the Pope: Eight Miles lower we came to *Il Ponte*, where leaving the *Po*, we paſſed through an artificial Channel of four Miles long to the very Gates of *Ferrara*, a City conſiderable both for its Bigneſs and Strength, it being reputed, for its Bigneſs, the ſtrongeſt in all *Italy*, being not only defended by ſtrong Fortifications, and a deep Ditch, but ſeated alſo in a fenny Plain. It was formerly under the Dominion of its own Dukes, but now under the papal Juriſdiction. From hence we went by Boats towards *Bologna*, and having ſhifted our Boat ſeventeen Miles from *Ferrara*, at a Place called *Mal Albergo*, reached another Channel, *viz. Rhenus Bononienſis*, and paſſing through nine Locks, arrived at *Bologna*, diſtant by Water from *Ferrara* forty-five Miles, the greateſt Part of the Country between thoſe two Places being fenny, not unlike the Iſle of *Ely* in *England*.

The City of *Bologna* itſelf is ſeven or eight Miles in Circumference, of a rotund Figure, the Houſes not very lofty, but adorned with fair Portico's, on each Side of them, to the Streets. Many of their Houſes, though not promiſing much on the Out-ſide, yet being very neat and convenient within: Its Inhabitants are computed to be eighty thouſand Souls. The Sauſages, Waſhballs, and little Dogs of *Bologna*, are famous all over *Italy* and other Parts. Their chief Trade is in Silk, and they have the moſt convenient Engines for winding and twiſting of it, that I ever ſaw. The Univerſity of *Bologna*, for its Antiquity, may compare with any in *Europe*, being chiefly famous for the Study of the Law, though it has a great Number of Profeſſors alſo in other Faculties, as may be ſeen by their annual printed Catalogue of ſuch Lectures, as each of them is to keep the following Year. Here we had the Opportunity of ſeeing the ancient Exerciſe of Tilting, ſtill practiſed here in the Carnaval Time: Thoſe who enter the Liſts are mounted on Horſe back, and armed Cap-a-pee, adorned with Plumes and Scarfs, with Lances in their Hands, with which they run at one another a full Gallop, aiming at a particular Part of the Body; he that hits neareſt to it carrying the Prize. We ſaw ſeveral Lances broken, but no body was either hurt or diſmounted.

Dr. *Ovidio Montalbano*, one of the Profeſſors here, ſhewed us the *Muſæum* of *Aldrovandus*, left as a Legacy to this City, and kept in the Cardinal Legate's Palace. What delighted us moſt, were ten Volumes of the Pictures of Plants, and ſix more of Birds, Fiſhes, and other Beaſts, drawn in Water Colours. The ſame Perſon alſo introduced us to *Jacobus Zenoni*, an Apothecary, and very curious Herbaliſt, who, among other Rarities, ſhewed us three Pieces of Rock Cryſtal, with ſome Drops of Water, encloſed in the Middle of them, as might plainly be diſcovered by the Motion of the Cryſtals.

The ſame Day we viſited the famous Chymiſt *Gioſeppi Bucemi*, who ſhewed us the Effects of the *Phoſphorus*, a Compoſition, which if expoſed for ſome time to the Air, and afterwards put in a dark Place, will appear like a burning Coal for ſome time, till by Degrees its Light ſlackens and quite vaniſhes at laſt, till expoſed again to the Air. The crude Stone which he ſhewed us was like a kind of Sparre, which, as he told us, acquired this Quality by being calcined in a ſmall Furnace, the Pieces of Stone being laid upon an Iron Grate over a Wood Fire; but whatever he told us, we could not make ſome of thoſe Stones, which he ſold us, ſhine, though we calcined them exactly according to his Directions. The *Phoſphorus* does by Degrees entirely loſe its ſhining Quality, as we found by Experience, in thoſe we brought along with us.

11. *February* 22. We continued our Journey towards *Modena*, by the Way of *Caſtel Franco*, a ſtrong Caſtle belonging to the Pope, upon the Frontiers of *Modena*, about twenty Miles diſtant from *Bologna*, a Place of no great Extent, but very populous, being the Duke's uſual Reſidence, and tolerably well fortified with a thick Wall, a broad Ditch, and ſome Outworks. In this Place, as well as *Padua*, *Bologna*, and other Places of *Lombardy*, we obſerved the Houſes well built of Brick, but not high, and the Streets cloiſtered on both Sides, which ſeems to intimate, that this was the Manner of Building of the *Goths* or *Lombards*, who ſettled in thoſe Parts. The Duke's Palace is no large Structure, but very neat within, the Rooms being richly gilt, and adorned with Hangings, and Pictures of the beſt Maſters. What moſt delighted us was the Chamber of Rarities, Jewels, ancient and modern Coins and Medals, ancient and modern Intaglia's, curious Pieces of turned Works, dried Plants paſted upon Boards whitened with Cerus; and a very fine Collection of Deſigns of the beſt Painters. We ſaw alſo a human Head petrified; a Hen's Egg, having the Figure of the Sun on one Side; Moſs included in a Piece of Cryſtal; Silver in another; and a Fly in a Piece of Amber, *&c.* The ordinary Revenues of the Duke of *Modena*, are computed at 350,000 Crowns *per Annum*, his Expences not amounting to above half the Sum. About twenty-eight Miles from *Modena*, near *Paiuli* Caſtle, iſſues out of a Mountain, a Spring of *Petroleum*; and in another Mountain called *Monte Nicani*, are found Abundance of petrified Cockles and other Shells.

12. *February* 24. We ſet out from *Modena* for *Parma*, and at ſeven Miles, having forded the River *Serchio*, and paſſed by a ſmall, but ſtrong Town called *Rubiera*, on the Left-hand, after a Journey of eight Miles further, came to the City of *Reggio*, of equal Bigneſs and Strength with *Modena*, and belonging to the ſame Duke, whoſe Title is Duke of *Modena* and *Reggio*. This laſt being built more at Length than the former, makes a fairer Shew at a Diſtance, having one long and one broad Street. Here are very good Sculptors and Artizans in carving of Ivory and Wood, for which this Town is celebrated throughout *Italy*. Ten Miles further, paſſing through a long Bridge over the River *Lenza*, we entered the Territories of *Parma*, and five Miles more, brought us to the Gates of the City of *Parma*, which exceeds *Modena* in Bigneſs, having broad Streets, but no Portico's.

February 26. In our Way to *Placenza*, we ferried at ſix Miles Diſtance from *Parma*, over the River *Taro*, and nine Miles farther, came to a Town called St. *Donin*, and eight Miles farther, came to a little Town called *Fiorenzuola*, near which, paſſing the River *Arta*, we came after twelve Miles travelling, to *Placenza*. This City is well fortified, and defended by a ſtrong Caſtle; in Bigneſs it is equal to *Parma*, but its Buildings not ſo fair. The Duke's Revenues are computed to be 400,000 Crowns *per Annum*, though ſome ſay 500,000; he being, beſides *Parma* and *Placenza*, Maſter of the Dukedom of *Caſtro*, and the Country of *Ronciglione*. The 27th, we took Horſe for *Crema*, and paſſing through *Caſtigno* in the *Milaneſe*, and two Miles further ferrying over the River *Adda*, and two Miles thence the River *Serio* (which falls into the *Adda*) we came to *Crema*, a Frontier City, belonging to the *Venetians*, about thirteen Miles from *Placenza*, of no large Extent, but well fortified; its Situation being in a Plain near the River *Serio*.

The 29th, We continued our Journey, and paſſing through *Oſanengo*, three Miles from *Crema*, and by the Caſtle of *Romanengo*, belonging to the *Spaniards*, came to *Sincin*, a conſiderable Place in the *Milaneſe*: Not far hence we ferried over the River *Oy* (*Ollius*) and two Miles further, rode cloſe by a ſmall Town called *L'orzi nuovi*, but well fortified, under the *Venetian* Juriſdiction. Two Miles further we paſſed a great Village called *L'orzi Vechii*, and ſeveral others of Note, and ſo came to *Breſcia*, which is thirty Miles from *Crema*. The Country hereabouts was well planted with Flax, very populous, and the Fields fenced with Hedges like our *Engliſh* Encloſures.

13. The City of *Breſcia* is not altogether ſo big as *Verona*, but better inhabited, its Streets being regular and ſpacious, with Bricks ſet Edgeways on both Sides (as the Cities in *Holland* are) as are alſo the Streets of *Parma*, *Placenza*, and *Crema*. It has a double Wall, the exterior of which is very ſtrong, and encompaſſed with a good Ditch, beſides a Caſtle ſtanding on a rocky Hill, which both defends and commands the Town. The Mountains hereabouts afford very good Iron and Copper Ore, and the Inhabitants are great Maſters in Iron Works, but eſpecially in making of Guns, which are in high Eſteem all over *Italy*; as is alſo the Cheeſe of *Breſcia*. As they abound in fruitful Valleys, ſo their Markets are well ſtored with Proviſions. The Territories of this City extend in Length, from *Moſo* near *Mantua* to *Dialengo*, in the upper End of *Val Canonica*, one hundred Miles, and in Breadth, from *Lago di Garda* to *L'orzi nuovi* fifty Miles, being full of Towns and large Villages. This City, like many others of *Italy*, has undergone many Changes of Government during the inteſtine Broils of the two famous Factions of the *Guelphs* and *Gibellines*; after which, it fell to the Dukes of *Milan*, till in 1426, they ſubmitted to the Protection of the *Venetians*. 'On the Sides of the Hill where the Caſtle ſtands, we found Serpent Stones, or *Cornua Ammonis*, and other petrified Shells. *March* the 2d, we continued our Journey through the Villages of *Hoſpitaletta*, *Cokai* and *Palazzuolo*, the laſt of which is ſeated upon the Banks on both Sides of the River *Ollio*.

As we were travelling on to *Bergamo*, we had a full View of the *Alps*. This City is conſiderable both for its Size and Strength, being ſituated on the Side of a Hill, encompaſſed by ſtrong Walls and a broad Ditch, but without Water: The Caſtle, though none of the biggeſt, yet is very ſtrong by Situation. Without the Walls are five large Suburbs, called St. *Leonardo*, at the Bottom of the Hill, inhabited chiefly by Merchants, the Suburbs of St. *Anthony*, St. *Catherine*, St. *Thomas*. and that of St. *Godard*. In the Church of the *Auſtin* Friers, we ſaw the Monument of *Ambroſe Calepine*, the Author of the famous Dictionary. Over his Cell in the Cloiſter was a *Latin* Inſcription, intimating, That he was a Native of *Bergamo*, and a Monk of this Convent, and that he died here, in 1511, in the 71ſt Year of his Age. This City has alſo been ſubject to Changes: They firſt ſubmitted to the *Venetians*, in 1428; but were in 1509, forced to acknowledge the Sovereignty of the *French*, after they had made themſelves Maſters of *Milan*, but theſe being expelled three Years after, it remained under the Juriſdiction of the then Duke of *Milan*, *Maximilian Sforza*, from whom it revolted ſoon after to the *Venetians*, but was forced to return to its former Obedience, till at laſt the *Venetians* got once more in Poſſeſſion of it, in 1516, and have remained Maſters of it ever ſince. They are governed by a Major, a military Commander, Chamberlain, and Governor of the Caſtle ſent hither from *Venice*. *Bergamo* is of ſo great a Reputation among the *Italians*, that by Way of Proverb they ſay, *If* Bergamo *ſtood in a Plain, it would be a fairer City than* Milan. From hence we went on Horſeback to *Canonica*, a Village ſeated upon the River *Adda*, in the *Milaneſe*, whence we went by Water to *Milan*.

14. This City, which is one of the four Cities of the firſt Rank in *Italy*, (*Rome*, *Venice*, and *Naples*, being the other three) is alſo ſirnamed *la Grande*, from its

Bigneſs, having ten Miles in Circumference, and of a circular Figure. It contains eleven Collegiate Churches, ſeventy-one Pariſhes, thirty Monaſteries for Monks, thirty-ſix for Nuns, eight of regular Canons, the Number of Inhabitants are ſaid to be 300,000, but this laſt is ſomewhat too large. Proviſions are here ſo cheap and plentiful, that the *Italians* have made it a Proverb, *That they eat well only at* Milan. The Cathedral here challenges the ſecond Place after that of St. *Peter*'s at *Rome*, both for Bigneſs and Beauty; being 250 Cubits long, and 130 broad, and of a proportionable Height; but the *Grand Hoſpital* juſtly claims the Preference before all others in *Europe*, for its magnificent Structure and Bigneſs. Among other Courts, it has a Square ſurrounded with a double Portico, one below, the other above Stairs. Its Revenues are yearly 50,000 Crowns, out of which are maintained 4000 poor and infirm Perſons. The Monaſteries and Churches here are beautified with many Pictures and Statues of the beſt Maſters, and adorned with exceſſive rich Church Ornaments, for which I will refer myſelf to *Schottus*, and others. The *Bibliotheca Ambroſiana*, founded by Cardinal *Borromeo*, is a noble Edifice, filled with excellent Books, unto which Strangers as well as the Inhabitants, have a free Acceſs. But the College called *Hermathenæum*, is a truly noble Building, the Court being adorned with a double Row of Cloiſters, one above the other, with double Pillars each; the lower of the *Ionic*, the upper of the *Tuſcan* Order.

The Citadel of *Milan*, either for its Bigneſs or Strength, may alſo compare with any in *Europe*. The ancient Caſtle has been twice enlarged, firſt by the *French*, who taking in a conſiderable Piece of Ground, encompaſſed it with a very thick and high Wall, and a deep Ditch; from hence you have a fair Proſpect of the whole City and adjacent Country, as well as thoſe Fortifications added by the *Spaniards*, being of a Pentagonal Figure, with a Baſtion at each Angle, and a Half-moon between every two Baſtions. *Schottus* ſays, that the Compaſs of the whole Fortifications (not including the Trenches) is ſixteen hundred Paces. We were told, that within the Caſtle, they have a Water-mill driven by a Spring, which ariſes within the Circumference of the Caſtle.

March 6. We ſaw the Collection of Rarities of *Manfredas Septalius*, Son to *Ludovicus Septalius*, the famous Phyſician, and among other Things, divers Looking-glaſſes, which by natural Reflection multiplied the Object almoſt infinitely. A plain Glaſs, with ſpherical Protuberances, which repreſented the Objects as often multiplied as there were Protuberances, and another Looking-glaſs of the ſame Kind; ſeveral concave Burning-glaſſes of Metal; ſeveral *Automata* and Clocks, among which, two of a cylindrical Figure, moved without Weight or Spring, only by being placed upon an inclining Plane; ſo that their Motion proceeded from their own Weight; beſides many other Curioſities both natural and artificial; for the Deſcription of which, I will refer my Reader to the Catalogue thereof, publiſhed by the Owner himſelf. There are great Artiſts in this City in working and engraving Cryſtals, and other Glaſſes and Stones. Their Way of Poliſhing is performed by a Braſs Wheel, upon which the Powder *Smiris*, mixed with Water, is put; and to ſmooth it, they uſe the Powder of *Saſſe-mort*, or Rotten-ſtone, as they call it, which is a heavy Pebble Stone, which by lying in the Water, dies by Degrees, firſt degenerating into a light Pumice, and at laſt crumbling to Duſt. They told us for a Truth, that moſt Stones, by lying long in the Water, will die in this Manner, except the clear pellucid Pebbles.

March 10. We began our Journey towards *Turin*, along the Bank of the River *Navilio*, and leaving *Biagraſſa*, a ſmall Town, to our Left, we lodged at *Buſalora*, twenty-two Miles from *Milan*. The 11th, we continued our Journey over *Novara*, a ſtrong Place belonging to the *Spaniards*, to *Vercelli*, under the Duke of *Savoy*'s Juriſdiction; a large Place, but neither ſtrong nor populous. The 12th, we travelled eighteen Miles, as far as *Sian*; and the 13th, being ſtopt by the Floods, were conſtrained to ſtay at eight Miles Length, at *Chivas*; and the 14th paſſing by many Waters, and after we had ferried over at *Orco* and *Stura*, arrived at *Turin*.

15. This City, known to the Ancients by the Name of *Auguſta Taurinorum*, and ſeated upon the River *Po*, is of no great Extent, but very populous, and the ordinary Reſidence of the Dukes of *Savoy*. The old Buildings are but very indifferent, but one new Street, and ſeveral other Houſes of late Date, are very handſome and uniform. The Piazza is in the Midſt of the Street, being a large Square, with a lofty Cloiſter on each Side: And at one End of it another Piazza, fronting the Duke's Palace, which is not yet finiſhed. The Citadel has five Baſtions. Here we met with ſome of the Proteſtants of the Valleys of *Lucern* and *Angrona*, who had lately obtained Liberty of Conſcience from the Duke. They told us, that being about fifteen thouſand Souls, they inhabited fourteen or fifteen Villages only, their fighting Men (who amounted not to above two thouſand, being divided into fourteen Companies) under as many Captains, and that they had killed above five hundred of the Duke's People in the laſt War, with the Loſs only of forty or fifty of their own. They are the only Proteſtants in *Italy*, having maintained the Purity of their Religion for above theſe twelve hundred Years. Here is alſo an Univerſity, which challenges the firſt Introduction of Printing into *Italy*. As the plain Country about *Turin* is very fruitful, ſo all Proviſions are very plentiful and cheap here; it being certain, that *Piedmont*, for Plenty of Corn, Cattle, Wine, Fruit, Hemp, and Flax, may compare with the beſt in *Italy*; and the Inhabitants apply themſelves more to Huſbandry than Traffick; which according to *Leti*'s Obſervations, makes them live generally well, though none are exceſſive rich. The Duke's Revenue, if we may believe the ſame Author, amounts to one Million eight hundred thouſand Crowns; of which *Piedmont* alone produces one Million four hundred thouſand. His Poſſeſſions in *Italy* are, beſides the Principality of *Piedmont*, the two Marquiſates of *Saluzzes* and *Aſti*, the Dukedom of *Aoſta*, and the Countries of *Nizza* and *Vercelli*. There are three very handſome Palaces belonging to the Duke near the City, called the *Venere*, *Milleſiore*, and *Valentine*. The firſt Invention of oiled Cloth is attributed to *Giaocomo Marigi*, a Citizen of *Turin*. *March* 17, having provided ourſelves with a good Guide, we ſet out from *Turin* for *Genoa*, where we arrived in three Days after. Not above a Mile below *Turin* we croſſed the *Po* (which begins to be navigable here) by a Bridge; and after a Mile's travelling along the River, we aſcended the Hills, under which the River runs, and theſe are of a very difficult Aſcent.

16. *March* 18. We proceeded on our Journey as far as *Novi*, a pretty large Town under the *Genoeſe*, twenty-ſeven *Piedmont* Miles from *Aſti*; I think they may well paſs for thirty-five *Engliſh*. About four Miles from *Aſti*, upon the Bank of the River *Tanar*, (which is there very high) and on the Sands, under the Bank, we found great Variety of petrified Shells, as Oyſters, Scallops, Cockles, *&c.* as alſo thoſe *Tubili ſtriati*, called by ſome *Antales*, which Seignior *Roſacco*, a Mountebank in *Venice*, firſt ſhewed us; *Belemnites*, and other rare Sorts of Stones. In the Corn Fields, we paſſed through, we obſerved *Ornithogalum lutem*, *C. B.* in great Plenty, now in Flower. This Day we paſſed by a large Village called *Non*, and another, which had formerly been walled, called *Felizan*, then *Alexandria*, a large Town upon the River *Tanar*, of more Strength than Beauty, the Buildings both publick and private being generally but mean. It was ſo called in Honour of Pope *Alexander* III. becauſe in his Time it was peopled by the *Milaneſe*, whoſe City was then almoſt quite deſtroyed and made deſolate by the Emperor *Frederick Barbaroſſa*, for ſiding with the Pope againſt him. The River (which ſeemed to me as large as the *Po*, at *Turin*) divides the City into two Parts, which are joined by a fair Brick Bridge. In our Paſſage through the Town, we took Notice of a triumphal Arch, erected to *Philip* IV. King of *Spain*, upon his Marriage.

19. We rode from *Novi* to *Genoa*, thirty Miles all over Mountains. About ſix Miles from *Novi*, we paſſed through a handſome little walled Town called *Gavi*, where there is a ſtrong Caſtle on a Hill over the Town; and about ſix Miles further onward, another elegant and well built Town called *Voltagio*. From hence we aſcended continually for about ſeven or eight Miles, till we came to the Top of a very high Hill, from whence we had a Proſpect of *Genoa* and the Sea. Then we deſcended conſtantly till we came to the City. In all this Way, we met with and overtook Mules and Aſſes going to and returning from *Genoa*, to the Number of five or ſix hundred or more.

March 20, We viewed *Genoa*, which for the Building of it, is certainly the moſt ſtately, and according to its Epithet, *ſuperb*, City in all *Italy*. The Houſes are generally ſtately, ſcarce a mean Houſe to be ſeen in the Town. The new Street anſwers the Fame that goeth of it. It is but ſhort, conſiſting of eight or ten Palaces built of Marble, very ſumptuous and magnificent, the meaneſt of them (as *Cluverius* ſaith) being able to receive and lodge the greateſt Prince and his Retinue. The only Deformity of this City, is the Narrowneſs of the Streets unanſwerable to the Tallneſs of the Houſes; and yet they are made ſo on Purpoſe, partly to ſave Ground, which here is precious, and partly to keep off the ſcorching Beams of the Sun in Summer-time, for the Coveniency of walking cool, for which Reaſon I have obſerved many of the ancient Towns of *Italy* and *Gallia Narbonenſis*, to have their Streets made very narrow. This City lies under the Mountains, expoſed to the South, ſo that it needs muſt be very hot in Summer, as witneſs the Orange and Olive-Trees, which grow ſo plentifully here, that they can afford thoſe Fruits at eaſy Rates, and drive therewith a great Trade; furniſhing with Oranges, *Florence* and a good Part of *Tuſcany*, and ſometimes ſending them into *England*. It is built in Form of a Theatre or Creſcent, encompaſſed with a double Wall toward the Land. The exterior or new Wall of a great Height and Thickneſs, paſſes over the Tops of Mountains, and takes in a great deal of void Ground. The famous new *Mole*, which now makes this a ſecure Harbour, is ſaid to have coſt as much as the new Wall. For a Work of that Nature, I believe it is not to be parallelled in the whole World. The Manners of the Inhabitants are not anſwerable to the Beauty of their Houſes, they being noted among their own Countrymen the *Italians*, for proud, unfaithful, revengeful, uncivil to Strangers, and horribly exacting. There goeth a Proverbial Saying of *Genoa*, that it hath *Montagne ſenza Alberi, Mare ſenza Piſce, Huomini ſenza Fede, & Donne ſenza Vergogna*; that is, *Mountains without Trees, a Sea without Fiſh, Men without Faith, and Women without Shame*. The Number of the Inhabitants muſt needs be great, they having loſt in the laſt great Plague, as we we were credibly informed, to the Number of 80,000 Souls. The chief Trade of the Town is Silks and Velvets; they make alſo pretty turned Works of Coral.

The Government of it, according to the new Laws made by the Pope's Legate, and the Emperors, and King of *Spain*'s Ambaſſadors, not long after the Time of *Andreas Doria*, is thus ſettled. There is, 1. A *Duke*, who continues in Office two Years. 2. Two *Collegia*, one of *Governatori*, as they term them, the other of *Procuratori*. The *Governatori* twelve, the *Procuratori* eight, all elected, beſides thoſe that of Courſe come in for their Lives. 3. A greater Council of 400. 4. A leſſer Council of 100. 5. A Seminary for the two *Collegia* of 120. The two *Collegia* of *Governatori* and *Procuratori* are, as it were, the chief Senate or Privy-Council, or Houſe of Lords, and are choſen twice a Year, *viz.* about the Middle of *June*, and about the Middle of *December*, after this Manner. All the *Seminarium* of 120, have their Names, together with their Surnames, and Fathers Names, written in little Scrolls of Parchment, and put into an Iron Box, which is kept very ſecurely under many Locks. When the Time of Election comes, this Box is brought forth before the Duke, the two *Collegia*, and the leſſer Council. Then a Boy, who muſt be under ten Years of Age, puts his Hand into the Box, and draws out five Scrolls, which are read, and the three firſt, if they be capable, are *Governatori*, the two laſt *Procuratori*. If a Man be an hundred Miles off the City, he is incapable of being elected for that Time. Likewiſe two of the ſame Family cannot be *Procuratori* or *Governatori* together. Therefore, if the two firſt that are drawn out, or the two ſecond be of the ſame Family, the firſt is *Governator*, and the ſecond *Procurator*; if the two laſt be of the ſame Family, the firſt drawn out is a *Procurator*, and the ſecond is returned into the Box again, and the Boy draws out another. So that every ſix Months, five are choſen into the *Collegia*, and five go out, and every one ſtays in Office two Years. In the *Collegium Procuratorum*, beſides the eight, are all thoſe who have been Dukes, and are gone out of Office, who (*modo bene ſe geſſerint*) continue *Procuratori* during their Lives. To ſupply or make up the *Seminarium* 120 every Year, in the Stead of thoſe who are dead, made incapable, or choſen into the two *Collegia*, the leſſer Council chuſes a double Number, all which muſt have three Suffrages of five; and out of theſe, the greater Council chuſe half by the major Vote. For chuſing the Councils both greater and leſſer, the leſſer Council in Preſence of the Duke, and two *Collegia*, chuſe thirty Electors, (all which muſt be of the Nobility) by three Suffrages of five. Theſe thirty chuſe both the greater and leſſer Council, but the *leſſer* out of the Number of the *greater*, by a like Proportion of Suffrages. The greater Council is aſſembled upon important Occaſions, and with the Duke and two *Collegia* make the ſupreme Power. The leſſer Council takes Care of the leſſer and ordinary Concerns of the City and Commonwealth. Thoſe who are capable of being choſen into the greater Council, muſt be twenty-five Years of Age, only the thirty Electors may, if the pleaſe, or ſee it expedient, chuſe to the Number of Sixty, who are but twenty-two Years old. Of the *leſſer Council*, the one half muſt be thirty Years of Age, the others at leaſt twenty-ſeven, excepting Doctors of Law and Phyſick, who, if they be well qualified, may be choſen two Years younger. Thoſe who are capable of being choſen into the *Seminarium* muſt be forty Years of Age.

The Choice of the Duke is in this Manner: The Great Council being aſſembled, there are put into an Urn ten Golden Balls, marked with ten ſeveral Letters; one of theſe being drawn out, is ſhewn to the Conſervators of the Laws, who thereupon put into another Urn ſtanding by the Duke's Throne, fifty Golden Balls marked with the ſame Letter, and fifty Silver Balls; theſe being ſhaken together, the leſſer Council of One hundred, excluding the two *Collegia*, draw out each Man a Ball. He that draws out a golden Ball, ſhews it to the *Cenſors* who ſit by, and preſently writes in a Scroll of Paper the Name of him whom he thinks fit to nominate for Duke, and goes out of the Council. When all the Golden Balls are drawn out, the two *Collegia* bring them into Order, and count them over, and if the Number of the Nominated amount to twenty, then they are propounded to the greater Council, who out of them, by major Vote, chuſe fifteen. Out of theſe fifteen the leſſer Council chuſe ſix by three Suffrages of five. Out of theſe ſix again, by major Vote, the greater Council chuſe the Duke. Theſe Suffrages are all occult, that is, given by putting of Balls into Ballotting Boxes. If in the greater Council for any Perſon the negative and affirmative Suffrages are equal, then five by Lot are to be put out of the Council, and the reſt to ballot again. Many other Proviſions there are in Caſe of Equality or Diſagreement, *&c.* Nothing can be propounded in *Council* but by the Duke, who, during the Time of his Regency, lives in the Palace, and hath, according to *Sanſovinus*, a Guard of five hundred *Switzers*. The Office of St. *George* is, as far as I underſtand it, nothing but a Company of Bankers, who lend Money to the Commonwealth, for which they are allowed ſo much *per Cent.* and have aſſigned to them the publick Gabels and other Revenues; and for further Security have *Corſica* engaged to them. This Company chuſe yearly out of their own Number eight Protectors, who are to take Care of, and manage the Affairs of all the Creditors. Into this Bank Strangers uſually put in Money, and ſo become of the Company, for which they receive yearly Intereſt proportionable to the Improvement made of the whole Stock of Monies then in Bank. The publick Revenue of this State is ſaid by ſome to be 1,200,000 Crowns *per Annum*, and yet ſcarce ſufficient to defray the publick Expences. There are many private Perſons here very rich. The Republick is thought to be able to raiſe an Army of 30,000 Men, and to ſet out to Sea twelve Gallies and twenty Ships of War. They hold good Correſpondence with all Chriſtian Princes and States, excepting the Duke of *Savoy*, by reaſon of his Pretence to the City of *Savona*.

17. *April* 2, We paſſed in a Boat from *Genoa* to *Porto Venere*, and thence croſſed the Bay of *Spezzia* to *Lerici*, where taking Poſt-horſes, we rode to *Sarzana*, a ſtrong Frontier Town belonging to the *Genoeſe*, and lodged that Night at *Maſſa*, a ſmall City, but dignified with the Title of a Principality, the Duke being likewiſe Lord of *Carrara*. His chief Revenues come from the Marble Quarries: He is of the *Genoeſe* Family of the *Cybo*'s.

April 3, We travelled through a boggy Valley near the Foot of the Mountains, a kind of a deſolate Country, as far as *Lucca*.

Lucca contains not above three Miles in Circuit, but very populous for its Bigneſs, the Eaſe of the Government drawing thither Abundance of People. Its Situation is very pleaſant, in a delightful Valley; and its Fortifications and Out-works ſtrong, and kept in good Repair. The Buildings are fair, and their Churches, though nor very large, yet neat and well kept. The Inhabitants, both of the City and Country, very courteous, and ſo careful to preſerve their Liberty, that they omit nothing which they think may contribute to maintain it. Their Women here are not kept ſo ſtrict as in other Parts of *Italy*, being allowed to walk Abroad with a reaſonable Share of Freedom: They are generally handſome enough, and in their Dreſs affect to follow the *French*. The Adminiſtration of the Government is by the Great Council of one hundred and ſixty, choſen every Year from among the Nobility, (the reſt having no Share therein) theſe muſt be twenty-five Years old at leaſt; nine *Antiani*, and a *Gonfaloniere*; theſe laſt are choſen a-new every two Months, and are ſtiled the *Signioria*, the *Gonfaloniere* being their Head, but no more than by his Title. The City is divided into three Wards, called *Terzieri*, each of which has its Arms or Banner, called *Gonfalone*, whence the Name *Gonfaloniere*: On the Corners of each Street theſe Arms are painted, with the Name of the Ward it belongs to, and what Bulwark they are to defend, in caſe of a ſudden Attack. The Council chuſes three *Antiani* out of each of thoſe Wards. Their Revenue is computed at 100,000 Crowns yearly. The beſt Olives in *Italy* grow hereabouts.

The City of *Piſa*, formerly a rich and populous Commonwealth, is, ſince its coming under the *Florentine* Yoke, become poor and almoſt deſolate, notwithſtanding all the Endeavours of the Great Dukes of *Florence*, who have erected an Univerſity, founded an Order of Knighthood, and built an Exchange there, for the Encouragement of the Inhabitants. Its Situation, which is in a fenny Ground, upon the River *Arno*, renders its Air very unwholſome and obnoxious to Strangers. What we thought worth our peculiar Obſervation here, were, 1. St. *Stephen*'s Church, dedicated to the Order of that Name, founded here by *Coſmo*, the firſt Great Duke of *Tuſcany*. 2. The College for Students in Law and Philoſophy (formerly the Houſe of *Bartolus*) founded by the Great Duke *Ferdinand* in 1596. 3. The Cathedral, being a moſt magnificent Structure of Marble, the Doors of Braſs, curiouſly engraven, a double Iſle on each Side of the Nave, and two Rows of Marble Pillars, beautified with ſtately Altars, and ſelect Pieces of Painting, the Sides hung with red Velvet, and the Roof richly gilded.

On each Side of the high Altar you ſee a Picture, and under each of them an Inſcription, giving a ſhort Account of two notable Adventures of this City, which are expreſſed there.

I. *Templum hoc, ut auctæ potentiæ ac religionis inſigne monumentum poſteris extaret, Piſanis ex Saracenorum ſpoliis captâ Panormo ædificatum, ac Sanctorum reliquiis è Palæſtina uſque advectis auctum*, Gelaſius II. P. M. *ſolennè pompa conſecravit*, An. Dom. M.C.XIX.

II. Paſcale II. P. M. *autore, Piſani claſſe* 300 *triremium Petro Arch. Piſ. Duce Baleares Inſulas, profligatis Saracenis in ditionem redigunt, Chriſtianòque nomini adjungunt captaque regia Conjuge ac filio præclaram victoriam illuſtri pioque triumpho exornarunt* A. D. 1115.

4. The *Baptiſterium*, in the Center of which you ſee a very noble Font of Marble, into which, like a Ciſtern, the Water runs continually; the Pulpit is alſo of Marble, with moſt curious carved Work. 5. The *Campo Santo*, or Burying-place, being an oblong Square encloſed with a broad Portico, well painted, and paved with Grave-ſtones: The Earth which makes up this Church-yard, is ſaid to be brought from the Holy Land, and to conſume Bodies in forty-eight Hours. 6. The Steeple, a round Tower, of a great Height, ſeeming to incline ſo much to one Side, as if it were ready to fall, which ſome attribute to the Contrivance of the Builder, others to a Defect in the Building. 7. The *Aquæduct*, which conveys the Water from the Mountains for five Miles into the City, by 5000 Arches, being begun by *Coſmo* and finiſhed by *Ferdinand* I. great Dukes of *Florence*: This Water for its Goodneſs, is carried in Flaſks to *Leghorn*. 8. The Phyſick-Garden, then but ſlenderly provided with Plants.

We took Boat here for *Leghorn* (the *Portus Liburnus* of the Ancients) about twelve Miles hence. This Town is not very ſtately nor large, the Houſes being but low, yet uniform, and the Streets regular, with a large Piazza in the Middle: It is ſtrongly fortified on the Land Side, and ſince the Great Duke has made it a free Port, much increaſed in Traffick and Riches: Its convenient Situation for the *Levant* Trade having drawn thither great Numbers of Strangers, and eſpecially *Jews*, of the laſt of which there are computed to be above 5000. Before it was ſo well inhabited, it was reputed a very unhealthy Place, by Reaſon of its Situation in a fenny Level, without Mountain, or as much as a Hillock within five Miles of it, but ſince that Time, the Multitude of Fires, and the Induſtry of the Inhabitants, have, by draining thoſe marſhy Grounds, rendered the Air as agreeable here, as in moſt Parts of *Italy*.

The Harbour within the Mole is but ſmall, but this Defect is compenſated by the Goodneſs of the Road, where there is ſafe Anchorage for Ships. Near the Harbour ſtands the magnificent Statue of the Great Duke *Ferdinand* I. the Pedeſtal of which is ſuſtained by four Braſs Statues of chained Slaves, of a gigantick Stature. The Great Dukes often reſide here in Lent, for the great Plenty and Cheapneſs of Fiſh, though all other Proviſions are here at a dear Rate. We ſaw many Workmen employed in filling of *Marking ſtones*, called in *Latin*, *Lapis galactites & morochthus*, by the *Italians*, *Pietra Lattaria*; they are found at *Monte negro*, five Miles from *Leghorn*; of the Duſt and Filings of which Stone they make Powder for Hair.

We embarked at *Leghorn*, aboard a *Dutch* Veſſel, bound for *Naples*, but the Wind being very variable, we ſpent five Days in this Voyage. Our Maſter told us, that it was a general Obſervation here, for the Wind to blow Eaſt in the Forenoon from the Land, and in the Afternoon Weſt from the Sea. We alſo made this Obſervation, that the Wind generally was quite laid with Sun-ſet, and we had but little about Sun-riſing. In our Return from *Meſſina* to *Naples*, and thence to *Leghorn*, we found the Wind contrary, for the moſt Part, which, according to the Seamens Saying, is commonly ſo here in the Summer. We further obſerved, that the Wind followed the Courſe of the Sun, it proving generally pretty well for us in the Morning, but in the Afternoon againſt us, the Land being to the Eaſt of us, which confirmed what our Captain had told us. He alſo alſo aſſured us, that when they are to make a Voyage from *Holland* to the *Weſt-Indies*, they ſail up as high on the South of *Afric*, as the Place whither they are bound in the *Weſt-Indies* lies; and then ſteer their Courſe Weſtward, the Wind blowing conſtantly from the Eaſt, and the Sea running the ſame Way; whereas, when they return, they go round the Bay of *Mexico*, far to the North, and ſo paſs over to *Europe*; which if true, much ſtrengthens the Opinion of the Diurnal Motion of the Earth.

18. The lovely City of *Naples*, extends in Form of a Creſcent along the Sea-ſide, under the Hills, reſembling in Form, that of *Genoa*, except that it is much larger, and more populous; for, though the Circumference of its Walls exceeds not above ſeven *Italian* Miles, yet it has very ſpacious Suburbs. The Houſes here are generally lofty Structures, of Stone, flat roofed, and covered with a certain Plaiſter, which keeps out the Rain to Admiration. Its Situation is ſo far to the South, and that under Hills, would make the Heat exceſſive here, were it not for the conſtant Breezes of Wind about Noon, which ſo cool the Air, that, except two or three Days, we found the Weather temperate enough, even at our Return, which was in *June*, when it rain'd very hard three ſeveral times, though they look'd upon it as extraordinary: For want of Rain, they have a Way of cooling the Streets every Day, by drawing through them a Tun with Water, in a Cart, which has many Holes in it. The Dialect of the common People here, is far different from the *Tuſcan*, and not very intelligible. Proviſions, but eſpecially Fruit, is very cheap here, and among the reſt, we ſaw the *Cucurbita anguina*, *Cucumis anguinus*, *Mala inſana*, and *Limoncelle*, ſold in the Market. All the *Neapolitans*, and generally the *Italians*, drink their Wine and Water ſnowed, by putting the Veſſels in which the Wine is, into another full of Snow or Ice, which is the Reaſon, that it is not only ſold in Stalls all over the Town, but they carry alſo ſmall Barrels, with Snow Water on their Backs, crying, *Snowed or Iced Water to be ſold.*

Beltranus tell us, there are 160 Religious Houſes of all Sorts in *Naples*, *viz.* 121 for Monks, and 39 for Women, which maintain 12421 Perſons. This City is defended, or rather bridled, by four Caſtles, *viz* by the *Caſtle d' Ovo*, built on a Rock in the Sea, with an artificial Cauſeway leading to it; the *Caſtle St. Elmo*, ſeated on a Hill above the City; *Caſtle Novo*, for the Security of the Harbour and Galleys, which lie near it; and the *Torrione di Carmine*, being only a Tower belonging to a Convent of the *Carmelites*, but famous for its having ſerved as a Retreat to the Rebels, under *Maſſaniello*.

Naples is famous for the Beauty of its Churches, which are generally ſumptuous, ſome of them not only paved with Marble, but alſo the Walls covered with it. Of all Things that ever I ſaw of this Nature, I never met with any that exceeds the Convent of the *Carthuſians*, adjoining to the Caſtle of St. *Elmo*, having a ſpacious ſquare Court, with the fineſt Cloiſter round it that ever was ſeen. The Pillars, as well as the Pavement of the *Portico's*, are of Marble of ſeveral Colours, ſo curiouſly wrought and poliſhed, and ſo neatly kept, that it cannot but ſurprize thoſe that behold it. The Granary of *Naples* is alſo worth the Obſervation of a curious Traveller, both for its Extent and Conveniencies: They told us that there was generally laid up as much Corn, as would ſuffice the whole City for ſeveral Years, in Caſe of Neceſſity; and that the Bakers of *Naples* are obliged to buy 25000 *Tomoli* (Buſhels) of Corn out of it every Month, at a certain Rate, which indeed enhances the Price of Bread, but makes Room for the laying up of new Corn, which is every Day turned in the Store-houſe, by a great Number of Men kept for that Purpoſe.

The whole Kingdom of *Naples* is divided into twelve Provinces; the Nobility are diſtinguiſhed into five *Seggi* or Societies, *viz.* of *Capua*, *Nido*, *Montagna*, *Porta*, and *Porta nova*; compoſed of 87 Princes, 122 Dukes, 159 Marquiſſes, and ſeven Earls. It has in all 20 Archbiſhopricks, and 122 Biſhopricks (to 30 of which the King of *Spain* only nominates; and 148 Cities. (1) The Province of *Terra di lavoro*, (the ancient *Campania felix*) has fourteen Cities, among which *Capua*, *Gaeta*, *Pozzuoli*, *Aquino* and *Averſa*, are the Chief. (2) *Principato Citra*, containing eighteen Cities, among them, *Campagna*, *Capri*, in the Iſle *Capreæ*, famous for the Retirement of *Tiberius Cæſar*, *Cappaccia*, *Laurino*, &c. (3) *Principato ultra*, which has fourteen Cities, as, *Benevento*, *Avellino*, St. *Angelo de Lombardi*, *Monte marino*, &c. (4) *Baſilicata*, containing eleven Cities, as, *Lavello*, *Polycaſtro*, *Venoſa*, *Monte peloſo*, &c. (5) *Calabria*, *Citra*, which has 12, as, *Mantea*, *Paola*, *Montalto*, St. *Marco*, &c. (6) *Calabria Ultra*, ſixteen, as, *Reggio* (the Ancients *Rhegium*) *Belicaſtro*, *Montilene*, *Melito*, *Nicoterra*, &c. (7) *Terra d' Otranto*, fourteen, as, *Gallipoli*, *Brindiſi*, *Otranto* (the Ancient *Hydruntum*) *Caſtro*, &c. (8) *Terra di Bari*, ſixteen, as, *Andria*, *Barletta*, a very ſtrong Place, *Biſeglia*, *Polignano* or *Putignano*. (9) *Abruzzo Citra*, has five only, *viz.* *Chieti*, *Sulmona*, *Benevento*, *Borrelle*, and *Ortona*. (10) *Abruzzo Ultra*, has alſo no more than five, *viz.* *Aquila*, *Atri*, *Campli*, *Civita di Peuna*, and *Teramo*. (11) *Cantado di Moliſi*, has four, *Bojano Guardin*, *Alferes*, *Iſernia*, and *Trivento*. (12) *Capitanata* contains thirteen, as *Monte St. Angelo*, *Aſcoli*, *Lucera*, *Sancto Severo*, *Manfredonia*, &c. Among this great Number of Cities, are many which can't compare with the beſt Sort of our Villages in *England*.

Hearth-Money is a cuſtomary Tax in the Kingdom of *Naples*, each Hearth paying fifteen Carolines (about ſeven Shillings *Engliſh*) to the King, except the *Sclavonians*, who pay but eleven Carolines a Year, the whole Tax, deducting what is to be abated for privileged Places, amounts to 6,554,873 Ducats and ſix Carolines *per Annum.* The Tax, which the Feudatories pay yearly, inſtead of perſonal Services, amounts to 120568 Ducats, beſides ſeveral other Exciſes and Taxes, the whole Revenue then amounting yearly to 2,996,937 Ducats, three Carolines, and fourteen Grains.

We had the Curioſity to viſit the Philoſophic Academy of *Virtuoſi* at one of their Meetings, which was then every *Wedneſday*; in the Palace of the noble Marquis *Arena*, a truly courteous and obliging Perſon; there were not above fifteen or ſixteen of the Members preſent, but triple the Number of other Perſons. They ſhewed an Experiment of the Waters aſcending above its Level, in ſlender Tubes, upon which, after they had diſcourſed a-while, three of the Society made an Harangue each had ſtudied on Purpoſe, upon a certain Subject; upon which ſome Arguments having been raiſed *pro* and *con*, they concluded the Meeting. I muſt confeſs that I was not a little ſurpriſed to ſee ſuch a Company of learned Men, in a Place, where I was of Opinion, they would ſcarce allow a reaſonable Latitude of Judgment; and I muſt give them their Due, that they were not only well acquainted with the beſt and moſt refined Authors of the immediately preceding Age, ſuch as *Galilei Galileo*, *Des Cartes*, *Gaſſendus*, *Harvey*, *Verulam*, &c. but alſo with thoſe ſurviving in the preſent Age, as Mr. *Boyle*, Sir *George Ent*, Dr. *Gliſſon*, Dr. *Willis*, Dr. *Wharton*, Mr. *Hobbs*, Mr. *Hook*, Monſieur *Pecquet*, &c.

April 24, We went by Water to *Pozzuolo* called by (the Ancients *Puteoli*) where the Country People brought us Abundance of Shells, dry'd *Hippocampi*, ancient Medals and *Intaglia*, nay, painted Glaſs to ſell, which they ſaid, they had raked out of the Sea. Near this Place you ſee many Arches of Stone reaching a good Way into the Sea, which has given Birth to that Opinion, that theſe are the Remnants of the Beginning of *Caligula*'s Bridge over the Bay, and that from the Extremity of this Pile to *Bajæ*, the reſt of the Bridge was made up of Veſſels faſtened together, and kept by Anchors on both Sides. But to me this ſeems to be the Ruins of a Mole or Pier, intended for the Security of the Harbour, becauſe upon every Pier is to be ſeen a great Stone perforated, and jetting out to tie Veſſels to. Certain it is, as well from the Manner of its Arches, as from the Bricks, that it was an ancient *Roman* Work. From hence we paſs'd croſs the Gulph to *Bajæ*, to deſcribe the Antiquities of which Place, would require a Volume alone, for which Reaſon we will refer the Reader to ſuch, both *Latin* and *Engliſh* Authors, as have given us a full Deſcription of them. I will content myſelf with giving you ſome Account of the Grots or ſweating Places, call'd by them *Bagne* (Baths) *de Tritoli*.

This is a ſtrait and long Paſſage, like a long Entry, the upper Part whereof is ſo hot, that ſhould a Man walk long upright, he muſt be ſtifled by the hot Vapours which fill up the upper Part of this Vault, whereas the lower Part is paſſable enough, ſo that every one is obliged to ſtoop. What I obſerved chiefly was, that the lower Part of the Vault, as far as it is tolerably cool, was covered on the Sides with a very ſolid Stone, whereas the upper Part was an unctuous friable Kind of Clay or Plaiſter; and what is more obſervable is, that at the very Partition of the Stones and the Clay on the Sides of the Bath, the Difference of the Degrees of Heat is very perceiveable; ſo that where you find the Clay reach lower, you muſt rule the Inclination of your Body accordingly. We found a watry Vapour contained in theſe ſulphureous Steams, as was ſufficiently manifeſt from the Drops, which notwithſtanding the great Heat, were condenſed on the Sides of the Vault.

In our Return from thence, we took a View of the *New Mountain*, called by ſome *Monte di Cenere*, (Cinder Mountain) raiſed by an Earthquake in 1538, *September* the 29th, its whole Altitude being now about an hundred Feet perpendicular. We were told that it produced nothing, yet we found *Myrtle*, *Maſtick* Trees, and ſome other Shrubs there. It is compoſed of a ſpongy Earth, which makes a great Sound if you ſtamp hard. By the ſame Earthquake the *Lacus Cucrinus* was fill'd up with Stones and Earth, and turned into a fenny Meadow. As we were coming back from *Pozzuolo*, we viewed alſo the Mountain called *Solfatara* (anciently *Campi Philegræi*) which burns continually. On the very Top of it is a very large excavated Hole, of an oval Figure, 1500 Feet long, and 1000 broad, where is the Burning; beſides which, there are divers other Holes, which convey the Smoke as out of a Furnace. Out of thoſe Vent's I gathered a kind of *Flores Sulphuris*, and *Sal Armoniac*, which ſtuck to the Mouths of thoſe Holes, and thruſting a Sword into them, or any other Iron, you will find it all bedewed with Drops of Water, an evident Sign that there is a conſiderable Share of Water mixed with thoſe fiery Exhalations; and what confirmed me the more in this Opinion, was, that thoſe *Flores* would not burn or melt, by reaſon of the heterogenous Particles mixed with them. The Inhabitants have a Way of ſeparating them from the Brimſtone, which lies as thick as a Cruſt all over the Mountain. As you walk, you hear the Earth ſound every Step you make, as if it were hollow underneath; and what is more, if every Thing be quiet, you may hear the very boiling and bubbling of the Minerals or other Liquors.

About five Miles diſtant from *Naples*, is the famed Mount *Veſuvius*, where we found the Ground all about the Sides of it covered with Cinders and porous Stones, which had been caſt thus far during the Conflagration: We alſo perceived great Channels, ſuch as are commonly left after ſtrong and ſudden Floods, which they told us were the Effects of the Waters, which at the Time of Burning are thrown out of the Mountain. We found ſome *Acetoſa ovilla* near the Top, and a little lower *Collutea ſcorpioides*, and ſome Shrubs of *Poplar*. It was very ſteep getting up to the Top, where is a vaſt hollow Pit of a Mile in Compaſs, occaſioned by the breaking out of the fiery Subſtance, at ſeveral Times with great Violence. We obſerved alſo ſome ſmall Vents or Paſſages for the Smoak, but were ſcarce conſiderable enough to threaten an Irruption.

We alſo took a View of the *Grotto di Cane*, or Dog's Cave, near the Lake of *Agnano*: It is both narrow and ſhort, and (whatever ſome may have pleaſed to tell the World) you may go into it, and continue there for a long Time without Prejudice, ſome of us ſtaying at the further End of it above an Hour; becauſe the Vapour, whether ſulphureous or arſenical, aſcending not above a Foot from the Ground, which you may perceive plainly by the Heat in your Feet and Legs, is that if you bend your Head towards the Ground, you will be immediately ſenſible of a Smell like burning Brimſtone, which ſeizing your Head, makes you ſtagger, and may ſtifle one. We took a Dog, and holding his Noſe down near the Ground, almoſt killed him; then throwing him into the Lake to recover him, we found him too weak to ſwim, and ſo was drowned. We try'd the ſame Experiment with a Pullet, which was killed immediately; and afterwards with a Frog, which likewiſe did not live long; and laſt of all, with a Serpent, which did not hold out above half an Hour. If you hold the Candle below the Part where the Vapours are, it is extinguiſhed immediately. I am of Opinion, that many more ſuch Grots might be digged hereabouts.

As we were going to this Grot, we paſſed through the artificial Paſſage or Vault, through Mount *Pauſilipus* performed by one *Cocceius* in fifteen Days. We judged it about half an *Engliſh* Mile long, though ſome will have it as long again. Where it is loweſt, which is in the Middle, it is twelve Feet high, and broad enough for two Carts to paſs conveniently by one another. As it is ſo dark in the Middle (no Light coming in but at the two Ends) that no body can ſee one another, ſo thoſe that paſs through it, cry always *Alla Marina* if they go to the Sea-ſide, and *Alla montagna* if they go towards the Country; ſo that each taking the Left-Hand, they prevent the running upon one another.

We obſerved the Fiſh-boats out at Sea with Lights at one End, to draw the Fiſh after it, and ſo they ſtrike them with a Mole-ſpear.

19. *April* 29, We continued our Voyage in the ſame Veſſel that had brought us hither, to *Sicily*, and arrived, *May* the 2d, at *Meſſina*: We ſailed by the *Æolides* or *Vulcaniæ inſulæ*, two of which, viz. *Stromboli* and *Vulcano* ſtill burn; we ſaw the firſt all in Flames as we paſs'd by in the Night time. It being no eaſy Matter to make the Mouth of the Streight, by the *Faro* of *Meſſino*, by Reaſon of the Current, which is very violent here, ſometimes running towards *Calabria*, ſometimes towards *Sicily*; our Maſter was forced to hire a Pilot for ten Pieces of Eight, who conducted us ſafely through it.

The Harbour of *Meſſina* itſelf is very good, being encloſed by the City on one Side, and on the other by a Neck of Land. As the Houſes along the Sea-ſide are loftily built of Stone, they make a noble Show at a Diſtance, but are but indifferent within, and the Streets narrow and ill paved, which verifies the *Italian* Proverb, *At* Meſſina *you have Duſt*, *Fleas*, *and Whores in Plenty.* This City ſtands in Competition with *Palermo*, both pretending to the Title of being the *Metropolis* of *Sicily*, which is the Reaſon that the Viceroy reſides eighteen Months in each, during his Government. The *Meſſineſe* boaſt of great Privileges granted by *Charles* V. the Emperor, and pretend to the Monopoly of Silk, which was indeed formerly vended at *Meſſina*, but the *Palermitans* having got a conſiderable Share of that Trade into their own Hands ſince, this cauſed great Jealouſies between thoſe two Places, which affects the whole Kingdom, ſome taking Part with one, and ſome with the other of thoſe Cities. The Inhabitants of *Meſſina* are none of the moſt poliſh'd, haughty in their Converſation, and very prone to Rebellion. The *Spaniards* are in Poſſeſſion of four Caſtles in and about the City, and the *Meſſineſe* of as many; for the reſt, the City Gates are open at all Times. The Government of this City is adminiſtred by ſix Perſons whom they call *Jurats*, four of which are choſen out of the Gentry, and two out of the common Citizens. Their Government is annual, and though the firſt have the Majority of Votes, yet can they tranſact nothing of Moment without

out the Conſent of the others; though the *Spaniards* have taken Care to reduce their Authority into ſuch narrow Bounds, that there is no great Occaſion of Conteſt among them upon that Score.

May 5, We hired a Felucca to carry us to, and bring us back from *Malta*. *May* 6, We ſailed with a briſk Gale as far as *Catanea*, ſixty Miles beyond *Meſſina*, a little Town, having nothing conſiderable in it, but two or three good Convents. *May* 7, We made forty Miles to *Syracuſa*, and ſailed in Sight of *Auguſta*, famous for the Goodneſs of its Wines. The ſmall City of *Syracuſa*, in its preſent State, is only that part of the ancient *Syracuſa*, called Νῆσος, being but indifferently built, and ſlenderly inhabited, but very well fortified to the Land-ſide by the Knights Hoſpitallers, after they had been expelled *Rhodes* by the *Turks*; but *Charles* V. thought it more expedient to beſtow a Settlement upon them in the Iſle of *Malta*. About two Miles from the preſent City, you ſee the Ruins of the ancient *Syracuſa*, and among the reſt, the Remnants of an admirable and extenſive Amphitheatre.

We were alſo ſhown the Grot, commonly called *Dionyſius's Ear*, being cut out of the Side of a high Clift; it is high roof'd, but not long, and goes a little Winding. In our Return from *Malta*, we took a View of one of the Burying-places, or Catacombs of the Ancients, of which there are ſeveral here and in *Malta*. This belonged to St. *Anthony's* Church, and conſiſted of many vaulted Walks cut out of the Rock, having on each Hand other Vaults at Right-angles with them, the Floors of which were about two Foot higher than the Floor of the main Walk, hewn into Troughs or *Loculi*, wherein they uſed to depoſit their dead Bodies: In ſome of thoſe were twenty *Loculi*, more or leſs. At certain Intervals, you come to round Rooms or Halls in the main Walks, where ſeveral of them meet together, ſo that the whole being of a great Extent, might contain many Thouſands of dead Bodies.

20. *May* 8. The Wind being contrary, we were forced to make uſe of our Oars, and rowed as far as *Capo Paſſaro*, anciently called *Promontorium Pachynum*, forty Miles diſtant from *Syracuſa*. Upon the utmoſt Point of Land ſtands a little Caſtle, held by a Garriſon of about twenty Men: This Caſtle ſtands now in a little Iſland made ſo by the Force of the Sea, which not long ſince brake it off from the Land. The Wind being contrary, and blowing a ſtiff Gale, made the Sea ſo rough, that we dared not venture out, but were forced to reſt here two Nights. *May* 10, we put to Sea again, but the Wind ſtill continuing contrary, and the Sea very rough, when we were gotten about half way over the Channel, we were forced to return back again to the *primo terreno* of *Sicily*, viz. the Caſtle of *Puzallu*. The Greatneſs of the Waves not permitting us to come aſhore there, we rowed ſix Miles further South, and put in at a little Cove called the Harbour of *Punto Cericolo*. The Weather continuing foul, we were detained here three Days, having no other Shelter but a ſmall Hut or two, which the two Centinels (who ſtand conſtantly at this Point, to watch and give Notice to the Country of the coming of *Corſairs*) had ſet up for themſelves to creep into in ſtormy Weather. We ſhould have been glad of freſh Straw to lie on, having Nothing in our Kennel but old ſhort Straw, ſo full of Fleas, that we were not able to ſleep in it. Our Diet was the Blood and Fleſh of Sea Tortoiſes, that our Seamen took by the Way, and Bread we brought along with us: Wine we got at a Houſe about half a Mile off our Lodging, but when our Bread failed, we were forced to ſend eight Miles for it and more Fiſh, for Fleſh we could get none.

May 13, The Wind ceaſing, we put to Sea again, and had a very good Paſſage over to *Malta*. By the Way we ſaw our Seamen take ſeveral Tortoiſes in this Manner: When they eſpy a Tortoiſe floating on the Top of the Water, as they can eaſily do at a good Diſtance, with as little Noiſe as they can poſſibly they bring their Boat up cloſe to him, then they either catch him with their Hands and draw him up into the Boat, or if they cannot get near enough to do ſo, one leaps out of the Boat into the Sea, and turns the Tortoiſe on his Back, and then with Eaſe drives him before him up to the Boat, the Tortoiſe being not able to turn or ſwim away on his Back. They ſay, (and it is not unlikely) that the Tortoiſe, while he floats thus upon the Water, ſleeps; which is the Reaſon why they are ſo ſtill, and make ſo little Noiſe in bringing their Boat up to him. One of theſe Tortoiſes which they caught, had two great Bunches of thoſe they call *Bernacle-ſhells* ſticking or growing to his Back, and ſome of them the largeſt and faireſt of that Kind which we have ever ſeen.

As for that Opinion of a Bird breeding in them, (which ſome have affirmed with much Confidence, and of which *Michael Meyerus* hath written a whole Book) it is without doubt falſe and frivolous. The *Bernacles* which are ſaid to be bred in them, being hatch'd of Eggs of their own laying, like other Birds; the *Hollanders*, in their third Voyage to diſcover the North-eaſt Paſſage to *Cathaia* and *China*, in 80 Degrees 11 Minutes of Northern Latitude, having found two Iſlands, in one of which they obſerved a great Number of theſe Geeſe ſitting on their Eggs, *&c.* as Dr *Johnſon* relates out of *Pontanus*. As for theſe Shells, they are a Kind of *Balanus marinus*, as *Fabius Columna* proves, never coming to be other than what they are, but only growing in Bigneſs as other Shells do. All the Ground of this Fancy, as I conceive, is becauſe this Fiſh hath a Bunch of *Cirri* ſomewhat reſembling a Tuft of Feathers, or the Tail of a Bird, which it ſometimes puts out into the Water, and draws back again. We were much ſurprized to find of this Shell-fiſh in theſe Seas, ſo Southerly, and far from the uſual Scene of the *Bernacle* Fable.

The Iſland of *Malta* is twenty Miles long, twelve broad, and ſixty Miles in Circuit, diſtant from the *primo terreno*, or neareſt Part of *Sicily*, ſixty Miles; from the Cape of *Calipia*, anciently called *Promontorium Mercurii*, the neareſt Point to the Continent of *Africa*, two hundred Miles, (as divers of the moſt ſkilful and experienced Pilots did affirm to *Abela* for an undoubted Truth); from the Cape of *Spartivento* in *Italy*, but one hundred and ninety; ſo that upon Account of Vicinity, it is rather to be attributed to *Europe* than *Africa*, eſpecially if we allow *Sicily* to have been of old Time united to, and ſo Part of the Continent. The Reaſon why others make it a Member of *Africa*, is becauſe the preſent Inhabitants of the Country ſpeak a kind of *Moreſko* or *Arabick*.

The old City, called *Citta Notabile*, ſituate about the Middle of the Iſland, hath 35 Degrees 15 Minutes of Northern Latitude, and the longeſt Day there is of fourteen Hours fifty two Minutes. I am not ignorant that *Heylin* and others, who reckon this among the Iſles of *Africa*, place it nearer the Coaſt of *Barbary*, aſſign it leſs Latitude, and allow the longeſt Day no more than fourteen Hours; but I do in theſe and other Particulars, follow the more accurate Obſervations of *Johannes Franciſcus Abela*, a learned Man, and Native of this Iſland, in his *Malta Illuſtrata*, written in *Italian*, and publiſhed in *Malta*, *Anno* 1646, in *Folio*. The whole Iſland, from the Shallowneſs of its Soil there, being in few Places above two Foot Depth of Earth before you come to firm Stone; and from the Lowneſs of its Situation, not much elevated above the Level of the Water, and having no conſiderable Hill in it, ſeems to have been in the moſt ancient Times, nothing elſe but a great Rock wholly overwhelmed and covered with the Sea; eſpecially if we conſider the Multitude of Sea-ſhells of all Sorts, Sharks-teeth, Vertebres of Thornbacks, and other Fiſh bones petrified found all over the Iſland, even in the higheſt Parts of it, and moſt remote from the Shore. For that theſe were formed by ſome plaſtick Power in the Stone Quarries, being nothing elſe but the Effects and Productions of Nature ſporting herſelf in Imitation of the Parts and Shells of theſe Animals, I can hardly be induced to believe.

Nature (which indeed is nothing elſe but the ordinary Power of God) not being ſo wanton and toyiſh as to form ſuch elegant Figures without further End and Deſign than her own Paſtime and Diverſion. But a very likely Thing it is, that the Sea being ſhallow above this Rock for ſome Ages before it came to be uncovered, there ſhould great Beds of Shell-fiſh, harbour and breed in ſo convenient a Place, and the Water leaving them, their Shells remain and petrify. I confeſs it is hard to imagine, how the Carcaſſes of ſo many Sharks ſhould come to be lodged here, as by the Multitude of Teeth, that have been for ſo many Years paſt, and are ſtill daily digged up, we muſt needs grant, unleſs by Chance they remain, of the Heads of ſuch Sharks as were caught and eaten by the Fiſhermen, who it is likely, after the Diſcovery of this Rock, frequented here, and made it a Station for Fiſhing before it came to be thoroughly and fully inhabited.

To this Difficulty, Mr. *Steno* returns anſwer in theſe Particulars, 1. That ſuch Sharks or Sea-Dogs, have each of them ſixty Teeth and more, and that all the Time they live they breed new Teeth. 2. That the Sea agitated by the Winds, is wont to protrude thoſe Bodies it meets with towards ſome one Place, and there heap them together. 3. That Sharks ſwim in great Troops or Shoals, and conſequently that the Teeth of many of them, may have been left in one Place. 4. That in the *Malta* Earth, beſides theſe Sharks Teeth, are found alſo ſundry Cockle-ſhells, ſo that if the Number of Teeth ſhould incline a Man to aſcribe their Production to the Earth, on the other Hand, the Make of the ſame Teeth, and the Abundance of them in every Animal, and the Earth, like the Bottom of the Sea, and other marine Bodies found in the ſame Place, do favour the contrary Opinion. The Soil, notwithſtanding the Rockineſs and Shallowneſs of it, hath been by the Ancients celebrated for Fertility.

Fertilis eſt Melite ſterili vicina Coſyræ
Inſula. Ovid. *Faſt.*

But undeſervedly, if we underſtand it of Corn, for there is not much Wheat ſown here, and that we ſaw upon the Grounds was but thin and ſlight. And though Barley be their chief Crop, and of which the Country People make their Bread, yet have they not near enough of that to ſerve the ordinary Uſes of the Inhabitants, ſo that they are forced to fetch moſt of their Bread Corn out of *Sicily*. The main Commodities which the Iſland yields, wherewith the Inhabitants drive a good Trade, and enrich themſelves, are, 1. *Cumin-Seed*, which they call *Cumino agro*, or ſharp *Cumin*, of which are gather'd about three thouſand *Cantares* yearly, one *Cantare* being equal to 116 Pound Weight, *Engliſh*. 2. *Aniſe-Seed*, which they call *ſweet Cumin*, of which are gathered and tranſmitted into foreign Parts, 1000 *Cantares* yearly. Theſe Seeds are ſold at ſeven, eight, or nine Crowns the *Cantare*, and we were told that the Year before our being there, [*Anno* 1663.] were vended 7000 *Cantares* of both Sorts. 3. *Cotton-Wool*, called in *Latin*, *Xylone* or *Goſſipium*, of which they ſend Abroad yearly, 14000 *Cantares* in the Huſk. They have of late begun to plant *Indigo*, which my Author ſaith agrees with the Soil, and thrives there very well. He alſo mentions a ſort of Excreſcence, or Moſs, or Scurf, which the Rocks about St. *Maria el Aalia*, and other Places on the North-ſide of the Iſland, naturally put forth, called by the Country People *Vercella*, which they ſcrape off with an Iron Inſtrument, and having waſhed it with a certain Liquor, and mingled it with other Ingredients, (he tells us not what that Liquor or thoſe Ingredients are) they expoſe it to the Sun, and uſe it to die Wool of a Carnation Colour. This kind of Moſs, called in *Wales*, *Kenkerig*, and in *England*, *Cork*, or *Arcel*, is gathered and uſed for the ſame Purpoſe in *Wales*, and the North of *England*. *Malta* hath been famous of old, for a Breed of little Dogs, called *Catuli Melitei*, the Race whereof is quite extinct, and now their Cats are as much eſteemed. The Roſes of *Malta* contend for Sweetneſs with theſe of *Peſtum*, and the Honey with that of *Hybla* or *Hymettus*: ſo that ſome ſuppoſe this Iſland had its Name *Melita* from Μέλι, ſignifying Honey. The Air is clear and healthful, and the People long lived. Not much Rain falls here, yet ſufficient to ſupply Water to feed their Springs, of which there are ſeveral in the high Grounds, or ſmall Hills, about the Middle of the Iſland. That theſe Springs proceed from Rain Water only, my Author doth very well prove, becauſe they are found only at the Foot of little Hills, conſiſting of a certain porous Stone, which the *Malteſe* call *Giorgiolena*, or a chalky Earth, which eaſily imbibes the Rain: And to ſpeak in general, that all Springs and running Waters owe their Riſe and Continuance to Rain, ſeems to me more than probable.

1. Becauſe I never yet ſaw any Springing of running Waters breaking out, either on the Top of a Hill, or ſo near the Top, but that there was Earth enough above them to feed ſuch Springs, conſidering the Condition of high Mountains, which are almoſt conſtantly moiſtened with Clouds, and on which the Sunbeams have but little Force: And yet I have made it part of my Buſineſs, in viewing the higheſt Hills in *England* and *Wales*, to examine this particular. Nor have I yet ever obſerved ſuch ſpringing and running Waters in any Plain, unleſs there were Hills ſo near, that one might reaſonably conclude they were fed by them. 2. Many Springs quite fail in dry Summers, and generally all abate conſiderably of their Waters. I am not ignorant that ſome make a Diſtinction between failing Springs, and enduring Springs, and would have the former to proceed from Rain, and the latter from the Sea; but I ſee no ſufficient Foundation for ſuch a Diſtinction, and do think that both the one and the other are to be attributed to Rain, the failing and enduring being to be referred either to the different Quantity and Thickneſs of Earth, that feeds them, or to the different Quality, the one more quickly, the other more ſlowly, tranſmitting the Water, or ſome ſuch like Accident. 3. In Clay Grounds into which the Water ſinks with Difficulty, one ſhall ſeldom find any Springs, but in ſandy, gravelly, rocky, ſtony, or other Grounds, into which the Rain can eaſily make its Way, one ſeldom fails of them. 4. They who would have Fountains to ariſe from, and be fed by the Sea, have not as yet given a ſatisfactory Account of the Aſcent of Water to the Tops of Mountains, and its Efflux there.

For though Water will creep up a Filtre above its Level, yet I queſtion, whether to ſo great an Exceſs above its *Equilibrium* with the Air, whereas in Pumps, we ſee it will not riſe above two or three and thirty Foot, or if it ſhould, whether it would there run out at the Top of the Filtre, we not having as yet heard of any Experiment that will Countenance ſuch a Thing. For the Aſcent and Efflux of Sap in Trees, I ſuſpect may be owing to a higher Principle, than purely Mechanical. As for the *Sabulum Quellem*, or *Arena bulliens* of *Helmont*, I look upon it as an extravagant Conceit of his, and yet ſome Ground there is to believe, that there is a kind of Earth lying up and down in Veins, which doth like a Filtre, retain the Water, and carry or derive it along, as it lies from Place to Place, till it brings it to the *Superficies* of the Earth, where it runs out. In other Places there are ſubterraneous Channels, like the Veins in Animals, whereinto the Water ſoaking into the Earth is gathered, and wherein it runs as above Ground, out of ſmaller Rivulets into greater Streams, and where one of theſe Veins open in the *Superficies* of the Earth, there is a Spring greater or leſſer, according to the Magnitude of the Vein. Nor need we wonder that Springs ſhould endure the Length of a dry Summer, for in many Sorts of Earth the Water makes its Way but ſlowly, ſince we ſee that in thoſe Troughs or Leches, wherein our Laundreſſes uſually put Aſhes, and thereupon Water to make a *Lixivium*, the Water will be often many Hours before it gets all thro' the Aſh, and the Lech ceaſes to drop, and in many Chymical Preparations which are filtered, it is long before the Liquor can free itſelf, and wholly drain away from the earthy and feculent Part. Some attribute the Original of Fountains, to watry Vapours, elevated by ſubterraneous Fires, or at leaſt by that generally diffuſed Heat, which Miners find in the Earth, when they come to fifty or ſixty Fathoms under Ground, and condenſed by the

Tops and Sides of the Mountains, as by an Alembick-Head, and ſo diſtilling down and breaking out where they find Iſſue. And in Reaſon one would think, that generally the deeper one digs in the Earth, the colder one ſhould find it, ſince the Urinators affirm, that the deeper they dive in the Sea, the colder ſtill they find the Water, and yet were there ſuch ſubterraneous Heats, they are not ſo great, as that it is likely they ſhould elevate Vapours ſo high, through ſo thick a Coat of Earth, which it muſt be an intenſe Heat indeed will carry them through, which Heat none ſay is found near the Superficies of the Earth.

Mr. *Hook*'s Account, *viz.* that Salt-Water being heavier than freſh, by Reaſon of its Preponderancy, it may drive up the freſh as high above the Surface of the Sea, as are the Tops of Mountains, before it comes to an *Equilibrium* with it, it is very ingenious, and would be moſt likely, where theſe continued cloſe Channels from the Bottom of the Sea, to the Tops of Mountains not admitting the Air, which I believe will not be found in many Places. What is ſaid about ebbing and flowing Wells, in Confirmation of it adds no Strength, for none of thoſe ebbing and flowing Wells, that I have yet ſeen, do at all obſerve the Motion of the Sea, but reciprocate two or three Times, or oftner, every Hour, excepting one on the Coaſt of South *Wales*, in a ſandy Ground, by the Sea-ſide, not a Quarter of a Mile from the Water which obſerves the Tides; but it is no running Water, nor doth it, I believe, ariſe above the Level of the Sea. I do therefore ſhrewdly ſuſpect for fabulous, whatever has been written of Wells remote from the Sea, which in their ebbing and flowing obſerve its Motion. But for a Reaſon of the ebbing and flowing of theſe Wells, I muſt confeſs I am hitherto at a great Loſs. Whereas ſome ſay, that Rain ſinks not above a Foot or two deep into the Earth; if they underſtand it of all Earths, it is manifeſtly falſe, for that we ſee in Coal Delphs, and other Mines, in wet Weather the Miners are many Times drowned out, (as they phraſe it) though no Water run down into the Mouths of their Pits or Shafts; and in ſandy and heathy Grounds in the greateſt Rains, little Water runs off the Land, as on *Newmarket heath*, *Gogmagog Hills*, *Saliſbury Plain*, &c. and therefore it muſt needs ſink in: And out of the Mouth of *Pole-Hole*, near *Buxton*, in the *Peak* of *Derby*, and other Caves in the Sides of Mountains, in rainy Seaſons, Streams of Water many Times run out, where in dry Weather and Summer-time there are none.

Neither is this Opinion we defend, any more repugnant to the Scripture than the other. For whereas it is ſaid, *Eccleſ.* i. 7. *All the Rivers run into the Sea, yet the Sea is not full; unto the Place from whence the Rivers come, thither they return again*; we grant it to be moſt true, nay we think ſuch a Circulation abſolutely neceſſary to the Being of Springs, only we aſſert it to be performed not under Ground, but above, that is, the Clouds take up Water out of the Sea, and pour it down again upon the Earth, and from Part thereof falling upon, and ſoaking into the higher Grounds, ariſe the Springs.

But to return to *Malta*, the Haven is very commodious and ſecure, divided into two by a little Promotory or Neck of Land, ſome 1500 Canes long, and 380 broad, upon which the new City is built. Of theſe two, that on the Weſt ſide the City, is called ſimply, and *per Automaſiam*, *Marſa*, that is, the Haven, and is in Length 180 Canes or Poles, often Palms, the Cane *Roman* Meaſure, and is ſubdivided into other Creeks or *Sinus*'s. That on the Eaſt-ſide, called *Marſa Moſcetto*, is as large as the other, in a little Iſland, within which is the *Lazaretto*; near it Ships that come from infected Places, keep their Quarantine. The new City called *Valetta* is divided into twenty Streets, eight in Length, and twelve in Breadth, all ſtrait, though they be not paved, yet they need it not, the Town being built upon a ſolid Rock. They want no Uniformity but being level, which the Place being uneven, up Hill and down Hill, will not admit. The Houſes are all Stone, flat-roof'd, and covered with Plaiſter, which is ſufficient here, there falling but little Rain; though they be not high, yet are they neat and pleaſant. Upon the Roofs of their Houſes in Summer time, the People ſet their Beds as at *Aleppo*, and ſleep in the open Air. The Number of the Inhabitants of all Ages, according to a Survey taken in the Year, 1632. was 10744, the Number of Houſes, 1891, which Sum is I believe ſince that time much increaſed. Over the Gate of this City, leading to the Land, called *Porta Reale*, you have an Inſcription giving an Account of the firſt founding and building of it. It is fortified with impregnable Walls and Bulwarks, eſpecially towards the Land, where one would think there are too many, and yet they are ſtill adding more; within the outmoſt Wall, or between the two Walls and Outworks, they have encloſed a great Space of void Ground, whether with Deſign to enlarge the City, filling that Space with new built Houſes, or to receive the Country People, in Caſe the Enemy ſhould land upon the Iſland, I know not. All the Walls and Bulwarks are mined or vaulted underneath, that ſo, in Caſe the Beſiegers ſhould get upon them, they might be blown up, and rendered uſeleſs. The Charge of all theſe Walls, Caſtles and Fortifications would be intolerable, had they not Stone at Hand, and Slaves to work.

This City is well ſerved with all Proviſions, there being every Morning, a Market plentifully furniſhed with Bread, Fleſh, Fiſh, Poultry, Fruits, Herbs, *&c.* of the beſt in their ſeveral Kinds, and to be bought at eaſy Rates. The moſt conſiderable Buildings in this City, are, 1. The Church of St. *John the Baptiſt*, Patron of the Order, wherein are many Chapels and Altar-Pieces, richly gilt and adorned. Here lie buried the Grand Maſters that have been, ſince the Order was tranſlated hither, in a Vault under Ground, ſeveral of them having in the Church, Monuments with Inſcriptions. This Church is not yet quite finiſhed. 2. The Caſtle of St. *Elmo*, which ſtood here before this City was built, on the utmoſt Point of the Promontory, a ſtrong Place, but of no great Capacity. Here we obſerv'd the like winding Aſcent to the Top, without any Steps or Stairs, as in the Tower of St. *Mark*, at *Venice*.

Upon the Top of this Caſtle is conſtant Watch and Ward kept. When they deſcry any Veſſel coming toward the Iſland, be it great or ſmall, they ſet up a Flag ſuitable to the Bigneſs of the Veſſel; if two Veſſels, two; if three, three; and ſo on according to their Number; ſignifying alſo by the Place, where they ſet theſe Flags, from what Quarter, Eaſt, Weſt, North or South, ſuch Veſſel or Veſſels come, ſo that the City is preſently adviſed what Veſſels, and how many are near the Port. In this Caſtle are impriſoned ſuch Knights as have committed any Miſdemeanour, and held in Reſtraint, longer or leſſer Time, or further proceeded againſt, according to the Degree of their Fault. 3. Before this Caſtle are the *Granaries*, where the Proviſions of Corn for the City are kept. Theſe are nothing but Caves hewn out of the Rock, in the Form of a *Cupola*, or ordinary Bee-hive, having each a narrow Mouth above. They are conſtantly provided with Corn enough beforehand, to ſerve the whole City for a Year. They have alſo Magazines or Stores of Wine, Oil, and all other Neceſſaries. 4. The *Albergbs* or Halls of the eight ſeveral Nations (*Lingue* they call them) of the Order. The Nations are *French*, *Italian*, *German*, *Engliſh*, *Provençal*, *Auvergnois*, *Caſtilian*, *and Arragonian*.

Theſe *Albergbs* are moſt of them fair Buildings like Colleges, and in each of them, is a publick Hall, wherein the Knights of each Nation dine and ſup as many as they pleaſe, the others have their Parts or Demenſum, ſent to their Lodgings, or diſpoſe otherwiſe of it, as they ſee good. The Seignior of each Nation is Superior of the *Albergb*, *Grand* Prior of his Nation, of the great Croſs, *gran Croce* they term it, and one of the Privy Council to the Great Maſter. Theſe are diſtinguiſhed from the reſt, by a great white Croſs upon their Breaſts made of Silk, ſewn into their Garments. Here is an *Albergb* for the *Engliſh* Nation, or rather a Piece of Ground, incloſed with the Foundation of an *Albergb*, *Albergh*, the Walls being ſcarcely reared up. This Ground, we are told, ſome of the Citizens would have bought and built upon, but the *Grand Maſter* and Council refuſed to ſell it, not deſpairing, it ſeems, that one Day our Nation may be reduced again to the Obedience of the *Romiſh* Church.

5. The *Armory* [*Sala di Arma*] within the Palace of the *Great Maſter*, conſiſting of two Rooms; the one (which they call the Hall) the faireſt and largeſt Room employed for ſuch an Uſe that we have any where ſeen; the other much leſſer. In both together are kept Arms for 30,000 Men, ſo intire, clean, bright, and fit for Uſe, that we were very much taken with the Sight of them. Here are ſome of thoſe little Drakes, that may be charged behind a Leather Gun, and other Curioſities, the like whereto we have ſeen in ſeveral Armories.

6. The *Hoſpital* [*Infirmaria*] a fair Building, which they are now enlarging. The Sick Perſons are ſerved by the Knights, *viz.* Such a Number of Knights are appointed to carry them their Meat daily with Cap in Hand, which Thing we ſaw them do in this Manner. The Meat was all brought into the middle of a great Room, where many of the Sick lay. Then one of the Knights (the Steward I ſuppoſe he was) read the Names of the Sick, one by one, out of the Phyſician's Bill, wherein was preſcribed each Sick Perſon's Diet. As he read a Name, the Cook took his Part whoſe Name was read, and Diſhing it up, delivered it to one of the Knights, who carried it to his Bedſide, where ſtood a Stool covered with a Napkin, having Bread and Salt upon it. This Duty their very Name intimates to belong to them, *viz.* Knights, *i. e.* Servants of the Hoſpital, and therefore we may be excuſed, if we have been more particular and circumſtantial in deſcribing the Manner of it. If any of the Order falls Sick, he is not to ſtay in a private Houſe, but preſently repair hither, where he is moſt carefully tended, one or two Knights being appointed to be always by him.

The *Palace* of the *Great Maſter*, where he hath ſeveral Apartments for Winter and Summer. There is alſo a Stable of good Horſes, in which beſides Coach-horſes and ordinary Saddle-horſes, are kept forty or fifty great Horſes. A Thing worth the Noting in this Iſland, where there is a great Scarcity of Horſes, that Knights and Perſons of Quality, ride upon no better than Aſſes. The *Slaves-Priſon*, a fair ſquare Building, where all the Slaves in the City lodge every Night, ſo long as the Gallies are abroad in *Corſo*. At the ringing of the *Ave-Mary Bell*, which is juſt at Sun-ſet, they are to repair thither; when the Gallies are at Home, thoſe that belong to private Perſons are permitted to lodge in their Maſters Houſes. The Number of Slaves now in Town, was about 2000 belonging to the Order, and 300 to private Perſons, beſides thoſe that were Abroad in the Gallies.

Beſides this new City, there are three conſiderable Towns diſtant from it, only by the Breadth of the Haven. 1. The *Iſola* (as they commonly call it) or Town of *Senglea*, with the Fort of St. *Michael*, ſeated in a *Peninſula*, made by two Creeks, running out of the principal Haven. It contains 994 Houſes, and 4050 Souls. For the ſtout Reſiſtance it made to the *Turks*, in 1565, it obtained the Name of *Citta invitta*. 2. The *Borgo* (as they call it) *i. e. Burgo del Caſtello á Mare*, built likewiſe on a little *Lingua* or Neck of Land, between two Creeks of the ſame Haven, on the utmoſt Cape whereof ſtands the Caſtle of St. *Angelo*, divided, for greater Strength, from the Town by a Ditch of Water cut croſs the *Lingua*. This Burgh contains 782 Houſes, and 3065 Souls. For its Valour and Fidelity in holding out ſo reſolutely againſt the *Ottoman* Army beſieging it, *Anno* 1565, it is deſervedly honoured with the Title of *Citta vittorioſa*. Between theſe two Burghs is a ſecure Harbour, where the Gallies and moſt of the other Veſſels of the City lie, which in Time of Danger is ſhut up with a great Iron Chain. 3. *Birmula*, rather a Suburb of *Senglea* then a diſtinct Town; it contains 642 Fires, and 2778 Souls.

May 25. We rode out to ſee ſome Part of the Country, paſſing two great Villages (*Caſales* they name them) we came to the *old City*, called anciently *Melita*, after the Name of the Iſland now *Citta notabile*, a ſmall Place at preſent, but well fortified, containing no more than 565 Houſes, 2620 Souls. It hath been formerly much greater, and incomparably more populous. The new City, as being more conveniently ſituate, daily drawing away, and withdrawing its Inhabitants. Here they ſhewed us the Pillar of St. *Paul* (as they call it) where when he ſtood Preaching (as they fondly believe, or at leaſt would perſuade us) his Voice was heard diſtinctly all over the Iſland. 2. The *Grot of St. Paul*. Here out of a ſmall Cave is taken that white Earth, called, *Terra di S. Paolo*, and by ſome *Terra Sigillata Melitenſis*, which they ſeal, and ſell to Strangers, attributing thereto, great Virtues againſt all Poiſon and Infections. This Cavern, though there be continually great Quantities of Earth taken out of it, according to their conceited Tradition, retains ſtill the ſame Dimenſions, becoming no greater than it was at firſt. That St. *Paul* ſuffered Shipwreck on the Coaſt of this Iſland, and wintered here, and not on that other *Melita*, in the *Adriatick Sea*, on the Coaſt of *Dalmatia*, now called *Meleda*, I think is ſufficiently proved and made clear by *Cluverius*, *Abela*, and others; but that upon Occaſion of a Viper faſtened on his Arm, he changed all the Serpents of the Iſland into Stones, and endued the Earth with an a exipharmical Quality, to reſiſt and expel Poiſon, is a ſuperſtitious and ungrounded Fancy.

From the old City we rode to the *Great Maſter*'s *Boſchetto*, where he hath a pretty Palace in Form of a Caſtle, from the Top whereof we had a good Proſpect of the Iſland. Here are a great Number of Gardens and Orchards, well furniſhed with all Sorts of Fruits and Flowers, good Water-Works, and a Grove of Trees; indeed this Palace wants nothing for Conveniency or Delight. The Palace is ſituated upon a little Hill, and the Gardens lie under it in a hollow or Bottom almoſt compaſſed about with Rocks. But to ſpeak of the Iſland: *Malta* hath been inhabited by ſeveral Nations, and often changed Maſters.

The moſt ancient Inhabitants are by *Cluverius* taken to have been the *Phœaces* mentioned by *Homer*, who were expelled by the *Phœnicians*. The *Phœnicians* were moſt of them driven out by the *Græcians*. After this it changed Maſters rather than Inhabitants, being firſt ſubdued and held by the *Carthaginians*, then for a long Time by the *Romans*: After that the *Goths* came hither, who were driven out by the *Eaſtern Emperors*: Next the *Saracens* poſſeſſed themſelves of it. The *Normans* expelled them, and got the Dominion. Then the *Germans* or *Suevi* became Lords of it; then the *French*, then the *Arragonians* and *Spaniards*; and now laſt of all, the Order of the Knights Hoſpitallers. The Hiſtory of all which Changes, if any Man deſire to be fully and particularly acquainted with, let him conſult *Abela*. In all theſe Changes, it followed for the moſt part the Fortune of *Sicily*, as having little Strength to reſiſt any foreign Power invading. It is now ſo well fortified and manned, that it would prove a very difficult Matter for the greateſt Prince or Potentate in the World to take it by Force, having, when it was in far worſe Condition than now it is, reſiſted and baffled the Arms of one of the greateſt Emperors the *Turks* ever had: It is very populous, containing between thirty and forty great Caſſales or Villages, ſome of them above 500 Houſes, more like to great Towns than Villages, and twenty-ſix Pariſh Churches, beſide thoſe of *Gozo*.

The Number of Fighting Men was ſaid to be about 25,000, but I believe there are ſcarce ſo many; for according to a Survey taken in the Year 1632, the whole Number of Souls upon the Iſland, beſides the Knights, was about 50,112, of which we cannot reckon much above one fifth Part to be fighting Men. And though ſince that Time the Number of Inhabitants be much increaſed, yet I think ſcarce doubled.

The Language of the Natives is a corrupt *Arabick* or *Moreſco*, introduced by the *Saracens*, the ancient Language before their coming in, probably having been *Greek*, with a Mixture of *Punick*; whence I think one may reaſonably conjecture, that the *Saracens* did either deſtroy or drive out the former Inhabitants. Howbeit, the People can generally ſpeak *Italian*, there being no other Language but that and *Latin* uſed in any of the Courts of *Malta*. The *Great Maſter* of the Order is now Prince and ſupreme Governor of the whole Iſland, which with *Goza* and the adjacent Iſles, after the Loſs of *Rhodes*, was granted to this Order by the Emperor *Charles* V. in the Year 1530. The Government is managed with that Prudence and Juſtice, that the Iſland is now in a very flouriſhing Condition, the Inhabitants enjoying a great Deal of Freedom and Security, being alſo in their Carriage and Converſation among themſelves, and to Strangers, ſince the Coming in of the Order, very civil and courteous, however formerly they have been branded for the contrary; ſo that few Subjects live more happy than they do. The *Great Maſter*, when he goeth Abroad, is attended by many of the Knights, and two or three Pages, of which he keeps (as we were told) about twenty four. The Knights of the Order are always uncovered in the Preſence of the Great Maſter, excepting thoſe ſixteen which are of the *Gran Croce*: They take Place, of what Birth or Quality ſoever they are, according to their Seniority, from the Time of their Admiſſion, ſo that there is never any Difficulty or Queſtion about Precedency.

All the Knights are of noble or genteel Extraction, none being capable of Admiſſion, but ſuch as can prove their Nobility for three or four Deſcents. The *Great Maſter* wears a black ſhort Gown, with hanging Sleeves, the reſt of the Knights are habited as they pleaſe at Home, but when they go *in Curſo* (as they call it) upon the Gallies, they wear the proper Habit belonging to their Order. The Number of Knights was ſaid to be between 2000 and 3000, of which, for the moſt Part, the Majority reſide in the City, except when the Gallies are Abroad. The Name of the Great Maſter, at our being there, was *Nicholaus Cottoner*, of *Majorca*, and I ſuppoſe he is ſtill living, not having ſince heard of his Death.

About five Miles diſtant from *Malta*, Weſtward, lies the Iſland *Gozo*, called by the Ancients *Gaulos*, twelve Miles long, ſix and a half broad, and about thirty in Circuit. The Soil, like that of *Sicily*, is very deep and fruitful of Wheat and other Grain. This Iſland is mountainous, yet all cultivated, furniſhed with Store of freſh Springs. It maintains upon it 3000 Perſons, the Number of Houſes being about 500. It was much more populous before the *Turkiſh Armada* moſt inhumanly waſted it in the Year 1565, carrying away Priſoners 6000 Perſons. In the Streight betwixt *Malta* and *Gozo* lies a little Iſland called *Comino*, anciently, according to *Cluverius*, *Hephaſtia*, about five Miles in Compaſs, and well cultivated, for the Defence whereof the Great Maſter *Wignacourt* cauſed a Fort to be built, oppoſite to that on the other Side the Streight in *Gozo*, to ſecure the Streight, and hinder any Veſſels paſſing between the Iſlands without Leave.

That there is great Plenty of Shells and Fiſh-Bones petrified found in *Malta*, I have already intimated. I ſhall now therefore only name thoſe which are not at all, or but rarely found with us in *England*. 1. *Gloſſopetræ*, which are nothing but Sharks Teeth of ſeveral Shapes and Sizes. Theſe the *Malteſe* call *Serpents Tongues*. 2. The Vertebres of Thornbacks, and other cartilaginous Fiſhes. 3. *Cats-Heads* (as they call them from their Likeneſs to a little Skull.) 4. *Serpents-Eyes* of ſeveral Figures and Colours, the moſt of them red and like to thoſe they call *Toad-ſtones*, the exterior Superficies being a Segment of a Sphere and ſhining, as if it were poliſhed, ſo that they are commonly ſet in Rings. I have ſeen great Lumps or Maſſes of theſe cemented together. That the *Toad-ſtone* is nothing elſe but the Jaw-Tooth of a Fiſh called *Lupus marinus*, by *Schonfeldius*, Dr. *Merrit* in his *Pinax* hath firſt publiſhed to the World, and I doubt not but theſe have the ſame or the like Original. 5. *Serpents Teeth* which are ſmall, oblong, ſtriate Stones, of a polite Superficies, but no certain Figure; whither to refer theſe as yet, I know not, as neither 6. thoſe they call *Serpents Eggs*, which are ſomewhat like the former, but not ſtriate with Lines. 7. *Baſtons of St.* Paul, [*Baculi Sti.* Pauli,] having their Reſemblance of ſmall ſnagged Sticks. 8. *Petrified Lentils*, becauſe for Colour, Figure and Magnitude, ſomewhat like to that Pulſe. Beſides I find among the Stones I bought there, ſome exactly figured like the Fore-Teeth of a Man, and doubtleſs many other Sorts by diligent Search might be found, which have not as yet been named or taken Notice of. There are but few Trees growing upon the Iſland, the greateſt Want they have being of Fewel; to ſupply which Defect, they have of late begun to make Uſe of Seawreck, to burn in their Ovens, prepared after a certain Manner, invented by a Peaſant of *Malta*, for which he is highly commended by *Abela*, as a great Benefactor to his Country.

Here I firſt noted the Cuſtom of ſlitting up the Noſtrils of Aſſes, becauſe they being naturally ſtrait or ſmall, ſuffice not to admit Air enough to ſerve them when they travel or labour hard in theſe hot Countries. For the hotter the Country is, the more Air is neceſſary for Reſpiration and Refreſhment of the Body, there being leſs of that *Menſtruum* which ſerves to nouriſh or continue Fire, and conſequently the vital Heat of Animals (which hath great Likeneſs thereto) in hot Air than in cold; whence we ſee that Fire burns furiouſly in cold Weather, and but faintly in hot. Whether it be becauſe the Air is thinner in hot Weather and hot Countries, or becauſe the reflected Sun-beams ſpend and conſume a good Part of the forementioned *Menſtruum*, or from both theſe Cauſes: That the Air is thinner, and conſequently the *Menſtruum* alſo more diffuſed in hot Weather, is clear in Experience. I need mention no other Experiment to demonſtrate it than the Air incloſed in the Shank of an ordinary Weather-Glaſs, which in hot Weather dilates itſelf, and in Cold contracts very conſiderably. So then to give an Account of the Raging of Fire in the coldeſt Weather, we need not have Recourſe to the inſignificant Term of *Antiperiſtacis*, the true Reaſon thereof being the Denſity of the ambient and contiguous Air, containing Plenty of that *Menſtruum* which nouriſhes the Fire.

I omitted to mention the ancient *Cœmetria*, or ſubterraneous Burying-places, called *Catacombs*, of which there be many in *Malta*, becauſe of theſe we have already had occaſion to diſcourſe in our Deſcription of *Syracuſa* in *Sicily*. That this Iſland produces or nouriſhes no Serpent or other venomous Creature the common People affirm; but becauſe I find no Mention hereof in *Abela*, I give little Credit to their Report; ſhould it be true, it would be to me a great Argument that this was not the Iſland upon which St. *Paul* was caſt, when he ſuffered Shipwreck, but rather that *Melita* beforementioned, upon the Coaſt of *Dalmatia*, for which there is alſo ſome Ground in the Scripture; for that St. *Paul*, upon the Viper faſtening on his Hand, did by his Prayers obtain of God, that all the Serpents in *Malta* ſhould be turned into Stones, and the Iſland for the future wholly free from all venomous Beaſts, is a Monkiſh Fancy grounded upon the forementioned petrified Fiſh Bones, which they fondly imagined were ſome time Parts of Serpents; whereas in other Places where Plenty of ſuch Stones are found, there is no Lack of Serpents. I confeſs it is difficult to imagine how Serpents ſhould come at firſt to breed here, if the whole Iſland were once (as we conceive) a ſubmarine Rock covered with the Sea; and as there is no ſpontaneous Generation of Animals, as we alſo believe, becauſe it can be ſcarce imagined, that any Man ſhould on Purpoſe bring over Serpents hither, unleſs perchance to ſhew them for a Curioſity.

Whether there be venomous Beaſts or no, I am ſure there are venomous Inſects here, the very Biting or Stinging of the Gnats (with which the City is much infeſted) being more virulent than in other Places. For my Part, I do not remember that in *England* the Biting of a Gnat did ever cauſe a Swelling, or leave a Mark behind it in the Skin of my Face, (though I know in ſome it doth) but there it both raiſed a Swelling, and left a Mark behind it, that was not out for a Month after. The *Malteſe* eaſily defend themſelves from the Annoyance of this Inſect, keeping them out of their Beds by large Linen Curtains, lapping over one another. At firſt we were not aware of the Trouble theſe Animals were like to give us, and left our Curtains open; but Experience ſoon taught us to correct this Fault.

22. In our Return from *Malta* to *Meſſina*, we ſtaid a Day at *Catanea*, and there took Horſes and a Guide to bring us up Mount *Ætna* (now call'd *Monte Ghibello*) the Top of which is reckoned thirty Miles from *Catanea*, and is one continued Aſcent; the Grounds through which we paſſed being very fertile, well cultivated and inhabited, the Cinders which are caſt out by the Mountain, being inſtead of Dung, (after it is diſſolv'd by the Weather) which fattens and enriches the Soil. We advanced as far as where the Snow lies, which reached all up to the Top; we could go no farther, however we were near enough to obſerve, that the very Top or Pinnacle of the Mountain, was ſurrounded with a Ring of Snow, but had no Snow itſelf.

As to the *Sicilians*, they have not undeſervedly the Reputation of being uncivil and rude to Strangers; and the *Banditti* or Highway-men, are ſo frequent, that there is very unſafe Travelling here; the worſt is, that they are not contented with Robbing you of all you have about you, but carry you away into the Mountains, nor ſet you at Liberty, till you have paid what Ranſome they think fit to impoſe upon you. They have ſome peculiar Laws and Cuſtoms not eaſily met with in other Places. If you carry above the Value of ten Crowns in Money out of the Country, it is forfeited if found; the beſt is, that a little Money makes the Cuſtom-houſe Officer let Strangers paſs unſearch'd. No Calves are permitted to be kill'd in this Iſland, ſo that you ſee no Veal at the Tables of the *Sicilians*, tho' at *Malta* (whither they carry it by Stealth) is enough of it. No body ought to take above the Weight of an Ounce of Silver, without weighing of it. No young Perſon under Age, muſt enter or travel in *Sicily*, without peculiar Licence. To carry Pocket-Piſtols about one is a capital Crime, though long Guns are not only allowed, but alſo carried almoſt by every Body: The Reaſon of which is, that by the firſt a Perſon may be aſſaſſinated before he can be upon his Guard.

After our Return to *Meſſina*, we took Boat, *May* 27, over the *Fretum*, to take a View of the ancient *Regium*, (*Rhegio*) which now makes but a very mean Appearance, having ſcarce any Thing to boaſt of, except ſome Gardens, which indeed afford them great Plenty of the beſt Sort of Fruits: Here is alſo Abundance of Bricks made, being reckoned the beſt in *Italy* and *Sicily*. They ſhewed us a ſmall Fragment of St. *Paul*'s Pillar that burned, and told us ſo many Stories of it, that we were ſooner weary of hearing than they of telling.

May 29. We went in a Boat as far as *Scylla*, to ſee the Fiſhing of the Sword-fiſh: They place certain Fellows on the Cliffs near the Sea-ſide, (*Huers* our *Engliſh* Fiſhermen call them) theſe either by a Signal, if they are out of hearing, or elſe by their Voice, give Notice to the Fiſhing-boats, whereabout they ſpy the Fiſh: Theſe make what Haſte they can towards the Place, whither they were directed, and placing one of the Boats Crew on the Top of the Maſt (which have little Steps made for that Purpoſe) he gives, from Time to Time, Direction to thoſe at the Oars, whither to take their Courſe, according to the different Motions of the Fiſh. Being come near enough, they ſtrike him with a Harpoon, and the Fiſh being wounded, ſwims up and down till being ſpent with the Loſs of Blood, they draw him into the Boat. The Harpoon Iron is faſtened to a Pole, the Point being ſharp with Beards on each Side, like a barbed Arrow, ſo jointed, that they go eaſily in, but reſiſt the drawing of them out. The *Meſſineſe* looking upon this Fiſh as a ſingular Dainty, buy it at the Rate of Sixpence *per* Pound at firſt coming in. In *May* and the Beginning of *June*, they are catch'd on the Coaſt of *Calabria*, and towards the latter End of *June*, come over to the *Sicilian* Coaſt, and are taken near *Meſſina* till *Auguſt*. As there are no Rocks near the *Faro*, they are obliged to place their *Huers* on the Top of a very high Maſt, ſet up in a large Boat or *Brigantine*.

They have in the Beginning of *June*, a yearly Feſtival, call'd the *Feaſt of our Lady of the Letter*, which is celebrated with more than ordinary Solemnity; for a whole Week together, all the Houſes being illuminated with Candles, Wax Tapers, Lanthorns, *&c.* all the Night long. They call it the *Feſtival of our Lady of the Letter*, becauſe it is celebrated in Memory of a Letter, pretended to be written to them, by the *Virgin Mary* in *Greek*, of which they ſhow you the *Latin* Copy (the Original being loſt) which runs thus.

Maria virgo Joachim filia Dei humillima, Chriſti Jeſu crucifixi mater, ex tribu Juda, ſtirpe David Meſſanenſibus omnibus ſalutem & Dei patris omnipotentis benedictionem.

Vos omnes fide magna legatos ac nuncios per publicum documentum ad nos miſiſſe conſtat: Filium noſtrum Dei genitum Deum & hominem eſſe fatemini; & in cœlum poſt ſuam reſurrectionem aſcendiſſe, Pauli Apoſtoli electi prædicatione mediante viam veritatis agnoſcentes. Ob quod vos & ipſam civitatem benedicimus, cujus perpetuam protectricem nos eſſe volumus. Anno Filii noſtri XII. Indict. I. III Nonas Junii, Luna XXVII, Feria V. Ex Hieroſolymis Maria virgo quæ ſupra hoc chirographum approbavit.

23. *June* 6. We took a *Felucca* at *Meſſina* for *Naples*, and lodged the firſt Night at a ſmall Town called *Tropia*, in *Calabria*, ſixty Miles diſtant from *Meſſina*. The 7th, Lodging at St. *Lucido*, we met there alſo with the wild *Jejube*. The 8th, We took up our Quarters at *Porto Nicolo*, a ſmall Creek near *Scalea*, which is ſtrengthened by a Caſtle. The 9th, We lodged at *Chiupo*, and the 10th came to *Salerno*, where having quitted our Boat, we ſtayed the 11th. This City, which is dignified with the Title of an Epiſcopal See, is at preſent very inconſiderable, having neither Univerſity, nor *Schola illuſtris*, as far as we could learn. The only Thing worth our Obſervation here, was the Monument of *Hildebrand* (Pope *Gregory* VII.) who rendered himſelf famous by introducing Celibacy among the Prieſts, and his Oppoſition to the Emperor. This is to be ſeen in the Cathedral of St. *Matthew*, in the Porch of which you ſee many *Roman* Grave-ſtones, with ancient Inſcriptions.

The 12th, We travelled from *Salerno* by Land to *Naples*, and paſſed that Day through *La Cava* and *Nocera*, both Epiſcopal Sees, and *Scafata*, *Torre d' Annunciata*, *Torre di Greco*. The 30th, We embarked at *Naples* for *Leghorn*, and the firſt Day advanced no farther than five Miles, to *Niſita*, a ſmall Iſle in the Mouth of the Bay of *Pozzuolo*; but the ſecond Day reach'd *Sperlonga*, a little ſhort of *Terracina* (anciently *Anxur*) ſixty Miles.

The 3d Day, we paſs'd in Sight of the *Monte Circello*, (or *Promontorium Circeum*) deriving its Name from the noted Enchantreſs *Circe*, who, as it is ſaid, dwelt here: The Cape extends a great Way into the Sea. About two Leagues from the Point of this Cape, directly againſt it, we obſerved a great Number of certain Inſects, very like the *Cicadæ*, ſuch as we never met with before; our Ship's Crew called them *Gronge*. The *Cicada* is commonly in our *Engliſh* Schools, rendred by the Word *Graſhopper*, whereas the ſame is a quite different Inſect, of a rounder and ſhorter Body, ſitting upon Trees, and making a much greater Noiſe than the *Graſhopper*, which ought properly be call'd in *Latin*, *Locuſta*. The *Cicadæ* are frequent in the hot Countries, but ſeldom to be ſeen on this Side of the *Alps*. We lodged this Night at *Aſtura*, where we ſaw the Ruins of an ancient Town, and of the Foundations of certain Buildings in the Water. Not far thence, we paſs'd the fourth Day, the new Town of *Antio*, and a Mile diſtant thence, we ſaw vaſt Ruins of the old Town, and of a great Mole belonging to the Harbour. We ſtaid this Night at St. *Michael*, a ſmall Town not far from *Oſtia*, near the Mouth of the River *Tiber*.

The 5th Day, we ſail'd with a fair Gale to St. *Stephano*, not far from *Orbitello*, paſſing in Sight of *Civita Vecchia*, and *Porto Hercole*, compaſſing *Monte Argentorato*.

The 6th Day, Being overtaken by a *Boraſco*, or Storm of Thunder and Lightning, we rowed 18 or 20 Miles to a little Creek, under the Tower of *Calo di Furno*. On the Sea-ſhore we ſaw thoſe *Opercula concharum*, which by ſome Naturaliſts, are taken for Stones, and called *Umbilici marini*; by the *Italians*, *S. Lucies Eyes*. The 7th Day, We reached the Iſle of *Troia*, and the Wind turning againſt us, we took Shelter in a ſmall Creek near the Tower of *Lo Molino*.

The 8th Day, paſſing in Sight of *Piombino*, (a City ſubject to a Prince of the ſame Name) *Populonia P. Barreto*, *S. Vincentio*, *Caſtagneto*, and *Vara*, lodged at the Tower of *Caſtiglione*. The 9th Day, the Sea was very rough, it having blown hard all the Night before, yet we got ſafely into *Leghorn* by Noon.

24. *Florence*, ſirnamed *the Fair*, anſwers its Character by the Beauty of its Buildings, tho', in my Opinion, were it not for the great Number of Stone Palaces (ſuch as the Great Duke's, the *Palazzo de Pitti*, of the *Strozzi*, *Salviati*, and others) *Antwerp*, and divers other Cities in the Low-Countries, might challenge the Precedency in this Point: For though its Streets are well paved with broad Stones, like thoſe of *Luca* and *Cologne* in *Germany*, yet are they very narrow (to keep off the ſcorching Heat of the Sun) and the Paper Windows much ſhatter'd in many Places, are no ſmall Diſgrace to the Beauty of this City. The River *Arno* runs through the Middle of it, over which are built four Stone Bridges, among which, the *Ponte Vecchio*, or *Old Bridge*, has Goldſmiths Shops on both Sides. Its whole Circumference is ſaid to be ſix *Italian* Miles; but of this, the Duke's Palace and Gardens take up at leaſt one Sixth, beſides ſome Hundreds of Acres made into Vineyards. It has forty-four Pariſhes, including the twelve Priorates. The Number of Inhabitants is computed by ſome at Eighty-five thouſand Souls, by others Ninety thouſand, nay, an Hundred thouſand; but in my Opinion they ſpeak too large. We were told, that it had fifty-ſix Nunneries, and twenty-four Convents of Monks, and 37 Hoſpitals, one of which, *viz.* the *Orphanotrophium*, has 70,000 Crowns yearly Revenue, and maintains 900 Perſons. The chief Strength of this City conſiſts in its three Caſtles, among which, that on the South-ſide has a good Garriſon, and an Armory furniſhed with Arms for 30,000 Men. Another is a Fort in the Great Duke's Gardens. The third we viewed not.

The Churches of *Florence*, if not in all other Reſpects, at leaſt in Point of Architecture, are moſt excellent; the Cathedral of St. *Maria Florida* being accounted the moſt exquiſite Piece that ever was made, eſpecially for the Pillars which ſupport the Nave or Body of the Church, which ſtand at ſuch a Diſtance one from another, and are ſo ſlender, that they do not obſcure the Iſles, and afford a fair Proſpect at once of the whole Church. The Cupola, (the firſt and the Pattern of all the reſt) both for its Compaſs and Height, exceeds all in *Italy*, except that of St. *Peter*'s at *Rome*. The Choir, which is of an octagonal Figure, is under this Cupola. The Walls of the Church are covered on the Outſide with Marble, cut into ſmall Pieces, and chequer'd, of divers Colours. Within the Church beyond the Choir, you ſee four Inſcriptions, 1. Concerning the Building of the Church, the Foundation of which was laid in 1280. The 2d, Concerning its Conſecration by Pope *Eugene* IV. *March* 25, 1436. The 3d, Concerning the Union of the *Greek* and *Roman* Churches, under the ſaid Pope *Eugene* IV. in 1438. The 4th, Intimates the Removal of the Body of St. *Zenobius* from St. *Lawrence*'s Church hither, by Archbiſhop *Andreas* his Succeſſor. In the ſame Church I alſo ſaw the Monuments of *Marſilius Ficinus*, and of *Giotto*, a famous Architect, who firſt revived Painting in *Italy*, as alſo of *Philip Brunelleſhi*, another noted Architect, who deſigned the Cupola of this Church and that of St. *Lawrence*'s. On the North Wall of this Church is to be ſeen the Picture of an *Engliſh* Knight on Horſeback, named *John Acutus*, which makes ſome think his Name to have been Sir *John Sharpe*, though others would have his Name to be Sir *John Hawkwood*, becauſe *Guicciardin* calls him *Aucutus*, and deſcribes him as a great and valiant Captain. Here alſo you ſee on a Table, the Picture of the famous *Italian* Poet *Dante*, a Native of *Florence*, but living in Exile, was buried at *Ravenna*.

In the Church of St. *Croce* is to be ſeen the Monument of that great Man *Michael Angelo Buonarota*, the famous Architect, Sculptor, and Painter; under his Effigies is a Coffin, and under that three Statues ſitting, repreſenting Painting, Sculpture, and Architecture.

In the Church of the *Annunciata*, you ſee the Monument of another great Artiſt, *John Bologna*, in a Chapel behind the Choir, built by himſelf.

In the Church of St. *Mark* is the following ſmall Inſcription on the Tomb of the famous *Johannes Picus Mirandulanus*;

Johannes jacet hic Mirandula, cætera norunt
Et Tagus et Ganges, forſan & Antipodes.
Ob. An. Sal. MCCCCLXXXXIV. vixit An. XXXII.

The Church of St. *Lawrence* contains the Tombs of ſeveral of the Great Duke's Family, and to this Church belongs the famous Chapel of St. *Lawrence*, which, when finiſhed, will prove the moſt magnificent in the World, the Inſides of the Walls being laid over with Jaſper of ſeveral Kinds and Colours, Agate, *Lapis Lazuli*, Touch ſtone, &c. all neatly poliſhed and inlaid, and wrought into various Figures. This Chapel is an Octagon, the Roof of which is a ſpacious Cupola: One Side of this Octagon is left void hitherto, being reſerved for a moſt magnificent Altar oppoſite to the Door, the reſt of the Sides being for the Statues and Monuments of ſuch as have been Grand Dukes; the firſt, beginning on the Left Hand of the Door, being intended for *Alexander*, who was only Duke of *Florence*, was not yet made up; the reſt have their reſpective Names ſet over the Effigies, each of which ſtands in a Nich, ſome of Stone, ſome of Braſs, and underneath a Coffin or Cuſhion, with a Ducal Crown lying upon it, with the following Inſcriptions in this Order:

Franciſcus Mag. Dux Etruriæ II. *vixit ann.* XLVI.
ob. XIX. *Octob.* M. D. LXXXVII.
Coſmus Mag. Dux Etruriæ II. *vixit ann.* LV.
ob. XI. *Kal. Maii*, MDLXXXXIV.
Ferdinandus Mag. Dux Etrur. III. *vixit ann.* LX.
ob. VII. *Id. Feb.* CIↃ IↃ CIX.
Coſmus Mag. Dux Etrur. IV. *vixit ann.* XXX.
ob. XXVIII. *Feb.* CIↃ IↃ CXX.

There is one Side remaining for *Ferdinand* II. the fifth Great Duke, who died ſince our Departure; the preſent Great Duke's Name being *Coſmus* III.

Betwixt the Tombs are the Arms of two of the chief Cities under their Juriſdiction. There are ſo great a Number of Towers, Pillars, Fountains, and Statues of Braſs and Stone, and moſt excellent Pictures, at *Florence*, that I will not pretend to enter upon a particular Deſcription of them here, contenting myſelf with mentioning only the two *Statuæ Equeſtres* in Braſs, much greater than the Life; one of *Coſmus* I. upon the great Piazza; the other of *Ferdinand* I. in the Piazza of the *Annunciata*; and ſo proceed to give you a ſhort Account of the Great Duke's Gallery in the Palace, a very handſome Structure, having the Stables under Ground, and above them fair Portico's to walk in; over theſe, the Shops of all the Artificers that are employed by the Great Duke; above them is that they properly call the Gallery, where in a Walk free for any to come into, you ſee many ancient and ſome modern Statues; and on each Side of the Walk, the Pictures of Princes and other great Perſons. Here we ſaw among the reſt, the Pictures of Queen *Elizabeth*, King *James*, *Oliver Cromwell*, and of the before-mentioned *Johannes Acutus*.

The Rarities which we ſaw were preſerved in four Cloſets, the chief of which were, a very large terreſtrial Globe, and a *Sphæra Armillaris* bigger than that; ſeveral Stone Tables curiouſly inlaid with Fragments of precious Stones of various Colours, repreſenting Flowers, Fruits, Birds, Beaſts, and Inſects, ſo naturally, that the beſt Maſters of *Europe* could ſcarce have drawn them more exactly. One of thoſe Tables (the richeſt I ever ſaw) was ſet with many Rubies and Pearls, and valued at 100,000 *Florence Scudi*, (a *Scudi* being ſomewhat more than an *Engliſh* Crown;) ſeveral very excellent Cabinets, the beſt of which being valued at 500,000 *Scudi*, was ſet with Gems of the firſt Magnitude; a Pearl of an enormous Size, but not perfectly round; with ſeveral Topazes about the Bigneſs of Walnuts, large Rubies and Emeralds, beſides other Stones of leſs Value, *&c.* Here alſo they ſhewed us the Nail, half of Gold, half Iron, Part of which they pretend was tranſmuted by *Thurnhauſſerus*, an Alchymiſt of *Baſil*, into Gold, but the Iron and Gold was ſo coarſely join'd, that it eaſily diſcovered the Impoſture. Beſides many ancient *Roman* Idols and Lamps of various Shapes, and Pictures and Statues made by the beſt Maſters.

In the Great Duke's Armory we took Notice of the Armours of many great Perſons, and, among the reſt, of a Headpiece pretended to have belonged to *Hannibal*, having many *Moreſco* Characters on it; *Scanderbeg*'s Sword; the Hair of a Horſe's Mane ſeven Yards long, and the Skin of the Horſe ſtuffed up; a long Gun and a Piſtol, the Barrels of beaten Gold; ſeveral round Bucklers, on one of which was painted a *Meduſa*'s Head, by *Michael Angelo*, valued at a high Rate; *Italian* Locks for Women; a Thong cut out of the Hide of a Buffle, 250 Yards long; a great many *Turkiſh* Arms, *&c.* The *Argenteria* or Wardrobe contains twelve Cupboards, full of rich Plate; one is fill'd with all Sorts of Veſſels of beaten Gold; another has an Altar of Gold, ſet with Diamonds and other precious Stones, with this Inſcription in Capital Letters made up of Rubies, *Coſmus* II. *Dei gratia magnus Dux Etruriæ ex voto.*

If I ſhould enter upon a Deſcription of the *Great Duke*'s Palace, with its Gardens, Variety of Trees, Fruits, Shrubs, Walks, Fountains, Waterworks, *&c.* it would require a Treatiſe by itſelf; The Choice Plants we took Notice of *in tranſitu* were, *Dictamnus Creticus*, *Quamoclit Indorum*; *Tragoriganum*; *Stramonium peregrinum* Ger. i. e. *pomo ſpinoſo rotundo*; *Piſum cordatum*, *Balſamina cucumerina*, *Chamærrhiphes*, &c.

In the Duke's *Theriotrophium* we ſaw a *Lion*, *Tyger*, *Leopard*, *Bear*, *Wolf*, *Porcupine*, *Wild Boar*; the Snout of the laſt being longer than thoſe of tame Hogs, the Ears not quite ſo long, of a black Colour, as were the Feet and Tail, the reſt of the Body being of a griſly or Iron-grey Colour, which is conſtantly the ſame; it being obſerved, that moſt of the wild Animals, whether Birds or Beaſts, keep the ſame Colour.

Moſt of the Palaces of *Florence* are built *à la maniera ruſtica*, as the *Italians* call it, that is to ſay, of rough hewn Stones, even protuberating above the Superficies of the Wall: For the reſt, this City is in a decaying Condition, in reſpect, I mean, of what it has been formerly, proceeding partly from the great Declenſion of their Silk Trade with *France*, as alſo from the heavy Impoſitions laid upon them by the *Great Duke*, who being abſolute, receives the Tenth of its yearly Value of every Houſe, as well as the tenth of what Lands or Houſes are ſold; eight *per Cent.* of the Portion of all Women that are married; two *per Cent.* out of every Law-ſuit, according to the Sum ſued for; for every young Heifer that is ſold, a Crown; and on all other Proviſions, even to the very Eggs, an Exciſe in Proportion: Nay, he farms the Monopoly of fine Bread (call'd *Pane di Bocca*) to the Baker, who furniſhes his Table, and pays 1000 *Scudi* yearly: Beſides theſe Impoſitions, as they render the Generality of the Inhabitants poor, (there having not been a new Houſe built in forty Years) ſo it makes the Prince very powerful, whoſe ordinary Revenue is computed at one Million and a half, and by ſome two Millions of Crowns *per Annum*; whereas his annual Expences do not amount to above half the Money, being very thrifty in his Court, keeping his Servants at Board-Wages, and being at a ſet Rate with his Cook, Baker, *&c.* one of the chief Maxims of State being to amaſs great Treaſures; for which Reaſon the late Great Duke would often ſay of our King *Charles* the Firſt, *That Want of Money ruined him!*

Very few Gentlemen here, but what ſell their own Wines by Retail; not within Doors, but by a Hole made in the Cellar-Wall, where they take in and return the Flaſks or other Veſſels: Inſtead of a Signpoſt, they hang out Pieces of broken Flaſks at their Palace Gates. Notwithſtanding this, they look upon it as a great Diſparagement to breed up their Children to the Profeſſion of Phyſick; but as for Commerce, it is ſo well look'd upon here, that from the Great Duke himſelf to thoſe of the loweſt Rank, they all apply themſelves to it vigorouſly. Beſides that they call the *old State*, comprehending the Territories of *Florence* and *Piſa*, and the *new State*, comprehending the Territory of *Sienna*, the Great Duke is Maſter of part of the Iſle of *Elba* (likewiſe a Fief of *Spain*) part of *Graffignana*, purchas'd from the Marqueſſes of *Malaſpina*; the Earldom of St. *Fiora*, bought of the *Strozzi*; the Marquiſate of *Scanzano*, and the Earldom of *Pitigliano* and *Sorano*, once belonging to the *Urſini*; and ſome other ſmall Places which he holds from the Emperor, as he is Feudatory to the Pope; for *Radicofani* in *Tuſcany*, and *Borgo ſan Sepulchro* in *Umbria*. He has generally the Reputation of maintaining his Fortreſſes in a better Condition than any other Prince in *Europe*, for the Defence of which he maintains, in Time of Peace, Five thouſand Men in conſtant Pay. The Guard of his Body are *Germans*. They have an odd kind of Race at *Florence*, eſpecially in the Summer time, when a certain Number of the ſwifteſt Horſes are let looſe, and ſo run full Speed through one of the Streets, (which thence is call'd *Curſo*) without Riders. To make them run, they faſten ſmall Pieces of Leather ſtuck with Pricks upon their Backs.

The Eccleſiaſtical Revenue in all the Duke's Territories did, according to a Survey taken thereof 1645, amount to 765000 Crowns *per Annum*.

It is a conſtant Practice, among the Gentlemen as well as Citizens, of any Note here, to put their Daughters to board in the Nunneries as ſoon as they come to the eighth or tenth Year of their Age, looking upon this as the cheapeſt and ſecureſt Way to educate them till they are married.

The red *Florence* Wine (deeper than ordinary Claret) is a Wine much eſteem'd both in *Italy* and elſewhere; it acquires this deep-red Tincture by the letting it ſtand longer than ordinary upon the Huſks or *Vinacea*, the interior Pulp of the Grape being white.

Sept. 1, We ſet out again from *Florence* towards *Rome*, and paſſing through *Caſtiano*, eight Miles from thence, after we had travelled four Miles further, left the ordinary Road leading to *Siena*, rode through St. *Buco*, to a poor wall'd Town call'd St. *Donato*, ſixteen Miles from *Florence*, and fourteen from *Siena*, whither we continued our Journey by the Way of *Caſtellina di Campi*, and had a Proſpect of *Siena* ten Miles before we came at it, the Country hereabouts, as well as all over *Tuſcany*, being mountainous and barren. *Siena* (being about four Miles in Compaſs) is a very fair City, the Piazza of which reſembling the Figure of a Cockle-ſhell, is adorned with ſtately Buildings: The Cathedral is a moſt magnificent Structure of Marble, with a moſt noble Front, and adorned with the Heads of all the Popes, placed in the Wall, round about the Church; ſome part (*viz.* about the Front part) of this Church is pav'd with Marble inlaid, or rather a moſt curious Piece of *Moſaick* Work, containing part of the Hiſtory of the Bible, done by *Micherino Saneſe*: If it had been finiſhed according to the firſt Project, it would have exceeded any Thing of that kind in the World; as, the Painting of the Library Walls in this Church, containing the Hiſtory of *Æneas Sylvius*, afterwards Pope *Pius* II. half by the Hand of *Peruginus*, and half by *Raphael Urbin*, is one of the beſt that ever I ſaw, being as lively now, as if it had been done but a few Days. From the Tower called *Torre di mangio*, we took a full Proſpect of the whole City, which is of a triangular Figure, and encloſes a great many Gardens and Vineyards within its Walls: It is ſituate upon a Hill, which, together with the Pavement of the Streets, (which is of Brick ſet Edgeways, as they do in *Holland*) keeps them very clean, and affords them this further Conveniency, that having good Cellars, they make little Uſe of Snow or Ice to cool their Drink. There is a Room in the Palace of the *Podeſta*, the Roof and Walls whereof are ſo excellently painted by *Micherino Saneſe*, that it is juſtly valued more than the whole Palace beſides. This Place is pretty much frequented by Strangers, for its temperate Situation in the Summer time; and as the Inhabitants ſpeak the *Italian* in its Purity, ſo they are very obliging to Travellers, and all Manner of Proviſions are at a reaſonable Rate here.

25. *Sept.* 3. We left *Siena*, and paſſing through *Lucignano*, *Buon Convento*, and *Tornieri*, came to St. *Quiricho*, (St. *Cyriaci Opidum*) where I met with abundance of Lavendar Cotton. Hence we rode unto *Radicofani*, thirty four Miles from *Siena* ſituate upon a high Hill, and provided with a Garriſon of three hundred Men, being a well fortified Frontier Town of the Great Duke. In this Day's Journey we ſaw great Plenty of *Abſinthium Romanum*, Cæſ. between St. *Quiricho* and *Radicofani*, *Cynara ſilv.* and two other Species of Thiſtle, one I gueſs'd to be *Carduus tormentoſus* Lob. the other I knew not; *Acarna flore purpuro rubente patulo*; *Veronica ſpicata cærulea*; *Winter Savory*; *Aſter luteus Linariæ folio*; *Colchicum* all over the Paſtures.

Sept. 4. We continued our Journey from hence to *Viterbo*, being thirty eight Miles; and we had ſcarce travelled ten Miles, when we paſſed over a ſmall River near a Place called *Ponte Argentino*, which on this Side is the common Border of the Pope's and Grand Duke's Territories; and travelling on four Miles further, came to *Aquapendente*, a large old Town, ſo called from its Situation upon the Top of an Hill, from whence the Water falls down perpendicularly. We obſerv'd all the Villages and Towns of this Country to be built on Hills, for Coolneſs Sake: And no ſooner were we entred the Eccleſiaſtical Territories, but we found the Fields full of Trees, intermix'd with pleaſant and fruitful Valleys, whereas all that Part of the Great Duke's Country through which we paſs'd was very craggy, without Trees, and appear'd to us very barren. From *Aquapendente* we went on to *Lorenzo*, a ſmall Place at the Edge of the Lake of *Bolſena*, (anciently of *Volſinii*) and travelling for five Miles along the Lake, came to *Bolſena*, and thence mounted up to *Monte Fiaſcone*, where having refreſh'd ourſelves with that moſt excellent Wine that grows here, we travell'd for eight Miles, through a fertile Plain to *Viterbo*, a Town very ſpacious, and well ſituated, but indifferently built; we obſerv'd only two or three handſome Fountains, and one Tomb of Pope *John* XXI. in the Dome or Cathedral. The hot Springs hereabouts we had not time to take a View of or enquire about.

From *Viterbo* we travell'd, *September* 5, through *Ronciglione*, (a pretty place belonging to the State of *Caſtro*) to *Baccano*, being twenty two Miles. *September* the 6th, We went forward, travelling that Day ſixteen Miles, to *Rome*: We aſcended a Mountain not far from *Baccano*, from whence having a large Proſpect of the *Campania* of *Rome*, being covered all over with a thick Miſt, appeared to us at a Diſtance like a huge Lake. About three Miles on this Side of *Rome* we ſaw an ancient Monument they call'd the Sepulchre of *Nero*, the like we had met with before at *Modena*. About a Mile ſhort of *Rome*, paſſing over the *Tiber* by the *Ponte Molle*, (the ancient *Pons Milvius*) came upon the *Via Flaminia*, a well-pav'd ſtraight Way, having on both Sides many Country Houſes and Gardens, which brought us to the *Porta del Popolo*, one of the Gates of *Rome*.

26. So many Authors have employed their learned Pains in the Deſcription of *Rome*, both ancient and modern, I ſhall be very brief in the following Account of it. The Antiquities worth the Obſervation of the Curious, are chiefly the Ruins and Remainders of *Pagan Temples*, *Theatres* and *Amphitheatres*, *Circi*, *Baths*, *Aqueducts*, *Obeliſks*, *Triumphal Arches*, *Pillars*, *Fora*, *Mauſolæa*, *Statues*, *Altar* and *Grave-ſtones*, and other Stones, with their Inſcriptions; *Medals*, *Entaglia*, or *Gems* engraven with Figures, *Sacrificing Veſſels* and *Inſtruments*. *Sepulchral Urns*, *Lachrymal Urns*, *Ancient Lamps*, *Weights*, *Rings*, &c. Among the ancient Temples, which are ſtill entire, we have remaining ſome Part of them: 1. The *Pantheon*, commonly call'd *Rotunda*, from its circular Figure, now dedicated to the Virgin *Mary* and *All-Saints*, is 144 Foot high and as many broad, the Roof being vaulted in Form of a *Cupola*, having no other Light, but that it receives through a round Hole on the Top, of nine Foot Diameter. Its Porch conſiſted of ſixteen tall and maſſive Pillars of ſpeckled Marble, call'd Oriental Granite, each Pillar having but one Stone, of which there are only thirteen remaining now. Upon the Architrave of this Portico you ſee theſe Words inſerted in very large Letters:

M. AGRIPPA L. F. COS. TERTIUM FECIT.

This Temple was covered with Copper, till Pope *Urban* the VIIIth removed it thence, and to appeaſe the Grumbling of the People, order'd the four famous wreath'd Pillars and Canopy of the high Altar in St. *Peter*'s Church to be made of it; the *Clavi trabales*, or Nails which faſtned the Tiles of the *Portico*, weighing no leſs than 2800 Pounds, out of which was caſt a great Cannon, which is ſtill to be ſeen in the Caſtle of St. *Angelo*, with this Inſcription, *Ex clavis trabalibus Porticus Agrippæ*, and the Figure of one of thoſe Nails engraven upon it. The whole Body of this Temple remains entire, being deſpoiled only of its Ornaments and Statues, among which was the famous *Minerva* of *Phidias*. After its firſt Building, it had ſeven Steps upwards, which ſurrounded the whole Structure, whereas now you muſt deſcend eleven Steps to go into it; a convincing Proof that a great Part of the ancient *Rome* is involved in Rubbiſh under Ground. Thoſe that ſhewed us the Church were very careful to tell us, That the Lintel and Side-poſts of the great Door of this Church (which indeed is exceeding large in all its Dimenſions) were all of one entire Stone; which we thought fit rather to believe than to give ourſelves the Trouble of examining it. In this Church is to be ſeen the Tomb of that great Architect and Painter *Raphael Urbin* with an elegant Inſcription.

2. *Templum Fortunæ virilis*, or the Temple of the *Moon*, as ſome will have it, but rather of the *Sun* and *Jupiter*, now call'd S. *Maria Ægyptiaca*, where the *Armenians* have their Service. 3. The Temple of the *Sun*, or of *Veſta*, as ſome affirm, or as others, *Templum Herculis Victoris*, ſtanding not far from the precedent, *viz.* by the *Tiber* Side, near the broken Bridge, and is now call'd *La Madonna del Sole*, or St. *Stefano alle carozze*; a ſmall round Structure, with a Gallery of ſtriate Pillars round about it: It receives its Light like the *Pantheon*, through a Hole on the Top. Theſe two laſt remain entire. 4. *Templum Dianæ Aventinæ*, now call'd St. *Sabino*, is very large, twelve ſtriate Pillars on each Side, dividing the Nave from the Iſles. 5. *Templum Herculis Aventini*, now the Church of St. *Alexius* and *Bonifacius*, near the former, on the Top of Mount *Aventine*. 6. *Templum Jani quadrifrontis*, in the Cow-market. 7. The *Temple of Concord*, or rather its Remains, being only a *Portico* ſuſtained by eight great Marble Pillars of one Stone each, at the Foot of the *Mons Capitolinus*. 8. The Temple of *Saturn*, now St. *Adrian*'s Church, the Frontiſpiece of which is only the Remainder of the ancient Temple; it ſtands near *Severus*'s Arch, at the Foot of

of the Capitol. 9. The Temple of *Antonine* and *Fauſtina*, now St. *Lorenzo in Miranda*; of this remains entire the Portico, with its Inſcription, and ſome of the Walls built of maſſy Stones, the Marble Pillars which ſupport the Portico having a Grain lying one Way, all cleave like Wood. 10. The Temple of *Romulus* and *Remus*, ſince dedicated to St. *Coſmo* and *Damiano*, has ſcarce any thing remaining of its ancient Structure. 11. *Templum Iſidis & Serapidis ſive Solis & Lunæ*, now St. *Maria nuova*; the few Ruins remaining of the old Church are behind the Cloyſter, the preſent Church being no Part of it, neither ſtanding in the ſame Place. 12. *The Temple of Peace*, the Founder of which was *Veſpaſian*, exceeded all the other ancient Temples of *Rome* in Bigneſs, as may be ſeen by the Foundation, the Ruins of which may be eaſily diſtinguiſh'd; for the reſt, there are no more than Part of three Arches left ſtanding: The ſtriate Pillar, ſet up before the Church of St. *Maria maggiore*, the greateſt of one entire Stone now in *Rome*, was taken hence, being one of the eight which ſupported the Nave or Body of this Temple. 13. *Templum Jovis Statoris*, three Pillars now to be ſeen in the *Campo Vaccino*, were part of this Temple. 14. *Templum Jovis tonantis*; of this three Pillars, for the moſt Part under Ground, are ſuppoſed to be Part; on the Architrave whereof are to be ſeen theſe Letters, ESTITUER, on the Left Hand of the *Clivus*, as you go from *Severus*'s Arch to the Capitol. 15. The Temple of *Faunus*, now called St. *Stefano rotundo*, from its circular Figure: This large Structure is ſuſtained by two concentrical Circles of Pillars, the outermoſt Pillars being leſs than the innermoſt, the firſt containing forty four Pillars, and the other exactly half the Number; beſides that, the Pillars of the inner Circle ſtand at the ſame Diſtance from one another as thoſe in the outer. 16. *Templum Herculis Callaici*, now *Galuzo*, of a diagonal Figure, its Roof being a Cupola not much leſs than that of the *Pantheon*; it has two Doors directly oppoſite one to another, and on both Sides betwixt them, eight Niches for Statues. 17. *Templum Bacchi extra portum Piam*, now the Church of St. *Coſtanza*, without the Walls: This is alſo a round Structure, having a concentrical Circle of twelve Pillars of a leſs Circumference within. Here you ſee an ancient Monument of Porphry reſembling a large Cheſt, having a Stone to cover it; it is curiouſly engraven with Branches of Trees, Boys treading of Grapes, of Birds, *&c.* In ſeveral Places of the Roof are Pictures of Bunches of Grapes, and other Things belonging to Vintage, but the Freſhneſs of the Colours, and Rudeneſs of the Figures, makes me ſuſpect them to be no *Roman* Workmanſhip. They call this the Monument of *Bacchus*. 18. The Temple of the *Sun*; of this there remains only ſome great Marble Stones in the Garden of the *Columna*'s, ſome of them curiouſly engraven. 19. The Temple of *Romulus* and *Remus*, now dedicated to St. *Theodore*; it is of a circular Figure, into which you deſcend by Steps, like as into the *Pantheon*.

Of the ancient *Roman* Theatres and Amphitheatres, there are remaining only ſome ſmall Footſteps of the Amphitheatre of *Statilius Taurus*, near the Church of St. *Croce* in *Gieruſalemme*, and ſome Part of the Walls of the Theatre of *Marcellus*, upon which the Palace of the *Savelli* is built: But of the Amphitheatre of *Titus*, now called the *Coliſeo*, great Ruins are to be ſeen to this Day, being round without, and of an oval Figure within: It is capable of containing conveniently 85,000 Perſons. Of *Circi*, there are only ſome ſlender Remnants of that of *Antoninus Caracalla*, without the City, and of the *Circus maximus*, of which you may juſt diſcern the Figure. Of the *Circus Agonalis*, (now the *Piazza Navona*) and of the *Circus* of *Nero* in *Campo Vaticano*; as likewiſe of the *Circus Flaminius*, nothing is left but their Names. Of *Roman* Baths very conſiderable Ruins are to be ſeen, *viz.* thoſe of *Diocleſian*, which had Seats for three thouſand two hundred Perſons to bathe, without ſeeing one another; of *Antoninus Caracalla*, which hath ſixteen hundred Seats all of poliſh'd Marble; the *Thermæ* of *Titus*, of *Agrippa* near the *Pantheon*, of *Conſtantine* near St. *Sylveſter*'s, of *Nero* near St. *Euſtachius*'s Church, of *Paulus Æmilius* at the Foot of *Monte Cavallo*, called, *Magnanapoli*; beſides many others, of which ſcarce any Footſteps are to be ſeen now.

Among the ancient Aquæducts of *Rome*, there are only four that have ſomething remaining now, *viz.* the *Aqua Martia*, conducted thirty ſeven Miles; the *Aqua Claudia*, brought thirty five; and the *Aqua Appia* and *Aqua Virginis*, both brought eight Miles; the laſt of which being repaired by Pope *Nicholas* V. is us'd now-a-days, and known by the Name of *Fonte di Trivio*. Beſides thoſe, there are two new Aquæducts built by late Popes, of which the following Inſcriptions will give you a ſatisfactory Account.

Paulus V. *Pontifex maximus aquam in agro Braccianenſi ſaluberrimis è fontibus collectam, veteribus aquæ Alſeatinæ ductibus reſtitutis noviſque additis* XXXV. *ab Urbe milliario duxit, Anno Domini* MDCXII. *Pontificatus ſui ſeptimo.*

There are eleven Obeliſks remaining, but we took Notice only of nine: 1. That which antiently ſtood in the *Circus maximus*, but being broken, was by *Sixtus* V. ſet handſomely together, and placed upon a fine Pedeſtal in the Piazza within the Gate called *Porta del Popolo*, having on each Side an Inſcription, and two ancient ones on the oppoſite Sides in the ſame Words.

Imp. Cæſar Divi F.
Auguſtus
Pontifex maximus
Imp. $\overline{\text{XII}}$. *Coſ.* $\overline{\text{XI}}$. *Trib. Pot.* $\overline{\text{XIV}}$.
Ægypto in poteſtatem
Populi Romani redact.
Soli donum dedit.

On the other two Sides are modern Inſcriptions. It is engraved on each Side with three Rows of Hieroglyphicks. 2. The Obeliſk which now ſtands in the Piazza before St. *Peter*'s Church, was taken out of the *Circus* of *Caligula* and *Nero*, and at the Charge of Pope *Sixtus* V. placed here, as were alſo thoſe of St. *Maria maggiore* and St *John Lateran*. This Obeliſk is ſeventy two Foot high, beſides the Pedeſtal, in all one hundred and eight. It has no Hieroglyphicks upon it. Of the Manner of its Removal, a peculiar Treatiſe is written; as the four modern Inſcriptions on the Pedeſtal, and the ancient one on the Obeliſk itſelf, may be ſeen in *Roma antica & moderna*. 3. That of St. *John Lateran*, having three Rows or Files of Hieroglyphicks on each Side of it; this is one hundred and twelve Foot high, beſides the Baſe, where it is nine Foot and an half thick one Way, and eight Foot the other. It is the greateſt Obeliſk in *Rome*: From the following Inſcription it appears by whom it was brought to *Rome*, and ſet up.

Fl. Conſtantius Aug. Conſtantini Aug. F. Obeliſcum à patre loco ſuo motum, diuque Alexandriæ jacentem trecentorum remigum impoſitum navi mirandæ vaſtitatis per mare, Tiberimque magnis molibus Romam convectum in circo maximo ponendum curavit S. P. Q. R. D. D.

4. That of St. *Maria maggiore*, without Hieroglyphicks, and much leſs than any of the former, was removed hither out of the *Mauſolæum* of *Auguſtus*. 5. That of the *Piazza Navona*, taken out of the *Circus* of *Caracalla*, by Pope *Innocent* X. It has but one Row of Hieroglyphicks, and much leſs than the laſt mentioned; of this

Athanaſ. Kircher has written a whole Treatiſe. 6. That of St. *Mahuto*, near the Jeſuits Church, is only a Piece of the Top of an Obeliſk, placed upon four rude Stones; it has ſome Hieroglyphicks. 7. That in the Garden of *Medicis*, is alſo no more than a Piece of the Top of an Obeliſk, full of Hieroglyphicks, placed upon a Baſe, without an Inſcription. 8. That in the Garden of the *Mattei* is but very ſmall, and broken in two Pieces; the uppermoſt has to the Top Hieroglyphicks, but the lower Piece none. 9. In the Court of the Palace of the Prince of *Paleſtrina*, you ſee an Obeliſk lying upon the Ground, broken in three Pieces, with Hieroglyphicks; it ſeems to have been much longer. 10. *Roma antica* makes mention of an Obeliſk ſtanding at the Foot of the Stairs in the Palace of the *Urſini*, in the *Campo di flore*, but we did not ſee it. 11. We were alſo credibly informed, that an Obeliſk, bigger than any of thoſe erected already at *Rome*, and ſuppoſed to be entire, was lying under a Row of Houſes in the *Campus martius*.

Among all theſe Obeliſks, thoſe that are engraven with Hieroglyphicks are of the ſame Kind of Stone, *viz.* of a hard Marble of a mingled Colour, red and white, which in ſo many Ages has not undergone the leaſt Alteration by the Weather: Their Figure is taperwiſe, leſſening by Degrees from the Baſis to the Center, yet ſo as that they don't terminate in a Point; but when they are come to that Degree, as to be too ſmall to have any Hieroglyphicks engraven upon them, the Tops are made in the Form of an obtuſe Pyramid. It is the general Opinion, and not without a great deal of Probability, that the Hieroglyphicks upon theſe Obeliſks, from the Bottom to the Top, are by Degrees greater and greater, which makes the uppermoſt appear of the ſame Bigneſs with the lowermoſt.

Of Triumphal Arches are yet remaining that of *Septimius Severus*, that of *Titus Veſpaſian*, that of *Conſtantine* the Great, that erected in Honour of *Antoninus*, *Septimius*'s Son, and that of *Gallienus* and *Salonica*, called the Arch of St. *Vito*. We could not find out the Arch in the *Via Flaminia*, called *Arco di Portugallo*, in *Roma antica*, where you may ſee the Inſcriptions and Places of thoſe Arches.

There are four Pillars yet remaining *viz.* the *Columna milliaria*, which anciently ſtood in the *Forum Romanum* in the Center of the City, this being the Mark from whence they uſed to count their Miles by a certain Stone ſet up at every Mile's End, this Statue being, toward the Top, marked with the Letter I, of a conſiderable Bigneſs, as the ſecond Stone at the firſt Mile's End was marked with II, and ſo further; ſo that *ad ſecundem lapidem* ſignified at one Mile's Diſtance from this Pillar, *ad tertium* two, and ſo on. It is of no conſiderable Bigneſs, and now placed on one Side of the Area of the Capitol. The *Columna roſtrata* in the *Forum Romanum*, erected to *C. Duilius*, in Memory of the Victory obtained over the *Carthaginians* at Sea; the old and long Inſcription, which was much defaced, is ſupplied in many Places.

The Column of *Trajan*, of white Marble, which remains ſtanding ever ſince its firſt Eſtabliſhment, being one hundred and twenty eight Foot high, and the Baſe twelve; within it you aſcend to the Top by a Pair of winding Stairs of one hundred and ninety two Steps, having forty four ſmall Windows to give Light; the whole Fabrick is compoſed of no more than twenty four entire Stones, each Stone having eight Steps. An *Helical* Area compaſſes the Pillar from Top to Bottom, in Manner of a Screw, on which are carv'd the Actions of *Trajan* in his Expedition againſt the *Dacians*. The Pedeſtal, which was buried under Ground, was laid open again by Pope *Paul* III. and has the following Inſcription:

S. P. Q. R.

Imp. Cæſari Divi Nervæ F. Nervæ Trajano Aug. Germ.
Dacico, Pont. maximo, Trib. Poteſt XVI. *Imp* VI.
Coſ. VI. *PP. ad declarandum quantæ altitudinis mons*
& locus tantis operibus ſit egeſtus.

The Column of *Antoninus*, much like the former, is one hundred and ſeventy five Foot high, has two hundred and ſix Steps within, and fifty ſix ſmall Windows: Being miſerably broken and defaced, Pope *Sixtus* V. mended and reſtored it.

There are but two *Mauſolæa* remaining, *viz.* that of *Auguſtus*, and the Moles of *Adrian*, now called the Caſtle of St. *Angelo*. Of Altar-ſtones, Grave-ſtones, and other Stones with Inſcriptions, there is vaſt Variety all over the City: And of ancient Medals and *Entaglie*, there are dug up daily, which are ſold in the Shops and Stalls in the Market-places, and great Numbers of them are preſerv'd in the Collections of the *Virtuoſi*; where, as well as in the Gardens and Palaces of Perſons of Quality, you may ſee great Quantities of ſepulchral Urns of different Shapes and Bigneſs, ſome of Stone, others of Earth.

Among the Antiquaries of *Rome*, who have conſiderable Collections of theſe before-mentioned Things, as well as of ſacrificing Veſſels and Inſtruments, Lachrymal Urns, ancient Lamps, Rings, *Fibulæ*, *Teſſeræ hoſpitalitatis*, Weights, *&c.* *Leonardus Auguſtinus*, the Pope's Antiquary, and *John Petro Bellori*, deſerve to be prefer'd before the reſt; that worthy and ingenious Gentleman Cavalier *Carlo Antonio del Pozzo*, ſhewed us twenty Volumes in Folio, containing the Figures of moſt of the Antiquities in and about *Rome*, drawn by the Hand with great Exactneſs; and among the reſt, we took Notice of the *Crepundia Veterum*, being Nothing elſe but little Images of Earth reſembling Children, Apes, Hares, *&c.* found in Urns. Of Weights, we ſaw ſome in the Collection of *Leonardus Auguſtinus*, made of a dark-red Stone well poliſhed, of the Shape of a *Holland* Cheeſe, of divers Magnitudes, marked on one Side with the Number of Ounces or Pounds it contained. Of theſe Weights, I ſaw two as big as a large *Holland* Cheeſe, in the Church of St. *Maria in Coſmedin*, called *Schola Græca*, and two more in the Church of St. *Maria in Traſtevere*, of which they have a Tradition, that they uſed to tie them to the Martyrs Feet, to ſtretch and torment them. In the laſt-mentioned Collection, we ſaw alſo a Medal, with the Figure of a *Talus* on one Side, and this Inſcription on the other, *Qui ludit arrham det quod ſatis ſit*: The *Fritillus*, or Dice-box of the Ancients, like ours; the *Strigiles*, a Medal that uſed to be hung about the Slaves Necks, having on one Side the Figure of a She-Wolf giving Suck to *Romulus* and *Remus*, and on the other, in three concentrical Circles, theſe Words, *Tene me ne fugiam, & revoca me in foro Trajani purpuretica ad Paſcaſium Dominum meum.* A Drinking-glaſs like a *Priapus*, of which the Poet, *Vitreo bibit ille Priapo.* The ancient *Roman* Timbrel, not unlike our modern ones.

27. *Rome* is near thirteen Miles in Circumference, but did to us appear not to be ſo populous as *Venice*, *Milan*, or *Naples*, as comprehending a great deal of waſte Ground: The Number of its Inhabitants is generally believed to be 120,000 Souls, without Strangers, of which there are great Numbers here; it extends nowadays below the Hills into the Valley by the River-ſide, being generally well-built, the Streets ſtreight, and beautified with many Palaces, Monaſteries and Churches, of which, they ſay, there are above three hundred. Proviſions are not ſo cheap here as at *Florence* or *Naples*, yet have they great Plenty of them, and exceeding good, their Beef being not inferior to ours in *England*. Before they kill their Beaſts, they hunt them as we do our Bulls. Their ſucking Veal they prefer before all of that Kind in *Europe*; and their Kid or *Caprette*, and Pork, is alſo excellent good Meat; but their Mutton is tough and dry. For tame Fowl they may compare with any Part of *Europe* both in Quantity and Goodneſs, *viz.* Hens, Capons, Turkies, tame Pigeons, *&c.* Geeſe they have in no great Plenty, but wild Fowl is very cheap, and that of the beſt Sort, ſuch as Partridges, of two kinds, the common and red-legged ones, Woodcocks, Snipes, Duck and Mallard, Wigeon, Teal, Quails, Plover, *&c.* beſides what is ſold in the Small bird Market, of Thruſhes, Blackbirds, Larks, *&c.* nay, even Robin-red-breaſts, Finches,

Wagtails, Grays, &c. Beſides theſe before-mention'd, you may ſee ſometimes in the Poulterers Shops, Cranes, Wild geeſe, Shelldrakes, *Avoſettæ*, Water-hens, Berganders, and even ſuch Birds as are not eaten in *England*, as Kites, Buzzards, Spar-hawks, Keſtrels, Jays-Magpies and Wood-peckers. Neither are they in any Want of Sea, or River Fiſh, though ſold at a dearer Rate than Fleſh: Of Freſh-water Fiſh, Pike, Carp, Tench, Trout, Eels, Barble, Chevin, and Dace, are the moſt frequent; I don't remember I ever ſaw a Perch at *Rome*. Of Sea-fiſh, they have the *Mullus antiquorum*, now *Triglia*, called *Rouge* by the *French*, from its Colour; in *Cornwall* we call them *Surmullet*: *Spigole*, or the *Lupus marinus*, a Fiſh not known in *England*, *Orate*, Giltheads; *Cephali*, the *Mugil* of the Ancients, we call it a *Mullet* in *Engliſh*; *Sarde*, or the Sprat; Conger or Lamprey; Sole, Plaiſe, and others of the flat Kind; *Merluzzo*, we call them Hakes; ſometimes ſmall Sturgeons, Dog-fiſh, as alſo Tuny and Sword-fiſh.

Wild Boar and other Veniſon you ſcarce ever miſs in the Market, but their wild Deer (or *Capreole)* is generally very lean: Sometimes you meet alſo with Porcupine to be ſold. Oranges and Lemons are very cheap here, but large Pears and Apples dear, being ſold by Weight all over *Italy*. Their Bread is very cheap, good, and light, though they uſe no Yeaſt to raiſe it. Of Wines they have greater Variety than in any other Place of *Italy*; as *Greco*, *Lacrime* of *Naples*, *Languedoc*; Wine of *Syracuſa* and *Auguſta* in *Sicily*, *Orvietano*, *Jenſana*, *Monte Pulciano*, *Monte fiaſcone*, *Caſtelli*, *Romano* and *Albane*, more frequently uſed than all the reſt. Moſt of their Wines are ſweet (which they call *Abboccati)* and ſo ſtrong bodied, that they will bear half Water. Rough Wines they call *Aſciuti*, though none of theirs are ſo harſh as our Clarets, *Florence*, or red Wines, which are alſo to be had here. Their Olives, though ſmall, are exceedingly good and ſweet; of Walnuts, Hazlenuts, and ſuch other Fruits as are frequent among us, great Plenty; but our Apples and Pears excell all the reſt for Goodneſs.

Rome is alſo noted for various Commodities and Manufactures; as, the beſt Viol and Lute-ſtrings in *Europe*, perfum'd Gloves, Combs made of Bufflers Horn, Womens Fans, Vitriol, Eſſences; and as for Muſick and Pictures of the beſt Maſters, this City may deſervedly challenge the Preference before all other Places in *Europe*. At this Time Cavalier *Barberini* was the moſt noted and the only excellent Sculptor here, and *Pietro de Cortona* the moſt eminent Painter.

The *Villa*'s or Country Seats of the Princes and other Perſons of Quality of *Rome*, for Flower Gardens, Groves, cut Hedges of Cypreſs, *Alaternus*, Laurel, Bay, *Phillerea*, *Laurus tinus*, and other *ſemper-virent* Plants, cloſe and open Walks, moſt excellent Orchards of Fruit trees, Labyrinths, Fountains, Waterworks, Statues, Bird-cages, and other Ornaments, but eſpecially in their Bigneſs, (ſome being three or four Miles in Compaſs) exceed moſt of the Gardens in *Chriſtendom*; the chief of thoſe, (1.) The *Villa Borgheſe*, eſteem'd the beſt of all about *Rome*, though inferior in Bigneſs to the (2.) *Villa Pamphylia*, which lies on the *Janiculum*, without St. *Pancras*'s Gate, being four Miles in Compaſs. (3.) The *Villa Ludoviſia*, belonging to Prince *Ludoviſio*. (4.) The Pope's Garden, called *Belvedere*, at the Vatician. (5.) The Pope's Garden at *Monte Cavallo*. (6.) The *Villa de Medici*, or the Great Duke's Garden. (7.) The Garden of *Montalto*. (8.) The Garden of the *Mattei*. Each of theſe have their little Pillars, beautified with moſt excellent Statues, *baſſi relievi*, Pictures and other Curioſities, for the Deſcription of which I refer myſelf to others; neither will I pretend to enlarge upon their publick Structures, but can't altogether paſs by in Silence the Church of St. *Peter*, being in my Opinion, the moſt ſumptuous and magnificent Structure that ever was placed upon the Face of the Earth, exceeding in all its Dimenſions the moſt famous Temples of the Ancients, being 520 Foot long, and 385 broad, which though it be not ſo long as St. *Paul*'s at *London*, yet as it is much broader, ſo this renders it more regular and proportionable to its Length. The *Cupola* is of that ſtupenduous Height and Compaſs (having the ſame Diameter as that of the *Rotunda*) which ſuſtaining on the Top a very large Lanthorn, encompaſs'd with great Stone Pillars, this renders it the boldeſt and moſt ſtupenduous Piece of Architecture the World ever beheld. The Roof is arch'd and divided into ſpacious Squares or Panes like Wainſcot, the Ribs and tranſverſe Borders terminating thoſe Pannels, being richly gilt, and the *Area* of each Square fill'd up with a large gilt Roſe. The oval Portico encompaſſes a large *Area* before the Church, conſiſting of four Rows of great Stone Pillars, ſo cloſe together, that at a Diſtance they reſemble a Grove of large Trees. To be ſhort, the lofty Porch to which you aſcend out of this *Area* by twenty four Steps, the covering of ſome part of the Walls with Marble, finely poliſh'd, the excellent Statues, magnificent Altars, moſt curious Pictures, and other Ornaments, render this Church the moſt majeſtick and moſt admirable Pile of Buildings in the Univerſe.

Whilſt we ſtaid at *Rome*, we took a *Tour* to *Freſcati*, twelve *Italian* Miles thence, anciently call'd *Tuſculum*, where *Cicero* had a Country-houſe, of which they ſhew as yet ſome Remnants: At preſent it is famous for three *Villa*'s, *viz.* that of *Borgheſe*, with its Palace call'd *Mondragone*; the *Villa Aldobrandina* or *Belvedere*, belonging to Prince *Pamphilio*, and the *Villa Ludoviſia*; all which for Walks, Groves, Labyrinths, and other Ornaments, may compare with the beſt near *Rome*; and for Waterfalls and other Waterworks, exceed them. That which pleas'd us moſt, (having never ſeen the like before) was the Imitation of a Tempeſt, with a Storm of Thunder and Rain, which artificial Thunder they call *Girandola*. We alſo took a View of *Tivoli*, the Ancients *Tibur*, eighteen Miles from *Rome*; how much *Horace* delighted in this Place, is evident out of his Verſes. Its Situation is, as well as *Freſcati*, on the Brow of a Hill overlooking the *Campania* of *Rome*. Here are to be ſeen the Ruins of ancient Temples and other Structures, and a remarkable Waterfall of the River *Aniene* or *Teverone*. And the *Villa* of *Eſte*, for its Gardens, Orchards, Walks, Groves, the *Girandola* and other Waterworks, may compare with thoſe of *Freſcati*. Not above five Miles from *Tivoli*, we paſs'd over the Sulphur River, the Water whereof we found of a bluiſh Colour, and nauſeous Smell, not unlike to that of our Sulphur Well at *Knaresburgh* in *Yorkſhire*; the Channel in which it runs is encruſted with a whitiſh kind of friable ſtony Matter, which being congeal'd in many Places in the Shape of Sugar-plumbs, they call *Confetti de Tivoli*, and ſell them in whole Boxes full at *Rome*. About *Freſcati* we ſaw growing wild Abundance of *Styrax arbor*, which we found no where elſe beyond the Seas.

The *Campania* of *Rome* is generally very fertile, but being marſhy, and full of ſtanding Pools, the Unwholſomneſs of the Air makes that Country but thinly inhabited. One thing more we obſerv'd very well worth mentioning during our Stay at *Rome*, *viz.* that the Water the Servants brought us in froſty Weather to waſh our Hands, was ſo hot, that we thought it had been warm'd on Purpoſe by the Fire; which Phænomenon having been denied by many of our modern Philoſophers, who were not ſatisfied with the *Antiperiſtaſis* of the Ancients, and yet could not give ſufficient Reaſon for it, we thought fit to be ſatisfied of the Truth, by making an ocular Inſpection into the Fountain itſelf, the Water whereof we found of an equal Heat with what was brought us. For the reſt, the frequent Rains that fall hereabouts make in ſome Meaſure Amends for the exceſſive Drought and Heat of the Summer: and as *Rome* has ſufficient to entertain People of all Tempers, ſo it is a Place well fitted for the Reception of Strangers. As for the Inhabitants, they approach now-a-days, in their Furnitures and ſome of their Manners and Cuſtoms, more to the *Engliſh* than any of the *Italians* beſides. To enlarge here upon the Court of *Rome*, the Eccleſiaſtical State and Government, with that of their Churches and Ceremonies, &c. as it would require an entire Volume, ſo without inſiſting any further upon thoſe Particulars, we will proceed in the Account of our Journey.

January 24, 1664. We left *Rome*, and taking our Way towards *Venice* along the *Via Flaminia*, paſs'd the *Tiber* again by the *Ponte Molle (Pons Milvius)* and at ſeven Miles Diſtance from *Rome*, through a ſmall Village called *Prima porta*, which ſome ſuppoſe to have been the ancient Boundary of the City on that Side. From thence we travelled eight Miles further, to *Caſtelnovo*, where we took up our Lodgings. All this Afternoon we kept along the *Tiber*, upon the *Via Flaminia*, which reaches as far as *Rimini*, and is all along pav'd with broad Flints and Pebbles, having on each Side a Border of Stone, and in that Border, at every ſecond or third Pace, a Stone ſtanding above the Level of the Border. In the Fields, as we paſs'd along, we found abundance of vernal Crocuſes in Flower.

Jan. 25. We continued our Journey to *Ariano*, eight Miles, where leaving the *Via Flaminia*, we rode round a high Hill, for nine Miles, to a little Town call'd *Civita Caſtellana*, now ſtanding on a Hill, not far from whence we had a Proſpect of the Duke of *Parma*'s Palace of *Caprarola*, which ſeem'd to be no more than two or three Miles off, but was, as they told us, at leaſt ten or twelve. After we had travell'd four Miles further, we paſs'd the *Tiber* a little below *Borgetto*, over a Bridge called *Ponte Felice*, begun by Pope *Sixtus* V. and finiſhed by *Urban* VIII. At a ſmall Diſtance from the River Side we paſſed under the little Town of *Magliano*, built on the Top of a Hill, and travelling for four Miles along the Bank of the River, came to *Utricoli*, now ſtanding upon a Hill, though the Ruins which remain ſhew the ancient *Ocricoli* to have extended, at leaſt for ſome Part, to the River. From hence we rode, for five Miles, over mountainous and rocky Ways, and a Mile before we reach'd *Narni*, upon the Brink of a moſt dreadful Precipice, extending along the River *Nera*'s ſide. *Narni* (the *Nequinum* of the Ancients) has borrowed its Name from the River *Nar*, which paſſes below that ſteep Rock, upon the Ridge whereof this City is built: It was formerly a *Roman* Colony, and none of the leaſt conſiderable ones, but is now very poor and mean. Here you ſee the Braſs Statue erected in Memory of *Gattamelata*, the famous *Venetian* General, on Horſeback, who was a Native of this Place. Near it you ſee the Ruins of vaſt Stone Arches, which ſome would have to be the Remnants of a Bridge, others of an Aquæduct over the River from one Mountain to another.

Jan. 26. We travell'd thence through a very delightful and fertile Valley, environ'd with Mountains, and well cultivated, to *Terni*, anciently *Interamna*, from its Situation, a neat little City, in the Piazza of which ſtands a Church which ſeems to have been an ancient Temple. About four Miles further is the famous Waterfall from the Lake *di Pie di Luco*. Beyond *Terni*, at the further End of this Valley, and on all the adjacent Hills, we ſaw whole Foreſts of Olive-trees, and the Country People buſy in gathering them. From *Terni* we paſſed over the Mountains to *Tritura*, and thence deſcended to *Spoleto*, the Capital of *Umbria*, thence call'd *Ducato Spoletano*: The Walls of this City are of conſiderable Extent, and the Houſes well built: Here are to be ſeen the Ruins of many ancient Buildings. From hence we paſſed through a moſt ſpacious and pleaſant Valley, encloſ'd with Mountains in the Form of an Amphitheatre, the Valley being planted with Trees and Vines after the Manner of *Lombardy*, and the neighbouring Hills full of little Towns and Houſes. About four Miles ſhort of *Foligno*, we paſſed under *Trevi*, a little Town ſeated on a round Hill. *Foligno (Fulginium)* is a very pleaſant and handſome Town, famous chiefly for Confectioners and good Sweetmeats. Beyond it, at the Extremity of the Valley of *Spoleto*, we ſaw ſuch another Plantation of Olive-trees as before.

Jan. 27. We aſcended from *Foligno* to a Mountain, by a Way cut out of the Rock, having a terrible Precipice on our left, and below a Valley ſurrounded with high and ſteep Hills, into which falls a ſmall River called *Dale*, which drives ſome Paper-Mills. After we had thus travell'd four or five Miles, we reach'd the Top of the *Appennine*, the Mountains round about us being covered with Snow: On the Top we came into a ſmall Plain, having a little Lake or Pool near a Village call'd *Col fiorito*, a very delightful Place in Summer. No ſooner had we paſs'd this Plain, but we began to deſcend, and paſſing through the Village of *Serravalle*, ſituated at the Entrance of a narrow Valley, fourteen Miles from *Foligno*, we continued our Journey through the Mountains, and lodg'd at *Valcimarra*. *Jan.* 28, We travelled thro' *Tolentino*, nine Miles from *Valcimarra*, a pretty little Town, famous for the Birth-place of that great Critick, *Franciſcus Philelphus*, who was the firſt Inventor of the Word *Stapes*, for Stirrops, which had before no Word in *Latin*. From hence we rode on ten Miles to *Macerata*, a large and populous City, the Capital of the *Marca Anconitana*, and Reſidence of the Cardinal Legate. From hence we travel'd thro' *Recanati* to *Loretto*. At *Recanati* we ſaw a Statue in Braſs of the Virgin *Mary* in *Baſſo relievo*, with a Table having an Inſcription upon it giving Thanks to her, that ſhe was pleaſed to ſettle her Houſe in the Territory of this City.

Loretto itſelf is no more than a ſmall City, ſeated upon a Hill, conſiſting only of one Street within the Walls, and ſuch another without, which makes the Suburb: The Church and College of the Canons ſtand at one End of the Street; and before the Church is a ſmall Piazza, having a Cloyſter on one Side, where the Canons have their Lodgings. In the Midſt of the Piazza you ſee a very fair Fountain, and juſt before the Church Door a Braſs Statue of *Sixtus* V. in a ſitting Poſture, with an Inſcription, intimating, that it was he who gave a Biſhop and the Title of a City to *Loretto*. All the Doors of this Church are of Braſs caſt, with ſeveral Hiſtories upon them. The Church is built in Form of a Croſs, with a *Cupola* in the Middle, directly under which you ſee ſtanding, the *Santa Caſa* or *holy Houſe*, encloſ'd in a Caſe of white *Parian* Marble, curiouſly engraven with Figures in *Baſſo relievo*, repreſenting ſeveral Hiſtories, done by the beſt Sculptors of that Age, the full Deſcription of which may be ſeen in *Turſelinus*'s Hiſtory. The Walls of the Houſe itſelf are made of a peculiar kind of Stone (as they would perſuade the World) reſembling Bricks both in their Colour and Figure, but to be found only about *Nazareth*; which, if they could prove to be true, would be the beſt Argument to verify their Aſſertion concerning the Tranſportation of this Houſe from thence; but, in my Opinion, they are real Bricks. But to let the Reader know what Arguments they make uſe of to perſuade the World of the Verity of it, I will here inſert the whole Relation as given by themſelves, which being tranſlated into thirteen Languages, and hung up in the Church, written on as many Tables, runs thus in *Engliſh*.

Ave Domina Angelorum.

The miraculous Origin and Tranſlation of the Church of our Lady of Loretto.

“ The Church of *Loretto* was a Chamber of the bleſſed Virgin nigh *Jeruſalem*, in which ſhe was born and bred, and ſaluted by the Angel, and therein conceiv'd and brought up her Son *Jeſus* to the Age of twelve Years. This Chamber, after the Aſcenſion of our Saviour, was by the Apoſtles conſecrated into a Church in Honour of the bleſſed Lady: And St. *Luke* made a Picture to her, likewiſe extant therein to be ſeen at this very Day. It was frequented with great Devotion by the People of the Country where it ſtood, whilſt they were Catholicks; but when, leaving the Faith of Chriſt, they follow'd the Sect of *Mahomet*, the Angels took it and carried it into *Sclavonia*, and placed it by a Town call'd *Flumen*, where not being had in due Reverence, they again tranſported it over the Sea, to a Wood in the Territory of *Recanati*, belonging to a Noblewoman called *Loretta*, from whence it took the Name of our Lady of *Lo-*

“ *retto*; and thence again they carried it, by Reaſon of the many Robberies committed, to a Mountain of two Brothers in the ſaid Territory: And from thence finally, in Reſpect of their Diſagreement about the Gifts and Offerings, to the common Highway not far diſtant, where it now remains without Foundations, famous for many Signs, Graces, and Miracles; whereat the Inhabitants of *Recanati*, who often came to ſee it, much wondering, environ'd it with a ſtrong and thick Wall; yet could no Man tell whence it came originally, till in the Year 1296, the bleſſed Virgin appear'd in his Sleep to a holy devout Man, to whom ſhe reveal'd it, and he divulg'd it to others of Authority in this Province, who determining forthwith to try the Truth of the Viſion, reſolv'd to chuſe ſixteen Men of Credit, who to that Effect ſhould go all together to the City of *Nazareth*, as they did, carrying with them the Meaſures of this Church, and comparing therewith the Foundation's Remnant, they found them wholly agreeable; and in a Wall thereby engraven, that it ſtood there, and had left the Place. Which done, they preſently returning back, publiſhed the Premiſes to be true; and from that Time forward it hath been certainly known, that this Church was the Chamber of the Virgin *Mary:* To which Chriſtians began then, and have ever ſince had a great Devotion, for that in it daily ſhe hath done and doth many and many Miracles. One *Frere Paul de Sylva*, an Eremite of great Sanctity, who liv'd in a Cottage nigh unto this Church, whither daily he went to Mattins, ſaid, That for ten Years Space, on the eighth of *September*, two Hours before Day, he ſaw a Light deſcend from Heaven upon it, which he ſaid was the bleſſed Virgin, who there ſhew'd herſelf on the Feaſt of her Nativity. In Confirmation of all which, two virtuous Men of the City of *Recanati* divers times declar'd unto the Prefect of *Terreman*, and Governor of the aforemention'd Church, as followeth: The one, called *Paul Renaiduci*, avouch'd, That his Grandfather ſaw when the Angels brought it over the Sea, placed it in the aforementioned Wood, and had often viſited it there: The other, call'd *Francis Prior*, in like Sort affirm'd, that his Grandfather's Grandfather being 120 Years old, had alſo much frequented it in the ſame Place; and for further Proof that it had been there, he reported, that his Grandfather's Grandfather had a Houſe nigh unto it, wherein he dwelt; and that in his Time it was carried by the Angels from thence to the Mountain of the two Brothers, where they placed it as aboveſaid.”

By order of the Right Reverend Monſigor *Vincent Caſſal* of *Bolognia*, Governor of this Holy Place, under Protection of the moſt Reverend Cardinal *Moroni.*

I *Robert Codrington*, Prieſt of the Society of *Jeſus* in the Year 1634. have faithfully tranſlated the Premiſes out of the *Latin* Original hanging in the ſaid Church.

To the Honour of the ever-glorious Virgin.

29. From *Loretto* we travel'd, *Jan.* the 30th, to *Ancona*, a populous City much frequented by Merchants, by Reaſon of the Conveniency of its Harbour, which formerly was the beſt in all the Gulph, but is much decayed of late. Here we took particular Notice of the Ruins of the Stones which ſecur'd the ancient Port, where you ſee that renown'd triumphal Arch of white *Parian* Marble, erected to *Trajan* by order of the Senate: The Stones are of a vaſt Bigneſs.

The *Statua equeſtris* of *Trajan*, which formerly ſtood on the Top of this Arch, is remov'd thence, and ſet up over the Gate of the Exchange. Here we were alſo entertain'd with a Diſh of Shelfiſh, of a very pleaſant Taſte, call'd *Pholades* in *Latin*, becauſe they live in Holes within a ſoft kind of Stone, or rather Clay, which being found in great Plenty at Sea, if expos'd to the Air becomes in Time a perfect Stone: The *Italians* call theſe Stones *Balle di Saſſo*, and the Fiſh *Ballare* or *Dattyli de mare.*

Jan. 31. We continued our Journey along the Sea-coaſt for twenty Miles, to *Sinigaglia*, (anciently *Sena Gallica)* a ſmall Harbour for Barges, but well fortified.

From hence we ſtill paſs'd along the Sea-ſhore for fifteen Miles further to *Fano*, (anciently *Fanum Fortunæ*) a large and well fortified City: Here is a triumphal Arch erected in Honour of *Auguſtus*, which being ſomewhat broken and defaced, they have in the Wall by ſet a Model of it, as it was entire.

Here was the ancient Temple of *Fortune*, now the Church of the *Auguſtine* Friars, the Braſs Statue of *Fortune*, which was there ador'd, ſtanding yet in the Palace. The City is govern'd by a Senate, conſiſting of ſeventy Gentlemen, chang'd every third or fourth Year, but the Governor of the Pope directs all Matters of Moment. This City is by ſome accounted the beſt ſituated of any in *Italy*.

Feb. 1. We continued our Journey ſeven Miles along the Shore to *Peſaro*, a very fine City, with a ſtately Piazza ſurrounded with fair Buildings, and many Stones with ancient Inſcriptions. The Harbour is almoſt choak'd up, but the Caſtle and Fortifications in tolerable Repair. From hence croſſing the Country, we paſs'd through the Village of *Catolica*, ten Miles from *Peſaro*, and from thence along the Sea-ſhore for the moſt Part, till within two or three Miles of *Rimini*, when leaving the Shore, we took the *Via Flaminia*. The Buildings of the City of *Rimini* are low, but neat, with regular ſtrait Streets. Within the Walls of it, we paſs'd under a high Stone Arch erected to *Tiberius*, or according to *Schottus* to *Auguſtus Cæſar*; the Inſcription was much defac'd. In the Piazza they ſhew'd us the Stone on which *Cæſar* ſtood when he made his Speech to the Soldiers, when he was preparing to march to *Rome:* Theſe modern Inſcriptions are engraven upon it:

> *C. Cæſar Dict. Rubicone ſuperato civili bell. commilit. ſuos hic in foro Ar. adlocut.*
>
> *Suggeſtum hunc vetuſtate collapſum Coſſ. Ariminenſium Novembris & Decembr.* MDV. *Reſtit.*

In another Piazza ſtands a Braſs Statue of Pope *Paul* V. It being Carnival Time, we ſaw the Gentlemen here diverting themſelves with Tilting, but they did not run at one another, but at a Puppet of Straw, which they call *Bamboccio.*

Feb. 2. We made a ſmall Excurſion to St. *Marino*, a ſmall City and Commonwealth ſeated on the Top of a very high Hill, about ten Miles from *Rimini*, the Inhabitants boaſting, That they have maintain'd their Liberty uncorrupted for above a 1000 Years. All its Territories are included in one Mountain about three Miles in Length, and nine or ten in Circumference, containing four Villages, viz. *Serravalle*, *Fietano*, *Monte Giardino*, and *Fiorentino*; about eight Corn-mills upon the little River *Canova*, and two Powder-mills. The Arms of this petty Commonwealth are, three Towers upon a Mountain, with this Motto underneath, *Libertas perpetua.* The Suburb of St. *Marin* is at the Foot of the ſame Hill, whereupon the City is built; here they keep a weekly Market every *Wedneſday*, eſpecially for Swine, of which ſometimes 5000 are ſold in a Day, paying no more than Sixpence Toll for every Drove, whether large or ſmall. Beſides theſe weekly Markets, they have four great Fairs every Year, the chief of which is on St. *Bartholomew*'s Day, where prodigious Quantities of Cattle are ſold, to the no ſmall Diſguſt of ſome of the neighbouring Princes, whoſe Cuſtoms are conſiderably impair'd thereby. At this Fair they keep a general Muſter of all their Forces. From this Suburb up to the City are two Aſcents, the one pretty eaſy, and winding about to the furthermoſt Gate, by which Coaches may upon an Occaſion get up; the other leading to the nearer Gate being very ſteep. The City is wall'd on one Side, the other lying at the Brow of a Precipice, being defended by three Towers in a

Row; and the Hill, even on that Side where the Walls ſtands, is ſo ſteep, that it is inacceſſible, except by the Aſcents; neither are there any Hills near it, except what are much lower than that whereon the City ſtands. The Streets of the City are narrow, and their Houſes but meanly built; they have two Cloyſters within the Walls, one belonging to the Diſcalcate *Franciſcans*, the other to the Nuns of the Order of St. *Clara*, and in the Suburb a Convent of the *Capuchins*; beſides that, the *Servitæ* have a very fair Monaſtery not above a Mile from the City, which has its own Biſhop, and has always a Protector at *Rome*, who at preſent is Cardinal *Berberini*, whom they ſometimes preſent with ſome Cheeſes and *Muſcatella* Wine, which grows very well hereabouts, and is in great Eſteem with the *Italian* Nobility. They have no Cows, but Goats and Sheep in Abundance. Their Government is adminiſtred by a Council of forty five, which they call *Corpo di Prencipe*; of theſe fifteen are Gentlemen, (of which they have about twenty Families) fifteen Artiſans and fifteen Countrymen, who continue for their Lives, and when one dies, another is choſen in his Stead, by two thirds of the Votes; in the Place of a Gentleman, a Gentleman, and ſo with the reſt.

Feb. 3. We left *Rimini*, and taking our Way to *Ravenna*, paſſed that renown'd Bridge over the River *Rimino*, begun by *Auguſtus*, but brought to Perfection by *Tiberius*, the Stones of which, they ſay, are join'd together without any Cement: Certain it is, that the Sides of it are of vaſt Stones as high as the Borders, and of a proportionable Breadth, without any Mortar or Cement betwixt them that I could ſee: It has a large Inſcription, intimating when and by whom it was built. About fifteen Miles from *Rimini* we paſs'd through *Seſenatico*, and fifteen Miles further thro' *Cervia*, a poor City, having nothing to boaſt on but the Title of an Archbiſhop's See. All the Way from *Cervia*, till within two or three Miles of *Ravenna*, we travel'd near a vaſt Pinewood on the right Hand of us, call'd *Pigneda*, and, if we may credit *Schottus*, bears Fruit enough to ſerve all *Italy*. The City of *Ravenna* lies encloſ'd betwixt two Rivers, *viz.* the *Bedeſis* and *Montone*, one running on one, and the ſecond on the other Side. It is of a great Circumference, but meanly built: It has five Gates, and an old Caſtle of Brick, and three fair Convents, *viz.* the *Claſſe*, belonging to the *Monachi Claſſenſes*; the ſecond call'd the *Porto*, from its being dedicated to St. *Maria Portuenſis*, belonging to the *Canonici regulares Lateranenſes*; and the third to the *Benedictine* Monks, dedicated to St. *Vitale*, the Church of the laſt being a double Octagon, the one concentrical to and encloſ'd within the other; they ſay it was built by *Juſtinian*. Theſe Monks ſhewed us alſo two Marble Pillars, adding that the *Venetians* had offer'd their Weight in Silver for them: They were produced at firſt by an Heap of ſmall Flints or Pebbles united into one Body by a Cement petrified as hard as the Flints themſelves, and capable of Politure, which Cement, it is probable, might be the Sediment of the ſame Stones mixt with a Fluid, and ſeparated from thence. I have ſeen the like in the Library at *Zurick*, and at *Verona*, in our Ladies Chapel, in the Garden of Signior *Horatio Giuſti*. To the ſame Convent alſo belongs the little round Church (call'd the *Rotunda*) of the Virgin *Mary*, a Quarter of a Mile without the City, the Roof whereof being fourteen ordinary Paces in Diameter, yet is made of one Stone, having in the midſt a round Hole to let in the Light: Upon the Top of this Church ſtood in former Ages the Monument of *Theodoricus* a *Gothick* King, of Porphyry, who is ſuppoſ'd to have built it; this Monument is as yet to be ſeen in the Wall of the Monaſtery of the *Succolanti* or barefooted *Franciſcans*, with this Inſcription:

> *Vos hoc Porphyriacum ol. Theodorici Gottor. imp. cineres in Rotundæ apice recondens, huc Petro Donato Cæſio Narnien. præſule favente tranſlatum ad perennem memoriam Sapientes Reip. Rav. PP. C. MDLXIII.*

This Convent is one of the faireſt I met with belonging to this Order; and their Church dedicated to St. *Apollinaris* is remarkable, both for the double Row of Marble Pillars brought from *Conſtantinople* by *Theodoricus*, and the ancient *Moſaick* Work in the Walls: Of the ſame *Moſaick* Work we ſaw the Figures of the Archbiſhops of *Ravenna* in the Cathedral, eleven of them having a Dove ſtanding upon their Heads, being choſen by a Dove alighting upon their Heads, if we will credit *Schottus*. Not far from the Convent of the *Franciſcans* you ſee the Arch erected in Memory of the famous Poet *Dante*, with his Effigies under it, and two Inſcriptions in *Latin* Verſe underneath, ſaid to have been made by himſelf, but ſo ſlenderly done, that had he not compos'd better in *Italian*, he could ſcarce have challeng'd a Place among the famous Poets. This City has ſcarce any Thing to boaſt of now but its Antiquity, being very ill peopled, ill ſerv'd with Fiſh, notwithſtanding its Vicinity to the Sea, ill provided with Inns, and worſe with Water, which verifies the old Saying of the Poet, *Sit ciſterna mihi quam vinea malo Ravennæ*, the Water being all brackiſh. In this Journey from *Rome* to *Venice* we were very ſenſible of the Difference in the Air on both Sides of the *Appennine* Mountains, being very warm on the other, whereas on this Side we found it as cold as it is in Winter with us, which that it proceeded not from any Change of Weather, we were ſufficiently aſſur'd of; not only by Enquiry, but alſo becauſe we found Snow lying in many Places in the low Grounds, which was melted even on the Hills of the other Side: The true Reaſon of it, I think is the Heighth of this Ridge of Mountains; which reaching above the lower Region of the Air where the Sun-beams are reflected, hinders the Mixture of the warm Southerly and Weſtern, with the cold Northerly and Eaſterly Air; and ſtops the free Paſſage of the South and Weſt Winds on one Hand, which would carry the warm Vapours into the other Part, as they prevent the cold North and Eaſt Winds from tempering the Heat beyond theſe Mountains; in the ſame Manner as ſome Travellers relate of a certain mountainous Ridge in the *Eaſt-Indies*, on one Side whereof it is Summer when it is Winter on the other.

Feb. 5. We travelled from *Ravenna* along the Bank of the River *Montone*, till within four or five Miles of *Faenza*, which is twenty long Miles from *Ravenna*. *Faenza* is a little neat City, ſurrounded with a ſtrong brick Wall, but ſomewhat out of Repair; it is famous for the beſt Earthen Ware in *Italy*. On St. *Thomas*'s Day yearly all the Gentlemen meet to chuſe Magiſtrates, *viz.* nine Senators and a Preſident whom they ſtile Prior for every Month, ſo that they have twelve different Senates throughout the Year. From hence we travell'd ten Miles to *Imola*, half a Mile ſhort of which we ferried over the River *Senio*. *Imola (Forum Cornelii)* is not ſo big as *Faenza*, yet has a fair Piazza with a Cloyſter on one Side. From hence we continued our Journey upon the *Via Æmilia* to *Bologna*, *Feb.* 6. Here they have a Way of boiling their Wines, to keep them better than if left cold. The firſt, which they call *Vino Cotto*, appear'd to us much ſtronger than the other which they call *Vino Crudo*.

Feb. 7. Taking the *Florentine* Procaccio's Boat to *Venice*, we paſſed through nine *Soſtegni* or Locks to *Mal Albergo*, where we ſhifted our Boat, going down from a higher to a lower Channel, which brought us to *Ferrara*, forty five Miles diſtant from *Bologna*. From *Ferrara* we were tow'd by a Horſe through an artificial Channel as far as *Ponte*, where entring the River *Po*, we chang'd our Boat again, and were row'd down the Stream twenty ſeven Miles to *Corbola*, where entring the *Venetian* Territories, we were obliged once more to change in Order to take a *Venetian* Boat. We had ſcarce gone two or three Miles further down the *Po*, when ſtriking into a Channel to the Left, we paſſed a Sluice near *Loreo*, and proceeding fifteen Miles further, paſs'd near to *Chioza*, and *Paleſtrina*, a large Place built among the *Lagune*, ſtanding upon the *Lido*, entring into the *Laguns* at the Haven of *Malamocco*, and arrived at *Venice*, *Feb.* 9. of which we have given an Account already.

March 13. We ſet out from *Venice*, on our Journey to *Geneva*, taking our Way through *Rhætia* and *Switzerland*. To *Meſtre* we went ſeven Miles by Boat, from thence twelve Miles further by Coach to *Treviſo*, where taking Horſe, we ſpent two Days and a half in travelling to *Trent*, being eighty Miles. The firſt Day, after twelve Miles riding, we paſſed through *C. Franco*, and thence through a fair champaign Country to *Baſſano*, a handſome City upon the River *Brenta*, where there are Abundance of Silk-weavers. No ſooner were we paſs'd *Baſſano*, but we came among the Mountains, extending for fourteen Miles along the River-ſide: We lodg'd that Night at *Pont Sigiſmund.* The ſecond Day we ſtill kept along the Bank of the River, and about two Miles from *Pont Sigiſmund*, paſſed thro' a Gate, where we paid the firſt Duty to the Duke of *Inſpruck.* At this Paſs we ſaw, hewn out of the Rock, a ſmall Caſtle called *Cauolo*, unto which there is no Avenues, both the Soldiers that keep Garriſon there, and their Proviſions, being drawn up by Ropes and Pullies. It has a Fountain of Freſh Water in it, and belongs to the Archduke of *Inſpruck*, though the *Venetian* Territories extend four or five Miles beyond it. After having travelled ſixteen Miles further, we came to a ſmall Town called *Borgo*; and thirteen Miles more, to a rich and populous Borough called *Berzine*, not above five Miles on this Side *Trent.* Upon the River *Brenta* we ſaw divers Saw-mills, and Abundance of Timber floating down the Streams; and as ſoon as we enter'd the Mountains, we found Stoves inſtead of Chimneys.

30. *March* 16. We got to *Trent* in very good Time, a little but handſome City, ſeated upon the River *Atheſis* or *Adda*, at the Foot of the Mountains which almoſt ſurround it, were it not for the Valley where the River runs. It belongs to the Archduke of *Inſpruck*, but the Inhabitants ſpeak *Italian.* On the Front of the Choir is to be ſeen the following Inſcription, giving a ſhort Account of the Council held in this City.

Sacroſanctum poſtremum Oecumenicum generale Concilium fuit in hæc celeberrima civitate celebratum; & quidem ſub Papa *Paulo* III. Anno MDXLV, 13 Decembris pro felice Inchoatione fuit facta Proceſſio generalis per totam Urbem, ab Eccleſia Sanctiſſimæ Trinitatis ad hanc Eccleſiam Cathedralem, quâ finitâ primus Cardinalis Præſidens, qui poſtea fuit Papa *Julius* III. [prout etiam alter Card. Præſidens fuit Papa *Marcellus* II. nominatus] in hoc loco eminentiore, tunc magis amplo, ad celebrandum Concilium & Seſſiones faciendas deputato, ad altare S. & glorioſiſſimi Martyris *Vigilii* hujus Eccleſiæ patroni celebravit miſſam de Spiritu S. Ac reliquis ceremonis peractis fuerunt ſub *D. Paulo* III. celebratæ octo publicæ Seſſiones cum decretis, & aliæ tres ob vaſtam peſtem in hac Urbe graſſantam *Bononiæ*, ubi nihil fuit decretum, Anno MDXLVII. Poſtea ceſſante peſte & Bellis fuit reductum hoc Concilium, & in hoc eodem loco fuerunt ſub Papa *Julio* III. celebratæ aliæ publicæ ſex Seſſiones cum Decretis Annis 1551, 1552, quibus interfuerunt tres Sereniſſimi Principes Eccleſiaſtici, S. R. I. Electores Archiepiſcopi, *Moguntinus*, *Treverenſis*, *Colonienſis*, 1 Die Septemb. 1551. hanc urbem ingreſſi; prout etiam Sereniſſimus Elector Brandenburgenſis duos oratores huc ablegavit. Demum ſub Papa *Pio* IV. Anno 1561. & 1563. fuerunt celebratæ ultimæ novem publicæ Seſſiones cum Decretis in Eccleſia S. *Mariæ* majoris hujus Urbis, iſtius Eccleſiæ Reverendiſſimo Capitulo incorporata, ſicuti etiam Eccleſia S. Petri. Et nihilominus ad pedes Sanctiſſimi Crucifixi tum in hoc loco exiſtentis & nunc alio tranſlati pro Decretorum corroboratione ſemper fuerunt publicati omnia dicti Concilii Decreta. Interfuerant ſub dictis ſummis Pontificibus celebrationi Cardinales Legati 13, inter quos *Chriſtophorus Madrucius*; Non Legati 4. inter quos *Ludovicus Madrucius*: Oratores Principum totius Europæ 29: Patriarchæ 3: Archiepiſcopi 33: Inter quos Archiepiſcopus Roſſanienſis, qui poſtea fuit *Urbanus* VII. nominatus: Epiſcopi 233: Abbates 18: Generales Ordinum 12: Theologiæ Doctores 148: Procuratores 18: Officiales Concilii 3: Cantores 9: Notarii 4: Curſores Papæ 2.

Sacroſancto Spiritu S. omnium Conciliorum directori ſacratiſſima Die Penticoſtes, Anno 1639. dicatum.

The Inclinations, Manners, and Cuſtoms of the Italians.

31. The *Italians* are, by the general Confeſſion of all that write of them, ingenious, apprehenſive of any thing, and quick-witted. *Barclay*, who is not too favourable to them in the Character he gives them, ſaith, they have *animum rerum omnium capacem*; and again, that there is Nothing ſo difficult *ad quod Italici acuminis præſtantia non tollatur.* They are patient and aſſiduous in any thing they ſet about or deſire to learn, never giving over till they maſter it, and attain the Perfection of it. They are a ſtill, quiet People, as being naturally melancholy, of a middle Temper, between the faſtuous Gravity of the *Spaniard*, and unquiet Levity of the *French*, agreeing very well with the *Engliſh*, as the *Scots* are obſerved to do with the *French*, and *Spaniards* with the *Iriſh.* They are very faithful and loving to their Friends, mindful of a Courteſy received, and if it lies in their Way or Power, for one good Turn will do you two. This I had from a very intelligent Perſon, who hath lived and converſed long enough among them to know them thoroughly. *Barclay* himſelf confeſſeth, that where they do truly love, *omnia Diſcrimina habent infra tam humani fœderis Sanctitatem*; underſtand it of the better Sort; for Shop-keepers and Tradeſmen are falſe and fraudulent enough, and Inn-keepers, Carriers, Watermen and Porters, as in other Places, horribly exacting, if you make not an explicit Bargain with them before-hand, in ſo much that in many Places the State hath thought it neceſſary, by publick *Bando* and Decree, to determine how much Inn-keepers ſhall receive of Travellers for their Dinner, and for their Supper and Lodging. They are not eaſily provoked, but will bear long with one another, and more with Strangers than their own Countrymen. They are alſo very careful to avoid all Occaſions of Quarrel, not to ſay or do any thing that may offend any Perſon, eſpecially not to abuſe any one by Jeſting or Drollery, which they do not like, nor can eaſily bear. No People in *Europe* are more ſcrupulous and exact in obſerving all the *Punctilio*'s of Civility and good Breeding, (*bella Creanza* they call it) only methinks the Epithets they beſtow upon mean Perſons are ſomewhat extravagant, not to ſay ridiculous, as when they ſtile a Mechanick or common Tradeſman, *Signor molto magnifico*, and the like; when they are in Company together, they do not only give every Man his Turn of Speaking, but alſo attend till he hath done, accounting it a Piece of very ill Breeding to interrupt any Man in his Diſcourſe, as hating to be interrupted themſelves; contrary to the Manner of the *French* and *Dutch*, who make no Scruple of interrupting one another, and ſometimes talk all together. As careful are they not to whiſper privately one to another, when in Company, or to talk in an unknown Language which all the Company underſtands not. They do alſo ſhew their Civility to Strangers in not ſo much as aſking them what Religion they are of, avoiding all unneceſſary Diſputes about that Subject, which are apt to engender Quarrels; which Thing we could not but take Notice of, becauſe in *France* you ſhall ſcarce exchange three Words with any Man before he aſks you that Queſtion.

It is not eaſy for a Stranger to get Acquaintance and Familiarity with the *Italians*, they not much delighting to converſe with Strangers as not knowing their Humours and Cuſtoms; yet is their Converſation, when gotten, pleaſant and agreeable, their Diſcourſe profitable, and Carriage obliging. Moſt of them, even of the ordinary Sort of People, will diſcourſe intelligently about politick Affairs, and the Government and Intereſt of their own Country, being much addicted to and delighted in politick Studies and Diſcourſes. Moſt of them are very covetous of Liberty, eſpecially ſuch Cities as have been formerly Common-wealths, Diſcourſes or Treatiſes of that Subject making deep Impreſſions on their Minds; ſo that in ſome Places, not only Books, but alſo Diſcourſes about former Revolutions, are prohibited. *Barclay* alſo ſaith, that they are *glorioſæ Libertatis cupidi, cujus adhuc imaginem vident.* Hence the Princes of *Italy* build ſo many Caſtles and Citadels in their Territories, not ſo much to defend themſelves againſt their Enemies, as to bridle their Subjects, and ſecure themſelves againſt Tumults and Inſurrections. A ſtrange thing it is, that of all the People of *Italy*, the *Neapolitans*, who never taſted the Sweetneſs of Liberty, nor mended their Condition by their Commotions, but always (as we ſay) *leap'd out of the Frying-pan into the Fire*, ſhould be the moſt tumultuous, and given to rebel againſt their Princes.

Leti tells us of one of thoſe petty ſubordinate Princes of *Naples*, called *Thomaſo Ferrari*, who governed his Subjects, not like Vaſſals, but with that Sweetneſs and Gentleneſs, as if they had been his own Children; yet ſome of theſe Fellows taking Arms, came into his Preſence, and ſaid to him, *Sir Prince, We are come to drive you out of your Palace, and burn all your Moveables.* Why, (anſwers the Prince) *Can you find Fault with my Government? Are you aggrieved in any Thing, and it ſhall be redreſſed?* No, (replied they) *But becauſe we underſtand that many of our Countrymen have revolted from their Lords, we alſo, to ſhew that we love Revolutions, are reſolved to rebel againſt you.* The *Italians* are greatly delighted in Pictures, Statues, and Muſick, from the higheſt to the loweſt of them, and ſo intemperately fond of theſe Things, that they will give any Price for a choice Picture or Statue.

Tho' all of them cannot paint or play on Inſtruments of Muſick, yet do they all affect Skill and Judgment in both; and this Knowledge is enough to denominate a Man a *Virtuoſo*. Many of them are alſo curious in collecting ancient Coins and Medals. They are great Admirers of their own Language, and ſo wholly given to cultivate, poliſh, and enrich; that, they do in a great Meaſure neglect the *Latin*, few of them now a Days ſpeaking or writing well therein, but mingling ſo many *Italian* Idiotiſms with it, that you have much ado to underſtand what they ſpeak or write. As for the *Greek* few or none have any tolerable Skill in it, the Study thereof being generally neglected and laid aſide. They are very temperate in their Diet, eating a great deal of Sallet, and but little Fleſh. Their Wine they drink well diluted with Water, and ſeldom to any Exceſs. We ſaw only one *Italian* drunk for the Space of a Year and half, that we ſojourned in *Italy*.

Whether it be, that in hot Countries Men have not ſo good Stomachs as in Cold, or whether Meat, as being better concocted, nouriſhes more, or that the *Italians* are out of Principle, Temper or Cuſtom more ſober and temperate than other Nations. Their Herbs ſeemed to me more ſavoury and better concocted than ours. Their Water alſo was not ſo crude. But for Fleſh, ours in my Judgment, much excels theirs, being much more ſucculent and ſapid; yet in *Rome* have I eaten Beef not inferior to ours. But I ſuppoſe it might be of *German* Oxen; of which (as we were informed) there are many driven thither, and for ſucking Veal, the *Romans* (as we have already noted) think theirs preferable to any in the World. The *Italians*, eſpecially thoſe of inferior Quality, are in all things very ſparing and frugal, whether it be becauſe they are ſo educated and accuſtomed, or becauſe the Gabels and Taxes, which they pay to their Governors are ſo great, that they cannot afford to ſpend much on themſelves, or becauſe, naturally loving their Eaſe, they had rather live nearly than take much Pains.

The Nobility and great Perſons chooſe rather to ſpend their Revenues in building fair Palaces, and adorning them with Pictures and Statues; in making ſtately and ſpacious Orchards, Gardens and Walks, in keeping Coaches and Horſes, and a great Retinue of Servants and Staffieir, than in keeping great Houſes and plentiful Tables, giving board-Wages to their Servants and Attendants, which, in my Opinion, is the better Way of ſpending Eſtates, theſe Things finding poor People Employment, ſo that the Money comes to be diſtributed among them according to their Induſtry; whereas the other Way maintain'd in Idleneſs ſuch Perſons for the moſt part as leaſt deſerve Relief, thoſe that are modeſt and deſerving chooſing rather (if poſſible they can) to maintain themſelves and their Families by the Labour of their Hands, than hang about great Houſes for a Meal's Meat. Beſides that, great Houſekeeping is very often, not to ſay always, the Occaſion of great Diſorder and Intemperance. Were I therefore God's Steward for a great Eſtate, (for ſuch all rich Men are or ought to be) I ſhould think it more Charity to employ poor People, and give them Money for their Work, than to diſtribute my Eſtate among them freely, and ſuffer them to live in Idleneſs: I mean ſuch as are able to labour.

The inferior Gentry affect to appear in Publick with as much Splendor as they can, and will deny themſelves many Satisfactions at Home, that they may be able to keep a Coach, and therein make the *Tour à la mode* about the Streets of their City every Evening. The *Italians* when they call, ſpeak to, or of one another, uſe only the Chriſtian Name, as, *Signor Giacomo, Signor Giovanni, &c.* unleſs it be for Diſtinction's Sake; ſo that you may converſe among them perchance ſome Months, before you hear any Man's Sirname mentioned. The *Italian* Gentry live for the moſt part in the Cities, whence it is that the Cities are ſo ſplendid and well built, ſo populous and rich, and the Country ſo poor and thinly inhabited; yet are the Noblemen's Palaces rather great and ſtately than commodious for Habitation.

In many Cities the Paper Windows (which are for the moſt Part tattered and broken) diſgrace the Buildings, being unſuitable to their Magnificence. The Houſes are generally built of Stone, thick wall'd and high roof'd, which makes them warm in Winter, and cool in Summer, but they contrive them rather for Coolneſs than Warmth, and therefore they make the Windows large to give them Air enough. Of the Gentry in *Italy*, eſpecially in *Venice*, if there be many Brothers of one Houſe, only one uſually marries, and that the eldeſt if he pleaſes; if he be not diſpoſed, then any other, as they can agree among themſelves, the reſt do what they can to greaten him that is married to uphold the Family. The Brothers that marry not keep Concubines or Whores, which, tho' it be a Sin, yet their Confeſſors can eaſily abſolve them of it.

In moſt of the Cities and Towns of *Italy* there are *Academies* or Societies of *Virtuoſi*, who have at ſet Times their Meetings and Exerciſes, which are for the moſt Part Proluſions of Wit and Rhetoric, or Diſcourſes about moral Subjects, curious Queſtions, and Problems or Paradoxes, ſometimes extemporary, ſometimes premeditated. Theſe have their Head, whom they call Prince, and a certain Number of Academiſts who are choſen by Ballotting, but they ſeldom refuſe any that offer themſelves to Election. Many of theſe Academies aſſume to themſelves conceited or fanciful Names, and take a ſuitable *Impreſs* or Coat of Arms; as for Example, the *Academiſts* of *Bergamo* call themſelves *Excitati*, and their Impreſs is the Picture of the Morning. In *Mantua*, the Academiſts called *Acceſi*, have taken for their Emblem, a Looking Glaſs, reflecting the Sunbeams; thoſe called *Timidi*, a Hare. As for the other Cities of *Italy*; in *Rome* there are three *Academies*, the *Humouriſti*, the *Lyncei* and the *Fantaſtici*: In *Padua*, three; the *Ricovartia Infiammati* and *Incogniti*: In *Bologna*, three; *Ardenti*, *Indomiti* and one *Innominate*: In *Venice*, two; *Diſcordanti* and *Guſſoni*: In *Naples*, two; *Ardenti* and *Intronati*: In *Luca*, two; *Oſcuri* and *Freddi*: In *Florence*, *la Cruſca*: In *Sienna*, *Intronati*: In *Genoa*, *Addormentati*: In *Vicenza*, *Olympici*: In *Parma*, *Innominati*: In *Pavia*, *Affidati*: In *Milan*, *Naſcoſti*: In *Ferrara*, *Elevati*: In *Rimini*, *Adagiata*: In *Cecena*, *Offuſcati*: In *Ancona*, *Caliginoſi*: In *Fabriano*, *Diſunito*: In *Perugia*, *Inſenſati*: In *Viterbo*, *Oſtinati*: In *Breſcia*, *Occulti*: In *Faenza*, *Philoponni*: In *Treviſo*, *Perſeveranti*: In *Fermo*, *Raffrontati*: In *Verona*, *Philarmonici*: In *Macerata*, *Catenati*: In *Aleſſandria*, *Immobili*: In *Urbino*, *Aſſorditi*.

Moſt of the *Italians* of any Faſhion wear black or dark colour'd Cloaths, and for the Faſhion of them follow the *French*, but not too haſtily, excepting thoſe Countries which are ſubject to the King of *Spain*, which uſe the *Spaniſh* Habit. As for their Vices, they are chiefly taxed for three. 1. *Revenge*, they thinking it an ignoble and unmannerly Thing to put up or paſs by any Injury or Affront. Many Times alſo they diſſemble or conceal their Diſpleaſure and Hatred under Pretence of Friendſhip, that they may more eaſily revenge themſelves of whom they hate, by poiſoning, aſſaſſinating, or any other Way; for nothing will ſatisfy them, but the Death of thoſe who have injured them; and there are Bravo's and Cut-throats ready to murther any Man for a ſmall Piece of Money. Beſides, which is worſt of all, they are implacable, and by no Means to be truſted, when they ſay, they pardon. Hence they have a Proverb among them, *Amicitie reconciliate & meneſtre riſcaldate non furono mai grate.* The Women alſo provoke their Children to revenge the Death of their Fathers, by ſhewing them the Weapon wherewith they were murthered, or Cloaths dip'd in their Blood, or the like; by which Means Feuds between Families are maintained and entailed from Generation to Generation. Theſe are the Qualities for which we uſually ſay an *Engliſhman Italianate* is a Devil incarnate. 2. *Luſt*, to which the Inhabitants of hot Countries are, by the Temper of their Bodies, inclined. Hence it is that all Cities and great Towns do ſo ſwarm with Courtezans and Harlots; and, to avoid worſe Evils, the State is neceſſitated to give them publick Toleration and Protection. As for maſculine Venery and other Works of Darkneſs, I ſhall not charge the *Italians* with them, as not having ſufficient Ground ſo to do, and becauſe, (as *Barclay* ſaith) *Hæc ſcelera tenebris damnata & negari facilius à conſciis poſſunt, & ab æmulis fingi.* 3. *Jealouſy*, which ſtrangely poſſeſſes this People; ſo that for every little Suſpicion they will ſhut up their Wives in a Chamber, and carry the Key with them, not ſuffering them to ſtir Abroad, unleſs themſelves accompany them. To ſalute an *Italian*'s Wife with a Kiſs is a ſtabbing Matter; and to call a Man *Cornuto*, or Cuckold in good Earneſt, is the greateſt Affront or Diſgrace you can put upon him. The married Women in *Italy*, by this Means, have but bad Lives, being for the moſt Part confined to their Houſes, except when they go to Church, and then they have an old Woman attending them; the Doors of their Houſes ſhut up at Dinner and Supper; all Viſits and familiar Diſcourſes with Men denied them; neither can they ſpeak or ſmile without Suſpicion. One Reaſon of this, among others, may be, becauſe the Huſbands knowing themſelves to be ſo diſhoneſt, and falſe to their Wives, they preſume, that had they Opportunity, they would not be more true to them. And yet for all this Guarding and Circumſpection, are not the *Italian* Dames more uncorrupt than the Matrons of other Nations, but find Means to deceive their Huſbands, and be diſhoneſt in Spight of Jealouſy.

To theſe I might add *Swearing*, which is ſo ordinary among all Sorts, the Prieſts and Monks themſelves ſcarce abſtaining from Oaths, that I believe they account it no Sin. It is a general Cuſtom all over *Italy* to ſleep an Hour or two after Dinner, in Summertime; ſo that from Two of the Clock till Four in the Afternoon, you ſhall ſcarce ſee any body ſtirring about the Streets of the Cities. Indeed if one ſits ſtill it is very hard to keep his Eyes open at that Time. Either this Cuſtom did not prevail when the School of *Salerno* wrote their Phyſick Precepts, or that Direction *Sit breves aut nullus tibi Somnus meridianus*, was calculated for *England*, to whoſe King that Book was dedicated. And yet ſtill the *Italian* Phyſicians adviſe People, either not to ſleep at all after Dinner, or, if they muſt ſleep, to ſtrip off their Cloaths and go to Bed, but only to take a Nod in their Chair ſitting.

In many Cities of *Italy* are Hoſpitals where Pilgrims and poor Travellers are entertained, and have their Diet and Lodging for three Days, if they have Reaſon to ſtay ſo long, *gratis*, beſides a Piece of Money when they go away. There are Hoſpitals alſo to receive expoſed Children, if I may ſo term them, that is, without any Exception, that ſhall be brought and put in at a Grate on purpoſe, where, upon ringing a Bell, an Officer comes preſently and receives the Child, and aſking the Party that brought it, Whether it hath been baptized? carries it to a Nurſe to give it Suck, and there it is maintained till it be grown up. The Place where it is put in is ſo ſtrait, as to admit only Children new born, or very young. This I look upon as a good Inſtitution in great Cities, taking away from Women the Temptation of Murthering their new-born Children, or deſtroying their Conception in the Womb to hide their Shame. I know what may be objected againſt it, *viz.* That it emboldens them to play the wanton, having ſo fair a Way of concealing it, *ſed ex malis minimum.* In *Rome*, *Venice*, and ſome other Cities of *Italy*, they have a Way of exerciſing Charity, little uſed among us; ſeveral Confraternities of well-diſpoſed Perſons raiſe Sums of Money by a free Contribution among themſelves, which they beſtow yearly in Portions for the marrying of poor Maids, which elſe might want Huſbands, and be tempted to diſhoneſt Practices to maintain themſelves.

This I look upon as a well-plac'd Alms, and worthy of Imitation, it being very convenient, and in a Manner neceſſary, that new-married People ſhould have ſomewhat to furniſh their Houſes and begin the World with, and no leſs fitting that young Perſons ſhould be encouraged to marry, as well for multiplying of People, wherein the Strength of the Common-wealth chiefly conſiſts, as for the preventing thoſe Evils to which young and ſingle Perſons are ſtrongly tempted and inclined. It is a troubleſome Thing to travel with Fire-arms in *Italy*, you being forced in moſt Cities to leave them at the Gate with the Guard, who give you a Tally or Token; and when you leave the City, you bring your Tally, and receive your Arms. This is done to prevent Aſſaults and Murders, which are ſo frequent in many Cities of *Italy*. For this the Great Duke of *Tuſcany* is much to be commended, there being no ſuch Murthers and Outrages committed in any of the Cities under his Dominion, as in other Places; ſo diligent is he in ſearching out, and ſevere in puniſhing Bravoes, Cut-throats, Aſſaſſins, and ſuch Kind of Malefactors. As much might be ſaid for the Pope in the City of *Rome*, but in other Cities in his Territories there is killing enough.

When you depart from any City, you muſt be ſure to take a *Bill* of *Health* out of the Office that is kept every where for that Purpoſe, without which you can hardly get to be admitted into another City, eſpecially if it be in the Territory of another Prince or State. If any one comes from an infected or ſuſpected Place, he is forced to keep his *Quarantain* (as they call it) that is, be ſhut up in the *Lazaretto* or Peſt-houſe forty Days, before he be permitted to come into the City, ſo ſcrupulouſly careful are they to prevent Contagion.

In *Rome*, and other Cities of *Italy*, we have often obſerved many Labourers that wanted Work ſtanding in the Market-places to be hired, whither People that want Help uſually go and bargain with them; which Cuſtom illuſtrates that Parable of our Saviour, recorded in the Beginning of the Twentieth Chapter of St. *Matthew*'s Goſpel, wherein the Houſholder is ſaid *to go out about the third Hour, and ſee others ſtanding in the Market-place.* Verſe 8; and in Verſe 6, he is ſaid *to find others about the eleventh Hour*, and to ſay to them, *Why ſtand ye here all the Day idle?* and Verſe 7. they anſwer, *Becauſe no Man hath hired us.* In *Italy*, and other hot Countries, ſo ſoon as they have cut down their Corn, they threſh and winnow it uſually, or at leaſt a great Part of it, on a Floor made in the open Air, before they bring it into the Houſe. Hence in the Scripture we read of threſhing Floors as open Places without Roof or Cover. Such, I ſuppoſe, was that where *Boaz* winnowed Barley, *Ruth* iii. 3. Neither is it any Wonder

der that he ſhould lie there all Night, for at *Aleppo*, and even in *Malta*, in Summer-time, they ſet their Beds upon the Roof of their Houſes, and ſleep *ſub Dio*, in the open Air. One Cuſtom we have in *England*, which (as far as I could obſerve) is no where uſed beyond the Seas, and that is, for Children to beg their Parents and Godfathers Bleſſing upon the Knee. One Cuſtom which prevails generally in foreign Countries, that is but little uſed in *England*, that is, to ſalute thoſe that ſneeze, by vailing the Bonnet, and praying God to bleſs, aſſiſt, or defend them, *&c.* There is a Kind of Sport or Game much uſed to this Day by the *Italians*, called, *Gioco di mora*, which ſeems to have been uſed by the Ancients, and called *micare Digitis*. It is for the moſt part between two, who put out juſt at the ſame Time each of them, as many Fingers as they pleaſe, and alſo name each of them what Number he thinks fit, and if either of them happens to be the Number of the Fingers, which both of them together threw out, then he that names that Number wins one.

An Account of the Curioſities and Obſervations in the ſeveral Parts of Italy.

In *Lombardy* and other Parts of *Italy*, *Tartufale*, (as they call them) *i. e. Tubera Terræ*, a Kind of ſubterraneous Muſhroom, which our Herbaliſts call in *Engliſh Trubs*, or after the *French* Name *Truffles*, are accounted a choice Diſh, held by Naturaliſts to be incentive of Luſt. The beſt of all are gotten in *Sicily* and thence ſent over into *Malta* where they are ſold dear. The Way to get them is to turn Swine into a Field where they grow, who find them by the Smell, and root them up out of the Ground; and ſet one to follow the Swine, and gather them up. *Snails* boiled and ſerved up with Oil and Pepper, put into their Shells are alſo accounted a good Diſh: I am ſure they are ſold dear at *Venice*, and elſewhere, eſpecially the great whitiſh or aſh-coloured Shell-Snails, which we had not then ſeen in *England*, but have ſince found plentifully upon the Downs near *Darking* in *Surry*; whither, as we were informed by the Honourable *Charles Howard*, Eſquire, they were brought from beyond Seas by a Gentleman, whoſe Name has ſlip'd my Memory, and is worn out in my Papers. But Mr. *Martin Liſter* hath found them on the Banks of that hollow Lane, leading from *Puckeridge* to *Ware*. Theſe Snails before Winter, ſtop up the Mouth or Aperture of their Shells, with a thick hard, white Paſte, like a good Lute or Plaiſter, and are kept all Winter in Barrels or other Veſſels, and ſold by the Poulterers. The firſt Place where we met them to be ſold in the Market, was *Vienna* in *Auſtria*, where they imitate the *Italians*, as well in their Diet, as in the Manner of their Buildings.

Frogs are another *Italian* Viand, which we in *England* eat not. Theſe they uſually fry, and ſerve up with Oil. At *Venice* they eat only the Loins and hind Legs, as alſo at *Florence*, and that upon Fiſh Days. In ſome Places of *Lombardy* they eat their whole Bodies, and beſides their Frogs are of a larger Size than ordinary. Their Fleſh ſhews white and lovely as they lie in the Markets, ſkin'd and ready prepared to fry. Howbeit, even there in *Italy*, *Kircher* in his Book *de Peſte*, condemns them as an ambiguous and dangerous Meat, and I think deſervedly; wherefore we do well, having Plenty of better Foods wholly to abſtain from them. *Land Tortoiſes* are accounted with them a better Meat than *Sea Tortoiſes*, and are commonly to be ſold in the Markets; they are eaten by thoſe Orders of *Friers*, whoſe Rule obliges them to abſtain from Fleſh, as, *Carthuſians*, *Carmelites*, *&c.* They eat alſo many Sorts of *Shell-fiſh*, which we either have not, or meddle not with, as, *Purples*, *Periwinkles* of ſeveral Sorts, *Patellæ* or Limpets, Sea Urchins, which laſt are to be found every Day in the Markets at *Naples*. They eat alſo the Sea Tortoiſes, of which the Blood put into the Stomachs, and boiled is the beſt Part.

Paſte made into Strings like Packthreads or Thongs of white Leather, (which if greater they call *Macaroni*, if leſſer *Vermicelli*) they cut in Pieces, and put in their Pots, as we do Oatmeal, to make their *Meneſtra* or *Broth*, of much Eſteem by the Country People. Theſe boiled and oiled, with a little Cheeſe ſcraped upon them, they eat as we do buttered Wheat or Rice. The Making theſe is a Trade and Myſtery, and in every great Town you ſhall ſee ſeveral Shops of them. They ſcrape or grate *Cheeſe* upon all their Diſhes, even Fleſh, accounting that it gives the Meat a good Reliſh which to thoſe that are unaccuſtomed, makes it rather nauſeous or loathſome. *Cheſnuts* roaſted and the Kernels ſerved up with Juice of Lemon and Sugar, are much eſteemed, and by ſome called the *Piſtachio's* of *Italy*. At *Bononia* they grind them and make little Cakes of the Flower of them, which, though eaten by the Poor, are no deſirable Dainty to a delicate Palate. Roaſted Cheſnuts are a great Part of the Diet of the poor Peaſants in *Italy*; as we have elſewhere noted. They eat all Manner of *Small Birds* as well as the *Germans*, viz. *Wrens*, *Stares*, *Titmice*, *Butcher-birds*, and ſeveral great ones, which we touch not in *England*, as, *Magpies*, *Jays*, *Woodpeckers*, *Jackdaws*, &c. Nay we have frequently ſeen *Kites* and *Hawks* lying on the Poulterers Stalls, as we have already noted in our Deſcription of *Rome*.

They uſe ſeveral Herbs for *Sallets*, which are not yet or have been but lately uſed in *England*, viz. *Selleri*, which is nothing elſe but ſweet Smallage, the young Shoots whereof, with a little of the Head of the Root cut off, they eat raw with Oil and Pepper; in like Manner they eat Fennel, Artichoak alſo they eat raw with the ſame Sauce (the ſame Part of it that is eaten boiled.) In *Sicily*, at the higheſt Village upon that Side Mount *Ætna* that we aſcended, they gave us to eat for a Sallet, the Stalks of a tall prickly Thiſtle, bearing a yellow Flower, I ſuppoſe it was the *Carduus Chryſanthemus*, Dod. which the Rankneſs of the Soil had cauſed to amount up to that Stature; beſides, in moſt of their Sallets they mingle Rockett, *Rachetta* they call it, which to me gives them an odious Taſte. *Curl'd Endive* blanch'd is much uſed beyond Sea, and for a raw Sallet ſeemed to excel Lettice itſelf; beſides, it hath this Advantage, that it may be kept all Winter. Many *Fruits* they eat, which we either have not, or eat not in *England*, viz. *Jejubes* ſold by the Huckſters while they are yet Green: *Lazarole*, the Fruit of the *Meſpilus Aronia*, of a pleaſant acid Taſte, both Fruit and Tree, and exactly like the common Hawthorn, but bigger. *Services* or *Sorbes* the true, as big as little Pears; thoſe that grow with us are the Fruit of the *Sorbus torminalis*. Green Figs, both white and blue in great Plenty, a moſt delicate Fruit when fully ripe, comparable for the Taſte to the beſt Marmalade, and which may be eaten freely without Danger of ſurfeiting. The Huſks or Cods of *Carobs*, called in Latin, *Siliqua dulcis*, in *Greek*, κερατία, the Word uſed *Luke* xv. 16. and therefore by ſome ſuppoſed to be the Huſks the Prodigal is ſaid to have deſired to fill his Belly with. Indeed we thought them fitter Meat for Swine than Men, for though they had a ſweet Taſte, yet afterwards they troubled our Stomachs, and purged us, but they have not upon all Men the like Effect, for the *Italians* and *Spaniards* eat them ordinarily without any ſuch Trouble. *Love Apples*, *Mad Apples* both raw and pickled: *Water-melons* which they uſe to eat, to cool and refreſh them, and ſome Phyſicians allow ſick Perſons to eat them in Fevers. They are almoſt as big as Pompions, have a green Rhind, and a reddiſh Pulp, with blackiſh Seed when ripe; the *Italians* call theſe *Cucumeri*, whereas Cucumbers they call *Citrulli*. Several Sorts of Gourds, as, *Cucurbita lagenaria*, and *Cucurbita Flexuoſa ſive Anguina*, which eats very well boil'd in Pottage, *Cucumis anguinis*, which is more eſteem'd, and indeed better taſted than the Cucumber.

The common People both in *Italy* and *Sicily*, eat green chich Peaſe raw, as our common People do common Peaſe. In their Deſerts and ſecond Courſes, they commonly ſerve up Pine-kernels, and in Time of Year green Almonds, alſo a Kind of Sweet-meat or Confection, made up of Muſtard and Sugar, which they call *Italian* Muſtard. To cool and refreſh their Wines they uſe generally Snow, where it may eaſily be had, elſe Ice, which they keep in Conſervatories all Summer. Without Snow they that are commonly uſed to it, do not willingly drink, no not in Winter. In the Kingdom of *Naples* and *Sicily*, they make a Sort of Cheeſe which they call *Caſeo di Cavallo*, i. e. *Horſe Cheeſe*, for what Reaſon I could not learn. Theſe Cheeſes they make up in ſeveral Forms, ſome in the Faſhion of a blown Bladder, ſome in the Faſhion of a Cylinder, and ſome in other Figures. They are neither fat nor ſtrong, yet well taſted, and acceptable to ſuch, as have eaten them a-while. The Pulp or Body of them lies in Flakes, and hath as it were a Grain one Way like Wood. They told us that they were made of Buffalo's Milk, but we believed them not; becauſe we obſerved not many Buffalo's in thoſe Countries, where there is more of this Cheeſe made, than of other Sorts.

In *Italy* and other hot Countries their Meat is not only naturally more lean and dry than ours, but they roaſt it alſo till it be ready to fall from the Bones, and there be little Juice left in it. Beſides, when they roaſt their Meat, they draw Coals, under the Spit, and let the Fat drop on them, the *Nidor* whereof perfumes the Meat, but not to our Guſt, who are not uſed to it, and what they loſe in Dripping they ſave in Fewel. Their Roaſting differs not much from our Broiling or Carbonading. I ſpeak this of ordinary Inns, and mean People's Houſes; in great Houſes and Inns it is otherwiſe.

The *Italians* count not their Hours as we do, from twelve to twelve, beginning at Mid-day and Midnight; but from one to twenty-four, beginning their Count at Sun-ſet, which is a much more troubleſome Way; the ſetting of the Sun being a moveable Point or Term, and they being therefore neceſſitated to alter and new ſet their Clocks every Day; whereas, Mid-day and Midnight being fix'd Points, the Clocks need no ſetting a-new. As for *Italy* in general, though the *Italians* imagine it to be the beſt Country in the World, and have a Proverb among them, that *Italy is the Garden of the World*; yet ſetting aſide *Lombardy*, *Compania felix*, and ſome few other Places, the reſt is mountainous and barren enough: The Earth ſo parched up by the Sunbeams, that it bears no Graſs, and (as *Barclay* ſaith) ſeldom yieldeth Grain enough for three Years ſucceſſively, to ſupply the Neceſſities and Uſes of its Inhabitants, whatever they may boaſt of the *Itala gleba*. The Reaſon why the *Italians* are ſo conceited of their own Country is becauſe they ſeldom travel Abroad, and ſo ſee not the Beauty and Fertility of others.

I might have taken Notice of the vaſt and incredible Number of religious Houſes there are in *Italy*. I have ſometimes thought they might in all of both Sexes, amount to eight or ten thouſand. Of theſe the Gentlemen make Advantage; for ſuch of their Daughters as either they cannot get Huſbands for, or are not able to give Portions to, ſuitable to their Birth and Quality, they can in one of theſe Houſes for a ſmall Matter, honourably diſpoſe of, and ſettle for their Lives. The Inſtitution of ſuch Houſes as theſe, whither young Women of Quality, who, for Want of ſufficient Fortunes or perſonal Endowments, cannot eaſily provide themſelves ſuitable Matches, might retire and find honourable Proviſion; would perchance be tolerable, yea commendable, were they purged from all Superſtition; the Women not admitted too young, and under no Vow of perpetual Chaſtity, only to leave the Houſe in caſe they married. But becauſe of the Danger of introducing Monkery; I think it more ſafe for a Chriſtian State, not to permit any ſuch Foundations. Buffles are a common Beaſt in *Italy*, and they make uſe of them to draw their Teams, as we do of Oxen; only becauſe they are ſomewhat fierce and unruly, they are forced to lead them by an Iron Ring, put into their Noſes, as our Bear Wards do their Bears. The *Cicadæ* beforementioned. The *Flying Glow-worms*, which are there every where to be ſeen in Summer-time. Theſe flying or winged Glow-worms, are nothing elſe but the Males of the common creeping or unmingled Glow-worm. *Tabuis Calumna* relates, that *Carolus Ventimiglia*, of *Palermo* in *Sicily*, having out of Curioſity, kept many unwinged Glow-worms in a Glaſs, did put in among them a flying one, which preſently in his Sight did couple with them one by one, after the Manner of Silk-worms, and that the next Day, the unwinged ones or Females began to lay their Eggs. That the Males are alſo flying Inſects in *England*, though they do but rarely, or not at all ſhine with us, we are aſſured by an Eye-witneſs, who ſaw them in Conjunction with the common ſhining unwinged Glow-worm. Here by the Way, it may not be amiſs to impart to the Reader, a Diſcovery made by a certain Gentleman, and communicated to me by *Francis Jeſſop*, Eſq; which is, that thoſe reputed Meteors called in Latin *Ignes fatui*, and known in *England* by the conceited Names of *Jack with a Lanthorn*, and *Will with a Wiſp*, are nothing elſe but Swarms of theſe flying Glow-worms. Which if true, we may give an eaſy Account of thoſe *Phænomena* of theſe ſuppoſed Fires, *viz.* their ſudden Motion from Place to Place, and leading Travellers that follow them, into Bogs and Precipices. *Scorpions*, which in *Italy* ſting not, or at leaſt their Stings are not venemous, as the learned *Franciſcus Redi* affirms, though by Experience he found the Stinging of the *African* Scorpion to be mortal, or at leaſt very noxious.

Tarantula's ſo call'd, becauſe found about *Tarentum*, (though we have ſeen of them at *Rome*) which are nothing elſe but a large Sort of Spider, the Biting whereof is eſteemed venomous, and thought to put People into phrenetick Fits, enforcing them to dance to certain Tunes of the Muſick, by which Means they are cured, long and violent Exerciſe cauſing a great Evacuation by Sweat. Theſe Fits they ſay do alſo yearly Return, at the ſame Seaſon the Patient was bitten. But Dr. *Thomas Cornelius* of *Cozenza*, beforemention'd, a learned Phyſician and Virtuoſo in *Naples*, diligently enquiring into this generally receiv'd, and heretofore unqueſtion'd Story, that he might ſatisfy himſelf and others, whether it were really true in Experience, rejects it. *Cimici*, as the *Italians* call them, as the *French*, *Punaiſe*; We *Engliſh* call them Chinches, or Wall-Lice, which are very noiſome and troubleſome by their Bitings in the Night Time, raiſing a great Heat and Redneſs in the Skin. They harbour in the Straw of the Bolſters and Matraſſes, and in the Wood of the Bedſteads, and therefore in ſome *Noſocomia* or Hoſpitals for ſick Perſons, as for Example, at *Genoa*, the Bedſteads are all of Iron. This Inſect, if it be cruſh'd or bruis'd, emits a moſt horrid and loathſome Scent, ſo that thoſe that are bitten by them, are often in a Doubt, whether it be better to endure the Trouble of their Bitings, or kill them, and ſuffer their moſt odious and abominable Stink. We have of theſe Inſects, in ſome Places of *England*, but not many, neither are they exceſſively troubleſome to us.

32. We departed from *Trent*, intending for *Coira* or *Chur*, in the *Griſons* Country, called in *Latin*, *Curia Rhetorum*. We rode up the Valley where the River *Atheſis* runs, called *Val venoſta*, every five Miles paſſing through a large Village, and one handſome little Town called *Burgo*, and lodged at a ſmall Town called *Brunſole*. We rode through *Bolzan*, a conſiderable Town, and for Bigneſs comparable to *Trent*, and ten Miles further *Maran*, a large Town, and lodged at a Village called *Raveland*. We paſſed through *Latourn*, *Slech*, *Schlanders*, *Maltz*, all Villages and Towns of Note, and laſt of all *Cleurn*, a pretty great wall'd Town, and then ſtruck up on the left Hand among the Mountains, to a Village called *Tavers*, where we lodg'd. We rode on through the Snow to *Monaſtere*, where the *Griſons* Country begins, and St. *Maria*, a ſmall Terra, and ſtopp'd at *Gherf*, a Village at the Foot of the high Mountains. In this Country the People uſe a peculiar Language of their own, which they call *Romanſch*, that is, *Lingua Romana*. It ſeems to be nearer *Spaniſh* than *Italian*, though diſtinct from both: Beſides their own Language, they generally ſpeak both *Italian* and *Dutch*, ſo that after we had loſt *Italian* in the Vallies, we wondered to find it here among the Hills. Their Wines they bring all out of the *Valtelline* from *Tirano*, about two Days Journey diſtant. The Country at this

Time was all covered over with Snow, ſo that they are forced to keep their Cattle within Doors for ſix Months; yet the People ſaid, that thereabouts the Snow did not lie all Summer, no not on the Tops of the higheſt Mountains. Here we obſerved, that to draw their Sleds over the Snow, inſtead of Oxen they made uſe of Bulls, one Bull drawing a little Sled. About *Tavers* we obſerved them ſowing of Duſt upon the Snow, which they told us was to make the Snow melt the ſooner: I ſuppoſe it was rather for Manure. They uſe Stoves in all Places, and good Reaſon they have, the Country being very cold. A great Number of *Chamois* or *Gemps* [*Rupi Capræ*] are taken all over theſe Countries upon the high Hills, as, though the People had not told us, we muſt needs have gathered, from the Multitude of Horns we ſaw ſtuck up in the Houſes where we lodged. Bears there are, and Wolves enough, among the high Mountains, but not very many. The Men generally wear Ruffs, and long buſhy Beards. All the People (as far as we had Experience, or could judge of them, in that ſhort Stay we made among them) we found to be honeſt, hearty and civil, and the common Sort very mannerly. Their Houſes are built of Stone, and covered with Shingles of Wood, the Walls thick, and the Windows very ſmall, to Fence againſt the Cold. They have no ſtrong Holds or fortified Places among them, nor will they permit any to be erected, having ſo much Confidence in their own Valour, that they think they need no other Defence: Indeed their Country is ſuch, as one would think, none of the neighbouring Princes ſhould covet, unleſs for the Security of his own Territories. We paſſed the Mountain of *Buſalara* in ſeven or eight Hours. In the Top of the Mountain, in the Midway between *Cherf* and *Zernetz*, is an Inn called *Furno*. From *Zernetz* we rode in the Valley of the higher *Engadine*, through *Zuotz*, a great *Terra*, and two other Villages, and lodged at a little Place called *Ponte*.

32. The *Griſons* are divided into three Leagues, each of theſe ſubdivided into *Communities*, which have each ſeveral Villages, ſome more, ſome leſs: The *Lega Griſa* has nineteen *Communities*; the *Lega della caſa Dio*, twenty-one; the *Lega Dieci Ditture*, ten. Each *Community* has its chief annual Magiſtrate, (whom in ſome Places they call *Maeſtrale*, in ſome Places *Landman*) and a certain Number of Aſſeſſors or Judges, call'd *Truæder*, by them. Each Village chuſes its Judges by Majority of Votes, every Inhabitant, above the Age of ſixteen, having his Suffrage. Theſe Magiſtrates are chang'd every two Years, but confirmed every Year, and may be depoſed by the People. The executive Power and Management of publick Affairs is lodged in the *Maeſtrale* or *Landman*, who aſſembles the *Truæder*. Every two Years they have two general Diets, one at *Michaelmas* Day, when they chuſe Governors of Places; the ſecond at St. *John Baptiſt*'s Day, when they take an Account of all their Officers. To theſe Diets each *Community* ſends its Commiſſioners, ſome one, ſome two, who are to act according to the Inſtructions given them. Each League has its Head or Chief; as for Inſtance, the Burgomaſter of *Coira* is always Head of the League *della caſa di Dio*. From the Diet lies an Appeal to the Communities. The *Griſons* pay no Manner of Taxes; the County of *Chiavenna* and the *Valtoline* in *Italy* are ſubject to them, whither they ſent two Bailiffs before *Plurs* was deſtroyed by the falling in of an adjacent Mountain; now they ſend but one to *Chiavenna*; theſe are called *Commiſſario's*. The *Valtoline* is divided into ſix Diſtricts or *Præfecturæ*, each of which has its peculiar Governor ſent thither by the *Griſons*; their Names are, *Bormio*, *Tirano*, *Tellio*, *Sondrio*, *Morbegno* and *Travona*. The People of the *Valtoline*, and of the Country of *Chiavenna*, pay no other Taxes but only for the Maintenance of their Governors.

March 24. We left *Ponte*, and travelled over very high Mountains, in very bad Weather, it ſnowing ſo exceedingly, that we were ſcarce able to open our Eyes; yet by the Way we took Notice, that the People living among thoſe cold Mountains were of a more ſwarthy Complexion than thoſe below. *March* 25, We came to *Coira*, the capital City of the *Griſons*, ſtanding upon a River which falls into the *Rhine* about half a Mile below it. It is encompaſs'd with Mountains, except on that Side where the *Rhine* paſſes through a pleaſant Valley of very fine Meadows and Paſture-grounds. The Inhabitants of *Coire* are Proteſtants, except the Biſhop and twenty-four Canons, who have no Share in the Government of the Town, the Form of which is much like to that of *Zurich* and *Baſil*; the Citizens being divided into five Companies, each of which chuſes fourteen Senators, who compoſe the Great Council of Seventy: The ſame are choſen commonly again every Year on St. *Martin*'s Day. The Leſſer Council conſiſts of certain Members of the *Great Council*, *viz.* five out of each Company choſen every Year, and five Maſters of the Companies for the laſt Year, making up the Number of thirty. This Council, with the Burgomaſter Regent, (whom they call *Stattvought*) judge in criminal Cauſes, as Actions of Debt are determined by the five Maſters of the Companies, and ten Members of the Council of thirty. But from them an Appeal lies to the leſſer Council. The *Griſons* have beſides *Coire* two Towns more, *viz. Mayfield* and *Eylandts*: Some of their Communities are *Romaniſts*, ſome *Proteſtants*, but moſt of the laſt, the Number of which is computed at 17000 Fighting Men.

March 29. We went from *Coire* to *Walenſtadt*, ſeated upon a ſmall Lake called the *Wallenſtatter-Sea*: This, as well as *Sargans*, through which we paſſed, are *Voghtia's* of the ſeven Cantons. The 30th, we ferried over the Lake to *Weſen*, and from thence travelled to *Glaris*, one of the thirteen *Swiſs Cantons*: Here they ſhewed us the Horns of the *Ibex*, (which they call *Steinbuck*) not unlike, but ſomewhat longer than Goats-Horns; they told us, that they were found in *Walliſland*, and the Archbiſhoprick of *Saltzburg* in *Germany*; but of the beforementioned *Rupicapræ* or *Gymſes* and *Mures Alpini majores*, called *Marmottoes*, they have great Plenty, as well as of the *Merulæ torquatæ* and *Merulæ aquaticæ*; of the *Urogallus*, or *Cocks of the Wood*, and the *Lagopus*, a white Bird like a Partridge, feathered down to the very Claws; but of theſe they have greater Plenty among the *Griſons*. The Inhabitants of the two Cantons of *Glaris* and *Appenzel* are mixt, two thirds *Proteſtants* and one third *Romaniſts*; for the reſt, the Difference of the Government of the ſeveral *Swiſs Cantons* may be reduced under three Heads; the firſt of thoſe who have no Cities, where the ſupreme Power is lodged in the People, *viz. Uri*, *Swits*, *Underwalden*, *Zug*, *Glaris* and *Appenzel*; the ſecond of thoſe which have Cities, that were ſubject formerly to Princes, where the Form is Ariſtocratical, as *Bern*, *Lucern*, *Friburg* and *Solothurn*; the third of thoſe, which have Cities which were always free, where there is a Mixture of both, being divided into certain Companies, by whom the Magiſtrates are choſen yearly; of this Order are *Zurich*, *Baſil* and *Schaffhauſſen*.

The Canton of *Glaris* is divided into fifteen *Diſtricts*, ſome of which elect five, others ſix Counſellors, ſome more, others leſs, which make up the Senate or Council of ſixty, two Parts whereof are *Proteſtants*, and the reſt *Romaniſts*. The Sovereignty is lodged in the People, who meet every Year on the laſt *Sunday* in *April*, all above ſixteen Years of Age having their Votes, to chuſe by the Majority of Suffrages, 1. The *Landman*. 2. The *Stadhalter*, or his Lieutenant. 3. A Treaſurer. 4. A Standard-Bearer. 5. The Head Captain, and in Time of War a Lieutenant. 6. The Head Enſign. 7. Three Secretaries. 8. The Apparitor. Each of which has his particular Station and Share allotted in the Government, with ſuch Perſons as are joined with them in Commiſſion; for the further Elucidation of which, I will refer myſelf to Mr. *Simler* in his *Swiſs* Republick.

The Territory of *Glaris* is about twenty-four *Engliſh* Miles long, the Number of Freemen, of both Religions, about 2500. In the Cantons of *Baſil*, *Zurich*, *Bern*, *Lucern*, *Schaffhauſſen*, *Friburg* and *Solothurn*, the Citizens are only Freemen, the Inhabitants of the open Country being Subjects under the Government of Bailiffs, who in ſome Places govern two, in others three, in others ſix Years. But in thoſe Cantons which have no Cities, each Countryman is a Freeman, as far as they belong to their reſpective Cantons, for they have alſo their Subjects governed by Bailiffs.

April 1. We travelled from *Glaris* through *Nafels*, and other Villages near the *Lake of Zurich*, and after an Hour's riding aſcended an high Mountain, where we found the Ground covered with Snow, and the famous Monaſtery of the *Benedictine* Fryars, call'd *Eynſidle*, where is the Image of our Lady, who has a peculiar Chapel conſecrated to her, viſited by many Pilgrims. This Abby is under the Juriſdiction of thoſe of *Switz*, unto which Place we came *April* the 2d, being no more than a Village, but comparable to a large Town; its Government is the ſame with *Glaris*, being divided into ſix Quarters, each chuſes ten Senators, which compoſes the Senate, conſiſting of Sixty Perſons. Their Officers are alſo the ſame as at *Glaris*. This Canton, as every one of the reſt, ſends two *Meſſi* or Deputies to the general Diet at *Baden*, of which the *Landman* is generally one.

April 3. After we had travelled three Miles along the Lake to *Brunen*, we embark'd for *Altorf*, and having ſpent three Hours more in our Paſſage, had a Mile further to *Altorf*, there being no travelling from *Switz* to *Altorf*, unleſs you will take a Compaſs of about ſixty Miles. It is larger than *Switz*, and has a pretty Church and a Monaſtery belonging to the *Capuchins*. Here they told us the Story of *William Tell* and the *Lantvogt*; the Statue of the firſt we ſaw on the Top of a Pillar, over one of their Fountains, with his Croſbow on his Shoulder, leading his Son by the Hand, and at ſome Diſtance a Tower, on which were painted the ſeveral Paſſages of this Story. The Government is the ſame with *Switz*, the Number of Senators and Manner of Election the ſame, except that they have a Maſter of the Artillery, and ſix Proctors or Councellors beſides.

April 4. We return'd to the Lake of *Lucern*, and went by Water within an Hour's travelling of *Stantz*, the chief Village of *Underwalden*, where we lodg'd. Here is a very fair Church, and two Convents, one for the *Capuchins*, and one of Nuns. In this Place, and at *Altorf*, *Switz*, *Lucern*, &c. we ſaw in the Church-yards, Croſſes of Wood and Iron upon the Graves, on ſome of which hung a little Copper Kettle with holy Water, and many Women coming, with Bunches of Herbs in their Hands, which they dipt in the Kettle, and ſprinkled the Water upon the Graves. Such is their Ignorance and Superſtition!

This Canton is divided into *Oberwald* and *Underwald*; the capital Village of the firſt being *Stanner*, as *Stantz* is of the latter. The lower is governed by ſixty Senators, choſen by eleven Communities, ſome more, ſome leſs. Their Officers and Elections the ſame as in *Switz* and *Uri*, except that here they change their *Landman* every Year. *Oberwald* has its own *Landman*, Officers, *&c.* ſo that they would ſeem to be two diſtinct Cantons, were it not that they ſend but two Deputies to the general Diet at *Baden*.

Theſe three Cantons of *Uri*, *Switz* and *Underwalden*, have no Corn Fields or Vineyards, but only Paſture-Grounds, being ſupplied with Wine from *Italy*, which is very dear here; and therefore but little drank. The People are generally very honeſt and good-natur'd, and keep their Houſes very clean, but are much given to eating and drinking, having Plenty of plain Things at ſmall Coſt.

April 5. We travelled to *Lucern*, croſſing Part of the Lake. It is a very handſome City, pleaſantly ſituate upon the Lake of the ſame Name, and divided in two Parts by a River, which ariſing from the Lake, is cover'd here with three Bridges, one for Carts and Horſes, the other two for Foot-Paſſengers, covered with a Roof, one being near a Quarter of a Mile long; beſides which, it has a fourth Bridge covered like the other, but longer, leading to the Church. The great Church, which ſtands without the Wall, is a very lofty Structure, over the Weſtern Door of which is the biggeſt Organ that ever I ſaw, the Hollow of the greater Pipes being capacious enough for a Man to creep into. They told us, that their Great Council conſiſted of an hundred and thirty ſix, who continue in Office during Life, and when one dies, the reſt chuſe another in his Place. It has two Preſidents, whom they call *Sculteti*, who alſo continue for Life, but preſide in their Turns every other Year. For their Manner of chuſing theſe Senators and other Officers, I will refer myſelf to *Simler*. All the Inhabitants of the Territories belonging to this City are Subjects, and divided into nineteen or twenty *Prefecturæ*, but they pay no more than five *Batz*, or a Hen a Man *per Annum* to the Governor. From *Lucern* we travell'd, *April* the 6th, fifteen Miles to *Zugh*, (*Tugium* in *Latin*) ſeated at the Side of a ſmall Lake, but it is leſs by one half than *Lucern*. The Government here is popular, like thoſe of *Uri*, *Switz*, and *Underwalden*; but beſides the City, the three *Communities* of *Eyry*, *Menſinguen* and *Baar* have a Share in the Government. Their Magiſtrates, Officers and Elections the ſame as in *Uri* and *Switz*. To the General Diet the City ſends one, and the three *Communities* the other Deputy. The Nomination of the *Landvogts* or Governors in the Country belongs once to the City and twice to the Communities.

The Lake of *Zugh* (if you believe the Inhabitants) has greater Variety of Fiſh than any other of *Switzerland*; thoſe they named to us were, *Eels*, *Carp*, *Perch*, *Trouts*, *Salmons*; which is very ſtrange, by Reaſon of its great Diſtance from the Sea; *Eſch*, called *Grayling* in *Engliſh*, *Triſea*, or the *Eel-pout*, *Pikes*, (of which we ſaw one weighing thirty Pounds) *White-fiſh* or *Alberlin*, which is taken alſo in the Lake of *Bala* in *Merionethſhire* in *Wales*, and is call'd there *Guiniad*; and in *Huls-water* near *Perith* in *Cumberland*, and there call'd *Schelly*; *Haſsler*, a Fiſh I take to be the ſame with our *Charre* in *Winandemmere* in *Weſtmorland*, and the *Torgoch* of *North-Wales*; *Balla*, *Naſe*, (called *Naſus* by Naturaliſts) *Breams*, *Creviſes*, &c. and many more. In the ſhadowy Lakes about *Sant* and *Zug*, we found *Anblatum Cordi*, or *Dentaria aphyllos*. From *Zug* we rode *April* 7. in five Hours to *Zurich*, of which we have given an Account before.

April 13. We travelled thence four good Leagues to *Mellingen*, a free Town, not far from *Baden*, and paſſing through *Lenſburg*, lodged at *Arauw*, a conſiderable Town upon the *Aar*, four ſhort Leagues from *Mellingen*. The 14th we paſs'd thro' no conſiderable Place till we came to *Solothurn*, nine Leagues from *Arauw*, which, though the Head of a Canton, is not conſiderable either for its Strength or Bigneſs. *April* 15, taking a round-about Way out of the ordinary Road to *Geneva*, we took a View of *Bern*, ſix Hours riding from *Solothurn*, that we might not leave *Swiſſerland*, without ſeeing it.

Bern is a very handſome City, for though the Houſes be not very high, yet they are well built of Stone. The chief Street, which is very long, has Cloyſters on both Sides; it lies ſtretched out in Length upon a Hill, reſembling a Peninſula, being almoſt encompaſſed by the River, that Side where it is not being ſtrongly fortified with Baſtions and Outworks. The Founder of this City, as alſo of *Friburg* in *Switzerland*, and of *Friburg* in *Briſgow*, was *Berchtoldus* Duke of *Zerin*, unto whom they have erected a Monument in the great Church, one of the neateſt Stone Fabricks in all *Switzerland*. The Territories of this City are of ſuch an Extent, as to comprehend one third Part of all the Country of the *Swiſs*, being divided into ſixty Bailyages, beſides four others they have in common with *Friburg*. The *Landvoghts* or Bailiffs continue in their Stations for ſix Years, which makes them very rich without exacting upon the People. They keep here five or ſix Bears in a Pit, which are often climbing up and down the Fir-Trees that grow in the Pit. The Arms of *Bern* is a Bear, alluding perhaps to their Name, this City being the firſt that coin'd the Money called *Batze*, (ſignifying a Bear's Paw) from the Figure of a Bear ſtampt upon it, which was afterwards imitated by all the reſt of the Cantons.

April 17. We travelled from *Bern* to *Friburg*, a very handſome City and likewiſe the Head of a Canton; its

Situation is much the ſame as *Bern*, upon a Hill, almoſt ſurrounded with a River, and encompaſs'd with Hills, except on that Side where it is joined to the Land.

April 18. We travel'd from *Fribourg* through *Maulton* to *Lauſanna*, a great Town and Univerſity; and *April* the 19th continued our Journey by the Way of *Morges*, *Rolle* and *Nion*, conſiderable Towns upon the Lake of *Geneva* and *Verſoy*, a ſmall Place on the Lake near *Geneva*, belonging to the *French*, and came the ſame Day to *Geneva*, where we ſtaid for three Months.

The Governments of *Solothurn*, *Bern* and *Friburg*, are much the ſame as that of *Lucern*. In *Solothurn* the Great Council conſiſts of One Hundred and Fifteen, the Leſſer of Thirty-five; if one happens to die, the Thirty-four remaining chuſe another out of the One Hundred and Fifteen, and his Place is ſupplied out of the Citizens. In *Bern*, the greater Council is compoſed of Two Hundred, and the leſſer of Forty-two. In *Fribourg* the greater Council is of Two Hundred likewiſe, and the Leſſer of Twenty-four. All theſe Cities have two *Scouts* or Conſuls, who rule every other Year each in his Turn. He that deſires a more ample Account of the Government of theſe and all other *Helvetick* Cities, may conſult *Simler de Rep. Helvet.* Each of the Proteſtant Cantons acknowledge a certain Saint for their Patron, whoſe Image they ſtamp upon the Reverſe of their Money. The Proteſtant Cantons are, *Zurich*, *Bern*, *Baſil*, *Schaffhauſen*, and Part of *Glaris* and *Appenzel*. That which breeds frequent inteſtine Differences among the *Swiſs*, is the Buſineſs of the common Bailiwicks; for the Popiſh Cantons, being more in Number than the Proteſtants, they ſend Bailiffs to thoſe Places twice to the Proteſtants once, who are often oppreſſed and injured by the Popiſh Bailiffs, and the *Switzers* being very jealous on both Sides in their Religion, *hinc illæ lachrymæ*. On the other Hand, the Proteſtant Cantons, though fewer in Number, yet are the more powerful: Beſides that, their Land is better, very like ours in *England*. The *Romaniſts* are accounted the better Soldiers, and good Reaſon they have, being more exerciſed in War, ſerving the *Spaniſh* and *French* Kings, as being of the ſame Religion. Beſides, the *Zurichers*, who anciently had the Reputation for Valour, are now much given to Merchandize, and to accumulate Riches, and ſo taken off from martial Studies and Exerciſes. The *Berneſe*, though they have far the greateſt and beſt Territory of all; (ſo that it is ſaid they can arm as many Men as the Dutchy of *Milan*, ſend into the Field 100,000 Soldiers, and leave enough at Home to till the Land) yet have they no Reputation for Soldiers: They loſt their Credit quite in the late Skirmiſh with the *Lucerneſe*, who account them rather *Savoyards* than *Switzers*. All the Cantons of *Switzerland* coin Money, except *Appenzel*, *Underwald* and *Glaris*, of which *Glaris* formerly hath coined, though now it doth not. All the *Switzers* in general are very honeſt People, kind and civil to Strangers: One may travel their Country ſecurely with a Bag of Gold in his Hand. When we came to our Inns, they would be troubled if we diſtruſted them ſo far as to take our Portmanteaus into our Lodging Chambers, and not leave them in the common Dining-Rooms. They keep their Houſes very clean and polite, like our Houſewives in *England*. For Plants, going from *Zurich* to *Mellingen*, we obſerved common Gooſberry in the Hedges and by the Way-ſides very plentifully, and in ſome Places Barberries. *Sigillum Solomonis* and *Herba Paris* are the moſt common Plants that grow in this Country in the Woods and Hedges every where; *Annonymus flore Coluteæ* on the Mountains near *Zurich*; from *Arauw* to *Solothurn*, *Helleboraſter Maximus* on the Hills Sides, as alſo *Chriſtophoriana*, not to mention *Fumarica Bulboſa* every where growing in the ſhady Lanes.

Geneva is pleaſantly ſeated at the lower End of the *Lacus Lemanus*, now called *Geaffer-zee* or the Lake of *Geneva*, upon a Hill-ſide reſpecting the Lake; ſo that from the Lake you have a fair Proſpect of the whole Town. It is divided by the River *Rhodanus* or *Rhoſne* into two Parts, which are joined together by two wooden Bridges, one of which hath on each Side a Row of Houſes, after the Manner of *London* Bridge, only they are low. The two principal and indeed only conſiderable Streets in the Town are, the Low Street, *i. e. Rue bas*, which runs along by the River and Lake-ſide, and the High or Great Street, *i. e. Rue Grand*, which runs up the Hill. The City is indifferently ſtrong, and they have lately been at great Expences to fortify it, *à la moderna*, with Ramparts and Baſtions of Earth. Though it be ſmall, yet it is very populous, being ſuppoſed to contain 30,000 Souls. St. *Peter's* Church, formerly the Cathedral, is handſome and well-built; and in it is a ſtately Monument for the Duke of *Rohan*.

The Citizens are very buſy and induſtrious, ſubſiſting chiefly by Trading, the whole Territory of this Republick being not ſo great as ſome one Nobleman's Eſtate in *England* for Extent of Land. All Proviſions or Victuals are very plentiful and cheap at *Geneva*, eſpecially Milk, Meats, the neighbouring Mountains feeding Abundance of Cattle. The Tops of *Jura Saleve*, and other high Mountains of *Savoy*, *Dauphine*, and the *Alps*, where they are bare of Wood, put forth very good Graſs ſo ſoon as the Snow is melted off them, which is uſually about or before the Middle of *May*: And then the Country People drive up their Cattle to Paſture, and feed them there for three Months Time. Upon theſe Hill-tops they have here and there low Sheds or Dairy-houſes, which ſerve the Men to live in, and to make their Butter and Cheeſe in ſo long as they keep their Beaſts above. The Men, I ſay, for they only aſcend up thither, and do all the Dairy Work, leaving their Women to keep Houſe below it, as being too toilſome for them to clamber up ſuch ſteep Hills. By Reaſon of theſe Cotts, it is very convenient Simpling upon the Mountains; for if a Man be hungry or thirſty, he may ſoon find Relief at one of them. We always found the People very kind and willing to give us ſuch as they had, *viz.* Brown Bread, Milk, Whey, Butter, Curds, *&c.* for which we could ſcarce faſten any Money upon them. For the Temper of the Air, in reſpect of Heat and Cold, *Geneva*, I think, is very like *England*, there being no great Exceſs of either Extreme. The City is well governed, Vice diſcountenanced, and the People either really better, or at leaſt more reſtrained than in other Places, though they do take a Liberty to ſhoot, and uſe other Sports and Exerciſes upon the Lord's Day; yet moſt of their Miniſters diſallow it, and preach againſt it.

33. We ſhall now take our Leave of theſe Parts of *Europe*, with the Satisfaction of having given the Reader ſuch Accounts of them as cannot fail, with any reaſonable Degree of Attention, to furniſh him with juſt Ideas both of Places and Perſons; of the Country of *Italy*, of the principal Cities and remarkable Places therein, and of their Inhabitants. We might, indeed, have given him later Travels, but againſt theſe we had ſeveral Objections, ſome of which it may be proper to mention. Modern Travellers commonly viſit *Italy* for ſome particular Purpoſe; one is an Antiquary, and his Buſineſs is to conſider Monuments, tranſcribe Inſcriptions, collect Medals, and write tedious Accounts of them. Another has a Taſte for Painting, and every City that he paſſes through, furniſhes him with a fine Catalogue of Pictures, and which is no leſs valuable, an Opportunity of diſcovering to how great a Degree he is a *Connoiſſeur* by his Remarks upon it. A third, perhaps, is furiouſly addicted to the Claſſicks, and his great Point is to ſhred out by *Virgil*, *Horace*, *Ovid*, &c. and wherever he comes, gives you their Deſcription inſtead of his own. A fourth, may be, is a Politician, and he entertains you with a Recital of the ſeveral Families through which every little Principality has paſſed, before it fell under the Power of the Houſe of *Auſtria*, the Kings of *Spain*, the Pope, the *Swiſs* Cantons, or the State of *Venice*. A Fifth, poſſibly, may be a *Virtuoſo*, and inſiſts entirely upon Curioſities,

ſo as to render his Book a Collection of Diſcourſes or Diſſertations upon a vaſt Variety of Subjects extremely agreeable to a few, and abſolutely uſeleſs to all the reſt of the World.

I would not be underſtood to cenſure theſe Writers in a dictatorial Manner, or to prejudice my Readers againſt them; each and all of theſe Books may be uſeful, inſtructive and entertaining; but they are not fit for a Collection, becauſe, if we take one we muſt take all, in order to render the View complete; and this would ſwell our Work not only beyond its due, but beyond all Limits; and, after all, anſwer the Purpoſe but indifferently: Beſides, in moſt of theſe modern Books of Travels, you will find continual References to the Authors that we have uſed, becauſe ſuch Writers are themſelves ſatiſfied, that they cannot give better or more exact Deſcriptions; and this being the Caſe with reſpect to thoſe Things that the Generality of Readers deſire moſt to be acquainted with, it follows for this very Reaſon, ſuch Travels ought to be preferred in a Deſign of this Nature, and the Treatiſes of modern Travellers left to the Peruſal of ſuch as, from their having a like Taſte to this or that Writer, incline not only to read but to ſtudy his Performance.

In regard to the principal and general Ends of viſiting Foreign Countries, in order to take a View of the moſt remarkable Places in them, to examine their Situation, Excellencies and Defects, the Nature of the adjacent Territories, and their Produce; to obſerve the Governments, Number of People, Revenues, the Condition, Inclinations and Manners of the Inhabitants, and to take Notice of the Particulars for which they chiefly diſtinguiſh themſelves from other Nations; theſe, as they are the profeſs'd Intentions of the Authors we have inſerted; ſo it muſt be allowed, that they have executed them with great Diligence, Fidelity and Spirit. Wherever their different Circumſtances, different Qualities and different Manner of Travelling, may be ſuppoſed to have given them an Opportunity of making different Obſervations or Remarks upon different Places, we have been careful to ſupply the Reader with their ſeveral Works; ſo that all their Diſcoveries are united in this Body of Travels, with as little Repetition as it is poſſible.

As for Inſtance, *Miſſon*, *Burnet*, and *Ray*, all travelled through *Switzerland*; and yet their Accounts are very different from each other: The firſt confined himſelf chiefly to the Road, and deſcribes only the Places through which, in their ordinary Rout to *Italy*, moſt Travellers muſt viſit. The Second having greater Leiſure, and a Mind of another Turn, is leſs ſolicitous about Places, and more concerned about Perſons; ſo that from him we receive as clear and diſtinct Informations, as to the Tempers and Manners, their Notions in Religion and Politicks, as if we had paſſed as much Time as he did among the *Swiſs*. The Third differs from them both, ſpeaks of Places and Perſons too, and takes in beſides Abundance of Points, that from their Attention to their particular Views had eſcaped the other two; ſo that this may be juſtly reckoned a Kind of Supplement to the other Travels; and, by comparing all three, the Deſcription may be render'd compleat.

Again, as to *Loretto*, and the holy Houſe there, it is mentioned by each of our Travellers, and yet there is little or nothing of Repetition in their Accounts; but there is one Thing very ſingular in Mr. *Ray*'s, that inſtead of entering into a long Detail of all that he ſaw and heard there, and from thence remarking upon and pointing out all the Abſurdities and Inconſiſtencies of that extravagant Fable, he contents himſelf with tranſcribing, which neither of the other two had done, the authentick Account of honeſt Father *Codrington* in plain *Engliſh*; which furniſhes us with ſuch a Hiſtory of Things, as renders Reflections and Remarks entirely needleſs. His Travels through *Naples*, *Sicily* and *Malta*, are in reſpect to thoſe who have gone before, abſolutely new, and carry us to the very Frontiers of *Europe* on that Side; and with reſpect to the laſt mentioned Iſland, I very much doubt, whether there is a better Deſcription extant in any Language. It muſt be, indeed, acknowledged, that he runs ſometimes into very long Digreſſions upon Points of Natural Hiſtory; and the Reaſon that I did not lopp off theſe Digreſſions was, their being of general Uſe, and ſerving to illuſtrate the ſame Points, wherever they occur; ſo that conſidered in this Light, they are very uſeful as well as very entertaining.

It was the Deſign of Mr. *Ray* and his Company to have taken a View of all the Provinces of *France* that lay in their Way to return Home, and to have examined them with the ſame Diligence and Accuracy as they had already practiſed in their Travels through *Italy*: But this Scheme of theirs was defeated by the Difference that happen'd between the two Crowns, the *French* having thought fit, in the firſt *Dutch* War in King *Charles* the Second's Reign, to declare for that Republick againſt *Great Britain*; and, in Conſequence of that Declaration, order'd all the Subjects of the *Britiſh* Crown to quit the Territories of *France* within a certain Time. This obliged Mr. *Ray* and his Company to alter their Intention and Manner of Travelling; ſo that inſtead of looking into and enquiring after every Thing, they were conſtrained to make their Journey in the common Way, and to confine their Acquaintance entirely to the publick Houſes where they lodged, and the People to whom they applied for Bills of Exchange, and other neceſſary Purpoſes, excepting ſome few Places, of which Mr. *Ray* has left us ſome Account, and Mr. *Skippon* a larger, which ſhall follow in the next Chapter.

It may not be amiſs to take Notice here, that Mr. *Skippon* kept alſo a diſtinct Journal of his Travels thro' the *Low Countries*, *Germany* and *Italy*; but as moſt of the Particulars in them, different from what we meet with in Mr. *Ray*, are either honorary or monumental Inſcriptions, or Accounts of Engines and Machines, we were unwilling to interſperſe them with Mr. *Ray*'s Obſervations, becauſe they would not only have lengthen'd this Section beyond due Bounds, but alſo have afforded the Reader very little that is new, ſince they are already included in another Collection. But it is now Time to finiſh theſe Remarks in order to open the next Chapter, which relates to the two great Kingdoms of *France* and *Spain*.

But before we come to this, we ſhall take the Liberty of ſuggeſting, that if modern Travellers through the *Low Countries* would examine the new Manufactures that ſince theſe Gentlemen viſited them are introduced there, and are exported from thence not only into *Germany* and the North, but alſo into the ſeveral Kingdoms of *Europe*, and the Plantations in *America*, dependant upon them, it would be a prodigious Service to this Country. In *Germany* alſo there are many Enquiries to be made, that would be highly uſeful and in their Conſequences very beneficial, in reſpect to Mines more eſpecially, ſince we are well aſſured, that as moſt of the Diſcoveries, in relation to the Working them to Advantage, have hitherto been brought from thence, by the Care of the *Crawley* Family, and others intereſted in Iron Works here; ſo there are ſtill ſeveral Methods practiſed there, which are not yet known, or at leaſt not generally known to our People.

In *Italy* alſo there are many Things relating to the Silk Manufacture that deſerve to be enquired into; and we may very well gueſs at the Importance of ſuch Enquiries, by the Reward given to Sir *Thomas Lombe* for bringing over that celebrated Invention, which has been ſo ſucceſsfully executed in the Machine erected at *Derby*. But excluſive of the Manufactures, it would be of great Conſequence to the Publick, if any Method could be found to open new Markets for Raw Silk; the obtaining which, in the Channel whereby it now comes, ſtands the Nation in vaſt Sums; of which, whatever could be ſaved, would be ſo much clear Gains, and conſequently the general Balance of our Trade would be much more in our Favour.

The Trade of *Naples* and *Sicily* alſo is very capable of being extended and improved, ſince it is certain, that the *French* draw very conſiderable Sums from thoſe

Kingdoms for Commodities and Manufactures which they might receive from us, and though ſome People entertain a Notion, that ſince thoſe Countries fell under the Dominion of the Houſe of *Bourbon*, we are put under greater Difficulties in dealing with their Inhabitants; yet it is very certain we have ſtill a great Advantage over the *French*, which might be rendered of higher Conſequence than hitherto it has been; I mean, the trading with theſe People for their own Goods and Manufactures, which, as on the one Hand it would give us the Preference with reſpect to them, ſo on the other Hand it would increaſe the Shipping employed by us in this Part of the World, and likewiſe enable us to export their Commodities into ſeveral Parts of *Europe*, as well as to our Colonies in *America*.

To ſpeak the Truth, travelling with a Commercial View, though ſo viſibly advantageous to us, has hitherto been very little practiſed, more eſpecially of late Years; and yet one would think Enquiries of this Nature may prove very ſatisfactory, and even as entertaining as the looking after fine Statues, the Pictures of great Maſters, Medals, Bronzes and other Curioſities; ſearching after which take up ſo much of the Time of moſt of our Travellers. Not that I am by any Means an Enemy to Taſte, but that I think in our preſent Condition, ſome Reſpect ſhould alſo be had to our Intereſt, and that in Proportion, as our Expences are increaſed by the Share we take, and are long like to take, in the Affairs of the Continent, ſo we ſhould contrive, if poſſible, to make ourſelves ſome Amends, by enlarging and promoting our Commerce, which, whatever Way thoſe Affairs turn, is the only Means by which we can ever be made the better for them.

CHAPTER IV.

Containing TRAVELS through *Spain*, *France*, and *Navarre*, with Deſcriptions of the ſeveral Provinces and leſſer Diſtricts of thoſe great Countries; of the chief Cities and Ports in them, and of the Commodities and Manufactures, for which they are principally famous.

SECTION I.

The Travels of Francis Willoughby, *Eſq; through the Kingdom of* Spain; *with Obſervations on the Climate and Soil, as well as Produce of the Country; Accounts of natural Curioſities, remarkable Inſcriptions, principal Commodities and Manufactures, and of the Temper, Genius and Cuſtoms of the* Spaniſh *Nation. Interſperſed with ſome Remarks by another Hand.*

1. *An introductory Account of what is to be expected in the following Section.* 2. *The Author begins his Journey from the County of* Rouſillon, *and enters the Kingdom of* Spain *through a very barren and deſart Country. A large Deſcription of the Manner of Gathering, as alſo an Account of the Uſes and Value of Coral.* 3. *The Country of* Catalonia *deſcribed, as alſo the remarkable Mine of* Amethyſts, *at the Hill of St.* Sigminont. 4. *Of the Salt Mines both white and red in this Province; and of the famous Dutchy of* Cardona. 5. *An Account of the Lead-Mines in* Catalonia, *and of the poor living and wretched Condition of the Inhabitants. The City of* Tortoſa, *the* Jaſper *Mines, and other Things remarkable in the Author's Journey to the Banks of the River* Ebro. 6. *A curious and copious Account of the City and Kingdom of* Valentia; *the Univerſity there, and of the very low State of Learning therein.* 7. *An Account of the Sugar Works at* Olives *and at* Gandia, *and of the great Fertility of the adjacent Country.* 8. *Obſervations made by our Author in his Travels through the Kingdom of* Murcia, *the Poverty of the Country, and groſs Ignorance and Superſtition of the People.* 9. *A Deſcription of the Kingdom and City of* Granada, *and of the moſt remarkable Places in its Neighbourhood.* 10. *The Author proceeds to the famous City of* Sevil, *an Account of the moſt remarkable Things there, with two famous Inſcriptions to the Honour of* Ferdinand the Wiſe, *and the Family of the great* Columbus. 11. *Of the Country from* Sevil *to* Madrid, *including a Deſcription of the City of* Cordova, *and ſeveral other Places.* 12. *The Author's Arrival at, and Deſcription of* Toledo, *his Journey from thence to the capital City of* Madrid, *with an Account of what he ſaw moſt remarkable there.* 13. *His Journey from thence to* Burgos, *and from that City to the Province of* Guipuſcoa. 14. *An Account of the Principality of* Biſcay, *and a particular Deſcription of the ſtrong Town and Port of St.* Sebaſtian. 15. *A very large and entertaining Account of the Diſpoſition, Manners, Cuſtoms, Peculiarities, good and bad Qualities, &c. of the* Spaniards. 16. *Some additional Remarks by another Hand.* 17. *Concluſion of the Section, and ſome Obſervations on the moſt remarkable Paſſages therein.*

THE great Deſire Mr. *Willoughby* had to travel through and examine ſuch Countries as were leaſt like his own, that his Obſervations and Remarks might furniſh him with a greater Variety, was the Occaſion of this Journey into *Spain*, in which he parted from Mr *Ray*, and the reſt of his Company, and joined with ſome other *Engliſh* Gentlemen who were reſolved to make the Tour of that Country. It may not be amiſs to inform the Reader, that, from the Time of King *Charles*'s Voyage to that Country, while Prince of *Wales*, in Hopes of Marrying the *Infanta*, the *Engliſh* Nation had acquired ſo ſtrong, and ſo univerſal a Diſlike both to the Country, and to the People, that very few of our Gentlemen that went Abroad, inclined to viſit it; ſo that we had but very indifferent Accounts of what was remarkable there, as may be ſeen, by conſulting the Books of Geography, printed here of an elder Date. After the Reſtoration a very different Spirit prevailed. King *Charles* the ſecond, during his Exile, had travelled much, and among other Countries viſited this, and frequently diſcourſed of the Singularities he had ſeen there, and of the odd Humour and uncouth Diſpoſition of the People. Theſe Diſcourſes of the King's, raiſed the Curioſity of many, and excited in them a Deſire of viewing Places they had otherwiſe never wiſhed to ſee, and converſing with People for whom they had long had both an Averſion and Contempt. But beſides there were other Reaſons that induced Perſons of very different Tempers to think at this Time, a Journey through *Spain* might afford Matter of Inſtruction, as well as Amuſement, which was the Caſe of Mr. *Willoughby*, who had heard that there were various Mines and Manufactures, as well as a Multitude of natural Curioſities in that Country, which might very well juſtify the ſpending a few Months in ſurveying and committing to Paper, an Account of them, for the Improvement of others as well as his own Satiſfaction. If the ſhort Time that he ſpent in his Paſſage through this Kingdom, did not allow him to ſearch into and after every Thing, in as diligent a Manner and with as much Exactneſs as he deſired; yet it muſt be allowed, that he has given us a very judicious and accurate Account of all that he ſaw, ſo as to afford a true, if not a pleaſing Picture of *Spain* and its Inhabitants, at the Time he viſited them; the Reading of which will enable us to form a very juſt Notion of the Places and the People, which is the great End of Travelling, and the higheſt Advantage that can reſult from the Peruſal of Books of this Kind. I have met with a Copy of theſe Travels, which formerly belonged to Sir *Philip Skippon*; and in which there are contained ſome Explanations and Additions, which are here taken in, and conſequently render theſe Travels more curious and valuable. The Neceſſity of keeping within Bounds, renders it improper to extend this Introduction farther, and therefore we will now proceed without Ceremony to the Travels themſelves.

2. *Auguſt* 31, 1664. We left *Bagnols* in the County of *Rouſillon*, being the laſt Town belonging to the *French*, and at about three Fourths of a League's Diſtance came to a great Stone erected here for a Boundary between *France* and *Spain*, and paſſing very bad Way among deſolate Mountains, after many Hours riding, we came to *Lanſa*, the firſt Town of the King of *Spain*'s Country. All along theſe Mountains grow Roſemary, common Furze or Gorſe, and *Agnus caſtus* of two Sorts, the one with a carneous, the other with a blue Flower. From *Lanſa* we went on the ſame Day as far as *Cande Creux*, five Leagues or twenty *Engliſh* Miles from *Bagnols*. Among theſe Mountains we met with no Brooks, and ſcarce any Water. *Sept.* 1. We intended to have ſeen the Coral Fiſhing here; but the windy Weather hinder'd us. The Sea muſt be very calm and ſmooth, elſe it is impoſſible for them to fiſh for it. It grows downwards (as the Urinators told us) under the hollow Rocks, and not upwards as Trees. I believe rather, that it grows indifferently, either upwards or downwards, according to the Situation of the Rocks. The Engine they make Uſe of for getting Coral is, a great Croſs of Wood with a conſiderable Weight of Lead faſten'd at the Center, to which alſo a ſtrong Rope is fixed, and at each Corner there are ſtout Nets made of ſmall Cord: They go out in little Boats, and let down this Croſs; and when they have found a Rock at the Bottom of the Sea, he that manages the Rope, thruſts it into the Hollows, getting in one or two of the Corners; and if there be any Coral, it entangles in the Nets at the End of the Croſs, by which it is torn off and brought up. The natural Colour of the Coral, while it is alive and growing to the Rocks, is a pale carneous; but when the Scurf (which anſwers to the Bark on Trees) is rubbed off, it is red. The Coral, that dies or is broken off from the Rocks, loſes that carneous Scurf or Bark in the Sea, and becomes red, though ſometimes it gets a greeniſh white Ruſt. They ſay it is fifty Years before it comes to its full Growth; but that, I conceive, is an ungrounded Conjecture; they ſometimes, but very rarely, find Branches of three or four Pounds Weight. It rots, dies, grows light, Worm-eaten, and full of Holes like Wood. They all affirmed it to be hard and not ſoft, as it grows under Water, contrary to the current Tradition of the Ancients, *Mollis fuit herba ſub undis.* I believe the outward Scurf or Bark may be ſoft, it eaſily crumbling off afterwards, which might give Occaſion to the Fable. They told us, that a Piece of Coral having the carneous Scurf upon it (wetted) is juſt the ſame as when it is firſt taken out of the Sea. The beſt Coral, rude as it is found, is worth a Piſtole the Pound, or two or three Pieces of Eight: Poliſhed and wrought into Beads, Bracelets, &c. at *Marſeilles* it is ſold for thirty, forty, and ſometimes ſixty Sols, (*i. e.* ſo many Pence) the Ounce. They find here white Coral alſo, but very rarely.

To this Account of our Author, the following Particulars may be added.

The Opinion of the Ancients was clearly that it was a Plant, but this Notion was afterwards queſtioned by ſeveral very learned and great Men; but at this Time of Day, when Opinions in Matters of this Kind are not ſo much regarded, we are ſatisfied from Variety of Experiments, that the old Notion is a Matter of Fact, that it is really a Plant which is petrified, or render'd hard by the Sea-water, that it produces Flowers which are actually viſible; that in the Flowers there are Seed, though entangled in ſuch a Manner in a thick clammy white Juice as not to be diſcerned. It does not grow either at the Bottom of the Sea, as *Kircher* thought, or on the Sides of Rocks, as our Author and moſt learned Men have believed, but at the Top of Rocky Caverns, ſhooting directly towards the Center of the Earth. It is not true that it has any Root, for it is fixed to the Rock by a thin ſmall Plate, and never ſpreads itſelf by darting Fibres upwards, but grows by attracting its proper Nouriſhment from the Sea-water, through its Pores, which are viſible enough: Its Seed are carried by the Waves, and the thick glutinous Liquor in which it is contained, ſticking to the Rock, affords it thereby the Means of growing; but the Structure of it is ſuch, that it cannot grow but vertically in the Manner before-mentioned.

The principal Coral Fiſheries are thoſe in the *Perſian* Gulph, in the *Red-Sea*, in the *Sicilian* and *Neapolitan* Seas, upon the Coaſt of *Africa*, upon the Coaſts of *Minorca*, *Corſica*, and *Provence*; but it is agreed that no Place yields either better, brighter, or greater Plenty of Coral, than at Cape *Quiers* in *Catalonia*, which is the very Place our Author ſpeaks of: The Time in which they fiſh for it, is from the Beginning of *April* to the End of *July*. The beſt Account we have of any Coral Fiſhery, is that managed by a *French* Company, at a Place called the *Baſtion of France*, on the Coaſt of *Africa*; and as Experience has taught all that are concerned in this Trade, to purſue it in the ſame Manner, or at leaſt very nearly in the ſame Manner, one Deſcription will ſerve as well as many. When we ſay that theſe are the principal Coral Fiſheries, we do not mean that there may not be others; for we know there are both in the *Eaſt Indies* and the *Weſt*, but they are ſmall and inconſiderable in Compariſon of thoſe that we have mentioned, in Reſpect as well to the Coral which is gathered, as to the Quantities that are gathered; and perhaps it might be worth while to conſider, why Coral grows plentifully in ſome Seas, rarely in others, and in many not at all. But at preſent let us ſpeak of the Manner in which this Commerce is carried on.

The Coral Fiſhers, or as our Author calls them *Urinators*, come a little before the Seaſon begins, to the *Baſtion of France*, without either Tackle or Tools, without Veſſels, and without Money. The firſt Thing they do is to ſeparate into Crews. The Crew of a Coral Fiſhing-boat may conſiſt of ſeven, but it is generally compoſed of eight; the Patron, or Maſter of the Boat, the Man that throws the Croſs, and ſix Seamen that manage the Boat and aſſiſt in dragging the Machine aboard. Upon applying to the Company, they are furniſhed with a proper Veſſel, which the *French* ſtile *Satteau*, that is a long ſharp Boat with very large Sails, ſo that they go at a great Rate, and are not eaſily taken. They are likewiſe furniſhed with all Kind of Tackle and Proviſions upon Credit. Then they enter into Articles for the Price of the Coral, which is generally fixed at a *French* Crown a Pound, or thereabouts. They likewiſe engage to ſell all that they take at that Rate, upon Pain of corporal Puniſhment if they are detected in a clandeſtine Commerce. Thus equipp'd, they proceed to Sea, but they are not obliged to deliver their Coral till the Seaſon is over. Then each Boat's Crew brings their Stock on Shore, where it is divided into thirteen equal Parts, of which the Maſter of the Veſſel has four, he that manages the Machine two, and each of the Crew one; the thirteenth Part belongs to the Company, and goes in Diſcharge of the Equipment. In a good Seaſon, a Boat will bring twenty five hundred Weight of Coral, from whence the Reader may judge of the Profit which attends this Fiſhery; and if he deſires to be informed of the total Value, it is enough to ſay, that it is thought a very flouriſhing Seaſon, when two hundred of theſe Veſſels are employed. The Buſineſs of Coral fiſhing is both laborious and dangerous; it requires great Skill and Dexterity to heave the Croſs, and no ſmall Labour and Diligence to get it on board again, beſides the great Riſk they run from Storms, Accidents in their Fiſhing, and Pyrates, all which taken together, keep the Coral Fiſhers ſo poor, that the Company never wants Servants.

As for the Uſes of Coral, one may ſafely reckon three. Firſt, thoſe for which it ſerves in Phyſick, and there want not many Writers who have raiſed theſe very high, and ſuggeſted, that Wonders might be done by Tinctures, Elixirs, Magiſteries, and other Preparations of Coral, which in Proceſs of Time, however, have been exploded, and are grown altogether out of Uſe. But from the Powder and Salt, and ſome other Medicines more eaſily made, and of as great Efficacy as the former, ſince Coral can only operate as a Sweetner, and as an Abſorbent, it is ſtill a good Thing in this Reſpect, and great Quantities of it are continually vended. The ſecond Uſe it is put to, is for Toys, ſuch as Necklaces, Bracelets, adorning Rock and Shell-Work, and other Purpoſes of the like Nature. Laſtly, it is exported into the moſt diſtant Parts of the World, where it is in very high Eſteem, particularly in *Perſia*, and among the *Tartars*. But the beſt Market in the World (if it could be got thither) is *Japan*; where it is eſteemed beyond all precious Stones whatever, Emeralds, Rubies and Diamonds themſelves not excepted; and this for the beſt Reaſon in the World, becauſe all theſe Jewels they have, but Coral they have not. The Coral that is commonly brought to Market is either red or white, the former is employed in Toys, and the latter ſold to the Apothecaries; but beſides theſe, there are ſome Pieces of a fleſh Colour, and ſome Green, but this comes from *America*. When it is wrought into Beads and Necklaces, it ſells in the *Levant* for about five Shillings an Ounce, ſometimes for more. It has been already obſerv'd, that large Pieces of Coral are a very great Rarity, and this the famous Mr. *Lemery*, and ſome other learned Perſons aſcribe to the Nature of the Plant, but without any kind of Reaſon, except this may paſs for one, that Coral is of a very ſlow Growth, and that muſt be allowed to be the true Reaſon. For Coral requiring many Years to reach a large Size, and the Coral Fiſhers purſuing their Trade conſtantly every Seaſon, it muſt neceſſarily follow, that ſcarce any large Coral can be obtained, becauſe they never ſuffer it to grow. Beſides this, as the Coral Fiſhers are paid by Weight, without any Diſtinction between great and ſmall Coral, they are not at all ſolicitous as to the Size, Colour or Quality, but are barely taken up about the Quantity of Coral, that they can take and bring to Market. Theſe ſeem to be the principal and moſt material Points that relate to the Hiſtory of this ſubmarine Plant. It would be equally uſeful and curious, if we could enter into, and furniſh the Reader with as copious, and as diſtinct Accounts of the other Curioſities that occur in our Author's Travels. Where this is in our Power we ſhall not fail to do it, but in the mean Time, let us return to his Narration, which we ſhall again purſue in his own Words.

Near *C. de Creux* upon the Mountains, they find a kind of *Selenitis*, which may be cut or ſlit into very thin Plates like the common *Muſcovy* Glaſs. Upon the Shore are thrown up *Conchæ venereæ* of ſeveral Sorts and Magnitudes, and other ſmall Shells of Affinity to them, which they call *Porcellane*. Theſe they put in the Juice of Lemons or Citrons, and ſet them out in an open Bottle all Night. The Dew mingling with the acid Juice, diſſolves the Porcellane: This Liquor they uſe for a Coſmetic. They catch Fiſh about *C. de Creux* as at *Naples*, by hanging a Firebrand or other Light at the End of the Boat, which intices the Fiſh into the Boats. This Day we paſſed by *Roſes*, a ſtrong Garriſon, *Villa ſacra*, and lay at *Figera*.

3. *September* 2. We paſſed *Criſpia*, *Baſalon*, *Argelagues*, and lay at *Caſtel Foulet*, five Leagues. All the Way we obſerved Abundance of Pomegranate Trees. *Caſtel Foulet* is a ſmall Garriſon. On the 3d we paſſed by *Aulot*, where we ſaw a *Buſalore*, of which there are divers in that Town. It is a Hole or Cave, out of which continually iſſues a cool Air. They keep Bottles of Wine, Fruit, *&c.* in a little Houſe built over the Cave. The Wine here kept drinks as cool as if it were kept in Ice or Snow. They ſay that it is the Water running and falling down under the Ground that makes theſe *Spiracula*, which is not unlikely. They are all on the Left-ſide of the River, as you go to *Vict* on the Right. This Day alſo we paſſed *Rhoda*, and lay at *Vict*, ſeven Leagues. On the 4th we went to the Hill where the Amethyſts, or Violet Stones, are found, diſtant two Leagues from *Vict*, called *Sigminont*. On the Top of the Hill is an Hermitage and Place of Devotion, where *Sigminont*, a *Burgundian* King, did Penance. The Amethyſts are found lower in the Side of the Hills. Viſcount *Jacque* is Lord of the Soil, and whoever opens a Mine, pays him a Piſtole and a half *per Menſem*. They find the Stones by following a Vein of reddiſh or black Earth, or a Vein in the Rock ſo colour'd. They are all hexangular, and pointed like Cryſtal. There are of three Sorts; the beſt are the blackeſt or deepeſt Violet; others are alſo quite white; ſome, but very rarely, are found tinctured with yellow. They ſometimes ſtick a great many together to the Rock, like *Briſtol* Diamonds, but thoſe are never good; the beſt are found looſe in the Chinks of the Rock, in a fat, yellowiſh, or reddiſh Earth. They ſcrape out this Earth with long narrow Knives that enter into the Chinks, and then crumble it in Pieces with their Fingers to feel for the Stones. They are afterwards ground and poliſhed upon Leaden Moulds, after the ſame Manner as Cryſtal is. Firſt they uſe the Duſt of *Smiril* or Emery, and at laſt of *Tripoli*. All along the Way to this Hill we ſaw Abundance of *Arbutus*, and *Rhus Coriariorum*, called *Rhondo*. In this Country they uſe not Bark of Oak to tan their Leather, as we do, but the Leaves and Branches of this Shrub, which they firſt bruiſe with a perpendicular Stone, and then mingle with Water, and heating the Water lukewarm, ſteep the Skins in it three or four Days. In theſe Mountains are alſo found Emeralds, Gold, and other Sorts of Minerals and Stones, but it doth not turn to Account to ſearch for them. Topazes are found in a Lake called the Lake of *Silees*, not far from St. *Colonna*, near *Girona*. They find them upon the Shore of the Lakes. At *Vict* there is a great Market-place, and a Church at a Convent ſaid to have been built by *Charlemagne*, when he had diſcomfited the *Saracens*, and driven them out of *Catalonia*. This Night we lodged at *Moia*, having travelled only three Leagues. On the 6th we rode within Sight of *Montſerret*, broken at the Top into Rocks, ſtanding like the Teeth of a Saw, from whence it took its Name. There is a Chapel of our Lady, a Place of great Devotion. This Night we lodged at *Caſa della Pobla*, a ſingle Inn, five Leagues.

We came to *Cardona*, two Leagues. All the Way as we rode, the Rocks and Stones were full of round Holes, juſt like thoſe in the Stones at *Ancona*, in which the *Pholades* harbour, and there is no Queſtion but theſe Holes have been made by ſome Animal before the Stones were hardened.

4. On the 8th, we viewed the Mountain of *Salt*, where were three Officers, one to weigh the Salt, another to receive Money, and the third to keep Accounts. The Revenue of this Salt amounts yearly to about 30,000 Pieces of Eight. For every Quintal, that is 104 Pounds, they pay ten Reals. The Salt is hard and tranſparent, like Cryſtal, and when powdered white as Snow. They hew it out with Axes and Mattocks, and make Chaplets, Boxes, *&c.* of it. They ſay there is no End of it, but that it reaches to the Center of the Earth. Near the Place where they work, there are two Caves within the Rock of Salt, to the End of one of which they durſt never venture. Not far from this there is another Mountain of Salt, where the Salt ſticks to the Rocks, and is moſt of it tinctured with red. Of this red Salt they make broad Plates like Tiles, which they call *Ruggiolas*; theſe they heat before the Fire,

but never put them into it, and uſe them to take away Aches, ſtrengthen the Stomach, keep the Feet warm, *&c.* Well heated on both Sides, they will keep warm for twenty four Hours. Amongſt this red Salt there is a kind of *Selenitis* (which ſome call *Iſing-glaſs*, and the *Italians*, *Geſſo*, from the *Latin* Word *Gypſum*, ſignifying Chalk, becauſe when burnt, it is turned into a white *Calx*) which naturally roches into *parallelipipeda*, of the Figure of a Lozenge. Of which Sort of Stones are found in ſeveral Places of our Nation. About theſe Mountains of Salt grows great Plenty of *Halimus* and *Limonium*.

Cardona is a Dukedom, containing three or four Villages beſides the Town. The Duke thereof is one of the richeſt Grandees of *Spain*, having three Dukedoms, four Marquiſates, two Earldoms, *&c.* The Name of his Family is *Folke*. He lives, for the moſt Part, at *Madrid*, but ſends every three Years a Governor. The King of *Spain* hath nothing at all to do with this City, and the Duke never impoſes any Taxes, but enjoys only all the Tithes of the Corn, Wine, *&c.* There is a Council of Thirty-ſix, changed every Year, and he that has been of the Council, muſt wait three Years before he can be choſen again. The laſt Thing the Council does is, to chuſe a new Council for the Year following. This new Council is divided into four Ranks, not equally, but as the old Council ſhall think fit, and their Names are put into four Boxes; out of every Box a Child takes out one to be Conſul. He that is drawn out of the firſt Box is the firſt Conſul, and ſo in Order. Near the Town is a Caſtle, and in the Caſtle a Tower, ſaid to be built by *Charlemagne*. Every Duke hath an Oath given him by the Conſuls, wherein is an Article, that he muſt reſide in the Caſtle, which is never kept.

5. *September* 9. We paſſed through *Kalab*, and lay at a lone Inn a League and a half further, four Leagues and a half diſtant from *Cardona*. On the 10th we paſſed through St. *Columba*, *Rocoafort*, and lay at *Sirreal*, five Leagues and a half. *Sept.* 11. We paſſed by *Pobla*, a famous ancient Monaſtery, about two Leagues diſtant from *Sirreal*. In the Church, there are a great many Monuments. They told us thirteen Queens and eleven Kings lay interred there. Then we paſſed *Praves*, and lay that Night at *Coulnouvil*, five Leagues. All over *Catalonia* they reckon a League two Hours, and make Account that four *Catalonian* Leagues are equal to ſix *French*. We heard that there were Amethyſts alſo found about *Praves*.

On the 12th, we paſſed by *Falſot*, two Leagues from *Coulnouvil*, where are a great many Lead Mines. The Ore is very rich, and they melt it juſt as it is taken out of the Mine, without beating it to Powder. They ſell the Ore for forty Reals of *Ardiſ* the Quintal, a Quintal being 122 Pounds. Five Quintals of Ore uſually yield four Quintals of Lead. This Town, and the Mines about it, belong to the Duke of *Cardona*. They told us, that the Vein of Metal lay always *Eaſt* and *Weſt*. The beſt and fineſt of this Ore they grind to Powder, and thereof make Varniſh to lead earthen Pots and Veſſels with, ſprinkling the Powder upon the Pots. This Night we lay at *Tiviſa*, four Leagues. On the 13th we paſſed *Venu-ſalet*, *Tivians*, and lodged at *Tortoſa*, ſix Leagues. All along the Way we ſaw a great deal of *Palma humilis Hiſpanica non ſpinoſa*. The Fruit grew up in Bunches out of the Ground, like the Berries of *Arum*, and was not much bigger. Thoſe that were ripe were of a reddiſh Colour, of an oblong Figure, and divided into four Quarters; thoſe that were leſs ripe were yellowiſh; the Skin and Pulp very thin, and did but juſt ſerve to cover the Stone. It hath the Smell and Taſte of Dates. The Stones being broken, are not at all hollow, but have a hard white Kernel or Pearl within them. We obſerved alſo Abundance of *Garoffus* (as they call it) *i. e. Caroba ſive Siliqua dulcis*, the Cods, whereof they give their Mules inſtead of Provender. The *Spaniſh* Soldiers, at the Siege of *Barcelona*, had nothing but theſe *Siliquæ* and Water to live upon. All over *Catalonia* the People are generally poor. They uſe neither Glaſs nor Paper in their Windows, but only Shutters of Wood.

Tortoſa is a very poor and deſolate Town: There is a Bridge of Boats over the River *Iberus*, now called *Ebro*, in Sight of which we rode all along from *Tiviſa* hither. At *Tortoſa* they were wont to make Saltſellers, Mortars, Bowls, Beads, *&c.* of a Kind of Marble of a mingled Colour, red and yellow, found near the Town, which they call *Jaſper*, and of another greeniſh Marble ſpotted with black, brought from *Genoa*.

We went to the Jaſper Mine, about two Miles from the Town, with one of the chief Workmen. We ſaw there vaſt Pillars hewn out and wrought for a Church in *Palermo*. He told us, that all the Veins of Marble, Jaſper, *&c.* went from Eaſt to Weſt; that they ſawed thoſe Stones to make Tables, *&c.* with only Water and Sand; that when there was not enough red in the Stone, they made little Holes, and ſet in red Stones; that the Cement they uſed for all Stones in *Moſaic* Work, was made of one half Maſtich and one half *Greek* Pitch; that in building, they joined the Stones together with ordinary Lime, but on the Outſide they filled up the Chinks with a Cement made of the Powder of the Jaſpar mingled with Sulphur and *Mangra*; to make it more white they put in more Sulphur; to make it more red, they put in more *Mangra*. The Jaſper was hewed out with Chizzles and Hammers, juſt as Stone in our Stone Pits: It is afterwards poliſhed with Armoril, *i. e.* the Powder they uſe to poliſh Armour with, and to give it a Luſtre, ſo that one may ſee his Face in it with the Powder of the Cinders of the beſt Tin. This Day we ſet out towards *Valence*, paſſing *Ebro* by the Bridge of Boats, and lodged at *Galera*, a ſmall Village two Leagues diſtant from *Tortoſa*.

6. *Sept.* 16. We paſſed by *Tregera*, whereabouts ſeemed to be the Ruins of an old *Roman* Way. *Mattheau*, *Salſandail*, and lay at *Leſcouvas*, ſeven Leagues. Near *Leſcouvas* we found Store of *Oleander* with a red Flower. On the 17th we paſſed *Cabanes*, *Pobletta*, *Buriol*, *Villareale*, *Annules*, ſeven Leagues. This Journey we ſaw a great many Rivers quite dried up, and for above a Month together had ſcarce any Rain, that little that was always came juſt from the Sea. On the 18th, we paſſed *Chinces*, *Almenara*, *Moulvedere*, *Maſſa*, *Magril*, *Abalade*, and arrived at *Valence*, ſeven Leagues. Near *Valence* the Country is very populous, and well cultivated; Abundance of Mulberry-trees are planted in Rows all the Fields over. As we paſſed through the Market-place at *Valence*, all the People houted at us, and threw Parings of Melons, *&c.* on our Cloaks. It ſeems they are not uſed to ſee Strangers and Travellers there. This was the firſt Place in *Spain* where we were ſearched. In this City is an Univerſity. I heard a Profeſſor read Logic. The Scholars are ſufficiently inſolent and very diſputacious. One of them aſked me, *Quid eſt Ens univerſale?* and whether I was of *Thomas Aquinas*'s Opinion? Another, *Quid eſt Genus?* None of them underſtood any Thing of the new Philoſophy, or had ſo much as heard of it: None of the new Books are to be found in any of their Bookſellers Shops: In a Word, the Univerſity of *Valence* is juſt where our Univerſities were an hundred Years ago.

In the Kingdom of *Valence* the King of *Spain* is not abſolute; but to impoſe Taxes, raiſe Soldiers, *&c.* he muſt have the Conſent of the three Eſtates, *i. e.* 1. the Clergy, 2. the Nobility, 3. the Cities and Villages; and if one of theſe refuſe to conſent, nothing can be done. Theſe three Eſtates have ſix Deputies, two for each, who are changed every third Year. Of the two for the Cities, one is for the City of *Valentia*, and the other for all the reſt. Each City chuſing a Syndic, one is taken by Lot to be a Deputy. The ſix Deputies have the Care and Government of the Militia. Upon any urgent Occaſion, the Deputies muſt aſſemble the three Eſtates, *i. e.* the chief of the Clergy, the Nobility, and the Syndics of the Cities. The City of *Valence* is governed by Six Jurats or Conſuls. They are taken by Lot out of ſix Urns or Burſes, two out of each: In the firſt Urn are the Names of all the better Sort of Nobility that have the Title of *Dons*; in the

Second Urn, the Names of all the lower Rank of Nobility that have not the Title of *Dons*; in the Third, the Names of all rich Citizens that are not Gentlemen: They muſt have at leaſt four hundred Crowns yearly Rent, beſides what their Wives bring. Beſides theſe, there is a Rationel and two Syndics changed every third Year, ſix Advocates for their Lives, and forty Plebeians changed yearly. The City being divided into fifteen Trades or Companies, each Company chuſes two, which make thirty; the other ten are choſen, two by the Rationel, and eight by the ſix Jurats, and two Syndics, each chuſing one. Of all theſe Officers and the Forty Plebeians conſiſt the Senate. But nothing can be done, unleſs there be Twenty-nine of the Plebeians preſent at leaſt. There is alſo, 1. a Judge for criminal Cauſes, taken by Turns out of the three Urns, and changed yearly. He hath an Advocate to aſſiſt him, who is changed yearly, but ſo that all the Advocates in the City have the Place by Turns: And a *Lieutenant Criminal* taken by Lot out of the Forty Plebeians. 2. A *Muſtafa*, who has the Care of all Kind of Victuals, Corn, Weights, Meaſures, *&c.* He is taken by Lot out of the three Burſes, as the Criminal Judge is, and hath alſo a Lieutenant out of the Forty. There is beſides, a Judge for Civil Cauſes, taken out of the three Burſes, who has an Advocate like the Criminal Judge: But he cannot decide Cauſes of above fifteen Crowns.

The Univerſity is govern'd by the Town, who every third Year chuſe a *Rector* that muſt be a Canon. The other Officers are, a Beadle, a Serjeant, and a Puntadore, who is to take Notice when any Profeſſor fails to read. There are eight *Præpoſiti* in this Univerſity, four for Divinity, two for the Canon Law, and two for the Civil Law, who have each 500 Crowns yearly. There are alſo four Readers for Philoſophy, ſeven for Phyſick, one for the *Greek* Tongue, one for the *Hebrew*, and two for the Mathematicks. Theſe have but ſmall Stipends; but all their Scholars, who come to hear their Lectures, pay ſomewhat yearly. If a Profeſſor promote three rich Scholars, that are able to pay the Fees to any Degree, he may promote a Fourth that is poor for nothing. The Degrees are the ſame with thoſe in our Univerſities, *viz.* 1. Batchelor after they have finiſhed a Courſe in Philoſophy; which Degree coſts about twelve Crowns. 2. Maſter of Arts, which coſts eighty. 3. Batchelor in Divinity, Law or Phyſick, which coſts ſixteen. 4. Doctor, which coſts one hundred and fifty. They may be Maſters of Arts preſently after they are Batchelors, if they will; and in like Manner Doctors. In the Market at *Valence*, and all *Spain* over, they divide Hens and Chickens into Pieces, and ſell them by Quarters; they make great Veſſels of Goat Skins to put Wine and Oil in; and leſſer Bottles, which they call Boto's. The Women paint, laying it on ſo thick, as if one daubed *Minium* upon a Wall. No Garriſon nor Soldier here.

7. *Sept.* 24. We ſet out from *Valence*, and paſſing by *Maſaneſſe*, *Catarezi* and *Seille*, and lodged at *Muſſafes*, three Leagues. Coming out of *Valence*, we were forced to give Money at three Places to avoid Searching. We paſſed *Cullera*, where we ferried over a great River, called *Xucar*, and lay at *Gandia*. There is a College and an Univerſity, as appears by this Inſcription upon the Wall of the College. *Sanctus Franciſcus à Borgia Dux Gandiæ*, 4, *Præpoſitus generalis Societatis Jeſu* 3, *hoc Collegium & hanc Univerſitatem a fundamentis erexit.* A. D. 1546. At *Cullera* the Wine firſt began to be ſweet, and three Leagues off at *Gandia* the Plantations of Sugar Canes began. Q. Whether the Nature of the Soil that was fit to nouriſh the Sugar Canes did not alſo contribute to the Sweetneſs of the Grapes? At *Gandia* we firſt found Raiſins of the Sun (as they are called in *England*;) in *Spain* they call this kind *Panſas*, and they ſeem to be the *Duracinæ* of the Ancients. They are all white, round, and have a tougher Skin than other Grapes. They gather them when fully ripe, and dip them in a boiling *Lixivium* of Water and Aſhes, juſt dipping them in, and taking them out again, and then dry them upon Boards in the Sun, taking them in by Night, or in foul Weather. The Name Raiſin comes from *Racemus*. Figs are dried juſt as they are gathered, not being dipp'd in any *Lixivium*.

On the 26th, I went to *Olives*, where and at *Gandia*, are the Engines for Sugar Works; the beſt are at *Olives*. By the Way we ſaw the Sugar Canes growing in ſeveral Places. They are planted in low wet Grounds well mucked and dreſſed, divided into the Beds or Hillocks and Furrows. They cut the Canes cloſe to the Roots in *November* and *December*, and cutting off the ſlender Tops, which afford no good Juice, keep them under Ground till *March*, and then prick them into theſe Hillocks or Beds. Out of every Talea or Cut, ſhoot four, five or ſix Canes, which will be ripe the next *December*. The Knots or Joints of the Cane at the Bottom are very cloſe together, ſcarce an Inch aſunder; but upwards the Diſtance is more, as the Cane grows ſlenderer. Within is a white Pulp or Pith, full of Sap ſweet as Honey. They ſell them at *Gandia* to eat, and cutting them into Pieces juſt in the Middle, between two Knots, ſuck the Pieces at both Ends: To make Sugar, after Canes are cleanſed from the Tops and Leaves, and cut into Pieces, they are firſt bruiſed, either with a perpendicular Stone, running round as Apples to make Cyder, or Olives to make Oil, or between two Axes ſtrongly capp'd with Iron, horizontally placed, and turned contrary Ways, and then preſſed, as Grapes or Olives are. The Juice thus preſſed out is boiled in three ſeveral Cauldrons one after another. In the third Cauldron it becomes thick and black, and is then put into conical Pots, which at the Bottom have a little Hole ſtopped only with coarſe and foul Sugar; Mr. *Ligon* ſaith, with Plantain Leaves. Theſe Pots are covered, when full, with a Cake of Paſte made of a kind of Earth call'd in *Spaniſh*, *Gritty*, and found near *Olives*, which is good to take Spots out of Clothes; which Cap or Cover ſinks as the Sugar ſinks. Mr. *Swift* told me, that the Clay they uſe with us is Tobacco-Pipe Clay, or very like it, and that the Water in the Clay ſerved to waſh down and carry away the *Moloſſes*, at leaſt the Clay helps the Separation and Precipitation of it. Theſe conical Pots are put into other Pots, into which, by the Hole at the *Vertex*, the Juice drains down through the coarſe Sugar at the Bottom. It drains ſo for five or ſix Months, in which Time the Sugar in the conical Pots grows hard and white, all the Juice being either drunk up by the Lute or run out by the Hole at the *Vertex*. The Juice is boiled again ſo long as it is good for any thing, but at laſt it makes only a foul red Sugar, that will never be better. The conical Loaves of Sugar, after they are taken out, are ſet to drain over the ſame Pots for fourteen or fifteen Days. To make the Sugar more white they muſt boil it again, but about one Sixth is loſt every Time. A Pound of Sugar of twelve Ounces is ſold at *Olives* for three *Sous* and a half, refined for five or ſix *Sous*. The Sugar Juice is ſtrained through Strainers of Linnen, as it is put out of one Cauldron into another. They take it out of the firſt and ſecond Cauldrons ſo ſoon as it begins to boil, but in the third Cauldron they let it boil till the Scum riſes, and then take off only the Scum with a Scummer, and put it into a long Trough to cool, and when it is cool, put it into the conical Pots. One Scum riſes after another in the third Cauldron. The Scum when it is taken off is white, but turns to a black Liquor in the Trough. They never refine the Sugar more than three or four Times. They uſe for the refining of it, Whites of Eggs, putting in two or three Dozen into a Cauldron. They uſe but one Cauldron for refining. When it is refined it grows white and hard in nine or ten Days. The Juice boiled up is eaten with Bread toaſted, as Honey; the Juice of the refined Sugar is much better than the firſt Juice. The Duke of *Gandia* ſends Preſents of this refined Juice to the Queen of *Spain*. When they refine it, they put a little Water into the Cauldrons, to diſſolve it the better. But for a more exact Deſcription of the whole Proceſs of the Sugar Works, I refer to *Piſo*, in his Natural Hiſtory of *Braſil*; and *Ligon*, in his Deſcription of *Barbadoes*. The Sugar of *Olives* is better than the

Sugar of *Gandia*. At *Mentria* in *Granada* they alſo make a great deal of Sugar. About *Valence*, *Gandia*, *&c.* the Earth is always wrought, and never lies fallow or idle. They reckon five *Raccolta*'s or Crops in one Year. 1. Of Mulbery-Leaves for Silk. 2. Wheat and other *European* Grain. 3. *Darſi*, i. e. *Maiz* or *Indian* Wheat. 4. Grapes. 5. Olives; and 6. At *Gandia*, Sugar Canes. After the Wheat is cut, they preſently ſow the *Indian* Wheat. They complained that lately for a great many Years together, they had very bad *Raccolta*'s, for Want of Rain, which had almoſt ruined *Spain*.

8. On the 27th, We paſſed *Benegana*, and lay at *Chativer*, ſix Leagues and a half. *Chativer* is an ancient Town of the *Moors*, and was once Head of one of their little Kingdoms. About a League from the Town began a very remarkable Aqueduct made by them. It was juſt over a River along the Side of a Hill in moſt Places, not above a Yard or two under Ground, and had a great many Funnels like the Tops of Chimnies, to give Vent, and let out the Water when there ſhould be too much. The Tops of theſe Funnels were made of a red Clay and pebble Stones. The Water came almoſt to the Top in all of them, but run over in one. On the 28th, we paſſed in Sight of *Monteſa*, a Caſtle belonging to the Knight of *Monteſa*, that wear a red Croſs, *Orlemente*, and lodged at *Bechert*, ſix Leagues. On the 29th, near *Alicant* among the Mountains, there is a very good Breed of Falcons. In the Plains near *Alicant* grows Abundance of *Gramen ſpartum Plinii ſive Sportularum Officinarum. J. B. i. e.* Mat-weed, of which the Frails, wherein they put Raiſins and other Fruits, are made. This in *Spain* they call *Spar*, at *Marſeilles*, *Auffe*. The Women hereabout gather Abundance of this, and ſteep it in Sea-water till it be well ſoftened. Then they dry it, and carry it by Sea to *Marſeilles*, where they ſell it at eight Crowns the Milliere: Every Milliere conſiſts of ten Pachieres; every Pachiere of one hundred *Manado*'s or Handfuls. Of this they make Cables for Ships, Baſkets, *&c.* In this Day's Journey we ſaw a great many Fountains covered with long Arches to hinder them from being dried up. We paſſed *Elda*, *Novelda*, *Aſpe*, *Clavillente*, *Albitella*, and lay at *Orivola*, eleven Leagues.

On the 30th, We came to *Murcia*, four Leagues. Near *Orivola* (which City is an epiſcopal See) we obſerved many Turpentine-trees, ſome with Flower, and ſome with ripe Berries. Near *Elda* they dig up a Sort of *Selenite*, which they put into Wine to clarify it. About a League from *Orivola* began the Kingdom of *Murcia*; two Leagues from *Orivola*, we were forced to give Money to avoid Searching. *Murcia*, which gives Denomination to this Kingdom, is a pitiful and deſolate Town. The Fiſh-Market here is ſhut up in a Cage or Grate, as at *Genoa*, the People crowding about it, and thruſting in their Baſkets as there. *October* 1. we travelled through a miſerable deſolate Country to *Mula*, ſeven Leagues. On the 2d, we paſſed through *Caravacca*, where they drive a great Trade of making little Croſſes of Silver, Braſs, Wood, *&c.* After that Pilgrims, *&c.* have bought them, they carry them to the Caſtle to touch them by a famous Croſs, which, according to their fabulous Legend, deſcended miraculouſly from Heaven, which forſooth infuſes a wonderful Virtue into them. We lay this Night at a lone Houſe, four Leagues off *Caravacca*, having travelled in all ten Leagues.

On the 3d, We paſs'd by *Venta nova*, and came to *Hueſca*, eight Leagues. At *Hueſca*, we firſt ſaw a yellowiſh White-wine like Sack. The Kingdom of *Granada* began about four Leagues before we came to *Hueſca*. The Town of *Hueſca* belongs to the Duke of *Alva*. On the 4th, we paſſed by *Baſa*, and reſted at *Venta*, eight Leagues. We travelled to *Guadix*, an epiſcopal See, and ancient *Roman* Colony. Upon the Gates we took Notice of this Inſcription. *Recepit Colonia Accitana Gemelenſis Provinciæ caput prima omnium Hiſpanicarum fidem, Chriſti Jeſu, rejectis idolis evangelizantibus ſanctis Torcato & ſociis, Anno Salutis 70. Pontificatus S. Petri, 37. imperii Neronis 13. Urbs Accis patrono ſuo ſanctiſſimo. D. D. 1593.*

Honorati ſunt Amici tui Deus.

9. On the 6th, We travelled to *Granada*, ſix Leagues diſtant from *Deſinos*, where we lodged the Night before. Here we ſaw the Caſtle called *La Lambra*, the Seat of the Kings of *Granada*. Within the Walls of the Caſtle live Abundance of People, which dare not live in the City, for Debt, or other Cauſes. There is a fair Palace begun by *Charles* V. and yet unfiniſhed; the Outſide of it is ſquare, but it is round within, having two Rows of Cloiſters, one above another, round about the Court. Adjoining to this is the ancient Palace of the Kings of *Granada*; within there is all the ſame kind of Moreſco Work, wrought in Mortar and Stone, with Gold and Painting. The Cloiſters are ſupported by long ſlender Pillars. In this Palace is an octagonal Chamber, vaulted at the Top with eight Doors, one in every Side. If one ſtand in one Angle, and whiſper to another who ſtands in the Angle diametrically oppoſite, the Voice is conveyed, as in the Whiſpering Place at *Glouceſter*: But if you ſtand in an Angle that is not diametrically oppoſite, you hear nothing. The Reaſon of conveying the Voice, is the Vault above, and the Corners being ſtreightned into a very ſharp Angle or Channel. In *Granada* are two great Market-Places, one called *Plaſſa nova*, the other *de villa Rambla*. In the great Church are two Monuments, one for *Ferdinand* and *Iſabella*, with this Inſcription, *Mahometicæ ſectæ proſtratores Hereticæ prævicaciæ extinctores Fernandus Aragonum & Heliſabetha Caſtillæ, vir & uxor unanimes, Catholici appellati marmoreo clauduntur hoc Tumulo.* The other is of *Philippus* I. and of *Joanna*, Daughter and Heir of *Ferdinand* and *Iſabella*, without an Inſcription. In the River *Daro*, that runs by *Granada*, they find Gold among the Sand. In the Mountains of *Sierra niveda*, near *Granada*, are ſaid to be divers Sorts of Minerals, which are not at all looked after. Near *Motril*, at the *Capo di Gatto*, there is a Mine of Granates covered with the Sea. They are pointed as Amethyſts and Chryſtal, but the beſt come from *Africa*. We ſaw that Day *Monte ſacro*, a Place within half a League of the Town, of great Devotion. In *Caſtile*, *Granada*, *&c.* the greater Cities have a *Corregidore*, and the leſſer an *Alcayde*, who adminiſters Juſtice, and are appointed and ſent by the King to govern the Towns. All over the Kingdom of *Caſtile* they eat Fleſh upon *Saturdays*, and obſerve only *Fridays*. On the 12th, we left *Granada*, and paſſing by *Santa Feda*, travelled to *Lotta*, eight Leagues. 13. At *Lotta* we were troubled with Soldiers, that came from the Frontiers of *Portugal*, to take up their Winter Quarters. There had been of this Party 2600, but this Summer at *Alcantara* they were reduced to 900, the reſt being ſlain, or dead of Diſeaſes. We paſſed this Day by *Archidona*, *Lalameda*, *Laronda*, and lay at *Pedrera*, ten Leagues.

10. On the 14th, We paſſed by *Oſſuna*, *la Pobla*, and lay at *Elazabel*, ten Leagues. This Country was the beſt we ſaw ſince we came into *Spain*, the Land being for the moſt Part well planted and cultivated. On the 15th, We paſſed by *Gandula*, and arrived at *Sevil*, ſeven Leagues. Between *Gandula* and *Sevil* there are Abundance of Olive-trees. Here we firſt ſaw the greater Sort of Olives, which are uſually eaten in *England* for a Sallet, called the great *Spaniſh* Olive; all that we had ſeen in *Italy* or in *Spain* before, being of the leſſer Sort. Here is a brave Aqueduct of Brick, which conveys Water from *Carmona*, ſix Leagues diſtant: Under the Arches there are *Stalactites*, as at the Aqueduct of *Piſa*. The Galleons bring nothing Home from the *Weſt-Indies*, but Plate; the Merchant Ships are loaden with Leather, *Cocoa*, Sugar, *Lana di Vigonna*, &c. Of the *Cocoa* Nut, they make *Chocolate*, thus; firſt they toaſt the Berries to get off the Huſk, then pound the Kernels to Powder, and to every Milao, *i. e.* three Pound and a half of Powder, they add and mingle, two Pound of Sugar, twelve *Vanilla*'s, a little *Pimentone* or *Guiny* Pepper, (which is uſed by the *Spaniards* only) and a little *Achiote* to give a Colour; but theſe two laſt may be omitted. They melt the Sugar, and then mingle all well together, and work it up either in Rolls or Leaves. *Sevil* hath of late decayed very much, and doth continually Decay more and more, the Trading Part being moſt removed to *Cales*; the

Reaſon whereof is, becauſe they pay about twenty-ſeven *per Cent.* for all Merchandizes at *Sevil*, and but four or five *per Cent.* at *Cales*. The chief Places to be ſeen in *Sevil* are, 1. The great Church. 2. The King's or Vice roy's Palace. 3. The Archbiſhop's Palace. 4. The Steeple of the great Church like St. *Mark*'s Tower at *Venice*, which you aſcend almoſt to the Top without Stairs, by gently inclining Plains. 5. The *Franciſcan Convent.* 6. The *Longha*, where the Merchants meet about the Affairs of the Flote. 7. The Convent of *Notre Dame del Peuple.* 8. The Bridge of Boats over the *Guadalquivir*, *i. e.* the River *Bætis*. The Town on the other Side this River is called *Triana*. 9. The Inquiſition or Caſtle of *Triana*, juſt over the Bridge. 10. An old Tower called *Torre d'Oro*, where St. *Ferdinand*, that recover'd *Sevil*, kept Money made with Leather. 11. The Aqueduct. 12. The old Palace and Garden of the *Moors*. Near the Bridge, along the River Side, they come every Night with their Coaches, to take the *Freſco.* In the great Church, between two Altars, are three Monuments for St. *Ferdinand* the Wiſe, his Wife *Beatrice*, and his Son *Alphonſus.* The ſame Epitaph in *Hebrew*, *Arabick*, *Greek* and *Latin.*

Hic jacet illuſtriſſimus Rex Fernandus Caſtelli & Toleti Legionis, Gallicæ, Sibillæ, Cordubæ, Murciæ, & Jaheni, qui totam Hiſpaniam conquiſivit fideliſſimus, veraciſſimus, conſtantiſſimus, juſtiſſimus, ſtrenuiſſimus, devotiſſimus, liberaliſſimus, patientiſſimus, piiſſimus, humillimus, in timore & ſervitio Dei efficaciſſimus; qui contrivit & exterminavit penitus hoſtium ſuorum proterviam; qui ſublimavit & exaltavit omnes amicos ſuos, qui civitatem Hiſpalem, quæ caput eſt & metropolis totius Hiſpaniæ de manibus eripuit Paganorum & cultui reſtituit Chriſtiano, ubi ſolvens naturæ debitum, ad Dominum tranſmigravit ultima die Maii, Anno ab incarnatione Domini 1252.

In the ſame Church is *Ferdinandus Columbus*, the Son of *Chriſtopher Columbus*, buried, with this Epitaph.

A qui jace el mucho magnifico Signor Don Hernando Colon. el quel expleo y gaſto toda ſu vida y facenda en aumento di los Lettras y en juntar y perpetuar en eſta cividad todos los libros di todas las ſciencias, qui in ſu tempo hallo y en ridurlos à quatro libros ſegun eſtan à qui ſenelados. Falleſcio en eſta cividad à 12 *di Julio* 1532. *An de ſu edad* 50 *an* 10 *meſes &* 14 *dies. Fue Hyo del valoroſo & memorabile Signor Don Chriſtophoro Colon. primiero Admirante, qui deſcubio las Indias y nuevo mondo en vida di los Catholicos Reys Don Fernando y Donna Iſabella di glorioſa memoria à onze de Ottobre dy mill quatrocentos y noventa y doſannos y partio del puerto de Palos a deſcubrir las contres Carabelas y noventa Perſonas à tres de Agoſto—iuntes—bolbio à Caſtilla con la vittoria à quattro di Marzo del anno ſiguente, y torno deſpues otras dos vezes a poblar lequale ſcubrio, y al fin falleſcio à Valladolid vente de Maio de mill y quincentos y ſeys annos, Rogad al Sennor por ellos.*

Chocolate is ſold at *Sevil* for ſomething more than a Piece of Eight the Pound. *Vanillas*, which they mingle with *Cocoa* to make *Chocolate*, for a *Real di Plato*. *Acchiote*, which they mingle with the other Ingredients, to give a Colour, is made of a kind of red Earth brought from *New Spain*, wrought up into Cakes: It is ſold for a *Real di Plato* the Ounce. All the Oil and Wine they have in the *Weſt-Indies* goes from *Spain*, they not being permitted to plant Vines or Olive-trees, that they may always have a Dependance upon *Spain*. At and near *Sevil* we paid two *Reals de Quarto* for a Bed; Bread, Wine, Fleſh, and all other Commodities exceſſive dear, excepting only Olives and Pomegranates, which were better here than in any other Part of *Spain*. There had lately been a great Plague in *Sevil*, which had very much depopulated and impoveriſhed, indeed almoſt ruined the City.

11. I ſet out from *Sevil* towards *Madrid:* The firſt Day we travelled to *Carmona*, where the Aqueduct before-mentioned begins, ſix Leagues in all; which Way we ſaw no Houſes, but a great many Aloe-trees. We paſſed *les Fontes*, and lay at *Euia*, a great Town of above 20,000 Inhabitants. Between *Carmona* and *Euia* is a very good Country, with Abundance of Corn and Olive-trees. *Oſſuna* is within four Leagues of *Euia*, where the Duke of *Oſſuna* hath a Palace. We travelled this Day nine Leagues. We paſſed over the River *Xenil*, that runs into *Guadalquivir*, baited at *Arofith*, and lodged at *Cordova*, eight Leagues. About a League from *Cordova* we paſſed another little River that runs into *Guadalquivir*. Before we entered *Cordova*, we rode over a great Stone Bridge that here croſſes the *Guadalquivir*. In the middle of the Bridge ſtands a Statue erected to the Angel *Raphael*, with this Inſcription.

Beatiſſimo Raphaeli Angelorum proceri, cuſtodi ſuo vigilantiſſimo, qui ante annos 300 *ſub Paſchale antiſtite populum peſte depopulante ſe medicum tantæ cladis futurum prædixit, quì ſubinde anno* 1578 *venerabili Preſbytero Andreæ de las Roelas S. S. M. M. exuvias evulgavit, & tandem pateſecit Corduvenſium tutelam ſibi a Deo aemum datam. Quare ut juſta gratitudo diu ſtaret S. P. Q. Cordubenſis hanc lapideam ſtatuam cautus & pius erexit, multa procuratione Domini Joſephi de Valdacanas & Herera & Domini Gundeſalvi de Cea & Rios ſenatorum pontifice Innocente X. Hiſpan. rege Philippo IV. epiſcopo domino fratre Petro de Tapia, prætere domino Alphonſo de flores & monte Negro, Anno* 1651.

The moſt conſiderable Places in *Cordova* are, 1. The Biſhop's Palace. 2. The *Cavalleriſca*, where the King keeps a great many Horſes. 3. The Ruins of *Almanſor*'s Palace, the laſt King of the *Moors*. 4. *Plaſſa di Corridera.* 5. The Church of the *Auguſtine* Fryers. 6. The great Church, which was anciently a Moſque. It is large, but very low, ſupported by a great many Rows of Pillars, in a quadrate Order, ſixteen Rows one Way, and thirty another. Upon many of the Pillars are *Moors* Heads carved in the Stone, and one or two with Turbants on. In the Middle of this Church is the great Chapel, where are ſeveral Biſhops interred. In one of the Chapels, that is now dedicated to St. *Peter*, in the *Moors* Time was kept a Thigh of *Mohammed*; round about the Corniſh of this Chapel, and that Part of the Church next it, is an *Arabick* Inſcription. The People complain grievouſly, that *Cordova* is quite ruined and undone by Gabels and Taxes. On the 27th we left *Cordova*, and, after a League or two riding, entred the *Sierra Morena*, a miſerable deſolate mountainous Country, and lodg'd at a little Village called *Adamus*, ſix Leagues. On the 28th, we travelled all Day through the *Sierra Morena*, and lay at a Village called *La Conquiſta*, nine Leagues. 29th; In this Day's Journey we ſaw Abundance of Galls upon the *Ilices*, which were of like Bigneſs, Figure, Colour, Conſiſtency, and other Accidents with thoſe that grow upon Oaks. This Day we firſt met with red Wine again, which they call *Vino tinto.* We got ſafe out of *Sierra Morena*, and came to *Almedovar del Campo*, a tolerable Borough, nine Leagues. About the Middle of *Sierra Morena* are the Bounds of the *Caſtilia nova* and *Andaluzia*. On the 30th, we paſſed by *Caraquol*, *Cividadreal*, and lay at *Malagon*, ten Leagues. Between *Malagon* and *Cividadreal*, we paſſed over the River *Anas*, now called *Guadiana*, which was there but a little Brook. In this Day's Journey we met with a great many great Flocks of Sheep and Goats, going towards the *Sierra Morena* out of *Caſtile*; it being the Cuſtom all Summer to feed their Sheep upon the Mountains of *Caſtile*, and in Winter in the *Sierra Morena*. On the 31ſt, we paſſed by the Ruins of an Aqueduct, about four Leagues from *Malagon*, then *Yvenas*, a good ſizeable Village, and lay at *Orgas*, ten Leagues.

12. *November* 1. We paſſed through *Toledo*, and lay at *Eſquinas*, eleven Leagues. As ſoon as ever we paſſed the *Sierra Morena*, we felt a great Change of Weather, the warm Air that comes from *Afric* and the *Mediterranean* Sea being ſtopped by the Interpoſition of the Mountains. This Day there was here a hard Froſt, and pretty thick Ice. The moſt conſiderable Things in *Toledo* are, 1. The Bridge over the *Tagus*, conſiſting of but two Arches, one great one, and one little one. 2. The Shambles, where, notwithſtanding the Coldneſs of the Day, I ſaw Abundance of Flies; which confutes the Story, that there is but one great Fly there all the Year. 3. The great Church, where there are many Monuments of Biſhops, but without Inſcriptions: In

the *Capella Maggior* lie interred two Kings, and in the *Capella de los Res*, four Kings. 4. The King's Palace. 5. The Ruins of a famous Engine to raiſe up Water to the King's Palace. There is ſo little of it remaining, that it is impoſſible thence to find out all the Contrivance and Intrigue of it. Between *Toledo* and *Madrid* the Country is very populous, and the Soil very good. All along the Road, from *Sevil* to *Madrid*, the common Fare is Rabbets, red legg'd Partridges, and Eggs, which are ſufficiently dear. We arrived at *Madrid*, ſix Leagues; near the Town we paſſed over the River *Xarante*. *Madrid* is very populous, well built, with good Brick Houſes, many have Glaſs Windows, which is worth the noting, becauſe you ſhall ſcarce ſee any in all *Spain* beſides. The Streets are very foul and naſty. There is one very fair Piazza or Market-place, encompaſſed round with high and uniform Houſes, having five Rows of Balconies one above another, and underneath Portico's or Cloiſters quite round. The chief Things to be ſeen in *Madrid* are, 1. The Priſon. 2. The Piazza juſt now mentioned. 3. The King's Chapel. 4. The Palaces of ſeveral Noblemen, as that of the Duke of *Alva*, that of the Duke of *Medina de los Torres*, &c. 5. The King's Palace, where there is the King's *Cavalleriſca* and the Queen's *Cavalleriſca*. 6. A great Piazza before the Palace, where are Abundance of Coaches always attending. 7. The *Engliſh* College of *Theatines*. 8. *Il Retiro*, out of the Town, the *Eſcurial* and *El Pardo*.

13. On the 5th, I ſet out from *Madrid* for *Port St. Sebaſtian*. We paſſed within Sight of the *Eſcurial* and *El Pardo*, and lay that Night at *St. Auguſtin*, ſix Leagues. On the 6th we paſſed *Butrago*, and lay at *Somoſerra*; all the Way a barren, miſerable, mountainous Country, eleven Leagues. On the 7th we paſſed *Frecedille*, and lay at *Aranda*, having croſſed the River *Durius* or *Duero*, eleven Leagues. On the 8th we paſſed *Babalon* and *Lerma*, where is a Convent of *Dominican* Friers, and a Palace of the Duke of *Lerma*'s, and came that Night to *Burgos*, twelve Leagues. The moſt conſiderable Things in *Burgos* are 1. The Bridge over the River *Relarzon*. 2. The Gate at the End of the Bridge, where are the Statues of *Charles* V. of *Janus Calvus*, of *Diego Porcellero*, of *Fernandez Gonſales*, of Nuncio *Paſures*, of Don *Carlotte*, all famous Men of *Burgos*. 3. The Market-place. 4. The great Church, in which are a great many Monuments of Biſhops and Canons, two great Monuments of *Pedro Fernando di Velaſco*, Conſtable of *Caſtile*, and his Wife, *Mercia di Mendoza* Counteſs of *Haro*. This Night we lodged at *Quintora Villes*, five Leagues. On the 10th we paſſed by *Pancorva*, a Place very famous for good Water; *Miranda*, a great Town, where there is a good Bridge over the River *Iberus*; and after that we paſſed two other Rivers, *Baiis* and *Sadurra*, and lay at *Erminian*, eleven Leagues. At *Miranda* there is a great Market for Wheat.

On the 11th, We travelled to *Vittoria*. Over one of the Gates is the Statue of King *Bamba*, and inſcribed in Gold Letters, *Hæc eſt Victoria quæ vincit*, four Leagues. *Vittoria* is the chief City of all the Country called *Alaba*. We paſſed this Day by *Salines*, the firſt Town of *Guipuſcoa*, and lay at *Æſcarias*, nine Leagues. In *Guipuſcoa* they pay no Taxes or other Duties to the King, without the Conſent of the whole Country. The whole Diſtrict is more commonly called *Provincia* than *Guipuſcoa*; it is canton'd out into a great many Coporations and Villages, every one of which ſends one, two, or three Repreſentatives to the general Meeting, when there is any publick Buſineſs. All Offices are annual, and choſen diverſly, according to the differing Cuſtoms of the Town. The chief Officer in each Town to determine all civil and criminal Cauſes is the *Alcalda*, but from him they may appeal to the Governor of the Province, ſent by the King every third Year, and from the Governor to the King's Council at *Valladolid*. Next to the *Alcalda* are two *Regidores*, to look after the Prices of all Commodities, a *Bolſer* for the Treaſury, a *Medino* for the Priſon, *Argozils* or Serjeants, &c. They boaſt that they are the Walls of *Spain*, and therefore have many Privileges. *Guipuſcoa* is under the Biſhop of *Pampelona*. In *Guipuſcoa* and *Biſcay* they have a peculiar Language of their own, and therefore ſend their Children to School to learn *Spaniſh* (which they call *Romance*) as we do ours to learn *Latin*. The Searchers having hindered us, we were forced to travel a great Way in the Night; we were lighted by *Tiaſor Teas*, which burnt as well, and gave as good a Light as Torches. When they went out, they toſſed them up and down in their Hands, which kindled them again. Theſe *Teas* (ſo called, doubtleſs, from the *Latin* Word *Tæda*) are very commonly uſed in this Country, and are nothing elſe but Baſtons of Wood hacked and cleft, (but ſo as the Pieces hang together) and afterwards ſoundly dried in an Oven or Chimney. Along the Middle they uſe to cleave them almoſt quite aſunder. They are made of ſeveral Sorts of Wood, of *Robla*, i. e. Oak; *Haia*, i. e. *Beach-Tree*, but the beſt of *Avellana*, i. e. *Hazel*. *I wonder much at this, unleſs they have ſome Way of preparing the Wood by ſteeping it in Oil or inflammable Matter. The* Tædæ *of the Ancients were made only of the Trunks of old and ſappy Pines.*

14. On the 12th, We paſſed by *Mondragone*, where there is a *Fabrica* of Arms for the King, *Oniate*, *Legaſpa*, *Villa real*, and lay at *Villa Franca*, ſeven Leagues. We left St. *Adrian*, which is the ordinary Road, a little on our Left-hand. This Country is very populous and wooded, all the Hills being covered with Oaks. They uſe no Ploughs, but turn over the Ground with Tridents of Iron; four or five of them working together, and thruſting in their Tridents all together, turn up a Yard or two of Earth at a Time, which they afterwards dreſs and level, like Beds in a Garden. The People are ſomething better conditioned than the *Spaniards*, richer and far more populous; 1. Becauſe there is a better Government, and greater Liberty. 2. There is Abundance of Wood and Iron. 3. More Rain than in the other Parts of *Spain*. On the 13th, We paſſed *Toloſa*, and arrived this Night at St. *Sebaſtian*, having travelled eight Leagues. The moſt obſervable Things in St. *Sebaſtian* are, 1. The Walls and Guns. 2. A great Convent of *Dominican* Friars, in which there is a famous Pair of Stone Stairs, each Step being of one intire Stone, and ſupported only on one Side. 3. The Haven. The Government of St. *Sebaſtian* conſiſts of a great Council of all that have one or more Houſes, and are married, but none can bear Office unleſs he have two Houſes; of theſe there are not above 150 or 200, though the Town be very populous, containing about 24,000 Souls. Once in a Year all the Names of this 150 or 200 are put into an Urn, and a Child takes out eight to be Electors. Every one of theſe eight chuſes his Man. The old Magiſtrates that are juſt then going out, divide theſe eight, that the Electors have choſen, into four Pairs, fitting them as well as they can, *v. g.* an old Man and a young together, &c. Theſe four Pairs are put into an Urn. The firſt Pair that are drawn out, are the two *Alcaldas* for that Year, the ſecond Pair the Deputy *Alcaldas*, the third Pair the two *Regidores*, the fourth Pair the two Deputy *Regidores*. In much the ſame Manner they chuſe two Jurats, one Syndick or Attorney-General, one Treaſurer, &c. All theſe Officers make a leſſer Senate, but in Buſineſſes of Importance the whole Number meets. There is no Diſtinction of *Nobiles* and *Plebeii*, but all that are deſcended from *Guipuſcoans* that are married, and have one Houſe, are in a Capacity to be Electors; all that have two Houſes to be Magiſtrates; the Jurats Places are moſt deſired, there being a great many eccleſiaſtical Preferments belonging to the Town, the Diſpoſition whereof, when they come to be vacant, is in them, who uſually beſtow them upon their Relations and Friends. Every Winter there are ſeveral Whales caught upon this Coaſt, they coming hither in Winter, and frequenting here, as they do upon the Coaſt of *Greenland* in Summer. They catch them by ſtriking them with a Harping Iron, after the ſame Manner as they do Sword-fiſh upon the Coaſt of *Calabria* and *Sicily*. Abundance of Cyder made about St. *Sebaſtian* and *Bayonne*. On the 14th, from St. *Sebaſtian* I travelled through *Orogna*, *Irim*, on the Left

Hand of which is *Fontarabia*, a ſtrong Fort juſt on the Frontiers of *Spain*. About half a League from *Irim* is the River that parts *France* and *Spain*. In the middle of this River is an Iſland where the Kings of *France* and *Spain* met, when *Lewis* XIV. the preſent King, married *Philip* the IV's Daughter. The Iſland was divided juſt in the middle, and a Houſe built, ſo that at the Table where they ſat to eat, the King of *France* ſat in *France*, and the King of *Spain* in *Spain*.

15. *Spain* is, in many Places, not to ſay moſt, very thin of People, and almoſt deſolate. The Cauſes are, 1. A bad Religion. 2. The tyrannical Inquiſition. 3. The Multitude of Whores. 4. The Barrenneſs of the Soil. 5. The wretched Lazineſs of the People, very like the *Iriſh*, walking ſlowly, and always cumber'd with a great Cloak and long Sword. 6. The Expulſion of the *Jews* and *Moors*, the firſt of which were planted there by the Emperor *Adrian*, and the latter by the Caliphs, after the Conqueſt of *Spain*. 7. Wars and Plantations. In all the Towns, eſpecially in the *South* and *Weſt* Parts of *Spain*, a great many Ruins of Houſes are to be ſeen. Within a Quarter of a League of a Town you begin to ſee Ground ploughed, otherwiſe all a wild Country, and Nothing but Roſemary, *Ciſtus*, Juniper, Lavender, Broom, *Lentiſcus*, &c. growing in the Fields and on the Hills. Little or no Hay any where in *Spain*, they feeding their Mules and Horſes with Straw: At leaſt one half of *Spain* is mountainous. The *Spaniards* are not ſo abſtinent as ſome People take them to be, eating the beſt they can get, and freely enough, if it be at another Man's Coſt, and in Inns never refuſing Partridges, Quails, &c. for the Dearneſs. Lazineſs and Sloth makes them poor, and Poverty makes them pinch their Bellies and fare hardly.

They ſeldom mingle Water with their Wine, it being a common Saying among them, *Vino poco & puro*, though all over *Spain* the Wine is very hot and ſtrong. They delight much in *Pimentone*, i. e. *Guiny* Pepper, and mingle it with their Sauces. In roaſting of Meat they never uſe a Dripping-pan, but draw the Coals juſt under the Meat, which though it be not ſo cleanly, yet is the quicker and more thrifty Way for ſaving of Fuel. They tear Rabbits in ſunder with their Hands, when they are almoſt roaſted, and ſtew them in a Pot with Water and *Pimentone*. To toaſt Bread they throw it upon the Coals. They long and aſk for every Thing they ſee, to avoid which, a Merchant that travelled with me was wont to put ſomething into his Victuals which they did not love. They take Tobacco much in Snuff, and if one take out a Box of Snuff, he muſt give ſome to all the Company. The beſt Perſon in the Company, at Table, cuts and tears the Meat in Pieces, and gives to every Man his Share. They are moſt impertinently inquiſitive whence you come, whither you go, what Buſineſs you have; moſt horribly rude, inſolent, and imperious; uncivil to Strangers, aſking them, What do you come into our Country for? We do not go into yours; *i. e.* this is to be underſtood of the middle and inferior Sort of People, many of the Gentry being very civil and well bred.

Their Children are the moſt unmannerly and ill-bred of any in the World. The Sons of *French* Fathers and *Spaniſh* Women, when they are grown up, often turn their Fathers out of Doors, having many Privileges above them for being born in *Spain*. They are extremely given to Lying; *Almuzzos*, and ſuch Kind of Fellows not to be believed or truſted in any Thing they promiſe. They ride altogether upon Mules, and carry their Portmanteaus before them, for fear they ſhould be loſt or ſtolen from behind them; they lie between a high Pummel of the Saddle and an Iron Hook. Inſtead of Stirrops, Perſons of Quality uſe great Clogs of Wood, of the Shape of Shoes without Heels. They cut away the Mules Hair cloſe to the Skin under the Saddles and Portmanteaus, to avoid Galling. Of this Baſtard Breed of Animals, the Males are uſually bigger than the Females. *Q.* Whether the Reaſon be that they are always bred of a Mare and an He-Aſs? They piſs very often. *Q.* Whether the Reaſon be the Sharpneſs of their Urine, or the Smallneſs of their Bladder? They piſs almoſt always when they go through Water. They ſhoe them with Shoes a deal broader than their Feet, to prevent, I ſuppoſe, the breaking of their Hoofs. Under the Mouths of their Mules of Burthen, they uſually hang a Net with Provender in it. Theſe Beaſts are better at climbing of Mountains than Horſes, have a greater Courage to endure long and hard Travel, and, beſides, are maintained at leſs Charge.

The *Spaniards* ſeldom ride alone, but ſtay for a *Troppas*, as they do for a Caravan in *Arabia*. The common Phraſes or Forms of Salutation, when they meet or paſs by one another, are, *Guarda Dios voſtes*, i. e. *vous autres*, i. e. God defend you. *Adios*, i. e. Adieu. *Vaga con Dios*, i. e. God go along with you: When they are angry, *Cornuto*, i. e. Cuckold, is the firſt Word, and ſometimes *Cornutiſſimo*. When they ſpeak to their Mules, or Boys they ſend of Errands, they ſay *Anda Cornuto*, i. e. Go, Cuckold. When they refuſe a Courteſy or Compliment to drink firſt, go firſt, or the like, they ſay, *Nanper Vita mea*, i. e. No, by my Life. At any Thing ſtrange or ridiculous, they cry out, *Cuerpo di Dios*, or *di Chriſto*, *i. e.* Body of God, or Body of Chriſt. When they call to one to make him hear, inſtead of *Eſcoutes* in *French*, or *Senti* in *Italian*, they cry, *O yes*, juſt as Criers do in *England*. When they put off a Beggar, not giving him an Alms, they ſay, *Voſtes perdonné*, i. e. Good Friend, pardon or excuſe me. As for their Religion, the *Spaniards* are the moſt orthodox and rigid *Romaniſts* in the World, it being a Saying among them, *Faltando in uño punto à Dios*, i. e. If you leave the Church in one Punctilio, God be with you; you muſt needs be damned. All over *Spain* there are Abundance of pitiful wooden Croſſes ſet up in the Middle of Heaps of Stone. Under all the Pictures of the Virgin *Mary* is written, *Concebida ſin peccado originale*, i. e. conceived without original Sin. At the *Ave Mary* Bell, they all fall down upon their Knees; whereas in other Countries they are contented only to pluck off their Hats. When they have done their Devotions, as alſo after their Meals, when they take away, and when they go to Bed, they ſay, *Sia lodato il ſantiſſimo Sacramento*, i. e. Praiſed be the moſt holy Sacrament.

For Fornication and Impurity, they are the worſt of all Nations, at leaſt in *Europe*; almoſt all the Inns in *Andaluſia*, *Caſtile*, *Granada*, *Murcia*, &c. having Whores who dreſs the Meat, and do all the Buſineſs. They are to be hired at a very cheap Rate. It were a Shame to mention their Impudence, Lewdneſs and immodeſt Behaviour and Practices. In *Catalonia*, *Guipuſcoa*, and ſome other Places, they are not ſo bad. They are ſo lazy, that in their Shops they will ſay they have not a Commodity, rather than take Pains to look for it; not to be hired to carry a Portmanteau, go of an Errand, &c. but at an exceſſive Rate. Mercers never tie up any Thing they ſell, and if they allow Paper, they only rudely mumble up the Commodities in it. Of their fantaſtical and ridiculous Pride, and that too in the extremeſt Poverty, all the World rings. If there be any Employment that you would ſet them about, which they think themſelves too good for, they preſently ſay, Send for a *Frenchman*. Indeed the *French* do almoſt all the Work in *Spain*. All the beſt Shops are kept by *Frenchmen*, the beſt Workmen in every Kind are *French*, and, I believe, near one Fourth or one Fifth Part of the People in *Spain* are of that Nation. I have heard ſome Travellers ſay, that ſhould the King of *France* recall his Subjects out of *Spain*, the *Spaniards* would hazard being all ſtarved to Death.

Bread is very ſcarce and very dear in many Places of *Spain*, becauſe of the Barrenneſs of the Soil, and Want of Rain, but chiefly becauſe of the Sloth of the People in letting a great Deal of Ground lie untilled, and in not taking the Pains to fetch Corn and Bread from thoſe Places where there is Plenty. So that in a Day's Journey the Price of Bread will be trebled, and in another Day's Journey fall as much again. This Summer there was a Tumult at *Madrid*, the poor People gathering about the King's Palace, cried out, Let the King live, but let the ill Government die; let Exactors die, &c. juſt as they did at *Naples* under the Rebellion of *Maſaniello*. Upon which the King ſent to all the Towns about for Bread Corn, and in two or three Days Bread was very plentiful and cheap. All over *Catalonia* Bread is very cheap. The *Spaniſh* Bread is commended for the beſt in the World; and well it may be, if, as we have heard, they pick their Wheat Grain by Grain. At my being at *Madrid*, there was an Engineer there, ſent by the Emperor, that had invented a Plow, called by the *Spaniards* a *Sembrador*, to ſow Corn at equal Diſtances, and one Grain in a Hole; the Deſcription whereof hath been ſince publiſhed in the *Philoſophical Tranſactions*.

In all Kind of good Learning the *Spaniards* are behind the reſt of *Europe*, underſtanding nothing at all but a little of the old wrangling Philoſophy and School Divinity. The People are much diſcontented all over *Spain*, complaining of Taxes, evil Counſellors, &c. but they have a good Opinion of, and are generally well affected to their King, whoſe Intentions they ſay are very good. As for their Habit and Dreſs, in that they are to be commended that they are conſtant to the ſame Faſhions, though they be not the moſt convenient that might be deviſed. To change for the better, I think it rather commendable than blame-worthy; but to change out of mere Levity, or an apiſh Imitation of others, is fooliſh and unreaſonable.

They wear great Hats with broad Crowns, and the Top broader than the Bottom. Their Hair moſt commonly, and eſpecially when they travel, they tie up in a Knot behind, and ſometimes braid like Women's. Their Bands lie upon black Collars juſt of the ſame Bigneſs, or a little bigger. They are joined to the Collar, and put on Band and Collar together. They wear very much Cambrick half Shirts, and have their Sleeves open before and behind, both Winter and Summer: They have great Skirts upon their Doublets; their Breeches are very ſtrait and cloſe to their Thighs, and button'd down on each Side, and reach a little lower than the Knee. They wear very ſlight wrought black Silk Stockings, that the white Linen Stockings which they wear underneath may be ſeen through them. Their Shoes juſt fit their Feet, very light and thin, with low Heels. Over their Doublets they wear a cloſe Coat or Jerkin, with open Sleeves like the Doublet, and for the moſt Part with hanging Sleeves, like Childrens, yet never reaching lower than their Skirts, a very long Sword and a ſhort Dagger hanging juſt behind them; and at laſt, over all, a Cloak with a great Cape. The Women wear great Fardingales, ſtanding ſo far out on each Side, that to enter in at an ordinary Door, they are forced to go Sideways; when they go Abroad are covered with a Veil of black, having only a Hole left for one Eye.

The poor People wear Shoes made of Packthread. The moſt noble Sport in *Spain* is the *Jeu de Tarreau*, or Bull-Fighting, practiſed at *Valentia*, *Madrid*, &c. At *Madrid*, three times in the Year, where in the Market-Place, a brave Don on Horſeback, and a great many Pages on Foot, fight with a wild Bull; when one Bull is killed or much wounded, they turn in another. Seldom but ſome of the Pages are killed; and with theſe cruel and bloody Spectacles the People are much delighted, as were the *Romans* of old in the Time of Heatheniſm.

16. We ſee very plainly from Mr. *Willoughby*'s Account, that *Spain* is not naturally ſo poor a Country as is commonly imagined. The Climate is excellent, the Soil very far from being bad, and what Corn is produced in *Spain* may be truly call'd the beſt of its Kind in *Europe*. The only thing that is wanting is, a right Government, for this would encourage Induſtry, render the Country more populous, and make the People willing to work hard, in order to fare well. It is highly probable, that the Reader will incline to know what are the principal Faults of this Government, whence it comes to paſs that they have ſubſiſted ſo long, and are like ſo much longer to ſubſiſt, and what might be reaſonably expected in Favour of the *Spaniſh* Nation, if proper Remedies were applied to theſe Evils.

In the firſt Place then, with Regard to the Government, the King, tho' he ſeems abſolute enough, wants Power to take thoſe Steps that may appear neceſſary for the Good of his Subjects. In *Spain* Forms are not only regarded, but reverenced as ſacred. There is not a ſingle Nobleman in *Spain* but has very great Rights and Privileges in his own Lands; on the other Hand, there are very few of the great Nobility that have not conſiderable Towns upon their Eſtates, to which they have granted Immunities; and in Reſpect to either of theſe, there can be no Innovation made, though ever ſo much, or ever ſo apparently, for the Advantage of the Subjects in general. Thus it appears that there is a great deal of Liberty in *Spain*, and the People are very tenacious of it. The King alſo has great Power, more eſpecially in the Countries that hold immediately of the Crown; he therefore favours them in Point of Trade, and in other Reſpects; but the Crown of *Spain* has been ſo long at an exorbitant Expence, both of Treaſure and of Men, that it wants Force to rid itſelf of old Inconveniencies, at the ſame time that, from its preſent Weakneſs, new ones are continually growing. It muſt indeed be owned, that the Cortes, or Aſſembly of the States, might remove many of theſe Evils; but Princes, if they can avoid it, are unwilling to borrow Powers from their People and Miniſters, much more unwilling to have their Management of Power looked into and examined. To ſecure the Peace of the Kingdom, the Deſcendants of the *Moors* were baniſhed; this depopulated the Kingdom of *Granada*, then the richeſt and moſt fertile Part of *Spain*; and now, for want of thoſe induſtrious People, the moſt barren. Upon a Mixture of religious and political Principles, the Jews were alſo driven out, and with them went all Induſtry in the low Arts of Retailing and Pedlary, as well as in the ſuperior Branches of the mercantile Buſineſs. In a Word, to expreſs the Thing as clearly as poſſible to an *Engliſh* Reader, the firſt Meaſure was calculated to deſtroy the Landed, and the latter effectually ruined the Money'd Intereſt.

The plain Remedies for theſe Miſchiefs muſt be the bringing all the Kingdoms in *Spain* under one Conſtitution and Form of Laws, as they are ſubject only to one Prince. The raiſing Men and Money ought to be reſtrained to Caſes of Neceſſity, and then it ſhould be done as equally as poſſible; for when every Body ſuffers alike, it very ſeldom happens that any Body complains. Titles of Honour, and the Privileges annexed to them, ſhould be connected with Property, as well as with Deſcent, which amongſt the People, naturally proud, would prove the greater Spur to Induſtry. The Trade of the new World ought to be laid open to all the Subjects of *Spain*, under Reſtrictions that may be complied with, and thoſe Reſtrictions ought not to be relaxed. As it ſtands at preſent, this Commerce is ſo far in the Hands of the Crown, as to hinder it from being beneficial to the People; and yet there is ſuch a univerſal Corruption reigns amongſt the Officers employed by the Crown, that greatly abridges the King's Profits. If Strangers ſettled in *Spain* had the Means of acquiring Property, and the Privileges that ought to be annexed to Property, Manufactures would riſe of themſelves, and the Produce of *Spaniſh* Commodities would remain in *Spain*; whereas now all the Advantages ariſing from Trade are collected as it were in a Sieve, ſo that as they come in they appear to be very great, but they ſpeedily leak through, and that to ſuch a Degree that little or nothing is left behind.

The Want of Attention to theſe plain Maxims has rendered the Government weak and infirm; the purſuing Schemes directly oppoſite to theſe Maxims, has increaſed this Weakneſs into a kind of galloping Conſumption, and this has enervated the Monarchy to ſuch a Degree, that without a ſpeedy Reformation, it muſt crumble to Pieces by its own Weight; and that this is not a Conjecture but a Fact, appears plainly from the miſerable State of St. *Domingo*, *Porto Rico*, and other *Spaniſh* Settlements; but if ſuch a Reformation were to take Place, the Kingdom of *Spain* has in itſelf vaſt Reſources. There are in it many fine Ports, which would enable its Inhabitants to carry on an extenſive Commerce, and the Means of carrying them on are alſo in the Hands of the Inhabitants. We will give a few Inſtances, which at the ſame Time that they inform, cannot fail of pleaſing and entertaining an intelligent Reader.

To begin then with the Wool. All the World knows that *Spain* produces as good, ſome, who are well verſed in that Commodity, ſay better, than any in *Europe*; of this the *Engliſh* uſe a vaſt Quantity, and of late the *French* and *Dutch* a much greater. Their Wine is alſo a very conſiderable Article; ſo long ago as the Year 1690, it appeared by their Cuſtom-houſe Books, that they exported ſixteen thouſand Pipes annually from *Malaga*, *Alicant*, Port St. *Mary's*, *Porto Real*, St. *Lucar*, and *Rota*. They make vaſt Quantities of Oil in the Iſland of *Majorca*, and in the Country about *Sevil* and *Malaga*. *Caſtile* Soap is another great Article, and beſides this, Pot-Aſhes for the Uſe of Glaſs-works, and the Whitening of Linen, a Commodity that deſerves Notice.

They have great Quantities of the very beſt Sort of Salt, of which they ſell a great deal at preſent, but nothing in Compariſon of what they might ſell. In the Principality of *Biſcay*, and in the Upper *Navarre*, they have large Quantities of Iron, and that Iron is juſtly eſteemed excellent. From *Bilboa* and St. *Sebaſtians* they carry on two or three Kinds of Fiſheries, and theſe might be extended vaſtly. We will add to theſe Articles, that of Fruits, which is very conſiderable, ſuch as Oranges ſour and ſweet, Raiſins of the Sun, and many others; beſides all the Drugs that they derive from the *Weſt-Indies*, which are at once the richeſt and moſt ſaleable, ſuch as, Cochineal, Indigo, Vanella's, Jalap, Sarſa Parilla, Jeſuits Bark, *&c.* The Tobacco Trade, Skins and Hides, and a Multitude of other Things might be added.

All this plainly ſhows, that if *Spain* is very thin of People, it is entirely owing to Errors in Government, ſince the Country would have wherewithal to maintain its Inhabitants, if it was ever ſo populous, and it might be filled with Inhabitants from other Countries, if ſome idle fooliſh Cuſtoms were taken away; for theſe Cuſtoms make Strangers leave *Spain*, as ſoon as they have acquired Fortunes in it, which is doubly diſadvantageous to the State; firſt by the Loſs of ſo many Subjects, and next by the great Sums they carry off. We may judge of this from the Balance that is ſaid to ariſe to *France*, from what is acquired by itinerant Labourers, that go to *Spain* in the Spring, and return before Winter, which has been computed, and not extravagantly neither, at half a Million Sterling; yet ſuch is the Folly of the *Spaniards*, that inſtead of regretting this Loſs, they value themſelves upon it, and believe, that in Compariſon of the *French*, they are a rich and great People, to whom others willingly ſubmit themſelves, for the Sake of getting Bread by them, without conſidering that theſe Strangers whom they deſpiſe, eat that Bread which they want, and go Home rich into their own Country, while thoſe who call themſelves their Maſters are left to ſtarve. If this Fact was not evident and undeniable, it would certainly be incredible.

Give me Leave alſo to obſerve, that as *Spain* is a very large Country, and compoſed of Provinces that differ very much from each other in Soil and Climate; ſo thoſe, who ſeem to be leſs happy in theſe Particulars, are by much the beſt cultivated, and fulleſt of Inhabitants: As, for Inſtance, the *Upper Navarre*, for the Lower belongs to *France*, is very cold and mountainous; yet *Pampeluna*, which is the Capital, is a fair well-built City, and has a good Trade: The People there, and throughout the whole Country, are active, frugal, and induſtrious, civil to Strangers, and generally ſpeaking, free from moſt of thoſe Vices that are commonly imputed to the *Spaniards*. It is the ſame Thing in *Biſcay*, where, though the Land is alſo far from being fertile; yet the People are never in Want; their Farms require Labour and Manure; the Owners beſtow it chearfully; and there is more Trade carried on, in Proportion to the Extent of this Diſtrict, than in all the Kingdom beſides. The People alſo of *Biſcay* and *Navarre* are the beſt Soldiers, not only as they are robuſt in their Conſtitutions, and very hardy, but as they are active, diligent, and very capable of bearing Fatigue. The *Biſcaneers* alſo are excellent Seamen; their Barks are well built; they are well victualled, and well manned; they fiſh for Cods on the *Newfoundland Banks*; they have a Share in the *Greenland* Fiſhery; and whereas the *Spaniſh* Seamen in general are ſlow and aukward, theſe are as briſk and as capable in every Reſpect as ours. But in *Valentia*, *Murcia* and *Granada*, Countries that were formerly very rich, and produced vaſt Quantities of Grain, the Land lies untilled, and the People are poor and ſtarving, merely becauſe they are idle and will not work. In *Andaluſia*, indeed, which may be ſtiled the Paradiſe of *Spain*, there is great Plenty, and the Country has a fine Appearance; but even here vaſt Improvements might be made, if the Inhabitants were more induſtrious, and did not think four Hours Labour in twenty-four an intolerable Fatigue.

That the *Spaniards* have Genius and Parts is certain, and yet both are commonly miſapplied; for as our Author obſerves, they are a Hundred Years behind the reſt of *Europe*, in almoſt all Branches of Literature; not becauſe they want Abilities, but becauſe they are attach'd to their old Notions, and had rather go on in the Paths of their Forefathers, tho' ever ſo rugged and uncouth, than diſhonour them ſo far, as to ſtrike out into better Roads that are new. In Poetry, Romances, Novels, and ſuch Kind of Writings, they ſhow a Spirit and an Invention, that is a clear Evidence of their falling ſhort in other Things, merely from Want of Attention and Application: Yet with all this their Reverence and Regard for Authority, they want not a ſtrong Propenſity to Liberty; and though no People in the Univerſe are more loyal to their Princes, yet they are far from being blind to the Errors in their Adminiſtration; which, however, they aſcribe conſtantly to their Miniſters, never to themſelves. When they meet in the Evenings, as they commonly do in the great Squares of *Madrid*, and other Cities, they diſcourſe very frankly upon all Sorts of Subjects, and ſpare their Superiors as little as in the freeſt Countries in *Europe*.

In theſe little Cabals, the ſecret Hiſtory and Policy of *Spain* may be very truly learned, at the ſame Time that it gives you a very natural Picture of the real Genius and genuine Diſpoſition of the People. The Birth, the Riſe, Progreſs and Summit of every Miniſter's Fortune, are here fairly diſcuſſed; his private Life, as well as his public Adminiſtration, canvaſſed, and the Conſequences of his Miſtakes either predicted before they happen, or traced to their true Sources afterwards. It muſt be owned, that theſe Politicians are but very low People; a Taylor, perhaps, or a Shoemaker, is one of the moſt enlightened Members of this Society; but they are ſtrangely miſtaken, who ſhall perſuade themſelves from thence, that nothing great or ſenſible paſſes in theſe Converſations. The very contrary is ſtrictly true: This Cuſtom has reigned ſo long in *Spain*, that the whole Nation are become Stateſmen, at leaſt, to ſuch a Degree, as to form a right enough Judgment of a Miniſter's Behaviour in Domeſtick Concerns; and therefore the famous Conde-Duke *de Olivarez*, had always his Spies amongſt them, whoſe Reports he committed to Writing; and it was againſt the Charge drawn from them, that he wrote his famous Juſtification, which is beyond Controverſy the beſt Apology that ever fell from a Miniſter's Pen. The King, at the Time he wrote it, was ſtrongly inclined to reſtore him to his Favour, but the Mob Politicians of *Madrid* pronounced him undone; as ſoon as this excellent Piece appeared, *A Favourite*, ſaid they, *can never riſe again, after ſhowing that his Maſter was in the Wrong to let him fall.*

Now we are upon this Chapter of Politicks, I cannot help adding a Thought of my own, which is this, that the indulging the People of *Spain* in theſe extraordinary Liberties has been the great Secret by which they have been kept conſtantly loyal, without an armed Force; for the Kings of *Spain* are neither crowned, as other Monarchs are, nor do they keep any Guards: The firſt they think unneceſſary in an hereditary Kingdom; and as for the latter, *Philip* the Third ſaid truly, *that Guards might protect Tyrants, but a juſt Prince needed no other Guards than his own Subjects.* The People being thus indulged in Freedom of Speech, and making Uſe of this Freedom openly, never enter into ſecret Cabals; ſometimes, indeed, they aſſembled in Crowds before the Palace, and repreſented their Grievances in very round Terms; but they began and ended with this Exclamation, *Let our good King live for ever, but let the wicked Adminiſtration go to the Devil.* A little Condeſcenſion, and the Redreſſing a few of the moſt notorious Grievances, always quieted them ſo, that their Monarchs have never thought themſelves in Danger; and their Miniſters know, upon ſuch Occaſions, how to purchaſe Peace upon reaſonable Terms. [The Reader is to obſerve, that all that is here advanced relates to the Old *Spaniſh* Monarchy under the Kings of the Houſe of *Auſtria*; for ſince the Acceſſion of the *Bourbon* Family, the King of *Spain* has not only had Guards, but a very formidable Body of Houſehold Troops. The long War, occaſioned by the Acceſſion of the late King *Philip*, gave him an Opportunity of eſtabliſhing theſe; and it is not probable that he or his Succeſſors will ever part with them.]

17. We cannot have, for the Time in which they were written, better Accounts than thoſe given us by Mr. *Willoughby*; nor are the Additions leſs curious, more eſpecially with reſpect to the Coral Fiſhery, our former Relations being very little to be depended upon. There was likewiſe, in the ſame Book, as large and particular a Detail as to Lead Mines; but the Writing being defaced, it was impoſſible to pick it out. But there is one Objection to which this Collection would be liable, if we inſerted no other Travels but theſe, *viz.* that they are many Years old; that Things are much changed ſince, and that People would be glad to know how they look nearer their own Times. In order to guard againſt this, and at the ſame Time to ſupply another Deficiency, which is the Leaving ſeveral Provinces untouch'd, we ſhall, in the next Section, preſent the Reader with the Travels of an *Engliſh* Gentleman, not only through *Spain*, but *Portugal* alſo; later in Point of Time by about thirty Years, than thoſe which have been already given, and which are written with great Plainneſs and Perſpicuity. It is, indeed, to be wiſhed, that we had a better Acquaintance with their Author, ſince this would very probably give us a better Opinion of the Work itſelf; but as we have not, we muſt be content to take it the other Way, and eſteem the Author for the Sake of his Work, which will appear more pleaſant to a modern Reader, as it is written in the Language of theſe Times. We might, indeed, have ſmoothed thoſe of Mr. *Willoughby*, and render'd them more graceful in the Eyes of many People, by taking them out of their ancient Garb; but againſt this we had many Reaſons.

It ſeems but juſt that a Man, and eſpecially a Man of his Quality, ſhould tell his Tale in his own Language, and after his own Manner, eſpecially if there be nothing in it barbarous or uncouth. It is very far from being an eaſy Matter to give preciſely the Senſe of an Author, who writes in our own Tongue, in any other Words than his own; for either we fall ſhort of, or exceed his Ideas; and to be convinced of this, we need only make a Tryal. There is a great Beauty in ſeeing theſe Variety of Stiles, which is alſo heighten'd by its Propriety. In a Treatiſe of Geography, or even in a Hiſtory of Voyages, Uniformity is requiſite; but it is otherwiſe in a Collection, and thoſe have been always eſteemed moſt, that have been the exacteſt in this Reſpect, ſuch as *Ramuſio*'s in *Italian*, *Thevenot*'s in *French*, and *Hackluyt*'s in our own. This laſt is a very proper Inſtance, for by comparing him with his Succeſſor *Purchas*, we may eaſily diſcern the Inconveniences that attend a finical Nicety, in an Editor who prefers his own Manner of Writing to that of all other Men. The Reverend Author we have laſt mentioned, conſider'd himſelf, and was conſider'd in his own Times as a Wit; that is to ſay, he had a Humour of playing upon Words, and introducing Burleſque Remarks upon very ſerious Subjects; which has brought him into Diſcredit with the preſent Age, when a chaſter and more correct Stile is grown into Faſhion.

But though I do not think it expedient, that an Editor ſhould always new cloath his Author; yet I muſt admit, that there are Caſes where this is not only allowable, but neceſſary; and in thoſe Caſes, according to the beſt of my Judgment, I have never failed uſing this Freedom. But if there be a Beauty in ſuch Variety of Stiles, there is likewiſe a very great Utility; for by ſeeing the different Methods which Travellers make uſe of, we learn the Excellencies of ſome, and the Deficiencies of others, and know from thence how to copy the one, or to avoid the other, when it becomes our own Turn to write. But theſe Reflexions have, perhaps, carried me a little out of my Way, and made the Concluſion of this Section a few Lines longer than it ought to be. The Reader will conſider, that all People are fond of talking of their own Trades, and that perhaps Authors are more liable to fall into this Error than others. The beſt Amends I can make, after confeſſing my Foible, is to atone for it; and as I have already ſaid all that is neceſſary to be ſaid of the Perſon to whom we are indebted for the following Section, we will proceed to it without any Introduction.

SECTION II.

Travels through *Portugal* and *Spain*, with a diſtinct Deſcription of the principal Cities in both Kingdoms; particularly, *Liſbon*, *Coimbra*, *Porto*, and *Braga*, in the former; *Madrid*, *Valentia*, *Alicant*, &c. in the latter: With a curious and correct Detail of the Curioſities in the *Eſcurial*, and a ſuccinct Deſcription of the other Royal Palaces of their Catholick Majeſties.

By an English *Gentleman.*

1. *The Author's Voyage to* Liſbon, *and Thoughts of the* Portugueſe *upon his firſt Arrival there, with ſome other Particulars.* 2. *A diſtinct Account of the City of* Liſbon, *and the Country adjacent.* 3. *The City and Univerſity of* Coimbra *particularly deſcribed, and more eſpecially the famous Convent of*

St. Auſtin. 4. *A Deſcription of the Town of* Aveyro, *and the Country about it.* 5. *An Account of the famous City of* Porto, *and of the noble River upon which it is ſeated.* 6. *The Author's Journey from thence to* Braga, *with a View of that City, and of the Towns of* Viana *and* Camena. 7. *A Deſcription of* Valentia *(in* Portugal) *and of the Frontier Country towards* Spain. 8. *An Account of the* Spaniſh *Province of* Galicia, *and of the Towns of* Radontelia *and* Ponte Vedra. 9. *His Return into* Portugal, *and by another Route back to* Liſbon. 10. *His ſecond Journey into* Spain, *with a Deſcription of* Eſtremoze *and* Elvas. 11. *His Journey through* Badajos, Merida, Trukillo or Truxillo, *to* Toledo. 12. *The Author's Deſcription of* Madrid, *and of the Palace of the* Buen Retiro. 13. *An Account of the City and Univerſity of* Compoſtella, *one of the moſt famous in* Spain. 14. *The celebrated Palace and Convent of the* Eſcurial *deſcribed, the Reliques, Riches, and Ornaments enumerated.* 15. *An Account of the* Pantheon, *or Place of the Royal Sepulchres.* 16. *A View of the old Chapel and Royal Palace of their Catholick Majeſties, and a Recapitulation of the remarkable Things in this celebrated Place.* 17. *An Account of* Aranjuez, *and other Places on the Road.* 18. *A Deſcription of the Town and Caſtle of* Alicant. 19. *The Manners, Cuſtoms, and Behaviour of the Inhabitants of* Valentia. 20. *Some very ſingular Inſtances of the Ignorance and Superſtition of the* Spaniards *in general.* 21. *Obſervations and Remarks upon the foregoing Section.*

1. IN the Year 1693, I embarked on board a Merchant-ſhip for *Portugal*, where we arrived without any Accident but ſuch as are ordinary at Sea, in the River of *Liſbon*, in which City ſtaying ſeveral Months, I will give you the beſt Account I am able of what I obſerv'd during my Stay.

It is ſeated on divers Hills, which make the Streets very uneaſy and unpleaſant; beſides, the Dirt and noiſome Smells ariſing from the Filth that runs from their Kitchens (which are all above Stairs) into them, and by Reaſon of their Narrowneſs can't be dried by the Sun, makes them ſo offenſive, that no body cares much to paſs through them.

Arriving there in *Lent*, I was entertained with the Sight of their monſtrous Proceſſions, wherein I obſerved ſome of the true Penitents laſh themſelves with that Severity that they frequently die of it; for which Reaſon it is that the Prieſts are obliged to declare to them, That *ſuch as procure their Death by this Exceſs of Folly, are the Occaſion of their own Damnation.* But among theſe true Devotees are to be ſeen many others, hired on Purpoſe by the Religious Societies, to increaſe the Number of the Penitents; a Thing ſo ſcandalous, that even the foreign Catholicks reſiding here bluſh at it, there being ſcarce any but the moſt profligate and debauch'd Wretches that will expoſe themſelves to ſuch dangerous Mortifications for Lucre-ſake: Among the reſt, they had at that Time employed a certain lewd Fellow, who us'd to ſerve as a Porter to the *Engliſh* reſiding there.

They have a vaſt Number of Churches and Convents, but few that are magnificent, the *Domo*, or Cathedral itſelf, being neither large nor handſomely built: Their chief publick Structures are, the Royal Palace, ſeated upon the River *Tagus*, the Model whereof was deſigned much larger than it is. It has a Cloyſter behind adjoining to it. The Palace of the Archbiſhop of *Liſbon* is a ſpacious Structure, with ſome good Statues upon the Stairs, the only Kind of Furniture the *Portugueſe* delight in, there being even in the King's Apartments nothing to be ſeen but white Walls. Their Houſes are generally very high and pretty cool, but the Streets ſo narrow, that inſtead of Coaches they are forced to make uſe of Litters, carried by Mules, which are very ſtrong and large in this Country.

It is an odd Sight to ſee the *Portugueſe*, both young and old, appear with large Spectacles faſtened to their Ears in the Streets. Their Diet is generally very moderate, and they ſeldom or never commit any Exceſs in Wine: The predominant Vice is the Converſation of lewd Women, unto which the Heat of the Climate ſeems to incline them more than Extravagance. The Women paint here very young, and are conſequently obliged to follow it as they grow more in Years. The Men are exceeding jealous, and a Suſpicion of Incontinency in a Woman puts her in Danger of her Life; hence they are ſeldom allowed to ſtir abroad, except when they go to Church on Sundays, Holidays, or their Eves.

The Women of Quality wear their Fardingals here larger than thoſe of *Italy* or *Spain*; they wear Veils to cover their Faces; they look upon it as the greateſt Piece of Immodeſty to ſhew their Feet; for which Reaſon they wear very long Petticoats, and their Pages or Footmen hold a Piece of Cloth either before or behind them, as they get in or out of their Coaches or Litters, though at the ſame Time they go both with their Boſom and Shoulders bare. The Men's Habit is a black Coat and a Band of our *Colcheſter* Bays, which they turn the wrong Side outward in Mourning; this is the general Wear, without any Diſtinction of Perſons or Quality, unto which they are all ſubject without any Difference, Silver and Gold Laces being expreſly forbid among them. The *Inquiſition* makes them all appear good Chriſtians, though it is generally believed there are many conceal'd *Jews*, as their ſwarthy Complexion and fiery revengeful Temper are the Remnants of their *Moriſh* Anceſtors.

2. The Situation of *Liſbon* upon the River *Tajo* or *Tagus*, makes it a Place of conſiderable Traffick; for, not to mention their Commerce in the *Eaſt Indies* and *Braſil*, they trade with moſt Nations of *Europe*, but eſpecially with the *Engliſh*, who take in Salt there for *Newfoundland*, and bring back to them dry'd Cod; beſides that, they exchange many of their Woollen Manufactures for the Wine and Fruits of *Portugal*.

The Extent of the *Tagus* into a great Part of the Country, affords them likewiſe a moſt commodious Carriage of their Wines, Oils, Fruits, and other Products of the Country: Their Salt, eſpecially that of St. *Ubes*, is tranſported into moſt Parts of *Europe*, and uſed in vaſt Quantity in *Sweden*.

They abound in Fiſh at *Liſbon*, but have ſome Scarcity of Fleſh, eſpecially of Beef and Mutton, the adjacent rocky Mountains affording Food only for Goats; however, their tame Fowl, when well fatted, are very good, and their Pigeons both very large and well taſted.

About *Liſbon* are many Summer-houſes, and Gardens well planted with Orange-trees, the agreeable Scent whereof perfumes the Air at a conſiderable Diſtance: A Friend of mine had one of theſe Summer-ſeats at *Luz*, about four Miles from *Liſbon*, with a well planted, pleaſant, walled Garden, of three Acres of Land belonging to it, which, among other Advantages, had this Conveniency belonging to it, that we could go thither in a Coach, a Rarity among thoſe craggy Mountains. I ſpent a great Part of the Summer there.

During my Stay here, I took particular Notice, that even in the hotteſt Seaſon, we were conſtantly, toward Evening, refreſh'd with a cool Sea-breeze, a Thing I afterwards obſerv'd in moſt Places about *Liſbon*.

From this Country-ſeat I uſed frequently to take a Walk to the once ſo much celebrated Nunnery of *Odevalla*, but much reſtrained of late Years both in its Revenues, and the free Converſation allowed to that Order in ſome of their Convents.

3. Leaving *Liſbon*, May 6, 1694, I travell'd towards *Porto*, to take a View of the Country on that Side. I paſs'd the firſt Day through a rocky Country to *Sacca Veina*, and thence two Leagues further to *Alcrea*, and in the Afternoon through *Aliandra*, *Villa Franca*, *Povia* and *Caſtinora*, where I lodg'd that Night,

but badly enough; the next Morning early I purſued my Journey through the Villages of *Villa Nova de Remo*, *Amboſia*, and *Caſteſia*; after Dinner I travell'd on near *Sancta Terrena*, through a plain and moſt delightful Country, abounding in Wine, Oil and Corn, and ſo came to *Pauſinio*, where I took up my Lodging for that Night; the next Day I continued my Journey in a no leſs pleaſant and delightful Country, over *Campo di Galligong*, (a delicious Plain, abounding in Corn and Olive-trees) through *Alla neroſa*, *Pialva*, and *Jandemaſans*, to *Peruchio*, where I lay that Night, and the next Morning over *Arujon*, *Pulga*, *Toboſal*, &c. getting to *Coimbra* that Night, after four Days Journey in a Horſe-litter, being none of the quickeſt in theſe Countries.

Before I entered the Gates of *Coimbra*, I croſs'd the River over a Bridge very remarkable for its Length, as having no leſs than twenty-nine Arches, and its being built upon another Bridge, which is ſwallowed up in the Sand, the River being ſo ſhallow now, that 'tis fear'd it will in Time be quite choak'd up. On this Side of the Bridge ſtands a Convent and a Nunnery, both belonging to the *Franciſcan* Order, the firſt dedicated to St. *Bartholomew*, the other to St. *Clara*. The City itſelf is computed to contain about 30,000 Souls, and its Situation is like moſt of the great Towns of this Country, upon Hills; it has ſixteen Colleges and Convents.

The *Univerſity* has but two Colleges, *viz.* thoſe call'd St. *Peter*'s and St. *Paul*'s, adjoining to each other like one Building. Their Schools make no great Show, though they keep publick Lectures in them in all Sciences; and I was told they had a good Library. I ſaw a *Fidalgo* (or Gentleman's Son) perform his Exerciſe for his Degree of *Doctor in Law* in the Hall, which is a handſome large Room, common to both the Colleges, hung about the Walls with the Pictures of the Kings of *Portugal*. As the Number of Students here is computed at no leſs than five thouſand, (becauſe they are admitted as ſoon as they can well read, and are diſtributed accordingly in different Claſſes) ſo none but the Children of Perſons of the beſt Rank can have their Chambers in the Colleges, the reſt being diſpos'd in the Town as they beſt can.

The chief of their Convents is that of St. *Cruz*, being all Noblemen, and of the Order of St. *Auſtin*. The Church belonging to this Convent is a large Structure, with Altars richly gilt, and adorn'd with Silver Candleſticks of great Value: They preſerve here many Relicks, but as they are very ſhy of ſhewing them to Strangers, I obtain'd this Favour by the Aſſiſtance of an *Iriſh* Father; they ſhew'd me the Sword of King *Alphonſo*, wherewith he kill'd five *Mooriſh* Kings; they tell you that King *Sebaſtian*, when he was juſt upon going to the Wars in *Barbary*, borrow'd this Sword of the Convent, and that the Sword being loſt there, together with the King, they inſtituted publick Supplications for the Recovery of this Sword, which was one Day found by a Friar upon the high Altar, as he was going to officiate there. But the chief Repoſitory of their Relicks is in a Chapel at the End of the *Dormitory*; here they ſhew'd a golden Croſs ſet with precious Stones, which (they ſay) contains a Piece of the true Croſs, and uſed always to be fix'd on the royal Standard in their Wars againſt the *Moors*; half of one of the Thorns wherewith our Saviour's Head was crown'd; a Bone of St. *Stephen*, another of St. *Auſtin*, a Finger of one of the Innocents ſlain by *Herod*, St. *Peter*'s Chains with large thick Iron Links, a Bone of St. *Paul*, a Leg-Bone of one of the eleven thouſand Virgins ſent out of *England* to the *Indies*, to marry and encreaſe the *Chriſtians* there; an Arm-Bone of St. *Blazius*, a Bone of St. *Sebaſtian*, the Bones of *Theotonius* in a Silver Cheſt, the Bones of five Martyrs put to Death by the *Moors* in *Barbary*, whither they were ſent to convert them to the *Chriſtian Faith*, likewiſe in a Silver Cheſt; a Bone of St. *Lawrence*: Moſt of theſe, beſides many others, were brought out of *England* immediately after the Diſſolution of the Monaſteries by King *Henry* VIII. They were ſo cautious in ſhewing them, and that at ſuch a Diſtance, that I cou'd ſcarce diſtinguiſh what they were, which made me never enquire any farther about any ſuch Things as *Relicks* in this Country.

4. After a Stay of three Days I left *Coimbra*, taking my Way towards *Aveyro* through a pleaſant Country, though ſomewhat mountainous and rocky: I found my travelling upon a Mule as tedious as in a Litter, for you go no faſter than your Guide, who is on Foot. *Aveyro* is a very handſome Town, with clean and pleaſant Streets, govern'd by a Juſtice, as are moſt Country Towns here; it has three Convents of *Dominicans*, *Carmelites*, and the Order of St. *Anthony*; and four Nunneries, of St. *Anthony*, *Franciſcans*, *Dominicans*, and *Carmelites*; and four Pariſh-Churches: Each of the Nunneries contains above a hundred Perſons, including Servants; and the whole City, about fifteen or ſixteen thouſand Souls. The Duke of *Aveyro* lives in *Spain*, under Pretence that the Family of *Braganza* has uſurp'd the Crown of *Portugal*, ſo that his Eſtate being ſeiz'd upon for the King's Uſe, his Palace is beſtow'd upon the *Carmelite* Nuns. The Town is fenc'd about with a Wall after the *Mooriſh* Faſhion, and has great Plenty of good Fiſh and Fowl: The River is of ſuch a Depth that Veſſels of ſeventy or eighty Tun may ride ſafe at Anchor under the Town, to which belong above four thouſand Boats, employed for the moſt Part in carrying Dung from thence into the Country, where the Ground is barren, and wants much more manuring than the Soil about *Liſbon*. Much Salt is alſo made hereabouts, which is carried into the Country, and into *Galicia*.

From *Aveyro* to *Porto* is ten Leagues; the firſt five I went by Water, for taking Boat at twelve at Night, I came the next Morning to a little Village called *Varr*, whence I travelled the other five on Horſe, through a barren Country, to *Porto*, the River of which affords a ſafe Harbour, being ſo environ'd with Hills, as to protect Ships againſt the Violence of any Winds; the Ships may ride under the very Walls of it, which are very high, but at that Time the City was without a Garriſon.

5. The City of *Porto* itſelf is very handſomely built, and the Streets neatly pav'd, though ſeated upon Hills. On the other Side of the River called *Sarra*, ſtands a Convent of *Auſtin Friars*, a ſpacious Structure, containing about forty-five Brothers, who call themſelves *Dons*: Their *Dormitory* I found to be two hundred and fifteen Paces long, and five broad. Near it is a Nunnery of St. *Dominick*. Somewhat lower, on this Side of the River, at a Place called *Gaia*, (famous in ancient Times, for the Palace of the *Mooriſh* Kings) is another Convent of twenty-eight Friers, of the Order of St. *Antonio*. In the Convent of the *Serra* they ſhew'd me a Pair of Crutches of a lame Child, which was cured by a certain little Image of our Lady in *Baſſo relievo* in the ſame Church: The like you ſee in ſeveral other Churches, as alſo wooden Legs and Arms, nay, ſometimes the Pictures of the Perſons pretended to be cured near the Saint's Image that is ſaid to have wrought it.

This City has four Pariſh-Churches, the Cathedral, which is but ſmall in Compariſon of others of that Rank, the Church of St. *Nicholas*, of St. *Victoria*, and St. *Peter*; they appeared to me richer and better gilt than thoſe of *Liſbon*: Seven Convents of Friars; *viz.* the *Franciſcans*, St. *John Novo*, St. *Eli*, (dreſs'd in Purple) the *Dominicans*, *Carmelites*, *Benedictins*, and the *Tanograpes*, an Order following the Diſcipline of the *Jeſuits*, and upon that Score in much Repute here. They have alſo a College of *Jeſuits* and four Nunneries, *viz.* of St. *Munchecba*, St. *Bento*, St. *Clara*, and the *Recolletes*, an Order peculiar to this Country, and ſeldom to be met with but in Seaport Towns, being intended for Seamen to beſtow their Wives in till their Return; Orphans are likewiſe educated here till they come to Years of Maturity to chuſe either Marriage or a religious Life; Widows are alſo permitted to enter into this Order after the Deceaſe of their Huſbands, provided they vow Chaſtity for the future. The whole City is reckon'd to contain fifty thouſand Souls, including the Suburbs, in one of which is another Pariſh-Church dedicated to St. *Alphonſo*. It is a Place of vaſt

Trade, the River (which ſupplies them with great Quantities of Proviſions, Wines, Oil, Corn, Fruits, *&c.* out of the Country for Tranſportation) having from its Conveniency got the Name of *the Golden River.* The Bar, through which the Ships come in, is a very narrow Paſſage, with Rocks on both Sides. Over againſt it, near the Village of St. *John*, is a Fort kept by a ſmall Garriſon.

The Epiſcopal Palace near the Cathedral ſeem'd to be a magnificent Building, but was not inhabited then, becauſe the Biſhop, being at Variance with the Clergy of his Dioceſe, was at *Liſbon.*

6. From *Porto* I travell'd to *Gamarains*, over ſteep and rough Hills; it is a pretty neat Town, well built upon a Level of a conſiderable Compaſs; it has five Convents of Monks, *viz.* the *Dominicans*, *Carmelites*, *Capuchins*, *Franciſcans*, and *Auſtin* Fryars; and three Nunneries, *Franciſcans*, *Carmelites*, and *Dominicans*, but no more than two Pariſh-Churches. The whole Place is encloſed by a ſtrong and high Wall, and there are to be ſeen here the Ruins of a Caſtle, ſaid to be built for one of the Kings of *Portugal*'s Brothers.

From hence I continued my Journey the next Day to *Braga*, the moſt ancient Archbiſhoprick of *Portugal*, and which to this Day diſputes the Precedency and Primacy with the Archbiſhop of *Toledo* in *Spain.*

Braga is a ſpacious City, well wall'd according to the Faſhion of this Country. The Cathedral is ſomething bigger than in moſt other Places in *Portugal*, and ſtrongly built, as are moſt of their Structures; for they have hereabouts a Kind of very durable tho' coarſe Marble, and their Loam very white and fine, and conſequently exceeding binding, as may be ſeen by their old Buildings. In this Church is a Monument of the Duke of *Bayonne*, (a Thing the *Portugueſe* do not much regard) who being met upon the Road to this City by a great Number of People to honour his Entry, and dying there ſoon after, order'd by his Will a conſiderable Revenue to be employ'd for diſtributing a certain Allowance to the *Poor* every Morning in the Cloyſters of the Church; adding, That *ſince he was not able to feaſt them, he would take care they ſhould not go without a Breakfaſt.* The Tomb, which is about a Yard and a half high, ſtands in the Iſle of the Church, being all of Braſs, with his Effigies at full Length, which appear'd to have been gilt formerly; the Grates about it hinder'd my reading the Inſcription. Not far from the Dome ſtands the Archiepiſcopal Palace, an old Pile of Building, which made but an indifferent Shew on the Outſide, being not then inhabited by reaſon of the Death of the Archbiſhop.

The next Place I came to in this Journey was *Viana*, one of the pleaſanteſt Towns in *Portugal*, ſeated on the Sea ſide, ſo that from the Key you may ſee any Ships that ſail along the Coaſt: It is well pav'd, the Streets upon a Level, with very good Buildings. Its Strength conſiſts only in a ſmall Caſtle on the Sea-ſide, which commands the Harbour, but they had at that Time a Garriſon of a thouſand Foot and two Troops of Horſe, and in the Caſtle about thirty-ſeven Great Guns mounted: There was lately built a Magazine for the King, containing Arms for about twenty thouſand Men, and ſome Accoutrements for Horſe. They ſhew'd us a ſmall low Building within the Precinct of the Caſtle, ſaid to be built for the Impriſonment of King *Alphonſo.* For the reſt, this is a Place of pretty good Trade, tho' the River is not navigable far, by reaſon of the Sands which choak up the Channel.

From this Place I travell'd for three Leagues very pleaſantly along the Sea ſide to *Camena*, ſeated in a Plain; and, though the Frontier Town on the Borders of *Galicia*, it is of no great Strength, but commonly provided with a good Garriſon; there ſtands, however, upon a Rock near the Entrance of the River, a little Fort, commanding the Paſſage toward the Harbour, but it was guarded only by ſix or eight Country-Fellows at that Time, and had not above three or four Guns mounted; within it is the Convent of St. *Anthony.* This Place has ſome little Trade, two Pariſh-Churches, two Convents of *Dominicans* and *Franciſcans*, and one Nunnery of *Dominicans.*

7. If you intend to go from hence into *Galicia*, you muſt croſs the River, which is the common Boundary between *Spain* and *Portugal* on this Side.

I went from *Camena* to *Villa nova de Silvero*, an ancient Town in the Road betwixt *Camena* and *Valentia*; as it is a Frontier Town, ſo it hath a Wall after the Manner of this Country, with a Garriſon.

Valentia, likewiſe a Frontier Town, upon the Borders of *Galicia*, advantageouſly ſituated for being made a ſtrong Place, but almoſt without Defence, though ſo near to *Spain*; it is true, ſome Works it had, but without Men or Arms to defend them, all the Defence they have being the Fort *Lovelio*, about a Mile from the City, in Oppoſition to which the *Spaniards* have one or two on their Side of the River. At this Place the King's Officers make ſtrict Search, whether you carry more Money with you than is allow'd; the ſame is done on the Borders of *Galicia* by the *Spaniards*, in your Return hither, which they do with Severity enough, unleſs you make them civil by a little Money. Here you muſt alſo give Security for the Return of your Mule.

8. The firſt *Spaniſh* Town you come to after you have croſſed the *River*, is *Tine*, an Epiſcopal Seat, but meanly built, which made me without any Stay continue my Journey to *Vigo*, a Sea-port Town in *Galicia*, ſeated upon a River, and accounted one of the beſt Harbours of *Spain*, formerly the Rendezvous of the *Spaniſh Armada* or Fleet, when they made a much better Figure at Sea than they do now. Here their Galeons, and the *French* Squadron commanded by M. *Chateaurenand*, were deſtroyed by the *Engliſh* and *Dutch* in the Year 1702. For the reſt, the Town is of no conſiderable Traffick, few inhabiting here but Fiſhermen, which makes their Houſes appear very mean. It is reckon'd among the garriſon'd Towns of *Spain*; but this Garriſon conſiſts only of ſixty Country Fellows, who are ſummon'd out of the adjacent Country, for the Defence of ſome ſlight Works, provided with a few Guns, and are changed every Day. It has one large Pariſh Church, but meanly built, and two Convents, one of Friars, the other of Nuns, both *Franciſcans.* About three Leagues down the River you ſee the Iſles of *Bayonne.*

From hence I paſſed for three Leagues down a noble River towards *Ponte Vedra*, lined on both Sides with Hills and pleaſant Valleys, and ſome little Redoubts oppoſite to one another, for the Defence of the River. As you paſs along this River, you ſee *Raduntella*, a ſtately Town, built upon the Bank of the River, in the Middle of which is an Iſland, with a Convent of *Franciſcans* upon it, the Gardens of which being planted with Fruit-Trees, made a pretty Show at a Diſtance. At the End of this River you muſt travel a League and a half by Land before you come to *Ponte Vedra*, thro' very rough and uneven Ways. *Ponte Vedra* is a large but meanly built Town, though the River (which diſcharges itſelf into the Sea) affords them ſome conveniency for Traffick. The chief Thing worth taking Notice of, is the Church of our Lady, a large Fabrick, and adorn'd on the Inſide with ſome curious Wrought Work on the Ceiling, and the Pillars, which are Marble, a Thing ſeldom obſerved in the Churches of *Galicia.* The Front of this Church hath alſo ſome very fine *Relievo-work*; among the reſt, our bleſſed Lady on her Death-bed, with the Apoſtles and ſome of the ancient Fathers about her.

The Archbiſhop of St. *Jago*'s Palace here is a large Structure, but appear'd much decay'd: It has two Pariſh Churches and three Convents, two of *Franciſcans*, and the third of *Dominican* Friars, one of Nuns, and a Jeſuits College. The Magazine here had alſo ſome good Braſs Guns, and ſome ſmall Arms.

9. *Galicia* appear'd to me a Country very like *Portugal*, as well in reſpect of the Soil, as of the Manners and Cuſtoms of its Inhabitants, who alſo differ but very little from the *Portugueſe*, even in their Habit and Language; and as there is ſcarce any Footſteps of Induſtry or Huſbandry among them, ſo you ſee nothing but Poverty where-ever you turn yourſelf.

The indifferent Uſage I met with in all thoſe Places thro' which I paſſed, made me ſoon alter my Reſolution of going further that Way; ſo I return'd to *Porto* the ſame Road I came, but took another Way from *Porto* to *Liſbon*; for, after having paſs'd *Aveyro*, inſtead of going to *Coimbria*, I took the Road of *Fygera*, a ſmall Maritime Town, yet not without ſome Trade in Salt and Oyl, Ships of about a hundred Tons being able to come up the River hither: They have a Caſtle with ſome Guns for their Defence. The Salt is made near this River, and the adjacent Country affords great Abundance of Olives.

Betwixt *Aveyro* and *Fygera* is the Town of *Mira*, much celebrated for vaſt Store of wild Ducks thereabouts, which they take in a peculiar Manner, without either Nets or Guns, by throwing Sticks at them as they riſe and take Wing, which they do with ſuch Dexterity, that they knock down ſeveral at a Time.

I paſs'd the River near *Fygera* the 25th of *July*, which being on a *Sunday*, and St. *James*'s Day, I had ſcarce travel'd two Miles to *Lavos*, where meeting with an *Iriſh* Prieſt, he would fain have engaged me to go about four Leagues with him, to a Chapel dedicated to St. *James*, where (he told me) was a Family which had this Peculiar to itſelf, that on this Day, when the People of the adjacent Country came to pay their Devotions to the ſaid Saint, and are regaled with a large hot Cake by the Town; any of them can go to the Oven, though never ſo hot, and turn the Cake without the leaſt Danger; but I thank'd him for his Care, and told him, that having no great Faith in ſuch Matters, he muſt excuſe me, if I did not go ſo far out of my Way. I came the ſame Day to *Lazia*, the Seat of a Biſhop, whoſe Palace is a noble Structure: For the reſt, the Town is but indifferently built; it hath three Pariſh-Churches, the Cathedral, St. *Diago*, and St. *Peter*'s; the firſt appear'd to be a large handſome Fabrick, but I did not view the Inſide of it: They have four Convents of *Auſtin* Friars, *Dominicans*, *Franciſcans*, and *Capuchins*, and a Nunnery of *Dominicans*. Near it, upon a very high Hill, you ſee a Caſtle belonging to the King, which at a Diſtance appear'd to be a noble Building.

In my Way from *Lazia* to *Terena* I paſs'd by *Batalia*, where is ſaid to be the beſt-built Church in all *Spain*, perfected by ſome *Engliſh* Workmen; it contains the Sepulchres and Tombs of the *Portugueſe* Kings. The Steepneſs of the Rocks, over which I was forced to paſs, together with the Length of the Way, made this the worſt Day's Journey I ever had, which made me not get to *Terena* till late at Night; and having fourteen Leagues to *Liſbon*, I ſet out early in the Morning, and after I had rode two Leagues, embark'd on the River, (ſending my Mule by Land) which brought me the ſame Day to *Liſbon*. I obſerved a great deal of Poverty in the Country through which I paſs'd, the poorer Sort living for the moſt part upon *Brow* and Water. This *Brow* is a Kind of courſe yellowiſh Bread, made of a certain *Indian* Corn called *Millio*; certain it is, that many hundred Families live upon this, without ever taſting Meat in all their Life-time. The Country, through which I paſs'd, affords ſcarce any Wood for Timber, the Oaks, which are but few, appearing no bigger than Shrubs here; Olive and Cork-trees they have in Abundance, and I ſaw ſome pretty large Groves of Pines.

The Authors Journey from Liſbon *to* Madrid.

10. I ſet out, *Sept.* 1, 1694, from *Liſbon* for *Madrid*; I went three Leagues by Water on the other Side of the River to *Allegalego*, whence, continuing my Journey the next Day, I travel'd for eight Leagues through a barren Country to *Vento Novo*, and the next Day by the Way of *Monte Major* (a very good Village) to *Ryolio*, a ſmall ruined Town with an old *Mooriſh* Caſtle, which affords a fine Proſpect into the adjacent Country. The next Day I travel'd on to *Eſtremoze*, a Place noted for Earthen Ware, then garriſon'd with eight Companies of Foot, and three Troops of Horſe. Thence I went to *Elvas*, the laſt Frontier Town of the *Portugueſe*, bordering upon *Spain* on that Side, a Place of good Strength, and famous for the ſix Months Siege it ſuſtained againſt the *Spaniards*, in their laſt Wars. Near it is a moſt noble Aquaduct, three Leagues and a half in Length, and of a vaſt Height in ſome Places where the Ground is low; where, for a conſiderable Way together, there were no leſs than four Arches built upon one another with vaſt Expence. Not above two *Engliſh* Miles beyond *Elvas* you come to a ſmall River, which being the common Bounds betwixt *Spain* and *Portugal* on that Side, you are no ſooner paſs'd it, but you come to the *Campo* or *Plain*, where was fought that memorable Battle betwixt the *Spaniards* and *Portugueſe* in their laſt War, with the loſs of ſeven thouſand *Spaniards*; in which Action the *Engliſh* had a conſiderable Share, acting as Auxiliaries on the *Portugueſe* Side.

The firſt Town belonging to the *Spaniards* on this Side, is *Badajos*, a ſtrong Place, into which you enter over a Bridge of twenty ſix Arches. The next Day I travel'd to *Merida*, into which you muſt paſs over a Bridge of above ſixty Arches: This Place affords ſome Entertainment for curious Travellers, as the Ruins of ſome ancient *Roman* Buildings, a ſpacious Caſtle, now turn'd into a Priſon, a noble Arch of vaſt Stones joined without Mortar, the Work of *Julius Cæſar*, a curious Pyramid by *Auguſtus Cæſar*, the Remnants of ſome ancient *Roman Aquaducts*, and another modern one by which the Water is convey'd into the Town a great Way. From hence I travel'd to *Trukillo*, through a woody and mountainous Country: The Town itſelf is very well built, with ſeveral goodly Structures belonging to Perſons of Quality; it has five Pariſh-Churches, as many Convents of Friars, and four Nunneries: The Villages upon the Road were moſt of them very large, but the Dwellings only of Mud; however, I took Notice by the Way of one ſpacious and noble Palace belonging to the *Conde de Lopeſo*: I lodg'd at *Telaveyra de Royna*, a very handſome Country Town, having eight or nine Pariſh-Churches, thirteen Convents of Monks, and five Nunneries.

From hence I travel'd five good Leagues out of my Way to take a View of the City of *Toledo*, a magnificent Place, nobly built, and adorn'd with ſtately Churches, very rich in Plate and Jewels. The Image of our Lady in the Cathedral has a Garment cover'd all over with Pearl and precious Stones of an ineſtimable Value: The Paintings are anſwerable to the reſt. It is the Metropolis of all *Spain*, and the Archbiſhoprick is accounted the moſt conſiderable for its Revenues in *Chriſtendom*, though that of *Braga* diſputes the Priority with it. The *Caſtilian* Language is ſpoken here in its Purity, and ſeveral great Councils have been held there. The preſent Archbiſhop is a Cardinal. The King's Palace or *Caſtle* is a ſpacious Pile of Building, and the Stables belonging to it are capable of containing at leaſt five hundred Horſe.

12. *Madrid* is only a Village, but may deſervedly be called the largeſt of that Kind in *Europe*; the Soil round about it is not ſo mountainous as in *Portugal*, but very fruitful, which agrees beſt with the ſlothful Temper of the *Spaniards*. This Place, though the ordinary Reſidence of the Kings of *Spain*, is not ſeated in a very wholſome Air, occaſioned, queſtionleſs, by the adjacent River, which is often dry: This River is a Branch of the *Tagus*, riſing near *Toledo*, whence it continues its Courſe as far as S. *Terence*, fourteen Leagues beyond *Liſbon* in *Portugal*. The Buildings here are generally very good, of Brick, and ſome of the Streets regular, ſpacious and noble, but very dirty, nauſeous, and full of Filth. Their Churches are for the moſt Part very fine. The Palace of the *Almirante* of *Caſtile* is highly remarkable for its excellent Pictures, in the Collection whereof the *Spaniſh* Lords ſpare no Coſt; among the reſt I took Notice of one done by *Titian*, repreſenting *Ixion* embracing the Cloud; it was pawn'd to this Lord for five hundred Dubloons, much leſs than it was worth.

In the King's Summer-houſe, a little Way out of the Town, called *Buen Retiro*, I took Notice of many curious Pieces of Painting by *Titian*, *Raphael Urbin*, *Bordonna*, *Annibal*, and *Vandyke*, but has nothing elſe remarkable either within or without, being built only of Brick, except that in the Garden you ſee the Statue of

King *Philip* IV. on Horſeback, finely done in Braſs, placed on a Marble Pedeſtal. On the Canals are Pleaſure-Boats, and ſome Summer-houſes for the Muſicians to divert the King, whilſt he takes his Pleaſure in theſe Boats upon the Canals. At the Entrance of the outer Court are the King's Stables; that for the Saddle-horſes had at that Time about ſixty, choſen out of all Nations; in thoſe for the Coach-horſes were three Setts of Black, as many of light Grey, all of *Flanders* Breed, one of dark Grey, and two Setts of very fine Duns, beſides ſix Setts of Mules. Adjoining to theſe is the Armoury, a ſpacious handſome Room, fill'd with many curious Suits of Armour, belonging formerly to their Kings. Here they ſhew you divers Suits, once uſed by the great *Charles* V. with a Sword preſented him by the Pope; his Armour is eaſily diſtinguiſhed from others by our Lady's Image he always wore engraved on his Breaſt-piece; a large poliſh'd Steel Plate the ſaid Emperor uſed inſtead of a Looking-glaſs when he put on his Armour, and an eaſy Chair, in which he ſlept, eat, drank, and diſpatch'd Buſineſs when in the Camp; ſeveral other Suits of *Philip* II. *Philip* III. *Philip* IV. and among the reſt, one for the late King *Charles* II. though it is certain he never wore any; it is double gilt, and ſet with precious Stones: Here you ſee alſo the Armour of that warlike Cardinal *Ildefonſo*, and ſeveral Trophies and Colours taken from the *Turks*.

The outward Court of the Palace is a large Square, with Cloyſters on both Sides, the Stables and Armory fronting the Palace itſelf; it conſiſts of two Quadrangles, with Cloyſters both above and below; one of theſe Quadrangles is allotted for the King, the other for the Queen's Lodgings, but are not to be ſeen unleſs when the Court happens not to be there.

I paſſed through three or four indifferent Rooms (as far as they would let me go) to ſee the King at Dinner; the Dining Room was large, but indifferently furniſh'd, the Room before it was leſs, but cruſted over on the Walls with fine Jaſper and Marble. The King has always twelve Diſhes at Dinner, and eight at Supper, ſerv'd up in as many Silver Plates, and attended by as many Halberdiers, who make every one uncover as the Meat paſſes by. There is a glorious Appearance at Court every Day, as well of Coaches as a great Number of People; the Reaſon is, becauſe all the chief Courts of Juſtice, belonging to the ſeveral Provinces under the *Spaniſh* Dominion are kept in the Palace.

Many of the Streets of *Madrid* have Fountains, but ſuch as have nothing extraordinary in them. The *Placa Major*, where they keep their *Bull-feaſts*, is a noble Square. The *Prado* of S. *Hieronomo* is ſprinkled every Evening with Water out of the many Fountains placed there for the Conveniency of the Coaches that take the *Tour-a-la-mode* there. Croſs the Water the King has another Houſe, call'd *Caſa del Campo*, where he refreſhes himſelf ſometimes in the Heat of the Summer under the cool ſhady Walks, the chief Conveniency of this Seat.

13. From *Madrid* I took a Turn to *Alcola de Henares*, or *Compoſtella*, in Latin *Complutum*, the greateſt Univerſity (next to *Salamanca*) in *Spain*, founded by Cardinal *Ximenes*. The Buildings of the City itſelf are none of the beſt: The *Univerſity-College*, where all publick Exerciſes are kept, acknowledges the great Cardinal *Ildefonſo* for its Founder the other Colleges are, that of *Madre di Dios*, of *Malca*, the *Trilingue*, the King's College, that of *Mena*, of *Manrique*, of S. *Clement*, of *Lugo*, that of *Arragon*, of *Verdes*, of S. *Ambroſe*, of S. *Catharine*, of S. *Dennis*, that of the *Ruſſians*, and S. *George's* College, built and well endow'd by a *Portugueſe* Count for the Uſe of thirty *Iriſh* Students; but the Count dying before it was quite brought to Perfection, the King ſeiz'd on the greateſt part of the Revenues, leaving only a ſlender Allowance for the Maintenance of eight Students, who are obliged by Oath, after ſeven Years Stay in the College, to preach the Goſpel in ſome of the Northern Parts. There are beſides theſe the Colleges of S. *Peter* and S. *Paul*, and that of the Grammarians.

Their Convents of Monks are, thoſe of the Order of S. *Auſtin*, of S. *Thomas*, S. *Baſil*, S. *Bernard*, and that for the *Complutenſes*, the *Carmelites*, the *Oratory*, the *Jeſuites*, two of the *Trinitarians*, the *Diſcalceats*, two of the *Mercenaries*, the *Minims*, the *Agoniſants*, the *Auſtin Friars Diſcalceats*; the Convent of the Angels of S. *Diago*, S. *John de Dios*, and that of *Leon*, beſides ten Nunneries. I heard one of their Diſputations, and it ſeem'd very odd to me, that the Reſpondent, after having repeated the Opponent's Syllogiſm, did not anſwer in *Latin*, but in his native Tongue. Juſt before the high Altar in the Chapel of the *Univerſity College* ſtands a white Marble Tomb, containing the Body of the beforementioned Cardinal *Ildefonſo*, his Effigies in a cumbent Poſture, all excellently done, and encompaſſed with Braſs Grates; *Mahomet's* Lamp, and ſome *Turkiſh* Colours taken by him from the *Turks*, are hung up in the ſame Chapel.

The Cathedral here is a ſpacious and noble Fabrick, in which (among others) I took Notice of a white Marble Tomb with a *Latin* Inſcription, erected to the Memory of Dr. *J. Gonzales*.

This City ſtood formerly on the other Bank of the River, at the Foot of an high Hill, but being laid deſolate by the *Moors*, it was afterwards rebuilt in the Place where it now ſtands.

Over the Water, on an high Hill, in a little Chapel, they preſerve a red Croſs, which (they ſay) was ſent down from Heaven and put into the Hand of one of their Kings, as he lay encamped againſt the *Moors*, who were entirely routed. In the Cathedral they ſhew you a miraculous Stone, which formerly afforded ſuch Abundance of Oil, that they ſupplied all the Lamps of the Church with it; but thoſe who look'd after it making a Gain of it, by ſelling it for other Uſes, the Miracle ceaſed.

14. During my Stay at *Madrid*, I made another Excurſion to take a View of the *Eſcurial*, that Wonder of the World, built by King *Philip* II. purſuant to a Vow he made before the battle at St. *Quintin* againſt the *French*, and having obtain'd the Victory, he dedicated the *Convent* adjoining to the Palace to S. *Lawrence*, (it being his Day when the Battle was fought) and placed in it two hundred Friars of the Order of S. *Jerome*, under a Prior nominated by the King, and a College or Nurſery for young Students. It is ſeated about ſeven Leagues from *Madrid*, among the Mountains in the Kingdom of *Toledo*, having to the Eaſt and Weſt very delightful Plains watered with many Rivulets and Springs. Its Form is a large Square, each Side whereof is 2630 Foot long, with a fine Tower on each Corner; the Materials are a Sort of very hard Stone, ſpotted with grey; the greateſt Part of the Architecture is of the *Dorick* Order, with ſome of the *Ionick*, *Corinthian*, *Compoſite* and *Tuſcan*: The whole Fabrick is ſubdivided into four leſſer Squares, which have ſixteen Gates; the chief Entrance is on the Weſt Side, through three Gates, over which ſtand the Statues of S. *Lawrence*, the Patron of this Fabrick, and in the Middle the Arms of *Spain*.

The firſt Quadrangle is two hundred and thirty foot long, and a hundred and twenty ſix broad: The Front of this inner Court is adorn'd with ſix Pillars of the *Dorick* Order ſixty eight foot high, upon which are placed ſix Pedeſtals, and upon them as many Statues of the Kings of the old Teſtament, *viz. David*, *Solomon*, *Joſias*, *Ezekias*, *Jehoſhaphat* and *Manaſſes*, with Crowns of Braſs on their Heads, weighing a hundred Pound each, and the Scepters (of the ſame Metal) fifty Pound each; *David's* Harp, likewiſe of Braſs, weighs no leſs than three hundred ſeventy five Pounds. Under each of theſe Kings are the following Inſcriptions:

David	Solomon	Ezechias
Operis	*Templum*	*Mandata*
Exemplar	*Domino*	*Domo*
A Domino	*Ædificatum*	*Phaſe.*
Recepit.	*Dedicavit*	*Celebravit.*

Joſias	Jehoſaphat	Manaſſes
Volumen	*Lucis*	*Contri*
Legis	*Ablatis*	*tus*
Domini	*Legem*	*Altare*
Invenit.	*Propagavit.*	*D. Inſtau ravit.*

You enter into the *Church* by five Arches twenty eight Foot high and fourteen broad; the Length of the *Church* is three hundred ſixty four foot, and its Breadth two hundred and thirty; its whole Height, from the Floor to the Croſs on the Top of the *Cupola*, is three hundred and thirty foot; the Architecture is of the *Dorick* Order; it has ſix Iſles, two of which make a Croſs, the other four meeting into a Square; it has beſides this twenty four noble Arches, fifty large Windows, and thirty nine Galleries with Silk Curtains: There are here alſo no leſs than twelve noble Croſſes of Jaſper-ſtone, ſet over ſo many Chapels, and forty Altars, in their peculiar Chapels, beautified with excellent Pictures of the Saints.

The Floor of the Church is pav'd with grey and black Marble, and the Iſles are illuminated with a vaſt Number of large Silver Lamps; the Middle Iſle alone has fourteen Balconies of two Yards three Quarters in Length. The grand Chapel is magnificent beyond what can be imagined, its Length is twenty Foot, the Breadth fifty, and the Height an hundred; you aſcend into it by the middle Iſle, by twelve Steps of the fineſt Jaſper of Fifty three Foot long; the Chapel is parted from the Body of the Church by curiouſly wrought Rails of Braſs gilt; the Paintings are very excellent here, ſuitable to the reſt: It contains four Sorts of Architecture, which are ninety three Foot high, and forty nine broad, the firſt of the *Dorick* Order with ſix Pillars, the ſecond of the *Ionick* with as many, the third is *Corinthian*, and the fourth the *Compoſite*, with two Pillars ſuſtaining the Roof and Arches; they are all of the beſt Jaſper, curiouſly poliſh'd, the *Baſes* and *Capitols* of Braſs gilt: In one of the Pillars of the *Dorick* Order is the *Cuſtodia* or Place where the Sacrament is kept; on each Side is an Original of *Perugrino* an *Italian*, one repreſenting our Saviour's Birth, the other the Adoration of the three *Eaſtern* Kings; the four *Evangeliſts*, in Braſs gilt, ſtand on the Sides of the Pillars: In the *Ionick* Order is painted S. *Lawrence*'s Martyrdom, by the ſame *Perugrino:* On the Sides are two Originals, one of Chriſt tied to a Pillar to be ſcourg'd, the other repreſenting Chriſt bearing the Croſs, by *Frederico Zucchero*, and four Statues of Braſs of as many ancient Fathers of the Church: In the *Corinthian* Order you ſee the Aſſumption of our Lady, and on the Sides the Reſurrection, and the Deſcent of the Holy Ghoſt, all Originals, painted by the ſame Hand: Between two Pyramids are two brazen Statues of S. *Andrew*, and S. *James* the Patron of *Spain*; the *Compoſite* Order has but two Pillars, and in the Middle of them our Saviour on the Croſs, S. *Peter* and S. *Paul* on the Inſide, and the Virgin *Mary* and S. *John* on the Outſides: they are all four of Braſs, gilt, and thirteen Foot high each.

The *Cuſtodia* or Box wherein the Sacrament is kept, is of a round Figure, made of various Stones; its Height is ſixteen Foot, and its Diameter ſeven and a half, ſupported by eight Columns of *Diaſpare*, imitating the Rainbow in their various Colours; they ſay, that this Stone is not to be wrought but by Diamonds, and that the Workmanſhip of this coſt eighty thouſand Ducats. Over the *Cuſtodia* you ſee the Statues of the twelve Apoſtles, and at the Top the Reſurrection of our Saviour. You enter into this Chapel (called the *Segrario)* by two Doors of Jaſper, one on each Side, and aſcend to the Altar by ten Steps of the ſame Stone, which alſo furniſhes the Materials for the Floor; it has its Light through a curious Cryſtal Window on the Eaſt Side with Iron Bars gilt; it is beautified with Pictures repreſenting the Myſtery of the Euchariſt, with a Rainbow and many Angels over it. On the right Side of the Altar you ſee five Statues in Braſs upon their Knees, of the Emperor *Charles* V, his Daughter, and two of his Siſters; on the other Side are placed the Arms of *Spain*, with five Statues underneath correſponding to the others, *viz.* one of King *Philip* II. of his Queen *Anne*, of two of his former Wives, and of his Son *Charles*. Under this Altar is the *Pantheon* or Burial-place of the Kings of *Spain* of the *Auſtrian* Family, of which more hereafter. This Church has receiv'd much additional Beauty by the excellent Paintings of the ſacred Hiſtory by the rare Hand of *Luqueſto* an *Italian*.

15. Among their Relicks (of which, they ſay, they have ſomething of every Saint) they ſhew ſome of the Hair of our Saviour and the bleſſed Virgin, as alſo ſome of their wearing Apparel, ſome Thorns of his Crown, and one of the Nails wherewith he was nail'd to the Croſs, ſome Remnants of his purple Habit, divers Relicks of St. *John* the *Baptiſt*, of the Apoſtles, Martyrs, and the entire Body of S. *Lawrence*, the Head of S. *Jerome*, and the Heads of ſeveral other Saints. They tell you, that they have no leſs than five hundred and fifty *Pixes* and *Chalices* of Gold, Silver and Chryſtal, among which they ſhew one ſaid to have been offered to our Saviour by one of the three Eaſtern Kings. In the Middle of the Iſle is the *Choir*, fronting the Chapel, its Length is ninety ſix Feet, its Breadth fifty ſix, its Height forty eight, the Floor cover'd with the ſame Marble as the Church, and the Walls painted with the Martyrdom of S. *Laurence* and S. *Jerome*, the firſt by *Romulo*, the laſt by the juſt mention'd *Luqueſto*, who has alſo painted the Glories of Heaven on the Top: It is illuminated by a Chryſtal Branch of twenty eight Lights, the Preſent of the late King *Charles* II. and has two Orders of Seats curiouſly wrought with precious Wood: On each Side is an Organ, with croſs Galleries gilt, and in the Church are ſix more, one of Silver, the Gift of *Charles* the Fifth.

The Sacriſty is a hundred and eight Foot long, and thirty broad, the Pavement of Marble of divers Colours, and the Cieling and Walls painted with the beſt Originals (thirty four in Number) of ſacred Hiſtory, the Gift of *Philip* IV. by the greateſt Maſters in that Art, *viz. Titian*, *Raphael Urbin*, *Paulo Veroneſe*, *Tintoret*, *Andrea del Sarto*, *de Bordonon*, *Guido Bologneſe*, *Annibal*, *Caracche*, *Van Dike*, and others. Near the Sacriſty you deſcend by Steps of the beſt Marble into the *Pantheon*, containing the Sepulchres of the Kings of *Spain* of the *Auſtrian* Family, being eſteem'd the fineſt Piece of this kind in *Europe*. Over one of the Gates, (which are of Braſs gilt) underneath the Arms of *Spain*, you ſee upon a black Marble this Inſcription in golden Letters:

D. O. M.
Locus Sacer mortalitatis exuviis
Catholicorum Regum
A Reſtauratore Vitæ, cujus Aræ Max.
Auſtriaca adhuc pietate ſubjacent.
Optatam Diem expectantium.
Quam poſt ſuam ſedem ſibi & ſuis
Carolus Cæſarum Max. in votis habuit,
Philippus IIdus Regum Prudentiſſimus elegit,
Philippus IIItius verè pius inchoavit,
Philippus IVtus
Clementia, Conſtantia, Religione Magn. Auxit,
Ornavit, abſolvit; M. D. C. LIV.

The Arms of *Spain*, cut in precious Stone and richly gilt, are placed here between two Statues of Braſs gilt, one repreſenting the Fall of Man, the other the Hope of a Reſurrection. This Door brings you by the beforemention'd Steps of the fineſt Jaſper and Marble into the *Pantheon*, which is overcruſted with the ſame, and moſt artificially poliſhed; its Form is round without, and octagonal within, in each of the Squares being repoſited the Urns for the Royal Bodies, four in each Square; there were then in all twenty ſix of theſe Urns, of grey Marble, ſupported by four Lion's Paws of Braſs gilt; of the ſame Metal there is an oval Figure in the middle of each of theſe Urns, containing the Names of ſuch royal Perſons as are interr'd there, in black Letters. In the Square fronting the Door ſtands the Altar, and upon it a large Croſs of Braſs gilt, fixed within another of black Marble, of which alſo the whole Altar is compos'd, except that it has ſome curious Ornaments of the choiceſt *Perphyry:* On each Side of the ſaid Croſs ſtands a Pillar of green *Genoa* Marble, with braſs Baſes and Capitols gilt. On the Goſpel-ſide of the Altar lie inter'd the Bodies of *Charles* V. *Philip* II. *Philip* III. and *Philip* IV. and on the other Side ſuch of their Queens as brought them forth Iſſue, ſuch as die without being not admitted to be buried here, but in another Sepulchre allotted for the Branches of the Royal Family. The *Pantheon* is enlightened by a curious Branch of Braſs gilt, with twenty four Lights; the Floor is cover'd with the ſame Stone as the Walls, and wrought into the Figure of Stars.

The Convent has no fewer than five Cloyſters, the biggeſt being no leſs than eight hundred Foot ſquare, painted all about with the Life, Death, Reſurrection and Aſcenſion of our Saviour. The old Chapel affords three excellent Pieces, that of St. *Lawrence* on the Gridiron in the Middle, and on both Sides the Offering of the three Eaſtern Kings, and Chriſt's Sepulchre, both by *Titian*, beſides divers other Originals of ſacred Hiſtory of the beſt Maſters: They boaſt here of one of the Innocents Bodies entire, of one of the Waterpots in which Chriſt turn'd Water into Wine at the Wedding of *Canaan*, and of one of the Bars of the Gridiron on which St. *Lawrence* was broil'd, but theſe are not to be ſeen by Hereticks. In the Refectory you ſee a celebrated Piece, by *Titian*, of the Lord's Supper, brought hither from *England* during the Exile of King *Charles* II. and pawn'd for 15,000*l.* Sterling.

I had no Opportunity of ſeeing the Royal Palace, which is not very large, and was told it contain'd little of Moment except the Paintings; but the Library muſt be own'd a noble lofty Structure, two hundred Foot long and thirty ſix high, the Stalls of the Books (which are all letter'd on the Back) being of Cedar and other precious foreign Woods: It has ſeven Pillars of the *Dorick* Order, the Floor is cover'd with white and grey Marble, and the Ceiling with curious Paintings repreſenting the Arts and Sciences, and the moſt celebrated Authors, by *Perugrino*; but thoſe Hiſtories of Arts and Sciences you ſee under the Corniſhes, are of the excellent Hand of *Bartholomew Carducho.* In the Middle of the ſame Room ſtand ſeven Tables of Jaſper and Marble, and two of *Porphyry*, with Globes and Spheres placed upon them. They preſerve alſo ſome ancient Medals and Writings on the Bark of Trees; their moſt valuable Manuſcripts are, *De Baptiſmo Puerorum* of St. *Auſtin*'s own Writing, a Piece of St. *Chryſoſtom*, *Apocalypſis de Sancto Amadeo*, four Books writ by St. *Thereſa*, a Letter of St. *Vincent*, the Original of St. *Lewis Beltram* of the Conception of the Virgin *Mary*, with divers other Pieces of St. *Gregory*, St. *Anaſtaſe*, and St. *Chryſoſtom*.

The moſt excellent Paintings on the Ceiling of the Church, and over the great Stairs, by that great modern Artiſt *Luca Giordano* a *Neapolitan*, and but lately finiſh'd at the late King's Expence, are no ſmall Addition to the Beauty and Glory of this ſtupenduous Fabrick, which I was told contain'd, with every Thing belonging to it, above thirty-ſix Leagues in Circuit; certain it is that there belong to this Structure fifteen Cloyſters, eleven Courts, twenty-five Fountains, thirteen Statues of Stone, and thirty eight of Braſs gilt; the Number of original and other choice Pictures is computed at 1602, beſides 540 more on the Walls; the Copies of Landſkips, Fruits, &c. are not to be number'd: It has beſides this nine *Refectories*, five *Infirmaries*, two fine *Apartments* for the Reception of Strangers, and nine *Kitchens*; it was twenty-four Years before it was finiſhed, and coſt King *Philip* II. ſix Millions wanting only two thouſand Ducats, unto which adding the Charge of the *Pantheon* and other additional Buildings, and the Reparations made after the Fire happen'd in 1671, the whole Charge has been computed at no leſs than eight Millions of Ducats. I have nothing to add to the Deſcription of this wonderful Piece, except the curious Walk of double Rows of Elm-trees, leading from the little Town below to this Royal Foundation.

17. I left *Madrid*, *Dec.* 3, 1694, and lodg'd the firſt Night at *Valdemore*, whence I turn'd ſomewhat out of the Road the next Day to go to *Aranjeuez*, moved with a Curioſity to view the King's Palace there, the Situation of which among Woodlands (a Rarity ſcarce ever to be met with in this Country) put me in mind of my native Country *England*. For the reſt, the Houſe is but ordinary for a Royal Palace, the Gardens and Walks not very large, yet better contriv'd than any I ever ſaw either in *Spain* or *Portugal*; here are many excellent *Statues* and *Fountains*, brought hither from all Parts by the Emperor *Charles* V. and thoſe that are more modern are very good ones; the great Number of theſe *Statues*, of Braſs and Marble, together with the pleaſant *Fountains* all along the ſhady Walks and Arbours of large Elms, and ſome Oak and Aſh, (great Rarities here as well as in *Portugal)* render this Place very delightful, its Situation being between two Hills, upon the very Banks of the River *Tagus*, from whence ſome Walks run up the Hills for a League together, yet the Air is eſteemed not extraordinary healthful. Here the King keeps his beſt Male Aſſes for Breeding.

I lodged the next Night at *Ocanno*, a Place noted for the beſt *Caſtile-Soap*, and the following Night at *Corral de Almagner*. As the Road betwixt *Madrid* and *Alicant* is paſſably good for a Coach, ſo the Country is generally fertile in Corn, Oil and Wines, and the rocky Parts produce Abundance of Roſemary, Thyme, and ſuch-like Sweet herbs, wherewith they feed their Sheep and Goats. The next Place I came to was *Albarzete*, noted for good Knives, Daggers, and Sciſſars; notwithſtanding this the extream Poverty of the Country-People, and conſequently the ill Accommodation one meets with upon the Road, (where you are oftentimes deſtitute of Provender for your Horſes, a Bed, nay, Bread and Wine) renders Travelling very difficult and tedious in *Spain*; however, I got at laſt ſafe to *Alicant*, the 13th of *December*, after a Journey of ten Days in a Calaſh.

18. The Town of *Alicant* is pleaſantly ſeated betwixt Hills along the Sea ſide, where there is a continual Paſſage of Ships bound to or from the *Mediterranean*; it ſuffered much in the late War with the *French*, who with three Bomb-Veſſels threw in about 4700 Bombs, and deſtroy'd ſix hundred Houſes; they told it as a great Miracle that above three hundred of the *French* Bombs fell upon the Cathedral dedicated to St. *Nicholas*, of which one only pierced through the Roof, whereas the whole Miracle was only to be attributed to the ſtrong *Cupola*'s and *Arches* which cover it. The *French* bombarded the Town with incredible Dexterity, throwing their Bombs even over the Caſtle, that ſtands a good Way above the Town, upon ſo high an Hill, that I had enough to do to get up to it, though when I came there I found nothing worth the Trouble I had taken, except a fine Proſpect, the whole *Spaniſh* Garriſon conſiſting of only five or ſix Guards, and perhaps as many Guns. *Alicant* is of no Strength, and the People ſo unfit to defend it, that at the Time of the *French* Bombardment they all retir'd into the Mountains, not excepting the Officers themſelves, and had certainly deſerted the Place, had not one Mr. *Newland*, an *Engliſh* Merchant, ply'd the *French* with two Guns from the Mole, and by his Example encourag'd ſome of them not to leave the Place to the *French*.

19. The Gentlemen here of *Valentia*, both in their Dreſs and Actions, much more imitate the *French* than the *Caſtilians*; they are of a haſty, vain and baſe Temper, and ſo bigotted to their fooliſh Niceties, or *Spaniſh Punctilio*'s, that upon a very ſlender Occaſion they will either murther one another themſelves, or hire others to do it, there being many of that Sort of Mercenaries in this Country, who will ſacrifice any man for a few *Pieces of Eight*, which they commonly perform by Shooting. Theſe Murthers produce ſometimes no ſmall Diſorders, the Friends of the murder'd Party thinking themſelves oblig'd to revenge his Death, go in ſtrong Parties, ſome a hundred in a Body, arm'd each with five Guns, (one Fuſee, and four leſſer ones in the Girdle) and ſo going into the Field, ſurprize one another wherever they can, it being their Principle not to attack their Enemy but upon a manifeſt Advantage; I was told there were

at that Time two ſuch Parties in the Mountains of forty on a Side each, and I was credibly informed, that not long ago two ſuch like Fellows were executed at *Valentia*, who confeſs'd that one of them had murthered thirty-three Perſons, and the other no leſs than ſeventy-ſeven. The Government of the Kingdom of *Valentia* is adminiſtred by a *Viceroy*, but the Town of *Alicant* has its peculiar *Governor*, who commands alſo the Garriſon when they have any, all their ſtanding Forces thereabouts conſiſting in a few Troops of Horſe, and ſome Foot Militia, for the Defence of the Coaſt.

The City contains betwixt thirty and forty thouſand Communicants; their Civil Adminiſtration is by a Juſtice, like our Mayors, and ſome Aldermen; it has ſix Convents of religious Men, *viz.* the *Jeſuites*, *Dominicans*, *Auſtin Friers*, *Carmelites*, *Franciſcans*, and *Capuchins*; two Nunneries, the *Monges de la Sangue* and *Capuchins*; and as many Pariſh Churches, S. *Nicholas* and S. *Mary*'s. For the reſt, *Spain* is at preſent in a very low Condition, through the weak adminiſtration of the Queen-Mother, the King's Want of Education, and the Feuds among the *Grandees*, which has depriv'd them of all their former Strength both by Sea and Land, for Want of Money, Proviſions, and all other Things requiſite for the Maintenance of a Fleet and Army; and what is worſe, without any future Proſpect of having theſe Thing redreſs'd. It is true, the King's Revenues are very great, but being anticipated, little of them comes into the King's Coffers; for the *Spaniſh Indies* are computed to amount to ten Millions a Year in their Revenues to the Crown, and their Seaport Towns muſt needs bring in conſiderable Cuſtoms, were it not that the Officers are both remiſs and corrupted in their Places.

20. About half a League from *Alicant* is a famous Convent of Nuns, whither there is a great Reſort of Pilgrims, to pay their Devotions to the *Sancta Faz* or *Holy Face* kept in this Nunnery; among theſe are eſpecially many Seamen, who when they leave *Alicant*, frequently make a Vow of performing their Devotions here after their ſafe Return, which they perform barefooted after a proſperous Voyage. The Story of this *Holy Face* runs thus:

Our Saviour going to his Crucifixion, a certain Woman call'd *Veronica*, who was juſt then moulding Dough, and had a Napkin girt about her, coming out of her Houſe at the Noiſe of the People, and ſeeing our Saviour's Face all dropping with Blood and Sweat, took the folded Napkin and ſo wiped his Face, the Impreſſion whereof remained upon the three Folds; theſe the *Church* has preſerv'd as holy Relicks, one whereof (they ſay) is at St. *Peter*'s at *Rome*, the other in a Convent near *Malaga*, and the third here, which (they ſay) came hither over Sea, and landing in *Valentia*, upon the Confines of two Pariſhes, a great Conteſt aroſe which of them it belong'd to; to decide this Difference it was agreed to blind a certain Perſon, who ſhould walk for ſome time with the *Sancta Faz* thereabouts, and that thoſe ſhould be Maſters of it in whoſe Precinct he happened to drop it; which was done accordingly, and it happening to fall in this Place, a *Convent* and *Church* was founded for its Preſervation. Its Virtue was the firſt Time experienced in a great Drought, when being carried in Proceſſion, it rain'd immediately, and that in great Abundance. By Permiſſion of one of the Fathers I had liberty given me to look upon it a ſecond time, as near as the Glaſs in which it is encloſ'd would allow of, and found it rather to reſemble the Face of a Child, than a Man of that Age as our bleſſed Saviour, at the Time of his Suffering, which made me look upon the whole as fabulous; and I remember, a certain *Italian* Painter ſeeing it, did not ſtick to ſay, *It was the worſt Daubing he ever ſaw.* Once a Year, *viz.* the 17th of *March*, there is a great Feaſt celebrated at *Alicant* in Memory of this *Holy Face*, when 'tis brought into the City, upon which Occaſion great Rejoicings are to be ſeen every where, and the Night generally concludes with Bonefires and a fine Firework. During my Stay at *Alicant*, I had the Opportunity of ſeeing divers of their Proceſſions, and among the reſt, that on *Corpus Chriſti Day*, one of the moſt celebrated in thoſe Parts: The firſt Pageant repreſented the Hiſtory of *Adam* and *Eve*, how the Serpent entic'd her, how they eat the forbidden Fruit, and were threatned by the Angel with a naked Sword: The next, *Abraham*'s Sacrifice of his Son *Iſaac*, acted by living Perſons, who (as we were told) were Fiſhermens Children, and had their Leſſons taught by the Prieſts, and their Pay from the Town for their acting. Theſe Pageants are made upon Wagons, with Boards laid upon them, both the Stages and Actors being thus drawn by Men along the Streets; theſe were followed by certain Giants, to perſonate the *Gentiles*, after whom came a Serpent repreſenting Temptation, and after this a Dragon with his Mouth wide open, to repreſent Hunger: Next to theſe came the ſeveral Companies of Tradeſmen with their Banners; then the *Capuchins*, *Carmelites*, *Auſtin Friars*, and *Franciſcans*, each carrying the Image of the Founder of their Order, and that of the Virgin *Mary*, ſplendidly attir'd; then followed ſome Morris-dancers, and after them ſome Churchmen of Note, and a few little Children dreſs'd up like Angels, ſtrewing Flowers before the Biſhop, who walk'd under a Canopy, carrying the Hoſt.

21. We have in this Section a very good Supplement to the laſt; for the Author, who travelled only for his Pleaſure, and by Way of Diverſion from the Fatigues of Buſineſs, enters into no deep political Speculations, but keeps pretty much to the Surface of Things, and tells us in what Light they appeared to him, at the Time of his Paſſage. What he ſays of *Portugal* is certainly very juſt, and we have good Reaſon to believe that Things are not much mended there at this Day. Yet this Country is juſtly eſteemed the fineſt Part of *Spain*, if it be conſidered as having belonged to it, both in earlier Times, and little more than one hundred Years ago. It lies very conveniently for Health, for Pleaſure and Commerce, along the Sea-ſide, ſeveral large navigable Rivers running through, and emptying themſelves into the Ocean in its ſeveral Provinces, and thereby making many and ſome of them excellent Ports, at the ſame Time that the Trade through the Country is by the ſame Means much facilitated.

The Kingdom of *Portugal* may boaſt of as fine a Climate, as almoſt any Country in *Europe*; for though from its Southern Situation it is very hot, yet this is ſo tempered by Breezes from the Sea, as not only to become very tolerable, but alſo very pleaſant. It may alſo boaſt of as much Variety as almoſt any Country; for the Northern Provinces are mountainous, and this renders them cool and wholeſome, though leſs fruitful than the plain and flat Country about *Liſbon*; and here, as well as in *Spain*, it has been remarked that theſe Provinces are more populous and better cultivated than where the Soil is more indulgent, which renders the People vicious and lazy, conſequently indigent, and in a wretched Condition. In the former Part of this Volume we have treated ſo largely of *Brazil*, and in our firſt Volume ſaid ſo much of the Riſe and Progreſs of the Naval Power of *Portugal*, the Empire ſhe once had in the *Eaſt-Indies*, the Manner in which it declined, and the very low State to which it is at preſent reduced, that there is no Neceſſity of adding any Thing on thoſe Subjects here. But it may not be amiſs to obſerve, that, how paradoxical ſoever it may ſeem, yet there is good Reaſon to doubt, whether the Diamond and Gold Mines that have been diſcovered of late Years in *Brazil*, have been ſo very advantageous to this Country as is generally ſuppoſed.

To explain this Notion it will be ſufficient to hint to the Reader, that, independant of its Plantations, *Portugal* is very far from being a poor Country, or deſtitute of the Means of carrying on a very extenſive Commerce. The Proportion in Extent between the Kingdoms of *Spain* and *Portugal* is, upon a fair Computation, thought to be as ſix to one, and yet it is believed that the Commodities and Manufactures are very nearly equal, that is to ſay, though *Portugal* is but a ſixth Part as big as *Spain*, yet the Produce of the former is equal to that of the latter. This conſiſts chiefly in Wool, Wine, Oil, Oranges, Lemons, Raiſins, Figs, and other kinds of Fruit, with various other Commodities of leſs Value. There is likewiſe in *Portugal* a very rich Silver Mine, by good Judges eſteemed the beſt in *Europe*, from whence there has been ſometimes drawn three hundred thouſand Pounds Sterling a Year. Yet with all theſe Advantages, and though there appears to be a vaſt Trade at *Liſbon*, *Porto*, and other Places, the Advantages which the Inhabitants derive therefrom, are very far from being ſo conſiderable as might be expected. The great, indeed almoſt the ſole Cauſe of this is, their having little or no Turn to Trade themſelves; ſo that, as in *Spain*, the whole is in a good Manner managed by Foreigners.

Immediately after the Acceſſion of the Houſe of *Braganca* to the Throne, it fell almoſt intirely into the Hands of the *French*, and what little eſcaped them, was managed by the *Italians*. But the Crown of *France* affecting to treat the late King of *Portugal* with great Haughtineſs, that Prince, who was a Man of Spirit and of Parts, took ſuch Meaſures as threw the Commerce of his Kingdom into other Hands, and upon the *French* King's prohibiting *Brazil* Tobacco and Sugar, he prohibited, in his Turn, moſt of the *French* Commodities and Manufactures. About the ſame Time he ſet up Silk Looms in *Liſbon*, and other Places, which deſtroyed the Trade of the *Genoeſe*, *Venetians* and *Florentines*. The *Dutch* became then Maſters of this Trade, in which alſo we had ſome ſmall Share; which increaſing by Degrees, and the late War about the *Spaniſh* Succeſſion giving fair Occaſion to a cloſer Correſpondence between the two Nations, we ſoon rivall'd, and at laſt ſurpaſſed the *Dutch*.

But how this Trade ſtands at preſent, is a Queſtion I am not well able to determine: Certain it is, that we ſeem to have ſtill a Superiority over all other Nations, and employ in it a great Number of Ships that export vaſt Quantities of our own Manufactures. On the other Hand, we import alſo prodigious Quantities of theirs; and though from Time to Time conſiderable Sums in Gold come over from thence, which looks as if the Balance was ſtill greatly in our Favour; yet there want not ſome Suſpicions, that a conſiderable Part of this Treaſure ariſes not from the *Portugueſe* Trade, but from the Balance of our Trade with *Holland*, which is paid us in *Portugueſe* Gold by the *Dutch*; and, if there be any Truth in this, it alters the Caſe greatly. But however, let that Matter be as it will, two very important Deductions may be made from thence; the firſt is, that from their not carrying on Trade in their own Bottoms, the *Portugueſe* are immenſe Loſers notwithſtanding the vaſt Cargoes they bring Home annually from *Brazil*; the other is, that the *Britiſh* Nation are great Gainers by the Balance of their Trade, whether that Balance ariſes from the *Dutch* or the *Portugueſe*; ſo that on the Whole we ſee, that the ſureſt Mark of a flouriſhing Trade is the Number of Ships employed; for while Navigation increaſes, Trade increaſes; and, whenever it declines, Commerce muſt decline with it.

Our Author's Reflections upon what he ſaw in his Travels through *Spain*, are very pertinent and natural; and he appears to have repreſented the Country, the Towns and the Inhabitants, with the utmoſt Candour and Veracity. It is certain, that he ſaw *Spain* in the very worſt State ſhe ever was, or indeed any Country could be in, which was towards the Cloſe of the Reign of *Charles* II. when her Councils were weak and diſtracted, her Treaſures exhauſted, her People impoveriſhed and diſtreſſed, her Armies conſumed, and her Armada's, from being the Terror, become the Contempt of all *Europe*. It will appear very ſtrange for a Man to advance it ſeriouſly; yet I muſt confeſs it is my own Opinion, that the War, occaſioned by the *Spaniſh* Succeſſion, notwithſtanding all the Inconveniencies that attended it, rather helped than hurt the *Spaniſh* Affairs. The Nation, at the Time of the Death of *Charles* II. was in a Kind of Lethargy; and though this Accident threw her into violent Convulſions; yet even theſe were Signs of Life, and in that Light favourable Symptoms. Had there been a Reign or two more of thoſe ſleepy Monarchs, their vaſt Dominions in *Europe*, *Aſia* and *America* muſt have been broke to Pieces; whereas, notwithſtanding the War, they remain tolerably whole.

It is indeed true, that their Country became the Scene of Action, which it could not be without ſuffering from it; but, on the other Hand, this very Circumſtance brought great Sums of Money into it, and kept a great Part of their *American* Treaſure at Home, Things unknown in *Spain* for two Ages before. It may, indeed, be ſaid, and ſaid with Truth, that a very large Part of the Treaſure that arrived from *New Spain*, came into the *French* King's Coffers: But even this was no Detriment to the *Spaniards*, if the Thing be conſider'd in its true Light; for, in the firſt Place, none of theſe Treaſures could have been received, if they had not been eſcorted by *French* Ships of War; and, in the next, *France* employ'd thoſe Sums, and more, in Supporting the Intereſt of *Spain*; ſo that the Nation loſt nothing thereby, but was rather helped.

What proves to a Demonſtration, that this is not merely a Conjecture, or a political Notion plauſibly defended is this, that after the War was entirely over, and the late King *Philip* fixed upon the Throne, both his Armies and his Fleets were in a much better Condition than *Spain* had ſeen any for a whole Age before; which enabled him to attempt, and would have enabled him to have reunited *Sicily* and *Sardinia* to his Crown, if the *Britiſh* Fleet had not interpoſed and cruſhed his new-raiſed Naval Force in the *Streights of Meſſina*. A very great Stroke this was eſteemed, by thoſe who conſider'd it barely as a Victory at Sea; but to Men of another Caſt of Mind, who meditate the Revolutions of Power, and the Mutations of Empire, it appeared in a much ſtronger Light, as it fruſtrated the Schemes of Cardinal *Alberoni*, and compelled his Maſter to part with a Miniſter, whoſe Genius was capable of reſtoring the Forces of that Monarchy, and rendering *Spain* almoſt as terrible under the Government of the peaceable and pious *Philip* V. as it had been under the ambitious and politick *Phillip* II.

Since that Time *Spain* has been govern'd by a Kind of a ſecond Rate *Genii*, under the Influence of a female Spirit, reſtleſs, ambitious, and at the ſame Time avaritious and intriguing; ſo that the People are almoſt in their old Condition; and while they are flatter'd with the Hopes of conquering Principalities Abroad, and giving Laws to *Europe*, they are ſinking under the Weight of a weak and arbitrary Government, into Slavery, Poverty, and Diſtreſs at Home. If any Thing can ſave them, it muſt be a Peace, when King *Ferdinand* the Sixth will find himſelf in a Condition to act according to his own Inclinations, which are ſaid to be entirely *Spaniſh*; and that his Deſire of ſettling the Infant Don *Philip* in *Italy*, ariſes chiefly from their being a Sea between that Country and *Spain*.

SECTION III.

The TRAVELS of *Philip Skippon*, Eſq; afterwards Sir *Philip Skippon*, and the Reverend Mr. *John Ray*, through the beſt Part of the Kingdom of *France*; interſperſed with a great Variety of hiſtorical, political, philoſophical and mechanical Remarks and Obſervations.

Collected from the JOURNALS *of thoſe ingenious Perſons.*

1. *An Introductory Account of Sir* Philip Skippon, *and of the Subject of this Section. Their Departure from the Territories of* Geneva, *and their Arrival in thoſe of* France. 2. *An elegant and exact Deſcription of the City of* Lyons, *particularly of the Cathedral Church of St.* John, *the famous Clock there, and the Cabinet of Curioſities belonging to Mr.* Servier. 3. *Their Journey to and Deſcription of the ancient City of* Grenoble, *and of the moſt remarkable Things therein.* 4. *A very curious and circumſtantial Relation of the* Grand Chartreuſe, *and of the Manner in which the Monks live there.* 5. *Their Journey from* Grenoble *to* Orange, *with an Account of the principal Places they met with, and of the Face of the Country between thoſe two Cities.* 6. *The City of* Orange *particularly deſcribed, in the State it was then in under the Minority of the late King* William *the Third.* 7. *Their Journey from* Orange *to* Avignon: *A Deſcription of this laſt-mentioned City, and of the moſt remarkable Edifices therein.* 8. *The Country between* Avignon *and* Niſmes *deſcribed. A full Account of this City, and of the Antiquities there.* 9. *An Account of the City of* Montpelier, *and the Obſervations of our Travellers there. The Hiſtory of the Manufacture of Verdigreaſe. The Art of Bleeching Wax.* 10. *A particular Deſcription of the* Confectio Alkermes. *The Method of making Oil from Olives. The Burning Fountain at* Peroul. 11. *Their Excurſion from* Montpelier *to* Frontignan. *The Method of making Raiſins of the Sun, and other Raiſins.* 12. *Their* Travels *along the Sea Coaſt, with an Account of what they obſerved moſt remarkable in their Journey.* 13. *Another Journey of theirs, with ſome Account of the great Cities of* Marſeilles *and* Toulon. *The Method of Planting and Curing Capers.* 14. *Their Journey from* Lyons *to* Paris, *and a ſhort Account of the principal Places they paſſed through upon the Road.* 15. *A Deſcription of* Paris *by Mr.* Skippon, *interſperſed with many curious Particulars.* 16. *Remarks upon the* French *Nation, and a particular Account of a very ſingular Tranſaction during the Protectorate of* Oliver Cromwell. 17. *The State and Revenue of the Clergy of* France. 18. *Mr.* Skippon's *Return to* England. 19. *Obſervations upon the foregoing Section.*

1. WE are now, according to our Promiſe, to reſume the Thread of Mr. *Ray*'s Travels, who, in his Return from *Italy*, paſſed through the Kingdom of *France*; but for the Reaſons which have been already aſſigned, his Accounts of that Country are far leſs copious and diſtinct than thoſe he has left us of *Italy:* Yet this is in ſome Meaſure ſupplied by the Journal of *Philip Skippon*, Eſq; afterwards Sir *Philip Skippon*, whom we have mentioned before, and who was the Companion of Mr. *Ray*, from the Time they left *England* till this Gentleman left him, for the Sake of returning more ſpeedily to *England*, at *Paris*. Sir *Philip Skippon* was a Gentleman of great Parts and Learning, as appears from the excellent Journal of his Travels, which being drawn up with regard to his private Uſe only, and not for the publick View, is an unexceptionable Teſtimony of his Candour, good Senſe, and Impartiality. He was a Man of an ample Fortune, and travelled purely for the Sake of Improvement and Amuſement. He was therefore extremely inquiſitive, where-ever he came, into all that might furniſh him with Knowledge or Pleaſure; and he kept ſo exact an Account of every Thing he ſaw, and deſigned with his own Hand, ſo accurately, every Engine or Machine, that he thought worthy taking Notice of, that one cannot help wondering, conſidering the Pains he took in viewing Things, how he found Time to deſcribe them ſo carefully, and to accompany them with his Reflections.

At his Return Home, he led a retired, or at leaſt a ſtudious Life, as appears from the Books which compoſed his Library, and are now diſperſed. In the Title Page of each of them is his Name, and the Year when they were bought or given to him, written in a very fair *Italian* Hand; and many of them have very learned Notes, judicious Corrections, or pertinent and pleaſing Remarks upon their Margins. Thus much I thought due to the Memory of this Gentleman, as having ſeen many of thoſe Books, and poſſeſs'd ſome. We will now come to the proper Buſineſs of the Section, and open it from his Journal, which is much more exact and full than what Mr. *Ray* thought fit to publiſh; though nothing can be better than the Accounts of the latter, which he thought proper for publick View; and therefore we have brought both into this Section for the Reader's Conveniency, in their Order of Time; ſo that they are intermixed but not blended, that it may be ſeen to which of theſe Authors the Accounts, Remarks and Obſervations belong.

Wedneſday, July 19, (ſays Mr. *Skippon*) we hired Horſes of the *Chaſſe Marin*, for four Crowns apiece, (our Diet included) and allowed for the Carriage of our Portmanteau's two Sols for every four Pounds Weight, above what was allow'd, and left *Geneva* about Eleven of the Clock, then paſſed over *Pont d' Arve*, where there is a *Geneva* Guard, and over the Bridge is the Duke of *Savoy*'s Guard, that ſearches for Salt, *&c.* We went through two or three Villages belonging to *Geneva*, and, after two or three Leagues riding, ferried over the *Roſne*, paying five Sols a Man. Half a League further we came through *Coulonge*, a Village where the *French* King's Officers ſearch Paſſengers, Portmanteaus, *&c.* Half a League from thence we rode in a narrow Paſſage between the Mountains, divided by the *Roſne* on the left Hand of us, and paſſing through a ſmall Port called *Cluſa*, (where ſix or ſeven *French* Soldiers keep Guard) were examined whence we came, *&c.* About two Leagues thence we obſerved the Place where the River *Rhoſne*, in the Winter-time, runs under great Stones for about half a Stone's Caſt, after it paſſed through a Channel three or four Yards broad. Half a League farther brought us to our Lodging at *Chaſtillon*.

The 20th, We ſet forward about Four in the Morning, and rode thro' mountainous Ways, paſſing by a Fall of Water called *Piſſe Vache*, which *Golnitz*, in his Itinerary, ſays, runs under Ground into a Lake called *la Bougie*, that was on our left Hand. *La Bougie* is divided into two Parts by a Wall; one Part is marſhy, belonging to St. *Germain*, the other belongs to *Nantua*, filled with Water and ſtor'd with Fiſh. We travelled through *Nantua*, a long Town with *Portici* like thoſe of the *Rue-bas* at *Geneva*; it is ſeated at the End of the Lake we had on our Left Hand. This Place is noted for good Needles. It is three Leagues from *Chaſtillon*. Three Leagues farther we baited at *Cerdon*, having rode between Box-hedges and a hilly Way, making a ſteep Deſcent juſt before we arrived at *Cerdon*, where our *Chaſſe Marin* changed his Horſes. After Dinner, we aſcended a rocky Hill, and then enter'd a Plain which continues to *Lyons*. Two Leagues from *Cerdon* we ferried over the River *D'Aine*, and three Leagues thence lodged at *Verbonne*. This Day we took Notice of the Shepherds Huts made of Straw, and placed on little Carts.

2. On the 21ſt, at Break of Day, we mounted, and, after two Leagues riding, came through a walled Place, and three Leagues thence rode through hilly Ways till we came to *Lyons*, where we firſt went through a Suburb full of Victualling-houſes. At the Gate we received a Billet to lodge in the Town, then made a ſteep Deſcent in a well paved Way, and after weighing of our Portmanteau's, we took up our Lodging at the *Eſcu d'Or*, or Crown of *France*. This is a very fair City, Part ſituated at the Meeting of the *Soane* and *Rhoſne*, and Part on the other Side of the *Soane*; the Houſes are high and well built, only defaced by the Raggedneſs of their Paper Windows. There is a great Commerce carried on here, and large Shops full of all Sorts of Wares.

We ſtaid at *Lyons* till the 25th of *July*, and remarked theſe Particulars: The *Maiſon de la Ville* is a very handſome Fabrick, having a fair ſquare Piazza before it with a large Fountain. On one Side of the Piazza is a ſtately Front erecting. The Rooms we ſaw here have theſe Names; *la Chambre Conſulaire*, where the Provoſt and four Eſchevins ſit; *la Chambre de la Converſation*, where the Merchants ſit. In the Great Hall are the Pictures of the fourteen *Lewis's*, Kings of *France*; the Roof painted. Another Hall with the Pictures of the Eſchevins; a little Chamber for Banquets, *&c.* S. *Nicy* is a pretty Church. *La Charitie* is the Hoſpital, a great Building. *N. Dame de Foutrier* is on the other Side the *Soane*, built on the higheſt Ground, where there is a ſmall Pyramid erected to the Virgin *Mary*. Here we had a full Proſpect of the City. Before another is a ſmall Pyramid, and thereon is inſcribed the Name of God, and Unity, and Trinity, in ſeveral Languages.

Without St. *Juſt*'s Gate is a large Suburb; the *Carmelites*, that go barefooted, have a pleaſant Convent with large Gardens, whence a pleaſant View of the Town. The Friars in this City are very importunate Beggars, coming into Strangers Chambers. The Feaſt of St. *James* was kept while we were here, and we ſaw this Proceſſion. Firſt went a great Banner, then a great Cake or Loaf, (called *Pain Benedit*) upon a Fellow's Head; after that two Pipes and a little Drum, which made ſome Muſick in the Interval between the Friars Singing. *Belle Cour*, is a ſpacious wide Space, where there is a Mall and a pleaſant Walk of Trees by it. Mr. *Palmer*, Brother to the Earl of *Caſtlemain*, was at this Time in *Lyons*, at the Academy Royal, and who lately turned Papiſt. The Proteſtants are about 2000 Families in this City, and have a Temple at St. *Romain*, two Leagues up the *Soane*. Monſieur *Moze*, an Apothecary and a Proteſtant, was very civil to us.

The Monument of the two Lovers is on the other Side the *Soane*; it ſeems to have been ſome *Roman* Building, and is built of great Stones. Two Forts, *la Pierre Seize* on the *Soane* Side; for St. *Jean* is on the ſame Side with the Body of the City. The *Soane* is a very ſlow River, and there are croſs it one Stone and two wooden Bridges. On one of them a Cuſtomer demands a Liard of every one that paſſes over. St. *Jean* is the Cathedral, which is large, and remarkable for a Clock with Motions like that at *Straſburgh*; every Hour a Cock on the Top claps his Wings twice, and crows twice; after that an Angel comes out of a Door and ſalutes the Virgin *Mary*, and at the ſame Time the Holy Ghoſt deſcends, and God the Father gives the Benediction. The Minute Motion hath an oval Circle, and yet the Handle or Index always touches the Circumference. Invented by M. *Servier*.

We had good Luck in ſeeing this M. *Servier*'s Cabinet, his Humour being very difficult. He was a Soldier in his younger Days; but about twenty-two Years ago he retired hither, and invented many ingenious Pieces of Clock-work, Machines of Water, *&c.* which he hath deſcribed with his Pen, and bound them up together in a thick Folio, and made the Models of them in Wood with his own Hand. Theſe Things we took Notice of, which we had not before ſeen in *Italy* and *Germany*. The Hand of a Minute Watch moved every Time the Ball ſprings up; in a certain Engine a Lizard creeping up a perpendicular Rule, ſhews the Hour of the Day. A Mouſe creeping upon a Rule, placed horizontally, doth the like. Theſe are done by Magnets: An Hour Glaſs that turns of itſelf, when the Sand is run out, and at the ſame Time the Hour Figure placed over the Glaſs, is changed. Several hydraulick Machines. An Atlas bearing a Globe, and upon its Equator was ſhewn the Hour of the Day. The Clock upon a declining Plane does not go when placed upon an horizontal Plane. A Ball put in at the Mouth of a winding Serpent runs through it, and afterwards paſſes up the Tail of another placed on a moveable Axis, and comes out of his Mouth. A Tortoiſe put into a Baſon of Water, will never ſtand ſtill till he points to the Time of the Day. A *Balaſtra* to ſhoot Granada's at a certain Diſtance. A Circle, with the ſeveral Humours of Perſons written on it, and if you touch the Gnomon or Index, it will point to the Humour (as is pretended) of him that touches it. A Door that opens both Ways. Two Gates, when one ſhuts, the other opens. Two Dials, a pretty Diſtance from one another, moving the Index of the one, turns the Index of the other; but when M. *Servier* took a little Piece of Iron or Load-ſtone (colour'd white) out of the Point or End of the Index that was moved, the other would not ſtir. A Cannon to ſhoot downwards; it is placed on a declining Carriage, an Axis with Cords winds it backwards and forwards, and when the Cannon comes to the further End, a Circle of Lead is round the Mouth. We were told, that the *Germans* living in *Lyons* have great Privileges; that they have diſtinct Courts to judge Civil and Criminal Matters, and when they make Harangues to the King they ſpeak ſtanding.

3. The 25th, Hiring a Poſtillion for a *Louis d'Or* a Man, we left *Lyons*, and rode over a long Stone Bridge, croſs the *Rhoſne*, and then paſſed through a large Suburb, and entered on a large Plain, where we travelled four Leagues, and after that rode thro' a pleaſant Country, caſt up into Hillocks, and ſix Leagues from *Lyons*, dined at *Artas*, having paſſed through but one Village before. After Noon we came through *Maria*, *la Baſtier*, *Champier*, and at Night lodged in *la Frett*, three Leagues from *Artas*. 26th, We rode a good Way in a level Valley, and at two Leagues from *la Frett*, went through *Moyran*; a little from thence we entered between the Mountains, and travelled through a fruitful Valley, planted like *Lombardy*, with Rows of Trees and Vines climbing about them; ſometimes we mounted ſtony Hills, among them paſſed through *Rives*, a Village noted for its Iron Works; four Leagues from *Moyran*, we arrived at *Grenoble*, riding by a double Pall Mall, juſt before we entered the City. This Night it ſnowed on the Mountains near *Grenoble*.

Grenoble is a large City ſituated in a fruitful and pleaſant Valley near the Meeting of the River *Drac* with the *Yſere*. The Houſes are generally meanly built, and the Streets are not handſome. A long Street (on the other Side of the *Yſere)* joined to the City by a wooden and a Stone Bridge. On the ſame Side, upon the Top of a high Hill, is a Fort called *la Baſtile*; a Wall runs up that Hill. The Arſenal is another Fort guarded now by about 150 Soldiers. The Cathedral is a mean Church. The Jeſuits are building a neat Chapel. The Proteſtants are here about 5000, their Temple is within the Walls, and is of an octagonal Figure, with a tall Roof; within are Seats for Counſellors of Parliament and Perſons of Condition, a little Gallery with wicker Windows, where many Times Popiſh Gentry, *&c.* ſit *incognito*, three Miniſters. The Duke of *Leſdiguieres*'s Palace has fine ſhady Walks, and a fair Garden.

The Biſhop of this City is a Prince. Within the Palace is a Room where the Parliament ſits; the Lacqueys will ſuffer no Swords to be worn here, except you give them a ſmall Piece of Money. Ancient Inſcriptions on ſome of the Gates which are printed in *Golnitz*'s Itinerary. Three Liards paid for every Horſe that paſſes the Bridge with Stone Arches. We viſited a Garden of Simples belonging to a Counſellor of Parliament, (who was civil to us) and Monſieur *Bernard*, an Apothecary.

4. On the 27th, paying four Crowns for two Horſes and a Guide, we immediately rode out of the City, aſcended the Mountains, and at a League's Diſtance came thro' a Village call'd *Sapene*, and a League and a half further paſs'd through the Valley of *Chartreuſe* Village. Theſe Valleys, among the high Mountains or Alps, are well cultivated, having great Store of Oats, and other Corn and Meadow Ground. At a narrow Paſſage between two high precipitous Rocks, we paſſed over a Bridge, croſs a Torrent, and knocking at a Gate, were let in by a Servant belonging to the Monaſtery of the *Chartreuſe*; then we aſcended a mountainous Way above a Quarter of a League, till we paſſed by a large Building, where Perſons of all Trades live, and who are habited like the Fathers of the *Carthuſian* Orders, and work for the Convent. A good Diſtance farther up we arrived at the *Grande Chartreuſe*, where the Porter aſk'd us whence we came, and called a Lay-Brother, who introduced us into one of the Halls appointed to receive Strangers in. At the Gate we left our Swords and Piſtols. Seven Hours riding from *Grenoble* hither.

This Convent is ſeated under one of the higheſt Mountains in theſe Parts, and diſcovers far and near into the adjacent Countries. As ſoon as we came into the Hall, Wine, Bread and Cheeſe were ſet before us, and one of the Fathers, a very intelligent Man, viſited and diſcourſed ſometime with us about the News of *Europe*, which he was no Stranger to. A Boy guided us up into the Mountains, and ſhewed us a neat Chapel, dedicated to S. *Maria de Caſalibus*, which is prettily adorned with the Letters of her Name in Gold, and with Scripture Epithets: Beyond this we ſaw S. *Bruno*'s Chapel, built on a Rock. At Night we had our Supper and Beds prepared for us. We obſerved the Friars, at Even Song, bowing their Heads as they ſat, at the Saying the *Gloria Patri, &c.* Sixty Fathers, and as many Lay-Brothers here. No Women but thoſe of the royal Blood can enter this Cloiſter. There are two Ways more to come to this Convent, beſides that from *Grenoble*, *viz.* one from *Lyons*, and the other from *Chamberry*. In their Stable they keep about ſixty Horſes, beſides Mules and Aſſes.

28th. We ſaw their Church, a dark and narrow Building; before the Altar ſtand four tall Braſs Candleſticks, within the Choir the Fathers ſit, and without ſit the Lay-Brothers. The Fathers riſe to their Devotions at Midnight, and are in the Choir three Hours, but then they ſleep till Seven or Eight in the Morning, when the Maſſes begin. The Cloiſter is a very long and narrow Square; we went into one of their Cells, which are not kept ſo neat as thoſe we ſaw at *Venice*. At Meal Time ſeveral Servants bring Bread, Wine, *&c.* and open a little Window by the Side of the Cell-Door, and there put in the Proviſion. On *Fridays* they faſt ſtrictly, and this Day we ſaw what they eat, *viz.* two or three Spoonfuls of cold Peaſe boil'd, four or five Pears, and a few ſtew'd Prunes and raw Plumbs, beſides a ſmall Pittance of Bread and Wine, and at Night they had no Supper. In the *Refectorium* are two Tables, beſides the Prior's at the upper End; they dine here together only on *Sundays* and great Feſtivals.

In the General of the Order's Lodging we obſerved the Pictures of St. *Martin* at *Naples*, the Chertruſe of *Pavia*, and the Convent nigh *Avignon*, *&c.* Places belonging to this Order. In the Chapel is an Altar Piece of great Value. In the Chapter Room is a large Picture, how ſeven of this Order were executed for Treaſon (they ſay for Religion) in *Henry* the VIIIth's Days in *England*. Cardinal *Richlieu* profeſſed himſelf firſt of this Order. The Lodgings to entertain Princes in are very neat; the Chapel there is within cruſted over with Marble; we gave the Cook a *Quart d'Eſcue*, and having eaten our Breakfaſt, and written our Names in a Book kept by a Porter, we mounted and rode back to *Grenoble* the ſame Way we came.

5. We ſtayed in *Grenoble* till *Auguſt* the firſt, and one Day rode out, and after twice fording the River *Drac* (which makes a great Waſh) at a League's Diſtance, went over *Pont de Clef*, a large Arch croſs that River, where we paid one *Sol* a Man; a League further we paſſed through a large Village called *Vif*, and about a League thence by S. *Bartholomew*, another Village, and *Chaſteau Bernard*, where we ſaw Flame breaking out of the Side of a Bank, which is vulgarly call'd *la Fountaine qui Brule*; it is by a ſmall Rivulet, and ſometimes breaks out in other Places; juſt before our Coming, ſome other Strangers had fried Eggs here. The Soil hereabouts is full of a black Stone like our Coal, which perhaps is the continual Fuel of this Fire.

Auguſt the firſt, We took Boat for *Orange*, and went down the Rivers *Yſere* and the *Rhoſne*; twenty Crowns was given for a Boat, and the Paſſengers paid proportionably to the Length of their Journey, ſome more, ſome leſs. After we had left *Grenoble* three or four Leagues, we durſt not ſtir from the Bank ſide, a furious Wind ariſing and ſtopping us for the Space of an Hour. Then nine Leagues from *Grenoble*, we arrived at our Lodgings in *la Faurie*, a Village on the right Side of the *Yſere*.

2*d*. At Break of Day, we entered our Boat, and at two Leagues Diſtance paſſed under a Bridge with Stone Arches, and a wooden Penthouſe over it; *Romans*, a great walled Place, lay on the right Hand thence. We went three Leagues to the Meeting of the *Yſere* and the *Rhoſne*, where we obſerved for a good Space the *Yſere* kept itſelf unmingled with the *Rhoſne*, which was of a whitiſh Colour and much troubled, the *Yſere* being much clearer and greeniſh. A League down the *Rhoſne* we landed at *Valence*, a poor City and Univerſity, ſituated on the left Side of the River: Afterwards we went by the *Vivaretz* and *Sevennes*, and paſſed by *Montlimer* on the left Hand, and *Viviers* on the right, both walled, though mean Places, and at fourteen Leagues from *la Faurie* lodged at *Bourga*, a walled Town on the right Side of the River. Many Peages and Tolls paid by the Boatmen as we came along.

3*d*, After two Leagues we came to *Pont* S. *Eſprit*, a ſtately Stone Bridge, with eighteen great Arches, and four little ones; between every Arch is a Window. It is curiouſly paved with ſquare Stones, a Hand broad, two Coaches can go abreaſt on it, it is not made ſtrait, but bending out againſt the Stream. The Town of S. *Eſprit* on the right Hand is walled; a League further we landed at a Peage or Toll-place belonging to *Orange*, (we might have landed a League nearer to *Orange)* where we gave thirty-five Sols apiece for a Horſe to carry our Things thither. We walked about two Leagues in a level and fruitful Country to *Orange*.

In *Valence*, *Bourg* and other Places, we obſerved Meaſures of Corn cut in Stone, and little Portals to let the Corn out of them.

6. *Orange* is but a ſmall and meanly built City, and the Walls are not conſiderable, but there are Outworks which if well looked after, would render it very ſtrong, by Reaſon of its Situation in a Plain. The Caſtle is built on the higheſt End of a long Ridge of a Hill; it was formerly of greater Strength, when it had walled Bulwarks round about, which the *French* King, in this Prince of *Orange*'s Minority, cauſed to be blown up with Gunpowder, when at the ſame Inſtant, thirty (all *Roman Catholicks)* were overwhelm'd in the Ruins. The Governor is Count *de Dohna*, but his Deputy or Lieutenant is a *Frenchman* and a *Papiſt*. Within the Caſtle were now about a hundred Soldiers, who civilly admitted us into the Caſtle, and ſhewed us many great Pieces of Cannon, and their Armory ſtored with Arms enough for 5000 Men. In the Middle of the Caſtle is a very deep Well of good Water, cut out of the Rock. *C. Marius*'s Arch, and *la Torre ronde* are Antiquities without the Walls; on ſome of the Engravings of the Arch was written, *BODUIACUS*. The *Circus* is a ſtately Ruin within the Wall.

The People here are very civil, and of a much better Humour than the *French*. When the *French* King had the City in his Poſſeſſion, many of the Gentry turn'd Papiſts. The Univerſity is not conſiderable, having about four Profeſſors, and one of them is one *Guy*, I think a *Scotchman*. The *Roman Catholicks* have now the Uſe of the Cathedral: The Inhabitants of this Principality are at leaſt half Proteſtants, and who were ſenſible of the Change of Governors. On the Tower of the *Maiſon de la Ville*, we ſaw many falſe Weights nailed to the Wall. The Prince hath a Parliament here of both Religions, and hath paſſed a public Amneſtia of all Offences, wherein he calls the King of *England*, and the Marquis of *Brandenberg*, his Uncles and Tutors. In a poor Woman's Houſe, we ſaw an old *Roman* Pavement of *Moſaick* Work, very curious, repreſenting a Cat with a Rat in its Mouth; round about were Squares.

7. 4*th*, Giving four *Livres* and fifteen *Sols* for three Horſes and a Guide, we travelled a ſtony Way two Leagues, in a Country where Thyme, Lavender, Box, *&c.* grew plentifully, many Mulberry and Olive-Trees planted in the Fields; we paſſed by *Chaſteau neuf*, on the right Hand of us, and a League further ferried the River *la Naſque*, paying for each Horſe one *Sol* a League, thence riding nigh the *Rhoſne*, we entered *Avignon* at Port St. *Lazare*, upon which Gate was written, *Clave Petri tuta*. Having ſhewed our Bolletins of Health, which we took at *Grenoble*, leaving our Fire Arms with the Guard, and taking a Note to lodge in the City, we came to a Sign of a Town called St. *Flour*, where we lay till *Monday* the ſeventh of *Auguſt*.

In the Cathedral, a ſmall Church ſituated on the Rocks nigh the Windmills, we ſaw an ancient Monument of *Benedictus* XII. Pope, a Miller's Son. The Palace is adjoining, guarded by Soldiers, *Chigi* Cardinal *Padrone* is Legat and Governor, M. *Columnia* Vice-Legat, who (they ſaid) was ſuddenly to be removed, becauſe he had given ſome Suſpicion to the *French* King, by making a Kind of Fort before the Palace Gate, and laying up a large Quantity of Corn. On the Outſide of the Palace where the Priſon is, are pictured, hanging by the Heels, the chief of the late Rebellion againſt the Pope; and in the *Bando*, 200 Piſtols are promiſed to any Perſon that can bring the Head of any one of them; theſe Rebels live in Safety at *Villeneuf*, a Place t'other Side of the Bridge, juſt croſs the *Rhoſne*, which belongs to the *French* King, who hath threatened to burn alive any that ſhall offer to lay Hands on them. Monſignor *Lomellino* is the new Vice-Legat.

The *Dominicans* Church is a large Building of one Arch. The *Cordeliers* Church is larger; in the *Sacriſta*, they ſhewed us a round leaden Box with a leaden Medal, plain on one Side, and on the other the Figure of *Laura*, and theſe Letters, M. L. M. J. which is interpreted by ſome, *Madonna laura morta jace*. This Medal with *Italian* Verſes on her, written by *Petrarch*, in a neat Character, was found in that Box, lying at her Breaſt, when *Francis* I. took up her Body, who alſo made Verſes on her in *French*, which are kept with the others. In an obſcure Chapel we ſaw her Tomb-Stone.

In St. *Martial*'s Church we ſearched for *Caſimir* King of *Poland*'s Monument, but could not be informed where it was; nigh the Altar is a very ſtately Tomb that reaches almoſt to the Top of the Church, and below lies the Figure of a Biſhop, and over him our Saviour and the Apoſtles Effigies, and ſo upwards are many Marble Figures. The *Celeſtins* Church hath a Marble *relievo* Altar, which they ſay is but of one Piece, having many Figures in it: The Picture of a Skeleton drawn by King *Renatus*, who gave the Altar. In the Middle of the Choir is a handſome Monument of *Clement* VII. Pope. In a long Chapel adjoining is the Legend pictured of S. *Peter* of *Luxenbourg*.

The Coining-houſe is oppoſite to the Palace, and has a new fair Front. The Jeſuits have a pretty Chapel, and an indifferent *Studium*; in the *Area* of it are Dials, with Directions to know what it is o'Clock in ſuch Cities as are under Kings, and in ſuch as are under Commonwealths; the one is called *Horologium Regium*, the other *Ariſtocraticum*, in which they have placed *Geneva*. The Gate on the *Rhoſne* Side is open every Day, but beſides that, there is but one more open at a Time, and that they change every Week. About 700 *Italian* Soldiers in the City. Here are ſome Palaces and good Houſes, but the Generality of the Buildings are mean, and the Streets narrow; the Inhabitants are in Fear every Night that the Rogues ſhould creep in at their Windows.

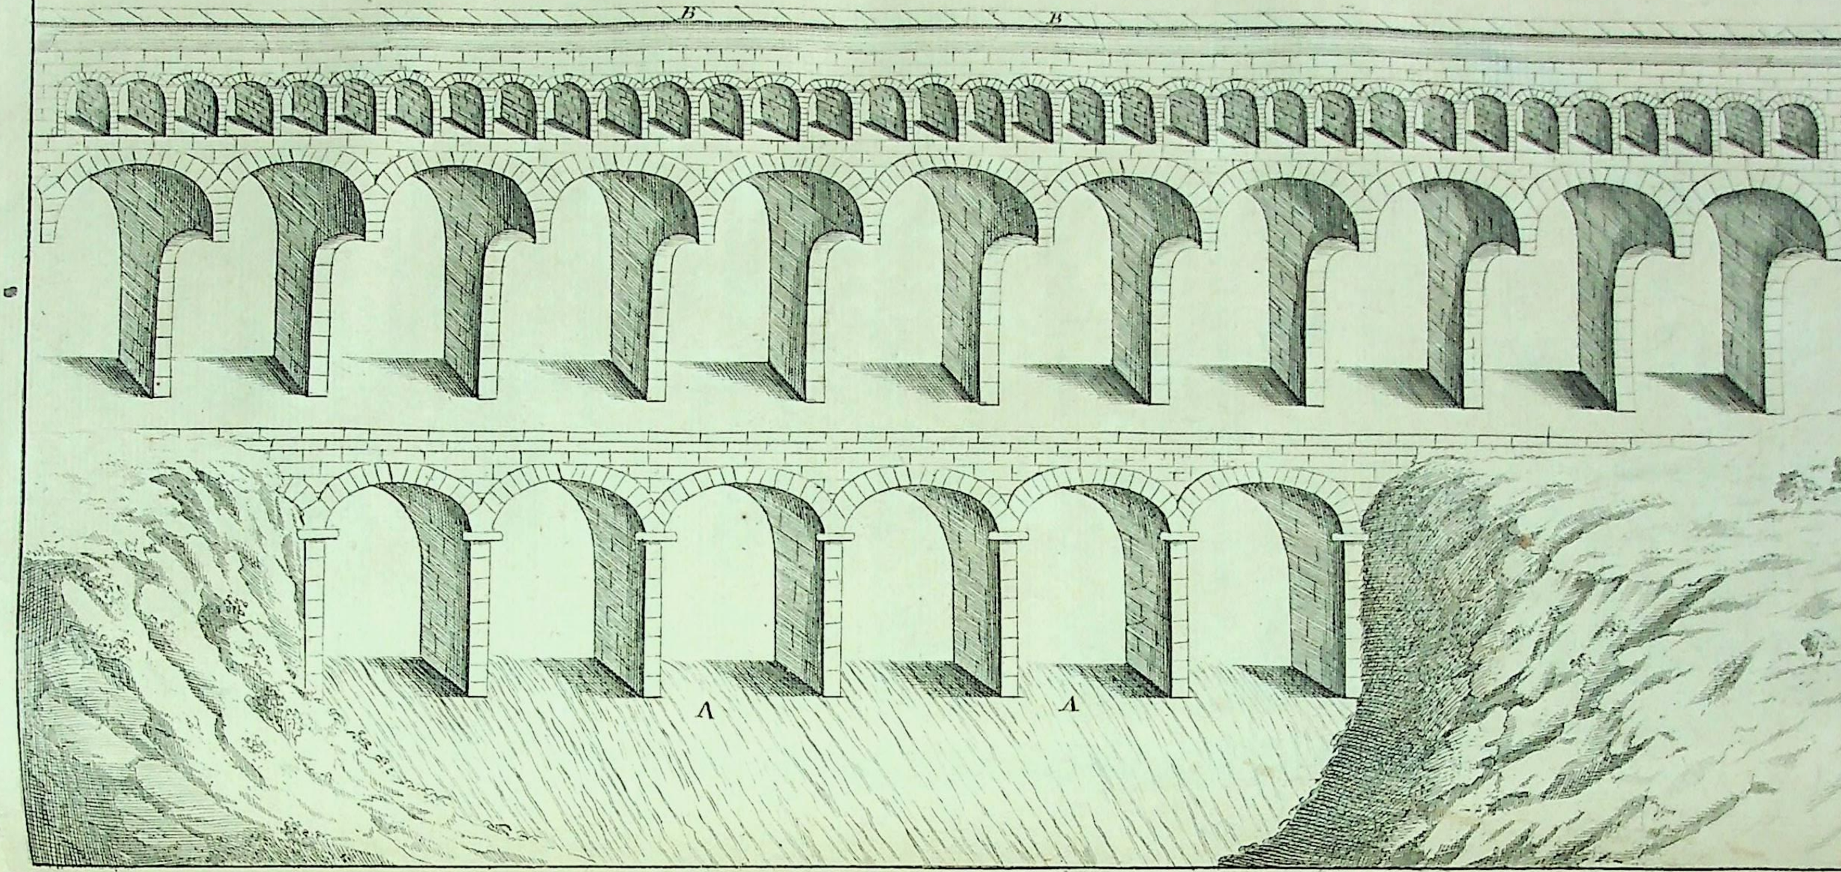
8. The 7*th*, Giving fifteen *Livres* of *France*, we hired three Horſes and a Poſtillion, who guided us firſt over the long Bridge at *Avignon* croſs the *Rhoſne*, which Bridge is entire on the City Side, but broken on the Side of *France*, and repaired with Wood. It ſeems to have been a *Roman* Work, is built of Stone, and paved (though now much defaced) like that at St. *Eſprit*, and it is more bending againſt the Stream. Some Way on the Bridge ſtands a Centinel, and the *Avignon* Searchers lodge there, to ſtop and enquire into Merchants Goods. When we were almoſt over the Bridge, our Poſtillion paid about one *Sol* a Horſe. At the End of the Bridge is *Villeneuf*, a Village, and a little Way thence on the River Side, S. *Andre*, a ſtrong Place of the *French* King's. Leaving theſe Places behind us, (without entering them) we rode among ſome Vineyards, and then travelled a ſtony Way over little Hills, till we came by *Remoulin*, a ſmall walled Place; about a ſhort *Engliſh* Mile thence, we arrived at *Pont du Gard*, a ſtately Antiquity, well deſigned by Dr. *Bargrave*, and deſcribed in *Golnitz* and *Deyron*'s Antiquities of *Niſmes*. A League from hence we dined at *Seſignan*, a ſmall Village; and in the Afternoon rode a direct and level Way between Olive Fields, (the Olive-Trees were much mortified by the Extremity of the laſt Winter) and after three Leagues riding, arrived at *Lutzenbourg*, a good Inn without the City of *Niſmes*.

We ſaw the Amphitheatre, the Outſide whereof is very entire, and is two Stories high, the Steps or Seats are ruined, and the *Arena* filled with Houſes. Over the great Entrance are two half Bulls in Stone, and on the Outſide is a Wolf ſuckling *Romulus* and *Remus*; alſo a *Triple* and *Priapus*, or *Penis* winged, and the Figure of a Woman holding by a Bridle. In a private Houſe we ſaw Eagles excellently well made in Stone; a double Statue of a Woman having two Bodies and four Legs, it was made without a Head, but now they have fixed on it the Head of an old Man; ſome will have this to be the Statue of *Geryon*, but *Deyron* contradicts it. A ſmall Piazza call'd *Place de Salamandre*, from a Pillar with a Salamander upon it. *La Maiſon Quarre* is a fair Antiquity within the City, being one Pile of Building adorned with Statues, Pillars, *&c.* Within the Port *de la Couronne* are many old Inſcriptions, and an ancient Statue with his Hands upon his Head.

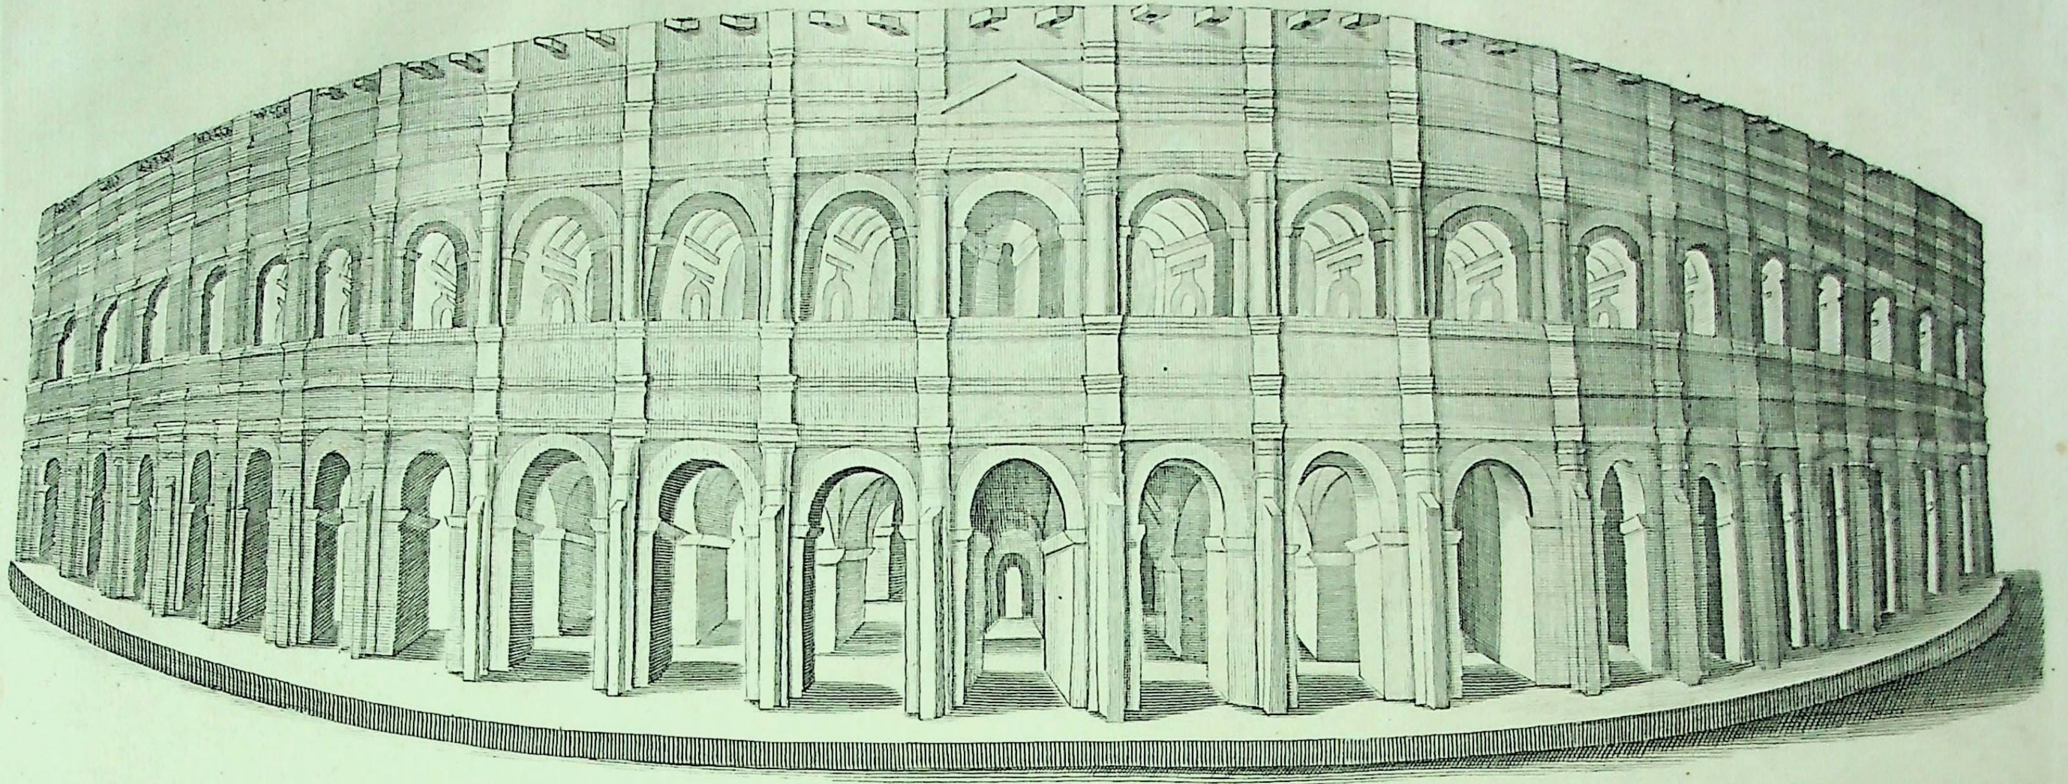
After

Vol. 2. pa. 718.

PONT-DU-GARD about Four Leagues from Nismes a Stately Antiquity
One Hundred and Eighty Six Feet high from the River A A to the Top of the Aquæduct B B.



An outside View of the Amphitheatre at Nismes in LANGUEDOE
of Sixty Arches and Pillars in each Story.



After a little Walk without the Town, we ſaw the Ruins of the Temple of *Diana*, which is under the Side of a Rock, and cloſe by is *Fons Dianæ*, which firſt makes a deep Pond, and ſends Water enough to furniſh all the Gardens of the City; in Winter or any rainy Seaſon it overflows very much. *La Torre Grande*, on the Top of a Hill, is a ruin'd Tower of the old *Roman* Wall; in other Places are ſeen the Ruins of the old Wall. The Circuit of this City was but 2000 Paces leſs than *Rome*, and was built formerly upon ſeven Hills. The Front of the Cathedral is adorned with ancient Carving. A large Plain or Level round the Town, except on one Side, where ſeveral Hills run along in a Hill. The *Splanade* is an open Walk without Port *de la Couronne*, ſometimes frequented by a great deal of Company. In the *Maiſon de la Ville* are kept two or three Crocodiles, (dead) which are the Arms of *Niſmes*, and ſignify their Founders came out of *Egypt*.

In a Court of this *Maiſon de la Ville*, is erected on two Pillars againſt the Wall the Monument of *Dandalo* the General of the Proteſtants. The Proteſtants of this City are three Parts out of four, and they had two Temples, but one is lately pulled down: Every Morning they have a Sermon, and in the Afternoon Prayers: On *Sunday* they have four Sermons; they have three Burying-places without the Walls, and they had a College and Profeſſors, but now the Jeſuits are Maſters: The Proteſtants have a Bell to ring them to Church.

Thus far we have followed Mr. *Skippon*'s Journey, who, as we obſerved in the Introduction, ſuffered nothing to eſcape him. Whatever he ſaw remarkable, he committed to Writing immediately, and the Deſcription of it to his Journal; whatever was particularly curious, he examined more cloſely, and the Reſult of his Examination was alſo committed to Writing. In like Manner he recorded whatever was communicated to him that deſerved Notice. All this however was done in a haſty and unpoliſhed Manner, for the Aſſiſtance of his own Memory, and not at all with a View, or even with a Suſpicion that it ſhould one Day appear in Print.

It was otherwiſe with Mr. *Ray*, who, though he kept ſuch a Journal as Mr. *Skippon*, yet reviſ'd and improv'd what he ſet down in it, and where he had an Opportunity, compared it with the Notes of his Friend Mr. *Willoughby*. He begins his Deſcription of *France*, with an Account of the City of *Montpelier*, to which this Introduction was requiſite; but now we are arrived at a more copious and poliſhed Account of Things, we ſhall make Uſe of Mr. *Ray*'s Travels ſo far as they go, and ſhall then take up with Mr. *Skippon*'s Journal again, in Order to ſupply the Deficiencies that would otherwiſe appear in the Courſe of theſe Travels, and which has hitherto rendred Mr. *Ray*'s liable to the Cenſure of being ſomewhat abrupt and unconnected. Thus he writes:

9. *Montpelier* is a round Town ſtanding upon a Hill, in the Midſt of a ſtony Country, ſomewhat bigger than *Geneva*, but not ſo populous, the Number of Inhabitants at preſent being about 25000, of which two thirds are Papiſts, and one Proteſtants. The Proteſtants have two Churches (Temples they call them) in Town. The Streets of this City are very narrow, ſhort and crooked, without any Uniformity or Beauty at all, ſo intricate, that its half a Year's Work to underſtand them all, and learn the Way from Place to Place. The Houſes are many of them well built of free Stone, which were they ſet well together in order, would make three or four handſome Streets. No large Piazza or Market-place in Town. The Number of *Apothecaries* in this little City is ſcarce credible, there being thirty Shops, and yet all find ſomething to do; their *Cypreſs* Powder, ſweet Bags, Caſſolets, Treacle, Confection al Kermes, and Hyacintha, having a Name all *France* over. The Queen of *Hungary*'s Water (as they call it) made here, is likewiſe much bought up. It is nothing but common Spirit of Wine, in which Roſemary Flowers have been macerated and diſtilled from the ſaid Flowers. The Wines hereabouts are very ſtrong, and bear Water well.

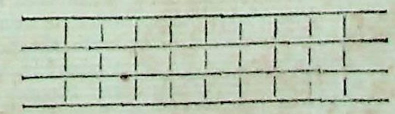
Their Vineyards are of dwarf Vines, without any Support, the Standards, when the Branches are pruned off, being like the Standards of our Oſier Gardens. At *Montpelier*, the beſt Verdet or Verdegreaſe, *Viridi æris*, is made. They told us that ſo good could not be made elſewhere, though they uſed the ſame Method and the ſame Materials; whether it be to be attributed to the juſt Temper of Heat, or the Nature of the Wine they uſe, or ſome other unknown Quality. The Manner thus; Firſt, they take Grape Stalks well cleanſed from the Raiſins, and from all Filth, and putting in the Bottom of a Pot, a Quantity of the beſt red Wine, they ſet Sticks croſs, a little above the Wine, and upon them lay a Quantity of Grape Stalks, firſt alſo drenched in Wine, and let them alone about fifteen Days, more or leſs, according to the Seaſon, till they come to make (as they call it) a Roſe, that is, the Outſides become to Appearance dry, and the Middle only wet.

Theſe Grape Stalks being thus prepared, they put in the Bottom of a large earthen Pot of the beſt red Wine, that begins to be ſour, but is not yet come to be Vinegar, to the Quantity of about two or three Inches Depth; ſomewhat above the Wine they ſet Sticks croſs the Pot, and having ready many little Plates of Copper, they lay upon the Croſs-ſticks, firſt a Layer of the prepared Grape-ſtalks, then a Layer of Copper Plates, and ſo alternately, S. S. S. *i. e. Stratum ſuper ſtratum*, till the Pot be full. In the Middle of the Pot they uſually leave a Hole all along, for the Vapour of the Wine to aſcend, neither are the Copper Plates laid near together for the ſame Reaſon; when they have filled up the Pot, they cover it, and ſet it in a Cellar, and after ſome five or ſix Days turn the Copper-plates, letting the Pot remain in the Cellar three or four Days more. In eight or ten Days, according to the Seaſon, the Verdet will be come.

Then they take out the Plates, and laying them ſix or ſeven on a Heap, put them in a Trough, and ſprinkle the Edges of them with the ſame Wine, for three or four Days; next they preſs them with heavy Weights for four or five Days, and laſt of all, ſcrape off the Verdet with Knives, and moulding it with a little Wine, dry it and ſell it. The ſame Plates are again put into Pots, and uſed as before. So then the Verdet is nothing but the Ruſt or Scurf of the Copper, calcin'd by the Vapour of the Wine.

Here alſo we ſaw the Manner and Proceſs of Blanching of Bees-Wax. Firſt, they melt the Wax in a great Copper Cauldron, then they have ready a Mould or Form of Wood, of the Figure of a Sugar-Loaf, or the Block of a Steeple crown'd Hat, which having beſmeared over with Slime of Snails, they dip into the Wax thus melted. This takes up a Skin or Film of Wax, as Candles upon Dipping do.

This they ſmooth with their Hands, and dip in Water, and when it is cold take it off the Form, from which, by Reaſon of the anointing the Form with the forementioned Mucilage, it will readily ſlip in the Form of a Cone or long Crucible. Theſe Cones (ſo let me call them) are ſet in a Garden in Ranks, ſingly one by one, ſupported with Canes or Reeds, croſſing one another on this Faſhion.



Round about they ſet Pots with Water, wherewith they ſprinkle the Wax often to keep it from melting. In Summer Time, when the Sun lies hot upon it, ſome ſix or ſeven Times a Day, otherwiſe but three or four Times. In fourteen or fifteen Days, the upper End of theſe Cones will grow white, and then they turn them to whiten the other End. In a Month's Time, more or leſs, according to the Weather, they will become White all over.

Then they melt the Wax again in earthen Pans like *Metæ* or Scuttles, and run it ſo melted, through the Neb of a Tin Pot, into Water, and as it runs down into the Water, a Man either breaks it with his Hand into Grains, or works it into round Figures like ſpiral Wreaths, or *Corellæ*, and theſe they expoſe again to the Weather, in the Garden and Order as before, 'till they become purely white, and then melt into great Pieces to ſell. The Mucilage wherewith they beſmear the Forms, is made of Snails taken alive, Shells and all, and pounded in a Mortar, till they become a perfect Pap or Viſcus. The Form once beſmeared well over with this Pap, will laſt dipping many Times. Wax whitened is almoſt twice as dear as yellow Wax. Yellow Wax is ſolutive, and uſed where there is an Inflammation, and the Sore not ripe; white Wax on the contrary very aſtringent. They ſay *Montpelier* is a Place proper for the Whitening of Wax; and that the ſame Workmen coming over into *England*, found the Air of a different Temper, and not convenient for this Trade. At *Montpelier* is made the beſt *Confectio Alkermes*, as Reaſon there is it ſhould, the Grain which gives it its Denomination, being in no Country of *Europe* found ſo plentifully as here.

The Manner of the Preparation of this Grain, for the making the Confection, you may find ſet down in the *Philoſophical Tranſactions*, N°. XX. *p.* 362, and I ſhall therefore here omit it. Theſe Grains have formerly been thought to have been proper to the Dwarf or Shrub *Ilex*, called therefore *Ilex Coccifera*, and a by Fruit or Excreſcency of the Twigs of that Plant. But my learned and ingenious Friend Mr. *Martin Liſter*, who hath been very happy in making Diſcoveries in natural Hiſtory, hath found the like Grains here in *England*, upon the Twigs of Cherry and other Trees, and judged them to be the Work of an Inſect, and by her affixed to the Twigs for Neſts to breed and harbour her young; and indeed to me they appeared to be ſo, eaſily receding and falling off from the Wood, when the Young are hatch'd and gone. As for the Grains themſelves, they are ſo like the *Kermes* Grains, that they are ſcarce to be diſtinguiſhed, and grow to the Twigs juſt in the ſame Places and Manner. But for a more full and compleat Hiſtory of them, I refer the Reader to Mr. *Liſter*'s Letters publiſhed in the *Philoſophical Tranſactions*.

10. At *Montpelier* I obſerved the Manner of making Oil Olive: Firſt, they take Olives, whether freſh gathered or laid a while on a Heap, it matters not (as they told me) and bruiſe or grind them to a Paſte, as we do Apples to make Cyder, with a perpendicular Mill-ſtone running round in a Trough. This Paſte, or the Olives thus bruiſed, they put in round thin Baſkets, made of *Spartum*, like Frails, having a round Hole in the Top: But both Top and Bottom clapping together, ſo that when preſſed they look like a thin round Cake. Half a Score or more of theſe Baſkets, filled with Olive Pouce, they lay on a Heap in the Preſs, and letting down the Preſs Beam, ſqueeze them at firſt without any Mixture. Then winding up the Beam they take out the Baſkets, and into each one put a good Quantity of ſcalding Water (which they have always ready) and ſhaking the Baſket mingle it with the Pouce, and then piling them upon one another, as before, preſs them down a ſecond Time.

This ſecond Operation they repeat again, and then taking out the Pouce, put in new, and proceed as before. The Oil, together with the Water, runs out into Veſſels ſet to receive it. The Water with the *Annurca* ſinks to the Bottom, and the Oil ſwims above it, which they take off with a Copper Diſh, like a Fleeting-diſh, as good Houſewives ſkim the Cream from their Milk. The Water mixed with the red Juice of the Olive becomes red and thick, not at all mingling with the Oil; ſo that it cannot eaſily the leaſt Drop of it, be taken up without perceiving it. It is ſaid, that in *Provence*, they ſpread their Olives on a Floor, after they are gathered, and there let them reſt thirty Days to dry, and for that Reaſon their Oil is better than that of *Languedoc*. Others lay them on a Heap a-while, to let them ſweat, as they call it.

It is worth the noting, that, though the Olives be very bitter, and of a very fiery ungrateful Taſte, yet the Oil which is drawn from them is ſweet; the like is obſerved in bitter Almonds, and it is very likely might be in all other bitter Fruits, which is a ſufficient Proof that the Taſte of ſuch Fruits doth not inhere in the Oil, at leaſt which is made by Expreſſion; and it deſerves Examination, whether the chymical Oil may not alſo be diveſted of the Taſte of the vegetable, from which it is extracted. Olives when they come to Maturity, change Colour, and become black as ſome other Plumbs do, but it is very late in the Year firſt. They are then notwithſtanding of an horrid and ungrateful Taſte, firing the Throat and Palate of one that eats them. They afford moſt Oil when full ripe, but beſt as they told us when gathered and preſſed green. Sometimes they pickle ripe Olives, but they will not laſt; therefore, thoſe which they pickle to ſend Abroad, are gathered green. The Pickle they uſe is nothing elſe but a Brine of Salt and Water.

Near *Peroul*, about a League from *Montpelier*, we ſaw a boiling Fountain (as they call it) that is, the Water did heave up and bubble as if it boiled. This Phænomenon in the Water was cauſed by a Vapour aſcending out of the Earth, through the Water, as was manifeſt, for if that one did but dig any where near the Place, and pour Water upon the Place new digged, one ſhould obſerve in it the like bubbling, the Vapour ariſing not only in that Place where the Fountain was, but all thereabout; the like Vapour aſcending out of the Earth, and cauſing ſuch Ebullition in Water it paſſes through, hath been obſerved in Mr. *Hawkley*'s Ground about a Mile from the Town of *Wigan*, in *Lancaſhire*, which Vapour by the Application of a lighted Candle, Paper or the like, catches Fire and flames vigorouſly. Whether or no this Vapour at *Peroul* would in like Manner catch Fire and burn, I cannot ſay, it coming not in our Minds to make the Experiment.

11. From *Montpelier* we took a Journey of Pleaſure to ſee the adjacent Country, and firſt we rode to *Frontignan*, a little walled Town by the *Eſtang* Side, three Miles diſtant, which gives Name to the ſo famous Muſcate Wine. The Country about this Town, toward the Sea Southward, lies open to the Sun, but toward the Land Northward, it is encompaſſed with a Ridge of Hills in Form of a Bow, touching the Sea at each End; ſo that the whole is like a Theatre: In the *Arena*, and on the Sides of the Hills, grows the Muſcate Grape, of which this Wine is made.

In this Space are contained two other little Towns, the one called *Miraval*, the other *Vich*; this laſt gives Name to a mineral Water ſpringing near it, much uſed hereabout. It hath an acid vitriolic Taſte, but nothing ſo ſtrong as our *Spaw* Waters, and therefore I gueſs the Operation of it is much weaker. At *Frontignan* and other Places, we ſaw the Manner of making Raiſins [*Uvæ paſſæ*;] they take the faireſt Bunches, and with a Pair of Sciſſars ſnip off the faulty Grapes, and tie two Bunches together with a String, then they dip them in a boiling Ley [*Lixivium*] into which they put a little Oil, till they are very plump and ready to crack.

Jo. Baubinus ſaith that they let them continue ſo long in the boiling *Lixivium, quo ad flacceſcant tantum & corrugentur*; but we obſerved no ſuch Thing, for they did not continue the Bunches half a Minute, but preſently took them out again, and waſhed them in a Veſſel of fair cold Water; then they put them upon wooden Poles for two or three Days in the Shade to dry, and after that expoſed them to the Sun, taking them in the Night Time, or rainy Weather. *Cyprianus Richovius* deſcribes the Manner of making Raiſins in *Spain* thus: There are (ſaith he) two Sorts of *Uvæ paſſæ*, or Raiſins, the one of thoſe called Raiſins of the Sun, of a blue Colour, the other of the *Uvæ paſſæ Lixæ*, which they call Frail or Baſket Raiſins.

In preparing the firſt Sort they thus proceed; when the Bunch they deſign for that Purpoſe begins to grow ripe, they cut the Footſtalk of it half aſunder, that ſo the radical Juice or Moiſture may be at leaſt in a great Meaſure detained, and not paſs to the Grapes, and ſo they leave it hanging on the Vine. Then by the Heat of the Sun, the Grapes are by Degrees dried. When they are ſufficiently dry, they gather them and put them up in Veſſels. The ſecond Sort they make on this Faſhion; when they prune their Vines, they bind up the Cuttings in Faggots, and reſerve them till the Vintage time. Then they burn them, and of their Aſhes make a Ley or Lixivium, which they boil in great Veſſels, and therein immerſe the Bunches of Grapes one by one. Afterwards, to dry them, they ſpread them upon a paved Floor clean ſwept, made for that Purpoſe in the Vineyard, that ſo they may be more ſpeedily dried by the Sunbeams.

When they are ſufficiently concocted and dried, they put them up in Frails or Baſkets. After the ſame Manner they prepare their dried Figs, by dipping them in a Lixivium made of the Aſhes of the dried Branches of the Fig-tree, cut off in pruning. But however they ſuperſtitiouſly obſerve to make their Lixivium for Raiſins, of the Aſhes of the Branches pruned off the Vine, *&c.* I doubt not but the Aſhes of any Wood indifferently taken would ſerve as well for that Purpoſe.

12. From *Frontignan* we rode to *Balleruch*, to ſee the hot Waters, which are uſed as well inwardly as outwardly. At our being there, which was in the Beginning of *September*, the Water was ſcarce lukewarm; they told us that in the Winter it was very hot. The Bath is not above two ſlight Shots diſtant from the *Eſtang*, and the Water thereof taſtes very ſalt and brackiſh, whether by Reaſon of the Seas being ſo near it, or becauſe the Water comes from ſome Salt Mine, I know not; yet the latter ſeems the more probable, becauſe, ſhou'd it come from the Sea, the Water ſtraining thro' ſo much Sand, would probably loſe its Salt by the Way, as we have found by Experiment in *England*. At *Gobian*, about a Day's Journey from *Montpellier* in the Way to *Beziers*, is a Fountain of *Petroleum:* It burns like Oil, is of a ſtrong pungent Scent, and a blackiſh Colour. It diſtills out of ſeveral Places of the Rock all the Year long, but moſt in Summer-time. They gather it up with Ladles, and put it in a Barrel ſet on one End, which hath a Spiggot juſt at the Bottom; when they have put in a good Quantity, they open the Spiggot to let out the Water, and when the Oil begins to come, preſently ſtop it. They pay for the Farm of this Fountain about Fifty Crowns *per Annum*. We were told by one Monſieur *Beauſhoſte*, a Chymiſt in *Montpellier*, that *Petroleum* was the very ſame with the Oil of Jet, and not to be diſtinguiſhed from it, by Colour, Taſte, Smell, Conſiſtency, Virtues, or any other Accident, as he had by Experience found upon the Coaſt of the *Mediteranean Sea* in ſeveral Places, as at *Berre* near *Martegue* in *Provence*; at *Meſſina* in *Sicily*, &c.

They make Salt of the Sea Water drawn into ſhallow Pools, and evaporated by the Sunbeams, in Summer time. Firſt, they let the Water into a large ſhallow Plain, like the Cooler in a Brewhouſe, and there being well heated they run it into ſeveral ſhallow Beds, like the Beds of a Garden; when the Sun hath dried up all the Water, they let in more, and ſo again three or four Times, till the Salt, remaining at the Bottom of theſe Receptacles, come to be three Fingers thick, and then they take it up with Shovels, and heap it on little Hills; but the whole Proceſs of this Operation being exactly deſcribed in the *Philoſophical Tranſactions*, Numb. 51. *p.* 1025. I ſhall forbear to enlarge any further concerning it.

Now that I have mentioned *Martegue*, I ſhall add the Manner of making *Botargo* out of Mr. *F. Willoughby*'s Notes. At *Martegue* they take Abundance of Mullets [*Mugiles* not *Mullt*, as one would be apt to think by the *Engliſh* Name] in their *Burdigos*, which are Places in the Shallows incloſed with Hedges of Reeds. The Male Mullets are called *Alletants*, becauſe they ſhed the Milt, [*Lac piſcium.*] The Females *Botar*, of the Rows or Spawn of which *Botargo* is made. They firſt take out the Spawn intire, and cover it round with Salt for four or five Hours, then they preſs it a little between two Boards or Stones, then they waſh it, and at laſt dry it in the Sun for thirteen or fourteen Days, taking it in at Nights.

13. *December* 7th, 1665. From *Montpellier* we made an excurſive Voyage into *Provence*. The principal Cities and Towns that we ſaw were, 1. *Lunel*, four Leagues diſtant from *Montpellier*. 2. *Arles*, a conſiderable City, once the Head of a Kingdom, called anciently *Arelate*, ſtanding upon the River *Rhoſne*, which, a good Way above this City, divides itſelf into two Branches, and makes an Iſland called the *Camarg*. All this Iſland is full of *Vermicularis frutex* growing by the Ditch Sides all along. Beyond this City, in the Way to *Marſeilles*, we paſſed over a large Plain or Level, all over covered with Stones, called now the *Craux* or *les Champs pierreux*, anciently *Campi Lapideito*. 3. St. *Chamas*, a large *Burgh*, ſtanding upon the Ridge, and on each Side a narrow Hill, which is perforated like *Pauſilypus*. 4. *Marſeilles*, an ancient City, not great but well built, with tall Stone Houſes for the moſt part, and very populous.

We were told that the Number of Souls was about 120,000. The Streets are narrow as in moſt of the ancient Towns in this Country, to keep off the ſcorching Beams of the Sun in Summer time. The Haven is the moſt ſecure and commodious that I have ſeen; the Entrance into it is ſo ſtrait and narrow, that a Man may eaſily caſt a Stone croſs it, but the Haven within large enough to contain 500 Veſſels or more; of an oval Figure. On one Side of this Haven the Town is built, which compaſſes it more than half round, having before it a handſome Kay well paved, which ſerves the Citizens for a Walk or Promenade. This Haven is not capable of Ships of above 600 Ton.

On the Rocks near this Town, I found growing plentifully, the ſame *Colutea* I obſerved at St. *Chamas: Valeriana rubra Dod. Carduus galactites, I. B.* By the Sea-ſide, *Tragacantha*, *Maſſilienſium* plentifully: *Aſter luteus ſupinus*, I. B. *Tithymalus myrſinites anguſtifolius*; *Coronopus Maſſilienſis, Lob.* 5. *Bauſſet*, 6. *Oliolæ*, two little Towns. 7. *Toulon*, no great Town, but well fortified, and the beſt Haven the King of *France* hath on the *Mediteranean Sea*, having a large Bay capable of the greateſt Veſſels where there is good Riding for Ships. At *Toulon* they make Holes in their Stone Walls at three or four Foot Diſtance near the Ground, and there plant Capers, the Fruit whereof they prepare and pickle after this Faſhion. They gather the Buds or Bloſſoms of the Flowers before they be explicated, and ſpreading them thin, lay them in the Shade to wither for three or four Hours, to prevent the Opening of the Flower. Then they put them in a Veſſel, and pour Vinegar upon them, covering the Veſſel with a Board, and ſo let them ſtand for nine Days, at the End whereof they take them out and preſs them gently, and put them in freſh Vinegar, letting them ſtand as long as before: This done the third time, they put them up in Barrels with Vinegar. Some mingle Salt with their Vinegar, which is the beſt Way, and preſerves the Capers for three Years both for Colour and Taſte, as good as at the Firſt.

I obſerved near *Bauſſet* great Plenty of Myrtle in the Hedges; near *Olliole*, *Acanthus Sativus*; *Althea fruteſceus folio rotundiore in cano C. B. Fumaria minor ſive tenui folia ſurrecta I. B. Acacia trifolia*; *Teucrium vulgare*; *Ariſarum latifolium Chryſocome Ger.* 8. *St. Maximine*; near which is the famous Grot of *Mary Magdalen*, called St. *Baulme*. 9. *Aix*, anciently *Aquæ Sextiæ*, from the hot Baths that are there. This is a very elegant and pleaſant City, well built with fair Stone Houſes, having broad Streets and handſome Piazza's. 10. *Selogne, Selonia.*

In the *Cordeliers* Church lies buried *Noſtradamus* the famous *French* Prophet, whoſe Verſes the *Frenchmen* eſteemed as Oracles. In the Church Wall is placed a Stone with this Inſcription to his Memory.

> *D. M. Cariſſ. oſſa M. Noſtradami unius omnium mortalium judicio digni, cujus penè divino calamo totius orbis ex aſtrorum influxu futuri eventus conſcriberentur. Vixit an.* 62. *m.* 6. *d.* 10. *Obiit Salo* MDLXVI. *Quietem poſteri ne invidete. Anna Pontia Gemella Solonia conjugi optimo. V. F.*

11. *Aiguemortes*, a ſmall Town, but of great Strength, near the Sea, in a fenny Place, ſix Leagues diſtant from *Montpellier*. From *Montpellier* we returned to *Lyons*,

from *Lyons* we travel'd with a Meſſenger to *Paris*, from *Paris* again to *Calais*, and ſo croſs the Strait to *Dover*; whence we at firſt ſet out, and began our Journey.

14. Thus we have run through all that Mr. *Ray* has left us concerning *France*; but for the Sake of obtaining more Particulars of that Journey in which Mr. *Ray* ſeems to have been leſs circumſtantial than uſual, we ſhall have Recourſe to Mr. *Skippon*'s Journal of their Travels from *Lyons* to *Paris*, in which the Reader will find very few Repetitions, and many ſingular and curious Remarks that for any Thing I can diſcern, had eſcaped the Obſervation of former Travellers, and are not taken Notice of by any that came after them, more eſpecially the Story which he tells us of the Son of Count St. *Geran*; which he has related very ſuccinctly, and that has ſince been made the Subject of a conſiderable Treatiſe. It may not be amiſs to obſerve, that the young Gentleman who thus recovered his Title and Fortune, married, and had only a Daughter, who, by the Intereſt of the Family, was put into a Convent; by which Means the Eſtate deſcended very nearly in the ſame Way that it would have done, if the Fraud had never been diſcovered.

March 6, We gave forty five *Livres* a Man, for Horſes to a Meſſenger, who for that Money maintained us from *Lyons* to *Paris*, and allowed him five *Sols* a Pound, for every Pound our Portmanteaus weighed above ſix Pound, which he carried on a Sumpter-horſe. By the *Coche d'eau*, a Conveyance by the River *Soane*, we ſent ſome of our Things, and paid but three *Sols per* Pound. Dr. *Moulins*, Mr. *Liſter*, Mr. *Ray* and myſelf, were in Company this Journey with ſome *Frenchmen*. We went through a very ſtony Way, and paſſed over Hills, and three Leagues from *Lyons* paſſed through *la Brelle*, and three Leagues further brought us to our Lodgings in *Tarrara*. This Day we obſerved Oxen ſhod with Iron. *7th*, We mounted before Day, and rode over the Mountain of *Tarrara*, where we found Snow. After three Leagues riding we came through St. *Savorin*, and thereabouts obſerved a perpendicular Stone moved by Water, to bruiſe Hemp, held underneath by two Boys. Three Leagues further we dined at St. *Nicholas* in *Roanne*, and there ferried over the *Louvre*, each giving two *Sols Marque*. We paſſed a pleaſant Valley, and four Leagues from our Baiting-place, lodged in *Pas de Quand'ere* a ſmall Village.

The 8*th*, We rode, for the moſt Part of four Leagues, thro' hilly Way, and dined at *l'Eſcu de France* in *Paliſſe*, where the Count *de S. Geran* hath a Houſe. The preſent Count came thus to his Eſtate; his Uncle being next preſumptive Heir, made a Compact with a Midwife, who delivered the preſent Count's Mother, but by caſting her into a Sleep, the Midwife perſuaded her into a Belief ſhe was delivered of a dead Child; when the Midwife conveyed away the little Infant, who was bred up by a Country Woman, and being grown to ſome Years, the Counteſs deſired, and took him for her Page, on whom ſhe beſtowed very good Breeding; and in the mean Time the Midwife, on her Death-bed, confeſſed the Cheat, and declared the Page to be the Counteſs's true Son. This Diſcovery occaſioned a great Suit between the Uncle and the young Heir; but at laſt it was determined by the Parliament of *Paris*, in Favour of the Heir the Counteſs's Son, who is now Count *de St. Geran*. Four Leagues from *Paliſſe*, having traveled good Way in a pleaſant Country, we lodged at the St. *George*, without the Walls of *Warene* a ſmall Town.

On the 9th, we traveled ſeven Leagues, and dined at the *Three Moors* in *Moulins*, where many Women came to ſell their Sciſſars, Knives, &c. *Moulins* is an indifferent City, which afforded little of Remark, beſides the ſtately Monument of *Montmorency*, who was beheaded in the *Maiſon de Ville* at *Toulouſe*. The white Marble Statues of the Duke and his Lady lay on a Tomb of black Marble; a fair Marble Statue is on each Side, and over them a Marble Urn, and other Ornaments. We rode ſeven Leagues from *Moulins* in very good Way, (as we did in the Morning) and lodged this Night without the Walls of St. *Pierre de Moutier*. Hereabouts began ſtony Cauſeways. On the 10th, we rode five Leagues, paſſed a Stone Bridge over the River *Loire*, and dined at the *Flower-de-lys* in *Nevers*, where the poor People deſired us to buy their *Bagatells* of Glaſs. This City is meanly built nigh the *Loire* on a riſing Ground, and hath an indifferent fair Cathedral, where are ſeveral marble Monuments: The Steeple of this Cathedral is handſomely adorned with Statues. After Dinner we continued our Journey about two Leagues and an half, and taſted of an acid Water ſpringing up plentifully in the Middle of a Court, walled about. This Water is much drank in *Auguſt*, and is reputed very good for curing the Stone, &c. It is near *Pogue* a Village. This medicinal Well riſes in the Level of a Valley. Two Leagues and a half farther we reached *la Charité* a walled Place, ſituated upon the *Loire*. Over the Gate we entred at is written,

In Varietate Securitas ſub Lilio.

Our Inn was handſome, the Sign of the *Croix d'Or*.

On the 11th, we took Horſe about Four in the Morning, and rode three Leagues to *Pouilly*, where we drank very good Wine, which that Place is noted for. Four Leagues thence we dined at *Coſne*, a walled Place, noted for Dogſkin Gloves. In the Afternoon we travel'd five Leagues to *Bony*, and one League and an half farther lodged in *Briare*, a ſmall walled Town. At this Place begins a Channel cut from the *Loire* to the *Seine*, the Water being kept up by Locks or Sluices. On the other Side of the *Loire*, in *Berry*, and about two Leagues from *Coſne* is *Sancerre*, a Town ſituated upon a Hill; formerly a ſtrong Place and well defended by the Proteſtants about ninety Years ago; they held out ſo long, that they underwent the greateſt Miſeries of Famine, ſome Women digging up their Children they had buried three or four Days before. We met on the Road many *Savoyards*, who were Chimney-ſweepers at *Paris*, &c. They come off the Mountains of *Savoy* in the Beginning of Winter, and return thither in the Spring.

The 12th, we rode four Leagues, and dined at the *Eſcu de France* in *la Buſiere*, a ſmall Village. Seven Leagues further we lodged in *Montargis*, a City where we ſaw nothing worth our Obſervation. An indifferent Caſtle ſtands here on a Hill: There is an Archbiſhop of this City, and the King ſends a Governor. In the Road we took Notice of many thatch'd Houſes, and many Country-houſes with high and ſteep Roofs covered with Slate. The 13th, we travel'd about five Leagues, and had on our Right Hand *Pont a Gaſſon*, a walled Town, and a League thence dined at the *Angel* or *Maiſon rogue*, a Houſe that ſtands in the open Fields. In the Afternoon we went over a Plain ſowed with Corn, and five Leagues from our Bait paſſed by *Milly*, a large walled Place on our Left Hand, and one ſhort League thence arrived at *Corrance*, where we lodged. This Afternoon we ſaw on our Right the Wood of *Fontainbleau*. The 14th, we rode about a League, and paſſed among Rocks where Travellers are often robbed. About two or three Leagues farther, we ſaw on our Right Hand, *Corbilly*, a City in a Valley, with many Villages round it. Seven Leagues from *Corrance* we dined at *Juviſii*, at the Sign of the Golden Lion. Three Leagues thence we paſſed through *Ville Juiſue*, and there, on the Top of a Hill, had a Proſpect of *Paris*, where we ſafely arrived after we had traveled two Leagues.

15. On our Left Hand we had a fair Hoſpital; from *Corbilly* to *Paris* is a Cauſeway in a ſtrait Line, and well paved with ſquare Pebbles. Nigh *Paris* we obſerved ſeveral Stone Quarries. This Stone is of very great Advantage to the City of *Paris*; for were it not thus plentiful, the Buildings would be but indifferent. We ſtaid in this City till *April* 1, 1666, too ſhort a Time for ſo great and remarkable a Place; but the *French* King's Declaration of War againſt *England* commanded us out of *France*, within three Months after the Proclamation thereof, which was on the 1*ſt* of *February*, N. S.

What I could obſerve during my Stay here, I haſtily put in Writing, *viz.* Every *Wedneſday* there is a Horſe-market in *Fauxbourg S. Victor*, and every *Saturday* at *Port Richlieu.* At *Mount Martre* is made the Plaiſter called Plaiſter of *Paris*, and they have this Saying about it, *Il y a plus de M.* Martre *à* Paris *que de* Paris *à M.* Martre. Cardinal *Mazarine* left a great Legacy to build the College of four Nations, *Italian*, *French*, *Spaniſh*, and *German*; a good Part of it was now finiſhed; the Front is ſtately made, like a Theatre, and it looks upon the *Louvre*, being placed on the oppoſite Side of the River *Seine.* The *Sarbonne* College is a magnificent Structure. The Doctors wear black Gowns; and when Exerciſes are perform'd, they wear a white Furr, which hangs athwart the Breaſt. *L'Hôtel de Ville en la Place de Grave* is an old and fair Building. *Pont Neuf* in the Middle is joined to the Iſland *Notre Dame* Church ſtands in. The Braſs Statue of *Henry* IV. on Horſeback, made by *Bologna* (who is buried at the *Annunciata* in *Florence*) ſtands in the Middle of the Bridge, having Inſcriptions and *Baſſi relievi*, deſcribing his Victories, *&c.* *Place Dauphine* is a triangular Piazza built very uniform, and juſt in Sight of *Henry* IVth's Statue. *Rue de Harlay* is behind that Piazza, where all the Houſes are of the ſame Building. *Place Royale* is an uniform Square, very neat, having a green Court railed about, and a ſmall Portico under all the Houſes. *Notre Dame* is a fair Church with a handſome Front, adorned with Statues, and two flat Steeples, from which is a good Proſpect of the City. Several Colours hang up in this Church, two of them were taken by the *Engliſh.* The *Baſtile* is like the Tower of *London*, for Priſoners of State, where the King gives them Allowance. It is near Port St. *Antoine.* The Arſenal conſiſts of many Courts, and has fair Walks in a Garden near the City Wall. St. *Germain Auxerrois* is a pretty Church nigh the *Louvre*, and is called the King's Pariſh Church. The *Thuilleries* is the Garden belonging to the *Louvre*, which they would not permit Strangers to ſee at this Time. The *Louvre* Gallery is 900 Feet long; under half the Length of it are Stables.

Before the *Louvre* Gallery, not far from *Pond des Thuilleries*, ſtood an old Tower called *la Tour des Anglois*, which was thrown down the laſt Year. Some ſay, the preceding Kings durſt not throw it down, becauſe of a Prophecy that *France* ſhould be then conquered. The *Louvre* will be a vaſt Place when it is finiſhed; that Side towards the River, and the End towards the *Thuilleries* is already built. *Donec totum impleat orbem*, and *Virtuti Regis invictiſſimi*, inſcribed on ſeveral Parts of the *Cheſtau de Louvre.* In the Jeſuits Church *Rue St. Antoine*, is *Lewis* the Thirteenth's Heart kept in a Golden Caſe, held up by two Silver Angels. In the ſame Church is a fair Altar, with about four Braſs Figures or Statues, being the Monuments of this Prince of *Conde*'s Father. I rode out of the City two League to St. *Clou*, where *Madame Henrietta*, Dutcheſs of *Orlean's* our King *Charles* the Second's Siſter, hath a Palace and Gardens. In the Pariſh Church of St. *Clou* is a ſpiral Marble Pillar, and Inſcriptions to *Henry* III. whoſe Heart is kept here. In a Chapel under the Choir is the old Monument of St. *Clou*; two Leagues thence we came to *Verſailles*, a pretty Pleaſure-houſe built by M. *Foucquet.* Here rare Birds and other Animals are kept, but the *Conceirge* would not let us ſee them, or the Rooms of the Houſe, becauſe we had no Ticket from M.——. In the Room, they ſay, are Cabinets, Looking-Glaſſes, *&c.* curiouſly adorned with Silver Fillegree-work. Here I ſaw *Lewis* XIV. and his Queen, attended by a Foot Company of *Swiſs*, armed with Back, Breaſt, and Head-pieces, a Company of *Swiſs* with Halberds, and a Company of *French* Foot, beſides his Guard in Livery on Horſeback, armed with Carbines. The King has alſo a Guard of Younger Brothers, who ſerve him voluntarily, and wear whitiſh Coats with Silver Lace; they carry Muſkets. Out of theſe the King oftentimes chooſes his Officers. The Lord *Douglas* was formerly the *French* King's Page, who at this Time commanded a Regiment of *Scots*, which the King of *England* ſent for over upon the Declaration of War between *France* and *England.*

Every *Monday* comes out the *Journal des Sçavans*, a Pamphlet written by one Mr. *Galloyer* a *Pariſian*, and but a young Man. M. *Joncquet* is Profeſſor in the King's Garden, which is a handſome large Place; but that at *Montpellier* is bigger and more pleaſant. M. *Marchand*, formerly an Apothecary, hath travelled ſome Parts of the *Levant*, and is very ſkilful in Herbs; he hath the beſt *Hortus Siccus* that we ever ſaw, the Plants being neatly faſtened on with a Glew, which he freely told us was made thus: Take of *Icthyocolla* and ξυλοχολλα, *ana*; cut theſe ſmall, and then boil them with *Colocynth*, and afterwards diſſolve all in Vinegar. Among the dried Plants, *Medica Ciliaris* and *Ferrum equinum*, *Siliqua multiplici*, are moſt remarkable. We met accidentally with one *M. Crock*, a Phyſician in *Amiens*, who ſeemed to be a very ingenious Perſon. In a dirty narrow Street, called *Rue de la Ferranerie*, we ſaw the Well, which *Ravillac* ſtood againſt when he ſtabbed *Henry* IV. the King's Footmen going through St. *Innocent*'s Church-yard, which is juſt by. St. *Innocent*'s Church-yard hath many Charnal Houſes round about, and it is obſervable, that none of the Graves there are digged much above one Foot and an half deep, and yet the Fleſh of the dead Bodies is ſuddenly conſumed by the Earth, which is of a chalky Nature. When they make new Graves, they ſometimes met with whole Coffins, but the Fleſh quite conſumed within them. In *Lent*-time no Butchers can ſell Fleſh, the Hoſpital having the Gain of all the Fleſh that is eaten at *Paris* in this Seaſon; which muſt be a conſiderable Profit, if they always, as they did this *Lent*, ſell Beef at eight Sols *per* Pound.

St. *Euſtace* is a fair and large Church. *Valdegrace* is a new Church, building at the Expence of the late Queen-Mother of *France*; it hath a handſome Aſcent up to it, by ſeveral Stone Steps, which lead into a Portico in the Front of the Church: It is made after the *Italian* Faſhion, and hath a Cupola between the Choir and the Nave. The Queen's Heart is buried here. The *Carthuſians* have a great Cloiſter in the *Fauxbourgh* St. *Germains*, and have large Walks. *Luxembourg* is a ſtately Palace, and very uniformly built; it hath fair and large Walks, like thoſe of the *Roman Villæ*, where all Perſons may walk with Freedom. *Madamoiſelle* the Prince of *Conde*'s Siſter lives here. Every Hour of the Day there paſſes a Hackney-coach from the *Place Royal* to *Luxembourg-houſe*; and another Coach goes from *Rue St. Honore* to *Rue St. Jaques*, where the Bookſellers live. Every one pays five Sols for his Place, but goes with other Company, and for that Reaſon it is not uſual for Perſons of any Quality to go in them. *Palais Cardinal* is a fair Palace with handſome Walks. Here *Madame Henrietta*, Dutcheſs of *Orleans*, lives. At one Side of this Houſe is a publick Stage, where the *Italian* and *French* Comedians act by Turns. I ſaw here *Il Maritaggio d'una Statua*; a merry Play, where the famous Buffoon *Scaramuccio* acted; three antick Dances pleaſed the Spectators. The *Quattre Scaramuccie* was another pleaſant *Italian* Comedy. We ſtood in the *Parterre* or Pit, and paid thirty Sols for ſeeing the firſt, and but fifteen Sols for ſeeing the laſt. We ſaw a *French* Comedy, entitled, *L'Eſtourdie*; which was better acted than we expected. We paid for ſeeing this, and ſtanding in the Pit, fifteen Sols a Man. In the *Marais du Temple* are another Company of *French* Actors, who have Machines to move their Scenes. M. *le Dauphin* hath his Company of Boys, who, they ſay, act very well. The *Sale des Machines*, in the *Louvre*, is made like that at *Modena*, and by the ſame Workman *Gaſpar Vigarini*; this is larger, and the Roof of the Theatre richer gilt; they ſay it will hold 5000 People, and that at *Modena* but 3000; one of the Machines moves a Hall with the King and Courtiers. The Sea is well repreſented in one Machine. Noblemen's Houſes are called *Hoſtels*, and over their Gates are always written the Names of them; as, *Hoſtel des Ambaſſadeurs* near the *Luxembourg.* *Hoſtel de Sully* is in *Rue St. Antoine*; *Hoſtel de Vendoſme* in *Rue St. Honore.* The *Mathurins* are the *Padri di Riſcbatto*, and are thus called in *Paris*, becauſe St. *Mathurin*'s Body was formerly kept here; which is ſince carried to the Place where he was born, called *Archant*, a Village in *Gaſtinois*. In the Cloyſter here is a Tomb-ſtone with a Sphere on it, and round about it this Inſcription.

> *De Sacroboſco qui compuſtita Joannes*
> *Tempora diſcrevit jacet hic a tempore raptus*
> *Tempore qui ſequeris, memor eſto quod morieris,*
> *Si miſer es plora, miſerans pro me precor ora.*

Clermont College is a ſquare and high Building, that belongs to the Jeſuits who teach here, in ſeveral Schools, about two thouſand Boys, many of whom are Gentlemen's Sons boarded here, having ſeveral Halls to dine in, and long Chambers to lodge in. They ſay about 400 Boys live here in this Manner, and are not ſuffered to go out of the Gate without Leave. Many of the Scholars wear colour'd Gowns, faſhion'd like the Sophiſters in *Cambridge*, and have large Velvet round Caps when they learn Logick, and ſquare Caps when they read Philoſophy. At a Diſpute, we ſaw the Duke of *Guiſe*, a young Lad. *Le Palais* is in the ſame Iſle with *Notre Dame*, where the Courts of Judicature ſit; the Lawyers wear black Gowns and ſquare Caps. In the Hall are many Shops and Galleries. One *Varennes* is the only Proteſtant Bookſeller here, who, to ſignify whether Maſs is ſaid or not, hangs out a Paſteboard, having on one Side the Letter *N.* and on the other the Letter *O.* for *Non* and *Ouy*. This is taken Notice of by the Proteſtants that come to the Hall, that they may avoid the Elevation of the Hoſt. *Eſchelle du Temple* is a great Ladder that ſtands in the Corner of a Street not far from the Place where the *Templars* formerly lived. The chief Streets are, 1. *Rue St. Jaques.* 2. *Rue St. Martin.* 3. *Rue Montmartye.* 4. *Rue St. Denis.* 5. *Rue St. Honore.* There are ten *Fauxbourgs* or Suburbs, twenty Gates, eleven Bridges, ſix hundred Streets in the City and Suburbs, more than thirty-two thouſand Houſes, and above one hundred Religious Houſes or Convents. At the *Gobelins* is a Houſe where Tapeſtry is made. Nigh Port St. *Honore*, the Lord *Hollis*, the *Engliſh* Ambaſſador, dwelt.

The Fair of St. *Germain* begins the 3d of *February*, and holds all the Lent; the Place the Fair is kept in, is a large ſquare Houſe with ſix or ſeven Rows of Shops, where Cuſtomers play at Dice, when they come to buy Things; the Commodity is firſt bought, and then they play who ſhall pay for it. After Candle-lighting is the greateſt Gaming; ſometimes the King comes and plays. Here we ſaw the Picture of our Saviour's Aſcenſion, St. *Peter*, St. *Paul* and two Angels; it was made by *Antonio Moro*, who lived in *Charles* the Vth Time; it is valued at 200 Piſtoles. The Frame is curiouſly carved, and very richly gilt. The *Theatins* have a fair Church and Cloiſter, a Building by the River Side, ſome Diſtance below the College of Four Nations. Cardinal *Mazarin* gave a Legacy for the Erecting this Convent. 1. *Pont St. Michel*, 2. *Pont aux Change*, 3. *Pont Notre Dame*, and 4. *Petit Pont*, have Shops on each Side. The *Pont Notre Dame* is a very uniform Street. 5. *Pont Marie*, ſome Years ago had many of its Houſes, at one End, tumbled down in the Night, by a violent Stream of the River. Every one without a Sword pays two Livres that paſſes over. 6. *Pont de Bois*, which joins the Iſle *Notre Dame* Church ſtands in, to Iſle *Notre Dame*, where are new and handſome Streets. An *Engliſh* Boat rowed by twelve Men, two of them *Engliſh*, in this River, and belongs to the Dutcheſs of *Orleans*. The King hath one or two Pleaſure-boats. Croſs ſeveral Streets of *Paris* hang little Bells and Chains, which are rung when Thieves break into Houſes in the Night-time. The *Chaſtelet* is a Priſon not far from *Pont aux Change*, where Men are clapt up for Debt, and ſometimes criminal Matters. Such as are found murdered in the Streets are brought hither and expoſed to View, that they may be known. *Vade in Pace* is a cloſe Priſon in Convents, where they keep ſuch as have been profeſſed of their Order, and are turned Proteſtants. They feed them with Bread and Water, and there let them lie ſometimes all their Days. It is like a Dungeon, having only ſome light from the Top, whence their Meat is let down.

16. A *Frenchman*, at the firſt Sight, is very civil and familiar, and will as ſuddenly forget his Acquaintance with you; they will aſk you, whether you are of the Religion, *i. e.* Proteſtant, or of the *Egliſe*, *i. e. Roman* Catholick Religion, the firſt Time you fall into their Company, and enquire who made your Cloaths, what they coſt, and twenty ſuch Queſtions. If you employ a Porter, *&c.* and not agree with him before Hand what he ſhall have, he will go away grumbling, though you give him more than he could have expected if a Bargain had been firſt made. None but Gentlemen, or ſuch as have been Officers in the Army, can wear Swords, *&c.* when they travel. The *French* Women are generally bad Houſewives, minding their Cloaths, and dreſſing moſt, which they will have in the Faſhion; and the Humour of obſerving Modes muſt be ſatisfied in both Sexes, though their Bellies pinch for it; for in moſt Families their Diet is both coarſe and ſlender. The Women drink uſually Water, and ſometimes a little Wine; they have a Breeding ſo free, that in *England* we ſhould eſteem it immodeſt, the *Hugonot* as well as popiſh Ladies, ſpot and paint their Faces, which, however, ſome of their Miniſters do not approve; and, in a Word, Women of both Religions, agree but too much in their Morals.

Swearing and Curſing, with the Addition of obſcene Words, are cuſtomary in both Sexes. Yet there are ſome Men and Women among the Hugonots that are truly religious. Look on a *French* Woman, and you ſhall ſee her ſtare you in the Face, which is a Confidence that better becomes the Men, who ſeldom or never are put out of Countenance. The *French* are ſtrangely impatient at all Games, eſpecially at Cards, which tranſport ſome that loſe into a Rage, and they make a dreadful Noiſe, with Blaſphemies, Curſing and Swearing in a horrid Manner. At this Time moſt People complained of their King's impoſing Taxes, *&c.* yet they ſeemed to boaſt of him, and were proud to think themſelves Subjects to an abſolute Monarchy. Shirking or Sharping is as natural to a *Frenchman* as his Oaths; and tho' his Carriage be free, yet he is ſtingy enough of his Purſe, and will ſooner loſe a Friend than a Penny, and ſmall Intereſts will govern his Affections; *Exceptis Excipiendis.*

Malefactors receive their Sentences on their Knees, which pronounced, the Hangman preſently ties a Rope about their Necks, and conveys them to the Priſon; whence after Confeſſion, they are immediately hauled to the Gallows, ſo that ſometimes they are condemned in the Morning, and hanged before Night. If one hath endeavoured to kill another, and the aſſaulted Perſon lives, yet the Juſtice of *France* will condemn the other to die, taking the Will for the Deed. The Marquis *de l'Ange*, a Proteſtant, and reputed a ſtout Man, was divorc'd not long ſince from his Wife, a very handſome and virtuous Woman. She after ſome Years complained to her Friends, that the Marquis was not able to get her with Child: This made ſome Diſturbance among the Relations, but at laſt, when Phyſicians, *&c.* had given in their Teſtimonies, they could perceive no external Fault in either; it was agreed by both Parties they ſhould prepare themſelves, and a Day was appointed by the Phyſicians to be not far off; but notwithſtanding all the Endeavours of the Marquis, it was concluded by a Decree of Parliament, that they might be divorced. The Lady is ſince married to another, and hath Children by him, and the Marquis hath another Wife, and hath got her often with Child.

April 7. After Dinner, and juſt as Mr. *Howlett*, Dr. *Ward*, Mr. *Ray*, Dr. *Moulins*, Mr. *Liſter* and myſelf, were going out of our Lodging towards the *Chaſſe Maree*, a kind of a Cart, that fetches Fiſh from *Calais*, one of the *French* King's Officers, a Captain *de Guet*, aſked for Monſieur *Moulins*; and while he exchanged two or three Words with him, he let his Batton, which he had under his Cloak in two or three Pieces, together, and preſently came in eight or ten Muſqueteers, who ſeized on Dr. *Moulins*, and hurried him away in a Sedan to the Baſtile; the Captain firſt read the Order or Warrant commanding him to apprehend one *Moulins* wherever he could find him. Mr. *Howlett*, Dr. *Ward*, and Mr. *Ray* went away this Day for *England*, but Mr. *Liſter* and myſelf not liking that Way of travelling by the *Coaſſe Maree*, ſtaid a little longer in *Paris*; in which Time we could not learn any Thing concerning the Impriſonment of Dr. *Moulins*, only Gueſſes were made that his chief Crime was, he had lived too long among the *French* Proteſtants in *Languedoc*; and that the *French* King ſuſpected he might diſcover the preſent Inclinations of that Party after his Arrival in *England*, he being very intimate with ſome of good Quality, that were diſcontented with the preſent Management of Affairs in *France*.

When *Oliver Cromwell* was Protector, there happened this Accident at *Niſmes*; the Proteſtants having a Right to chuſe Magiſtrates, the popiſh Party were reſolved to hinder them by Force on the Day of Election, and had ſome of the King's Guards, and all the Papiſts in Arms ſtanding ready about the Town-Houſe; the Proteſtants alſo armed in great Numbers, and one Proteſtant Gentleman being nigh the Door that led into the *Maiſon de Ville*, had a Piſtol in his Hand, and being demanded why he ſtood in that Poſture, anſwered, to defend their Privileges; then they commanded him to deliver up his Arms, which he refuſing, the Guard ſhot him dead; which gave ſuch an Alarm to the Proteſtants, that they immediately fired at the Guards and others, and killed the Biſhop of *Niſmes*'s Nephew, and then turned the Guards, and the reſt of the Papiſts out of the City. After that they began to fortify, and had many of their Friends come in daily to their Aſſiſtance, from the *Sevennes*, &c. But ſome more conſiderate Perſons conſulting what was to be done, at laſt reſolved to ſend Dr. *Moulins*, then in *Niſmes*, into *England*, and acquaint the Protector with it, and to deſire his Interceſſion with the Court of *France*; ſo Dr. *Moulins* immediately and privately rode away for *Lyons*, in bitter ſnowy Weather, and in eight Days arrived in *England*, having firſt waited upon Lord *Lockhart*, the *Engliſh* Ambaſſador at *Paris*. In this Journey, Dr. *Moulins* rode Poſt with a *Frenchman*, that ſeeing the Poſtboy fall down dead with the Extremity of Cold, opened his Codpiece, and rubbed his *Membrum virile*, with Snow, till he recovered him, which he did in a little Time, and the Boy was able again to ride Poſt. Dr. *Moulins* ſtaid but a very ſhort Time at *London*, and then returned with Secretary *Thurloe*'s Letters to the *Engliſh* Ambaſſador and Cardinal *Mazarine*; the Poſtſcript of the Letter to Cardinal *Mazarine* was written with the Protector's own Hand; the Words were to this Effect: *As you ſhew Kindneſs to the Proteſtants, ſo you have me your Friend or your Foe.* Dr. *Moulins*, upon his Arrival at *Paris*, delivered the Letters to the Ambaſſador; within a ſhort Time he attended on the Ambaſſador to the Cardinal's, who read the Letter, and then had ſome private Conference with *Lockhart*; after which *Moulins* was called in, who heard the Cardinal promiſe to the Ambaſſador, the Proteſtants at *Niſmes* ſhould not be meddled with; and added, Mr. Ambaſſador, *You know* France *is not in a Condition to deny* England *any Thing*. Accordingly, Orders were ſent expreſs to ſtop the Troops which were marching againſt *Niſmes*, and within a Day's March of the Place when they received the Orders.

Dr. *Moulins* ſent a Note for ſome Linnen to our Lodging, and Mr *Liſter* returned by the Meſſenger a little Billet, which only condoled his Misfortune, but the Captain of the Guard at the Baſtile tore it in Pieces. All this while we heard of no Crime laid to his Charge. He was kept a Priſoner at the King's Charge, and well dieted and uſed. After the City of *London* was burnt, the *French* King ſent a Courtier, I think *Rouvingny*, to *Moulins*, to acquaint him he ſhould make any Province in *France* his Priſon, if he would give Security in a great Sum of Money not to go out of it; which he ſaid he was not able to give. Some Time after the King offered him all *France* for his Priſon, upon the ſaid Security; to which he anſwered as before. At laſt the King ſent for him and told him, he had done him no Wrong, and then bid him begone out of *France* within a Fornight. This Relation I had from Dr. *Moulins* after his Coming into *England*.

17. The Romiſh *Gallican* Church conſiſts at preſent of fourteen Archbiſhopricks, which are, 1. *Lyons*. 2. *Ambrune*. 3. *Auchs*. 4. *Arles*. 5. *Tours*. 6. *Rheims*. 7. *Bourdeaux*. 8. *Thoulouſe*. 9. *Bourges*. 10. *Narbonne*. 11. *Aix*. 12. *Vienne*. 13. *Rouen*. 14. *Paris*. Under theſe Archbiſhopricks are Eighty five Suffragan Biſhopricks, which contain 7000 Parſonages, Priories, and Pariſhes, above 1140 Commanderies of *Malta*, 157000 Chapels, beſides 557 Abbeys of Friers, and above 700 Convents of *Cordeliers*, excluſive of the *Carmelites*, *Jacobins*, *Auguſtins*, *Carthuſians*, *Cæleſtines*, *Jeſuits*, *Minims*, and other religious Orders, who poſſeſs 14077 Convents. To theſe Clergy belong 259000 Farms, and 17000 Acres of Vineyards, which are by them leaſed out in *France*, not reckoning 3000 Acres from which they take the Third and the Fourth. The Revenue of the ſaid Church is eſtimated at 920,000 Crowns *per Annum*, excluſive of the Reſervations in their Leaſes, which amount to 120,000 Crowns, conſiſting of three *Livres* each. The ſaid Calculation was made by order of the Aſſembly of the Clergy of *France*, held in the *Auguſtine*'s Convent, at the End of *Pont Neuf*, in *Paris*, the 16th of *November*, 1635.

18. *April* the 1ſt, Mr. *Poly*, Mr. *Liſter* and myſelf gave eighteen *Livres* a Man for our Places in a Coach-Waggon that holds eight Perſons; we had in the Coach with us, one of *Geneva*, (a *Genevrite* as they vulgarly call them) who had lived many Years, and married a Wife in *Venice*; but the laſt Year the Inquiſition took Notice of ſome that were privately Proteſtants, and clapped two into Priſon. This Man had Intelligence of their Deſign, and therefore preſently retired out of *Venice*, and undertook a Journey for *London*, where he reſolved to end his Days. We had alſo in the Coach, a ſtout young *Swediſh* Soldier, who had ſtolen away a young Woman; and that Morning we ſet forward, three *Frenchmen* pretending themſelves the King's Officers, attempted to get her away, and carry him to Priſon, becauſe he had dreſſed the Wench he ſometimes call'd his Wife, in Mens Cloaths; but the *Swede* outvapour'd them, and turned them down Stairs, and went after them, hectoring them all the Way to the Inn-Gate. When I came to *London*, I met with this *Swede*, and aſked him in *Italian*, where was his *Bella Donna*; he replied, he had diſmiſſed her; and ſaid, *Jo Tenge una piu bella*, i. e. I have got a handſomer. This Day we rode through St. *Dennis*, four Leagues from *Paris*, and four Leagues further lodged in *Beaumont*, a little Town ſituated by the River *Loazzo*. We obſerved ſome few Vineyards this Day. 2d. We travelled four Leagues, and dined at the White Croſs in *Tilliar*, and three Leagues further lodged in *Beauvais*, a large Town, but the Houſes low, and built of Wood.

The Royal Manufacture here employs four or five hundred Men in weaving Tapeſtry, having ſeveral Looms in long Chambers; and Painters are invited thither to draw the Pictures that are to be woven. We obſerved thoſe that weave have the Picture they work juſt underneath the Tapeſtry they are weaving. The Cathedral in this City was not finiſhed. The Choir is built like thoſe in *England*, very high and handſome within and without: There is a large Piazza in this Town. On the 3d, after ſix Leagues riding, we dined at St. *Puy*; then three Leagues brought us to *Pais*, a Village where the Duke of *Crecqui* hath a Caſtle. On the 4th, we went five Leagues, and dined in *Airaines*, a great Village, and after Dinner rode four Leagues more to *Abbeville*, a large Town with wooden Houſes. Good Guns and Piſtols made in this City. There are likewiſe three or four large Piazza's here. St. *Ulfrane* is the chief Church, a lofty ſtone Building, not finiſhed: The River *Seanne* croſſes the City in three Places; little Veſſels of 80 Tons come up hither, the Sea being but three Leagues off. Between *Airanies* and *Abbeville* we paſſed by a Fort. On the 5th, we rode five Leagues, and dined in *Berneil*, a Village five Leagues thence, and lodged in *Montrevil*, a Garriſon Town indifferently built, but well paved and fortified; where we entred, there was a treble Wall, and good Ditches, and where we went out, was a ſteep Deſcent into a marſhy Ground. On the 6th, we travel'd two Leagues, very bad Way, to *Fran*, a ſmall Village; and after Dinner rode hilly Way five Leagues to *Boulogne*, a City built on a Hill. The Suburbs called the *Baſſe Ville*, where we lodged; a little Sea-port here. All the Way, in this Journey from *Paris*, we bargained for our Meat before Meals, and at Night did the like, or elſe bought it out of the Cook's Shops, paying only for our Lodging, Uſe of Table-linnen, *&c.* in the Inn. *Piccardy* is a great Corn Country.

On the 7th, we rode bad hilly Way, three Leagues to *Marquiſe*, a Village, and four Leagues further to *Calais*: Half a League before we came into the Town, we deſcended into the Fenny Country about it. We paſſed alſo by a ſtrong Citadel, and among many little Cottages, which are uſed, as ſome told us, for Peſt-houſes in Time of Infection. Entring *Calais*, the Guards only examined how many *Engliſh* and *French* we were in the Coach. On the 8th, after taking a Paſſport from the Judge-Major, and our Things ſearched, we delivered our Paſſport without the Gate, and entring the *Engliſh* Packet-boat, ſailed two Hours S. W. to gain the Wind; and in three Hours, without once changing Board, we ſafely arrived at *Dover*, a Boat fetching us aſhore. The Author concludes his Journal with this Inſcription:

Deo
Omnipotenti
Maximas reddit
Gratias
P. S.

19. Theſe Travels of Mr. *Ray* and Mr. *Skippon* may prove both uſeful and entertaining to the Reader in many Reſpects, not only though they were written ſo long ago, but even from that very Circumſtance. They ſhow the Condition that *France* was in at that Time of Day, the Size and the Number of the Inhabitants in ſeveral of the principal Cities, and above all, the Situation of Things before the Edict of *Nants* was recalled, and the Proteſtants were obliged to quit that Kingdom: This will afford the Means of making many uſeful Compariſons to Perſons who have their Heads turned for rational Politicks, and ground their Opinions of Kingdoms and States, not upon the looſe and general Repreſentations of the ordinary Rank of Writers, but upon Obſervations of their own, founded in Facts that may with Reaſon be concluded certain. As for Inſtance, our Author laſt-mentioned gives us the State of the Clergy in *France* at the Time he was there: I will alſo give another ſhort State of it as it now ſtands, from a Book publiſhed with Royal Authority: There are at preſent, in the Dominions of the *French* King, 18 Archbiſhopricks, 113 Biſhopricks, 770 Abbeys of Men, and 317 of Women, to which the King names: There are beſides 250 Commanderies of the Order of *Malta*; which ſhows not only the Power of the Clergy in that Kingdom, but alſo the Power and Influence of the Crown over the Clergy.

We may learn likewiſe, from theſe Travels, ſome very curious Circumſtances with reſpect to Manufactures and Commerce. Thoſe Things that appeared ſo new and ſingular even to theſe great Men, are now very common in this Kingdom. We are no Strangers to the Art of making Verdigreaſe; and, as for the Art of Blanching or rather Bleaching of Wax, it is not only known, but practiſed here with as great Succeſs as Abroad; ſo that the Notions of peculiar Excellencies of the Climate or Water of *France* appear to have had no Foundation in Nature, but were the mere Chimera's of *French* Vanity; and there is no Doubt that, upon proper Experiments, the ſame Thing will be found true in other Caſes. It is, indeed, highly likely that theſe Travels occaſioned our looking into and transferring ſeveral *French* Manufactures hither; and therefore this Kind of Writing ought, of all others, to be encouraged.

There was an Attempt made in King *James* the Firſt's Time, to introduce the Silk Trade into this Kingdow, and a Plantation of Mulberry-trees was raiſed for that Purpoſe at *Chelſea*; but it failed, not becauſe the Thing was found impracticable from any Faults in the Soil or Climate, but becauſe thoſe concerned in the Project, wanted Steddineſs, and thoſe employed under them, Care and Induſtry; without which, nothing of this Kind can be ever brought to bear. I have been informed, that in *Hampſhire* ſome Trials of the like Nature have been made with great Appearance of Succeſs; but thoſe that were concerned made ſuch a Secret of their Proceedings while living, that the Thing could not be conveniently carried on after their Deceaſe. It has been likewiſe aſſerted, that Olive-trees might be cultivated in at leaſt five of our Southern Counties; but we delight, it ſeems, rather in having Rarities in our Gardens, than Riches in our Fields.

The *French* had that Notion too, as well as we, but *Henry* IV. the very beſt King they ever had, beat them out of it, and compelled the Inhabitants of the pooreſt Provinces of *France*, to become wiſer and richer in Spite of their Teeth. He made Uſe of his Power to make his Subjects happy; and deſired it, for no other Purpoſe, as appears from an Anſwer he made, when it was ſlily inſinuated to him in Prejudice to the Proteſtants, that he could do nothing in *Rochelle*, which was then in their Hands. *It is a Miſtake*, ſaid the King, *I am abſolute in* Rochelle, *for I can do there juſt as much* Good *as I pleaſe.* His Succeſſor dragooned the Proteſtants out of *France*, though the moſt induſtrious People in it, becauſe they were not of his Religion; but *Henry* IV. dragooned his Subjects of all Religions into planting Mulberry-trees, and making Silk. One, from a Principle of publick Spirit, obliged People to do what they ought againſt their Inclinations, becauſe he knew it was for their Good; the other, from a narrow and bigotted Spirit, drove People out of his Dominions, who were doing all the Good they could.

But there is no Need of making Uſe of Force here; another Method would do the Buſineſs much better. A Reward of Ten Thouſand Pounds for the firſt Hundred Weight of Silk, or the firſt Hogſhead of Oyl, upon Security given to make the like Quantity annually for twenty Years after, might beſtow upon us both Commodities, if it be poſſible for us to enjoy them; if not, the Reward would never be obtained, and therefore no Hurt would be done.

We find, in theſe Travels, a remarkable Point of ſecret Hiſtory; I mean the Protector's ſaving the City of *Niſmes*, and that from the moſt authentick Authority, with many other Things which we might look for in vain any where elſe. But with regard to Matters of a later Date, which come nearer our own Times, and that may better enable us to judge of the preſent State of *France*, it is neceſſary that we ſhould have in this Collection, Travels of another Nature, and in another Seaſon, which the Reader will find in the next Section; and, from the Peruſal of both, will be more inſtructed and better entertained than they could have been with either, if it had ſtood ſingle.

SECTION

SECTION. IV.

TRAVELS through *France,* interſperſed with hiſtorical, political and medical Obſervations, made with great Care and Circumſpection, in two different Journies through that Kingdom, the laſt of which was completed in the Year 1702, and the Whole reviſed by the Author a little before his Death.

By Doctor JOHN NORTHLEIGH, *of the Royal College of Phyſicians.*

1. *A ſhort Introduction. The Author's Entrance into the Kingdom of* France. *The Places he paſſed through in his Journey to* Paris. 2. *A large and curious Deſcription of that City, with an Account of the principal Edifices and other Things remarkable, obſerved therein by the Author.* 3. *A very copious and circumſtantial Deſcription of the Univerſity of* Paris, *and of the ſeveral Colleges of which it is compoſed.* 4. *A Deſcription of ſome of the principal Churches in this City; alſo of the Houſes belonging to the* Jeſuits. 5. *The Abbey of St.* Germains *deſcribed, with ſome Account of the Curioſities there.* 6. *The* Palais, *the Chappel of St.* Louis, *the Palace of* Luxemburg *and the Obſervatory deſcribed.* 7. *An Account of the Bridges in* Paris, *with ſome hiſtorical Remarks.* 8. *The* Place de St. Victoire, *and the Triumphal Arch erected to the Honour of* Lewis XIV. 9. *An Account of the principal Gates of this City.* 10. A *Deſcription of the* French *King's Country Palaces, particularly* Fountainbleau, St. Germains, *and* Marli. 11. *A more particular Deſcription of* Verſailles, *and ſome other Palaces not far from it.* 12. *A Deſcription of the Monaſtery of* St. Dennis, *where the* French *Kings are interred.* 13. *The Author's Journey to the Sea-Coaſt through* Pontoiſe, Roan, Dieppe, Abbeville, *and* Calais. 14. *The Author's Journey from* Paris *by* Charrienton *to the Banks of the* Loire, *with his Obſervations in his Paſſage.* 15. Nevers, Moulins, *and other Places deſcribed, with ſome Account of the Waters of* Bourbon. 16. *A Deſcription of the City of* Lyons, *of the moſt remarkable Buildings and other Curioſities there.* 17. *This Subject continued, with an Account of the adjacent Country.* 18. *The Author's Remarks on the* French *Government and Nation.* 19. *Some Obſervations upon the foregoing Section.*

1. WE are acquainted with very few Circumſtances relating to the ingenious Gentleman, who was the Author of theſe Travels. He was bred at the Univerſity of *Oxford*, as Mr. *Wood* informs us, and travelled through the greateſt Part of *Europe*, purely for the Sake of Improvement and Information. He entered *France* from that Part of the *Low Countries* now under the Dominion of the *French* Monarchs, having before paſſed through the Territories of the Republick of the *United Provinces*, which he has alſo deſcribed; but conſidering we have inſerted Travels through that Country already, we ſhall not fatigue the Reader with Repetitions, but give him at once our Author's own Account of the Places he paſſed through in his Way to *Paris*.

The firſt Place we came to in *France*, properly ſo call'd, (without its Conqueſts) was *Peronne*, formerly a Frontier Town towards *Cambray*, and well fortified after the old Way, being the firſt on that Side in *Picardy*. Here the Cuſtom-houſe Officers ſearched us as ſtrictly as if we had firſt ſet Foot into the *French* Territories, though we came out of the *French* Conqueſts, and had paid Duties there to the ſame King. It is ſeated upon a Level on the River *Somme*, not unlike our *Saliſbury*, but in Bigneſs approaching near to *Exeter*, in that Part of *Picardy* called the *Vermandois* or *Sans terre*; the firſt being the Situation of the ancient *Veromandue*; St. *Quintins*, which is not far off, being ſuppoſed to have been the *Auguſta Veromanduorum* of *Cæſar*.

From *Peronne*, paſſing through the little Village of *Marſlipo*, we came to *Roy*, formerly a Town of Note, (as its Ruins ſufficiently teſtify) ſeated on the River *Moreul* in the *Sans terre*; then taking our Way through the Village of *Gourney*, ſurnamed *Sur le Aronceburg*, in the Iſle of *France*, we came to *Pont*, ſurnam'd St *Maixence*, upon the River *Oyſe*, having an old ſtrong Wall, and a good Bridge that brings you to it croſs the River. From hence travelling three Leagues further, we came to *Senlis*, a Biſhop's See, [illegible]ffragan to that of *Reims*; ſome would have it the *Auguſtomagus* of *Ptolomy*. The Great Church, dedicated to the Holy Virgin, is ſuppoſed to have been built by the *Engliſh*. The next Town between this and *Paris* is the *Louvre*, ſeated in the Dukedom of *Valois*, once the Sirname of the Royal Family, before it was ſwallow'd up in the Houſe of *Bourbon*. *Picardy* has generally a pleaſant and fertile Soil.

2. Thence we came to *Paris*, the Metropolis of *France*, which ſome have compared with *London* for its Extent, Buildings, and Number of Inhabitants. As for its Circumference, the ſame is eaſily diſcover'd from off the Towers of their *Notre Dame*, or *Our Lady*'s Church, to be much leſs than ours, tho' it lies in a more circular Figure. The Houſes, it muſt be confeſs'd, look very handſome on the Outſide, being built with a fair white free Stone (found thereabouts) with handſome Saſh-windows.

The Number of its Inhabitants is, in my Opinion, beſt gueſs'd at, without any further Scrutiny, by the People you meet with in the Streets, eſpecially on the *Pontneuf*, the greateſt Paſſage in *Paris*, and that a very ſhort one, notwithſtanding which, you ſhall very rarely ſee near ſo many People there, as you meet every where walking all along from *Tower hill* to *Weſtminſter-Abbey*: Add to this, that their By-Streets and Alleys are not near ſo throng'd with People as ours in *London*; and if Trade is the main Thing that renders Cities populous, (as we ſee in thoſe of *Holland*) it is evident that our Metropolis challenges the Preference upon that Account. What ſome would alledge in Reference to the Number of Coaches in *Paris* is of no great Conſequence, though I am apt to believe we may carry it even upon that Account.

This ſo much celebrated City is ſeated in a moſt delightful Plain; their Houſes are generally ſix or ſeven Stories high: By common Computation *Paris* has betwixt thirty and forty thouſand Houſes, and about ſeven hundred thouſand Souls.

The Streets are much handſomer and leſs dirty than they were formerly, (which gave it the Name of *Lutetia)* and their Squares are exceeding noble; they are enlightened in the Night-time by Lanthorns hung on Lines. The whole Bulk of this ſpacious City is divided into three Parts; the firſt is called *la Ville*, containing the four Suburbs of St. *Antoine*, *Du Temple*, St. *Martin* and St. *Denis*, being encompaſs'd with the *Sein* on one Side, and Walls on the other; the ſecond is called *la Cite*, ſeated betwixt the firſt and the third, upon what is properly call'd the *Iſle*, ſurrounded by the Branches of the before-mentioned River, and joined to the reſt by Bridges, being the moſt ancient Part of the Town; the third Part is called the *Univerſity*, ſeated on a riſing Ground, containing the Colleges erected for the Promoting of Learning, and the *Fauxbourgs* or Suburbs of St. *Germain*, St. *Michael*, St. *Jaques*, St. *Marcell*, and St. *Victoire*.

The Suburb of St. *Germain* has the beſt Palaces and Colleges. For the reſt; in all the three Quarters are reckoned forty Pariſh Churches, forty-two Abbeys and Convents, forty Nunneries, twenty-four Hoſpitals, forty-eight Colleges, beſides ſeventeen Chapels; ſo that Charity and Religion ſeems to take up a conſiderable Part of this great City. The *Sein* paſſes through the Middle of it, and the Water is very ſweet and freſh here, but has no Tide, like our *Thames* about *London*. So much of it in general. We will now proceed to give you the Particulars. The *Louvre*, were it finiſh'd according to the firſt Deſign, would queſtionleſs exceed all Structures in the World, whereas now only two Sides are compleated, *viz.* that towards the *Sein* and *Thuilleries*, the Hotels of *Crequi*, *Longueville* and *Montauſier* being ſince built within the Compaſs of this Structure, which for this and ſome other Reaſons (amongſt which the Siding of this City with the Malecontents in this King's Minority is none of the leaſt) is ſuppos'd will never be finiſh'd, it being certain that the third Part of the Charges employ'd in Building of *Verſailles*, would have made this as compleat and magnificent a Structure as ever the World beheld. Some ſay *Philip* the *Auguſt* was the firſt Founder of it, above 500 Years ago, but the Fabrick, as it now ſtands, oweth its Riſe to *Francis* I. The Hall call'd *le Salle de Cent Swiſs*, formerly the Hall of Audience for Ambaſſadors, was by *Mary de Medicis* turn'd into a Playhouſe. On the Porches you ſee ſeveral Inſcriptions, ſufficiently demonſtrating that the *French* were always good at flattering their Monarchs, though they then did not come up to that Height as they have ſince, in beſtowing the Epithet of *Viro Immortali*, and other ſuch-like blaſphemous Expreſſions upon them. Upon this Occaſion I cannot forbear inſerting three Diſtichs made by the *French* Poets, exceeding for their Loftineſs the Structure itſelf.

Rex, Regnum, atque Domus, tria ſunt Miracula Mundi!
Rex animo, Regnum viribus, arte Domus.

Non orbis gentem, non urbem gens habet ullam,
Urbſve Domum, Dominum nec Domus ulla parem.

Louvre Domus, Dominus Ludovicus, Regia Rege
Digna ſuo, Cælo eſt hæc minor, ille Deo.

All the Antiquities and *Roman* Statues, with a moſt curious Cabinet of Paintings formerly preſerved here, are tranſported to *Verſailles*; there are however ſome Pieces left of *le Brun*'s, and that celebrated Piece of *Paul Veroneſe*'s Wedding of *Cana*, preſented to the King by the Senate of *Venice*; for the *Servi*, in whoſe Church it ſtood on the Altar, having ſold the ſame to the *French* King, the Senate hearing of it, to check theſe mercenary Monks, preſented it to the King. Their Academy for the cultivating and improving the *French* Tongue, inſtituted by the preſent King's Father, conſiſting of forty or fifty of the moſt ingenious Perſons of the City, is kept here ever ſince. Many of the chief Artiſts belonging to the King have their Apartments in this Palace; their chief Painter then was M. *le Brun*, ſince dead; their head Graver was *Girardon*; and for Sculptures, Medals and Coin, M. *Rotier*, whoſe two Brothers have the Honour to ſerve in the ſame Employment to the Kings of *England* and *Spain*. And not far from theſe they ſhew you another ſpacious Place call'd the *Guard meuble*, ſtor'd with all Sorts of Paintings, Tapeſtries, and curious Cabinets.

The *Thuillery* is alſo a Part of the *Louvre*, where it faces the fine Garden of the *Thuilleries*; it was formerly furniſh'd with Abundance of the beſt Painting, and other Moveables of the beſt Workmanſhip, which have been carried to *Verſailles*: That Part which fronts the Garden is a long beautiful Piece of a Fabrick begun by *Henry* IV. and compleated by *Lewis* XIV. The Theatre in it is exceeding noble, and the Gardens before it not inferior to any in *Europe*, not excepting even *Verſailles*; the Walks and Plantations whereof are indeed more coſtly, but not more delightful and regular. At the lower End of it, ſtands a noble Statue of *Verity* carried off in the Arms of *Time*, with this Inſcription;

Opus Petri à Frankavilla Comeracenſis, Ann. 1609.

There are divers excellent Pieces extant of this great Maſter.

The Royal Palace, call'd *Palais Royale*, does alſo belong to the King, being the ordinary Reſidence of the Duke of *Orleans*, the King's only Brother, when in Town; it is compoſed of two fair Courts, with a delicious Garden behind it; Cardinal *Richlieu* was the Founder of it, who alſo built here a Theatre on Purpoſe for Tragedies, of which he was a great Admirer; but ſince *Moliere* had Liberty to act his Comedies there, and after his Death the Operas were acted in the ſame Theatre. The *Place-Royal* is a vaſt Square, open towards the Street of St. *Honore*, intended chiefly for the King's Statue, which is to be put in the Middle, for which Reaſon they have demoliſhed the *Hotel de Vendoſme*, and ruin'd the Convent of the *Capuchins*.

Near this is another Structure call'd *le Palais Brion*, deſign'd for a Library, but ſince turn'd into two Academies, *viz.* for Architecture and Painting; the firſt erected by M *Colbert*; *Manſard*, *Perault*, *Blondel* and *Felibien* were Members of it; they meet two or three Times a Week, to conſult about the moſt curious Models in Architecture that can be contriv'd. That of the Painters acknowledges M. *Noyers*, Secretary of State, for its Founder, but M. *Colbert* for its Reſtorer; of this M. *le Brun*, their great Painter, was Preſident. They keep here a good Collection of original Paintings of ſome of the beſt Maſters, Statues, Cuſtoms of ancient *Roman* Sculpture to deſign by; beſides which, they hire every Day ſome clean limb'd Man or Woman, who expoſe themſelves naked to their View. The Houſe, known by the Name of the *Cabinet du Roy*, contain'd formerly great Store of curious Pictures, Medals, Agates, and ſuch like Rarities, as alſo the *Anticalia* found in *Childeric* the Firſt's Tomb at *Tournay*, with his Library, and a conſiderable Collection of Manuſcripts, among which was St. *Cyprian*'s Work, brought thither from St *Lawrence*'s Library at *Florence*; but theſe are for the moſt Part now at *Verſailles*.

The Academy of Sciences was likewiſe founded by M. *Colbert*; they are employed in promoting Mathematicks, Phyſick, and Natural Philoſophy, like our *Royal Society*, which exceeds theirs both in the Number of its Members and Advancement of Learning. They have many Noblemen's Houſes of Note, call'd by them *Hotels*; that of the great M. *Colbert*, now in the Poſſeſſion of the Marquis of *Seignelay*, is a very noble Fabrick, and his Library is moſt exquiſite, both for its Number of good Books and curious Manuſcripts; they ſhew you a Manuſcript Bible as old as the Reign of *Charles le Chauve*; the famous Hiſtorian M. *de Thou* has alſo left the Publick an excellent Library. Moſt of their Noblemen's Palaces of Note are furniſh'd with very good Collections of Original Pictures by the moſt excellent Hands, which they have purchas'd for the moſt Part from the covetous *Italians*; among theſe the *Palais Mazarin*, and the Hotel *de Seiguier*, deſerve to be particularly remembered;

membered; the firſt is noble without, and curiouſly furniſhed within, with Statues and Paintings both ancient and modern, of the Hands of *Grimaldi* and *Romanelli*, two famous *Italian* Painters, ſent for hither upon that Account; the King has taken the beſt of them, yet there are many Cabinets, Tapeſtries, and other rich Veſſels of Stone and Silver, left. The ſecond was alſo excellently well-furniſh'd with all Sorts of Curioſities, and particularly with precious *China*-works of all Sorts, but ſince ſold or diſtributed.

The *Recolets* have a very good Library, and ſome excellent Paintings: Hard by is the Hoſpital of St. *Lewis*, founded for thoſe that are infected with the Plague, by King *Henry* IV. but at preſent is made uſe of for the Sick of the *Hotel de Dieu*. In the Street of St. *Avoye* is an old large Palace belonging to the *Grand Prior* of *France*, but formerly appertaining to the *Knights Templars*; it has a conſiderable Revenue annex'd to it. In the Street of St. *Lewis* is a noble Fountain, adorn'd with *Tritons* and other ſuch-like Ornaments.

Their *Maiſon de Ville* or *Townhouſe* ſtands in the Place called the *Greve*, built by King *Francis* I. Neither the Place nor Structure are anſwerable to the Greatneſs of ſuch a City as *Paris*; however, there is a noble Way leading to it, enlarged in 1675, with Cauſeway-banks on both Sides.

The *Place Royal* is a magnificent Square, near as ſpacious as our *Great Lincoln's-Inn-Field*, encloſ'd with *Piazza-walks*, and the Platform with Iron Rails; the Statue of King *Lewis* XIII. ſet up by Cardinal *Richlieu*, ſtands in the Middle of it, with ſeveral Inſcriptions on it in *French* and *Latin*; the Horſe is ſaid to be the Work of *Volterre* a famous *Italian*, who made it for King *Henry* II. The ſaid Cardinal's Houſe ſtands in the ſame Place, having among other Curioſities an excellent Collection of Paintings.

The *Baſtile* is a Place not unlike our *Tower*, ſurrounded with a plain Wall and eight antique Turrets, and ſerves for the ſame Uſe, *viz.* for a Magazine and a Priſon for Priſoners of Quality. There is another very good Arſenal not far from this, a ſpacious Pile of Building, three great Courts and a Garden; the Portal is ſupported by Cannons inſtead of Pillars, with this Inſcription in Capitals:

> *Ætna hæc Henrico Vulcania tela miniſtrat,*
> *Tela Giganteos debellatura furores.*

Here many Workmen are employed by the King, to caſt Statues and other Works in Metal.

The Abbey of St. *Victoire*, in the Poſſeſſion of the *Canons Regular* of St. *Auſtin*, is one of the moſt ancient Foundations in *Paris*; it has a good Library, and ſome Manuſcripts; and Students are permitted to make uſe of them three times every Week. The noted Mr. *Santeuil* belong'd both to this Houſe and Order. The *Jardin Royal* or *Phyſick Garden* (of which Mr. *du Verney*, an excellent Anatomiſt, was Surveyor) is maintain'd at the King's Charge, and Botanick Lectures are kept there during the beſt Seaſon for Plants; it is ſomething longer, but not broader, than that of *Oxford*. There alſo belongs to it a very good Anatomy-School, ſtored with Skeletons of Animals, and among the reſt with one of a very large Elephant. In the King's Laboratory every Body is admitted to ſee the Operations, and the Medicines made here are beſtowed upon the Poor.

Near it is the *Hoſpital General*, as they call it, a vaſt Pile of Buildings, finiſh'd in 1657, by Cardinal *Mazarin*, and containing near ſix thouſand poor People, who are employ'd here in different Sorts of Work, and when ſick well looked after. Another of their Hoſpitals is that call'd *Hotel Dieu*, a very large Building, but neither handſome nor extraordinary convenient, being ſometimes overcrowded with Sick, and too cloſely built up round about it. As it is the chief Hoſpital in *Paris* for the Sick, the Nuns of St. *Auſtin* are oblig'd to tend and look after them, which they do with ſo much Tenderneſs ſometimes, that they don't care much to return to the Nunneries; for, not long before, a certain *Iriſhman* being recovered by the Care of his pretty Nurſe, made ſhift to carry her away without being ever heard of ſince. The Danger and Trouble that muſt needs be the Attendants of this Employment, making the ſame very meritorious among the *Romaniſts*, the Ladies of the firſt Quality ſometimes employ themſelves in theſe Acts of Piety; and it was in this Place that (not long before) the Dutcheſs of *Nemours*, Mother to the Dutcheſs of *Orleans*, got the Small-pox, and her Death into the Bargain. Not far thence is the Hoſpital *de la Charite*, where the Friars of St. *John* perform the ſame Office as the Nuns do in the former: Each Room has three Rows of Beds.

There is another Hoſpital in *Paris* they ſtile *The Incurable*, becauſe only ſuch as are paſt Cure are admitted into it.

But what exceeds all the reſt is, the *Hotel Royal des Invalides*, or the *Royal Hoſpital* for maimed Soldiers, or thoſe render'd unſerviceable by Age, founded upon the ſame Deſign as our *Chelſea Hoſpital*, built at the preſent King's Charge, from 1670 to 1678. The whole Structure is compoſed of five Quadrangles one large one in the Middle, flank'd with two other ſquare ones on each Side, with Piazza's and Corridors or Galleries round them all; the whole Fabrick being of fine hewn Stone, makes a very noble Appearance. The Kitchen is very large and handſome, and in their Refectories (where the Soldiers eat) you ſee moſt of the Sieges undertaken in the late Wars by the *French*, painted on the Walls. The Apothecary's Shop belonging to this Place is the beſt contriv'd, and as well furniſh'd as any I ever met with in all my Travels. The Soldiers are attended here by the Siſters of St. *Lazarus*. Conſidering the Freedom allow'd to Strangers, to be preſent at their Operations perform'd in all their Hoſpitals, the Advantage of their Chymical Lectures, Phyſick-Garden, and frequent Practice in Anatomy, *Paris* ſeems the moſt accompliſh'd School for young Phyſicians, and to be preferred in this Reſpect to *Leyden*, *Padua*, *Montpellier*, *Cambridge*, and *Oxford* itſelf. The Houſe known by the Name of the *Gobelins*, in the Suburbs of St. *Marcell*, was formerly famous for the making and dying of the beſt Scarlet Cloths, but now divers Sorts of the beſt Workmen are employ'd here at the King's Coſt and Profit, in making the fineſt Tapeſtry, Plate, Moſaic, Iron, Copper and Braſs Works, Statuary, Sculpture, Embroideries, *&c.* Theſe Suburbs have a Church dedicated to St. *Marcell*, where you ſee the Tomb of the celebrated *Peter Lombard*.

3. The Univerſity of *Paris*, which makes up one third Part of the whole, is worth the Curioſity of a Traveller; they make it as ancient as *Charles the Great*, and ſay it was he encompaſs'd it with a Wall; hence it is that they celebrate a certain Day to his Memory, when all the Heads of the Univerſity meet at the College of *Navarre*. Formerly the Univerſity of *Paris* had more Colleges and Students; the Number of the firſt (where publick Exerciſes are perform'd) is at preſent reduc'd to eight or nine, among which the *Sorbonne*, the College *du Pleſſis*, that of *Navarre* and of *Harcourt*, are the chiefeſt: They had alſo formerly the Privilege of being exempted both from the civil and criminal Juriſdiction of *Paris*, which is now little regarded.

The chief Things profeſs'd here are Divinity, Phyſick, Law, and Arts, or Philoſophy; for each of theſe they chuſe four Times a Year, a *Rector* or *Profeſſor*: The *Sorbonne* and the College of *Navarre* are the moſt conſiderable for Divinity. The Schools for the Civil Law are in the *Rue de Bauvais*, lately new modell'd by the King's Orders. The Phyſicians have a fair Anatomical Theatre in the *Rue de Bouchiere*; and their College call'd *de quatre Nations*, (i. e. of four Nations) *viz.* thoſe of *France*, *Picardy*, *Normandy*, and *Germany*, is dedicated to their Faculty of Arts.

The *Sorbonne* has got its Name from *Robert de Sorbonne* its Founder, formerly a plain and ordinary Fabrick, but now turn'd into a magnificent Structure, chiefly by the Care of Cardinal *Richlieu*; it has always been famous for its learned Profeſſors, ever ſince its firſt Foundation, which was under the Reign of St. *Lewis*, as the Inſcription on a Braſs Plate in the Church teſtifies;

> *Ludovicus Rex Francorum, ſub quo fundata fuit Domus Sorbonæ, circa An. Domini* MCCLII.

The Profeſſors and Students are lodged in the Apartments about the great Quadrangle.

The Library is kept in a handſome and lofty Room, much increaſed by the Liberality of the ſaid Cardinal, eſpecially with ſome Manuſcripts, diſtinguiſhed with his Arms upon them. Among other curious Pieces, they ſhew you two large Volumes of *Livy*, an old Tranſlation of antiquated *French*, written in the Reign of *Charles* V. embelliſh'd with Paintings in Miniature on Vellum; which Art has been loſt above two hundred Years ago. They have good Store of Divinity Works, and all Tranſlations of the Bible. The Picture of the Cardinal their Benefactor hangs at one End of the Room, at Length, in his Habit; and, at the other End, ſtands his Buſt in Braſs, done by the excellent Hand of *Varini*. The Fathers and School-Divines are regularly placed one after another, with their reſpective *Annotators* in the Rows underneath. After they have frequented the publick Lectures for three Years, they are qualified for the Degree of Batchelors, who wear Lambſkins and Tippets like our Batchelors of Arts at *Oxford*; after two Years more, they may be promoted to the Degree of Licentiats, who generally are the Opponents to ſuch as take the Degrees of Doctors. I was preſent at ſome of their publick Exerciſes and Diſputations, which were managed with a great deal of Decency and Order. The Subjects on which moſt generally they exerciſe themſelves are, the Sacrament, the Tranſubſtantiation, Trinity and Incarnation, which in the *Roman* Church being look'd upon as the ſole Object of Faith, even in Contradiction to Senſe and Reaſon, I could not but admire to hear the Opponents urge oftentimes ſuch Things as are accounted and declared heretical among them.

The College of *Navarre*, the next in Rank, acknowledges King *Philip the Fair* and his Queen for its Founders, as the Inſcription under the Statues teſtifies. Formerly none but Noblemen's Children were admitted here, but now all Sorts, without Diſtinction. They have four Profeſſors in Divinity, and the Archbiſhop of *Paris* is Preſident of it. In 1684, the Magiſtrates of *Paris* founded an annual Panegyrick for this preſent King, on St. *Lewis*'s Day.

The College *de Harcourt* is a large Structure near the *Sorbonne*, where continual Exerciſes are held for inferior Forms of Students in Logick and Philoſophy; they print their *Theſes*, and diſpute categorically, without confining themſelves ſtrictly to Syllogiſtical Rules. The College *du Pleſſis* was reſtored by Cardinal *Richlieu*, being as it were the Nurſery of the *Sorbonne*, who always place a Governor of their own College over it. The Faculty of Arts for the four Nations is a different Foundation from the College of the *Quatre Nations*, theſe Artiſts having peculiar Houſes allotted to them, and chuſe each, every Year, a Preſident of their own Nation.

The College of the *Quatre Nations* acknowledges the Cardinal *Mazarin* for its Founder; the Portal hath this Inſcription:

> *Jul. Mazarin: S. R. E. Card.*
> *Baſilicam, & Gymnaſ.*
> *F. C. A.* MDC.LXI.

It has a double Court, and a good Library of the Cardinal's own Collection, which is open to every Body at certain Hours in the Day. The Number intended by the ſaid Cardinal's Will were ſixty, *viz.* fifteen from about *Pignerol* and the adjacent Parts of *Italy*, fifteen for the *Alſatian* Youth of *Germany*, twenty for thoſe of the *New Conqueſts* in the *Netherlands*, and ten for *Rouſſilion* and *Catalonia*; but neither the *Structure* nor *Inſtitution* is compleated yet. As the *Doctors* of the *Sorbonne* are Governors of this College, ſo their Books in the Library treat of the Canon and Civil Law, mixed with Abundance of School-Divinity.

The *College Royal*, founded by *Francis* I. for Law, Phyſick, Mathematicks, and the Oriental Languages, was carried on farther by King *Henry* IV. *Mary de Medicis*, and *Lewis* XIII. though not brought to Perfection; the Profeſſors receive their Salaries from the King, without any Dependance on the Univerſity. It is ſeated near St. *James*'s-ſtreet and the College of *Cambray*.

4. The *Engliſh Roman-Catholicks* have a good Nunnery and Convent of the *Benedictines* in *Paris*, founded in 1657. In the Nunnery many young Ladies of Popiſh Families are educated. Among their Churches, the Cathedral called *Noſtre Dame* challenges the firſt Rank, an antique *Gothick Structure*, compleated at ſeveral Times, more ſtrong than noble, a very ancient Biſhoprick, founded (as they ſay) by St. *Dennis*, not long after the Apoſtles Time, but made an Archbiſhoprick ſo late as 1622, by Pope *Urban* VIII. In the Choir you ſee divers good Pieces of Painting and rich Tapeſtry, and Abundance of Gold and Silver Plate for their Altars: It has about fifty Canons belonging to it, among which was once the famous Hiſtorian *Paulus Emilius Veronenſis*, whoſe Tomb is to be ſeen in one of the little Chapels.

The next is the *Jeſuits* Church; on the Front of their College you ſee theſe Words in Capitals, *Collegium Ludovici Magni*. This Society was firſt introduced into *Paris* by *du Pratt*, who preſided at the Council of *Trent* for *France*, and afterwards proved a great Benefactor to them, as well as that famous and unfortunate Miniſter of State M. *Fouquet*. The Library, which was his Gift, is a very good one, both for Number of Books and Manuſcripts, among which are many *Proteſtant* and *Socinian* Authors. Theſe Fathers have another College in the Street of St. *Anthony*, the Church whereof is a magnificent modern Structure, carried on in Part by Cardinal *Richlieu*, under the Reign of King *Lewis* XIII. whoſe Heart is entomb'd here, as well as that of *Henry de Bourbon* Prince of *Condé*.

They have lately built another in the Suburbs of St. *Germain*, called the *Novitiates*, the Church whereof is but ſmall, but the Architecture moſt excellent; it was built at the Charge of M. *Noyer*, Secretary of State. The Church of St. *Genevieve*, with its regular Canons, is ſaid to have been founded by King *Clovis*, who has an old Tomb here, which has been embelliſhed of late Years, for they have put on his Head a Crown with a *Flower de Luce*, whereas thoſe Arms were not till long after uſed by the Crown of *France*; juſt as in ſome other Popiſh Countries I have obſerved our Saviour painted with Beads and a Roſary in his Hands. They have alſo put a modern Inſcription upon the old King's Tomb. But the chief Ornament of this Church is the Tomb of that great *French* Philoſopher *Des Cartes*; it has two Inſcriptions, one in *French* Verſe, the other in *Latin*.

The Apothecary's Shop belonging to the Convent, and the Library, are neatly diſpoſed, where they have ancient Buſts, Coins, Medals, and other Antiquities: Father *Molinet* has a curious Collection of Rarities of his own; and the famous Architect Father *Creil* was a Member of this Convent. In the Monaſtery of the *Jacobins* is to be ſeen the Monument of *Humbertus*, the laſt Prince of *Dauphine*, who having no Iſſue, ſold this Principality to *Phil. de Valois*, and, embracing a monaſtical Life at *Lyons*, became firſt Prior of this Convent, and afterwards Patriarch of *Alexandria*, as the Inſcription tells you.

5. The Church of the *Carmelites* is, for its Antiquity, not inferior to any in *Paris*, being ſuppoſed to have been founded by St. *Dennis*; it now contains the Heart of the *Great Turenne*, and has divers excellent modern Paintings and other Ornaments within. That called *Val de Grace* is both a modern Inſtitution and Structure, after the *Italian*, founded by Queen *Anne* of *Auſtria*, upon the miraculous Birth (as they ſtile it) of the preſent King, after ſhe had been married twenty-two Years: Her Heart, as alſo that of our *Henrietta Maria*

Dutcheſs of *Orleans*, lies entomb'd here. The *Altar* and *Cupola* are exceeding fine, and upon the *Portal* you ſee theſe Words:

Jeſu naſcenti Virginique Matri.

All the Nuns are of noble Extraction, and chuſe a Lady Abbeſs every three Years: Madam *la Valliere*, once the King's Miſtreſs, retreated to this Nunnery, to do Pennance for her paſt Miſcarriages.

In the ancient Abbey of St. *Germain* are the Tombs of many of their ancient Kings, who us'd to be buried here, before the Time of the Inroads made by the *Northern* Nations, as of late at St. *Dennis*. That of *Chilperio* has only theſe few Words, in a very old Character, on a plain Stone:

Rex Chilpericus hoc tegitur Lapide.

But that this was but Part of his Tomb, is evident from the Inſcription on a broken Tombſtone dug up ſince in another Place; which ſhew how much in thoſe Days, they were afraid of being diſturb'd in their Graves.

Hic jacet Chilpericus Francorum Rex.
Ego Chilpericus Francorum Rex precor ut inde in Æternum non aufferentur oſſa mea.

Queen *Fredigonde*, who died in 601, is alſo entomb'd here; and *Clotharius*, and the ſecond Son to *Chilperic*, of the ſame Name with his Father, with their Wives. Among the modern Monuments chiefly remarkable are that of the Duke of *Verneuil*, Prince of *Bourbon*, natural Son of King *Henry* IV. who was Biſhop and Abbot of St. *Germain*, but afterwards relinquiſhing the monaſtical State, married the Dutcheſs of *Sully*. Here is alſo interred the young Duke of *Bourbon*, ſon of the preſent King of *France*, and *Caſimir* King of *Poland*, who after having reſign'd his Crown, died Abbot of this Place; their Epitaphs and Inſcriptions are too long to be inſerted. Here are buried alſo ſome of the Family of *Douglas* of *Scotland*. They have a very good Library here, formerly accounted one of the beſt in *Paris*, and which ſtill has the Reputation of excelling all the reſt in Manuſcripts, except the King's. They pretend to have the *Pſalter* of St. *Germain*, which he generally uſed at divine Service, and a Miſſal of nine hundred Years old, written with a Stile on little Tables of Cedar. They ſhew you a great Volume brought by a *French* Ambaſſador from *Conſtantinople*, with Atteſtations of moſt of the Biſhops of the *Greek* Church, concerning their Belief of Tranſubſtantiation, which they produce as an undeniable Proof againſt the Opinion of the *Proteſtants*; though to ſpeak the Truth, it is very probable that theſe good Fathers might do much out of Complaiſance both to the King and the Ambaſſador, nothing being more obſervable among the *Greeks* than to accommodate themſelves, both in Diſcipline and Doctrine, to thoſe among whom they live; as is particularly remarkable at *Rome* and *Venice*.

The Fathers of this Abbey formerly publiſh'd a very good Edition of St. *Auſtin*'s Works, from the beſt Manuſcripts in *Europe*; and Father *Dachiere*, of this Houſe, has ſent abroad divers Volumes of his *Specilegium*, containing many Curioſities and Antiquities taken out of their Manuſcripts. They tell you, that the Church being built in the ſame Place where ſtood anciently the Temple of *Iſis*, a Statue of which Goddeſs remains on Part of the Walls, a ſimple old Woman was ſeen to worſhip it for a Saint, which the Fathers having had Notice of, they broke it to Pieces.

6. Another of their publick Structures is what they call *le Palais*, becauſe in old Times it was the Reſidence of their Kings, but by King *Philip the Fair* appropriated for the Aſſembly of their Parliament. The Hall in which anciently their Kings uſed to perform their greateſt Solemnities is very ſpacious, and arch'd, with the ſeveral Courts of Juſtice in particular Chambers about it; the ancient Chamber of private Audience is now the Room where the Remainders of their ancient Parliaments aſſemble when the King has any Thing of Moment to propoſe to them; it opens always on St. *Martin*'s Day, when the Members attend in the Great-Hall in their Scarlet Robes. Here is alſo kept the Court of Aids, which has a ſeparate Juriſdiction from the Parliament; their *Court of Chancery*, and the *Chamber of Accounts* are the ſame as our *Exchequer Court*; they plead by Way of Bill and Anſwer, Plaintiff and Defendant, but in a more ſummary Way than in our *Court of Chancery*, much like our Civil Law *Courts of Judicature*; though at the ſame Time there are not wanting Inſtances, that their Suits have been protracted for a great many Years. Here all the *Patents* of the Peers are regiſtred, as well as their *Charters* and other *Records*.

In the Chapel of St. *Lewis*, belonging to the Lawyers, they ſhew you Abundance of Relicks, which they vouch for authentick; as the Sponge dipt in Vinegar and Gall; the Head of the Spear wherewith they pierc'd our Saviour's Side, and the Purple Robe entire, though at *Rome* they ſhew with the ſame Aſſurance a Piece of it. Near this Palace is the Square call'd *la Place Dauphin*, of a triangular Form, built immediately after the Birth of *Lewis* the XIIIth, which gave it the Name *Dauphin*.

The *Palais de Luxembourgh*, or *Palais d'Orleans*, built by *Mary de Medicis*, is one of the moſt regular and magnificent Structures in *Paris*; Madamoiſelle *d'Orleans* has her Lodgings on one Side, and the Dutcheſs of *Guiſe* on the other, in whoſe is that famous Gallery of Paintings of *Mary de Medicis*, repreſenting her whole Life, from her Nativity to the End of her Government, the Work of the excellent *Paul Reuben*, who, they ſay, beſtow'd two whole Years upon it; her Meeting with *Henry* IV. juſt before Marriage, he all in Armour, and ſhe dreſſed with all imaginable Advantage, and the moſt beautiful and amorous Looks in the World, is a moſt exquiſite Piece: The ſame Dutcheſs has moſt of her other Apartments curiouſly furniſh'd with the choiceſt *Italian* Pictures; among theſe the wandring *David*, by the Hand of *Guido Reni*, is moſt excellent. The Gardens are ſuitable to the Magnificence of the Palace, and open for publick Walks.

The *Obſervatory*, built by the preſent King for Aſtronomical Obſervations, is a vaulted Fabrick, without either Wood or Iron-Work, three Stories high; beſides which, you deſcend by two hundred Steps into a Cave with little Alleys, from whence there is a Proſpect thro' the very Top of the Houſe to the Sky, in Order to obſerve the Motions of the Stars by Day; but this Contrivance has not anſwer'd Expectation, no Stars being to be ſeen there, but the Light only, which they impute to the not paſſing of any Stars through the *Zenith* of *Paris*; but it is ſomething ſtrange that this Defect ſhould not have been foreſeen by their Artiſts; though otherwiſe the Building is better contriv'd than ours at *Greenwich*.

Near it is the *Tour de Charpente* or the *Timber Tower*, all of *Carpenters-work*, for the fixing of their Tubes and Teleſcopes; M. *Caſſini* is the chief *Superviſor* of all this Buſineſs, the ſame who was *Profeſſor* of *Bolognia*, and made that famous *Meridian Line* in one of the Churches of that City; he has a very good Salary allow'd him by the King, and deſerves that Reputation he is in with the Publick, and if poſſible a greater.

7. Among the Bridges of *Paris* there are only three worth taking Notice of; the firſt is, the *Pont-Royal*, or *Royal Bridge*, a ſtrong plain Piece of Stone-work, but lately built croſs the *Sein* to the *Thuilleries*; in 1685, a Silk Bag of Medals was lodg'd in ſome of the Maſonry of it, to perpetuate the Memory of their *Lewis le Grand*; it was included in a Cedar-Box, with a blue Sattin, and the Arms of *France* upon it: One of theſe Medals was very large, of Copper gilt, beſides twelve others of Gold and Silver; one among them had for its Motto, *Germania ſervata*; another, *Juſſit Quieſcere*; another *Rheno Bataviſque unâ ſuperatis*; and on another is repreſented *Jupiter*, with this Motto, *Vibrata in ſuperbos Fulmina*, and underneath, *Genua emendata*. What Vanity!

The ſecond is the *Pont Noſtredame*, charg'd with Houſes ſomething like our *London Bridge*, but not near ſo big. The next to this is the *Pont Neuf* or *New-Bridge*, a curious Fabrick, (though not near ſo large as that of *London*) firſt begun by King *Henry* III. but finiſh'd by his Succeſſor *Henry* IV. whoſe Statue on Horſeback ſtands upon it much beyond the natural Size; it is a moſt excellent Piece of Workmanſhip of *John* of *Bologn*, an *Italian* Artiſt, but deſcended from *French* Parentage; it has ſeveral Inſcriptions about it, relating to ſome memorable Actions, and the Battles of *Yvry* and *Arque* are repreſented in *Baſſo relievo* upon the Pedeſtal, on each Angle of which lie four Slaves of maſſy Braſs.

8. That noble Monument, erected in the Place of St. *Victoire*, to the Memory of their preſent King, by the Care (if not at the Coſt) of the Duke *de la Feuillade*, is certainly the moſt excellent Piece of Statuary that can be beheld either in *Italy* or any where elſe; and the *French* boaſt, that it exceeds all that ever were made of this Kind, not excepting even thoſe erected to the *Greek* and *Roman Emperors*. The King's Statue is of maſſy Braſs, thirteen Foot high, in his Robes, with a *Victory* ſtanding behind him, of the ſame Bulk and Metal, crowning him, poiſed with his Foot on a Globe; under his Feet is a three-headed *Cerberus*, to denote the Triple Alliance over which he triumphed, at the Foot whereof you ſee theſe Words, *Viro Immortali*, the laſt of which they explain of the *Immortality of his Fame*. The whole was caſt all at once, and weighs above thirty thouſand Pound. The Pedeſtal is twenty-two Foot high, which, with that Part of the maſſy Mould the Statue ſtands on, being three Foot, and the Statue itſelf thirteen, makes this ſuperb Piece about thirty-eight or near forty Foot high. Upon the Pedeſtal reſt four Slaves of Braſs, much beyond the natural Largeneſs, with *Baſſo relievo*'s of his Battles and Conqueſts. It ſtands in a very ſpacious Square; and to render it the more uniform, they demoliſhed many Houſes, and the Duke pull'd down Part of his Palace. The Statue itſelf is encloſed by ſtately Iron Grates that environ a Floor of Marble; and a Centinel is always placed near it. The grand Inſcription upon it runs thus:

Ludovico Magno
Patri Exercituum
& Ductori
ſemper felici,
Domitis hoſtibus, protectis ſociis,
Adjectis Imperio fortiſſimis populis,
Extructis ad Tutelam Finium firmiſſimis Arcibus.
Oceano & Mediterraneo inter ſe junctis, prædari vetitis toto mari Piratis: Emendatis Legibus. Deletâ Calvinianâ impietate;
Compulſis ad Reverentiam Nominis
Gentibus remotiſſimis, cunctiſq; ſummâ providentiâ, & virtute domi foriſq;
compoſitis.
Franciſcus Vicecomes d'Aubuſſon, Dux de la Fueillade
ex Franciæ Paribus, & Tribunis Equitum unus in
Allobrogibus Prorex & prætorianorum peditum
Præfectus.
Ad memoriam poſteritatis ſempiternam.
P. D. C.

Beſides this, there are ſeveral Verſes, ſome for the Statue, ſome relating to the hiſtorical Part repreſented in the *Baſſo relievo's*; as for Inſtance, that relating to the Statue.

Tali de ore ferens, orbi & ſibi, jura modumq;
Dat Lodoix, famamq; affectat vincere factis.

There are divers others upon his Paſſage of the *Rhine*, the Peace of *Nimeghen*, the *Dutch* and the *Germans*; but that on the *Genoeſe* for Haughtineſs exceeds all the reſt.

Vane Ligur, fruſtraq; animis elate ſuperbis;
Juſtitiam monitus diſce, & non temnere Divos.

The *Triumphal Arch* was, at the Time of my being there, not brought quite to Perfection; but if you will believe the *French*, it is to exceed all of that Nature in *Europe*, whether ancient or modern: It is true, the Deſign promiſes ſomething very noble; the Models conſiſt of two Faces of an extraordinary Height, with three Portals, after the Manner both of the ancient and modern *Romans*; the Orders of the Columns are finely deſigned, and the Captives and Trophies moſt exquiſitely done, by the famous *Perault*, who tranſlated *Vitruvius*. The King's Statue on Horſeback is deſigned to be placed on this Arch.

9. The other Gates of the Town (as many *Triumphal Arches*) are all proud Pieces of Architecture; that of St. *Dennis* (which leads to the Place of the ſame Name) is above ſeventy Foot high, and as many over, adorn'd with Columns, *Baſſo relievo's*. and Trophies, with ſome Inſcriptions relating to the Paſſing of the *French* over the *Rhine*, and their taking of *Maeſtricht*. The Gate of St. *Martin* is fifty Foot high, and as many wide, having on each Side an Inſcription relating to this King's Actions. The third Gate is that of St. *Anthony*, erected in King *Henry* the Second's Time, but new embelliſhed by the City, with ſome Inſcriptions likewiſe relating to the preſent King. The *French* boaſt that *Cæſar* makes Mention of this City, and that he laid Siege to it, being then encloſed betwixt the two Branches of the *Sein*, the ſame that is now called the *Iſle*. Some of their Hiſtorians add, that *Cæſar*, after the Conqueſt of *Gaul*, had his Head Quarters here, and built ſeveral Caſtles on the *Sein*. They all agree in that Point, that the Name of *Lutetia* was given it by the *Romans*, from its Situation in a moiſt dirty Soil, betwixt the two Branches of the River; the modern Name of *Paris*, being deduced from *Paris*, one of the Kings of the *Gauls*.

This City is much more gay and ſplendid in outward Appearance than wealthy within, nothing being more frequent than to meet with Beggars that appear in Habit like Gentlemen. It has few or no Pumps, moſt of their Waters being preſerved in Ciſterns. I took particular Notice here of two Medals that went about at that Time, made in Spleen to Pope *Innocent* XI; one repreſented our Sir *Edmund-bury Godfrey* ſtrangling, with this Motto, *Juſſu Pontificis*; the other had his Holineſs's Head or Buſt on one Side, and an Altar, Pix and Chalice turn'd topſy-turvy on the other, with this Inſcription, *Pontificis quis credat opus?* Another I met with at the ſame Time no leſs odd than the two former, having the King's Buſt on one Side, and a broken Column on the Reverſe, on the upper Part whereof hung a Scroll of Parchment with theſe Words written upon it, *Edictum Nancii reverſum*.

10. *Mezeray* ſays, that *Paris* was firſt paved and walled under the Reign of King *Philip* II. ſirnamed *the Auguſt*; and near it the *French* King has many Palaces, where he reſides at Pleaſure: That called *Fountainbleau*, ſeated in the Iſle of *France*, among Woods, is of an irregular Structure; but its convenient Situation for Hunting makes the Court frequently retire thither in the Summer-time. Its Fountains and Canals are very good, and it has one noble ſpacious Hall, the reſt of the Apartments being neither large nor magnificent enough for a royal Palace, though ſome very good Paintings are to be ſeen in them; in the Queen's Gallery the Conqueſts of *Henry* IV. are excellently well done in *Freſco*; and in the Gallery *de Cerfs* underneath this, you ſee all the royal Palaces of *France*, with Landſkips of the Country round them curiouſly painted; not to mention the Paintings in the King's and Queen's Cabinets. The Chapel Royal is alſo a very good Fabrick, and well adorn'd.

In their Play-houſe is to be ſeen a curious Marble Chimney-piece, repreſenting the Battle of *Ivry*, fought by King *Henry* IV. The Gardens are beautified alſo with Statues; and formerly a good Library belonged to it, ſince removed to *Paris*. The moſt noted Apartment in this Palace, is what they call the *Salle de Conſeil*, famous for the Conference occaſioned by M. *du Pleſſis*'s Book againſt the Maſs, in which the celebrated M. *Perron*

M. *Perron* (afterwards Cardinal) pretending to ſhew at leaſt five hundred falſe Quotations, a Conference was appointed to be held in this Room on *May* 14, 1600, in the Preſence of King *Henry* IV. the Preſident *de Thou*, and the famous *Iſaac Caſaubon*; the firſt for the *Romaniſts*, and the laſt for the *Proteſtants*: The firſt Day was ſpent in examining only nine, and each Party challenging the Victory, the Conferences were diſcontinued; *Du Pleſſis* afterwards publiſhing a Treatiſe upon theſe Debates, the ſame was anſwered by *Perron*.

The Palace of St. *Germain*, ſeated on a riſing Ground near the River *Sein*, about four or five Hours from *Paris*, and one from *Verſailles*, is built in the Nature of a Caſtle, ſurrounded with a dry Ditch; a noble Stone Gallery runs round the Middle of the whole Structure, which is of an oval Figure: The Covering of this Pile is of flat Free-ſtone, each Stone being three Foot long, two broad, and three Inches thick: On one Side of the Garden is a moſt delicious Terras-walk, with the River running under it, 3350 Paces long; and on the other Side it is flanked by a moſt delightful Wood. I found hereabouts the wild *Geniſta Hiſpanica*, or *Spartum Hiſp. Cluſ. Chab.* or the *Spaniſh Broom*, and the *Onobrychis Spicata*, commonly called by us *Saintfoin*, brought from *France* firſt, where it grows wild. In the Garden I obſerved, among other curious Plants, the *Agrifol. Oderatum*, a ſmooth Holly with ſweet-ſcented Flowers.

The *Chateau Neuf* was built by *Henry* IV. upon the Brow of the Hill near the other, its Gardens aſcending by Degrees down to the River; here are to be ſeen the noble Ruins of *Grottos*, *Caſcades*, and *Waterworks*. About an Hour from hence is *Marli*, a moſt delightful Summer-ſeat, built by the preſent King (rather gay than magnificent) at the Head of a Canal, with ſeveral Houſes along the Side of the Water for the *Courtiers*; they were then buſy in cutting a Way to it through an adjacent Wood. Near this Palace, on the *Sein*, is that ſo much celebrated *Waterwork* of *Marli*, by which the Current of the River is, by the Help of an Engine-mill built upon it, forced over two or three vaſt Hills, by Iron Pipes of half a Foot Diameter, jointed into one another, and ſeveral laid by the Side of one another, every Stroke of the Mill throwing a vaſt Quantity of Water into the Baſons on the Hill, which from theſe Baſons is conveyed by ſuch another Mill higher, over all the Eminencies, when gathering into a ſmall Lake, the ſame by Aqueducts furniſhes with ſufficient Quantity of Water both *Marli* and *Verſailles*.

11. *Verſailles*, the moſt beautiful Palace in *Europe*, is ſeated in a dirty deſart Ground; that Side which faces the Stables is not ſuitable in Magnificence to the reſt, as that which fronts the Garden ſurpaſſes all that can be imagined ſumptuous; its Roof glittering with Gold, affords a glorious Proſpect at a Diſtance; and the Garden for *Statues*, *Canals*, *Groves*, *Grottos*, *Fountains*, *Waterworks*, or what elſe may be thought delightful, far ſurpaſſes any Thing to be ſeen of this Kind in *Italy*; and its Riches and Beauty within are altogether anſwerable to its Outſide. The Royal Cabinet for Medals, Coins, Painting, and ſuchlike Curioſities, has the Choice of all *Italy* could afford. The King's Lodgings are enriched with Utenſils of maſſy Plate, even to the Bedſteds, Baluſters and Rails: The Gallery towards the Side of the Garden is the nobleſt that ever I beheld in my Life, for its moſt delicious proſpect, Statues and Looking-glaſſes placed between the Pannels. The modern Paintings in this Palace are for the moſt part of *Mignard*, *Pouſſin* and *le Brun*, among which the Battles of *Alexander* are highly eſteemed. At one End of the Garden is the Place where they breed all the foreign Beaſts and Birds the *Eaſt* and *Weſt-Indies* afford: And what they call the *Trianon* is a cool Retreating-Place for the King after his Walks, ſuitable in all Reſpects to the reſt.

About two Leagues thence M. *Louvois*, the late prime Miniſter, had erected a noble Palace with vaſt Coſt, the Ground riſing into a pleaſant *Terras*, with fine Gardens behind it. Near *Paris* there is another of the King's Houſes, called *Madrid*, both unfurniſhed and unfiniſhed; they tell you that it was built by King *Francis* I. who having promiſed to pay his Ranſom at *Madrid*, gave it this Name, and carrying the whole Sum thither, paid the *Spaniards* with this Equivocation inſtead of Money.

Hard by it, *viz.* at *Ruel*, a ſmall Town, ſtands a pretty little Palace built by Cardinal *Richlieu*; it is neither ſtately nor magnificent, but has very neat Gardens and curious Waterworks.

About two Leagues from *Paris* on the Aſcent of the Hill of St. *Cloud*, is another of the King's Houſes, where the Duke of *Orleans* ſometimes reſides for his Diverſion; the Gardens are very pleaſant, the Galleries very beautiful, and ſome of the Paintings very good: It was here that King *Henry* III. was ſtabb'd, by one *Clement* a Monk.

12. In our Tour to *Roan*, *Diep*, and the Sea-coaſt, we paſſed through St. *Dennis*, about a League from *Paris*, famous for the Sepulchres of the *French* Royal Race, and the Abbey built by King *Dagobert*, formerly called *Catullia*, but ſince dedicated to St. *Dennis*, the *Areopagite*, whoſe Body lies interr'd here; though the Monks of the Convent of St *Emeran*, near *Ratiſbon* in *Germany*, diſpute that Point with them, and poſitively affirm. that they have the whole Body, and thoſe of St. *Dennis* only a Finger. They boaſt here of the Sepulchres of ſeveral other Saints, as of their King St. *Lewis*, St. *Hilary* Biſhop of *Poictiers*, St. *Hypolito* one of the ſanctified Martyrs of the *Thebæan* Legion, and one of the Innocents murthered by *Herod*'s Command. The moſt remarkable among the Tombs of the Royal Family are thoſe of *Francis* I. and *Lewis* XI. Here you ſee alſo the Tomb of the Great Marſhal *de Turenne*, placed by the King's Order (but at the Charge of his Nephew) in a Marble Chapel built for that Purpoſe; he lies at full Length, ſurrounded with Laurels and Trophies in *Relievo*, with a *Roman* Eagle at his Feet retreating as it were backwards, with diſplayed Wings at the Sight of his formidable Enemy: For though this *Abbey* is chiefly deſigned for the Sepulchres of the Royal Family, yet by the King's Favour, ſuch of his Subjects as have ſignaliz'd themſelves in his Service, are alſo ſometimes interred here. There is a Croſs of maſſy Gold on the Altar ſeven Foot high, ſet with Diamonds and the beſt Pearls, and a Table of Gold, the Altar itſelf being alſo plated over with Silver.

13. From hence we paſſed on to St. *Pontoyſe*, an inconſiderable Place, ſeated upon the River *Oyſe*, which riſing in *Picardy*, runs a little below it into the *Sein*. The Country of *Normandy* betwixt this Place and *Roan* is champaign and extremely fertile, eſpecially in Apples, of which they make excellent Cyder.

Roan is the Metropolis of *Normandy*, and one of the Cities of the ſecond Rank in *France*; its Situation is upon the Banks of the River *Sein*, at the Foot of a Hill, and to the oppoſite Bank you paſs by a handſome Bridge of Boats, two hundred and ſeventy Paces long, which being pav'd, riſes and falls with the Tide; below it you ſee the Pillars of an ancient Stone Bridge, beaten down ſome Years ago by the Violence of the Current; ſomething lower Ships of about two hundred Tun can ride with Safety: Near the River-ſide ſtands a very ancient Caſtle with Turrets, now the Reſidence of the Governor. Two other Rivers (*viz.* the *Robbee* and *Reinelle*) run alſo through this City, which has two Churches remarkable; the Cathedral dedicated to our Lady, exceeds in Beauty and Regularity that of *Paris*; here you ſee the Tomb of *John* Duke of *Bedford*, Regent of *France* in King *Henry* the VIth's Time, but the Monument is not anſwerable to the Grandeur of ſo high a Perſon. The Church of St. *Toin*, is alſo a lofty Structure, but chiefly famous for its great Bell. The Streets of *Roan* are narrow, and their Houſes for the moſt part of Wood and Plaiſter work; here it was the *Engliſh* burnt the Maid of *Orleans*; this Place was the *Rotomagus* of the *Romans*, and the Reſidence of the Dukes of *Normandy*; it is at preſent a Biſhop's See, and was lately a Place of very good Traffick.

From hence we travel'd through a very good Country and bad Road to *Diep*, a pretty little Sea-port Town, the Streets whereof are more ſpacious and regular than thoſe of *Roan*; they are very ingenious here at working in Ivory. The little Harbour lies betwixt two Cliffs, and the River *Arquo* runs into it; anciently it was known by the Names of *Julia bona* and *Deppa*, and then ſtrongly fortified; it has ſtill a good Caſtle and Wall. From *Diep* we continued our Journey through a little Place call'd *Eu*, ſeated upon the River *Breſſe*, which being the common Boundary on that Side betwixt *Normandy* and *Picardy*, diſcharges itſelf into the Sea about a League below it.

Near the River's Mouth we ſaw on the Cliffs another ſmall Town call'd *Criel-port*, and ſo paſſing through *Francheville*, came ſafely to *Abbeville*, a poor old Town, meanly built and extremely dirty, in that Part of *Picardy* they call *Ponthieu*. They are noted here for making Guns and Piſtols, but they are rather fine than ſerviceable. It is ſeated upon the River *Somme*, which falls into the Sea near St. *Valery*, from whence Barks can come up to this City. Before the *French* had made themſelves Maſters of the Province of *Artois*, this was a Frontier Town of a conſiderable Strength, and inacceſſible in ſome Parts, being almoſt ſurrounded by the Fenns. It is alſo a Biſhop's See.

From hence we travel'd by the Way of *Heſdin* to *Calais*, from whence we could diſcover the chalky Cliffs of *Dover*; it is of no great Compaſs, but regularly fortified, and ſtrengthened with a good Cittadel; the Town-houſe is but ſmall, but the Market-place ſpacious. Some Antiquaries would have it to be the ſame mentioned by *Cæſar* in his *Commentaries*, under the Name of *Portus Iccius*, which ſome again explain of *Boulogn*, others of *Doway*. The Loſs of it by the *Engliſh* is alledged to have been the chief Cauſe of our Queen *Mary*'s Death.

The Doctor's Second Journey.

14. As you travel from *Paris*, in a Kind of *Dutch Treck-ſchuyt* along the River *Sein*, you paſs by *Charenton*, a curious little Place, ſeated on the Banks of the *Marn* and *Sein*, and once famous for the Privileges the *Proteſtants* enjoyed there. Above it is a neat Houſe belonging to *Madamoiſelle*. In the next Place is *Corbeil*, of no great Conſequence, the *Caſtrum Corbolium* of the *Latins*, called by *Cæſar Joſedum* or *Metroſedum* on the *Sein*, where its Waters are mixed with thoſe of the *Juin* or the *Eſtampes*.

Higher up, on the River, you ſee another little Place, about four or five Leagues from *Corbeil*, call'd *Melun*, (the *Melodunum* of the ancient *Romans*) which gives Title to the Viſcounts of a very ancient Family. Here the River *Sein* dividing into two Branches, makes a little Iſland, which you paſs by two good Bridges. The Barge, which carries you from *Fountainbleau* down the River to *Paris*, being drawn by three or four Horſes, runs in ten or twelve Hours, ſixteen of their Leagues, or about forty-eight *Engliſh* Miles. In the Woods thereabouts I took Notice of the *Milyſſophillum*, *Orobanchæ*, *Rapum Geniſtæ*, Ger. Park. *Cariophillum olens*, C. B. our *Broom-rape*, *Polygonatum*, *Latifol. vulg.* C. B. the *Solomon's Seal*, beſides all Sorts of Spurges of the *Eſſula* and *Tythimalus* Kind.

The next Place we came to from *Fountainbleau* was *Nemours*, having nothing remarkable, except that it gave Title to the ancient Dukes of that Name. Near it is the Abbey of *Surcaſſon*, of the Order of St. *Bernard*. Here we obſerved the Women of the Town (even ſuch as were in very good Habit) to come to the Inns to collect Alms from Travellers for the Poor.

From hence we travelled on to *Montargis*, an old walled Town, but of no great Note, except that being Part of the *Demeſnes* belonging to the Crown, it gives Title to the King's Brother, who is Duke of *Orleans* and *Montargis*; it has, however, a very ancient Church, with curious Pillars, and an antique Caſtle built in the Midſt of Ruins: The preſent King's only Brother has laid the Foundation of a Church here; but it remains unfiniſhed, there being nothing compleated but a ſmall Portico, in which, on a black Tablet of Marble, is a *French* Inſcription with Golden Letters, intimating, that he laid the firſt Stone of this Church in 1677, in Memory of his Victories obtained in the Battles of *Mont-caſſel*, St. *Omer*, and *Buchar*.

From *Montargis* we continued our Journey to *Briare*, whither Cardinal *Richlieu* cauſed a Canal to be brought from *Bleſneau*, a Tract of twenty Miles, and thereby made a Communication betwixt the *Loing* (which falls into the *Sein*) and the River *Loir*, ſo that by the Help of Sluices, Boats can paſs through all three; the Banks of the *Loir* lying all along on the Flats, as you ſee near the Sea-ſhore, make it a very pleaſant River. Near it we found the *Cariophillus marinus*, Ger. Hob. *Juncus* C. B. or the *Sea-Gilliflower*, which is rarely found in Inland Countries, but commonly in Salt Marſhes near the Sea-ſide.

15. From hence we paſſed through *Coſne*, a little Place noted for the making of Knives, and ſome Mills for poliſhing Iron and Steel, and ſo in Sight of *la Charite*, an inconſiderable Place, to *Nevers*, ſeated near the Conflux of the *Loir* and the *Nibatre*, the Capital of the Territory of *Nivernois*, though the Houſes are but meanly built, repreſenting more of Antiquity than Beauty. It is a Biſhop's See, Suffragan to that of *Sens*, and gives Title to the *Dukes* of *Nevers*, (now in the Family of Cardinal *Mazarine*.) *Cæſar* mentions it under the Name of *Nipernum* or *Noviodunum*.

The next Place we came to was *Moulins*, near which are the ſo much celebrated Waters of *Bourbon*, even in the Time of the *Romans*; they are of the Nature of our *Baths* and thoſe of *Aix la Chapelle*, compoſed of a bitumenous Subſtance, impregnated with an Alcaliſate Salt; which being mixed with an Acid, cauſes a Fermentation and produces the ſame Effect on Syrup of Violets as the Salt of Tartar, turning it green. Of late they have been much uſed inwardly againſt the *Gout* and other nervous Diſtempers. The above-mentioned Town of *Moulins* is of no great Extent, though once the Reſidence of the Family of *Bourbon*, who built a handſome Caſtle here; the Inhabitants are reputed excellent Workmen in Steel and Iron, Knives and Sciſſars, &c.

Among their Churches and Convents (of which they have ſeveral) thoſe of the *Carthuſians* and of the *Viſitation* are moſt remarkable, the laſt containing the Monument of the Great Duke of *Montmorency*, who was ſacrificed to the Power of the Cardinal *Richlieu*. The whole Chapel conſiſts only of a ſmall Cupola to cover him; his Canopy and Armour is ſupported by Angels, with his own Effigies and that of his diſconſolate Lady lying by him in an elevated Tomb, with the Statues of *Pallas*, *Hercules*, *Charity* and *Religion*, all of the choiceſt Marble, much beyond their natural Grandeur, with this Inſcription to his Memory.

> *Henrico II. Montmorenciaei Ducum ultimo, optimo & maximo, Franciæ Pari, Thalaſſiarcho, Polemarco, Terrori hoſtium, Amori ſuorum.*
>
> *Maria felix Urſina, ex Romana Stirpe Conjux unica, cui ex immenſis viri Divitiis, una amor viventis, & defuncti Cineres, fæliciſſimo poſt exactos Conjugis annos* XVIII. *Marito incomparabili, de quo dolere nihil unquam poterat, niſi mortem bene merenti poſuit. Ann. Sal.* MIↃLII. *Sui luctus* XX.

It is remarkable, that they were forced to behead him in the Town-houſe for Fear of the Populace, whoſe Darling he was; his Dutcheſs was ſo highly afflicted at his Death, that ſhe forſook the World and retired into this Monaſtery, where ſhe ended her Days in Tears for the Loſs of a Huſband ſhe loved more than her own Life. I was credibly informed, by a Perſon who was well acquainted in that Family, that her Fondneſs to the Duke was ſuch, that ſhe would not ſtick to aſſiſt him in his Amours.

We had hitherto travelled for the moſt part through fertile Plains; but coming near to St. *Sapherin* and *Breſle*, two ſmall Places, we paſſed through Mountains covered with Pines and Firs, which afforded great Variety of Plants: Thoſe I took Notice of *en paſſant* were, the *Polygala Lutea*, called by *Chabre*, *Polygala vulg. maj. fol.*

fol. anguſtiſſimus, a Kind of *Milk-wort*; the *Meliſophillum* or *wild Baum*; the *Bellis Cærulca Monſpel*, though growing alſo in other Parts of *France*; *blue Daiſies*. In the Woods we obſerved the ſeveral Species of *Orchis*, *Spurges* of all Kinds, but eſpecially the *Tithymalus Cupriſſicus*.

16. From *Breſle* we ſoon came to *Lyons*, the largeſt City of *France* next to *Paris*, ſeated at the Confluence of the *Soan* and the *Rhoſne*; the laſt runs here with a ſwift Current, and over the firſt they keep a Chain of Boats link'd together, to prevent Barks from paſſing by without paying Cuſtom. Its Situation was anciently, as well as now, at the Conflux of theſe two Rivers, as appears from a Paſſage in *Seneca*; and that its Name was *Lugdunum* among the *Romans*, is evident from the following Inſcription found at *Gaeta* in *Italy*.

> *L. Minutius* 2 *L. Fil. L. N. L. pro N. Plancus*
> *Caſſ. Cenſ. Imper. iter VII. Vir Epulon:*
> *Triumph. ex Rhetis ædem Saturni fecit de manubiis*
> *agros diviſit in* Italia *Beneveriti*, *in* Gallia *colonias*
> *deduxit.* LUGDUNUM & *Rauracum.*

Part of the City is built on the Hills of *Tornir* and St. *Sebaſtian*, the reſt along the Banks of the Rivers; the Market-place is handſome, and the Town-houſe (lately built) a fine Structure. In the *Carmelites* Church is an Altar of *Agate* and *Lapis Lazuli*; the *Capuchins* have all the pretended Miracles of their Saint painted on the Walls of the Cloyſter; among which you ſee one where he pays his Apothecary with Prayers inſtead of Money.

The Church of St. *John* is their Cathedral, the Chapter compoſed of Gentlemen of the beſt Families, and formerly boaſted of having had therein ſeveral Kings and Princes: They compute, that in the thirteenth Century they had, at the ſame Time, one Son of an Emperor, nine Sons of Kings, fourteen Dukes Sons, thirty of Counts, and twenty of Barons; there belong no leſs than three Churches to this Chapter, *viz.* that of St. *John* before-mentioned, of St. *Stephen*, and of the *Holy Croſs*; in the firſt is to be ſeen the Clock ſo much celebrated for the Variety of its Motions and Mechaniſm. The *Huguenots*, during the Civil Wars, knock'd down many of the Heads of the Saints that were placed to adorn the Front of this Church. Their *Theatres* and *Operas* are not inferior here to thoſe of *Paris*; and the *Jeſuits* College upon the *Rhoſne* is the fineſt Structure in the whole City, being a regular Quadrangle curiouſly painted in *Freſco*, which is ſomewhat defaced on the Eaſt Side, where the Weſt Winds from the Mountains bear upon it: I found them to perform their publick Exerciſes much after the ſame Manner as they do at *Paris*. Their Chapel has a fine Altar-piece of *Lapis Lazuli*, and an excellent Piece of Painting by *Blanchard*, who died while we were there. The Apartment for their Library is ſpacious and handſome, but the Books not extraordinary, and at that Time were all diſordered, by reaſon of a late Fire that broke out in the College; they have, however, ſome Manuſcripts of the Bible, but not very old; and *Pliny*'s *Natural Hiſtory* and *Decades* finely printed on Vellum about two hundred Years ago, all the capital Letters in Miniature, gilt and embelliſhed as we ſee the old Maſs-books. The moſt valuable Piece of the whole Library is a Manuſcript of the ſame Author's *Natural Hiſtory*, four or five hundred Years old; many obſolete Words, ſuch as *illod*, *jocondiſſimo*, &c. demonſtrate it to be a Piece of a conſiderable Antiquity.

The Abbey of *Daiſne*, juſt without the Town, is an ancient Piece of Architecture, which very good *Moſaick* Work, the Picture of God the Father (excellently done) being almoſt defaced by Age. This Abbey is the ſame Place where *Caligula* had erected his *Athenæum* for the Improvement of the *Greek* and *Latin* Tongues, (mentioned by *Suetonius*) Rewards and Puniſhments being propoſed to ſuch as did either well or ill; to this *Juvenal* alludes,

> *Palleat ut nudis preſſit qui calcibus anguem,*
> *Aut Lugdunenſem Rhetor dicturus ad aram.*

Here they ſhew you the ſo much celebrated Buckler of *Scipio*, which, upon due Enquiry, is ſo far from being his Buckler, that it is rather a Baſin or Diſh well gilt and emboſs'd; for, according to the ancient Form of Armoury, it is too unwieldy, and its Concavity within no Way adapted to the Bending of the Arm and covering the Body. Add to this, that all Bucklers both ancient and modern, have their Ornaments of Painting or Gilding on the Outſide, and not within the Concavity; and I remember, that talking with M. *Patin*, a great Antiquary of *Padua*, upon this Subject, he was of the ſame Opinion; it being crack'd, it was cramp'd on the Back with ſmall Irons Bars. They have here a more authentick Piece of Antiquity, I mean the Speech of *Claudius*, who was born here; it is to be ſeen in the Front walk of the Town houſe, and the Word *illod* for *illud*, and the old *Roman* Punctuation, betwixt every Word, ſufficiently ſhews its Antiquity. They have alſo ſome Obeliſks, but not ſo ancient as thoſe at *Rome*; that near the *Jacobins* Church is inſcribed ↄ W ↄ. τῷ Θεῷ παντοσοτηρίαν παρακλητῷ ἱερὸν.

Their St. *Peter*'s Nunnery is a fine Foundation, and the parochial Church of St. *Niege*, adorned with ſeveral fine Pieces of Painting by *le Brun*.

17. The Priſon of the City is built upon a Rock, unto which they have cut out a Way with vaſt Charge and Difficulty; but it was probable that this was rather done to make a Way into the Town by the Water-ſide, it extending, perhaps, before out into the River, which now runs juſt by the Street that lies under the Rocks. This Place being ſeated on the Confines of *Italy*, was one of the beſt Magazines of the *Romans* in *Gaul*; ſome of the greateſt Men of *Rome* have honoured it either by their Birth or Abode, beſides the Emperors *Claudius*, *Germanicus*, *Geta*, *Caracalla*; and here are ſtill to be ſeen ſome Remnants of the *Roman* Antiquities, of their Baths, Aqueducts, and Part of an Amphitheatre. At preſent the King's Treaſury for that Part of *France* is kept here, and another called the *Court of Commerce*. Two General Councils have been held at *Lyons*, in 1245, under *Innocent* IV. and in 1274, by *Gregory* XI; beſides which, they had ſeveral Synods here long before, as that aſſembled by St. *Irenæus* in 197, and another in the Time of St. *Cyprian*, under *Fauſtinus* Biſhop of *Lyons*; it was upon this Occaſion St. *Cyprian* writ that Letter to the Pope, which begins thus, *Fauſtinus Collega noſter Lugduni conſiſtens*, &c. In my Walks about the *Carmelites* Church-walls I obſerved the *Fumaria major ſcandens*, the *large Fumitory*; the *Muſcatellina fol. fumariæ bulboſæ* J. B. or the *Radix cava minima*, Ger. the *Muſkwood Crowfoot*; *Bellis major*, the *Enneaphyllon* of *Pliny*, or the *great baſtard Hellebore*; the *Hypericum vulg.* C. B. St. *John*'s *Wort*. About the City grows alſo the *Anchuſa Lutea*, a Kind of *baſtard Gromel* with a yellow Flower.

I was not a little ſurprized to ſee ſo fruitful a Soil as all the Country betwixt *Lyons* and *Savoy* (called *Dauphiny*) almoſt deſtitute of Inhabitants, though well enough cultivated in many Places; but upon Enquiry found, that this Part of the Country being allotted for Winter-quarters to the *French* Horſe, the Peaſants uſed to come thither only in the Spring, to ſow the Seed, and in the Summer to reap the Product thereof, and ſo retire into other Parts. This fertile Tract of *Dauphiny* brought us to the utmoſt Borders of *France* on that Side, *viz. Pontebeauvoſin*, an obſcure Place ſeated upon an inconſiderable River called *Gyer*, which, however, is the common Boundary here betwixt *France* and *Savoy*. The chiefeſt Plants of Note I obſerved in *Dauphiny* were, the *Valeriana rubr. anguiſol.* C. B. the narrow-leafed red *Valerian*; the *Radix Rodia* or *Roſewort*, in great Plenty; *Linaria fol. Bellidis* J. B. a Kind of *Toad-flax* with a Daiſy Flower; *Imperatoria vulg.* or the common *Maſterwort*; *Parietaria cerulea quædam*, a Sort of blue *Pellitory*; the *Catanance fol. Cyani Dalech. fl. Coronop.* J. B. which *Chabreus* would have the *Siſameidis minus Matth.* a certain Graſs with the Leaves of the *Bluebottles* and Flowers of the *Buckthorn Plantain*.

We were no ſooner paſſed the Bridge of *Pontbeavoiſin*, but we were ſenſible of the Difference of the Country; for whereas we had left behind us the fertile Plains of *Dauphiny*, the other Side of the Banks of the ſame River repreſented to our View the frightful *Alps*, the Precipices whereof would have been more dreadful to us, had not the many Vineyards we found on the firſt Aſcent taken off a great Part of the Horror we had conceived at the firſt Sight of them.

As you aſcend the firſt Rocks, you ſee and hear the Cataracts of the River *Guyre* among the Precipices, over which you ride by a Way cut out and ſupported by Art: Along this terrible Road I found among the wild Hedges the *Oxyacantha*, the *Privet*, *Liguſtrum & Vaccinia nigra*. From this narrow Paſſage you proceed further into the *Alps*, where the Duke of *Savoy* has made a Road thro' the Middle of the Rock, near which is erected a Stone with this Latin Inſcription:

> *Carolus Emanuel II.*
>
> *Subaudiæ Dux. Pedem. Princeps. Cypri Rex. Publicâ fœlicitate partâ ſingulorum commodis attentus, breviorem ſecurioremque viam Regiam, à natura occluſam, Romanis intentatam, cæteris deſperatam, dejectis ſcopulorum Repagulis, æquatâ montium iniquitate, quæ Cervicibus imminebant, præcipitia pedibus ſubſternens, æternis populorum Commerciis patefecit. Anno Domini*, 1670.

About half-way betwixt this noted Paſſage and *Chambery* you ſee a delightful Fall of Water, from one of the higheſt Rocks, which being continued afterwards by three or four more gradual Falls joining into a Current, and from a vaſt Height ſpreading itſelf among the craggy Precipices, produces here a natural, but more pleaſant Caſcade than all the Art and Expences of *Verſailles* are able to afford.

From hence we proceeded to *Chambery* through a Sort of a Valley, (in reſpect of the other Mountains) a Town not ſo conſiderable at preſent as in former Ages, when it could boaſt the Reſidence of the Dukes of *Savoy*, but now has nothing to ſhew but old Houſes and Walls, and a ruined Ditch about them; it is the *Cameriacum* of the *Latins*, and ſtill the Capital of the Dutchy of *Savoy*, where their Parliament is conveen'd, and the Chamber of Accounts kept: Its Situation is on the little River *Orban*, in a Sort of a Valley ſurrounded with Mountains; the Churches and Convent, the Town-houſe, Market-place, and a great Number of Fountains, make ſome tolerable Show. Here we firſt obſerved what we afterwards found common over all *Italy*, the Houſes built ſo as to jet out into the Streets, and ſupported by Pillars, which form a Sort of Alley or Cloyſter, under which you may paſs ſecure from Rain and the Heat of the Sun. The Mall without the Town is handſome. Another ſuch Plain brought us to *Montmelian*, a Place of great Strength both by Nature and Art, in *Savoy*, ſeated on a high Rock at ſuch a convenient Diſtance from the adjacent Mountains, that though they overlook it, they don't command it; the River *Hero* runs by the Town that bears the ſame Name with the Caſtle, with an impetuous Current, and joining with the *Arche*, another rapid River made by the melted Snow, falls into the *Rhoſne* at *Arbigny*, a little Place above *Montmelian*, as the *Iſere* does at *Grenoble*, the Acceſſion of theſe rapid Rivers being the true Occaſion of the impetuous Courſe of that River. This Fortreſs is the Key of the Mountains on this Side, as *Suſa* is on the other; but notwithſtanding its Strength, it was taken by the *French* in 1691, and is now demoliſhed.

The Country hereabouts being all mountainous, hath a very indifferent Proſpect, except ſome few Valleys, which ſeem to promiſe ſomething of Fertility; and the People looking as meagre and dejected as the Soil is barren, they ſeem to be made for one another, and adapted to that Slavery they are forced to ſuffer from their Prince, who has modelled his Government after that of *France*.

We had ſcarce paſſed the River *Iſere* at *Montmelian*, but we came into a Valley much more pleaſant than any we had yet met with in *Savoy*, and continuing our Way toward *Argentier*, we met the roaring River *Arche*, which at that Time (it being Midſummer) was ſo ſwelled by the melted Snow from the Mountains, that we were forced to leave the ordinary Road near the Waterſide, and, inſtead thereof, climb up a dreadful Precipice, called by them Mount *Greny* or *Grezy*, as high if not higher than Mount *Cenis* itſelf. On the middle Region of this Mountain you ſee a few ſmall Farm-houſes, there being thereabouts ſome cultivated Ground, which you can perceive below, but when you come to it, you find another Mountain riſing upon the former, like *Pelion* upon *Oſſa*: The Froth and Sediments which are by the Impetuoſity of the River *Arche* forced down from the Mountains, make its Waters appear in the Valley as black as Pitch, almoſt like the Waſhes of Dye-houſes.

We kept however along the Current of this River for ſome time through *Argentier*, *Eſperies*, and *la Chambrey*, inconſiderable Places, and we no ſooner left the laſt, but we were forced to climb up the Mount, by Reaſon of the Inundation of the River *Arche*, the Deſcent whereof brought us to St. *John Morienne*, once the chief City of the *Madulli*, and an Archbiſhop's See, which gave the Title of Earls of *Morienne* to the Dukes of *Savoy*. From hence we went on to St. *Michael*, a low watery Place: On the Top of the Mountain I obſerved as well as I could, the *Mentha Cattaria montana*, *Valeriana Alpin. Latifol. Valerian. Alpina Anguſtifol.* the *Caryophill. Alpin. minimus*; the ſmall *Mountain Pink* of the *Alps*; afterwards I found it in great Plenty on another Hill. St. *Michael* was formerly a Convent, but now only a Village, near the Banks of the River *Arche*, which they paſs over hereabouts by Bridges of Timber made of the Trunks of young Fir and Pines, laid athwart, which being round and ill joined, tremble under your Feet as you paſs them.

The next Place we came to was St. *Andre*, an inconſiderable Town ſeated among the Mountains; juſt over againſt it is ſuch another Caſcade or high Waterfall, but not altogether ſo diverting as that near *Chambery*. The Current of this River, rendered impetuous by various Waterfalls, is almoſt like the Torrents of our Mill-pools, but more foul and furious. I took Notice hereabouts of the *Abſinth. Latifol. Ponticum* or *Rom.* and the *Abſinth. tenuifol. minus*, which ſome would have to be *Abſinth. Commune minus* of *Geſner* and *Gerard*. Above St. *Andre* the River *Arche* is, at a Place called *Termignon*, augmented by a Channel of Water coming from another Part of the Mountains, which brought us to *Laſnebourgh* or *Lanſebourgh*, a Place that has nothing remarkable, except its Situation at the Foot of Mount *Cenis*: Here croſſing the River *Arche*, we took our Leave of it, which riſes about two Leagues above this Place with a pure but ſmall Source, and affords in the Neighbourhood as well taſted *Trouts* as our beſt Rivers. We were now come to the Paſſage of Mount *Cenis*, (the *Ciniſcum* of the Ancients) which we performed by the Help of Mules we were furniſhed with at *Laſnebourg*. This Mount exceeds in Height thoſe of St. *Goddard* and *Sampion*, by which you enter *Italy* from *Switzerland*: Mount *Cenis* being in ſome Places covered with Pine and Fir-trees from the Top to the Bottom, aſcending regularly one above another with the gradual Riſing of the Mountain, affords the moſt natural Grove that can either be deviſed by Art or expreſſed by the Pencil. About *May* theſe Mountains open the vaſt Storehouſes of Snow, which melting by Degrees till *October*, (when they begin to harden again) make the Rivers ſwell hereabouts in the Heat of the Summer, when the Sources of moſt other Rivers are very near exhauſted.

The Paſſage of Mount *Cenis*, notwithſtanding its Height, is not very unpleaſant; the Precipices being not perpendicular, gave our Eyes Liberty to look about with leſs Trouble, and the Slowneſs of our Cattle (which made me walk on Foot) allowed me ſufficient Opportunity to expatiate a little Way out of the Road, and to take Notice of a great many Plants; but having loſt the Collection at Sea, I can only give ſuch as I accidentally remembered and ſince ſet down, *viz.* the *Caryoph. Alpin. minor* in prodigious Quantities; the *German. Columbinum*, and what is more remarkable, the *Geran. Argent. Alpinum*; the Cranes-bill; the *Hyacinth. Cæruleus Ger.* or *Racemoſus cærul. minor*, C. B. *Juncifol.* toward the Bottom out of Flower; *Calceolus Mariæ, ad Ger. Elleborine major.* Park. *Stell. flor. rotund.* C. B. About the Bottom, *Helleborine flor. alb.* C. B. or *Damaſonium Alpinum* J. B. the little, wild, white *Hellebore*; *Iris fl. albo*; the great white-flower'd *Iris*, or *Flower de Luce* wild; the *Herba Paralyſis* or *Paralytica Alpina*, out of Flower; the *Caryophillat. Montan.* or *Caryophillat. Alpin. Lutea*; Caſp. B. *yellow Mountain*; *Avens, flos Carophill. Alpinus pumilio dictus*; the little Dwarf-mountain Pink, or rather a *Lychnis*, agreeing with the Deſcription of *Ger.* who from its *Calix* calls it of the *Lychnis* Kind; *Sedum Alpinum, Exigui fol.* C. B. *Sedum Alpin. minim. flor. carneo, Schol. Botan. Helleborus niger*, Lob; *verus* Park. Ger. *fl. Albo & Atro rubente*; the *black Hellebore, Gentian. maj. fl. lut.* &c.

I took this Opportunity to make a ſtrict Examination of the Snow, as it lay incruſtated in hard Cakes on the very Top of the Mountains; ſome of theſe are ſuch as have lain there for ſeveral Years, the Sunbeams not being able to diſſolve them quite, by reaſon of their vaſt Thickneſs.

In the Midſt of the Top of Mount *Cenis*, near the Road, (which is flank'd by other higher Rocks) you ſee a pretty large Lake gather'd, queſtionleſs, by the melted Snows, as the Coldneſs of the Water ſeems to teſtify; in the Midſt of it the Duke has a handſome Houſe, and another juſt by the Road; one for Devotion (of which the Prieſts take Care) and the other for his Diverſion, which lies almoſt in Ruins by Neglect. Here it is you take Carriages to deſcend the Mountain, being only wooden Chairs carried by two Poles: By this Carriage you are convey'd down the rocky Precipices, which are however not ſo dangerous or dreadful as ſome have repreſented them; for though your Horſes are led about a further Way, you may deſcend, for the moſt part, without much Difficulty on Foot, which I choſe rather to do, than be jolted in theſe uneaſy Chairs. Here is alſo a little Hoſpital for ſuch as fall ſick by the Way, and a ſmall Chapel to bury ſuch as periſh in the Snow, from thence called the *Tranſit*. The Plain on the Top of this Mountain (which is about four Miles long) has alſo an Inn for the accommodating Paſſengers, ſuitable to the Circumſtances of the Place: The Aſcent is accounted four Miles, but the Deſcent no more than two. *Novaleſe* has not any Thing remarkable, except its being the utmoſt Frontier of *Savoy* near the River *Semar*, which joins its Waters with the *Doria* at *Suſa*, where begins the Principality of *Piedmont*.

18. Though the *French* live under the moſt deſpotick Government in *Europe*, yet they are ſo fond of it, that they laugh at other Governments, which do not come up to that abſolute Power, of which they frame themſelves ſuch pleaſant Imaginations, that in the Midſt of their Slavery they find out an *Oligarchy* in their Council of State, an *Ariſtocracy* in their Parliaments, and a *Democracy* in their City Governments, adminiſtred by Provoſts, Mayors, and Merchants, and thereby would introduce into the World the moſt perfect Mixture of a Commonwealth; when, to ſpeak truly, all theſe different Qualifications make up but one entire Chain of Slavery. They boaſt of the Policy of *France* as loudly as of their Conqueſts; and it muſt be confeſs'd, that in their Military Affairs they follow, in many Things, the Footſteps of the ancient *Romans*, but want their Honeſty and true Generoſity. The Body of the People is compoſed of the Nobility, Huſbandmen, Artificers and Traders; the Peaſants, being condemned to perpetual Drudgery, furniſh the Field with Labourers and Soldiers, for when they are ſuck'd to the very Marrow by the Gentry and Tax-gatherers, they muſt either chuſe to ſtarve at Home, or ſeek for a Livelihood (ſuch an one as it is) in the King's Armies. Artificers and Traders are much encouraged in *France*, being the Court-Sponges, from whence they ſqueeze out what Juice they have gather'd before by one Means or other. The King commonly picks out the moſt ingenious among them for his own Service, and the reſt are employ'd in converting the Products of *France* into Manufactures exported into Foreign Parts.

The Clergy of *France* has of late been look'd upon with ſomewhat of a jealous Eye by the Laity, both by Reaſon of the Encreaſe of their Number, and ſeveral Eccleſiaſtical Uſurpations; theſe Encroachments of the Clergy at Home, and the pretended Power from the Popes Abroad, has made them revive our Lord *Digby*'s Diſtinction betwixt the Church of *Rome* and the Court of *Rome*, and not to be ſo fond of the *Jure Divino* Doctrine of the Prieſthood, but that the Privileges of the *Gallican* Church, and the *Regale*, have been made to give Laws to both; witneſs the Synod and the Decrees made there in 1682, againſt Pope *Innocent* XI; the Profeſſion of the *Proteſtant* Religion being to be rooted out, ſome were for attempting it by mild Ways, which were follow'd at firſt, but ſoon changed for Fire and Sword, as the moſt effectual Means, either to make them fly the Kingdom, or to comply with the King's expreſs Commands. This is differently taken among the *French*, according as they are more or leſs devoted to that unchriſtian Doctrine of the Extirpation of Hereſy.

19. The Remarks of this Gentleman are ſuch as might be expected from one of his Education and Profeſſion; and as he doth not ſeem to be prepoſſeſſed in Favour of the *French*, ſo there appear on the other Hand no Signs of Prejudice againſt them. This may be juſtly eſteemed a peculiar and a conſiderable Advantage to his Writings, for, generally ſpeaking, moſt of our Travellers take one or other of theſe Turns. If they are Men of Vivacity, they grow fond of *French* Cuſtoms, and of *French* Notions, receive for Goſpel every Thing that they are told, magnifying in their Relations both the Country and its Inhabitants, and labour to perſuade ſuch as read their Writings, that *France* is the fineſt Part of *Europe*; and the *French* Nation out of all Compariſon the moſt powerful People in it. Such again as embrace oppoſite Sentiments, run with equal Violence into the other Extream; they find nothing lovely in the Place, and exclaim perpetually at the Slavery, the Poverty, and the Vanity of the People. Whoever takes his Notions of *France*, and the *French*, as a Nation, from either of theſe Sort of Writers, will be infallibly miſled; and as in the preſent Situation of Things eſpecially, Miſtakes of this kind may be extremely fatal, by tending to inſpire an Apprehenſion, that the Power of the moſt Chriſtian King is irreſiſtable, and therefore it is to no Purpoſe to oppoſe; or to create an Opinion that the Power of *France* is a mere Bugbear; and that at the Bottom, notwithſtanding the Noiſe that is made about it, we have little or nothing to fear. To overturn both theſe Errors, and to give the Reader as near as may be a true Picture of the preſent State of that Kingdom, we will enter into a ſhort political Anatomy of it, which, as it could not be expected from Travellers, ſo it may ſerve as a Supplement at leaſt for ſome Time, to whatever has been publiſhed of that kind. We have taken a great deal of Pains to become, in ſome Meaſure, Maſters of this Point, and we ſhall report what has been the Reſult of our Inquiries as conciſely, as correctly, and with as much Candour as is poſſible.

It is very certain that in Point of Situation and Extent, the Dominions of the Crown of *France* are very conſiderable; they lie between the forty ſecond and the fifty ſecond Degrees of North Latitude, in the ſixth, ſeventh and eighth Northern Climates; ſo that they enjoy a very pleaſant and wholeſome Air, and generally ſpeaking a rich and fruitful Soil, which by the Way however is far enough from being improved to the utmoſt Advantage. From Weſt to Eaſt, that is, from Point *Conqueſt* in *Britany*, to the City of *Straſburgh* in *Alſace*, they reach pretty near ſix hundred Miles; and from South to North, that is, from the Frontiers of *Rouſillon* to *Dunkirk*, they extend upwards of five hundred Miles.

But there is another Method of computing, which will prove more ſatiſfactory than this to the intelligent Reader. *France*, according to the exacteſt Computation, contains about a twentieth Part of *Europe*, and is certainly much better peopled than *Spain*, *Italy*, *Ruſſia*, *Sweden* or *Denmark*, but is not near ſo populous as *Holland*, *England*, or ſome Parts of *Germany*. If we could depend upon the *French* Accounts, we ſhould reckon there are in it twenty Millions of People, but it is very certain that they are apt to ſtretch in their Computations, and that according to the eſtabliſhed Rules of political Arithmetick, we cannot affirm the Number of its Inhabitants to be above fourteen Millions, and, in my own Opinion, even this Calculation is rather too high, conſidering that, according to their own Reckoning, the Number of Perſons in Religious Houſes, that is to ſay, both Men and Women, amount to four hundred Thouſand. As to their Secular Clergy, I never ſaw any juſt Computation, but I think there cannot be much fewer, and if we take in thoſe, who from other Conſiderations lay themſelves under Obligations of leading ſingle Lives, the Number will not fall much ſhort of a Million, which muſt be a prodigious Drawback on their Increaſe as a People.

This great Country is divided into thirty ſix Governments, of which that of *Paris* is eſteemed the firſt, that is to ſay, diſtinguiſhing it, and the Diſtrict dependant upon it, from the Iſle of *France*. It is ſaid to contain fifty one Pariſhes, fifty two Monaſteries for Men, ſeventy eight Convents for Women, ſixteen Hoſpitals, fifty Hotels, five Royal Palaces, fifty Colleges, twelve Suburbs, and ſix hundred and fifty ſix Streets. 2. The Iſle of *France*, which is generally ſpeaking a good Country and well inhabited. 3. *Picardy*, a very fine Province, yielding plenty of Corn and Fruits; the Capital of which is *Amiens*. 4. *Champagne*, famous for Corn, Cattle and Wine; its Capital is *Troie*. 5. *Burgundy*, a very large, and very fertile Country; its Capital *Dijon*. 6. *Dauphine*, ſomewhat mountainous, but generally ſpeaking well cultivated, and the Valleys very fruitful; the Capital *Grenoble*. 7. *Provence*, which though it cannot boaſt of producing much Corn or Graſs, it is remarkable for its Wines, Oils, Saffron, and a great Variety of Fruits; the Capital is *Aix*. 8. *Languedoc*, is the largeſt and by many accounted the beſt Province in the Kingdom, producing great Quantities of Corn, Fruit, and Wine; the Capital is *Toulouze*. 9. *La Foix*, ſo called from its Capital, is neither large nor fruitful. 10. *Bern* and the lower *Navarre* are accounted but one Province; the Capitol of the former is *Pau*, and of the latter St. *John Pie de Port*. 11. *Guiene*, is a very fine, and a very rich Province; the Capital of which is *Bourdeaux*. 12. *Saintonge* and *l'Angoumois* make but one Government, tho' it has two Capitals, *viz. Saintes* and *Angouleſeme*. 13. The Country of *Aunis* is very ſmall, but very fertile and well peopled; the Capital is *Rochelle*. 14. *Poitou* is a very large Province, about 180 Miles from Weſt to Eaſt, but not the fineſt Country; the Capital is *Poictiers*. 15. *Brittany* is very fertile in Corn and Paſtures, has in it many rich Mines, and is well ſeated for Trade; the Capital is *Rennes*. 16. *Normandy*, which once belong'd to us, is one of the faireſt and fineſt of the *French* Provinces, though it produces no Wines; the Capital is *Rouen*. 17. *Havre de Grace*, a very ſmall Government, taken out of *Normandy* purely on the Score of the important Port which gives a Name to it, and is its Capital. 18. *Maine* and *Perche*; the Capital of the former is *Nantz*, of the latter *Mortagne*, paſſable Countries both, but nothing extraordinary. 19. *Orleanois*, famous for its Wines; the Capital is *Orleans*, which gives the Title of Duke to the ſecond Son of *France*. 20. *Nivernois*, a very ſmall Country ſeated on the *Loire*, and conſequently both fruitful and pleaſant: There are alſo ſome Iron Mines in it; the Capital is *Nevers*. 21. *Bourbonnois*, a good Country, which is alſo full of Wines, and famous alſo for its Baths near the Caſtle of *Bourbon*; the Capital is *Moulins*. 22. *Lionnois*, a rich and noble Country; its Capital is the famous City of *Lyons*, remarkable on many Accounts, but chiefly for its being the Seat of the Silk Manufacture. 23. *Auvergne*, a large Province, in which are found all the Neceſſaries of Life; and the Inhabitants of which are conſidered as the beſt Farmers in *France*; the Capital is *Clermont*. 24. The *Limouſin*, a barren mountainous Country, the Inhabitants of which however are very induſtrious; the Capital is *Limoge*. 25. *Marche*, a ſmall, well watered Country; the Capital of which is *Gueret*. 26. *Berry*; it is ſaid to have the fineſt Meadows and Paſtures in *France*; it produces a great deal of Wool, and therefore moſt of the Cloth Manufactures are in this Country. 27. *Touraine*, commonly called the Garden of *France*: Few Provinces boaſt of better, and none has ſo little bad Land; the Capital of it is *Tours*. 28. *Anjou*, a very fine well watered Country; the Capital of which is *Angiers*. 29. The *Saumurois*, taken out of *Anjou*, a ſmall Country, the Capital of which is *Saumur*. 30. *French Flanders*, the richeſt and fineſt Province belonging to the *French* Crown; the Capital is *Liſle*. 31. *Dunkirk*; this Town and Diſtrict makes a Government, ever ſince it was ſold by us in 1662. 32. *Metz* and *Verdun*; the former is ſituated at the Conflux of the *Seille* and the *Moſelle*, and is now one of the ſtrongeſt Fortreſſes in *Europe*. *Verdun* upon the *Meuſe* is large, populous, and well fortified. 33. *Toul* upon the *Moſelle*; this, with the other two Cities before mentioned, are commonly ſtiled the three Biſhopricks, and were taken out of *Lorrain* before the whole of that Country became a Sacrifice to the *French* Ambition. 34. *Alſace*, a large, fruitful and rich Country, torn from the Empire with little or no Pretence, and kept, as it was got, by Force; its Capital *Strasbourg*. 35. *Franche Comte*, or, as it is commonly called, the County of *Burgundy*, fruitful in Wine, Corn and Wood; another Conqueſt without Right; the Capital of which is *Biſancon*. 36. *Rouſillon*, a mountainous and barren Country, the Capital of which is *Perpignan*.

Theſe Governments were thus eſtabliſhed in 1698. by *Louis* XIV. They have ſuffered ſome Alteration ſince, and are liable to the like Changes from the Will and Pleaſure of the King, who may if he pleaſes join two of them together, or ſeparate them if he thinks fit. The Reaſon we have mentioned them ſo particularly is, that we may ſhow how they are governed; and by that Means how much *France* is changed from what it was, and how effectually the Power of the Crown is eſtabliſhed. In every Province there is a Governor, who is a Perſon of the firſt Rank, and his Poſt is generally for Life; but as it is ſuppoſed that he cannot always attend the Functions of his Office, the King appoints a Lieutenant General if it be a ſmall Province, if a large one, two or three, each of which has his particular Diſtrict, in which his Power is independant. Beſides theſe Lieutenant Generals, there are alſo the King's Lieutenants, who have ſmaller Diſtricts; and the Governors of Towns are likewiſe appointed by the Crown, and are independant of the other Officers. In Places that have Citadels, thoſe have likewiſe their Governors independant of the Governor of the Town, and by the Help of theſe Checks it is impoſſible for thoſe Diſturbances to happen, which were ſo frequent in every Reign before the laſt. Heretofore it was common for the King to grant the Survivorſhip of the Government to the Son or next Relation of the Governor; but now another Method is taken, for the Father actually reſigns to the Son, who has the Title, but the Exerciſe of the Office is reſerved to the Father by a Brevet, which gives him likewiſe the Power of reſuming the Title, if his Son dies before him. The Adminiſtration of Juſtice in the Province is veſted in the Parliament to which it belongs, in which the Governor has a Seat, which however is a mere Point of Honour, and gives him little or no Power. As this creates a new Diſtribution of the Kingdom, with reſpect to Parliaments, ſo there is alſo a Third in reference to Taxes, by which it is diſtinguiſhed into Generalities and Elections; and at the Head of theſe are the Intendants. By this Kind of Policy, which was invented by *Richlieu*, and perfected by his Succeſſors, every Part of the Kingdom is immediately under the

Power and Inſpection of the Miniſters; and the Princes of the Blood and great Lords, notwithſtanding they have ſtill the Title, Authorities and Revenues of Governors, have nothing of that Kind of Power that was ſo dangerous in paſt Times. But with reſpect to their Lordſhips, they have ſtill very great Prerogatives; which though they do not render them formidable to the Crown, give them ſuch Power over the common People, that without doubt the Peaſants in *France* are as miſerable as any in *Europe*; and this is the true Secret why their Infantry, notwithſtanding all their Diſcipline, is not near ſo good as the *Engliſh*, the *Swiſs*, or thoſe of ſome of the *German* Princes; for Men born and bred under Oppreſſion, have never that true Spirit and Courage that is ſo remarkable in Freemen. The Artizans and Manufacturers are ſomewhat better treated, and in the Cities of *France* they have Immunities and Privileges which at firſt Sight bear a near Reſemblance to Liberty; yet even theſe give Way upon any Exigence; ſo that after all, the King is abſolute Maſter of every Rank of his Subjects, and diſpoſes, in a great Meaſure, both of their Perſons and Properties at his Pleaſure, which is the true Reaſon why ſo many leave their Country, and ſettle elſewhere.

We have hitherto in this Account repreſented Things in general; and indeed it would require much more Room than we have to ſpare, to enter into Particulars. It may very well ſuffice to ſay, that the ruling Maxim of the *French* Government is to ſuſtain and to extend the Power of the Crown, to which every Thing muſt give Way. The Church, as a State Machine, is managed with greater Addreſs in *France*, than in any Country in the World. *Louis* XIV. was a Bigot in his Practice, but not in his Church Politicks; for while he dragoon'd his *Hugonot* Subjects, out of pious Regard to the Principle of Unity, he countenanced and approved the nice Diſtinction between the *Roman* and the *Gallican* Church. For by this Contrivance he procured for himſelf, and has left to his Succeſſors, two Reins, by which the Eccleſiaſtical Machine is governed with Eaſe. If the Pope is to be managed and the Influence of the See of *Rome* becomes neceſſary to the *Eldeſt Son of the Church*, then one Rein is pulled, and the Royal Power is exerted in Support of the papal Authority: But if ſome ſtubborn, long-headed or well-meaning Cardinal is advanced to the ſupreme Dignity in the popiſh Hierarchy, who has a greater Regard to the Whole than to any Part, and will not employ either his Credit or his Power to ſerve the Purpoſe of the *Gallic* Monarch, then he plucks the other Rein, and makes his Holineſs fully ſenſible, that without his Aſſuming the Title, he is truly and effectually Head of the *Gallican* Church. It muſt be confeſſed that this Sort of Policy is not without its Inconveniencies, and thoſe too that are very evident, and ſometimes very troubleſome, ſuch as continual Heart-burnings and Struggles, vexatious Diſturbances, and a kind of perpetual Perſecution, under all which Miſchiefs the *Gallican* Church has now laboured near thirty Years: But this gives no Pain to the Miniſtry; they look upon it as a neceſſary Evil, and raiſe and fall the Tide of Perſecution as Intereſt directs. Thus the greateſt Part of the *French* Clergy are obliged to conform to the Court Creed, as well as to the Catholick Faith; and that Part of his Subjects are now moſt in the King's Power, which were leaſt ſo in his Predeceſſors; and thoſe Men receive their Inſtructions from the Cabinet, who from the Nature of their Office, have the ſtrongeſt Sort of Influence over the Common People. By this Management alſo the Government draws a large Revenue from the Church, which in former Times was reckoned impracticable. The Tenths, which are annually paid to the King, amount to about Sixty thouſand Pounds; the Free Gifts, which are now become a ſtated and regular Revenue, amount to above two hundred thouſand Pounds a Year, that is, in Time of Peace; for in War the extraordinary Free Gifts bear ſome Proportion to the Exigency of the publick Affairs.

The Eccleſiaſtical and Civil Government in *France* was reduced by Degrees pretty near the ſame it ſtands at preſent under the Reign of *Lewis* XIII. and the Improvements only are to be attributed to his Son and Succeſſor; but with reſpect to the Military Eſtabliſhment, *Lewis* XIV. was its original Founder. Before his Time a few Companies of Guards, and the four old Corps, as they are ſtill called, were all the ſtanding Troops of *France*; neither were they exactly of the ſame Nature with the Regiments that are now kept up, though this is not a Place to diſcuſs the Difference. It is ſufficient for us to obſerve, that the Prince laſt mentioned, finding every Thing at home diſpoſed according to his good Pleaſure, when he took the Adminiſtration into his own Hands, reſolved to lay hold of that Opportunity to ſecure the boundleſs Authority of which he was poſſeſſed in his own Dominions; and at the ſame Time to make himſelf terrible to his Neighbours. It was to this End that he eſtabliſhed firſt, under the Notion of Guards, a very conſiderable Force, which is now ſtiled the Troops of the Houſehold, and afterwards, as Occaſion offered, raiſed Regiment after Regiment, both of Horſe and Foot, and kept them in conſtant Service. It was by the Help of this Standing Army, that he gained ſo many and ſo great Advantages over *Spain*, and the reſt of his Neighbours, and annexed ſeveral conquered Provinces to his Dominions, which at the ſame Time afforded him an Opportunity of increaſing the Number of theſe regular Troops, and of covering his Frontiers on every Side with Abundance of ſtrong Fortreſſes. By Degrees other States in *Europe* found themſelves obliged, for their own Defence, to raiſe and maintain regular Troops likewiſe, which afforded that ambitious Prince a Pretence for augmenting his to as great a Number as was poſſible for him to maintain; and his Example in this, as well as in moſt other Points, has been exactly followed by his Succeſſor. So that immediately before the Breaking out of the preſent War, the Standing Troops of *France* conſiſted of one hundred and twenty thouſand Foot, twenty thouſand Horſe and Dragoons, and between eight and ten thouſand Invalids; that is, in the whole, to about One hundred and fifty thouſand Men. The keeping up ſo large an Army, and the maintaining ſo many Garriſons, is as ſerviceable to the King, as it is burthenſome and ruinous to the Kingdom; inaſmuch as it keeps ſo great a Proportion of able and active Perſons in a State of abſolute Idleneſs with Regard to the Publick, at the ſame Time that heavy Taxes are raiſed upon the induſtrious Part of the People for their Subſiſtence. But it muſt be allowed, that it finds Employment for the Nobility and Gentry of *France*; more eſpecially, as it is become almoſt an indiſpenſible Cuſtom for them to ſpend their Youth, at leaſt the firſt Part of it, in the Service; by which they are brought inſenſibly into a Dependance upon the Court, and have their Minds filled with falſe and ſlaviſh Notions of the Glory of their Grand Monarch, which entirely gets the better of the natural Paſſions that all Men of Birth and Breeding in other Nations, have for the Service of their Country. Thus the Reader ſees, that the Church, the Law, the Civil Employments, and the Military, being wholly at the Pleaſure of the Court, the far greater Part of the active People in this great Country have their Lives and Fortunes at the Diſpoſal of the Crown, and ſpend the beſt Part of their Days in the Maintenance of a Syſtem calculated to hold them in irrecoverable and perpetual Servitude.

As for the political Government, it is managed by ſeveral great Councils, or rather Committees of Council, of which there are at preſent four, which are ſtiled the Council of State, the Council of Diſpatches, the Royal Council of Finances, and the Royal Council of Commerce. The firſt Civil Officer in *France* is the Chancellor, the only Officer that is not removable at the King's Pleaſure; that is to ſay, he cannot be turned out without being brought to a Tryal; but the King may and frequently does take the Seals from him, and put them into the Hands of another Perſon, who has the Title of Keeper, and the Power of Chancellor, who is removeable at the King's Pleaſure. There is generally a Perſon at the Head of the Miniſtry, either with or without the Title of prime Miniſter, and with more or leſs Authority as the King pleaſes: At preſent this is the Cardinal *de Tencin*. For the Management of publick Affairs there are four principal Secretaries of State, who have each their ſeparate Departments. Theſe are at preſent the Count *de Maurepas*, who has the Marine; the Count *de Puiſieux*, who is Secretary for Foreign Affairs; the Count *de Saint Florentin*, who has the Care of Domeſtic Concerns; and the Count *d'Argenſon*, who is Secretary at War. The principal Officers of the Revenue is the Comptroller General of the Finances, at preſent M. *de Machault*, who has under him a Multitude of Intendants and other Officers, ſubject to the Direction of the Council of Finances, of which the Duke *de Bethune* is Preſident. As to the ordinary and ſettled Revenue of the Crown of *France*, if we may believe their own Writers upon that Subject, it is not at all increaſed in its real, though it is conſiderably augmented in its nominal Value. In 1683, it was computed at 116,873,476 Livres, and in 1730, it amounted to no more than 140,278,473 Livres, which make 5,844,973 Pounds of our Money, which ſhews that neither the general Wealth of *France*, nor the Income of the King, are near ſo great as is commonly imagined. It is, indeed, very true, that in Time of War the King levies much larger Sums; but it is very plain, that even theſe muſt fall ſhort of what ſome People would perſuade us they amount to, ſince there muſt be always a Proportion between the ordinary and extraordinary Revenue; and conſequently, if we know the one, we may very eaſily compute how far the other can be carried, becauſe even under arbitrary Governments, ſome Meaſures muſt be preſerved, and ſome Regard had to the general Income of the People, which is leſs in Time of War, at the ſame Time that the publick Expence is greater.

With regard to the Commerce of *France*, there remains no Sort of Doubt, that it has grown more extenſive and more profitable than formerly, when Trade was very little known in this Country. It may ſeem a little ſtrange, but the Fact is certainly very true, that the Commercial State of this Country is entirely under the Direction of the Crown; and in this there ſeems to be the leſs Hardſhip, becauſe it may be very truly affirmed, that the Commerce of *France* is as much or rather more the Work of their Miniſters, than of their Merchants. When *Colbert* was at the Head of Affairs, he made the Increaſe of Manufactures, the Facilitating Domeſtick, and the Improving Foreign Trade, one of the principal Objects of his Miniſtry. In this he was very ſucceſsful; he underſtood Commerce as a great Man ſhould underſtand it, ſo as to render it beneficial to a Nation, without conſulting too minutely the Profit of private Perſons. Upon this Occaſion I will venture to relate, after an eminent *French* Author, a very ſingular Story: He invited ſeveral eminent Merchants to meet in his Cabinet, in order to diſcourſe on the Principles of Commerce, and promiſed them the utmoſt Liberty in Converſation. At their firſt Meeting, a certain Merchant, who was conſider'd as the beſt Head amongſt them, made a ſett Harangue againſt the Management of the Duties, and ſpoke ſo bluntly, that the Miniſter roſe in great Heat, and bid him hold his Tongue, for that was no Part of his Buſineſs. If no Freedom, no Speech, anſwered the Merchant; we will be going; if you cannot hear, it is impoſſible you ſhould learn, and if you will not correct what is immediately in your own Power, what are we to expect? *Colbert* bid him ſit down, and go on, and from that Time forward never checked any of them, let them ſay what they would. By this Means, in a few Years, he knew more than them all. *Madam de Maintenon* was likewiſe a great Politician in Commerce; and it fell out, when the Affairs of *Louis* XIV. were in the utmoſt Diſtreſs, that ſome of his Miniſters propoſed poſtponing the Payment of the Sums due to his Bankers for a Year: To which the King ſeemed inclined. The Lady, who was ſpinning at the other End of the Room, without quitting her Work, addreſs'd herſelf to the King in theſe Words: *Sir, if you ſtop Payment to your Bankers, they will loſe their Credit with their Foreign Correſpondents, which while they maintain, you are never at a Loſs for Money in any Part of* Europe. *While Things continue in this State, your Diſtreſſes are known only to a few; but if you take this Reſolution, you will become a Bankrupt in the Eyes of the whole World: Stop therefore your Penſions, the Money deſtined for Buildings, and other Pleaſures, and pay the Bankers punctually, for Credit is the true Baſis of Power.* The King took her Advice, which was certainly better than that of his Miniſters; and it anſwered the End that was propoſed.

By this it appears, as well as by what was ſaid in the former Volume, of the *French Eaſt-India* Company, that the Commerce of *France* is the Creature of the State; and from thence it follows, that though in particular Branches it may flouriſh wonderfully, yet, taking in the Whole, it is nothing near ſo conſiderable as it might be, nor can it ever be made ſo under a Government conſtituted like that which ſubſiſts in this Country at preſent; which is one of the beſt Reaſons that can be aſſigned, why the ordinary Revenue of *France* is not higher now than it was many Years ago, and why even very ſmall Sums of Money, in Compariſon of what are raiſed elſewhere, are raiſed here with ſo much Difficulty. The Shipping of *France* is certainly increaſed, but not in that Proportion that is commonly imagined, much leſs in the Degree ſome of our political Writers have aſſerted; for I have actually ſeen Computations of the Shipping employed in only one Branch of Trade very confidently laid down, which I could demonſtrate to be very near, if not beyond the whole Shipping of this Country; a very clear and inconteſtable Proof of this, is the preſent State of their Navy. I have before me a Liſt of it in the Year 1693. when it conſiſted of One hundred and fourteen Ships of the Line, but at the Beginning of the preſent War, they had not forty Sail of Men of War and Frigates of all Sizes: I have likewiſe before me a Memorial preſented by the Merchants of *France*, to the Count *de Maurepas*, at the Cloſe of laſt Year, in which the Loſſes ſuſtain'd thereby, are computed at Two hundred Millions, which makes Nine Millions three hundred thouſand Pounds of our Money. In this Memorial it is ſaid, that if the King could maintain Sixty Men of War and Frigates, including the *Breſt* Squadron, which is reckoned at twenty Sail, the whole Trade of *France* might be well protected, which is an Evidence, that it is very far from being protected at preſent, and that the King has not any ſuch Force as the Merchants think is requiſite for that Purpoſe. While the War continues it is impoſſible he ſhould; foreign Subſidies, and the Expences of his Land-Forces run away with all, and more than all; ſo that if our Naval Force was employed in Diſtreſſing the *French* Trade, in any Part of the World, but more eſpecially in the *Weſt-Indies*, there is no Doubt that we might put them back for half a Century, at leaſt; and if at the End of this War, there ſhould remain ſuch a Part of the Sinking Fund, as would enable us to take off the Duties upon Sugar entirely, I believe their *Weſt-India* Trade could never revive. But I ought to aſk my Reader's Pardon for this Digreſſion, and for extending my Remarks to ſuch a Length; but the Deſire of ſhewing, that if *France* be a *Hydra*, it is not impoſſible ſhe may meet with a *Hercules*, was what led me thus far, and I hope will ſerve for a tolerable Excuſe.

CHAPTER V.

Comprehending Travels through the remoteſt Parts of *Germany*, *Bohemia*, *Moravia*, *Hungary*, &c. to the very Frontiers of *Europe* upon that Side; interſperſed with the Hiſtory of Mines, Salt-works, Fiſheries, and other curious Particulars.

SECTION I.

A Voyage from England *to* Holland, *with a Journey from thence, by Land, through the Electorates of* Cologne, Treves *and* Mentz, *the* Lower *and* Upper Palatinate, Bavaria *and* Auſtria, *to* Vienna; *from thence through* Moravia, Bohemia *and* Saxony, *to* Hamburgh; *with many judicious and uſeful Obſervations.*

By the very learned Dr. Edward Browne of the Royal College of Phyſicians.

1. *Introductory Account of the Author. He embarks at* Yarmouth, *and proceeds by Sea to* Rotterdam. *Deſcription of that City.* 2. *A very curious Account of the* Hague, Leyden *and* Harlem. 3. *A copious and circumſtantial Deſcription of what is moſt remarkable in* Amſterdam. 4. *The like Account of the City of* Utrecht, *and of the Country about it.* 5. *A Deſcription of* Boiſleduc, Breda *and* Dort. 6. *The Author's Paſſage into the Iſland of* Walcheren, *with a Deſcription of* Middleburgh *and* Fluſhing. 7. *The Courſe of the River* Schelde, *and the City of* Antwerp *deſcribed.* 8. *The Author's Journey continued through* Bruſſels *and* Maeſtricht *to* Cologn. 9. *His Journey from thence to* Bonn, *with ſome very curious Obſervations.* 10. *An Account of the Author's Journey from* Bonn *to* Franckfort, *and of the Places he paſſed through upon the Road.* 11. *A ſuccinct Account of* Franckfort. 12. *A Deſcription of the City of* Heidelburgh, *and of the* Palatinate. 13. *His Journey from* Heidelburgh *to* Nurembergh, *with a Deſcription of the laſt-mentioned City.* 14. *The Country of* Bavaria *and* Auſtria *deſcribed, with the principal Towns in them.* 15. *A large and particular Account of the City of* Vienna. 16. *A View of the Emperor's Court, and of that Prince's Manner of living.* 17. *Of the celebrated Library at* Vienna, *and the Emperor's Collections of Curioſities.* 18. *The moſt remarkable Things in the Neighbourhood of this City deſcribed.* 19. *The Author's Remarks upon the Cuſtoms and Manners of the Inhabitants in that great City.* 20. *A Deſcription of the remaining Part of* Auſtria *and* Moravia. 21. *His Journey through the Kingdom of* Bohemia, *with an Account of the Silver Mine at* Guttenberg. 22. *The famous City of* Prague *deſcribed, together with an Account of ſome other remarkable Places in* Bohemia. 23. *A Deſcription of the City of* Dreſden, *and of the Country of* Saxony. 24. *The Author's Journey through* Freiberg, Leipſick *and* Magdeberg; *with an Account of thoſe great Cities.* 25. *A Deſcription of the noble City of* Hamburg, *with the Author's Remarks upon the* German *Nation.*

1. IT is now Time that we ſhould lead the Reader out of *Europe*; of which, however, many Countries remain yet undeſcribed; for the making known of which, we could think of no better Method than digeſting, into the cloſeſt Order poſſible, the Travels of the ingenious Dr. *Browne* through moſt of thoſe Countries, Accounts of which are ſtill wanting. He was the Son of the famous Sir *Thomas Browne* of *Norwich*, ſo well known to the learned World by the many curious and valuable Works he publiſhed. As for this Gentleman, he received the firſt Part of his Education under the Care of his worthy Father; and having paſſed through the Circle of School Learning, was removed to the Univerſity of *Oxford*, where, after having taken his Degrees regularly, and with much Reputation, he reſolved to travel, as he did, through the greateſt Part of *Europe*; and having Recommendations where-ever he came, to Perſons the moſt diſtinguiſhed for Rank and Learning, acquired thereby various Opportunities of making deeper and better Obſervations than is common with Travellers in ſuch haſty Tours. He publiſhed two Volumes of his Voyages and Travels, which were extremely well received; and in the Account given of them by the Secretary of the Royal Society in the Tranſactions, they are very highly and juſtly commended. He afterwards took his Degree of Doctor of Phyſick, and became a Member of the College, Fellow of the Royal Society; and, in regard to his great Knowledge and Experience, was promoted to the Rank of being the King's Phyſician. He enjoy'd theſe Honours, together with an univerſal and unblemiſh'd Reputation, for many Years, and was very juſtly conſider'd as an Honour to his Family and Profeſſion. We have taken the Liberty to range his Travels in the Manner moſt ſuitable to the Nature of this Collection; and becauſe it was impoſſible to preſerve a proper Connection, without taking in his Account of the *United Provinces*, the *Low Countries*, and ſome Part

of *Germany*; we choſe rather to retain them, though many of the Places had been before ſpoken of in former Chapters of this Book, than to begin abruptly with his Accounts of *Auſtria*, *Bohemia*, *Hungary*, &c. for the Sake of which they were chiefly inſerted; but as all he ſays is equally entertaining and inſtructive, we apprehend that this cannot be conſidered as any Inconvenience.

I went in the Year 1668, from *Norwich* to *Yarmouth*, a Sea-Port in the County of *Norfolk*, at the Entrance of the River *Yare*: Where being furniſhed with Letters of Recommendation by Sir *James Johnſon* to *Amſterdam*, *Francfort*, *Venice*, and *Vienna*, I embark'd the 14th of *Auguſt* in *Yarmouth* Road, aboard the *Angel Ketch*, Burthen Fifty five Tuns; and ſet ſail for *Rotterdam*. It was not long before we diſcovered *Goree* Steeple, and immediately after the *Briel*, ſituate at the Entrance of the River *Moſa*, or the *Maeſe*; which having its Riſe in the Mountains of *Vauge*, or *Vaugeſus*, paſſes by *Verdun*, *Dinant*, *Namur*, *Liege*, *Maeſtricht*, *Ruremond*, *Venlo*, and ſeveral other Places, and here diſcharges itſelf into the Ocean. In our Paſſage up the River we ſaw many ſtately Villages, the moſt noted of which were *Maeſeland-Sluice*, *Schiedam*, and *Delfts-Haven*; and came aſhore about Six in the Evening at *Rotterdam*.

Here I had Sight of two of the largeſt Men of War belonging to *Holland*, *viz.* the *Crane*, and the *Waſſenaer*; the laſt of which was built in Lieu of that in which Admiral *Opdam* was blown up, as he was engaged againſt his Royal Highneſs the Duke of *York*. The Points of the Keys of this City are very fair, and the Channels, which extend into the very Centre of it, ſo large and deep, as to be capable of receiving Ships of great Burthen. It is very populous, the Houſes well built, and the Streets very clean. The Organs of the great Church, the Tower, and the Monument of M. *De Wit*, the Statue of *Eraſmus* upon the Bridge, and ſome other Curioſities, are worth the Obſervation of a Traveller. It being then Fair-time, we ſaw ſome Drolls acted, and ſome Rarities, *viz.* Lions, Leopards, and among the reſt a Woman of ſeven Foot high.

From *Rotterdam* we paſſed forward to *Delft*, paſſing by the Powder-Houſe (a beautiful Structure at ſome Diſtance from the City.) The Piazza of *Delft* is very large, the Town-houſe fronting it at one, and the new Church with its high Steeple at the other End. This Church is famous for the Tomb of *William* of *Naſſaw*, Prince of *Orange*, together with his Wife and Son, Prince *Maurice*, whoſe Statue is in Armour, with his Dog lying at his Feet, with four Obeliſks ſupported by ten Marble Pillars: It ſtands in the Middle of the Iſle. The old Church contains the Tomb of the famous *Van Trump*, carved on the Walls, his Effigies lying upon a Cannon, ſurrounded with Arms and Trophies. In another Church we were ſhewn the Monument of Admiral *Hein*, who took the *Spaniſh* Plate Fleet: And in a large Houſe, in a Wall, the Marks of ſome of the Bullets, by which Prince *William* was murthered, in 1584.

2. The *Hague* is celebrated for being the ancient Reſidence of the Counts of *Holland*, and now of the States-General; it is about three *Engliſh* Miles from *Delft*. It has a very fair Piazza, many well built Houſes, and the Pall-mall, the Wood, and the Park, are very beautiful Places; but what ſurpaſſes all, is the Way from hence to *Scheveling*, which is paved with Brick for three Miles, with ſeveral Rows of Trees on both Sides, as far as to the Steeple of *Scheveling*. The City of *Leyden* (nine Miles diſtant from the *Hague*,) may for its Neatneſs compare with any in *Europe*, its Streets being beautified with noble Houſes, and large Channels on both Sides: Its Fortifications are after the modern Way. One of the chief Antiquities of *Leyden*, is what they call the *Hengiſt Caſtle*, (or the *Berg*,) from its Founder *Hengiſt* the *Saxon*. On the Top, into which we went by very handſome Stairs, we ſaw a very fair Arbour, a Labyrinth and Well, and at the Bottom is a very good Houſe of Entertainment. But what ſurpaſſes this, are the Ruins of an ancient Fortreſs not far from this City, at the Village call'd *Catwick*, upon the Sea, known by the Name of *Arx Britannica*; which being built by *Caligula*, and afterwards ruin'd by the *Normans*, was overwhelm'd by the Sea at laſt; yet not ſo, but that at certain Times, when the Tide is very low, its Ruins have been plainly diſcovered, and ſome Antiquities have been found with this Inſcription: *Ex. Ger. Inf.* that is, *ex Germania Inferiori*. The Stadt-houſe has a very fair Front towards the Street. In the Anatomy Hall you ſee many Skeletons, of a Whale, a Horſe, Deer, Cow, Cat, and Fox, and two Legs of an Elephant, beſides thoſe of Men and Women, ſome Muſcles preſerv'd, and one entire Body with the Skin and Fleſh.

The Phyſick-Garden is none of the largeſt, but abundantly ſtock'd with Plants of all Sorts. Near it ſtands the College where the Publick Lectures are kept every Day, and under it is the Printing-Houſe of the Univerſity. In the Stadt-houſe, in the Apartment of the Burgermaſters, I ſaw a moſt curious Piece done by *Lucas van Leyden*, repreſenting the Day of Judgment. Near the ſame Place is alſo ſhewn the Table of that famous Taylor, *John* of *Leyden*, upon which he uſed to work, before he took upon him the Trade of a Reformer, and came to be King of the *Anabaptiſts* in *Germany*. From *Leyden* I travell'd to *Harlem*, ſeven *Dutch* Leagues (or twenty one *Engliſh* Miles) thence. Its Situation is very pleaſant, among Groves of Trees. The great Church ſurpaſſes for its Bigneſs all others in *Holland*, and is full of remarkable Inſcriptions. The Pictures of all the Earls of *Holland*, in the Prince's Houſe, are very good Pieces; and in the Summer-Houſe of the Garden is that of *Laurence Coſter*, a Citizen of this Place, whom they ſtile the firſt Inventor of Printing; whereas others aſcribe the ſame to a certain *German*, named *John Gottenberg*. In the other Rooms you ſee ſeveral excellent Pieces of Paintings of *Hemſkerk* and *Goltzius*; but thoſe of *Cornelius* of *Harlem* exceed the reſt, eſpecially his Hiſtory of *Herod*'s killing the Children; his Feaſt of the Gods, in which *Vulcan*'s Foot is eſteemed moſt; and his Collation of a Nun and a Monk.

On the other Side you ſee a Picture of a Ship with Saws, in Memory of the glorious Action done by thoſe of this Town, who under the Reign of *Frederick Barbaroſſa*, fighting againſt the *Saracens*, took *Damiata*, entering the Port by Means of Saws faſtned to the Keels of their Ships, which cut the Chains of the Harbour. Here is alſo an Hoſpital for Sixty aged Perſons, and another for the Sick, both very handſome and neatly kept. Here I obſerved the firſt Time their Way of Whipping Malefactors with Rods: They tie their Hands ſtretch'd upward as high as they can, to a Poſt erected upon a Scaffold, with an Iron round their Waſte, and ſo give them as many Stripes as are allotted them by their Judges. The Lake near *Harlem*, call'd the *Harlem Meere*, is above twenty Miles long.

3. The next Place to *Harlem* is the City of *Amſterdam*, famous throughout the World for its Riches, Trade, Shipping, fair Streets, and magnificent Buildings. Its Situation is upon the River *Ye*, being formerly the Seat only of a few Fiſhermen; but being favour'd in Time with the Title of a City, by the Earls of *Holland*, was ſtrengthened with a Wall 1470, againſt thoſe of *Utrecht*; and many Years after, by the Emperor *Maximilian*, honour'd with the Imperial Crown over their Arms, which are three Croſſes on a Pale. It is almoſt incredible how this City is increaſed of late Years, being now encompaſs'd with a new Wall, and large Ditch, after the Modern Way of Fortifications. The new Streets eſpecially are very ſpacious, with large Channels. The River *Amſtel* (from whence it has borrow'd its Name) alſo paſſes through it, being let in under a very handſome Bridge of eleven Arches, and twenty ſix Paces broad, which makes part of the Wall. This whole vaſt Body is built upon Piles of Timber driven into the Earth cloſe to one another, the Foundation of the Tower over-againſt St. *Catharine*'s Church, being ſaid to conſiſt of 6334 great Trees; and I myſelf was an Eye-witneſs of the vaſt Number of Trees I ſaw

I ſaw them drive into the Foundations, where the *Eaſt-India* Houſe was to be enlarged; and at another Place, where they were laying the Foundation of a *Lutheran* Church.

The nobleſt Structure of all this Country, and one of the fineſt in *Europe*, is their Stadt-houſe, built of Free-ſtone, 110 Paces in Front (in which it exceeds St. *Peter*'s Church at *Rome)* and Eighty one Paces deep. At its very Entrance, on the Right-Hand, you ſee the Hall where Malefactors receive their Sentence; the Marble Statues here hanging down their Heads, as if grieved at what was pronounced. All the Floors are covered with Marble, and the Roofs finely carved, painted, and gilt; *Atlas*, bearing a Globe upon his Shoulders, ſtands on the Top of it. The Globe is of Copper of ten Foot Diameter, and exceeds, as far as I ever heard or ſaw, any Ball or Globe of this Nature. That of St. *Peter*'s Church at *Rome*, and that of *Florence*, being leſs; and ſuch as I have ſeen upon any of the *Turkiſh* Moſques, don't come near this in Bigneſs; nay, the largeſt of thoſe three famous Balls at *Morocco*, are, according to the Report of thoſe that have ſeen it, inferior to this. The Exchange of *Amſterdam* is very fair, exceeding large, and frequented by an incredible Number of People. Moſt of their Churches are ſtately Edifices. The Partition with Balliſters of Braſs in the new Church are truly noble; and the Carvings of the Pulpit exceed the reſt.

The Tombs of *Van Hulſe* and *Hemſkerk*, in the old Church, are very well worth a curious Traveller's Obſervation: The laſt of theſe two has rendered himſelf famous by his ſucceſsful Expeditions in the *Eaſt-Indies*, after their firſt Settlement there, by the Way of the Cape of *Good Hope*, when they had found the *North Paſſage* by *Nova Zembla* impracticable. Their Houſe of Correction is alſo worth Obſervation; having at its Entrance two Lions bridled with this Inſcription:

Virtutis eſt domare quæ cuncti pavent.

A proper Emblem for the Purpoſe it was intended, *viz.* to bridle the Inſolencies of ſuch as are riotous in the Streets, or commit Diſorders, and the Extravagancies of the Sons of Citizens, who are paſt the Government of their Maſters and Parents. They are employed in Gaining their Bread by raſping *Brazil* Wood; and if they refuſe to perform their Taſk, and become incorrigible by Blows, they (as we were told) put them in a large Ciſtern, with a Pump by them, and ſo letting in the Water upon them, force them to work for their Life.

Their *Spin-huis* is intended for the Correction of young Women, ſuch as live looſely, or are taken in the Streets, and other ſuſpicious Places: Sometimes the Citizens ſend their Daughters hither for Chaſtiſement, and theſe have Chambers allotted them; I ſaw above an hundred Women in one large Room, ſome of which were very well dreſs'd. In the Hoſpital for Children are 600 Orphans, well educated and look'd after. The *Dol-huis* is like our *Bedlam*, intended for delirious Perſons. The *Gaſt-huis*, an Hoſpital for the Sick; as the *Mannen-houſe* is an Hoſpital for old Men. They have beſides this, a laudable Cuſtom throughout all *Holland*; which is, that upon the Appointment of any Metting at a Tavern, or any other Occaſion, certain Forfeitures are put into a Box kept in all Publick-Houſes, for the Uſe of the Poor, which is the Reaſon that ſcarce every any Beggars are ſeen in the Streets.

Their *Eaſt-India*-Houſe contains an incredible Store of Spices, and other *Indian* Commodities. Their Admiralty Houſe, where they keep their Stores for Shipping, is ſurrounded with Water for its greater Security, and near it lie Seventy two Men of War. On the Top of this Houſe (as moſt of Note of this City) is a Ciſtern for the Reception of Rain-Water, to ſupply the Defect of Spring-Water, which is very ſcarce. At the Entrance of the Gate, we ſaw the entire Body of a Man preſerved from Corruption, encloſed to the Waſte in a Canoe, made of Fiſh ſkin, ſo cloſely ſewed together, that no Water could get in. The handſomeſt Streets of *Amſterdam* are, the *Harlem-Street*, the *Cingel*, *Princes Graft*, *Kaiſers Graft*, and *Heeren Graft*, as alſo the *New Iſland*. Among other Rarities I ſaw here a Globe, the Workmanſhip of *Vingbomes*, betwixt ſix and ſeven Foot Diameter; it was all of Copper, and very well painted, with all the new Diſcoveries made in 1641, at 42 Deg. S. Lat. and 170 Longit. thoſe towards the N. W. of *Japan*, about *Nova Zembla*, the *Tartarian* Sea, beyond the Streights of *Voygats*, viz. *New Holland*, *Weſt-Frieſeland*, &c. Though moſt of thoſe Diſcoveries are contradicted by *Martiniere*, who made a Voyage into thoſe Parts in 1653, from *Copenhagen*, eſpecially as to the true Poſition of *Zembla*, its Coherency to the Continent, the Length of the Streights of *Voygats* (which they make ten, but he thirty five *Dutch* Leagues) and a Paſſage through it into the *Tartarian* Ocean.

I had the Curioſity to take a Proſpect of the City from the Steeple of the Church, which by Reaſon of the Unevenneſs of the Houſes, did not appear altogether ſo beautiful as thoſe of *Italy*, which are flat on the Top. Every Day, at Eleven a Clock in the Forenoon, there is very good Muſick at the Stadt-houſe, being the Gift of the Earl of *Leiceſter*. The Chimes, of which there is a Sett in moſt Steeples here, make alſo a very agreeable Harmony.

Among other Perſons of Note, I got into the Acquaintance of Dr. *Ruiſh*, who ſhew'd me many Curioſities in *Anatomy*; ſuch as the Skeletons of Children, and Fœtus's of all Ages, very neatly done; the Lymphatick Veſſels preſerved, with all the Valves; all the Veſſels of the Liver ſeparated from the fleſhy Part; many Muſcles diſſected, and whole Bodies kept entire, without the leaſt Signs of Corruption. Dr. *Swammerdam* ſhew'd me ſeveral of his Experiments, according to his Treatiſe *De Reſpiratione*, with a Collection of many Inſects. *Glauber*, the noted Chymiſt, gave me a Sight of his Laboratory. And *Blaſius*, famous for his Obſervations upon *Veſlingius*, gave me many Marks of his Civility.

It is to be obſerved, that the Jews live at *Amſterdam* in more Splendor than in any other Part of the World, being provided with magnificent Houſes, and a very fair Synagogue, and have among them Perſons of Learning, and endow'd with other good Qualifications; ſome of them having lived under the Notion of Chriſtians in other Places. There was one *Juda Leo*, who had a Model of the Temple of *Solomon*, the Fort of the Temple, the Tabernacle, and many other Curioſities of that Nature. I alſo ſaw the Ceremony of the Circumciſion of a *Jewiſh* Child; they thruſt a Probe betwixt the *Glans* and *Præputium*, and dilating it ſo, that both the inward and outward Skin be drawn forward, by a certain Inſtrument they hold the Skin cloſe to the Inſtrument; the remaining Skin being put back immediately, the Blood ſtopp'd, and the Plaiſter applied: All there preſent ſinging all the while, that the Cries of the Infant may be the leſs heard.

I paſs'd from *Amſterdam* to *Utrecht* in ſeven Hours, in one of their *Track Schuyts*, or large Boats, drawn by Horſes, through the artificial Channels which are made for this Purpoſe in moſt of the Provinces, as well of *Holland*, as of the *Low-Countries*.

4. *Utrecht*, (anciently *Antonina*, and afterwards *Ultrajectum)* the Capital City of the Province of the ſame Name, is very large, and handſomely built. It has been an Epiſcopal See for near theſe thouſand Years: Its firſt Biſhop was *Willebald*, an *Engliſhman*. It was made an Univerſity in 1636. The great Church has three Steeples one above the other, from whence I took a full View of the adjacent Country, which is very plain, and ſo populous, that there are no leſs than fifty one walled Towns, to any of which you may go in a Day's Journey thence. Here is alſo an *Engliſh* Church, in the Middle of which is a Pillar, the Foundation of which was laid upon Bulls Hides, in 1099, with the Picture of a Bull with this Inſcription:

Accipe Poſteritas quod per tua ſæcula narres,
Taurinis cutibus fundo ſolidata columna eſt.

The Library belonging to this Church has ſeveral old Manuſcripts, and among the reſt a Bible in ſix Volumes, painted and gilded after a very ancient Way. The two *German* Idols, beſtowed upon this Place by the Emperor *Henry* IV. are worth taking Notice of for their Antiquity's Sake: As alſo a Horn ſaid to be made of Ivory. I ſaw alſo three Sea-Unicorns Horns, (being an Animal in the Northern Sea) one of which being tipp'd with Silver, ſerved for a Drinking-Cup. They were about five Foot long; though the King of *Denmark* has two that were taken near *Nova Zembla*, that have ten Foot in Length: This King's Father had ſo many of them, that he beſtowed above one hundred of them for the making of a magnificent Throne. I myſelf have ſeen ſome fifteen Foot long, and a Walking Staff, a Sceptre, Scabbard for a Sword, and other Curioſities made of the Teeth of this Animal, but could never be convinced of its Effects againſt Poiſon, or any contagious Diſtemper, though I have given it frequently, and in very great Quantities.

Here I had alſo the Honour to ſee Dr. *Cyprianus ab Oeſterga*, Dr. *Regius Voetius*, the only Member left alive of the Synod of *Dort*; but unfortunately miſs'd the Sight of the famous *Anna Maria Skurman*, ſhe being gone into the Country, yet had the good Fortune to ſee her Picture, drawn by her own Hand, with this Inſcription:

> *Cernitis hic pictâ noſtros in Imagine vultus,*
> *Si negat ars formam gratia veſtra dabit.*

I travel'd from *Utrecht*, in two Hours, to *Friſwick*, and croſſing the River *Leck* to *Vianen*, where there is nothing remarkable beſides the Houſe and Gardens of Count *Brederode*, accounted the nobleſt Family in *Holland*, as that of *Waſſenger* is the moſt ancient, and that of *Egmont* the richeſt. A Mount belonging to this Garden, makes Part of the Rampart of the Place. The Statues of the Twelve *Cæſars*, of *Ariſtotle*, with ſome Pyramids, Partitions, and Paintings, are Ornaments ſuitable to a Traveller's Curioſity.

Hence I paſs'd by Boat through the Country of *Arkel*, and came the ſame Night to *Gorcum*, a City ſituate near the three Rivers, the *Ling*, the *Waal*, and the *Maeſe*: It has a pretty handſome Market-place, and a Church with a very high Steeple. The Fortifications are of Earth; and over the Water-Gate you ſee this Inſcription:

> *Civitas in quâ maximè Cives legibus parent, & in pace beata, & bello invicta.* 1642.

Which Inſcription ſeemed to have been fulfil'd in 1672, when the powerful Army of *Lewis* XIV. King of *France*, who conquered thirty Cities in one Campaign, did not extend their Conqueſts beyond this Place. From *Gorcum* I went to *Worcum*, on the other Side of the River, and ſo by the Caſtle of *Loveſtein*, famous for the Impriſonment of *Barnevelt*; which, ſince that Time, has given that Name to the whole Party, which is generally called in *Holland* the *Loveſtein* Faction.

5. Paſſing farther up the *Maeſe*, we came the next Day to *Hertogen Boſche*, having left *Preye* on the Left, and *Heuſden* on the Right Hand. This City, called by ſome *Sylva Ducis*, *Boiſleduc*, and *Bolduc*, is a well fortified City, ſituate upon the River *Diſa*, or *Deeſe*, which joins its Waters, two Leagues below this Place, with the *Maeſe*, being one of the chief Frontiers belonging to the United Provinces on that Side, and ſtrong both by Art and Nature. Its Avenues are only Cauſeways made through the Marſhes, with various Turnings, commanded by ſix ſmall Forts; beſides which, the Town is both commanded and defended by a Citadel, conſiſting of five regular Baſtions. The Market-place here is triangular. In the Cathedral (which is dedicated to St. *John*) are many of the Arms of the Knights of the Golden Fleece, and on the upper Stalls an Inſcription containing a ſhort Account of the firſt Inſtitution of this Order, by *Philip* ſirnamed the *Good*, Duke of *Burgundy*, *Lorrain*, and *Brabant*. It was made an Epiſcopal See in 1559, and taken by the *Dutch* from the *Spaniards* in 1628.

From hence we purſued our Journey through a plain and ſandy Country to *Breda*, a City ſituated upon the River *Merk*. It is very well fortified, with a large Ditch round the Counterſcarp, and a Ravelin betwixt each Baſtion, joined to the Rampart withinſide of the Ditch; beſides a good Number of Half-moons and Horn-works, and a Parapet ſtrengthened with a double Row of Elms. This Place belongs to the Prince of *Orange*. The *Spaniards* took it in the Beginning of the *Low Country* Wars; but the *Dutch* not long after ſurprized it, by putting eighty armed Men in a Boat covered with Turf, who thus entred the Caſtle.

It was taken by the *Spaniards* in 1625, and afterwards regained again by *Frederick Henry* Prince of *Orange*. It has a very fair Church, in which are many good Tombs; and among the reſt thoſe of *Englebert* Count of *Naſſaw*, with his Family; of the Heer *Van Horn*, and his three Wives; and of *Henry* Earl of *Naſſaw*, who being the Founder of the Caſtle of *Breda*, his Armour is ſupported by four Warriours upon their Knees: The Gardens, Gallery, Walks, and Dials belonging to this Caſtle, are worth a Traveller's Obſervation. From *Breda* we travel'd by Land to St. *Gertruydenberg*, the utmoſt Frontier Place of the *Dutch* on the North Side of *Brabant*. It is of no great Extent, but abounds in Fiſh, which are catch'd in a Kind of a Lake called the *Waart*, made ſo by the Falling into it of the *Maeſe*, and divers other Rivers. You ſee here a very fair Church, and the Ruins of a large Steeple. We paſs'd hence over a large Water, which had overflow'd the Country, and drown'd twenty-two Pariſhes, and, paſſing by the ancient Tower called *Murvey* Houſe, came to *Dort*, or *Dordracum*. This City, which is ſeated in the Waves of thoſe great Lakes made by the *Maeſe* and the *Wael*, is reckoned the chief Town of *South Holland*, as having the Privilege of the Mint, and the Staple for *Rheniſh* Wine and *Engliſh* Cloth; we have two Churches here, as the *French* have one. The great Church has a Steeple of 312 Steps high. I took a view of the Apartment where the Synod of *Dort* had been held in 1611; which was a very fair one, and had an extraordinary agreeable Proſpect into the Country. The large round bellied Veſſels, which ſtand betwixt this City and *Cologn*, intermixed with long *Liege* Boats, afford an odd Spectacle to Strangers.

6. I embarked in a Veſſel bound for the Iſle of *Walcheren*, and ſailing by moſt of the Iſlands of *Zealand*, and in Sight of the Towns of *Williamſtadt*, *Zirickzee*, *Tergoes*, &c. we came aſhore at *Ter-Vere*, where there is a convenient Harbour. It has a fair long Market-place. The *Scotch* have had a Factory here for above 200 Years; over-againſt it you ſee a Steeple, the poor Remainder of a noble Town, which has been ſwallow'd up by the Sea.

From hence to *Middleburg* the Way is paved with a Kind of ſmall hard Brick; the ſame being to be obſerved in many Places alſo in *Holland*. The City of *Middleburgh* is ſeated in the very Centre of the Iſle of *Walcheren*, being very well built, ſpacious and populous, the fourth Chamber or Port of the *Eaſt-India* Company; *Amſterdam* being in the firſt Rank, *Rotterdam* the ſecond, and *Fluſhing* the third. There is a broad Water within the Compaſs of the Town, from whence is cut a Channel which carries Veſſels to the Sea. It is very well fortified, and beautified with many fair Churches, and other publick and private Structures. The new Church is of an octagonal Figure, with a Cupolo; the Steeple of the old Church is famous for its Height, the Town-houſe conſiderable for its old Statues, and the Piazza of a circular Figure. The Country round it is cover'd with fruitful Gardens. The *Zealanders* are generally great Lovers of the Family of *Orange*. Hence I went to *Fluſhing*, a ſtrong Sea-port Town, ſtrengthen'd with Stone-Walls towards the Sea, and Mud-works to the Land-ſide. This being one of the firſt Places the *Dutch* took from the *Spaniards* in 1572, was, together with *Rammaken* and the *Bril*, made a Cautionary to Queen *Elizabeth*, 1585, and reſtored again to the United Provinces in 1616, by King *James* I. The Mouth of the Harbour is ſurrounded with Piles driven into the Ground, and theſe again are ſecured by Ruſhes, Flags and Reeds, ſtaked down, intermixed with Oſiers and Hurdles, to break the Force of the Water. The Stadt-Houſe is a noble Structure, ſtanding in the Market-place, and affords a fair Proſpect in Front, which is adorned with three Rows of Pillars, the one above the other; the lower Row being of the *Dorick*, the ſecond of the *Ionick*, and the Uppermoſt of the *Corinthian* Order, on the Top of which is a Gallery, from thence you may diſcover Ships at a great Diſtance at Sea. We ſaw here many Ships, and among them ſome Men of War of conſiderable Bigneſs. The Women in the Iſle of *Walcheren* are clad for the moſt Part in red Cloth, and wear Straw Hats. If a Man happen to die here, a great Bundle is laid at the Door, if a Child a little one, if a Male it is put on the right Side, if a Female on the left. When a Woman is delivered, they give Notice of what Sex the Child is of to all the Neighbourhood, by tying a Piece of Lawn to the Rapper of the Door, made up into the Shape of a Puppet, and repreſenting the Sex of the new born Child. I returned to *Middleburgh* by Land, where I embarked again, and paſſing down the River by the Fort *Rammaken*, entered the River *Schelde*, and ſailing up, paſſed the Fort *Frederick Henry*, and ſo to the Fort *Lillo*, where we were forced to ſtay till our Ship was ſearched. Juſt oppoſite to the laſt of theſe two Forts, on the other Side of the River, is the Fort called *Lifgens hoek*, and on the other Side another called *de la Croix*, the laſt belonging to the *Hollanders*; the *Spaniſh* Forts to defend this Frontier are, the *Philip*, the *Pearl*, and the *Mary*.

7. The River *Schelde*, mentioned by *Cæſar*, has its Riſe in the Country of *Vermandois*, and paſſing by *Cambray*, *Valenciennes*, *Tournay*, *Dornick*, *Oudenard*, *Ghent*, *Rupelmond* and *Antwerp*, divides itſelf afterwards into two Channels, whereof the Southern is call'd the *Hont (Dog)* the other taking its Courſe from *Bergen-op-Zoom*, falls into the Sea between the Iſles of *Zealand*. The next Day we continued our Voyage upon the *Schelde*, and arrived ſafely at *Antwerp*. This City is of a large Extent; its Walls very broad, with Rows of Trees upon them, faced with Brick and Free-Stones, after the modern Way, though the Baſtions are none of the largeſt, but the Ditch is very broad and deep. The Citadel is accounted one of the beſt Fortifications of five Baſtions, in thoſe Parts, very well lined with Brick and Stone, and commanding the City, the River and the adjacent Country. There is alſo another Fort near the *Schelde*. The Exchange of *Antwerp* is ſupported by thirty-ſix Pillars, each carved a different Way. It ſtands in the Middle of four Streets, which lead unto it. The *Meer*, the moſt remarkable Street of the City, has the Water running under it, and here the Coaches meet to take the *Tour-a-la-mode*; at one End of it you ſee a large Braſs Crucifix, placed upon a Pedeſtal of Marble. The *Jeſuits* Church exceeds for Magnificence any that ever I met with out of *Italy*. The Front is a noble Piece of Architecture, having the Statue of *Ignatius Loyola* on the Top. The Roof is for the moſt part painted by *Rubens* and *Van Dyke*; the Carving is moſt excellent, and the Flower Work done by *Segers* a *Jeſuit*. It has a very handſome Library, kept in four Chambers, the Founder of which was *Godfrid Houtappel*, whoſe Tomb is to be ſeen in a Chapel on the South-ſide of the Church. The *Carmelite* Church is famous for the large Statue of Silver of the Virgin *Mary*. The Church *of our bleſſed Lady* is the biggeſt, and the Steeple the nobleſt and one of the beſt built in the World, being 459 Feet high. This Church abounds alſo in many curious Pieces of Paintings, and among the reſt, there is one highly eſteemed, done by *Quintin*, who being at firſt a Smith, made that curious Iron Work of the Wall before the Weſt Door; but afterwards, to gain his Miſtreſs, turned Painter, and became famous in this Art. His Head, cut in Stone, is placed near the Church Door, with this Inſcription:

Connubialis amor de Mulcibre fecit Apellem.

I took alſo a View of the Abbey of St. *Michael*, ſeated upon the River *Schelde*; among other Rarities I ſaw here a Glaſs which repreſented the Pictures of our Saviour and the Virgin *Mary*, collected from the putting together of divers other Heads: One being repreſented from a certain Picture, which contained no leſs than thirteen Faces, and the other from one of twelve. That of the Virgin *Mary* had this Inſcription:

Diva nitet variis expreſſa Maria Figuris.

In this Abbey, which contains ſixty-three Monks, I ſaw alſo the Tomb of a Counteſs of *Brabant*, who was drowned, and her Statue. Near the Wharf-gate, you ſee the Church of St. *Walburgis*, an *Engliſh* Saint. The Town-houſe of *Antwerp* is a fine Structure, that belonged formerly to the Eaſtern Merchants, very magnificent and large, but run to Ruin; here were preſerved, ſeveral Sorts of Muſical-Inſtruments, not known now-a-days. The *Heſſen* Houſe has been none of the worſt in former Time. The Water which they make uſe of in Brewing, is conveyed hither from *Herental*, at leaſt thirty Miles, by Means of a Canal. This City produces alſo many great Collections of Pictures, and ſome of the beſt Miniature, done by *Gonſol*; of that Kind I ſaw one curious Piece, done by thirty-five ſeveral Maſters.

8. I went from *Antwerp* to *Bruſſels* by Water, changing Boat five Times, by Reaſon of the many Locks and Sluices, the Country about *Bruſſels* being 200 Foot higher than *Antwerp*. There is a Place called *Fontaine*, about five Miles from *Bruſſels*, where three Rivers croſs one another, and one of them is carried over a Bridge. The Market-place of *Bruſſels* is a long Square, having the Town-houſe at one End, and oppoſite to it the Royal Palace, near which the Counts of *Egmont* and *Horne* were beheaded. On the Top of the Town-houſe you ſee the Statue of St. *Michael*, the Patron of this City, in Braſs. In the Church of the *Carmelites*, the Altar is a very noble Piece, and near the Church ſtands a Statue of a Boy piſſing, which ſerves inſtead of a continual Conduit. We alſo took a View of the Armory, which was well furniſhed formerly, but has now only ſome few Remains, ſuch as the Armour of *Charles* V. of the Duke *d'Alva*, of the Cardinal *Infanta*, and ſome few others, and divers Bucklers curiouſly wrought; the Sword of *Charles* V. wherewith he uſed to make the Knights of the *Golden Fleece*; and ſome Banners taken at the Battle of *Pavia* from *Francis* I. Before the Court of the Palace ſtand five Braſs Statues, and on one of the Towers a Bird pierced with an Arrow, in Memory of the Shot which the *Infanta Iſabella* made. The Park has very pleaſant Walks, ſet with Trees, and intermingled with Grotto's, Fountains, and Water-works; one Piece comes near to *Fraſcati*, imitating the Sound of all muſical Inſtruments, by a Kind of perpetual Motion. But what is moſt ſurpriſing in this Park is, the Echo, which makes ten or twelve diſtinct Replies. The Church of St. *Gudula* claims the Preference for Bigneſs; and two Chapels here are worth the Travellers Obſervation; in one of which is preſented the Hoſt, which bled when ſtabbed by the *Jews*. The *Dominican* Church is famous for the Monuments of the Duke and Dutcheſs of *Cleve*, in *Corinthian* Braſs. The *Beguines*, or pious Maids, (a Kind of Nuns) of which there are near 800 at *Bruſſels*, have alſo a very fair Church, which is milk-white, and lately built. The *Engliſh* have alſo a Nunnery here. There were at that Time above 300 Houſes ſhut up, infected with the Plague, and marked with this Token,

†
IHS

Which made me haſten away; ſo that after I had dined at the Fiſh-Tavern, (noted for its Pictures) I returned to *Antwerp*, and travelling the 4th of *October*, through an open Country, I took up my Quarters at *Molin bruſle*, and entring the Country of *Liege* the 5th, arrived the 6th at *Maeſtricht*, a ſtrong City, ſituated upon the *Maes*, four Leagues below *Liege*. It is chiefly conſiderable for its Out-works, the Wall itſelf being old. To remedy the Inconveniency ariſing to the Town from an adjacent Hill on the S. E. Side, they have made an Horn-work within a Muſket-ſhot of it, and a high Baſtion anſwering to it, covers the Town. Under this Hill is one of the beſt Quarries of Stone in the World. On the other Side of the *Maes* is a Suburb called the *Wicke*, rather ſtronger then *Maeſtricht*, unto which it is joined by a Bridge of nine Arches. The Country on that Side is flat: The Houſes of *Maeſtricht* are none of the handſomeſt; yet the Town-houſe is a ſtately Structure, ſtanding in one of the Piazzas; in another Piazza ſtands the Great Church. This Town was taken by the *Spaniards* in 1632. *October* the 7th, I paſſed through *Gal'op*, and came the ſame Night to *Aken*, *Aix la Chapelle*, or *Aquiſgranum*, famous for its hot Baths. From hence I purſued my Journey to *Juliers*, but being late, we paſſed by it, leaving it to the Right. Not far from this City runs a ſhallow but ſwift River, called the *Roer*, at the Confluence of which with the *Maes* is *Roermonde*, the capital City of the *Spaniſh Gelderland*, ſeated upon a riſing Ground.

9. *Cologne*, *Collen*, or *Colonia Agrippina*, anciently the chief Seat of the *Ubii*, who firſt inhabited the Country of *Bergues*, were infeſted by the *Germans*, and, imploring the Protection of the *Romans*, were by them placed on the other Side of the *Rhine*, and ſettled in this Place by *Agrippa* Lord Lieutenant of *Gallia*, and was afterwards named *Colonia Agrippina*, in Honour of *Agrippina* Daughter of *Germanicus*, and Wife of *Claudius*, whoſe Birth-place it was. It may for Extent vie with any City of *Germany*, and is fortified to the Land-ſide with two high Walls and two deep Trenches, and beautified with ſeveral Rows of pleaſant Trees, and ſecured on the Side of the *Rhine* by a Wall of Stone; but its greateſt Strength conſiſts in ſome Outworks, Half-moons and Ravelins. The chief Streets are broad, and paved with broad Stones. *Maternus*, who was preſent at the Council of *Arles*, was their Biſhop at leaſt 1350 Years ſince. Great Part of the Town is taken up with Churches and Monaſteries, many of them very well endowed, there being to moſt of the Houſes of the Canons and Prebends, large Gardens and Vineyards. The Church of St. *Kunibald* lies on the North Side of the Town; but the Convent of the *Dominicans* is a very fair modern Structure. The *Jeſuits* Church is full of rich Ornaments; and that dedicated to St. *Gereon* (who was martyred thereabouts in the Time of *Maximianus*) contains above 1000 Saints Heads. In the Church of St. *Urſula* you ſee her Tomb, and thoſe of 11,000 Virgins ſlain by the *Huns*. The Tomb of *Urſula* has this Inſcription:

Sepulchrum Sanctæ Urſulæ indicio Columbæ detectum.

Upon many of thoſe Tombs were old Croſſes and Lamps. The Church is alſo full of the Bones and Heads of Martyrs. The Cathedral of St. *Peter* is a large Structure, but remains unfiniſhed. Within the Body of the Church are four Rows of Pillars, and the Choir is very handſomely built; behind it are ſuppoſed to be the Tombs of the three Wiſe Men of the Eaſt, or the Kings of *Arabia*, commonly called the three Kings of *Cologn*; *Milchior*, who, as they ſay, offered Gold, *Gaſpar* Frankincenſe, and *Balthaſar* Myrrhe. They relate, that their Bodies were firſt tranſlated to *Conſtantinople* by *Helena*, the Mother of *Conſtantine* the *Great*; from thence to *Milan* by *Eaſtorſius* their Biſhop, whence they were removed above 500 Years ago, *viz.* 1164. to *Cologn*, by *Rainold* Biſhop of this Dioceſe. All the Canons of this Church muſt be Noblemen. Upon one of the Ruins in the Street, you ſee a Tomb made of one Stone, of which Kind many more are to be met with in other Places of this City. Of theſe I ſaw a great Number at *Arles* in *Provence*. The Town-houſe is an elegant Structure; on the Front of which is a Man in *Baſſo relievo*, engaged with a Lion, who, as they relate, was a Burger-maſter of that City, that having exaſperated the Clergy againſt him, upon ſome Difference, they ſent in a Lion upon him, whom he ſlew upon the Spot. The Elector of *Cologn*, who is alſo their Archbiſhop, has two Palaces here; but by Agreement is not to ſtay above three Days at a Time. It is a free Imperial City, notwithſtanding which it does Homage to the Elector.

The Inhabitants are generally *Roman Catholicks*, and the City, by Reaſon of the vaſt Number of Convents, Churches, and Reliques, is ſtiled the *Rome* of *Germany*. However, the *Lutherans* have a Church within the Precinct of the Walls, and the *Calviniſts* another at *Mulheim*, about two Miles below it, on the other Side of the *Rhine*. Juſt oppoſite to *Cologn* is the Village of the *Dutz*, inhabited chiefly by *Jews*. They ſpeak but a Kind of odd *High-Dutch*; but to recompence this, the *Latin* and *French* are much in Uſe here. It was made an Univerſity in 1388, and has four very good Hoſpitals, two for young and old Perſons that are infirm, and two for the Sick. After we left *Cologne*, we were drawn up the *Rhine* by Horſes, and lodged the ſame Night at a ſmall Village, near which *Julius Cæſar* made his Bridge over the *Rhine*.

10. We came the next Day to *Bonne*, the ordinary Reſidence of the Elector of *Cologne*. It was formerly called *Caſtra Bonnenſia*, as being the Station of the ſixth Legion in Winter, in the Time of *Tacitus*. The Archbiſhop's Palace is a noble Edifice, ſtretching a good Way into the *Rhine*. We took our Quarters this Night at the Foot of one of the ſeven Hills near the *Rhine*, moſt of which have old ruined Caſtles upon them. On the 15th we paſſed by a very pleaſant Iſland, with a Convent in it; we ſaw alſo the Convent at *Remagen*, built upon a Rock, and fortified with round Towers, and came the 16th in the Morning to *Andernach* or *Antenacum*, one of the *Roman* Fortreſſes upon the *Rhine*. Some affirm, that this was the Birth place of *Caligula*, and that *Valentinian* was buried near it. There are divers Mineral Springs hereabouts. The City is only fortified with an old Wall. The Water-paſſage being grown tedious, we hired a Coach to *Coblentz*, and paſſing through a very agreeable Country, planted with Walnut Trees, and in Sight of two of the Elector of *Treves*'s Country Houſes, we croſſed the River *Moſelle*, over a very fine Bridge ſuſtained by thirteen Arches, built in 1344, by Archbiſhop *Baldwin*. We went immediately to the Convent of the *Dominicans*, very agreeably ſeated on the Banks of the *Rhine*; the Prior of which being in our Company, he would needs keep us with him all Night, and entertained us with an handſome Supper, and excellent *Moſelle* Wine. *Coblentz* or *Confluentia*, is ſo called, from its Situation at the Confluence of the *Rhine* and *Moſelle*, which make two Sides of it, the Third being a noble Fortification, after the modern Way, from one River to the other, which makes it of a triangular Figure. It has an old Wall within the Works, and is under the Juriſdiction of the Elector and Archbiſhop of *Treves*, as is likewiſe the Caſtle of *Hermanſtein*, (*Hermans ſterna*) by ſome called *Ehrenbreitſtein*, built juſt over againſt it on the other Side of the *Rhine*, being joined to *Coblentz* by a long Bridge. At the Foot of a Rock juſt underneath this Caſtle, you ſee a very noble Palace belonging to the Elector, having two very large Wings, and a Fort with five Pavilions, facing the *Rhine*. Not far from *Coblentz*, the *Carthuſians* have a Convent pleaſantly ſeated upon a Hill.

October the 17th, we continued our Voyage upon the *Rhine* to *Boppart*, a walled Town upon the Weſtern Bank, an ancient Fortreſs of the *Romans*, known by the Name of *Bodobriga*.

The 18th, we dined at St. *Goar*, a Place upon the River, under the Juriſdiction of the *Lantgrave* of *Heſſe*, who has a Caſtle here. On the Outſide of the Wall of the Town is faſtned a Collar of Braſs, given, as they ſay, by *Charles* V. It is the Cuſtom, that ſuch Strangers as come aſhore here, muſt put their Knees into this Collar, when they are aſked, *Whether they will be ſprinkled*

ſprinkled with Water, or Beer, or Wine? If they are for the Wine, they muſt give an Entertainment of Wine to the Company. The Queen of *Sweden* paſſing by that Way not many Years before, had preſented them with a great Silver Cup, which they commonly drink out of. The 19th, We purſued our Voyage to *Baccharach*, famous for its excellent Wines; under the Elector *Palatine*. Hence we paſs'd by a very old Caſtle, ſituate upon a Rock in the Middle of the *Rhine*, called *Pfalts*, becauſe hither formerly the Princeſſes *Palatines* were ſent to be brought to Bed. The next Day we paſſed along with a rapid Stream, which is very dangerous by Reaſon of the many Rocks that lie under Water; and a little above it we had a full Sight of a round Tower, on a Rock in the *Rhine*, commonly call'd *Mouſe-Tower*, built by *Hatto*, Archbiſhop of *Mentz*, who having at a Time of general Scarcity, invited a great Number of Poor to preſent them with Corn, inſtead of relieving, ſet Fire to the Barn in which they were encloſed, and whilſt they made lamentable Cries, he ſaid, *Hear how the Mice ſcream.* Soon after, being perſecuted with Rats and Mice to that Degree, that he was not able to abide in his Palace, he built this round Tower in the *Rhine*, but being alſo proſecuted thither by the Mice, he miſerably ended his Days. Not far above it, upon the Weſtern Bank, you ſee the Town of *Bing* or *Bingium*, an ancient *Roman* Fortreſs upon the *Rhine*, at the Conflux of that River and the *Navus* or *Naw*, over the laſt of which is a very fine Stone Bridge. It belongs to the Elector of *Mayence.* From *Bing* we ſet forward for *Mayence*, and in our Way at *Rudeſheim* in the *Rhine* (ſo famous for the Excellency of the Wine) we were ſhew'd a Boy, whoſe Hair was as woolly as any of the *African* Moors, but of a whitiſh Colour; I took ſome of the Hair along with me.

Mentz, or *Mayence*; *Moguntia*, by the *Latins*, is ſituated juſt below the Confluence of the two Rivers, the *Main* and *Rhine*, over againſt it; extending in Length towards the River, abounding with Monaſteries, Churches, and publick Buildings; but the Streets are narrow, and the private Houſes built after an antick Faſhion; the Country round it is extremely fertile. *Mayence* claims the Invention of Printing, but may rather be ſaid to have brought it to Perfection. It is famous for the Defeat of the *Roman* Legions, under *Varus*, by the *Germans*, which happened near it; and *Guſtavus Adolphus*, the victorious King of *Sweden*, made his publick Entry here, 1631. in great Magnificence, and laid two Bridges, one over the *Main*, the other over the *Rhine*, the firſt of which is taken away ſince, but the other remains in the ſame Station. The Elector of *Mayence* is the firſt in Rank of the *Electoral College*, and has his Place at the Emperor's right Hand in all publick Aſſemblies. But his Territories are not ſuitable to his Dignity, being far leſs than thoſe of *Cologne* and *Treves*; beſides that, they lie ſcattering in the *Palatinate* and *Franconia.* However his ſeizing the City of *Erfurdt* has been no ſmall Addition to his Power; where he has built a Citadel on St. *Peter's-Hill*, which ſerves for an Inlet into *Thuringia.*

11. From *Mayence* we continued our Voyage up the *Maine* to *Franckfort*, an Imperial City, call'd *Trajectum ad Mœnum*, becauſe the *Franks* uſed to paſs and repaſs here, whilſt they made War upon the *Gauls*, and to diſtinguiſh it from *Franckfort* upon the *Oder*, an Univerſity belonging to the Elector of *Brandenburgh*. The City is very large, divided in two by the River, the leſſer of which is called *Saxon-Houſe*, joined to the other by a fair Stone-Bridge, ſupported by twelve or thirteen Arches. The Advantage of the River *Main*, which paſſes by *Bamberg*, *Schweinfurt*, *Wurtzburg*, and other Places, and is join'd by the River *Tauber*, and others of leſs Note, together with its running into the *Rhine*, renders this City very commodious for Trade, as may be ſeen at the Time of the two great Marts kept there every Year, in *March* and *September*, when there is an incredible Concourſe of People of all Nations, who buy and ſell their Commodities, but eſpecially Horſes and Books, though at other Times the Bookſellers have little Buſineſs here.

In *Saxon-houſe* is a Palace belonging to the Knights of the *Teutonick Order*, which is a Sanctuary for Debtors and Criminals, for fourteen Days. Abundance of *Jews* live in, and frequent this Place; they are diſtinguiſh'd from the Chriſtians by their Habits, which is a Ruff for the old Ones, a Bonnet for the younger Sort, and a peculiar Head-dreſs for their Women. We continued our Journey from *Franckfort* through the *Bergſtraet*, and paſſing by *Darmſtadt*, travelled through a very fruitful Country, full of Wall-nut Trees, Vines, Corn, and Tobacco in ſome Places. Coming to *Heidelberg*, we paſs'd the River *Neccar* or *Necarus*, riſing in the *Sylva Martiana* or *Black Foreſt*, and continuing its Current through the Duke of *Wittenberg*'s Dominions, joins its Waters with the *Rhine* at *Manheim.* It paſſes by *Sultz*, *Tubingen*, *Stutgard*, *Hailbrun*, *Heidelberg*, and divers other noble and famous Cities.

12. As for the City of *Heidelberg*, its Situation is betwixt a River and a Ridge of Hills, extending from Eaſt to Weſt, which makes it unfit for a regular Fortification. It was made an Univerſity, in 1346: It was taken by the *Spaniards* in 1620. when the famous Library that was preſerved there in the Great Church, was carried to *Rome*, and added to the *Vatican* Library, where I ſaw it in 1664 on one Side of the Gallery, oppoſite to that of the Duke of *Urbin*'s. This Church, as well as that of St. *Peter*, contains many beautiful Monuments of the *Palatine* Family and other Perſons of Note. The *French* have a Church here as well as the *Lutherans*, the laſt of which is call'd the *Church of Providence*, and the Elector, though a *Calviniſt*, laid the firſt Stone of it: The Electoral Family are now Papiſts.

The Town-houſe is remarkable for its Clock, which has ſeveral Motions, and repreſents ſeveral Figures of Men, fighting of a Cock, &c. when it ſtrikes. The Elector's Stables are near the River-ſide, but one half of them has been ruined in the laſt *German* Wars, as well as the Statues that were on the Outſide of the Caſtle, which being upon an Eminency has among other Things a very large Tower, formerly call'd *Trutzkayſar* or *Defiance to the Emperor*, the Name of which is ſince changed into that of the *Star-fort.* Near it is a beautiful Garden, adorn'd with Grotto's, Caves and Water-works. But the moſt remarkable of all are the Cellars, repleniſhed with Veſſels of Wine, of a more than ordinary Size, among which, that commonly call'd the *Tun of Heidelberg* ſurpaſſes the reſt, built in 1664, containing near 200 Tuns; inſtead of Hoops it is made with large Knee Timber, like the Ribs of a Ship, well carved and painted, and ſupported by Pedeſtals likewiſe carved. On one Side is a Stair-caſe, forty three Steps high, leading up into the Gallery, which is on the Top of this great Veſſel.

There is a ſolitary Place not above a Mile from *Heidelberg*, where you ſee three very fine Springs come forth out of the Mountain, and after they have fill'd five Ponds, and paſſed through three Caſcades or Falls, carry ſo ſtrong a Stream through the adjacent Plains, that they turn four Mills within a ſmall Diſtance one of another. It is call'd the *Wolfs Fountain*, from a certain Princeſs, who, as they ſay, was torn to Pieces near this Place by a Wolf. At *Heidelberg* I was viſited by two *Engliſhmen*, Mr. *Villers* and *Timothy Middleton.* Theſe belong'd to a certain Monaſtery called *Lebenſfeldt*, poſſeſſed formerly by the *Jeſuits*, but beſtow'd ſince upon the *Engliſh*, who, to the Number of about an hundred, leaving their Native Country, in 1661, ſettled themſelves with their Families in this Convent, a few Miles from *Heidelberg*. They call'd themſelves *Chriſtian Jews*, maintain'd a Community of many Things, did not cut nor ſhave their Beards, and obſerved many other Ceremonies enjoin'd in the Old Teſtament. Their Head was then one Mr. *Poole* of *Norwich.*

Whilſt I was at *Heidelberg*, I took a Turn to *Spires*, and afterwards to *Manheim.* The firſt (ſuppoſed to be *Urbs Nemetum* of the Ancients) is ſituate in a Plain near the Weſtern Banks of the *Rhine*. The *Swedes*, in the laſt *German* Wars, demoliſh'd it. The Epiſcopal See is under the Juriſdiction of the Archbiſhop of *Mayence*; it is well built, and has ſeveral good Churches. In the Cathedral, which is beautified with four large Towers, the *Roman Catholicks*, *Lutherans* and *Calviniſts* preach in their Turns at different Hours. It is very populous from the vaſt Concourſe of People which attend their Law-Suits here. The Imperial Chamber, which was by *Maximilian* eſtabliſh'd at *Worms*, has been ſince remov'd to *Spires*, in which not only private Cauſes, but alſo the Differences betwixt the Princes of the Empire, are determined without Appeal. *Manheim* lies at the Conflux of the *Rhine* and *Neccar*, which, from a Village, is in a few Years encreaſed to a Town, with large fair Streets, walled about and defended by a very ſtrong Caſtle or Fortreſs. I ſaw the Model of a Palace the Elector is building, and in that Part which is already built, are many good Pictures, and among the reſt, a Landſkip, with the Hiſtory of the *Swiſs* Confederacy.

13. In our Way from *Heidelberg* towards *Nurenberg*, we travel'd along the *Neccar* in rocky Ways to *Moſpach*; the ſecond to *Poxberg*, where we ſaw nothing but an old Caſtle; and the ſame Day came to *Merkenthal*, or *Mergentheim*, the Reſidence of the Grand Maſters of the *Teutonick* Order. It is a very well built Town, with a handſome Piazza, which has a Fountain in the Centre, and a Statue of one of the Grand Maſters of this Order, with a long *Corridore* from the Palace. This Order took its Riſe under the Emperor *Frederick* I. who, in his Expedition againſt the Holy Land, being accompanied by many Gentlemen of *Germany*, in Emulation of the Knights Templars, entred into an Order, which being approved by Pope *Celeſtine* III. they waged afterwards War againſt the Pagans inhabiting *Pruſſia* and *Livonia*, and ſubdued them; of which they remain'd Maſters, till they were at firſt diſpoſſeſs'd of theſe Countries by the *Poles*, and afterwards by the *Swedes*; ſo that there is nothing remaining now of this Order, but a few Commanderies in *Germany*. They wear a plain black Croſs on a white Mantle; and the Dignity of Grand Maſter (who takes Place of all the Biſhops) is generally beſtow'd upon one of the firſt Rank among the Princes of *Germany*.

As we paſs'd by *Lauterbach*, we ſaw a Church, a very noble Structure, on the Top of a high Hill, where the Pilgrims perform their Devotions in great Numbers. The next Place we came to was *Rotenberg*, an Imperial City, ſituate near the Head Spring of the River *Tauber*; which, after it has paſs'd by *Rotiengen* and *Landen*, falls into the *Main* near *Wertheim*. We lodg'd that Night at *Burgperner*, paſſing the next Day by *Schantzbach*, came before Night to *Nurenberg*. This City may very well claim the Prerogative of being the faireſt in *Germany*; moſt of the Houſes being built of Free-ſtone, very high, and many of them painted on the Outſide, and adorned with gilded Balls on the Top; they are generally ſix or ſeven Stories; and though the City is at a good Diſtance from any navigable River, and ſituated in a barren Country; yet is it very populous, the Induſtry of the Inhabitants being ſuch, as to be accounted the beſt Artificers in *Germany*, in Steel, Braſs, Ivory, and Wood, which creates a vaſt Trade here, and retains it.

The three chief Churches are, the *Hoſpital Church* lately built; that of St. *Lawrence*, which is famous for its Bigneſs, with two Steeples in the Front; and that of St. *Sebald*, which excels the reſt. Here you ſee a wooden Crucifix ſo carved, as to be valued at an exceſſive Rate: Without the Church is another of black Wood. In ſhort, as the *Lutheran* Religion is exerciſed here in its full Pomp, ſo this ſtately Church, and eſpecially the Pulpit, which is excellently carved and gilt, may challenge one of the firſt Places among thoſe of that Religion. Every Morning Half an Hour is ſpent in this Church in reading certain Paſſages out of the Scripture by the Prieſt, before he preaches to the People. The Senate Houſe is worth the Notice of any Traveller; the Hall is very ſpacious, and the Chambers lofty, and adorn'd with many good Pictures, the Floor being pav'd with Stones gilt, and intermix'd with ſeveral Colours. In one of theſe Chambers you ſee the Picture of moſt of the Great Perſons of *Germany*, that were entertained in the Halls; another of the Three Brothers of *Saxony*; an Elephant painted to the Life; a Piece of St. *John*, another of St. *Mark*, and two more of St. *Peter* and St. *Paul*, both done by *Albert Durer*; but that of *Adam* and *Eve*, by the ſame Hand, exceeds all the reſt, with this Inſcription:

Albertus Durer Alman faciebat poſt Virginis partum, 1507.

There is alſo another very rare Piece, of St. *Luke* drawing the Picture of our Saviour, and the Virgin *Mary*. As you enter the Shambles, you ſee a large Ox carved in Wood, and painted over, with this Inſcription:

Omnia habent ortus ſuaque incrementa, ſed ecce
Quem cernis, nunquam Bos fuit hic, Vitulus.

The Caſtle of *Nurenberg* is ſeated upon a Hill. The Emperor's Picture, his Chapel, a very fine Well, and other Pictures of the Electors, are very remarkable. They ſhew'd us alſo the Armour of *Hebbele van Gailleingen*, a famous Sorcerer in thoſe Parts, and the Print of his Horſe's Feet in the Wall of the Caſtle; from whence, as they tell you, he leaped with his Horſe over the Town Ditch. They were then buſy in making a new Fountain; I muſt confeſs, that the Braſs Statues intended for it, were excellent Pieces: The Sea Horſes were of a very large Size, and the Sea-Nymphs exceeded the ordinary Stature of Women: The Statue of *Neptune*, deſign'd to be ſet on the Top, was above ten Foot high.

The ſmall River *Pegnitz* paſſes through the City, near which are ſeveral Stone Bridges; below it joins with the River *Rednitz*, that unites its Waters with the *Maine* at *Bamberg*, which laſt falls afterwards into the *Rhine*. The River *Rednitz* has its Riſe at *Weiſſenburg*, at no great Diſtance from the River *Altmul*, which falls into the *Danube* not far from *Ratiſbon*. This Conveniency induced *Charles the Great* to endeavour a Communication between the *Rhine* and the *Danube*; but after he had advanced about two *German* Leagues in this Work, his warlike Employments, and ſome other Difficulties, made him give over his Deſign.

14. Not above four Leagues from *Nurenberg* is *Altorff*, a Town under their Juriſdiction, with an Univerſity erected in 1623. They have here a very handſome Phyſick Garden, containing above 2000 Plants. The Anatomy School is not very large, yet has ſeveral Skeletons, of a Hart, of a Horſe, of a Man, and of a Bear, bigger than a Horſe; beſides ſome very ancient Pictures, as that of *Moſes*, and of a *Ninevite*. Dr. *Wagenſeyl* (whoſe Brother travell'd with me from *Heidelberg*) Profeſſor of the Civil Law and Hiſtory, ſhew'd me alſo a good Collection of his own, of Rarities and Coins, which he had gather'd in his Travels through *Europe*. In the Univerſity Library I ſaw a fair *Hortus Eyſtetenſis*, and *Youngerman*'s Collection of Plants, by his own Hands.

Leaving *Nurenberg*, we paſſed through *Newmark* in the *Upper Palatinate*, belonging to the Elector of *Bavaria*; and the next Day by the Way of *Heinaw*, ſubject to the Duke of *Newburg*, to *Ratiſbon*, anciently called *Auguſta Tiberii*, and *Colonia Quartanorum*, from the Fourth *Italick* Legion, which had their Quarters aſſigned them here, as being the chief Place belonging to the *Romans* on thoſe Frontiers. Some are of Opinion, that *Tiberius* ſettled a Colony here in the Year of our Saviour's Paſſion; but it owes its chief Increaſe to the Emperor *Arnulphus*. Near it the River *Regen* falls into the *Danube*, whence the *Germans* give it the name of *Regenſburg*. It has a Bridge of Wood below the Town, and another of Stone, the faireſt that is to be ſeen upon the *Danube*, being ſupported by fifteen Arches. It is an Imperial City, and tolerably well fortified, and has many ſtately Buildings, both private and publick. The Cathedral of St. *Peter* is a very fair Edifice, on the

South-ſide of which you ſee the Picture of St. *Peter* in a Boat, and on the oppoſite Side the Apoſtle's firſt Miſſion. In the Piazza ſtands a ſmall but very neat Church; the Convent of St. *Paul*, another of St. *Emerammus*, Biſhop of *Ratiſbon*, and a celebrated Saint in thoſe Parts: *Albertus Magnus*, who was alſo Biſhop of *Ratiſbon*, has made no ſmall Addition to its Fame. But the chief Glory of this Place is the Diet, or General Aſſembly of the States of the Empire, which is call'd together here. Upon this Occaſion the Vice Marſhal is obliged to take Care that Lodgings are provided for the Perſons that are to appear there; that Proviſions may be brought thither in Plenty, and ſold at a ſet Rate; that the Place of the Aſſembly be adorned ſuitable to ſo great an Occaſion, and the publick Safety be not violated.

In this Place I entred that famous River the *Danube*, which beginning to be navigable in *Suabia*, paſſes by *Donawert*, *Newburg*, and *Ingolſtadt*; it is increaſed by the River *Licus*, or *Leck*; by which the Commodities of the famous City of *Augſburg* are tranſported into it, From *Regenſburg* we paſs'd the firſt Day to *Thonawſtein*, *(Danube-ſtone)* where is a Caſtle ſeated upon a high Rock, and thence to *Pfeter*, famous among the Ancients, by the Name of *Vetera Caſtra*, now an inconſiderable Place. The Boats made Uſe of upon the *Danube* are generally flat bottom'd, and broad at the Head and Stern; there is an Apartment for Paſſengers in the Middle, and they have very large Rudders, the better to command the Boats where the Current is ſwift. The next Day we paſſed by *Straubingen*, a wall'd Town belonging to the Elector of *Bavaria*; and the ſame Afternoon by *Swartz*, where we ſaw a Church upon a Hill, much frequented by Pilgrims; we lodg'd that Night at *Deckendorff*, near which the River *Iſer*, or *Iſara*, after having paſſed by *Landſhut*, *Friſing*, and *Munchen*, (the ordinary Reſidence of the Elector of *Bavaria)* falls into the *Danube*.

Thurſday, being *November* the 15th, we paſs'd by *Wilſhoven* to *Paſſaw*, *Paſſovio*, or *Boiodurum*, a handſome City in the lower *Bavaria*, formerly known by the Name of *Caſtra Batava* among the *Romans*, who had ſettled a Colony there. It is compoſed of three Towns, *viz.* *Illſtadt*, *Paſſaw*, and *Inſtadt*, and ſeated at the Meeting of the three Rivers, the *Inne*, the *Danube*, and the *Iltz*. It has ſeveral very fair Churches, amongſt which that of St. *Stephen* exceeds the reſt. The Biſhop's Reſidence is a Caſtle built upon a Hill; his Revenues are very conſiderable, Part of which ariſe from the great Lead-Mine at *Bleyberg* in *Carinthia*. It was, not many Years ago, almoſt laid in Aſhes, by an accidental Fire, and as moſt of the Streets have been rebuilt ſince after the *Italian* Manner, ſo this City may now juſtly claim to be inſerted in the Number of the ten conſiderable Cities upon the *Danube*, viz. *Ulm*, *Engolſtadt*, *Ratiſbon*, *Paſſaw*, *Lintz*, *Vienna*, *Preſburg*, *Strigonium*, *Buda*, and *Belgrade*; the eight laſt of which I had the Opportunity to ſee, before the End of my Journey.

Juſt by a Wall, oppoſite to the Great Church at *Paſſaw*, ſtands a very large Head cut in Stone, the Mouth being two Spans wide, and the reſt proportionable. In the River *Iltz*, which comes from the North, they find Abundance of Pearls: And the noble River *Inne* coming from the South, and paſſing by *Inſprung*, is augmented by the River *Saltz*, (upon which ſtands the City of *Saltzburg)* diſcharges itſelf with great Force into the *Danube*, being the largeſt Stream that hitherto had joined that River. The River *Inne* riſes among the *Alps* in *Tyrol*. The 16th we arrived at *Lintz*, the Capital of the *Lower Auſtria*, not ſo conſiderable for its Bigneſs as Neatneſs, the whole Town being built of a white Free-ſtone, and the Market-place very ſpacious and handſome. The Caſtle lies upon a Hill, and is fortified after the modern Way. It has a Bridge alſo over the *Danube*. When *Solyman the Magnificent* beſieged *Vienna*, this was the Rendezvous of the Imperial Army. It was beſieged by 40,000 Peaſants in *Ferdinand* II's Time; but relieved by *Pappenheim*. Somewhat below *Lintz*, the River *Draun*, which riſes out of the *Gemunder Sea* (or *Lacus Felicis)* joins its Current with the *Danube*.

The 17th, we paſs'd by *Embs*, or *Aniſia*, ſituated upon the River *Aniſius* or *Onaſus*, which riſing near the Frontiers of *Saltzburg*, and being augmented by the River *Saltza*, upon which ſtands *Maria Cell*, noted for Pilgrimages, divides the *Higher* and *Lower Auſtria*, and then falls into the *Danube*. Hereabouts ſtood the ancient *Lauriacum*, a *Roman* Garriſon, where a great many *Roman* Coins and Antiquities are found. On the North Side of the *Danube* we ſaw a Seat of the Earl of *Leichtenſteyn*, near the Village of *Greim*. Not far below this Village are two dangerous Paſſages in the *Danube*, called the *Strudel* and the *Wurbel*; the firſt is a Place where the River being forced among the Rocks, ſome under, ſome above Water, the Waves are broken, and render the Current rapid and troubleſome, requiring a great deal of Skill to paſs through the Ledges of the Rocks, eſpecially when it is low Water; the ſecond is a Kind of Whirlpoole, where the Current being forcibly repelled by a great Rock, turns round with much Violence. Hard by, on the Top of a craggy Rock, you ſee a large Croſs, and at the Foot a Chapel dedicated to St. *Nicholas*, who being look'd upon as Patron and Protector of ſuch as have paſs'd ſafely this Way, a Boat comes thence to receive ſuch Preſents as the Paſſengers are willing to give. We took up our Lodgings this Night at *Ips*, on the South-ſide of the *Danube*; oppoſite to which is *Beſenbeug* or *Uſtium Ptolomæi*. Two *German* Leagues below *Ips* lies *Pechlarn*, believed by ſome to be the old *Arlape*, where the River *Erlaph* falls into the *Danube*. A Mile and a half lower you ſee *Melcke*, formerly the Reſidence of the Marqueſſes of *Auſtria*, which was thence removed, firſt to *Leopold*, and afterwards to *Vienna*. The City is built along the South-ſide of the River; the Monaſtery of the *Benedictines* is ſeated upon a high Hill; has very great Endowments, and many Monuments of great Perſonages, and among the reſt the Tomb of St. *Colman*. We dined at *Steyn*, where is a ſtately Bridge over the *Danube*. Near to this lies *Crembs*, a walled Town, and on the oppoſite Side *Mautern*; not far from whence is the rich Monaſtery called *Ketwein*. A little beyond it the River *Traiſn*, or *Tragiſama*, comes from the South. Afterward we paſs'd by the famous Town of St. *Poll*; and taking up our Quarters that Night at St. *Eldorff*, went the next Day by *Thul*, *Stockerau*, and *Cloiſter Neuburg*, ſafely to *Vienna*.

15. *Vienna*, called *Wien* by the *Germans*, and *Beach* by the *Turks*, is the capital City of all *Auſtria*, ſituate in 43° 20′, differing not much from the Latitude of *Paris*, the Seat of the Archdukes of *Auſtria* and the *German* Emperors. According to ancient Geographers this City belonged to the *Upper Pannonia*; the Limits of *Pannonia* extending as far as *Kalemberg*, or *Mons Cetius*, about ſix Miles to the Weſtward of *Vienna*; beyond which all that lies more Weſtward, betwixt that Mountain and the River *Inne* or *Oenus*, which falls into the *Danube* at *Paſſaw*, was anciently called *Noricum*

Several of the *Roman* Emperors, and eſpecially *Marcus Antoninus Philoſophus*, have made themſelves famous by their great Actions againſt the *Marcomanni* and *Quadi*; the laſt of which, after he had routed theſe Nations, fell ſick at *Carnuntum* or *Petronel*, and died at *Vindobona* now *Vienna*, ſituate upon the South Shore of the *Danube*; which is the Reaſon, that at ſeveral Times, but eſpecially in 1662, many *Roman* Antiquities have been found hereabouts; the laſt was a Kind of Coffin containing hard Earth and Bones, with a ſmall Gold Coin, a Glaſs Urn in a Braſs Caſe, an Iron Knife like thoſe uſed anciently in Sacrifices; a little Roll of pure Gold, cloſed with a Golden Cover at both Ends, with an Inſcription, which, according to *Lambecius*'s Opinion, was in old *Pannonian Characters*. Not far from the Monument itſelf, which was under the Foundation of a Wall near the old Palace, they found a Head in Braſs, a *Patera*, Lamps, Lachrymatories, and other Veſſels of the ſame Metal, and a Copper Coin of *Antoninus Caracalla*.

This City is not ſeated upon the Channel of the *Danube*, but only upon a Branch thereof, of which there are ſeveral that make divers ſmall Iſlands. The River *Wien* (which has imparted its Name to the Place) paſſes by the Eaſt-part of the City, and below it falls into the

Danube: Its Floods often do conſiderable Miſchief to the City, though at other Times it is ſo ſhallow and narrow, that one may ſtep over it: It divides Part of the Suburbs from the Body of the City, the former are very ſpacious and full of fine Houſes, Gardens, Walks, and other Conveniencies. The Body of the City is well fortified, being ſeparated from the Suburbs by a fair *Eſplanade*, deſcending in an open Ground for 300 Paces. Its Fortifications are after the modern Way, compos'd of ten Baſtions to the Land-ſide, and a very deep Ditch, which though it be kept continually dry, for Fear the Water ſhould ſpoil the Cellars, which are very deep here, yet they can let the *Danube* into it at Pleaſure. It has two Baſtions toward the Water, on the North-ſide of the Town. The Baſtions are very large, the whole Fortification of a great Breadth, well faced with Brick, and edged with Free Stone. Beſides which, it has an old inward Wall, built with the Ranſom of our King *Richard* I. who was detain'd Priſoner there, in his Return from the *Holy War*.

The whole Circumference, Suburbs and all, takes up a great Tract of Ground; but the Fortifications of the City don't exceed three *Engliſh* Miles, but is exceeding populous, nothing being more delightful than to ſee *Turks*, *Tartars*, *Greeks*, *Tranſilvanians*, *Sclavonians*, *Hungarians*, *Croatians*, *Spaniards*, *Italians*, *French*, *Germans*, *Polanders*, all in their own Country Habits. It has ſix Gates, *viz.* 1. The *Stuben* Gate to the Eaſt. 2. The *Carinthian* Gate to the South. 3. The *Caſtle* Gate. 4. The *Scotch* Gate. 5. The *New Gate.* And, 6. The *Red Tower* Gate, to the Northward, leading to the Bridge over the *Danube*; beſides which there is a Port by the Emperor's Palace, towards the Water-ſide: There is a certain Nunnery in the Town, call'd *Himmel Port*, or the *Gate of Heaven.* The five firſt of theſe Gates are vaulted through the Town-Wall, with convenient Draw-Bridges to paſs the Ditch. The ſixth is a Paſſage under a Tower, towards the Bridge of the *Danube*: For as that River runs through a low Country, it divides itſelf into ſeven ſmall Channels, which are join'd by as many Bridges made of many thouſand Trees laid cloſe one to another. There is a very remarkable Bridge at *Vienna* call'd the *High-Bridge*, made by the croſſing of two Streets by equal Angles; but the Ground in one Street being equal in Height to the Tops of the Houſes of the other, they have been forced to build a Bridge or Arch in the lowermoſt Street, to let the upper paſs over it. For the reſt, the Houſes here are of Stone, for the moſt Part Six Stories high, and flat-roof'd after the *Italian* Manner; the Streets are of a middle Size, neither broad nor narrow: Their Cellars are worth a curious Traveller's Obſervation: in ſome of them I found four Cellars one under another, well arched, with two Pair of Stairs to go into them. In ſome I obſerved an open Space in the Middle of each Roof, for the Reception of the Air, and from the loweſt a *Tube*, to convey the Air into it out of the Street, much after the ſame Manner as they do in the Mines.

I can't here paſs by the Encomium *Æneas Sylvius* gives of *Vienna*; viz. *That it has Palaces fit for Kings, and Churches which* Italy *may admire*: Which is much better verified now. For the Imperial Palace is a truly noble Structure, and excellently well furniſh'd; it has two Courts, one very large, the other leſs, where the Emperor's Lodgings are. Over the Gate you ſee no other Inſcription but the five Vowels in Capital Letters, *viz.* *A*, *E*, *I*, *O*, *U*; which ſome have interpreted thus: *Auſtriæ Eſt Imperare Orbi Univerſo*; though I am apt to imagine, that this is not the true Senſe of theſe Letters. There is beſides the two before-mentioned Courts, another ſmall one, where are the Lodgings of the Pages; where I took Notice of a large rough *Jaſpis* Stone, of about nine Foot Diameter, which lay unregarded upon the Ground, though a little Piece that was poliſhed, ſhewed that it was full of beautiful yellow, red, black, and white Veins: It was a Preſent of the Archbiſhop of *Saltzburgh*, in whoſe Territories are noble Quarries, and Stones of ſeveral Sorts. Next to this the Palace of the Count *de Draun*, and that of Count *Rothal*, lately built; with ſeveral others, are very conſiderable. This City has alſo noble Churches, and rich Convents; as for Inſtance: Thoſe of the *Carmelites*, of the *Franciſcans*, of the *Benedictines*, and of St. *Nicholas*: In the Church of the laſt I ſaw the Tombs of Count *Strozzi* and Cardinal *Harrach*. The Convent of the *Dominicans* is a very fair Structure: The Church of the *Auſtin* Friars is very large, and has in the Middle a Chapel, the Model of which was taken from the *Holy Houſe of Loretto*, the Top being adorn'd with many Colours taken from the *Turks* and *Tartars*; various of which were not ſquare, but Eſcutcheon-wiſe, ſome full of Circles, with Half-moons within them.

The *Jeſuits Colleges* are all very fair and ſpacious here; the Front of their *College*, which faces the Piazza, has a Statue, or *Column of Copper*, belonging to it, which ſtands in the Centre of the Market-place, reſting upon a Pedeſtal of white Stone, with four Angels, Eſcutcheons, and the bleſſed Virgin on the Top: It has alſo divers Inſcriptions, by which the Emperor dedicates *Auſtria* to her Patronage and Protection.

When I came into the *Scotch Convent*, it raiſed no ſmall Curioſity in me to know how the *Scotch* became ſo conſiderable here, till I was inform'd, that *Vienna* had been many Ages ago a Receptacle of the *Scots*, in their Pilgrimages to *Jeruſalem*; and that *Colman*, a Saint in high Veneration in thoſe Parts, was not only a *Scotchman*, but alſo deſcended of the Blood Royal of *Scotland*, and barbarouſly murthered by the Peaſants at *Stockerau*, four *German* Miles from *Vienna*; who hung his Body on a Tree, where it remained uncorrupted a Year and a half; and after many Miracles was buried at *Stockerau*, and from thence removed firſt to *Melk*, and afterwards into *Hungary*; where it was preſerved for a long Time after at *Alba Regalis*, or *Stulweiſſenburgh*. The Church of St. *Peter* is highly eſteem'd for its Antiquity, being the oldeſt in the City, and built in the ſame Place where ſtood before the Altar dedicated to *Domitian*, called *Ara Flaviana*.

In the Cathedral of St. *Stephen* are many ſumptuous Monuments of Princes and other great Perſons: It is a very noble Fabrick, but none of the higheſt, by Reaſon of the Paintings of the Glaſs Windows; it is covered only with Tiles of Wood, yet makes no ill Shew. But what is moſt worth Obſervation, is the Steeple and Spire, high, large, ſtrong, and nobly built: It has on the Top, inſtead of a Weather-cock, a Croſs under a Star and Half-moon, well gilded: This Star and Half-moon was, as they relate, put upon this Spire by Order of *Solyman the Magnificent*, who when he had beſieged the City, offered to ſpare the Cathedral, provided they would ſet upon the Top the *Turkiſh* Arms, *viz.* the Half-moon and Star; which the Citizens comply'd with. This Spire has the largeſt Crockets I ever ſaw, being above a Yard long, and adorned with Foliage Work. The Steeple is accounted 465 Foot high: I went up half Way by 338 Steps; whence I could ſee the *Hamburger* Hill, near *Preſburg*, and the Courſe of the *Danube* through a great Part of *Auſtria*.

In the Room where I was, they had wooden Hammers, which they make Uſe of from *Good-Friday* till *Eaſter-Sunday*, the Uſe of Bells being forbidden during the Time our Saviour was in the Grave. In the laſt Siege the Creſcent on the Top of the Steeple was ſhot down, and has not been put up again there. Near one of the Doors of the Church is a Stone fix'd into the Wall, which they believe to be one of thoſe wherewith St. *Stephen* was ſtoned to Death: It looks like a Pebble, and is very ſmooth, by the frequent Rubbing of the People, who touch it with their Fingers when they go to Church.

I was ſhewn another Stone, which they ſaid, was one of thoſe that kill'd St. *Stephen* in St. *Saturnine's* Church, at *Thoulouſe* in *France*. Beſides many Monuments of great Perſons, which are in the Church of St. *Stephen*, there are alſo ſeveral Tombs of Men famous for their Learning, as of *Joh. Faber*, Biſhop of *Vienna*; *Jo. Cuſpinianus*, and *Sebaſtianus Tengnagelius*, the laſt of which, according to the Inſcription, was verſed in fifteen Languages.

The Univerſity of *Vienna* may alſo challenge the Preference before moſt others, in Reſpect of its Antiquity, and the Number of Students, their Accommodations and Privileges. *Albertus* the Third is reputed the Founder, above 300 Years ago; who diſtinguiſh'd the Students into four ſeveral Diviſions or Nations, each of which, beſides the General Conſtitutions, had their peculiar Rules and Privileges; they were *Auſtrians*, Nations of the *Rhine*, *Hungarians*, and *Saxons*.

To the *Auſtrian* Diviſion belonged thoſe of *Friuli* and *Trent*, all *Italy*, and other Provinces beyond the Mountains. Under the Nations of the *Rhine* were comprehended the *Suevians*, *Alſatians*, *Franconians*, *Heſſians*, and the other Provinces, *France*, *Spain*, *Navarre*, *Holland*, and *Brabant*. To the third Claſs of the *Hungarians*, are joined the *Bohemians*, *Moravians*, *Sclavonians*, and all that uſe the *Sclavonian* Tongue, as alſo the *Germans*. To the Claſs of the *Saxon* Nation, belong the *Saxons*, *Weſtphalians*, *Thuringians*, *Miſnians*, *Brandenburgers*, *Pruſſians*, *Livonians*, *Luſatians*, *Pomeranians*, with the *Ultramarine* Kingdoms of *England*, *Scotland*, *Ireland*, *Sweden*, *Norway* and *Denmark*.

As in theſe ſeveral Diviſions all *Europe* is comprehended; ſo it muſt be confeſs'd, that there are in this Univerſity Students of many Nations, who ſometimes when any Differences ariſe among themſelves, ſtand up each for their reſpective Diviſions; but are ſure to unite together, if any Contentions happen betwixt the Students and the Citizens, or Jews. As for their natural Philoſophy, they have not yet attain'd to our new Way of explaining Things, by Corpuſcular Motions, and Experimental Philoſophy; though ſome of them were very inquiſitive after our Royal Society, as well here as at *Altorff*; and I have been ſolicited even from *Caſſovia* in *Upper Hungary*, to ſend the Tranſactions of our Society thither: A manifeſt Sign, that if they were once led into the Path of our modern Philoſophy, they would without all Queſtion follow our Footſteps. For the reſt, they are well verſed here in Languages, Hiſtory, and Antiquity.

I remember I was preſent here at a publick Anatomy-Lecture of a Woman, which laſted nineteen Days; perform'd by Dr. *Wolfſtregel*, a learned Phyſician. I obſerved the *Pyramidal* Muſcles to be very plain and large, and the *Uterus* of a Size larger than ordinary; the *Cartilago Enſiformis* was double, and the Lungs very black. The Motions of the Eye were very nicely ſhewn by an artificial one of Ivory, and another of Paſteboard, contrived and made by himſelf; and after the Diſſection of the Muſcles of the *Pharynx*, *Larynx*, *Os Hyoides*, and the Tongue, he reduced them with an admirable Dexterity into their proper Places, to diſcover their natural Poſition. The Anatomy-Theatre was capable of holding a hundred Perſons.

16. This Univerſity has, among other Privileges, the Power of Life and Death, in reſpect of their own Members. But what gives the greateſt Luſtre to this famous City is the Reſidence of the Emperor *Leopold*, born in 1638. His eldeſt Brother *Ferdinand*, King of the *Romans*, dying before his Father *Ferdinand* III. *Leopold* ſucceeded in the Empire, and married *Margareta* Infanta of *Spain*, the Daughter of *Philip* IV. He is the Darling of his People, and equally beloved both by the Soldiery and Clergy. He is of a grave, but graceful Aſpect, and has the long Chin, and remarkable Lip of the Family of *Auſtria*. He is well verſed in the *German*, *Italian*, *Spaniſh*, and *Latin* Languages; and as he takes Delight in Reading, ſometimes for ſeveral Hours together, ſo he is always forward in countenancing learned Men. He alſo delights in Muſick, and frequently compoſes himſelf; which makes all the Church-men, and others, encourage Muſick and Muſicians. The Emperor himſelf has excellent Muſick, both Vocal and Inſtrumental, in his Palace, and ſome of his own Compoſitions are play'd in his private Chapel, where eight or ten Pages of the Emperor, Earls Sons, ſerve at the Altar, with white Torches in their Hands, whilſt the Eunuchs are ſinging.

His Recreations abroad conſiſt chiefly in Hunting, eſpecially the wild Boar. The young Nobility formerly uſed to encounter a wild Boar, ſometimes a ſingle Perſon alone; but ſince the unfortunate Accident that happened to Count *Nicholas Serini*, who was kill'd by one of thoſe Creatures, the Huntſmen are always at Hand, when the Boar is at a Bay, that the Emperor, or others there preſent, may the more ſafely kill it. There are great Numbers of theſe Creatures hereabouts, their Fleſh being a common Diſh at *Vienna*, and of a delicious Taſte; for they feed upon Acorns, Beach-maſt, and Cheſnuts, and upon the Sprouts of Broom, Juniper, and other Shrubs, as alſo upon the Roots of Fern; they will ſometimes leave the Foreſts, and range in the Corn-fields and Vineyards. It is the Huntſman's Buſineſs to keep a watchful Eye over them; and they are ſo ſkilful in that Game, that by the Tread of their Feet, and caſting their hind Feet out of the Track of their Forefeet, they will tell you, whether it be a wild Swine or tame Hog; nay, whether it be Male or Female, Young or Old, Lean or Fat, *&c.*

The Emperor, as he is a good Huntſman, ſo he takes a great Delight in Horſes: He has a very fine Stable filled with manag'd Horſes, brought from *Turkey*, *Tartary*, *Poland*, *Tranſylvania*, *Germany*, *Bohemia*, *Hungary*, and *Naples*. It was ſomething ſurprizing to me, to find in an inland City ſuch conſiderable Magazines of Naval Stores, as I found at *Vienna*: Theſe are employ'd in the Fleet upon the *Danube* againſt the *Turks*; being a kind of Gallies, carrying great Guns, and a conſiderable Number of Soldiers, beſides Seamen. They are laid up behind one of the Baſtions of the City, and ſome of them are kept at *Raab* and *Comorra*.

The Imperial Court was at this Time compoſed of many wiſe Counſellors, great Generals, and refined Courtiers; ſuch as, *Euſebius Wenceſlaus*, Duke of *Sagan*. Prince *Lobkowitz*, Lord High Steward, chief Miniſter and Favourite of the Emperor, being the Perſon who diſcovered the late *Hungarian* Revolt, for which Count *Peter Serini*, and *Nadaſti*, paid with their Heads. *Henry William* Count *Stahrenberg*, Marſhal of the Court. *John Maximilian*, Count *Lamberg*, Lord Chamberlain, who has near a hundred Gentlemen of the Bed-Chamber under him, all Barons and Counts: They wear a Golden Key upon the Breaſt, as the Grooms of the Bed-Chamber wear one of Steel: Two of each attend every Night. *Gundaker*, Count *Dietrichſtein*, Maſter of the Horſe. Count *Zinzendorff*, chief Hunts-Maſter. The Count of *Averſberg*, chief Faulconer, who has twelve others under him. The Count *de Paar*, Poſt-maſter-General. *Leopold Wilhelm*, Marquis of *Baden*, Captain of a hundred *Hartſhires*, who are kind of a Horſe-Guard of the Emperor's Body, arm'd with Piſtols and Carabines, without the City; but within, the Foot carry Launces and Javelins with broad Points. *Francis Auſtin*, Count *Walleſtein*, Captain of a hundred of the Emperor's Foot-Guard of his Body. Sixty Pages, moſt of them Counts and Barons. *Raymund* Count *de Montecuculi*, who has ſignaliz'd himſelf in *Poland*, *Hungary*, and *Germany*; the Emperor's General, Preſident of the Council of War. Next to him was Count *Souches*, a Native of *Rochel*; and his Son Governor of *Leopolſtadt*. Count *Leſley*, Nephew to Count *Leſly*, who was ſent in the Quality of Ambaſſador to the Port from the Emperor, is alſo look'd upon as one of the beſt Commanders the Emperor has: Beſides a great many other brave Officers, who have ſhewn their Valour upon a thouſand Occaſions; ſo that though the Emperor never takes the Field in Perſon, yet has he been very ſucceſsful in his Wars, eſpecially againſt the *Turks*. The Courts of both the Empreſſes are filled with Perſons of great Worth. Among the Clergy, and Men of Learning (of which the Emperor is a great Lover,) the *Jeſuits*, *Moelner*, and *Boccabella*, are the chiefeſt. And to ſum up all, it is certain, that *Vienna* is the moſt likely Place for any Foreigner, whether Soldier or Scholar, to make his Fortune, provided he be of the *Roman Catholick* Religion.

17. It will perhaps be ſurpriſing to ſome, that upon the utmoſt Limits of the learned Part of *Europe*, the Emperor is Maſter of a Library, which both for the Number and Value of Books, gives Way to no other Library in *Europe*. The worſt is, that the Receptacle is not ſuitable to ſo vaſt a Treaſure; for though it is divided into eight ſpacious Rooms, in which the Shelves ſtand ſo cloſe, that there is ſcarce an eaſy Paſſage left

betwixt them, yet many Books lie upon the Ground. The Manuſcripts have their peculiar places, diſtinct from the printed Books, and are divided into ſix different Claſſes, *viz.* *Theological*, *Juridical*, *Medicinal*, *Philoſophical*, *Hiſtorical* and *Philological*. The Manuſcripts of *Hebrew*, *Syriack*, *Arabick*, *Turkiſh*, *Armenian*, *Æthiopick*, and *Chineſe* Books, are without Compariſon the beſt Collection that is to be found.

The choiceſt Books of which this Library is compoſed, (which has been collecting ever ſince the Time of *Maximilian* I.) are: The famous Library of *Buda*, of *Matthias Corvinus*, Son of *Hunniades*. The Choice Library of *Wolfgangus Lazius*; as alſo 3000 Books of *Johannes Sambucus*. *Augerius Buſbequius* made a conſiderable Addition to the reſt; and in his two *Turkey* Embaſſies, bought a great many choice *Greek* Manuſcripts at *Conſtantinople*, which are mark'd thus with his own Hand, *Aug. de Buſbeck. emit. Conſtantinopoli.* There was alſo a conſiderable Number added out of the Library of the learned *Johannes Cuſpinianus*, the Emperor's Library-keeper: And the noted Libraries and Mathematical Inſtruments of *Tycho Brahe*, *Kepler*, and *Gaſſendus*, were purchaſed for it.

But the greateſt Addition of all was made by that noble Library of Count *Fugger*, which conſiſting of 16,000 Volumes, was purchaſed by *Ferdinand* the Third. Beſides which, the learned *Peter Lambecius*, the preſent Library-keeper, Hiſtoriographer, and Counſellor of the Emperor, has brought hither the choiceſt Books out of the Library of *Inſpruck*; and himſelf is Maſter of a moſt excellent one of his own, which will in Time be added to the Imperial Library. I had it from his own Mouth, that there were at leaſt 80,000 Volumes in this Library, which are encreaſed by the Acceſſion of other Books, which are purchaſed, eſpecially in the *Turkiſh* Dominions, where the Emperor keeping a conſtant Reſident, no Opportunity is let ſlip to buy up any good *Greek* Manuſcripts in their Convents. I remember myſelf, that when I was at *Lariſſa* in *Theſſaly*, the Reſident, Seignior *de Caſa Novo*, was continually enquiring after *Greek* Books in their Monaſteries, the preſent Emperor ſpairing no Coſt to purchaſe them; and were it only for the Number of Books, it is certain, that by the Right the Emperor has of having two Books of whatever is printed in *Germany*, this Library might ſoon increaſe to a vaſt Number.

As *Lambecius* conferred on me a thouſand Obligations, ſo he was ſo kind as to give me a Sight of all the rare Copies in this Library, among a vaſt Number of which, I took an Account of the following: A Letter in the *Chineſe* and *Tartarian* Language, from the Emperor of *China*, to the preſent Emperor *Leopold*, weaved in a very fine Roll. Another Roll written in an unknown Character, but moſt reſembling *Greek*. A Book in the *Runick* Language. A very fair Manuſcript of *Ptolomy*, the Maps colour'd. A Copy of *Livy*, the moſt ancient Manuſcript extant. a thouſand Years old, in large Letters, without Diſtinction of Words or Sentences, brought hither from the *Inſpruck* Library. A very fair Manuſcript in *Greek* of *Dioſcorides*, 1100 Years old, in large Characters, without Diſtinctions of Words or Accents; the Plants finely painted; with the Pictures of *Dioſcorides*, *Galen*, and ſome other noted Phyſicians. Two Books of Geometrical Propoſitions demonſtrated in the *Chineſe* Language; whereof one with Pictures. An old *Greek* Manuſcript in great Letters, without Diſtinction of Words or Accents. A *Greek* Manuſcript 1300 Years old, of the Book of *Geneſis*, without Stops or Accents. It contains forty-eight Draughts in Miniature, or Water-colours, relating to the Habits of the Ancients, to the Manner of their Feaſting, their Poſtures at Meal, Attendance of Servants, and Muſick. Among other Things, the Execution of *Pharaoh*'s Baker is worth Obſervation, his Head being thruſt through a forked Piece of Wood, and his Hands tied behind him. A Book of Painting in Miniature, by *Albert Durer*; and a Sphere with a Globe within it, carved and painted by the ſame Hand. A Book of *Michael Angelo*; wherein beſides many Rarities in Architecture, all the Paintings and Deſigns of the *Belvedere* are ſeen in Miniature. A very fair Alchoran in *Arabick*; with the *Turkiſh* Explication interlined betwixt it. A Bible in the *Coptick* and *Perſian* Languages. *Luther*'s Bible; with many Notes, written by his own Hand. A fair *Greek* Manuſcript of the *New Teſtament*, written with Golden Letters upon Purple 1500 Years ago. A Magical Glaſs of the Emperor *Rudolphus*, Sixteen thouſand Pieces of ancient *Greek*, *Roman*, and *Gothick* Medals and Coins, in Gold, Silver, and Copper. They pretend to have two Copper Coins of the Emperor *Marcus Otho*. Being willing to add a few Drops to this Ocean, I preſented ſome Coins, Intaglia's, and Inſcriptions, not to be found in *Gruterus*'s Great Work; which I met with in the remoteſt Part of the Emperor's Dominions; which being ſhew'd to his Imperial Majeſty by Mr. *Lambecius*, he was ſo well pleaſed with them, that he not only permitted me the Uſe of what Books I deſired, but alſo granted me a free Paſs, in *Latin*, through the Empire, exempting my Goods from being ſearched; which is no ſmall Conveniency, in a Country where a Traveller is to paſs thro' ſo many different Juriſdictions.

After I had taken a full View of this Library, I thought I cou'd not beſtow my Time better than in viſiting alſo the Repoſitory or Collection of Rarities made by the Care of many ſucceeding Emperors; in viewing of which, I ſpent ſeveral Hours; but fully to ſet down all the rich and magnificent Curioſities I ſaw here, is much beyond the Compaſs of this Treatiſe, (the Catalogue which is kept of them taking up a large Volume in Folio) ſo I will content myſelf with mentioning only a few of the beſt out of a great many, from whence the Reader may be able to give a Judgment of the reſt. The Whole is divided into fourteen Caſes or Cupboards.

1. Contains many curious Veſſels turn'd out of Ivory, Cups of Amber, Spoons, and other Veſſels, of Mother of Pearl, fine Works of Coral, a Gallery of Ivory, and two Cups, one turn'd by the preſent Emperor's own Hand, the other by *Ferdinand* III. Several Cups of the Rhinoceros's Horn. In the 2d, An Elephant with a Caſtle, and many other Rarities of Workmanſhip on his Back. Two fine Pillars all of Ivory, with *Baſſo relievo*, and other Varieties in Ivory. A Picture in Oil of *Ganymede*, by *Corregio*. In the 3d, An old Man's Head in Oil, by *Albert Durer*; vaſt Variety of Watches and Clockwork; a fine Centaur in Silver. The 4th, Alſo contains Watches and Clocks; a triumphant Chariot; a *Turk* of Quality with his Attendance; a Landſkip and a Cupid, by *Corregio*. In the 5th, Are Variety of curious Works in Filegree, brought from *Spain* and the *Indies*; and a Baſon of Agate finely wrought. The 6th, contains an excellent Collection of *Intaglia*, and old *Roman Stones*, of ineſtimable Value for their Workmanſhip and Bigneſs. A large Agate, on which is wrought the Victory of *Auguſtus Cæſar* over the *Dalmatians* and *Pannonians*; it is five Inches long, and four broad, of a very high Value; beſides ſeveral Heads and Figures cut in Onyx's, Shells, and Sardonyx's; and a Chain with the Heads of the whole *Auſtrian* Family. In the 7th, Divers Pieces of Mother of Pearl, curiouſly wrought. The Head of *Maximilian* I. in Plaiſter-work, with a Lock of his own Hair, and the Twelve *Cæſars* Heads. Another Head, excellently well done in Oil, by *Hans van Ach*. In the 8th, A Veſſel made of one Piece of Chryſtal, of a Yard and a half high; an Urn; ſeveral Hands, with other Chryſtal Works. The 9th, Has a very noble Ewer of Chryſtal, and another noble Veſſel; many curious Croſſes, and other Varieties. The 10th Containing five rich *Crowns*; the Imperial *Crown* adorned with precious Jewels, and a large blue Sapphire on the Top. A Model of the *Crown* wherewith the Emperors are crown'd, much exceeding in Value the Original. A *Paragon Diamond*, weighing 17½ *Carats*. Several very large Rubies. A Sceptre made of Unicorn's Horn, ſet with precious Stone. A Locket made of very large Diamonds. A moſt magnificent Scepter, Globe, Croſs, and Crown, valued at 200,000 Crowns. An Opal as big as one's Fiſt, as it came out of the Mine, with many other very fine Opals, and a very large Emerald. In

the 11th, A Golden Baſon, uſed at the Baptiſm of the *Auſtrian* Family. Divers Golden Sceptres, Scimeters, Knives, and other Preſents from the *Ottoman* Court. Three rich Dog-collars, ſent from *England*, with this Mark ƆCƆC. A great Piece of pure Gold, of the Bigneſs of one's Fiſt, as it came out of the Mine. Another Piece of Gold Ore, where you ſee the pure Gold ſhooting forth upon a white Stone; beſides divers other Baſons of Gold, and Veſſels of Coral. In the 12th, Great Store of Veſſels of *Jaſpis*, *Agate*, *Lapis Lazuli*, *Oriental Granates*, *Cups* of *Onyx* and *Sardonyx*, one very great one of an *Amethyſt*, and divers very large ones of *Lapis Nephriticus*. In the 13th, Are divers Flowers made out of precious Stones. A large high Veſſel of *Bohemian Topaz*. A *Cup* made of an *Hungarian* Diamond. A Piece of Ambergreaſe of the Bigneſs of a Man's Fiſt. A very fine *Jaſpis* Stone. A large *Agate* Stone on the Outſide, and a Bed of large *Amethyſts* naturally in it in the Middle, which is look'd upon as a great Rarity. In the 14th, Are many noble Chryſolytes, Jacinths, Oriental Granates, Beryls, and Aquamarines. A very rich Emerald, or a Cup of that Stone; three great ones having been already taken out, valued at 300000 Crowns. Great Numbers of Gold Veſſels, and rare Figures in Coral; *Turkiſh* Knives, Gauntlets, *&c.* fine Wax-works, large Bezoar-ſtones; a Golden Medal of the Emperor's Arms, worth 1000*l.* Sterling; a Cup ſaid to be taken out of *Solomon*'s Temple; a moſt curious Baſon and Ewer of carved Ivory; King *Philip* II. of *Spain* in Diamond Armour, ſet in Gold; a curious Picture of an old Man courting a young Woman, with this Motto:

Arctum Annulum nè geſtato.

A very fine Crucifix of Pearl; the Buff-coat of *Guſtavus Adolphus* King of *Sweden*, in which he was killed near *Lutzen*; all the Goſpel written and painted; the Head of King *Charles* I. King of *England*, in Marble; Prieſts Garments ſet all over with Pearls; an ineſtimable Agate Diſh, betwixt three and four Spans Diameter, in which you ſee in natural Characters *XRISOS*. Unto which may be ſubjoin'd that moſt magnificent Chain of Pearl taken from Count *Teckley* in the late *Hungarian* War, as I have been informed ſince.

One Day I had the Curioſity to walk up the Hill which lies two *Engliſh* Miles from *Vienna*, from whence I had a full Proſpect of the City and Country, as far as to the Mountains of *Styria*, covered with Snow; and in my Return took a View of the Empreſs Dowager's Houſe without the Town, call'd *la Favorita*.

18. Two *Engliſh* Miles to the Eaſt of *Vienna* are the Gardens of *Rodolphus* II. which are ſomewhat ruinous now. They conſiſt of an inward and outward Garden, the inward being about 200 Paces ſquare, much of the ſame Bigneſs as the *Place Royal* at *Paris*. It has a Cloiſter ſupported by forty Pillars of white Stone on each Side; and is covered with Copper, as are alſo the Pavilions. In certain other Buildings they keep Lions, Tygers, and other wild Beaſts, which breed here. Some ſay that *Solyman* the Magnificent pitch'd his own Tent in this Place, when he beſieged *Vienna*.

At two or three Miles Diſtance from thence, is a Place called *Arnols*, whither many *Devotees* go on Pilgrimage, eſpecially in Lent, with heavy Croſſes on their Shoulders. Here you ſee a Houſe, the Model of which is taken after the Holy Sepulchre of *Jeruſalem*, with a very curious Copy of the Picture of our Saviour and the Virgin *Mary*, at full Length; the firſt is exactly ſix Foot high, the laſt two or three Fingers Breadth lower. They are done after the original in St. *John de Lateran* at *Rome*. I ſaw one Day the Emperor and Empreſs go thither on Foot, the Road being very duſty, and were followed by the greateſt Part of the Court. Somewhat nearer to the City, is another Place call'd *Itzing*, likewiſe much celebrated for Devotion. In the Road from *Vienna* to it, the twelve Stations of the Croſs are marked out in the ſame Manner, as is obſerved in the *Via Doloroſa*, near *Jeruſalem*, in Memory of our Saviour's going to the Mount *Calvary*. The Emperor has a very fine Park juſt by *Vienna*, with a Houſe of Pleaſure in it: I alſo took a View of *Luxenburg*, a Houſe of Retreat alſo belonging to the Emperor; it is an old Structure, not very large; there is alſo a Summer-Houſe, built in the Middle of a Pond, and an Octagon in the Marſh, from whence they let frequently fly at the wild Beaſts. Over the Emperor's Palace Gate you ſee a Rib and Jaw-bone of an extraordinary Size, which they told me were human Bones, but appear'd to me more like the Bones of an Elephant.

From this Place I took a Progreſs to *Mannerſdorff*, ſituated near the River *Leyta*; famous for the *Bath*, call'd the *wild Bath*, over the Spring of which is built a Church: The Water being only Luke-warm, they boil it, and ſo bath in Tubs: That being judg'd beſt, from what ſticks to the Sides of the Copper when it is a Boiling; it ſeems to be impregnated with *Sulphur*, *Saltpetre* and *Chalk*: The Water leaves a *Turquois* Colour upon the Stones, and the Vapours, which condenſe and adhere to the Roof and Sides, give it a Tincture of Gold. The Phyſicians of *Vienna* have publiſh'd a Treatiſe in *High-Dutch* of this Bath.

From hence I went to the *Newſidler-See*, or *Lake*, which is three *German* Leagues broad, and ſeven long, abounding in Fiſh, and is encompaſs'd with a great Number of ſmall Towns and Villages. It has got its Name from *Newſiedle*, a Town ſituated on the North-ſide of it, with a Caſtle upon a Hill. Near this Place is a black Earth, of which they make *Salt-petre*. Afterwards I proceeded four *Engliſh* Miles up the *Danube*, to the famous Quarry of *Altenburg*. The Beds or Rows of the Stones don't lie horizontally, but elevated to the North, yet follow the Shape of the Hill in their Situation. I found here a Subſtance between a Clay and a Stone, call'd by them *Liverſtone*, upon many of which you ſee the Figures of Trees and Leaves, but not ſo plain as in thoſe of *Florence*.

I paſs'd by *Cloiſter Newburg*, a Town belonging to a rich Monaſtery of the ſame Name. Upon one of the Peaks of *Calenbergh*, before-mentioned, live certain *Hermites*, call'd *Camaldulenſes*, a very ſevere Order, living upon nothing but Herbs and Roots. Near their Cells they had paved the Ground with thoſe figured Stones. It being now near *December*, the Branches of the *Danube* were frozen over, and the Ground being covered with Snow, afforded good Paſtime for the Ladies, who at this Seaſon take their Recreations in handſome Sledges in ſeveral Shapes, *viz.* *Griffins*, *Tygers*, *Swans*, *Dolphins*, *Scallop Shells*, &c. In one of thoſe Machines the Lady is ſeated richly attired in Velvet, lined with rich Furs, adorned with Laces and Jewels, and Velvet Caps lined with Sables. The Sledge is drawn by one Horſe, adorned with Plumes, Ribbonds, and Bells; and as this Paſtime is commonly performed in the Night Time, the Footmen ride on Horſeback with Torches, the Gentlemen ſitting on the Sledge, behind the Lady, to guide the Horſe.

Chriſtmas they celebrate here much after the ſame Manner as in *Italy*. On *Chriſtmas-Day* the Emperor dines in publick. Upon St. *Stephen*'s Day he went to the Cathedral, where he kneeled upon the Altar, and kiſs'd the Plate whereon the *Hoſtia* had lain. On Twelfth-day they celebrated at Court the old Cuſtom of chooſing King and Queen, and the Lot falling upon Count *Leſlie* to be King, the Emperor laid the Cloth, and the Empreſs fill'd out the Wine. Not long before *Chriſtmas*, I ſaw the Solemnity of the Marriage of Count *Serau*, with a natural Daughter of *Philip* IV. King of *Spain*, where I could not but be ſurprized at the Splendour in which the Ladies appear'd upon this Occaſion. Not long after I ſaw alſo a very pompous Funeral, the Corps of Count *Draun*, which was brought from *Italy*, being interr'd in the *Dominican* Church, and a very ſumptuous *Caſtrum Doloris* was raiſed, ſet round with a vaſt Number of Wax Torches and Candles.

During my Stay at *Vienna*, the Election for a King of *Poland* being at Hand, after the voluntary Abdication of King *Caſimir*, there paſſed Meſſengers daily through *Vienna*. The *Czar* of *Moſcovy*'s Son, the

Duke of *Newburg* and the Prince of *Lorrain* were Competitors for the Crown; but the *Poles* thought fit to pitch upon *Michael Wiſnowitſki*, a native of *Poland*, for their King. I ſaw alſo at the ſame Time at *Vienna*, the *Spaniſh* Ambaſſador *Don Balthaſar de la Cueva*; the Pope's Nuncio was *Carlo Caraffa*. Beſides which, the *Venetians* had their Ambaſſador at *Vienna*, who ſolicited Succours for *Candia*, which the *Turkiſh* Envoy oppoſed with all his Might. Much about the ſame Time came an Ambaſſador from the *Cham* of the *Crim Tartars*, named *Cha Gagi Aga*, who preſented the Emperor with ſeveral very fine *Tartarian* Horſes, in Return of which he was regaled by the Emperor with ſome Plate, a Silver Baſon and Ewer, and a very fine Watch for the *Cham*. They were luſty, ſtrong limb'd Fellows, but very coarſe, their Habit long fur'd Veſts and Caps. They took a vaſt Quantity of Tobacco in very long Pipes.

19. Among the *Greeks*, who live and trade at *Vienna*, I was chiefly acquainted with three conſiderable Perſons; one was an Abbot, who had been forced to quit his Convent for Fear of the *Turks*; another, who called himſelf *Conſtantine Cantacuzenus*, being deſcended of the Royal Blood of the *Cantacuzeni*; the third was a *Greek* Prieſt, named *Jeremiah*, who having travelled in Queſt of a young Man, taken by an *Algerine*, and retaken by an *Engliſh* Ship, through *Italy*, *France*, *Germany*, the *Low Countries*, and *England*, had retained a moſt peculiar Kindneſs for the *Engliſh*, who, he ſaid, had treated him more courteouſly than any other Nation.

The Country about *Vienna* is ſo fertile in all Things, that People live here in great Plenty; and if any Scarcity ſhould happen, the *Danube* ſupplies them from remoter Parts. *Hungary*, *Italy*, and *Germany*, furniſh them with ſuch Varieties of Wine, that you may drink thirty ſeveral Sorts at any good Table in *Vienna*; neither are they deſtitute of good Beer. *Halſtadt* in *Auſtria* affords them Salt, from whence the Emperor draws a vaſt Revenue. Sheep and Oxen they have in great Plenty of their own, yet are they ſupplied with the laſt out of *Hungary* and the *Grand Seignior*'s Dominions. Wild Boar is a great Diſh with them, their Fat being as delicious here, as that of our Veniſon. Neither do they want Hares, Rabbets, Partridges, Pheaſants, a Fowl called in *Latin*, *Gallina Corylorum*, &c. The *Danube* furniſhes them with vaſt Plenty of Fiſh, ſuch as Carps, Trouts, Tenches, Pikes, Eels, Lampreys of all Sorts, white Fiſh, and large Creviſſes, beſides Fiſh not known to us. Here you meet with the *Scheiden*, the *Silurus Geſneri*, which exceeds the Pike, Salmon, nay, any of our River Fiſh in Bigneſs; but the biggeſt of all are the *Hauſons*, called *Huſones*, by *Johnſton*, being ſometimes twenty Foot long. Some will have this to be the Fiſh named *Anacetus* by *Ælian*, which he ſays is catch'd in the *Iſter*. I ſaw them buſy in fiſhing for them in the Iſle of *Schutz*, between *Preſburgh* and *Comorea*, for they ſeldom come up hither, it being ſuppoſed that they come out of the *Euxine-ſea*. They are not unlike the Sturgeon in Taſte, and they eat them both freſh and pickled. It is full of Griſtles, having a hollow nervous Chord down the Back, which, when dried, they uſe inſtead of a Whip. When they fiſh for them, they blow a Horn or Trumpet. *Venice* furniſhes *Vienna* with Oyſters, Sturgeon, and other pickled Fiſh, with Red-Herrings, Oranges, Lemons, and other Fruits. They are much diſpoſed to Jollity in this City; nothing more common than to ſee them dancing and fencing for Prizes on Holy-Days, and ſpending their Time in Merry-making, which made me wonder that they have not a Company of Players belonging to them.

Their Way of executing Criminals is commonly done by cutting off their Heads; though in Caſes of High Treaſon, they firſt cut off the Right Hand, and next the Executioner ſtrikes off the Head with one Fore-blow. I remember I ſaw one executed in this Manner; and no ſooner was the Head ſeparated from the Body, but a Man ran ſpeedily to catch the Blood, which guſhed out of the Neck, which he drank, and then ran as faſt as he could: They look upon this as a Remedy againſt the *Falling Sickneſs*. I had heard of ſomething like this in *Germany* before; and I well remember, that *Celſus* tells us, that in his Time, ſome epileptical Perſons uſed to drink the Blood of the Gladiators; yet moſt Phyſicians exclaimed againſt this Remedy, and I did not ſtay long enough here to learn the Effects of it.

At *Preſburgh* they have an odd Way of Execution, (which is alſo in Uſe at *Metz*.) They have an Engine framed in the Shape of a Maid, which the criminal Perſon is obliged to ſalute; but at the ſecond Salute, ſhe embraces him, and cuts him through the Middle.

It muſt be confeſs'd, that the Winters are very ſharp here, but their Rigour is much mitigated by their ſleeping betwixt two Feather-beds, and the Stoves they make Uſe of to warm their Rooms, as well here as in moſt other Parts of *Germany* and the Northern Countries. The Citizens of *Vienna* are generally well clad, and wear Furs very much, and the Womens Bonnets, which they wear upon their Heads, are both lined and faced with ſome Fur or other. The Climate is very healthful, yet have they an epidemical Diſeaſe, called *Colica Auſtriaca*, among them, which is very difficult to be cured. In the Court and City they ſpeak very good *German*, but the Country People ſpeak ſomewhat thick, and have a different Tone, and divers odd Words. I ſaw a certain Trick performed at *Vienna*, which at firſt Sight ſomewhat ſurpriſed me, *viz.* a middle ſiz'd Man laid upon his Back, had a heavy Anvil fix'd upon his Breaſt; upon which two luſty Fellows, with great Hammers, gave at leaſt a hundred Blows, till they had cut an Iron Horſeſhoe, about half an Inch thick, aſunder.

No other Religion but the *Roman Catholick* is permitted the publick Exerciſe of Worſhip here, the Proteſtants being obliged to go to Church as far as *Preſburgh*, forty Miles from hence; for which Reaſon a Coach goes thither every Day, beſides the Convenience of the Paſſage by the *Danube*; the Exerciſe of the Proteſtant Worſhip being ſtrictly forbid here ever ſince the Battle of *Prague*, the ſame being allowed before in the Church of the *Holy Ghoſt* at firſt, and afterwards at *Arnolds*, not above an *Engliſh* Mile from *Vienna*. In this City are Abundance of *Jews*, but theſe have their diſtinct Habitations on the other Side of the Water. They are, indeed, permitted to traffick in a certain Street in the Day-time, but muſt leave the City before Night. They have frequent Broils with the other Inhabitants, and more eſpecially with the Students. Whilſt I was there, theſe laſt aſſaulted the *Jews* Town, where divers were killed on both Sides; the Conſequence of which was, that many of the *Jews* were to be baniſh'd againſt a certain Day. The Empreſs being then with Child, they preſented her with a Silver Cradle; but as ſhe was their declared Enemy, ſhe would not accept of it, and it was chiefly by her Means that afterwards they were baniſh'd, not only out of *Vienna*, but alſo out of all *Auſtria*; for as they were uſeful on one Side, for the Sale or Exchange of many Things, and uſed to furniſh the Officers with Accoutrements and other Neceſſaries; ſo on the other Hand, they ſpoiled the Trade of the Citizens, and were accuſed of holding a ſecret Correſpondence with the *Turks*. The *Jewiſh* Phyſicians pretend to more than ordinary Skill in Urines, which makes the common People reſort to them, and to look upon their Predictions as Oracles.

20. Being now reſolved to take my Leave of *Vienna*, in order to my Journey for *Prague*, I took a Place in the Coach, which goes thither in ſix Days in the Summer, and eight in the Winter. We paſs'd over the great Bridge upon the *Danube* near the Chapel of St. *Bridget*. After we had paſs'd the River, we enter'd that Part of *Auſtria* which lies betwixt the *Danube* and the River *Thea*, and travel'd in Sight of *Cornenbergh*, ſeated near the Hill *Biſnebergh*, which lies oppoſite to *Calenbergh*. Hence we came to *Stockerau*, famous for the Death of St. *Colman*: It is ſeated at the Conflux of the River *Mial* and the *Danube*. From thence, by the Way of *Gunterſdorf* to *Koldorff*, which (though on the other Side of the River *Theya*) is reckoned the firſt Village of *Moravia*, and ſo farther to *Znaim*. It is obſervable,

ſervable, that in this Part of *Auſtria*, which extends along the North-ſide of the *Danube*, believed to be inhabited in former Ages by the *Marcomanni* and *Quadi*, there are not any Towns of Note; the *Romans* having had their Stations and Colonies on the South-ſide of that River. Yet is the Country well inhabited and full of Villages. I came in Sight of one of the chiefeſt Places call'd *Crembs* or *Cremona Auſtria*. *Znaim* is a good Place upon the River *Theya*; the common Boundary betwixt *Moravia* and *Auſtria*, which, joining its Waters at laſt with the River *Mark*, thereby opens itſelf a Paſſage into the *Danube*. This Town is the Fourth in Rank among thoſe of *Moravia*; *Olmutz*, *Brun* and *Iglaw*, being the other three.

We continued our Journey from hence over *Ulverſkirken*, *Paulitz*, and *Moravian Budweiſſe* to *Zimmaw*, and taking our Way through *Byrnitz*, came to *Iglaw*, upon the River *Iglaw*, a Place pleaſantly ſituate upon a Hill, on the Frontiers of *Bohemia*. Its Fortifications are very ſtrong, after the modern Way, eſpecially on one Side, and the Market place is one of the largeſt I ever met with. *Moravia* is a very plentiful and pleaſant Country, being irrigated by divers Rivers, among which the *Mora* or *Marck* is the chief; it riſes on the North ſide, and paſſing through the whole Extent of the Country, falls into the *Danube* near *Presburgh*. The other Rivers of Note are, the *Theya*, or *Theyſa*, the *Swarta*, the *Schwitta*, which run into the River *Marck*.

21. After we left *Iglaw*, we enter'd *Bohemia*, the firſt Place we came to being called *Stecken*; thence to *Teutchin Broda*, near the River *Saczua*, and ſo further through *Haberne* to *Janikaw*, famous for the Battle which was fought there, the 24th of *February*, 1643. betwixt the *Imperialiſts* and *Swedes*; the firſt had the better of it at the Beginning, but falling to plundering, were defeated by the *Swedes*. In this Town I happened to meet with a Gentleman, who lived at *Schacklitz*, not far from the *Riſgeberg*, or *Mountains of Giants*, ſituate near the Head Spring of the River *Albes* or *Elbe*; I was curious to enquire of him, what he knew concerning the pretended Spirit of *Ribenzhal*, which they ſay infects that Country, but I could get nothing from him that was ſatisfactory; all what he told me amounting to no more than that he verily believed there was ſuch a Spirit, but that he had not done any Harm theſe twelve Years laſt paſt. I have heard divers ſuch Reports among the Mountains and Mines of *Germany*. Thus they talk of Spirits in the Silver Mines of *Brunſwick*, and in the Tin-Mines of the *Slackenwalde* in *Bohemia*, but they talk of them only.

From *Janikaw* we continued our Journey to *Czaſlaw*, the chief City in the Circle of that Name. This is reputed the Burying place of *Ziſca*, the famous *Bohemian*, General who forced the Emperor *Sigiſmund* to quit that Kingdom. From *Czaſlaw*, we came to *Guttenberg*, about twelve *Engliſh* Miles from *Prague*, a very conſiderable Town, near the River *Elbe*, and famous for the Silver Mines about it. There are in all about thirty of them, but as the Hills hereabouts are not very high, ſo the Mines are not ſo deep as thoſe in *Hungary*, and in ſome other Places of *Germany*; however ſome are almoſt ſeventy or eighty Fathoms, and have been wrought at theſe 700 Years. I went into one of them which was firſt digged, called the *Cutten-Hill*, (*Cutten* ſignifying a Man's Garment) which has got its Name as they ſay from a Monk, who found a Silver Tree there, which gave Occaſion for the Digging of this Mine, which is no more than nineteen Fathom deep: The chief Vein of the Ore, which is about a Foot broad, runneth South. It contains both Silver and Copper; of the firſt, a hundred Weight yields about an Ounce; of the laſt, eight, nine, ten or more Ounces; though ſome Ore contains eight or nine Ounces of Silver in the hundred Weight. When they meet with a blue Earth in Digging, they are in Hopes of good Ore.

From hence we paſs'd through *Colline*, and ſo by the Way of *Bohemian Broda* (to diſtinguiſh it from the *Teutonick Broda*) came to *Prague*, the capital City, and formerly the Reſidence of the Kings of *Bohemia*. I ſoon perceived, even at a Diſtance, that the Walls of this Town encloſed a larger Tract of Ground, than any in *Germany*, but conſiderable Abatements are to be made for the wide Spaces and Hills encompaſſed within them. It is ſituate upon the *Moldau*, a large rapid River, having its Source in the South Part of *Bohemia*, and, before it comes to *Prague*, being augmented by the Rivers *Sarſna* and *Watta*, and to the North of *Prague* by the River *Egra*, at laſt empties itſelf into the *Elbe*. This great Body is divided into three Cities, *viz.* the *Old*, the *New*, and the *Leſſer City*.

22. The *Old Town* is ſeated on the Eaſt-ſide of the *Moldau*, being the moſt populous Place of the three; and conſiderable for the Univerſity, frequented by a vaſt Number of Students, this being the only one of the whole Kingdom, though it is not comparable now to what it has been. If we may believe *Lewis du May*, there were, in 1409, when *John Huſs* was Rector, above 40,000 Students; and it is credibly reported among them, that when the Emperor *Charles* the IVth, would have retrenched ſome of their Privileges, 24,000 Students left the Town in one Week, and not long after 16,000 more. This Part of the Town has alſo ſeveral Colleges and Monaſteries, and among the reſt the *Jeſuits*, which is a very handſome one.

The *New Town* is of a very large Extent, encompaſſing the *Old Town*, together with the River, being divided from it by a Ditch, into which they can let the River. The *Iriſh* have a Convent of *Franciſcans* here, and the Jeſuits have likewiſe a noble College. They were then buſy in making ſome Baſtions, and a Citadel for the Defence of the Town, but they were not finiſh'd.

The *Leſſer Prague*, is ſeated on the Weſt Side of the *Moldau*. It is far beyond the *Old Town* in Pleaſantneſs and handſome Structures, being join'd to it by a very ſtrong Stone Bridge, of ſixteen great Arches, the whole Fabrick 1700 Foot long, and 35 broad, with two high Gates, under two large Towers at each End. Part of this Town is built upon a riſing Ground, on the Top of which ſtands *Hartſchin*, or *Upper Prague*, where the Emperor has a Summer-houſe, and a moſt magnificent Palace. In this Part of the City is alſo the Cathedral Church of St. *Veit*, containing many ancient Monuments. Moſt of the Houſes of the Nobility are alſo in this Part; among which the Garden and Palace of *Coloredo* excel for Neatneſs, but it is not very large. The Palace of Count *Wallenſtein*, afterwards Duke of *Friedland*, General of the Emperor *Ferdinand* II. his Armies, is a very ſtately Structure, built upon the Ruins of at leaſt 100 Houſes, which were pull'd down for that Purpoſe: The Hall is a very lofty and ſpacious Room, and the Garden exceeding beautiful, on one Side of which you ſee the Place where they uſed to manage his Horſes, with a noble Fiſh Pond near it: On the other Side you ſee the *Aviary*, beautified with Trees and a Garden; the Model being taken from the *Aviary* of Prince *Doria* at *Genoa*. But what is moſt ſurpriſing are the large Stables, where you ſee a Marble Pillar betwixt each Horſe; every Horſe having a Rack of Steel, and a Manger of Marble, fix'd in a Nich of the Wall: Over the Head of each Horſe you behold his Picture, as big as the Life, with his Name under it. Thus a Bay-Horſe was named *Monte d'Ore*, a Mare *Bella Donna*, but his beloved Horſe's Name was *Mas Querido*. The current Language of *Bohemia* is a Dialect of *Sclavonian*, though all the Perſons of Quality here, and not a few of the Inhabitants both in the City and Country, ſpeak very good *High Dutch*. The *Leſſer Prague* was ſurpriz'd by the *Swediſh* General *Koningſmark*, in the long *German* War, who carried off an incredible Booty.

A Part of *Prague* being inhabited by *Jews*, is thence call'd the *Jews-Town*. They are here in great Numbers, and deal chiefly in Jewels, and eſpecially in thoſe Stones that are found in the Mines of *Bohemia*. I bought ſome *Bohemian Topazes*, very well cut, of them, at the Rate of ſeven or eight Crowns a Stone.

John Huſs, and *Jerome* of *Prague*, who endeavour'd to bring about a Reformation in thoſe Parts 800 Years before *Luther*, are not as yet forgotten among the *Bohemians*, who keep Silver Medals to the Memory of theſe two great Men; upon which Account I cannot help mentioning, what *Æneas Sylvius*, afterwards Pope *Pius* II. ſays of them two, *viz. That* John *was more in Years and of greater Authority, but* Jerome *excell'd in Eloquence and Learning; That they faced Death with unparallel'd Conſtancy, ſinging Hymns in the Midſt of the Flames.* He adds, *None of the old Philoſophers ſuffer'd any Kind of Death with ſo courageous a Temper, as theſe the Flames.*

As the ſame Author has made a Compariſon betwixt the City of *Florence* and *Prague*, I cannot forbear to give you my Obſervations upon this Head, which I made myſelf, both from the Top of the *Domo* at *Florence*, and from the Cathedral of St. *Veit*, on the Hill of the *Leſſer Town*. I found *Prague* to comprehend a much larger Compaſs, and to be more populous than *Florence*. The Streets of the firſt are much longer; and the Windows of the Palace being of very fine Glaſs, made a much better Show than the ragged Paper Windows of *Florence*. The River *Arno*, which paſſes through this laſt, bears not the leaſt Compariſon with the *Moldau* at *Prague*; and the great Stone Bridge over this River, bears a full Proportion to, if not exceeds, not only any one, but all the four Bridges of *Florence*. The Emperor's Palace alſo upon the Hill is a very noble Structure. On the other hand, it muſt be confeſs'd, that the Cathedral of *Florence*, built of black and white Marble; the Chapel of St. *Lawrence*, and the Great Duke's Gallery and Rarities, exceed any Thing I ſaw at *Prague*. Upon the *White Hill* near *Prague* was, 1620 *November* the 8th, fought the famous Battle betwixt the Armies of the Emperor *Ferdinand* II. and *Frederick* Elector *Palatine*, in which the latter was routed.

23. The Winter coming on, I would not go by Water to *Hamburgh* by the *Moldau*, which near *Melnick* falls into the *Elbe*; ſo that being obliged to travel by Land, I left *Prague* and the *Moldau* to the Right, and paſs'd through *Zagethal*, *Welverne*, and *Budin*, to *Labaſitz* upon the *Elbe*. After having croſs'd the River *Egra*, (which ariſing near the City of the ſame Name, falls afterwards into the *Elbe*) I came by the Caſtle of *Kriegſtein*, ſeated upon a high Rock, thence to *Auſig*, a ſmall City, and ſo by the Way of *Nolndorff*, and over the Mount *Kninſberg* to the Frontiers of *Miſnia*; taking our Way through *Peterſwald*, *Hellendorff* and *Kiſibel*, near the laſt of which are Iron Mines and Works. Having ſpent nine Days by Coach, from *Inglaw*, on the Confines of *Moravia*, to this Place, not reckoning my Stay at *Prague*, which is computed to be 200 *Engliſh* Miles, the Ways being very bad in ſome Places, eſpecially in the Winter Seaſon.

As we were going toward *Dreſden*, I took a View of the *Bohemian* Rocks behind us, which reſembled, at a Diſtance, the Ruins of an old Wall; but could not be convinced of what moſt Geographers have told us of *Bohemia*, That it is encloſed in a great Foreſt, though it is not to be diſowned, but that both within the Country, and in ſome Parts near the Borders, there are conſiderable Woods, believed to be Part of the old *Sylvia Hercinia*, or *Hercinian Foreſt*. The *Bohemians* have been at all Times a ſtout and warlike Nation; and though the common People are ſomewhat rough, the Gentry are very obliging and polite. They abound in luſty and ſtrong Horſes, but ſince their unfortunate Revolt, they have loſt moſt of their Privileges, and many thouſand Families have quitted the Kingdom.

We continued our Journey through *Miſnia* to *Dreſden*, one of the moſt remarkable Places in all *Germany*, being the Reſidence of the Electors of *Saxony* upon the *Elbe*, over which is a ſtately Bridge, ſupported by ſeventeen Arches. The Fortifications of the City are very ſtrong, after the modern Way; the Baſtions faced with Stone, ſurrounded in ſome Places with a double Ditch. It has three Gates. The Things moſt worth Obſervation are, The *Italian* Garden in the Suburbs, the *Hunting-houſe* in the *Old Town* beyond the River, and the Electoral Palace, with the Houſe for Wild Beaſts, Stables, and *Arſenal*. The Hall in the Elector's Palace is very ſpacious, and chiefly remarkable for the many Draughts of Cities, Pictures of Giants, and the Habits of ſeveral Nations, very well done.

But what is moſt ſurpriſing is, the Collection of Rarities, divided into ſeveral Chambers. The firſt contains all Manner of Mechanical Inſtruments, made very artificially. In the other Chambers, theſe following are moſt worth Notice: A Tube-Glaſs four Ells long; divers artificial Works of Coral; Bowls and Cups made out of Mother of Pearl; Caſtles of Gold and Mother of Pearl; a Cup made of a Stone taken out of an Ox's Stomach, of a Foot long; a Stone as big as one's Fiſt, taken out of a Horſe, reſembling a *Bezoar ſtone*; ſome very pure Ore out of the Mines of *Freiberg*; a natural Croſs of the ſame Ore; one hundred twenty one Heads carved on a Cherry-ſtone; a Chryſtal Cabinet, ſold by *Oliver Cromwell*; *Charles* II. of *England*, on Horſe-back, carved out of Iron; King *Charles* I. his Head; an Organ of Glaſs; ſeveral unpoliſh'd *Topazes*, ten Inches diameter; a Cup made of a *Topaz*; ſeveral Emeralds, an Inch in diameter, as they grow in the Rock.

Figures of Fiſh in Stones, the Stones dark colour'd, the Fiſh of a Gold Colour; two large fine Pieces of pure Gold Ore; a White Hart as big as a natural one, made of the Filings and Shavings of Harts-horn. Another Chamber contains all Manner of Mathematical Inſtruments, and a Library of Mathematical Books and Maps; an Unicorn's Horn, which they affirm to be of a Land Unicorn, becauſe it is neither wreathed nor hollow. The moſt remarkable Pictures, among a great Number, are, the Siege of *Jeruſalem*, by *Colter*, valued at a high Rate; two Nuns, by *Lucas van Leyden*; a Picture of Dr. *Luther*. Here is alſo a rowling Bullet, to demonſtrate a perpetual Motion.

Of Clock-works you ſee a vaſt Variety: A Cuckow ſinging, a Horſeman riding, a Ship under Sail, an old Woman walking, a *Centaur* running and ſhooting, and a Crab crawling or creeping upon a Table; all done by Clock-work, to the Amazement of ordinary Spectators. In the Stables, and Chambers thereunto belonging, you ſee a noble Stable full of Horſes, each Horſe eating out of a Rack of Iron, and Manger of Copper. Near them is a curious Fountain and Pond, ſurrounded with Balliſters, where the Horſes are watered; a long Walk arched, and painted with very fine Horſes; over which is a Gallery, with the Pictures of all the Dukes and Electors of *Saxony*, in their Electoral Robes and Military Habits; two Beds of Marble; a Horſeman of Silver, bringing a Cup of Wine in his Hand, moved by a Spring; a Pair of very fine Piſtols, with Stories of the *Old* and *New Teſtament* upon them; a Glaſs Gun; a Gun, which diſcharges forty Times without being charged again; a Lock without a Cock. Another Chamber has many rich Sleds and Accoutrements, made Uſe of in the Winter time upon the Snow. A White Bear's Skin ſtuff'd; Tygers and Lions Skins; a *Caſſowares* Skin; very fine Armour for Men and Horſes; a Picture of a *Laplander*; a *Lapland Magick Drum*; a Chamber full of all Sorts of curious Hunting Tackle and Arms.

The *Arſenal* is a long Square, a Building containing near 400 Braſs Pieces of Ordnance, of Muſquets and other Arms a great Quantity; divers Silver Coats of Mail, &c. In the Hunting-houſe in the *Old Town* are maintained fifteen Bears; Fountains and Ponds are made here for the Conveniency of waſhing themſelves, in which the Bears much delight. Round the Pond you ſee high ragged Trees or Poſts ſet up, where the Bears climb up and down, and Scaffolds on the Top, where they ſun and dry themſelves after they have been ſporting in the Water. The Horn Gallery here is alſo worth taking notice of; out of which you paſs through three Chambers, one painted with all the different Sorts of Hunting, the ſecond with Fowl, and the third with all Kinds of Wild Beaſts. In the Houſe where the Wild Beaſts are kept, was a *Marian*, a four legg'd Beaſt, which hangs on the Bows of Trees by the Tail.

A wild Mountain Cat of an extraordinary Size; five young Bears, five old black Bears; the Feet, Head and Neck, longer than thoſe of the black, but not ſo thick; two Lions and ten Lioneſſes.

The *Italian Garden* and *Summer-houſe* in the Suburbs, contained two noble Obeliſks, two beautiful Fountains, a Theatre and good Landſkips. They were built by two of the Elector's *Eunuchs*. It is not many Years ago ſince *Dreſden* has been made a City. The Revenues of the Elector of *Saxony* are very conſiderable, ariſing chiefly from his Impoſitions upon Commodities, Exciſes upon Beer, and Silver Mines. The chief Church of *Dreſden* is very fair. They are reputed to ſpeak the beſt *High Dutch* here, and throughout all *Miſnia*, which is a pleaſant, fruitful and populous Country.

After I left *Dreſden*, my Curioſity led me to *Frieberg*, noted for many conſiderable Mines, which are within two *Engliſh* Miles of the Place. Among thoſe I took particular Notice of three; one call'd *the High Hill*, the deepeſt in thoſe Parts, being Seventy-ſeven of theirs, or Two hundred and eight of our Fathoms deep, which Depth exceeded any of the Mines I ſaw in *Hungary*. The ſecond Mine I ſaw was called the *Prince of Heaven*, which not many Years ago, produced an Ore ſo rich, that an Hundred Pounds Weight afforded an Hundred and thirty Marks of Silver, or Sixty-five Pounds in the Hundred; but it is a conſtant Obſervation among the Miners, that where the Veins are richeſt and pureſt, they are thinneſt, and generally not above the Breadth of two Inches. The Ore, as it generally runs, affords not one Ounce and a half of Silver in the Pound; and they work it, if it holds above half an Ounce, which may ſeem ſomewhat ſtrange to thoſe who know not, that even in the Silver Mines of *Peru* and *Chili*, they will work the Silver Ore, which affords not above four or five Ounces; and the rich Ore in the Mines of *Potoſi* does not commonly produce above ten or twelve Ounces of Silver; though this Hill alone, if we may credit *Alberto Alonſo*, has produced in Silver ſince it has been dug, betwixt four and five hundred Millions of Pieces of Eight. They have here ſeveral Ways of opening the Ore to prepare it for Melting; as, by Lead, and a Kind of Silver Ore which holds Lead.

The Sulphur Ore alſo which is found here, after its Calcination, proves no ſmall Addition towards the melting of Metals, as likewiſe the *Schlich*, or pounded and waſhed Ore, and the *Schlaken*, being the Droſs, Sediment or Scum, taken out of the *Vortiegel* (Pan) which received the melted Minerals, let out into it at the Bottom of the melting Furnace. Their *Treibſhearth*, or *Furnace of Separating*, where the *Litharge* is driven, which I ſaw here, is more like that deſcribed in *Agricola*, than thoſe I ſaw in *Hungary*. Some of the Litharge is Green: They waſh the pureſt Ore, and ſuch as is mix'd with Stones or Spars; and they have this Peculiar, that before they melt the Ore in the Melting Furnace, they burn the pounded and waſhed Ore on the *Roaſting Hearth*, as they term it. They make much uſe of the *Virgula divina* or *Forked Hazel*, to find out the Silver Ore, or any other Treaſure. I never ſaw them uſe it in the Mines of *Hungary*, where I was, but I took particular Notice of the Manner how they uſe it here; yet as it is amply deſcribed in ſome Books, and is better ſeen than repreſented at a Diſtance, I will not enlarge further upon that Subject.

The third Mine I viſited was call'd the *Neckbreaker*, about eighty of our Fathoms deep: The Ore it produces is either Copper and Silver, or Silver and Lead, and ſometimes all three; but they work only for Silver. I found the Mines cold as far as the Air could penetrate, but otherwiſe warm enough. Where they are at the deepeſt, they are full of Damps; but that which troubles them moſt, is the Duſt, which ſettles upon the Lungs and Stomachs of the Miners. They have excellent Engines here to prevent the Inconveniencies ariſing from the Water. But I muſt not omit a rich Sulphur Ore, hard and ſtony, that with red Spots being deemed the beſt. This is melted in a peculiar Furnace, to ſeparate it from the Ore; ſome of which yields three Pound of Sulphur out of 100 Weight of Ore, which as it melts runs out of the Furnace into Water, or the Exhalations of the Ore are condenſed into Brimſtone, by the Coldneſs of the Surface of the Water placed to receive it. It is purified again, by melting it a ſecond Time. Some of this Brimſtone Ore holds Silver, ſome Copper, but in very ſmall Quantities. The Remnants, after Sulphur is ſeparated from the Ore, is reſerved for a double Uſe; either for the Melting of Silver, or the making of *Vitriol*. In the firſt Caſe, a certain Proportion of it is caſt into the Melting Furnace of the Silver, which, as the Miners term it, helps to make it Flux. In the making of *Vitriol* or *Copperas*, they take the Ore from which the Brimſtone has been ſeparated, and burn it over again, or let it continue to burn in the open Air, then putting it into a large Veſſel, pour as much Water upon it as is requiſite to imbibe the *Vitriol*; which Water being afterwards boiled to a certain Conſiſtency, is let out into Coolers, where the pureſt Part of the Vitriol adheres to Sticks ſet for that Purpoſe, the reſt ſettling on the Sides and at the Bottom. It is obſervable, that the Ore, after it is deprived of its Vitriol, has not the leaſt Virtue left in opening Metals, or rendring of them fluid.

24. The City of *Frieberg* itſelf is of a circular Figure, ſurrounded with ſtrong Walls: Its Streets are handſome, and ſo is the Market-place. The Elector's Palace is a very beautiful Structure; it has five Gates. But what exceeds all the reſt, is the Church of St. *Peter*, famous for the Monuments of many of the Ducal Family, among which, that of *Maurice*, Duke and Elector of *Saxony*, excels, being accounted the nobleſt in *Germany*, raiſed three Piles high of black Marble, with many fair Statues about it in Alabaſter, and white Marble; which is the Reaſon, that when this Town was ſurrender'd, *October* the 5th, 1632, to the Imperialiſts, the Elector of *Saxony* paid 80000 Crowns to ſave the Tombs of his Predeceſſors, and the Robes, Jewels, Rings and other Enſigns of Honour, that were buried with them.

There were certain Vaults and ſubterraneous Paſſages from the Mines into the City, which are ſaid to have been diſcovered firſt 1189, ſince which Time the Silver Mines at *Schneeberg*, *Annebergh* and *Joachim's Dale*, have been found, *viz.* in 1526. After having taken a View of what I thought moſt curious in and about *Frieberg*, I travell'd by *Waltheim* and *Coldick* to *Leipſick*, ſeated upon the River *Elſter*, which having its Source in *Vogtland*, paſſes by this City, and afterwards falls into the River *Sala*.

It is a very rich Place, celebrated for its three Marts or Fairs every Year, when there is a great Reſort of Merchants from all Parts. The Houſes are generally ſtately Buildings, being for the moſt Part ſix or ſeven Stories high. It has a Caſtle, but neither this nor the Town are well fortified. The Church of St. *Nicholas* has the Reputation of being within one of the fineſt *Lutheran* Churches in *Germany*.

This City is famous for three Battles fought near it in our Age; the 1*ſt*, Between *Guſtavus Adolphus*, King of *Sweden*, and Count *Tilly*, the Imperial General, 1631, in which the laſt was totally routed. The 2*d*, Some Years after, betwixt *Torſtenſon* the *Swediſh*, and Archduke *Leopold William*, the Imperial General. The 3*d*, about a League and a half from hence, near *Lutzen*, fought between the ſame King of *Sweden*, and *Wallenſtein* Duke of *Friedland*, the Imperial General, in which the *Swedes* were again victorious, notwithſtanding their King was ſlain before the Beginning of the Battle, as he was going to take a View of the Poſture of the Enemy. There is alſo a good Univerſity at *Leipſick*, erected there whilſt the Troubles continued in *Bohemia*, with the *Huſſites*, when 2000 *German* Scholars came hither at once from *Prague*.

From *Leipſick* I proſecuted my Journey to *Magdeburgh*, through a plain Country, betwixt the Rivers *Sala* and *Elbe*, through *Lanſberg*, and near *Peterſdorff*, and ſo by the the Way of *Kochten* (the Reſidence of the Prince of *Anhalt*) to *Caln*, ſituate upon the River *Sala*, not far before it falls into the *Elbe*. In this Neighbourhood is the famous Mountains, ſtiled the *Fichtelberg*, much celebrated for the Mines, Baths, and mineral Waters near it, and for four Rivers running to the four different Quarters of the World, *viz.* the *Main* to the Weſt, the *Nab* or *Nabus* to the South, the *Eger* to the Eaſt, and the *Sala* to the North; which four Rivers afterwards join the three capital Rivers of *Germany*, the *Danube*, the *Rhine* and the *Elbe*.

Hence we paſs'd through *Saltz*, (noted for its Salt-ſprings) to *Magdeburgh*, ſeated upon the River *Elbe*. This, which in former Ages was the Metropolitan City of *Germany*, but now under the Juriſdiction of the Elector of *Brandenburg*, is of a very large Circumference, but ſcarce half built, ſince it was deſtroyed by *Tilly* the Imperial General, who put 56000 Perſons there to the Sword. The Cathedral Church is a very fair Structure, built after the Model of our *Engliſh* Churches; by the Emperor *Otho* I. and his Empreſs *Editha*, the Daughter of our *Engliſh* King *Edmund*. Her Effigies in Stone ſtands ſtill in the Church, with the Repreſentation of eighteen Caſks of Gold by her, which ſhe gave thereto. The *Lutheran* Churches are very handſome here, and the Jeſuits very fine, as indeed they are in all other Places. In the Cathedral Church of St. *Maurice*, I ſaw the Statue of the five wiſe Virgins ſmiling, and the five fooliſh Virgins lamenting, which were not ill done. Among the reſt they ſhew'd ſeveral odd Relicks, *viz.* the Baſon in which *Pilate* waſh'd his Hands; and the Ladder whereon the Cock crow'd, after St. *Peter*'s Denial of our Saviour. Among the Ruins of the Cloiſter of the *Auſtin Friars*, are ſtill remaining *Luther*'s Chamber, his Bedſtead, and his Table. Upon the Door are certain *German* Verſes, which tranſlated into *Engliſh* are to this Purpoſe:

> *Great* Luther *lodg'd within this little Room,*
> *While as a* Monk *this* Cloiſter *was his* Home;
> *And we in Rev'rence of his Mem'ry keep*
> *The Bedſtead upon which he us'd to ſleep.*

At *Magdeburgh* I began to be ſenſible that I had left behind the true Purity of the *German* Language, for here you begin to hear another Dialect, generally called the *Lower Saxon*, ſpoken in all the *North* of *Germany*, at *Hamburgh*, *Lubeck*, and other Cities in thoſe Parts. However People of Faſhion converſe in *High Dutch*, and their Sermons are generally held, and Books written in the ſame Language. The City of *Magdeburgh* is highly celebrated in *Germany* as having been the firſt where the moſt famous Turnaments were inſtituted in the Year 638, by the Emperor *Henry*, ſirnamed the *Fowler*. The Condition of theſe Turnaments or Exerciſes of *Chivalry* were, That none but of the ancient Nobility, no Baſtard, no Uſurper, no Perſon attainted of High-Treaſon, no Oppreſſor of Widows and Orphans, none born of Parents, whereof one was of ignoble Extraction, no Heretick or Murderer, Coward, or who had given Offence to Ladies in Word or Deed, ſhould be admitted into the Liſt, and not above one in a Family at a Time. Princes were to come attended with four Squires, Counts and Barons with three, a Knight with two, and a Gentleman with one. He that was deſirous to enter the Liſts, appear'd at the Preſident's Lodgings, where his Name and Quality being regiſtred in the Preſence of three *Heralds*, the Champion deliver'd unto them his Helmet and Sword, and after Confeſſion enter'd the Liſt, attended according to his Quality. Their Horſes were to be without Defect, their Furniture according to the Rules preſcribed, and the Saddles without any riſing behind or before. Having performed all Manner of Exerciſes, they expected the Sentence from the Judges, and he who obtained the Prize, received it from the Hand of ſome Lady, or from the Prince who gave it.

But after theſe Paſtimes had continued for ſome Ages, they were aboliſhed upon very weighty Conſiderations, theſe Exerciſes having cauſed no ſmall Emulation among the Nobility, ſo that at the twenty-third Turnament, held at *Darmſtadt*, 1473, this Animoſity roſe to ſuch a Height between the Gentlemen of *Franconia* and thoſe of *Heſſe*, that ſeventeen of the former, and nine of the latter remained dead upon the Spot. The Winter now coming on apace, I haſtened my Journey to *Hamburgh*, which I performed in the Stage-Coach in four Days, taking our Way through the Elector of *Brandenburgh* and the Duke of *Lunenburgh*'s Territories. In this Road I took Notice of many ſmall Mounts of Earth, the ancient Funeral Monuments of Great Commanders; (which are alſo found in *England*) and ſometimes Rows of great Stones; and in one Place I ſaw three great maſſy Stones in the Middle, in a large Square, encloſed by other large Stones, ſet up on End.

25. The City of *Hamburgh*, one of the greateſt, richeſt, and perhaps the moſt populous Cities of *Germany*, is ſeated in a Plain, being well fortified after the modern Way, yet are their Works not faced with Stone. But the Territories belonging to it are of no great Extent. It is divided into the *Old* and *New Town*; it has five Gates; the *Stone-Gate*, which leads to *Lubeck*; the *Dyke-Gate*; the *Graſs-Brook Gate*; the *Dome Gate*; and the *Ellern* or *Altena*, a Town belonging to the King of *Denmark*. Their Buildings are very handſome, with very grand Entrances, and ſpacious Halls. The Senate Houſe is a noble Structure, beautified with the Statues of the nine Worthies. The Exchange was then enlarging: It is celebrated for its fair Churches, and noble Steeples cover'd with Copper. The Church of St. *Catharine* has a noble Front, and round the Steeple you ſee a Crown well-gilt. The Steeple of St. *Nicholas* is ſupported by great Globes. The other great Churches are, the *Dome*, or *Cathedral* Church, St. *Peter*'s, St. *James*'s the Great and Leſs, St. *Michael*'s Church in the *New Town*, beſides ſeveral leſſer ones, as of St. *Gertrude*, St. *John*'s, St. *Mary Magdalen*, the *Holy Ghoſt*, the *Blue Coat Hoſpital Church*, and St. *George*'s in the Suburbs. The River or rather Lake call'd *Alſter*, paſſes through it into the *Elbe*, which is juſt beyond the Town, join'd by another ſmall River call'd the *Bilde*. The Tide paſſes daily twice through moſt of the great Streets, through Channels, though the City lies eighteen Leagues diſtant from the Mouth of the *Elbe*.

As it is excellently well ſituated for Commerce, ſo it abounds in Shipping; for beſides its Paſſage into the Ocean, it is but an eaſy Days Journey from *Lubeck* on the *Baltick-Sea*, beſides, that by the River *Elbe*, they carry on their Commerce by Water with a great Part of *Germany*, even as far as *Bohemia*. The Conveniency of Trade drives many foreign Merchants thither, among which the *Engliſh Company* enjoys great Privileges; it being computed that they vend there about 100,000 Pounds worth of our Woollen Manufactory annually. I left *Hamburgh* the 10th of *December*, when embarking in an *Engliſh* Veſſel, we got that Day to *Stade*, upon the *Zwingh*, which near it falls into the *Elbe*. It belongs now to the King of *Sweden*; and here it was the *Engliſh* Merchants reſided for ſome Time, upon ſome Diſcontent with the *Hamburghers*.

11th, We paſs'd *Gluckſtadt*, ſeated upon the *Holſatian* Shore, and belonging to the King of *Denmark*: We anchor'd that Night at the Mouth of the River *Oaſt*, which riſing in the Dutchy of *Bremen*, falls into the *Elbe*, a Mile from *Brunſbuttel*, on the oppoſite ſide of the *Holſatian* Shore. 12th, We paſs'd *Cook's Haven*, in Hopes to reach the Sea that Night, but being becalm'd at Three in the Afternoon, were forced to Anchor again, between *Thickſand* to the North, and *Newark* to the South, near a Light-Houſe. 13th, The ſtrong Wind forcing us back to *Cook's Haven*, I embrac'd the Opportunity to go a-ſhore, and took a View of the Caſtle, which belongs to the City of *Hamburgh*. It is a ſquare Fort with a double Ditch, and at high Tide, ſome Veſſels come up to the Channel, which reaches up to the Fort, but at low Water it is dry. Both the Town and Caſtle are call'd *Reutzbuttel*, being not far from the *Lands End*, and the Governor thereof is always one of the Senate. Within three Days after, we ſet ſail again with a briſk N. E. Wind for *England*, and ſcarce were we out of the Mouth of the *Elbe*, but we got Sight of a certain ſmall Iſle, belonging to the Duke of *Holſtein Gottorp*, called the *Holy Land*, which as it is very high, ſo it is a ſafe Direction for Ships, eſpecially thoſe that come from Sea, without which they would be often at a Loſs from the Loweneſs of the Shore near that River's Mouth. This Iſland, which is very ſmall, is reputed to have about 2000 Inhabitants, who live for the moſt Part upon Fiſhing, and by carrying Lobſters and other Sea-fiſh to *Hamburgh*, *London*, and *Queenborough*. We choſe the main Sea that Night, but the next Day made nearer to the Shore, and ſail'd in Sight of *Amelandt* and *Schelling*; and in the Evening diſcover'd the Lights at the *Vly* and *Texel*. The next Day, having a fair Wind, we took down our Sails in the Evening, for Fear of coming too near the *Engliſh* Shore in the Night-time, and next Morning diſcovered the *North-foreland*, came the ſame Day to an Anchor in *Margaret* Road, and came as ſafely aſhore on *Chriſtmas* Day.

Now I muſt confeſs, that after I had taken ſo full a View of *Germany*, I found it quite different from the Conceptions I had formed of it myſelf. For to ſpeak firſt of its Rivers, they are ſo noble and great, that they excel thoſe of *Italy* and *France*, it being certain that the *Po*, the *Arno*, *Garigliano*, and other Rivers of *Italy*, bear not the leaſt Proportion to them; and though *France* has four great Rivers, *viz.* The *Loire*, the *Seine*, the *Rhoſne*, *Garonne*, as well as *Germany* has the *Danube*, the *Rhine*, the *Elbe*, and the *Weſer*, yet has *France* none that can come in Compariſon with the *Danube* and *Rhine*. 'Tis true, *France* has many fine Cities and Sea-ports, yet they do not come up in Number to thoſe in *Germany*, and I much queſtion, whether it has any Places that exceed *Hamburgh*, *Lubeck*, *Dantzick*, *Bremen*, &c. Beſides which, the whole Country is full of populous Towns, great Villages, ſtrong Caſtles, Seats of Perſons of Quality, delicious Plants, Foreſts, and pleaſant Woods. Nay, *Germany* affords even under Ground, Mines of Gold, Silver, Copper, Iron, Tin, Lead, Quick-Silver, Antimony, Coal, Salt, Sulphur, Cadmia, *&c.* and is full of the beſt Artificers to work in them. Add to this the eaſy Converſation of the People, who are great Lovers of Strangers, and honeſt in their Dealings: The Women are generally well complexioned, of a ſober Behaviour, faithful to their Huſbands, and good Houſe Wives.

Beſides that, *Germany* affords an inexhauſtible Stock of Men, the People being naturally fruitful, not exhauſted by long Sea Voyages and Engagements; and by Colonies ſent into far diſtant Countries; the only Conſumption of Men being in the Wars; and if they have none at Home, they will ſeek for them Abroad, being generally inclined to martial Exploits; and their Perſons of Quality are always averſe to Trade. To conclude, when I conſider the preſent Condition of *Germany*, their great and populous Cities, with the Strength of their Fortifications, the vaſt Number of their magnificent Structures, publick and private, and their civilized Manner of living in them, and compare all this with the Character *Tacitus* gives of the ancient *Germans*, that they lived poorly, ſcattered, without Towns or Villages, ignorant of Arts, and ſuch like, I cannot but be pleaſed with the Expreſſion of a certain learned Perſon, though long ago, upon this Subject, That if *Arioviſtus* and the other great Men of *Germany* of thoſe Times, ſhould riſe out of their Graves, and take a full View of their Native Soil, they would fancy themſelves to be in another World, and never acknowledge this for their own Country.

SECTION II.

A Deſcription of the noble Kingdom of *Hungary*, in which its various Prerogatives and many Excellencies are pointed out; the Nature of the Country, its various and admirable Productions, the Diſpoſition of the People, their Language, Manners and Cuſtoms are, from the Knowledge of the Writer, clearly and copiouſly ſet forth; interſperſed with a Variety of Geographical, Hiſtorical, Phyſical, Political and Literary Remarks, upon various Subjects.

By the learned Dr. EDWARD BROWNE, Preſident of the Royal College of Phyſicians.

1. *An Introduction, with ſome Account of the Author's Deſign in this Treatiſe. The Climate and Soil of* Hungary *deſcribed. The famous Rivers by which this Kingdom is watered.* 2. *Of the ſeveral Bridges that render this Country famous particularly the admirable Bridge of* Eſſeck, *the intended Bridge of King* Sigiſmond, *and the Ruins of that built by the Emperor* Adrian. 3. *Of the Iſlands in, and Fleets upon the* Danube; *as alſo of the famous Lakes in* Hungary. 4. *Of the large Plains in this Country, and how they facilitate Travelling.* 5. *Of the vaſt Quantities of all Sorts of Fiſh, and of ſome Species peculiar to the* Danube. 6. *The prodigious Fertility of the Country deſcribed, and of the Excellency of its Wines, Bread, Beef,* &c. 7. *Of the Language of* Hungary, *and of the adjacent Provinces. The general Knowledge the People have of* Latin. *The State of Learning there.* 8. *An Account of the old* Hungarian *Crown, the vaſt Veneration the People have for it. The Martial Diſpoſition even of their Eccleſiaſticks. The Tomb and Epitaph of the* Roman *Poet* Ovid. 9. *The* Pyrrhic *Dance ſtill underſtood and practiſed by the* Heydukes. *The State of* Hungary *at the Time of the Author's being there. Account of the Frontier towards the* Turks, *as it then ſtood.* 10. *Of the* Roman *Stations, Garriſons and Antiquities of this Country.* 11. *A curious Account of a prodigious Treaſure of ancient* Greek *Medals found at* Deva, *with Remarks upon ſome* Roman *Medals that have been alſo found in this Country.* 12. *Of the Habits and Arms of the* Hungarians, *and the Reaſons why they have been imitated by the neighbouring Nations.* 13. *A ſuccinct Account of* Tranſilvania *by another Hand.*

1. AS we have already given an Account of the Author, we ſhall only obſerve, that having ſpent a great Deal of Time in viſiting the different Parts of the Kingdom of *Hungary*, and in the Examination of the Curioſities it contains, Dr. *Browne* thought he could not do a more acceptable Service to his Countrymen, than by giving them a ſuccinct View of the Reſult of theſe Examinations and Inquiries. It is a received Opinion, that the Air in this Country is very unwholſome, which is attributed to many Cauſes; firſt, the Flatneſs of the Country, for where there are no Mountains, there are ſeldom any Winds ſufficient to cleanſe and purify the Air. Secondly, the Soil being marſhy and full of Minerals, the Vapours riſing from thence are ſuppoſed to be tinged with Particles far from being ſalutary to the Human Body. Thirdly, the extreme Heat in Summer, and the thick Miſts and Fogs in Winter and in Autumn, contribute not a little to draw this evil Report upon the Climate. But after all, it is very certain, that the Natives of *Hungary* live many of them to a vaſt Age; and though it be true, that it was formerly ſtiled at *Vienna*, *Cœmeterium Germanorum*, that is, the Churchyard of the *Germans*; yet perhaps a candid Judge upon a fair Hearing, would be inclined to acquit the Air of *Hungary* of the Murder of the *Germans*, and adviſe a freſh Indictment againſt the Wines. The Truth of the Matter ſeems to be, that in this rich and plentiful Country, Strangers are apt to indulge themſelves too much, and in that Caſe it muſt be owned, that the Climate is not very favourable; for without vigorous and conſtant Exerciſe, the Natives themſelves would not be able to maintain ſuch robuſt Conſtitutions as they are famed for, conſidering the Liberties they take in Eating and Drinking.

But except this Charge in Relation to the Air, there ſeems to be no Impeachment againſt the Excellency of this Country, which in Time paſt, and while under the Government of its Native Princes, made as great a Figure as any in *Europe*; and its Inhabitants had the Honour to give the firſt Check to the Arms of the *Mahometans* on this Side, as the *French* did on the other, and prevented them thereby from over-running all *Europe*. Since it fell under the Dominion of the Houſe of *Auſtria*, it has indeed made a leſs Figure, and grown more out of Knowledge as all Kingdoms do when they become Provinces; and to the ſame Cauſe it has been owing that the *Turks* have made themſelves Maſters of ſo great a Part of it, and that it has been ſo ruined and diſtracted by inteſtine Diviſions and civil Wars, that for their Severity and Length, there are ſcarce the like to be met with in Hiſtory. But theſe are caſual Events common to other Countries as well as *Hungary*, and which cannot be reaſonably urged as derogatory from or deſtructive of thoſe high Perfections, which it enjoys from Nature, and which ought to render it as much the Object of Attention to Strangers, as any other Country upon the Globe. For if we were to enumerate the ſeveral Advantages that diſtinguiſh thoſe Countries of the World that are moſt deſervedly famous, we might venture to affirm that almoſt all of them may be found here. Since if *Germany* boaſts her fine Rivers, *Italy* her golden Fruits, *Sicily* her copious Harveſts, *France* her generous Wines; in ſhort, if the numerous Commodities of *Europe*, if the luxurious Plenty of *Aſia*, if the various Curioſities of *Africa*, if the Silver of *Mexico*, and the Gold of *Peru*, are fit Objects of our Admiration, *Hungary* muſt claim it too; no Country is better watered, none more fertile, none more pleaſant, none yields better Fruits, none produces richer Wines, none abounds more with Cattle; none, notwithſtanding all theſe Riches above Ground, can boaſt a greater Wealth below. But to clear up all this, let us now enter a little into Particulars.

On the Eaſt-Side it has that noble River *Tibiſcus*, or the *Tibiſſe*, riſing at the Foot of the *Carpathian* Mountain, in the Country of *Maromorus*, and being increaſed by the Waters of the River *Mariſcus*, or *Mariſa*, and of ſeveral others, joins its Current with the *Danube* between *Waradin* St. *Peter*, and *Belgrade*. This River carries vaſt Quantities of Stone Salt from the Salt Mines of *Hungary* and *Tranſilvania*, and ſo by the *Danube* to all Places as far as *Preſburgh*, (it being not permitted to be carried higher, that it may not obſtruct the Sale of the *Auſtrian* Salt) a conſiderable Quantity of the ſame Salt being carried down the *Danube*, and ſo by the River *Moravia* into *Servia*, and other Countries adjacent. On the Weſt-ſide is the River *Rab*, (*Arabo*) which has its Riſe in *Styria*, and being in its Paſſage augmented by the Waters of the *Lauſſniz*, *Pinca*, *Guncz*, and other Rivers, falls into the *Danube* near *Raab* or *Javrinum*. The late Defeat of the *Turks* at St. *Gothard* near this River, has rendered its Name famous to Poſterity. Upon the South-ſide are two very conſiderable Rivers, the *Dravus* or *Drave*, and the *Savus* or *Save*. The firſt has its Source in the Country of *Saltſburgh*, (Part of the ancient *Noricum*) and after a Courſe of three hundred Miles through *Carinthia* and *Hungary*, diſcharges itſelf into the *Danube* near *Erdoed* or *Teutoburgum*. At its Entrance into *Hungary*, it is joined by the long River *Mur*; but a great Way before that, even near its Source, it is a conſiderable River. The *Save*, the ſecond noble River on that Side, has its Spring in *Carinthia*, and being augmented by the Acceſſion of many other Rivers, after a Courſe of three hundred Miles, joins with the *Danube* near *Belgrade*. It is a very beautiful Stream even at *Crainburgh* (*Carnodunum*) an handſome Town not far diſtant from the Head-ſpring; which is ſo conſiderably enlarged afterwards, that it contains ſeveral remarkable Iſlands, as that of *Metubaris*, on the Weſt-ſide of *Sirmium*, and that of *Seſſeck* (*Segeſtica*) near *Zagabia*, whereupon was anciently built a ſtrong Fortreſs, unto which the *Romans* uſed to carry their Proviſions, and other Neceſſaries from *Aquileia*, and ſo by Land to *Nauportus*, for the Uſe of their Forces in theſe Provinces. Into the fertile Plains between theſe two Rivers, *viz.* the *Drave* and the *Save*, *Solyman the Magnificent* retired from before *Vienna*, and ſo farther to *Belgrade*. On the North-ſide of *Hungary* are the Rivers riſing from the *Carpathian* Hills, which are the Boundaries betwixt that Kingdom and *Poland*, *viz.* the River *Gran*, which falls into the *Danube* over-againſt *Gran* or *Strigonium*; the River *Vagus* or *Waag*, which joins with the *Danube* near *Commorrah*: It is generally conceived to equal the *Po*, in *Italy*: This I am ſure of, that at *Frieſtadt* (above fifty Miles before it runs into the *Danube*) it is already a conſiderable Stream, and has a long Bridge over it; and another very near to its Source at *Trenſchin*, a handſome Town, famous for thirty-two Springs of hot and Mineral Waters. Beſides theſe, that great and famous River the *Danube* paſſes through *Hungary*, not any one Province having ſo large a Share of this River, as this Kingdom: For taking this River from the City of *Ulm* in *Suabia*, (where it begins to be navigable) it paſſes by *Ingolſtadt*, *Ratiſbon*, *Straubing*, *Paſſau*, *Lintz*, and *Vienna*, unto *Preſburgh*; from whence it continues its Courſe for at leaſt three hundred Miles through *Hungary*, before it comes to *Belgrade*. Not to mention here its ſmoother Paſſage along the Shores of *Servia*, *Bulgaria*, *Wallachia*, and *Moldavia*, and its Diviſion into many Mouths, by which, after it has received into its Channel above ſixty great Rivers, and, by a modeſt Computation, kept its Courſe for fifteen hundred Miles, it diſcharges into the *Euxine* or *Black Sea*; thence it is viſible, that in reſpect of its different Parts, it might well be mentioned by a double Name by the Geographers, *viz.* by that of *Danubius*, and *Iſter*. *Strabo* aſcribes that Name unto it below its Cataract, or Water-fall, near *Axiopolis*, in the inferior *Mæſia*, or *Bulgaria*; whereas *Appian*, and moſt modern Authors, begin it, at its Confluence with the *Save*, near *Belgrade*.

Beſides theſe large Rivers, it has divers others, *Fluvii non ignobiles*, as *Pliny* very juſtly ſtiles them, *viz.* The *Sarvizza*, or *Orpanus*, riſing near *Eſperies*, (*Veſprinium*) and paſſing by *Stulweiſſenburgh* (*Alba Regalis*) falls into the *Danube*. The River *Walpo*, or *Vulpanus*, which has its Riſe near a Town of the ſame Name; we paſs'd over it by *Walcovar*, and the River *Boſneth*, or *Bacunthus*, which empties itſelf into the *Save* not far from old *Sirmium*.

2. Moſt of theſe great Rivers are covered with long

Bridges. The Bridge of Boats over the *Danube*, betwixt *Strigonium* and *Barchan*, is the firſt upon this River after you come from *Vienna*. I ſaw alſo the Ruins of a Stone-bridge, upon the Shore of St. *Andrew*'s Iſland, by *Virovicbitz*; but the *Turks* now-a-days neglect thoſe Bridges, inſtead of which they make Uſe of Bridges of Boats, which they find more uſeful, and contrive ſo conveniently, that they may with Eaſe open a Paſſage for Veſſels that come that Way. Such a Bridge of Boats is betwixt *Buda* and *Peſt*, over the *Danube*, being above half a Mile long; and if *Sigiſmund* had lived to effect his Deſign of building a Stone Bridge in that Place, no Bridge in *Europe* could, in all Probability, have compared with it.

Colocza, formerly an Archbiſhop's See, has alſo a Bridge; and near *Walcovar* is another over the River *Walpo*. But the Bridge of *Eſſeck* (anciently *Murſa*) built partly over the *Drave*, and partly over the low marſhy Grounds and Fens, juſtly challenges the Precedency before the reſt: It is five Miles long, with Towers upon it at each Quarter of a Mile, being handſomely railed on both Sides, and ſuſtained by large Piles of Wood, nine or ten in a Rank for each Arch. Count *Nicholas Serini* burnt that Part of it which was built over the *Drave* in the laſt *Turkiſh* War, inſtead of which, the *Turks* have laid a Bridge of Boats a little below the other, which I paſs'd in 1669. Here it was the unfortunate King *Lewis* of *Hungary* engaged with the *Turks* under *Solyman*, which coſt him his Life. In ancient Times there were likewiſe many Bridges over that Part of the *Danube*, known generally by the Name of *Iſter*. *Darius* King of *Perſia* made a Bridge of Boats over that Mouth of the *Iſter*, called *Oſtium Sacrum*: And, according to *Nicephorus*, *Conſtantine* built a Stone-bridge over it; but that admirable Bridge built by the Emperor *Adrian*, (if we may give Credit to *Dion* the Hiſtorian) ſurpaſs'd all the reſt. Some of its Ruins are to this Day to be ſeen near *Severin*, about twenty *Hungarian* Leagues from *Belgrade*. It conſiſted of twenty Piles of ſquare Stone of one hundred Foot high, beſides the Foundation of ſixty Foot broad, the Diſtance betwixt each of them being one hundred and ſeventy Foot, and joined by Arches; with this Inſcription:

PROVIDENTIA AUG.
VERE PONTIFICIS VIRTUS ROMANA
QUID NON DOMAT? SUB JUGUM ECCE?
RAPITUR ET DANUBIUS.

And for an everlaſting Memorial, many Coins were ſtamp'd in Silver with this Inſcription, *DANUVIUS*.

3. Not any River, that I know of, has ſuch large and well-peopled Iſlands as the *Danube*; as the Iſle of St. *Andrew*'s, betwixt *Vicegrad* and *Vacia*: Another lies a little below *Buda*, againſt the Weſt-ſide of which ſtands *Adom*, forty Miles long, and containing many Villages; another oppoſite to *Mohatz*, and another at the Confluence of the *Drave* and the *Danube*, and another new one near *Belgrade*, where forty Years ago there was not the leaſt Footſteps of an Iſland to be ſeen: And if the River *Leyta* be the Boundary of *Auſtria*, the Iſle of *Schutz* (*Inſula Cituorum*,) excells all the others, being well peopled, and full of good Villages, beſides divers conſiderable Towns, ſuch as *Commorrah*, *Samarien*, &c. Another Thing is obſervable in the *Danube*, that no River whatever, at ſuch a Diſtance from its Mouth, can boaſt of ſuch conſiderable Naval Engagements as this; the Emperor keeping his Gallies at *Vienna*, *Preſburg*, and *Commorrah*; as the *Turks* do theirs at *Strigonium*, *Buda*, *Belgrade*, &c. It ſeems not a little ſurpriſing, when we read, that *Mahomet*, at the Siege of *Belgrade*, appear'd upon the *Danube* with 200 Gallies, and other arm'd Veſſels, which were ſo ſmartly engag'd by the Chriſtian Fleet, that beſides what were taken, the *Turks* were forc'd to ſet their own Veſſels on Fire, to prevent their falling into the Hands of the Enemy. The Chriſtians had a Fleet of twenty-four Gallies, and eighty other arm'd Veſſels, beſides Tenders and Ships of Burthen, at the Siege of *Buda*: And when *Solyman the Magnificent* lay before *Vienna*, the Imperial Admiral, *Wolfgang Hodder*, did a ſignal Piece of Service with his Veſſels; for coming out of *Preſburg*, he ſunk the *Turkiſh* Veſſels, which carried the heavy Cannon, intended for the battering the Walls. *Hungary* is alſo furniſh'd with ſeveral conſiderable Lakes, as the Lake *Balaton*, or *Platſee*, as they call it, (the *Volcæa* of the Ancients) extending a great Length between *Eſperies* and the River *Drave*, being guarded with ſeveral Forts, which have proved of great Uſe againſt the Incurſions of the *Turks*. The *Newſidler*-Sea, being ſeven *German* Leagues long, and three broad, having borrow'd its Name from the adjacent Town of *Newſidel*, a handſome Place, ſituate upon a Hill, with a ſmall ſquare Caſtle. This is the ſame mentioned by *Pliny*, under the Name of *Peiſo*; and the modern *Hungarians* call it *Terteu*, lying juſt half Way betwixt *Vienna* and *Sabaria*.

4. The vaſt Plain of *Pampus*, in *Paraguay*, in *America*, is famous for its Extent, being 2000 Miles long; I remember that famous Sea-Captain Mr. afterwards Sir *John Narborough*, told me, that there is all low Land from the *Plate* River, to the Middle of the Streights of *Magellan*. The great Plains of *Muſcovy* and *Poland*, are alſo famous throughout *Europe*; however, theſe are intermix'd with Trees, and ſometimes whole Woods, whereas the Plains of *Hungary* are clear and open; and, if compared with our *Engliſh* Plains, as of *Saliſbury*, *Lincoln*, and *Newmarket*, exceed them as far as a full-grown Man does a Child; ſuch are the Plains of *Auſtria* from *Vienna* to Mount *Simmaren*, upon the Frontiers of *Styria*. I myſelf travelled from *Vienna* to *Belgrade*, through one continued Plain, for 400 Miles, without any Eminencies, except one inconſiderable Wood near *Bacna* and *Shilberg*, beyond *Dotis*: And this Plain, taken from its firſt Beginning, *viz.* at Mount *Kalenburgh*, (*Cetius*,) two *German* Leagues Eaſtward from *Vienna*, and ſo beyond *Belgrade*, along the North-ſide of the *Danube*, to the very Frontiers of *Wallachia*, exceeds by much that renowned Paſſage from *Labor* to *Agra* in the *Indies*. It is true, *Upper Hungary* has Abundance of Woods and Hills, yet are theſe intermingled with large Plains. The Levelneſs of *Hungary* proves a conſiderable Conveniency for Travellers, who are carried in open Chariots, carrying two Men beſides the Driver, drawn by two or three, and ſometimes four Horſes a-breaſt. *Hungary* has more large Cities upon the *Danube* than any other Province; for among the ten conſiderable Cities which are ſeated from *Ulm* unto *Belgrade*, four, and thoſe very large ones, belong to *Hungary*, *viz. Preſburg*, *Strigonium* or *Gran*, *Buda*, and *Belgrade*; unto which if you add *Peſt*, it makes up the Fifth.

5. All the Rivers and Lakes of this Country furniſh them with vaſt Quantities of Fiſh: The River *Theſſe* is ſo famous for its Plenty of Fiſh, that they have a common ſaying, *That one Part in three conſiſts of Fiſh.* And the *Budziack*, which falls into the *Theyſſe* near *Tockay*, is ſo full of Fiſh, that the Country People ſay, *It ſmells of Fiſh*; being to be underſtood of the dry Summer Seaſon, when its Waters are very low; though (as I was credibly inform'd by a certain Officer) it is thirty Fathoms broad, and $8\frac{1}{5}$ deep; but being of this Figure V, he told me, it could not be well fiſh'd with Nets. The *Danube* alſo affords a plentiful Share of Fiſhes, as *Trouts*, *Perches*, *Carps*, the largeſt and fineſt I ever met with; and beſides many others, a certain Fiſh called *Coppen*, or *Capito*; a *Biſcurne*, a Kind of *Lamprey*, a *Grundel*, or ſpotted Kind of *Cobites*, with ſix Beards, two ſhort, and four longer; another Fiſh, exceeding in Bigneſs a Pike, call'd *Scheyden*, the *Silurus* of *Geſner*, and at certain Seaſons great Numbers of *Huſones*, call'd by them *Hauſons*, which are ſometimes twenty Foot long, a delicious Fiſh, not unlike a *Sturgeon*. There are ſet Fiſhing-places, and peculiar Store-Houſes for that Uſe upon this River, the higheſt thereof is above *Commorah*, in the Iſle of *Schutz*; but the greateſt Plenty of Fiſh is near *Kilia* in *Wallachia*, where they take and ſalt many Sorts of Fiſh coming out of the *Euxine* Sea, and ſend them into the adjacent Countries. Theſe Rivers afford alſo great

Plenty of Water-Fowl in the Winter, and among the reſt *Pelicans*, but I never ſaw any Swans upon the *Danube*.

6. The Land here affords the like Plenty of Proviſions of all Sorts, but eſpecially of Bread and Wine, their Bread being as good as any in *Europe*, made light by kneading for a conſiderable Time; and that ſo cheap, that you may buy as much here for Two-pence, as we generally do for Twelve-pence in *England*; the ſame being to be met with in the *Turkiſh* Dominions in theſe Parts. Their Grapes are both large, and of a luſcious Flavour, among which thoſe of *Virovichitz*, near *Vacia* excel the reſt; their Vines are very noble, witneſs thoſe of *Tockay*, which are in great Requeſt; and the pleaſant and rich Wines of *Sirmia*, in the Southern Parts of *Hungary*; the Vines of this Province having been planted firſt by the Emperor *Probus*, near Mount *Almus*, or *Arpataro*. At *Vienna* are no leſs than thirty Sorts of Wine to be ſold. Neither are the *Hungarians* at all negligent in improving their Grounds by Huſbandry. I remember that in *February* I ſaw every Night great Fires in the Country, occaſioned by the Burning of the Stubble and old Graſs, which rendered the Ground more fertile againſt the next Seaſon. Inſtead of our Barns, or Hay, and Cornſtacks, they uſe deep and ſpacious Caves under Ground, whither they retire alſo with their Families, in Caſe of a ſudden Inroad from the *Turks* or *Tartars*. They have vaſt Plenty of Hares and Deer, as alſo of all Sorts of Poultry, Partridges, Pheaſants, *&c.* vaſt Store of Sheep, having in ſome Places long ſpiral Horns, and long curl'd Wool; of Oxen ſuch prodigious Numbers, that, according to a well-grounded Computation, they ſend to *Germany*, *Italy*, and other Parts, above 100,000 yearly. They have alſo good Store of Bouffles, which are very uſeful to them, eſpecially in ploughing ſome ſtiff Grounds. Neither do they want Horſes, ſome of which are pretty large, but generally ſmall, though exceeding ſwift; I ſaw above 1000 of them belonging to the Village of *Lower Sene*, or *Senia*, near *Commorrah*.

7. Their Language is peculiar to themſelves; I heard a Miniſter praying and preaching in a Church at *Bitchka*, and tho' he that was with me was very well verſ'd in the *Sclavonian*, *German*, *Turkiſh*, Vulgar *Greek* and *Italian*, yet could he not find the leaſt Affinity in it, with any of thoſe beforemention'd Languages. The ſame we obſerv'd in the *Albanian* Language, in the Northern Part of *Epirus*, and Weſt of *Macedonia*, where indeed the *Sclavonian* is uſed by ſome, but their own Language in common Converſation among themſelves, could not be underſtood by the beſt Linguiſts, both *Chriſtians* and *Turks*, that travell'd along with us. Thus, in ſome Parts of *Hungary*, the *Sclavonian* is much in Uſe; I remember that at *Frieſtadt* (call'd *Colgotz* by the *Hungarians*) I heard them preach in *Sclavonian* in the Church of the Town, but the *Franciſcans* preach'd in *Hungarian*. This Remoteneſs of their Language from others, makes them much addicted to foreign Languages, eſpecially the *Latin*, which moſt of the Gentry and Soldiery ſpeak fluently enough, and there is ſcarce a Coachman, or Footman, but what underſtands as much of it as will ſerve to make him underſtood; this makes the *Latin* Tongue very uſeful through all *Hungary* and *Tranſilvania*; but beyond *Belgrade*, the *Sclavonian* is the univerſal Language; it being certain that you may travel with the *German* and *Sclavonian* from *Hamburgh* to the frontiers of *Tartary* and *Conſtantinople* itſelf; the *Sclavonian* being generally ſpoken in *Servia*, *Bulgaria*, *Romania*, and Part of *Macedonia*, beſides in many other Parts; ſo that a Man may make Shift to paſs with this Language from the *Adriatick* Shore in *Dalmatia*, unto the *Tartarian Ocean*. It is ſcarce to be ſuppos'd, that in a Country ſo near unto, and ſo much expoſed to the Violences of a barbarous Neighbour, I mean the *Turks*, there ſhould be any Seminaries of Learning, there being no Univerſity in thoſe Parts beyond *Vienna*; and though of old they have had many learned Men, yet theſe had their Education in foreign Parts, as had of old St. *Jerom*, and St. *Martin*; and thoſe Perſons of Quality in *Hungary*, who intend to breed up their Children to Learning, ſend them now-a-days to *Vienna*, *Breſlau*, *Prague*, and ſome other Univerſities in *Germany*. At preſent there is a *Gymnaſium*, or ſmall Univerſity at *Schemnitz*. The *Hungarians* boaſt however of their once ſo famous Library of *Buda* founded by their King *Matthias Corvinus*, the Son of *Hunniades*, about 200 Years ago, conſiſting of ſeveral Thouſands of Books, and among them many *Greek* and *Latin* MSS. not to be purchaſed; Part of it was carried off into *Turkey*, after *Solyman* had ſurprized that City, and the choiceſt thereof procured afterwards for the Imperial Library at *Vienna*, when *Cuſpinianus* was Keeper thereof; many of theſe Books being mark'd with the Arms of *Corvinus*, viz. *a Crow bearing a golden Ring in his Beak*; theſe, with the ſucceeding Additions of *Buſbequius*, *Wolfgangus*, *Lazius*, *Fugger*, &c. together with the choiceſt Manuſcripts brought thither by *Petrus Lambecius*, the preſent Library-Keeper, from the *Ambroſian Library* near *Inſpruck*, are Part of the 80,000 Volumes mentioned in the Imperial Library; of which I had the favour not only to ſee the rareſt Manuſcripts, and other Rarities, but alſo to have ſeveral of the beſt Books to my Lodgings; and at my coming away, the ſame learned Perſon preſented me with a Catalogue of ſome hundreds of *Alchemical* Manuſcripts, with an Offer to have any of them brought to *England*, or to be tranſcribed at *Vienna*. There were lately about 400 Books (the Remnants of the *Corvinian* Library) left at *Buda*, but careleſsly kept by the *Turks*, and were conſumed in the great Fire that happen'd there, in 1669.

8. The *Hungarians* have a moſt profound Veneration for their Crown, which, they tell you, was ſent to their King *Stephen* by *Pope Benedict* VIII. being admoniſh'd by an *Angelical Apparition* to ſend it to *Stephen*, and not to *Miſca* the then King of *Poland*, his Competitor: Hence it is, that they have always been ſo careful to preſerve it, as thinking the Fate of the Kingdom to depend on the Poſſeſſion or Loſs of it. Formerly it was kept in the Caſtle of *Vicegrad*, but at preſent in that of *Preſburg*. This Crown has alſo a moſt peculiar Figure, being a very low Crown, with a Croſs upon it, encloſed with four Turnings up like Leaves, one whereof is as large as two of the others. As it is a hard Matter to get Sight of the Original, ſo I was forced to be contented with the Sight of the Model thereof, in the Treaſury of the *German* Emperor *Leopold*, exactly made after the Faſhion of the *Hungarian* Crown of Gold, and beſet richly with precious Stones, perhaps richer than the Original. Tho' the *Hungarians* want neither Inclination to or Abilities for Learning, yet have they generally been moſt addicted to Martial Exploits, even to the Clergy, witneſs that unfortunate Battle of their King *Lewis*, near *Mohatz*, in which ſix Biſhops were ſlain with that Monarch. Some are of Opinion, that the famous Poet *Ovid* being recall'd from his Baniſhment at *Tomos*, near the *Euxine* Sea, died at *Sabaria* in *Hungary*, in his Return Home; where they ſay, his Tomb was found, with this Epitaph made by himſelf:

Hic ſitus eſt vates quem Divi Cæſaris ira,
Auguſti *Patria* cedere juſſit humo.
Sæpe miſer voluit patriis ſuccumbere terris,
Sed fruſtra, hunc illi fata dedere locum.

9. In *Hungary* I alſo firſt obſerved the *Pyrrhical Saltation*, or warlike Way of Dancing, which the *Heydukes* perform by dancing with naked Swords in their Hands, advancing, brandiſhing, and claſhing the ſame, turning, winding, elevating, and depreſſing their Bodies with ſingular Activity, ſinging at the ſame time to their Meaſures, after the Manner of the *Greeks*.

The great Deeds of *Attila*, King of this Country, and his numerous Armies, together with that memorable Battle fought againſt the *Roman* General *Ætius* (who was a *Myſian* or *Servian*, by Birth) in which 200,000 were ſlain, is ſufficiently famous in ancient Hiſtories; and how far they extended afterwards their Conqueſts over their Neighbours, is teſtified by the Banners carried at the Coronation of their Kings, *viz.* that of *Hungary*, *Dalmatia*, *Croatia*, *Sclavonia*, *Galliſia*, *Ruſſia*, *Servia*, *Bulgaria*, *Boſnia*, and *Ludomiria*; and it muſt be confeſs'd, to the everlaſting Honour of the *Hungarians*, that

that of all other Nations they have put the longeſt Stop to the victorious Arms of the *Turks*; and had it not been for their inteſtine Diviſions, which the *Turks* have known very well how to improve to their Advantage, it is more than probable the *Ottomans* would never have been able to penetrate ſo deep into this Country as they have done; notwithſtanding which, a very conſiderable Part thereof remains to this Day under the Emperor's Juriſdiction as King of *Hungary*, *viz.* almoſt all *Upper Hungary*, from *Preſburgh* unto *Tockay* and *Zathmar*; and in the *Lower Hungary* there are ſtill in the Poſſeſſion of the Chriſtians, (beſides divers other Places of Note) the three ſtrong Bulwarks of Chriſtendom, *viz. Raab*, *Commorrah*, and *Leopoldſtadt*, of which I took a full View, the laſt being erected ſince the Loſs of *Newhauſel*, and fortified after the ſame Manner. It is ſeated on the Weſt-ſide of the River *Waag*, oppoſite to *Frieſtadt*; its Fortifications, which were begun in 1665, conſiſt of ſix regular Baſtions and Ravelins, and were not quite finiſhed in 1669, when I was there.

10. Theſe Quarters are famous in ancient Hiſtories for the Preſence, Birth, Death, and great Actions of many *Roman* Emperors; not to ſpeak here of *Trajan*, *Caracalla*, *Galienus*, *Conſtantius*, and others; the Emperors *Aurelianus*, *Probus*, *Gratianus*, and *Maximianus*, had *Sirmium* for their Birth-places; and *Claudius Gothicus* died in or near it. *Jovianus* and *Valentinianus* were *Pannonians* by Birth, and *Ingenuus*, Governor of *Pannonia*, was ſaluted Emperor by the *Mæſian* Legions, as was *Vetranio* in the ſame Country. When *Photinus* was Biſhop of *Sirmium*, a General Council was held in that Place. The *Roman* Armies being ſo frequent in this Country, no doubt but they brought Abundance of their Copper, Silver and Gold Coin hither, of which I obtain'd a good Number at *Petronel*, of old *Carnuntum* in *Pannonia*, and with many more at *Sene*, or *Senia*, near the *Danube*. An *Armenian* Merchant, with whom I lodged at *Belgrade*, furniſhed me with a good Quantity of *Roman* Coins at my Return, which he had got at *Old Buda* or *Sicambria*, at *Old Sirmium*, in the Country now called *Schremnia*, and at *Murſa* or *Eſſeck*.

11. Near *Deva*, *Lyſimachus* King of *Macedon* and *Thrace*, is ſuppoſed to have kept his Court, in the Neighbourhood of which that unparallel'd Maſs of ancient Golden Coins was found, under the Ruins of an ancient Caſtle: For a ſtrong Current of Water having been forced that Way by long continued Rains, which waſhed away the Rubbiſh that had covered thoſe Golden Medals, and the Glance of this coſtly Metal having drawn thither many of the neighbouring Peaſants, they diſcovered theſe Medals, weighing two and three Crowns a-piece, having on one Side the Image of *Lyſimachus*, and on the other Side a *Victory*; under theſe Medals they alſo found a Golden Serpent, which General *Caſtalde* ſent unto *Ferdinand*, who had alſo 1000 of theſe Medals, beſides 300 *Caſtalde* had for his Share; of which there were collected, (after the Peaſants had taken up a vaſt Quantity) to the Value of 10,000 *l.* So that there was ſcarce a Man found hereabouts, but what had ſome of them, ſo infinite was the Sum. This Caſtle was ſuppoſed to have been ſome Time the Reſidence of King *Lyſimachus*, and this Coin remained here from that Time; it being a received Cuſtom among the Ancients, for ſuch as buried their Treaſure, to place Serpents there, as the Symbol of a faithful Keeper. Among other Medals, there were alſo found two Medals of Gold, one of *Ninus*, the other of *Semiramis*, which were preſented to the Emperor *Charles* the Fifth. As I paſs'd through the old *Roman* Towns, the Inhabitants brought me ſeveral Sorts of old Coins, which they term *Heathen-Money*; and in *Boſnia* and *Servia* the *Armenians* drive a great Trade with them, and ſend them by the Way of *Raguſa* into *Italy*. Among other Coins I found one of Copper pretty frequent here, but not eaſily found in other Parts. It was a Coin of the Emperor *Julius Philippus*, having on one Side the Head of *Philippus*, with this Inſcription, IMP. C. M. JUL. PHILIPPUS. AUG. and on the Reverſe a Woman between a Lion and a Bull, with this Inſcription, P. M. S. COL. VIM. AN. VII. which may be; *Provinciæ Mæſiæ Superioris Colonia Viminacium Annona Septimo data*; *Viminacium* being a *Roman* Colony in *Mæſia Superior*, (now *Servia*) ſuppoſed to be *Singidunum* or *Senderin* upon the *Danube*, at the Mouth of the River *Morava* or *Maroſh*. The Lion and Bull ſeem to declare the Fitneſs of the Soil for Agriculture, and the Warlike Temper of the People, and by theſe two Animals ſitting peaceably together, the Prudence of *Philippus*. *Annona Septima*, queſtionleſs, intimated the ſeventh Diſtribution of Corn by *Philippus* the conducting of which was committed to the *Legio* XVI. *Frumentaria*.

12. The Habit of an *Hungarian*, for its Conveniency, eſpecially in Warlike Exerciſes on Horſeback, is made Uſe of by all the neighbouring Nations, as the *Croatians*, *Sclavonians*, and the *Turks* themſelves, living near the Frontiers, though otherwiſe very nice in this Point. The *Hungarians* delight generally in Blue, Yellow, Green, and Purple Cloth, Black being a Colour rarely to be met with here, the Prieſts themſelves being clad in long purple Garments. Two Sorts of Weapons are moſt common among the *Hungarians*, viz. a Kind of Iron Mace, called *Catſhan* by them, with a round Iron Head, with Furrows in it, and Spaces cut away to render it the more light; the other they call *Balta*, being a Kind of Hatchet, with a Head ſomewhat like a Hammer, but broader, and at the End makes the Shape of the Letter *Delta*.

13. The Country of *Tranſilvania* was formerly a Part of the Kingdom of *Hungary*; but as I propoſe to give only a ſummary Account of the Place and its Inhabitants, I ſhall not meddle with its ancient Hiſtory. It is bounded on the North by the *Carpathian* Mountains, on the South by the Principality of *Walachia*, on the Eaſt by *Walachia* and *Moldavia*, and on the Weſt by the Kingdom of *Hungary*. I believe there is no Country in the World ſo nearly equal in Length and Breadth, each being about one hundred and forty *Engliſh* Miles, it may be very truly ſtiled a Country of Wonders; for to Travellers, who have ſeen the reſt of *Europe*, it appears altogether aſtoniſhing. The Air is temperate, and, generally ſpeaking, wholſome, the Soil wonderfully fruitful, the Water commonly but indifferent, as being frequently tinctured with Minerals, or, which is worſe, with Allom or Arſnic. There run through it four great Rivers, *viz.* the *Mariſcus* and the *Samos*, both which fall into the great River *Theyſſe*, the *Aluta*, which diſcharges itſelf into the *Danube*, and the *Chryſa*, which the *Germans* call the *Kruſch* from its Windings, in which, I verily believe, it exceeds the *Meander* itſelf, for one is obliged to paſs it thirty Times in half the Number of Miles.

The Country is finely chequered with Woods and Plains, Mountains and Vallies: There are many ſtrong Paſſes in it, and ſome of its Cities are naturally ſo well ſeated, that with the Help of very ſmall Improvements from Art, they might be rendered impregnable. To ſpeak of its Plenty is a Theme that might exerciſe the ableſt Pen; for it is extremely difficult to know where to begin, or when to leave off. The Wheat that grows here is the faireſt and fineſt in *Europe*, and ſo cheap, that, with Reſpect to the Subſiſtance of an Individual, it has hardly any Value: The Oxen in this Country are large, fat and fine, and their Fleſh wonderfully juicy and pleaſant; yet I queſtion whether one of them was ever ſold for an *Engliſh* Guinea, but from twelve to fifteen Shillings is the common Price; and yet, if I may be allowed the Expreſſion, they are the Staple Commodity of the Country, and are bought up for the *Auſtrian* and other Markets. They want not any other Kind of Cattle; and as for Hogs, they go in Droves like Sheep, are prodigiouſly fat, firm and well taſted; ſo that the Bacon of this Country is truly excellent. All Kind of tame Fowl are here both cheap and good; as for wild, they are ſo common and in ſuch Plenty, that they ſcarce bear any Price at all. Fiſh are not ſold in *Tranſilvania*, nor are you much troubled with the Sight of them, every Man, poor or rich, fiſhes where he pleaſes; and with what Inſtrument he pleaſes; if he takes more than will ſerve for a Meal, he throws them in again after chuſing the largeſt and the beſt, for nobody will touch a Fiſh that has been dead an Hour before it is dreſſed.

They have a very ſtrong ſerviceable Breed of Horſes, and beſides theſe, they have a wild Sort with Manes that reach almoſt to the Ground. As for their Wines, they are rich, ſtrong, and full-bodied, much ſuperior to thoſe of *Auſtria*, *Moravia* and *Walachia*, but inferior in Flavour to ſome of the Wines in *Hungary*. Honey and Wax they have in Abundance, and of the former they make a Mead, which, when it is long kept, is richer and ſtronger than moſt White Wines. In their Mountains are Mines of Gold, Silver, Steel, Iron, Lead, Copper, Quickſilver, Salt and Brimſtone.

As for the Inhabitants of this Country, to ſpeak of them diſtinctly would take up a Volume, and that Volume might be filled with Matter very inſtructive and entertaining. What I have to ſay however ſhall be contained in a few Words; there are four Nations that are look'd upon as Inhabitants of *Tranſylvania*. The firſt of theſe are the *Saxons*, who are ſuppoſed to be the Remains of the ancient *Dacians*; they have a Language peculiar to themſelves, and are governed according to their own Laws and Cuſtoms; the Capital of their Country is *Hermanſtadt*, which is a conſiderable Place; and beſides this, they have ſix other Cities, and amongſt them *Cronſtadt* and *Clauſenberg* are conſiderable Places. The Inhabitants of Towns are a civilized and good Sort of People, but the Plains are occupied by the *Heydukes*, who, in the Days of the Princes of *Tranſylvania*, were a Sort of Militia, and indeed for Strength, Activity and Valour, there are very few Nations that can compare with them. In Time of Peace they are Graziers, and live by Breeding, Feeding, and Selling of Cattle.

The *Siculi* inhabit the Northern Part of the Country towards the *Carpathian* Mountains; they are ſuppoſed to be Deſcendants from the *Huns*, and are as rugged and barbarous as the Country they dwell in; they reſemble the Highlanders of *Scotland*, or rather the old *Iriſh*, for they value themſelves upon their Nobility, and the meaneſt Creature in the Country inſiſts upon it, that he is a Gentleman of Birth. They too have ſeven Towns, ſuch as they are, are brave to a Degree of Madneſs, and contend for what they call Liberty, with a Fierceneſs that no Authority or Force has hitherto been able to tame.

The *Hungarians* have five Counties, and their Metropolis is *Alba Julia*, which is very far from being either a large or beautiful Place. Theſe People were much favoured by the *Ragotſki*'s, and other Princes of *Tranſylvania*, which encouraged them to make various Attempts upon the Privileges of the *Saxons*; nor were their Differences leſs frequent with the *Siculi*, ſo that no Country was ever more torn or diſtracted with civil Diſſentions than this. Each Nation had its Diet apart, and, which is ſtill worſe, the ſeven Cantons of the *Saxons* were independent of each other, and their Diets at *Clauſenburg* were in the Nature of States-General.

There is a fourth Nation in *Tranſylvania*, which live all over it, but without having Land, Property or Government; theſe are the *Cingars*, in plain *Engliſh*, Gipſies; they had great Privileges from the Princes of *Tranſylvania*, pitched their Tents where they pleaſed, removed when they pleaſed, and did almoſt what they pleaſed; but the Race of theſe Vagabonds is almoſt extinguiſhed, I mean in *Tranſylvania*, for there are enough of them yet in the *Turkiſh* Dominions. They are without Controverſy the moſt arrant Scoundrels in the Univerſe, Atheiſts by Profeſſion, Thieves by Trade, and have only this ſingle Virtue, that they pretend to none. With all this, they are a lively, active and ingenious People, and, which is ſtill more extraordinary, when there is nothing they can ſteal within their Reach, they will be very induſtrious. Like our Gipſies they are very expert Fortune-tellers; and have ſuch Knowledge in Phyſiognomy, that they never fail to promiſe every Man or Woman that applies to them, what he or ſhe likes beſt, and pick their Pockets for their Pains; they are very ſucceſsful as *Quacks*, very ſkilful as Farriers, are good Blackſmiths, and the moſt able Tinkers in the World.

We have now ſhown the faireſt Side of the Picture, let us turn the Reverſe. As rich and as fine as this Country is, as healthy, brave and vigorous its Inhabitants, yet, whether they are the happieſt or the wretchedeſt People upon Earth, is a Queſtion one cannot eaſily reſolve. As for Want, that is a Thing unknown, but with Regard to fix'd Property, Lands, Farms, and what we call Eſtates, they are far from being common. As for the *Saxons*, their ſupreme Delight is Drunkenneſs; As fat Bacon is the only Diſh they deſire, upon which they pour as much Wine and Mead as their Stomachs will hold, and then ſleep ſixteen or twenty Hours till they are ſober. The *Heydukes* are the merrieſt Mortals in the World; they dance with their Swords drawn, and their Targets upon their left Arm, with inconceivable Agility; and the Strokes of their Bucklers, and the Claſhing of their Swords, correſpond with the Tune that is played; to which the Gracefulneſs of their Motion, and the Sweetneſs and Serenity of their Countenances, add ſuch a ſurpriſing Beauty to the Sight, as renders it extremely delightful. They have Muſick always at their Feaſts, drink in Tune, and keep Time by claſhing their Mugs. An Excurſion is their ſole Pleaſure, and Induſtry would certainly be very dreadful to them, if they had any Conceptions of it. But as they neither ſee it or hear of it, they fight, feaſt, and ſleep all their Lives long; in ſhort, they live without Care, and die without Thought.

But if a good Government could be eſtabliſhed in this Country, and the People brought under due Regulations, they might certainly become both rich and powerful, as it is not a fifth Part of their Land that is cultivated, nor one Tenth of their Mines wrought. Some Cloth they make, but it is coarſe, and only fit for their own Uſe; but one may gueſs what Induſtry would do in this Part of the World, by what one Baron *Leſley* in the Emperor's Service actually did; he employed twenty of his Soldiers as Drovers, and they at proper Seaſons of the Year carried Cattle to *Vienna*, by which, in five Summers, he acquired One hundred thouſand *Florins*; and having veſted his Stock in proper Commodities, ſent it to *Venice*, whither he repaired at the next Carnival, where he found his Capital doubled, with which he bought a noble Lordſhip in *Bohemia*, and being naturally a Man of Œconomy, and a good Maſter, made his Vaſſals happy, and lived himſelf with all the Magnificence of a Prince.

But notwithſtanding all this, the Towns in *Tranſylvania* are, generally ſpeaking, mean; the common People live in Huts; their Roads are bad at all Times, in wet Weather impaſſable; the People ſave nothing, and will rather abandon their Homes than pay Taxes; in ſhort, they are proud of a Plenty which they abuſe, and of a Kind of Liberty, which is worſe than any Sort of Subjection. They have all Sorts of Religions amongſt them without Morality, and, in the Midſt of the moſt valuable and ſaleable Commodities in the World, have few Manufactures, and little or no Trade. In ſhort, they are Barbarians that think themſelves the happieſt People in the World, and might be really ſo, if they would become civilized.

SECTION III.

Travels through *Hungary* into *Theſſaly*; a Deſcription of the City of *Lariſſa*, and of the *Grand Seignior's* Court there, with other curious Particulars; together with a Deſcription of other Parts of *Hungary*, more eſpecially of the Golden Mines, and ſome Remarks upon the adjacent Countries, then and now making Part of the Hereditary Dominions of the Houſe of *Auſtria*.

By the Learned Dr. EDWARD BROWNE.

1. *Introduction to this Section, including the Motives and Deſign of our Author's Journey.* 2. *He ſets out from* Vienna, *and arrives at* Petronal *the* Carnuntum *of the* Romans, *with an Account of the Coins, and other Remnants of Antiquity found there.* 3. *A Deſcription of the City of* Preſburgh, *the preſent Capital of the Kingdom of* Hungary. 4. *An Account of the City of* Raab, *and the Manner in which it was betray'd into the Hands of the* Turks. 5. *The City of* Comorrah *deſcribed, with an Account of ſome Antiquities found there.* 6. *A Deſcription of* Newhawſel *and* Senir, *with various remarkable Paſſages.* 7. *An Account of* Strigonium *or* Gran, *and of the Caſtle of* Vicegrade, *with ſome other Places in that Neighbourhood.* 8. *A copious Relation of the Baths, and whatever elſe is worthy of Notice in the Royal City of* Buda. 9. *A Deſcription of* Tolnor, Mohatz, *and* Zygetch, *and ſeveral curious Particulars.* 10. *An Account of the Town of* Eſſeck, *and of the famous Bridge near it, ſuppoſed to be one of the longeſt in the World.* 11. *Obſervations upon the Country and its Inhabitants from thence to* Belgrade. 12. *A Deſcription of that important City and Fortreſs.* 13. *The moſt remarkable Paſſages in the Author's Journey from thence to* Leſcovia. 14. *A Deſcription of that Place, and of the famous Mountain* Hœmus. 15. *The Author's Account of* Macedonia, *with ſeveral curious hiſtorical Remarks and Obſervations.* 16. *A Deſcription of the City of* Lariſſa, *and the Country about it.* 17. *The ſame Subject continued, more eſpecially with regard to Mount* Olympus. 18. *A Deſcription of the Grand Seignior's Perſon and Court.* 19. *Miſcellaneous Remarks, and, amongſt other Things, of the different Modes of Shaving.* 20. *The Manners of the People, and the Reaſon of their being handſomer than the* Macedonians. 21. *Of the Produce and Commodities of* Theſſaly, *and of the great Plenty of Proviſions.* 22. *Some Remarks on the vaſt Extent of the* Greek *Church.* 23. *A Continuation of the Author's perſonal Remarks in this Country.* 24. *The Manner of Travelling through the Grand Seignior's Dominions.* 25. *Of the great Miſeries indured by ſuch as are Slaves among the* Turks. 26. *Of their Manner of Burying, and of the many Tombs that are to be met with on the Roads.* 27. *A very copious Detail of the Cuſtoms and Manners of the* Turks, *with Remarks upon their good and bad Properties.* 28. *The Author's Journey from* Comorrah *to viſit the Mines.* 29. *A large Deſcription of the Mines at* Schemnitz, *and the Manner of working them.* 30. *Of their Produce, and of the Manner of purifying the Metal, when extracted from the Ore.* 31. *An Account of a Gold Mine loſt, and ſome other curious Particulars.* 32. *The Author's Journey to* Eiſenbach, *with an Account of the Baths there.* 33. *A large and curious Account of the Gold Mines at* Kremnitz, *their Produce, and Manner of working them.* 34. *The ſeveral Methods made Uſe of for ſeparating and cleanſing the Gold.* 35. *An Account of the Quickſilver and Copper Mines.* 36. *The Author's Journey to that of* Herrn-graundt, *and his Obſervations there.* 37. *An Account of a Vitriolate Water that turns Iron into Copper.* 38. *A very ſingular Account of the hot Baths at* Stubn. 39. *A Deſcription of the Salt Mines at* Eperies; *with ſome other remarkable Particulars.*

1. THE ingenious Author, in the Collection of his Travels which he publiſhed, has regarded rather the Relation between Places, and the natural Connection of Things, than the Order of Time, for with reſpect to this, his Journey to the Mines was prior to that which he made to *Lariſſa*. In following this Method, he ſought the Reader's Conveniency and Information, to whom it was of little Conſequence when he travel'd, provided he was well inform'd of what he ſaw. While the Doctor lived, his Rank in his Profeſſion, his high Reputation, univerſal Acquaintance and agreeable Converſation, gave his Travels the Vogue, and every body read them with Applauſe; but now they begin to grow a little out of Date, merely on the Score of their being made ſo long ago; and yet we have nothing better, or, to ſpeak the Truth honeſtly, nothing near ſo good.

Indeed, it is not at all probable that we ſhall ever meet with any Thing of the like Kind of equal Value; for in the firſt Place, Dr. *Browne* travel'd at a proper Age, not after paſſing a Year at the Univerſity, but after having paſſed with Applauſe through both Univerſities, and was in his twenty-ſeventh Year. In the next Place, he was a Man of great Learning, very well ſkilled in ancient Hiſtory, and a perfect Maſter of the *Greek* Language. We may add to this, that he was alſo acquainted with Phyſick, Botany, Anatomy, natural Hiſtory and Chymiſtry; which laſt ſeems to me to have been his favourite Study. But the main Recommendation of all remains yet behind; he did not travel for the Sake of Amuſement, and to kill Time, or as a Trader in Expectation of Gain, or in pure Obedience to a Father, who deſired, that Traveling ſhould ſet a Poliſh upon his Education; but he travel'd for the Sake of Knowledge, that he might employ his junior Years in procuring Materials fit for the Meditations of old Age; that he might viſit thoſe Countries with his Eyes, of which modern Books gave him ſo bad an Account; and that he might gratify his peculiar Inclination to the Study of Minerals, by inſpecting himſelf the moſt famous Mines of *Europe*. When he had executed his Deſign, and found his Head fraught with Knowledge ſuperior to that of other Men, and very conducive to the publick Good, he reſolved not to conceal it; and thus the Writing and the Publication of his

Book were both the Effects of that great and generous Turn of Mind, which firſt put him upon Traveling, not any mercenary Deſign of Advantage, or a Scheme of making his Court to any great Man by a flattering Dedication.

We cannot help, therefore, reading his Book with Satisfaction, becauſe, on the one Hand, we are certain that his Labours had no other Object than the Diſcovery of the Truth, and that he was a Man of too much Parts and too much Learning to be impoſed upon himſelf; beſides, in the Courſe of his Narration it appears, that he ſpared no Pains, and grudged no Expence in order to obtain an exact Acquaintance with whatever he thought it worth his While to enquire about; and as he took Time ſufficient to examine all Things carefully, and to ſet them down circumſtantially while he was abroad, ſo he did not haſten the Publication of his Book at home, till he had thoroughly digeſted as well as reviewed his large Collection of Materials. In a Word, he had all the Diligence of Sir *Philip Skippon*, all the Accuracy of Mr. *Ray*, and ſeems to have had a more extenſive and penetrating Genius than either of them, of which we ſhall receive indubitable Proofs in the Courſe of this Section. Thus much I thought due to the Author's Character, as well as requiſite to excite the Readers Attention, which having awaken'd by this ſhort and I hope not improper Introduction, we will now proceed to the Doctor's Narrative, as near as may be in his own Words.

2. After having paſs'd the Winter at *Vienna*, I met with a fair Opportunity to ſee the Grand Seignior's Court, which then, and a conſiderable Time before, reſided at the ancient and famous City of *Lariſſa* in *Theſſaly*. As I do not pretend to give you the Names of all Places through which I paſs'd, ſo on the other Hand you will find mentioned ſome which are not to be found in Maps, at leaſt not in any that ever I met with. Between *Vienna* and *Preſburgh*, the firſt Place worth my peculiar Obſervation, was the Town of *Petronel*, and *Haymburgh* Hill and Caſtle: The firſt is ſuppoſed to be the old *Carnuntum*, one of the ſtrong Holds of the ancient *Pannonians*, who, one hundred and ſeventy Years before our Saviour's Birth, bravely repulſed the *Romans* here, but were forced to ſubmit to the Power of *Auguſtus*, who made it a *Roman* Colony, and the Station of the *Legio* XIV. *Gemina*, and of the *Claſſis Iſtrica*; and by Degrees arrived to that Pitch of Greatneſs, that it became the capital City of all *Pannonia Superior*, comprehending all that Tract on the South Bank of the River *Danube*, wherein now are *Haymburgh*, *Dutch Altenburgh*, and *Petronelli*. Here I met with Variety of Medals, Inſcriptions, and the Ruins of a moſt noble Aqueduct, and the Remnants of a ſtately Fabrick, which I thought might have belonged to a Temple of *Janus*, but is generally ſuppoſed to have been a triumphal Arch, erected in Memory of a Victory obtained by *Tiberius*, in the ninth Year of our Saviour, over the *Pannonians* and *Dalmatians*. *Petrus Lambecius* has, beſides other Antiquities of this Place, given a Draught of the one Side thereof, and of the back Part I took a Draught myſelf. In this Place it was that the Emperor *Antoninus Philoſophus*, when engaged in a War with the *Marcomanni* or *Moravians*, reſided for three Years, and died at *Vienna* (or *Vindobona*.) And here *Severus* was elected Emperor by the *German* Legions. But this great City was laid deſolate by *Attila* the *Hunn*, there being nothing remaining now, where the old *Carnutum* ſtood, but ſome ruinous Foundations of the Houſes and Streets, ſcarce diſcoverable by the Eye.

Of *Roman* Coins there have been, and ſtill are, found ſuch Quantities, that even the Peaſants bring them to Sale, of whom I bought a good Number; and I remember, that Mr. *Donallan* an *Iriſh* Gentleman, my Fellow-Traveller, as we were viewing the Ruins of the ancient Foundations, ſtruck by chance a Silver Coin with his Foot out of the Earth.

3. *Preſburgh*, *Poſonium* and *Piſonium*, is pleaſantly ſeated on the North-ſide of the *Danube*, ten *German* Leagues to the Eaſt of *Vienna*, now the capital City of *Hungary*, under the Emperor's Juriſdiction, and, ſince the Surpriſing of *Buda* by the *Turks*, the Place of Convention of the Eſtates of that Kingdom, and ſince the Loſs of *Gran* (*Strigonium*) the Metropolitan City. Its Caſtle is very noble and ſtately, built of white Stone, on the Top of a Hill, where is now kept the ſo much eſteem'd *Hungarian* Crown. The Garden of the Archbiſhop is exceeding fair, the Walks, Grotto's, Labyrinths, and Fiſhponds, very noble, and the Figure of *Jeronymo*, well worth the Obſervation of a Traveller. In the Cathedral Church is interr'd the Body of St. *Johannes Eleemoſynarius*, Biſhop of *Alexandria*. Part of this Church is in the Poſſeſſion of the *Jeſuits*; the *Lutherans* have likewiſe a handſome Church here.

4. *Raab* or *Javrinum*, a ſtrong Frontier City, is ſeated at the Confluence of the Rivers *Raab*, the *Rabnits*, and the *Danube*. It has two Bridges, one laid over a double Ditch, leading towards *Auſtria*, and the other towards *Stulweiſſenburg*, or *Alba Regalis*. Its Fortification conſiſts of ſeven Baſtions and four Cavaliers or Mounts. 1. The Caſtle *Baſtion*, upon which ſtands the Governor's Palace. 2. The *Water Baſtion*, on the Side of the *Danube*. 3. The *Baſtion* of *the Holy Hill*. 4. The *Middle Baſtion*, to the Eaſt on the Land-ſide. 5. The *New Baſtion*. 6. The *Imperial Baſtion*; and, 7. The *Hungarian Baſtion*, facing the River *Raab*. Here the *Turkiſh* Governor was kill'd; when the Chriſtians ſurprized this City. It lies in an open and plain Country, there being no Eminency near it, except a ſmall Hill, which is undermined, ready to be blown up in Caſe of the Approach of an Army, for which Reaſon alſo a Spy Tower is built at ſome Diſtance, to give timely Notice in Caſe of Need of an approaching Enemy. *Sinan Baſſa* the *Turkiſh* General, under the Reign of *Achmet* III, after having loſt a vaſt Number of Men before this Place, and 12,000 in one Aſſault, took it by Compoſition, by the Treachery of Count *Hardeck* the Governor, who paid for it with his Head. But in a few Years after, it was recover'd by the Chriſtians, who ſurprized it in the Night-time, under the Conduct of Count *Swartzenburgh* and Count *Palfi*, who put all the *Turks* to the Sword. At *Raab* and *Comorrah* we were ſhown ſeveral Sorts of Warlike Inſtruments, *viz.* a *Morning-Star*, as they call it, being a Club ſet round with Spikes; uſed in the Defence of Breaches, and in aſſaulting of Towns; *Earthen-pots*, fill'd with ſtinking and combuſtible Materials, to throw in among the Enemy; a *Lehn Brader*, or Plank, ſet with Hooks, to be fix'd to the Out-ſide of the Works, cover'd ſlightly with Earth; a *Werf Kugel*, or Kind of Hand-Granadoe; a *Spaniſh Ritter*, or *Cheval de Friſe*, to be faſtened in the Earth, to keep off the Horſe, provided with long Iron Spikes on all Sides. At this Place the *Turkiſh Chiauſes* or Meſſengers are obliged to ſtay to receive their Diſpatches, the Court of *Vienna* being much peſter'd with them before that Order, as they were ſent continually with ſome inſignificant Meſſage or other from the Governors of the *Turkiſh* Frontier Places, for the Preſents Sake, which they expect at their Departure.

5. *Comorrah*, *Crumenum* or *Comaronium*, is a large and ſtrongly fortified Place, ſeated at the Eaſt End of the Iſle of *Schutz*, looking over the *Danube* and *Waag*. The ſtrongeſt fort is called the *Tortoiſe* from its Figure. After *Sinan Baſſa* had made himſelf Maſter of *Raab*, he was alſo for trying his Fortune againſt this Town; but being repulſed with great Slaughter in all his Attacks, he was for tempting the Fidelity of the Governor *Baron Brown*, under a Pretence of a Parly, unto whom he ſent five *Turks*, with very advantageous Offers; but this brave Man, though dangerouſly wounded, having firſt given them the Hearing, cauſed four to have their Heads cut off, which he put upon long Pikes upon the Bulwarks, and ſent back the fifth with this Meſſage; That he was miſtaken in his Perſon, if he judged of him by the Treachery of Count *Hardeek*; and that he might reſt aſſured, he would live and die in the Defence of the Place committed to his Charge by the Emperor. In the innermoſt Caſtle of *Comorrah*, I ſaw three very ancient Tombs, brought thither formerly from *Senia*, a Place of Antiquity not far off, two of which having Inſcriptions not to be met with in *Gruter*, I thought fit to inſert here.

On one of them:

MEMORIAE JULIAE EMERITAE QUAE
VIXIT AN ccc VALERIA MASCLENIA
FILIAE PIISSIMAE.

And on the Cover
D. M.

The Inſcription of another was this:

MUAL VALERIANI LEG IIII F L VIXIT AN
XLII ET MUALUL PIOE Q PUBL' FIL VIXIT
AN VIII SIM CONDITIS ULPIA PARATIANE
MARITO ET ULPIA VALERIA FILIA ꟻL
REDESTS.

D. M.

And on the Cover this following:

ITAΛMΥPIЄΥΨΥXЄIMЄTATIATROC

The third Tomb was of the ſame Figure, but without any Inſcription. Of ſome other Places, through which I paſs'd alſo the Year before, I ſhall ſpeak only *en paſſant.*

6. *Newhawſel,* call'd *Vywar* by the *Hungarians,* is ſituate by the River *Nitra,* not far from *Nitria,* a ſtrong Place, taken by Count *Zouches,* in the late Wars. *Newhawſel* is a regular Fortification of ſix Baſtions, in the Form of a Star. After Count *Forchatz,* the Governor thereof, had raſhly engaged with the *Turks* at *Barchan,* they laid Siege to this Place, and after a ſtout Defence made themſelves Maſters of it by Capitulation; though it is generally believed, that if the Viſier had not ſpent his Time and Men in this Siege, he might have put moſt of the Emperor's hereditary Countries into a great Conſternation, whereas the Emperor's Auxiliaries being join'd by that Time, the *Turks* receiv'd a ſignal Diſgrace near St. *Goddard,* the Loſs of which Battle procur'd a ſpeedy Peace. The *Turkiſh Baſſa* lives now in the Palace, formerly belonging to the Archbiſhops of *Preſburgh. Sene* or *Senia,* a Place of Note for many Remains of Antiquity found there now and then. Here, by the Favour of the *Byra* or Judge of the Place, I got a *Roman* or *Heathen* Key, as they call it, and ſeveral Sorts of Coins, ſome of Gold, and ſome *Intaglia*'s, ſome of which I preſented to *Petrus Lambecius.* The Inhabitants will have its Name to have been anciently *Apollonium,* but without any good Ground. In our Way betwixt *Raab* and *Datis,* we paſs'd in Sight of *Martinberg,* a ſtrong and handſome Town, ſeated upon a Hill. *Datis, Tata* or *Theodota,* twelve *Engliſh* Miles from *Comorrah,* has ſcarce any Thing remarkable, except its Caſtle, and ſome natural Baths near it. But to return into the Road; we were row'd from *Comorrah* in a Saick of twenty four Oars, the *Hungarians* rowing on one, and the *Germans* on the other Side; thus paſſing by *Sene, Neſmil,* and *Rodwan,* we came to *Motch,* the Frontier Place, where we were to ſtay for the *Turkiſh* Convoy, which being ready in the Morning, their Officers went aſhore firſt, and next our *Veyda,* or *Veyvod,* with the Interpreter, and Chief of the Company, with a ſlow Pace, and at Meeting ſaluted one another by ſhaking of Hands together; then delivering our Boat to the *Turks,* they faſtned it to their Saick, and ſent one into ours to ſteer it. At parting they ſaluted the Chriſtians with one Gun, and ſo with eighteen Oars row'd down the *Danube,* we carrying the *Eagle* in our *Flag,* and they the *Double Sword, Star* and *Half-moon.* The *Turkiſh Saick* having brought us to *Gran,* ſet our Boat aſhore, and ſo left us; the Governor took no Notice of us, but being reprimanded upon that Account by an *Aga,* who came from *Newhawſel* with four Troops of Horſe, we were ſoon diſpatch'd.

7. The City of *Gran, Strigonium,* or *Oſtrogon,* is ſituate on the South Side of the *Danube,* near its Confluence with the River *Gran*; it is divided into the upper and lower Town, each of which has its peculiar Walls, that of the lower Town commanding the *Danube.* The Hill of St. *Thomas,* which overlooks the Place, is alſo fortified with a Wall. Here are natural Baths of a moderate Heat. This was the Metropolitan City of *Hungary,* which gave Birth to St. *Stephen,* their firſt Chriſtian King, and King *Stephen* III. lies entomb'd here. This Place has endur'd many remarkable Sieges, having been often taken and retaken: It yielded in 1683, to the Duke of *Lorrain.* Oppoſite to it is *Barchan,* being join'd to it by a Bridge of Boats. From hence we paſſed to *Vicegrade* or *Vizzegrade,* having two Caſtles, the Upper Caſtle being ſeated upon a high Rock, where formerly the Crown of *Hungary* was kept. The lower Caſtle has been formerly a fair Structure. Here are alſo to be ſeen the Ruins of an ancient Fabrick of Arches of ſquare Stone. This Place, after it had been a conſiderable Time in the Hands of the *Turks,* was ſurrendered to the Duke of *Lorrain* in 1684. Oppoſite to *Vicegrade* lies *Maroz,* where there is a handſome Church, the Chriſtians living pretty well at Eaſe here, under the *Turks,* becauſe of its voluntary Surrender to them. Below this Place, we ſaw the large Iſland of St. *Andrew* in the *Danube,* and ſome Ruins of Stone upon the Shore of the Iſle, which the *Turks* told us were the Remnants of a Stone-Bridge. Below this, paſſing by *Virochivitz,* famous for its large and noble Grapes, we came to *Vacia,* formerly an Epiſcopal See, which has now two *Moſques* and one Chriſtian Church. It was taken by the *Turks* in 1541. and regain'd by the Duke of *Lorrain* in 1684, after a ſignal Defeat given the *Turks* near that Place, but being not tenable by Reaſon of ſome adjacent Hills, was quitted the ſame Year in Autumn.

8. We changed again our Convoy here, and we came to *Buda,* formerly the Capital City and ordinary Reſidence of the *Hungarian* Kings, and at preſent of a *Turkiſh Vizier,* who has ſeveral *Baſhas* under his Juriſdiction. This City is of a large Circumference, pleaſantly ſeated upon the *Danube,* divided into the *Upper* and *Lower-Town*; wherein are to be ſeen the Remnants of many magnificent Structures, built by the ancient *Hungarian* Kings, and eſpecially *Matthias Corvinus,* in whoſe Palace the *Vizier* now reſides. This had anciently three moſt admirable Statues of Braſs, of *Hercules, Apolio* and *Diana,* at its Entrance, which were by *Solyman* caſt into great Guns; the whole Palace, in all other Reſpects, not approaching to its ancient Glory; however, here are ſeveral handſome *Moſques* and *Caravanſera's.* On the Top of St. *Gerard*'s Hill is a Fort, which overlooks the Town and Country. But what *Buda* has moſt to boaſt of now-a-days, are its natural Baths, eſteemed the nobleſt in all *Europe,* both for the Largeneſs of their Springs, and the Magnificence of the Buildings; for negligent as the *Turks* are in their private Houſes, yet we found them moſt ſumptuous in their publick Structures, as their *Caravanſera's, Moſques, Bridges,* but eſpecially their *Baths,* bathing being in great Requeſt among them and all other *Mohammedans.*

There are here in all eight Baths, of which I took a View, during my Stay in this City, *viz.* Three towards the Eaſt and South-Eaſt Part of the City, in the Way to *Conſtantinople,* and five towards the Weſt End of the Town, in the Way to *Old Offen* and *Gran.* The firſt is a large open Bath, at the Foot of a rocky Hill, call'd *Purgatory.* The ſecond has a *Cupulo* on the Top, ſtands near the ſame Hill, but more into the Town. The third they call the *Bath of the Green Pillars* (tho' now they are red) over againſt a *Caravanſera*: The Spring is very hot, yet uſeful without the Addition of cold Water; it contains a petrefying Juice, which is to be diſcover'd on the Sides of the Bath and its Spouts, where it leaves a Gummy Stone behind it; and the Vapours of the Bath coagulated on the *Cupola,* the Irons reaching from one Column to another, and on the Capitals of the Pillars, form long Stones like Icicles, which you ſee hanging to all theſe Places. The Bath is of a circular Figure, ſet about with large Pillars ſupporting the *Cupulo,* which has divers Openings, for the free Paſſage of the Exhalations, notwithſtanding which, the Bath continues always as hot as a Stove. The Water is let out every Night after the Women have done Bathing.

The Baths on the Weſt End are, firſt, *Tactelli,* i. e. the *Table Bath,* being but ſmall, the Water whitiſh, and of a ſulphurous Smell; they both drink of, and bathe in it; what is drunk, is receiv'd from a Spout conveyed into the Bath; I gave a Piece of five *Sols* to a *Turk*, who holding it under the Spout, to let the Water fall upon it, and rubbing it in the mean Time with his Fingers, gilded it for me in half a Minute. The ſecond is *Barat Degrimene* or the *Bath of the Powder Mill*, ariſing in an open Pond near the High-way, and its Waters being mix'd with thoſe of the Pond, makes one Part of it of a whitiſh Colour, and clear in another, as likewiſe cold and hot in ſeveral Parts; being conveyed croſs the Highway, into a Powder-Mill, it becomes uſeful in making of Gunpowder, whence it got its Name. The third is *Cuzzoculege*, the *Little Bath*, or the *Bath of the Saint*, being kept by *Turkiſh* Monks. The Water near the Spring-head is ſo hot, as not to be fit for Uſe, but being conveyed through one Bath into another, becomes tolerable. The Water differs neither in Smell, Taſte, or Colour, from common Water, being without the leaſt Sediment, except that the Sides of the Bathing-Room are cover'd with a green ſpongy Subſtance. The fourth is called *Caplia*, a noble Structure, of an octogonal Figure, with a very handſome Bath in the Middle, ſurrounded with a Trench of Water to bathe the Feet in: On each Side it has a Niche, wherein is a Fountain. In the Anti-chamber, where the Cloaths are left, is alſo a beautiful Fountain, with a Stone Baſon; the Water of this Bath is alſo very hot, and not without a petrefying Juice. The fifth is the Bath of *Velibey*, the nobleſt of all the reſt, having a ſpacious Anti-chamber; the Bathing-room is alſo very capacious, high arch'd, and advanced with one great Cupolo in the Middle, juſt over the great round Bath, beſides four leſſer ones at the four Corners, over as many private Bathing Rooms, where the *Turks* take off all the Hair of their Bodies with *Pſilothrum*, mix'd with Soap, except their Beards. The middle Cupolo is ſupported by twelve Pillars, betwixt eight whereof are Fountains of hot Water, and between the reſt, Places to ſit down, where the Barbers and Bath-men attend. In each of theſe Places are two Stone Ciſterns, one for cold and the other for hot Water, to be mixed as every one thinks fit, the Water being not fit to be uſed without the Addition of cold Water: For the reſt, it has a ſtrong ſulphurous Smell, and contains a petrefying Juice. The Mornings are appointed for the Men to bathe in, and the Afternoons for the Women. If you have a Mind to bathe, you are brought into the Anti-chamber of the Bath, where being furniſhed with a Cloth and Apron by thoſe that attend, you lay by your Cloaths, and ſo enter the *Great Bath*, where ſitting down on the Side, or between the Pillars near a Fountain, you are well rubb'd, with your Hands and Arms ſtretch'd out, by the Barber, after which you bathe. If you pleaſe, or the Cuſtom of your Country requires it, you may have your Head ſhaved, and your Beard alſo, except the upper Lip; next, the Barber rubs your Breaſt, Back, Arms and Legs with a Hair Cloth, either ſitting or lying upon your Belly; then having waſhed your Head with Soap, and thrown cold Water upon you all over, you walk in the Steam of the Bath for ſome Time. This City is generally called *Offen* by the *Germans*; ſome trace the Original as far as to a Brother of the famous *Attila*, called *Buda*. And to confeſs the Truth, the Situation of this Place upon the Banks of the *Danube*, where it gathers its Water in one entire Channel, and that upon an eaſy Aſcent of riſing Hills, from whence there is a Proſpect out of many of the Creeks croſs the *Danube*, into a beautiful Country, and of the City of *Peſt*; ſo excellent a Situation, I ſay, added to the Advantage of its hot Springs, might well invite the Conquering *Huns* to prefer this Place for the Building of a City, before all their other conquered Countries. The City of *Buda* was the ordinary Reſidence of the *Hungarian* Kings, till it was conquer'd by *Solyman the Magnificent*, the 13th of *Auguſt* 1541. There is another Place called *Old Offen*, ſuppoſed to be that ancient *Sicambria*, where the *Sicambrian* Soldiers had their Quarters in the Time of the *Romans*. Here ſome Antiquities and Inſcriptions have been diſcover'd formerly.

Upon the Eaſt-ſide of the *Danube*, directly oppoſite to *Buda* ſtands *Peſt*, in a Plain, of a Quadrangular Figure. This City imparts its Name to the whole Country, or *Comitatus Peſthienſis*, (*Hungary* being divided into Counties like *England*) as is joined to *Buda* by a Bridge of Boats above half a Mile in Length.

I was ſomething ſurprized at firſt, when I ſaw the *Turkiſh* Women wear long Breeches, reaching almoſt down to their Feet. Over theſe they wear their Shifts, and over theſe, a Kind of a long Garment; their Head-dreſs covers their Faces, except the Eyes, almoſt like our Penitents. Whilſt we ſtaid at *Buda*, we took a View of one of the *Turkiſh* Convents, where we were entertained in a large Room, not unlike a Chapel, with Melons, and ſome other Fruit, by the Monks. The Superior, called *Julpapa*, *i. e.* Father *of the Roſe*, having a Girdle about his Middle, emboſſed before with a white Stone called *Galactites* or *Milk-ſtone*, bigger than the Palm of a Hand. They have a ſuperſtitious Opinion, that *Mahomet* turned a whole River of *Arabia* into a Kind of Stone. From the Houſe where we lodged, we had a fair Proſpect of the *Danube*, and were often viſited by divers *Chiauſes* (*Turkiſh* Meſſengers.) The Maſter of the Houſe being a *Raſcian*, was thought to hold a ſecret Correſpondence with a *Franciſcan* Frier of *Peſt*, and with ſome other Perſons of Note at *Comorrah*, *Raab*, and *Vienna*: We were alſo very civilly entertain'd by *Mortizan Ephendi*, who had been in Quality of Envoy-Extraordinary at the Court of *Vienna*, and would needs have me ſit upon a Stool, brought in for that Purpoſe, being ſenſible that their Way of ſitting croſs-legg'd would not be very agreeable to me. Among many other Queſtions, he aſk'd me, What was the King of *Poland*'s Name; and when I told him it was *Michael Wiſnowitſki*, he replied, *Michael* is a good Name, it is the Name of the greateſt Saint in Heaven, except *Mary*.

9. From *Buda* we travel'd by Land to the Eaſt, and paſſing by *Ham Zabbi Palanka* and by *Erzin*, came to *Adom*, call'd *Tzan Kurteren*, i. e. *Anima liberata*, by the *Turks*; which Name was given it by *Solyman the Magnificent*, becauſe here he made the firſt Halt with his Army, after his Retreat from *Vienna*. Hence we came to *Pentole* or *Pentolen Palanka*, which ſome are of Opinion was the old *Potentiana*, where the *Huns* were overthrown by *Macrinus* and *Tetricus*, the two *Roman* Generals. Some will have this to have happened near *Adom*. From hence we went on to *Fodwar* in Sight of *Colocza*, ſeated on the other Side of the *Danube* in the Road to *Temeſwar*, and ſo further by *Pax*, or *Paxi*, to *Tolna*, the old *Altinum* or *Altinium*, near which the *Huns* fought a ſecond Battle, and routed the *Romans* with the Loſs of 40,000 Men on their Side. It is inhabited by *Hungarians* and *Raſcians*, who are often at Variance. Thence we came to *Jeni Palanka*, where we paſs'd the River *Sarvizza* (or the *Urpanus*) which riſes near *Eſperies*, and paſſing by *Stulweiſſenburgh* (*Alba Regalis*) joins its Current below it with the *Danube*.

From thence, by *Setzar* to *Botoſeck*, and ſo to *Setz*, a large Town, near which we ſaw the Ruins of an old Caſtle upon a Hill, encloſed with Palliſadoes. Here is a new *Caravanſera*. Hence we went on to *Mohatz*, but before we came to this Place, paſſing by a ſmall Bridge over the Brook *Curaſſe*, we took a View of the Place where the unfortunate *Hungarian*, King *Lewis*, after the Loſs of the Battle near *Mohatz*, fought *October* 29, 1526, was plunged in the Flight with his Horſe in the Mud, and miſerably periſhed. His Body being diſcover'd by *Cotriſcus*, who was near him when he was drowned, to the *Hungarians*, it was taken up and buried at *Alba Regalis*, the Place of Sepulture of the *Hungarian* Kings. Near this Place we met with a *Caravan* of two hundred Perſons, under a Guard of *Janizaries*, and frequently upon the Road we ſaw numerous Droves of Oxen driving towards *Vienna*, belonging to the Eaſtern Company there, who, as they have the Monopoly of Oxen in that City, ſo they have Liberty to buy them in the Grand Seignior's Dominions. The ſame Day we ſaw the City of *Five Churches* (*Quinque Eccleſiæ*) and *Zigeth* to the Right of us. This laſt is a ſtrong Place, ſituate on the Side of a Fen, in which there is an Iſle, and beyond it a Caſtle. This Place is famous for the unparallel'd Reſiſtance made here by Count *Serini* againſt the *Turks*; for, after having been forced out of the Town, he retired into the Iſle, and from thence to the Caſtle, where, after having repulſed the *Turks* in ſeveral Aſſaults, he ſallied out with twenty four Men, (all that were left) who were all ſlain by the Infidels, in endeavouring to break through their Lines.

10. From hence we paſs'd on by *Barinowar Darda*, or *Draza*, to *Eſſeck* or *Oſſeck*, ſuppoſed to be the old *Murſa*, or at leaſt very near it. Its Situation is very low, the Streets being paved with Timber Trees laid croſs-wiſe; upon one Side of the Gate you ſee ſome Remnants of an old *Roman* Inſcription, *M. ÆLIAN*, *&c.* and on the other Side a Maid's Head cut in Stone. Here you ſee alſo an uncommon Dial, brought hither from *Serinwar*; and the largeſt Piece of Ordnance that ever I ſaw in thoſe Parts, not lying upon Carriages, but upon Bodies of Trees. But what ſurpaſſes all the reſt is, the famous Bridge of *Eſſeck*, built of Wood, partly over the River *Drave*, partly over the adjacent Marſhes, being five Miles long, railed in on both Sides, and defended by certain Towers at every Quarter of a Mile's Diſtance. But of this elſewhere. It being the greateſt Paſſage from *Servia*, and other of the Grand Seignior's Dominions, into *Hungary*, Count *Nicholas Serini*, to hinder Supplies from coming to the Grand Vizier's Army, burnt that Part of the Bridge which was laid over the River *Drave*, (rebuilt ſince) and in his Return alſo ſet Fire to *Five Churches*, which lies to the Weſt of *Eſſeck*.

From hence we travel'd to *Valcowar*, where there is a ſtately Bridge of Wood over the *Walpo*, (*Valpanus*) a River affording great Plenty of Fiſh, upon which, to the Weſt, ſtands alſo the Town of *Walpo*; then by *Sotzin Palanko*, and *Towarnick*, or *Tabornick*, to *Netrovitza*, a large Town near a Lake, and ſo to *Simonovitz*, leaving to the Right of us (at a great Diſtance) the ſo famous ancient *Sirmium*, a Place ſcarce worth taking Notice of now, except for its Antiquity. The Country hereabouts is called *Schremnia*; but that Part extending nearer to the *Drave*, *Boſſoga*.

11. In this Country many Families, nay the Inhabitants of whole Villages, have their Habitations under Ground, like the *Troglodytes*, and the ſubterraneous Nations bordering on *Ægypt*. We ſaw ſome Wells near them, where they draw their Water like our Brewers; they no ſooner got Sight of us, but they retired to their Caves, their Dogs by their Barking having given them timely Notice of our Approach. We alighted to take a View of the Houſes of theſe poor Chriſtians, which we found tolerably well contrived within, divided by Partitions with wooden Chimnies, and a Window at one End a little above Ground: All Things were neatly kept, though but poorly, after the Faſhion of thoſe Parts. Their Speech we found to be a Dialect of the *Sclavonian*.

We continued our Journey between the *Danube* and the *Save*; we came to *Zemlin* upon the *Danube*, and from its Caſtle had a fair Proſpect of *Belgrade*; whither we paſs'd from hence by Water.

Belgrade, *Taurunum*, *Alba Græca*, or *Greek-Weiſſenburgh*, or *Nandor Alba*, as it is called by the *Hungarians*, is a large, ſtrong, populous, and trading City in *Servia* or *Mæſia Superior*, ſeated at the very Confluence of the River *Save* and the *Danube*, the firſt being to the Weſt, and the other to the North. The *Danube* is very broad here, and its Current ſo rapid, that it ſeems to cut off that of the *Save*, as the *Rhoſne* doth the *Sein* near *Lyons* in *France*. The Water of the *Danube* ſeems more yellow and troubled, and that of the *Save* greeniſh and clear. At the very Mouth of the *Save* is an Iſle, made there of the Settling of the Sands of both Streams, about thirty-five Years ago, which is now full of Wood.

12. As we entred *Belgrade*, I paſs'd by the Water-Caſtle, and afterwards by the Upper Caſtle, both large, and ſtrengthened with ſeveral Towers. The chiefeſt Trading-ſtreets are covered over Head, to keep off the Sun and Rain. The Shops are no bigger than Taylors Shopboards, and very low, the Shop-people ſetting upon them as our Taylors do, and ſelling their Wares to the Chapmen, who remain without, and ſeldom enter the Shop. There are beſides theſe at *Belgrade*, two large *Bezaſtans*, or Places where the beſt Commodities are ſold; they are built croſs-wiſe like the old Cathedrals, with Walks within, like to thoſe of our Old Exchange above Stairs. They have alſo two Exchanges built of Stone, with two Rows of Pillars over one another, but were almoſt filled up with Merchandizes. The Grand Vizier had lately built a ſtately *Caravanſera*, at his own Coſt, with a Fountain in the Court, and juſt by a Moſque with a Fountain before it; this being the firſt I ever ſaw within-ſide. He had alſo built a College for young Students, one of which I ſaw in a green Garment, with a four corner'd Turbant on his Head. I obſerved alſo great Numbers of Sepulchres near *Belgrade*. We lodged at an *Armenian* Merchant's Houſe, where we were well accommodated, and our Landlord conducted us to ſeveral other *Armenians*, who had very fair Houſes, and entertain'd us with Coffee, Sherbet, and very good Wines of the neighbouring Country. There are very few Trading People in thoſe Places where the *Armenians* do not live; they have a Church at *Belgrade*, and ſeem to be more open, candid, and fair-dealing than the *Greeks* and *Jews*.

Belgrade is a Place of great Trade; its Situation at the Conflux of the *Danube* and *Save*, and the River *Theyſſe* falling into the *Danube* near it, as the River *Drave* does not far from it, and the *Morava*, or *Maroſh*, not much below it: All this, I ſay, together with the Advantage of a very fruitful adjacent Country, through which the *Danube* paſſes towards the *Euxine* Sea, is ſufficient to make *Belgrade* one of the moſt flouriſhing Cities in *Europe*, were it in the Hands of a People that knew how to improve all theſe Advantages. This City was formerly the main Bulwark of *Hungary*, which has ſeveral Times ſtemm'd the Current of the *Turkiſh* Victories, witneſs the Diſgrace received here by *Mahomet the Great*; but was at laſt taken by *Solyman the Magnificent* in 1521.

13. After we had left *Belgrade*, we continued our Journey through *Servia*, and paſſing by a very high Hill called *Havilleck*, to the Weſt of us, (where we ſaw the Ruins of an old Monaſtery) we came to *Hiſſargick* near the *Danube*, though our Maps place it at a good Diſtance from it. Here we bid adieu to the *Danube*, at a Place where it had run already from *Ulm* in *Suabia*, where it begins to be navigable, about 900 Miles, beſides what is to be accounted for from its firſt Source thither, and has ſeveral Hundreds of Miles to run before it diſcharges itſelf into the *Euxine* Sea. The next Place we came to was *Collar*, not far from *Samandria*, an old *Roman* Colony, but now an inconſiderable Place. From hence to *Haſſan Baſſa Palanka*, about forty *Engliſh* Miles from *Belgrade*, where we found a Lion worrying a Wolf, in Stone, a very ancient Piece.

Coming afterwards to *Baditzna*, we ſaw ſeveral *Bulgarian* Women, whoſe Dreſs ſeemed to us very odd: For they wear a Kind of Canopy upon their Heads, ſet about, as well as their Foreheads, with all Sorts of Foreign Money; we alſo beſtow'd ſome Pieces upon them, as an Addition to their Ornaments, which they thankfully received. Much in the ſame Manner have I ſeen ſome *Græcian* Women attired, their Foreheads being cover'd richly with Ducats of Gold, and Pearl; but their Head-dreſs was not raiſed ſo high.

We paſs'd forward for *Jagodna*, pleaſantly ſeated in a moſt delightful Country; and in few Hours after we had left it, turning off to the South, we ſaw to the Right of us, on the Side of a Hill, the Tomb of a *Turkiſh* Saint, about four Yards long, and a ſquare cover'd Place near it: Our *Chiaus* having performed his Devotion here, we went forward through great Woods by *Chiſſlick*, where there is a *Caravanſera*; but we thought it more ſafe for us to refreſh ourſelves, and our Horſes, at an adjacent Farm-houſe, belonging to a Merchant of *Belgrade*. Hence we travell'd all Night to the *Morava*, or *Moſchius* (the *Maroſh*) the chief River of this Country, ariſing in the Mountains in two Streams, the one call'd *Morava di Bulgaria*; the other *Morava di Servia*; and uniting afterwards in one Channel, falls into the *Danube* at *Zendecir*, or *Singidunum*, oppoſite to the *Raſcian* Shore. We happening to paſs this River in a Place where it was very broad, deep and rapid, the *Chiaus* betook himſelf to his Prayers; and after the Danger was over, it put me in Mind of the rapid River *Varus* or *Var*, on the Confines of *Provence* and *Italy*, which, when I paſs'd on Horſeback, two Men were forced to go on the lower Side of me, to keep my Horſe from being carried downwards by the Violence of the Current. By this River the Commodities of *Servia* and *Bulgaria*, are carried into the *Danube*, and from thence to other Places; as on the other Hand, Salt, and various other Commodities of the Product of *Auſtria* and *Hungary*, are brought up againſt the Current of the ſame River. Near this River, *Hunniades* ſurprized the *Turkiſh* Camp by Moonlight, with 10,000 Horſe, with the Slaughter of 30,000 Men, and 4000 taken Priſoners.

At laſt we came to *Halli Jabiſar*, or *Cruſhovatz*, a Place of Note in *Bulgaria*, having a handſome Church, with two fair Towers. From hence we continued our Journey for a whole Day through Hills and Foreſts, and came at Night to *Procupie*, ſuppoſed by ſome to be the old *Villa Procopiana*; the *Turks* call it *Urckup*. We lodged here this Night at a Merchant's Houſe of *Raguſa*, where we met with very good Accommodation. Here we met with a *Roman Catholick* Monk, who ſpoke *Latin* (a Rarity in thoſe Parts) and one of their Phyſicians, whoſe Knowledge went no further than the Compoſition of ſome ordinary Simples; his Way was to offer his Service to the People every Morning in the Market-place.

14. From hence we travel'd to *Leſcoa*, or *Leſcovia*, a Town ſeated upon the River *Lyperitza*, which may well be call'd the *Mæander of Mæſia*, having ſo many various Windings betwixt the Hills, that in leſs than twelve Hours time we paſs'd it ninety Times. This put me in Mind of the *Italian* River *Taro*, which I paſs'd forty times betwixt *Parma* and *Fornovo*. I found nothing worth taking Notice of here, except an ancient large Tower, but without any Inſcription. We were alſo much diverted with the great Concourſe of People met together on Account of a great Fair, which is annually kept in an Encloſure near the Place. We continued our Journey the next Day over the Mountain *Cliſſura* (one of the Branches of Mount *Hæmus*) where our Eyes were ſurprized with the Brightneſs of the Rocks, which conſiſting of *Muſcovia* Glaſs, made a pleaſing glittering Show; like that mentioned by *Olearius*, of *Lapis Specularis*, betwixt *Permeras* and *Schamachia*, which ſhined like Diamonds. We deſcended through a narrow rocky Way, by the ſtrong Caſtle of *Kolombotz*, or *Golobotz*, which brought us to *Urania*, a ſtrong Paſs with a Caſtle at the Foot of Mount *Cliſſura*, and commanding that Paſſage.

The whole Ridge of Hills, which extends betwixt *Servia* and *Macedonia*, is a Part of Mount *Hæmus*, which under divers Names reach from the *Adriatick* to the *Euxine* Sea; viſiting by the Way ſeveral Paſſages which *Philip* King of *Macedon* took care to ſhut up, to ſecure himſelf againſt the neighbouring Nations; ſome affirm, That from the middle Peaks of Mount *Hæmus*, there is a Proſpect both to the *Adriatick* and *Euxine* Seas. But King *Philip*, who made Trial of it, found himſelf diſappointed in his Expectations, and ſo was I; for being upon one of thoſe high Mountains, but ſomewhat nearer to the *Adriatick* Sea, I found that the Mountains of *Albania* cut off the Proſpect on that Side. From hence he went forward to *Comonava*, where there is ſtill a *Greek* Monaſtery on the Side of the Hills, and ſo to *Kaplanlib* or *Tygres* Town; then to *Kuprulib*, or *Bridge Town*, having a good Bridge over a conſiderable River call'd *Pſinia*. It was caſually ſet on Fire before we left it, and a great Part of it burn'd.

From hence we travel'd by the Way of *Iſbar* to *Pyrlipe*, firſt paſſing the high and craggy Mountains of *Pyrlipe* in *Macedonia*, which gliſter like the *Cliſſura*, and probably contains, beſides the *Muſcovia* Glaſs, ſome Minerals. There we ſaw maſſy Stones lie upon maſſy Stones, without the leaſt Earth about them; and upon a high Ridge or Rock, many Steeples high, a very ſtrong Caſtle, belonging formerly to *Marco Crollowitz*, a famous Man in thoſe Parts.

15. After this, paſſing through a plain Country, we came to a large pleaſant and well-peopled Town of *Macedonia*, call'd *Monaſter*, or *Toki*, where great Preparations were making for the Reception of the *Sultana*, who was to lie in here; where I afterwards heard ſhe was delivered of a Daughter, who lived not long. From hence we went on to *Filurina* and *Ecciſſo Verbeni*, where are plentiful Springs of Mineral Waters: But as we were deſcending the Hill which leads to the Town, we had Sight of that noted Mount, *Olympus*, though Seventy Miles off; and to the Left of us, of the two Lakes of *Petriſki* and *Uſtrova*, one whereof, as they ſay, was made by the removing of great Stones out of the Side of the Hills, whereby Vent being given to the Subterraneous Waters, they broke out into the adjacent Plains. Coming to *Egribugia*, we quitted again the Plains, and paſſed over high Rocks to *Sarrigiole*, built partly upon a Hill, partly in the Plain; the firſt being inhabited by Chriſtians, and this lower Part by *Turks*: Upon one of the adjacent Rocks ſtands a Caſtle. Not far from this Place we went through a Paſſage cut through the Rocks, like a Gate, through which alſo paſſes a Rivulet; this Paſs commanding the Acceſs of this Country, which put me in Mind of the Paſſage of *La Chiuſa*, in the *Julian Alps*, betwixt *Venſone* and *Ponteva*, which is ſhut up by the *Venetians* every Night. We paſſed alſo by a Hill of a fine red Earth, whereof they make Veſſels, much eſteem'd in thoſe Parts; we proceeded over very dangerous Rocks, in narrow hanging Ways, with dreadful Precipices on one Side, where the Carcaſſes of Horſes, which were tumbled down, gave us ſufficient Warning to be upon our Guard. Afterwards we ſaw Mount *Olympus* upon our Left, till we come to *Aleſſone*, or *Aleſſæn*, a Place of Note, where the *Greeks* have a Monaſtery, belonging to thoſe of the Order of St. *Baſil*; the Building whereof was a quite different kind from that we had ſeen before.

From hence paſſing a River, we entred a pleaſant Place of five Miles long, with divers Towns in it; and afterwards over a Hill, a Branch of the Mount *Olympus*, on the Top whereof we ſaw an Old Man beating the Drum to give Notice, that the Paſſages on both Sides were free from Robbers. We deſcried from thence into the Plains of *Theſſaly*; and turning to the Left, paſſed over the River *Pharibus*, which comes from under a Rocky Mountain, not in ſmall Springs, but in one continued Channel, and taking its Courſe through the Vineyards and Corn-fields to *Tornovo*, runs into *Lariſſa*, of which we ſhall hereafter ſay more.

In our Return we left the Road about *Kaplanlib*, taking that of *Skopia* (the *Scupi* of *Ptolemy*) call'd *Uſcopia* by the *Turks*, being a large and trading City. It is ſeated on the Frontiers of *Mæſia* and *Macedonia*, at the Foot of Mount *Orbelus*, upon the River *Vardar* or *Axius*; in a pleaſant fertile Country intermix'd with Hills and Plains. It was formerly an Archbiſhop's See: Above 700 Tanners live here, who make moſt excellent Leather. There are ſeveral handſome Sepulchral Monuments, and fair Houſes here, as that of the *Cadib*, and of the *Emir*, or one of *Mahomet*'s Kindred, whoſe Father was in great Veneration in theſe Parts. In the Court-Yard of the Houſe of *Emir* you ſee a Fountain built like an old Caſtle with Towers, out of the Tops whereof ſpring the Water. The Floors in their beſt Houſes are generally covered with Carpets, and the Roofs divided into Triangles, and many other Figures well painted, and richly gilt, but without any Figures of Animals or Vegetables. The *Bezaſtan*, or chief Market-place here, is covered with Lead, and the trading Streets with Wood; it contains alſo a conſiderable Number of *Turkiſh* Moſques. The moſt ſplendid of all ſtands upon a Hill, having a ſpacious Portico, ſuſtain'd by four Marble Pillars; near it is an Arch, with a Brook running under it, which ſeems to be an ancient Piece;

as alſo a large Stone (being Part of a Pillar) with this Inſcription, *SHANC*. Not far without the City you ſee a moſt noble Aqueduct of Stone, from one Hill to another, over the interjacent Valley: It has about 200 Arches, and is a noble Piece of Antiquity. The Country hereabouts has been the Field of Great Actions in the *Roman* Times; here *Regillianus* did ſuch mighty Feats, that he deſerved a Triumph. Hereabouts ſtood alſo *Paræcopolis*, and *Ulpianum*. This City drives a conſiderable Trade with *Belgrade* and *Salonichi*, which is the old *Theſſalonica*.

The *Sanziack* of *Servia* is under the Juriſdiction of the *Beglerbeg* of *Rumelia*, or *Greece*; as our Geographers generally mention this Place as a very conſiderable one, ſo I thought fit to give a more particular Account of it. From hence we went on to *Catſhanich*, a Fortreſs commanding the Paſſage of the Hills, and travelling on reached the Plains of *Coſſova* in *Bulgaria*, known for the great Actions performed here, though not much exceeding *Lincoln Heath*. Some take it to be the *Campus Merulæ*. Here it was that *Lazarus*, Deſpot of *Servia*, at the Head of 500000 Men (the greateſt Chriſtian Army that ever was brought into the Field) was worſted by *Amurath*, and he ſlain in the Field; nor was he ſurvived long by *Amurath*, who viewing the dead Bodies, was ſtabbed by *Michael Cobilovitz*, a Chriſtian Soldier, left for dead in the Field; whence this Part, to this Day, is called, *The Field of the Sepulchre*, where a Monument is erected to the Memory of *Amurath*.

In theſe Plains alſo *Hunniades* engaged three Days ſucceſſively againſt *Mahomet*, but being very unequal in Forces, was put to the Rout at laſt.

We travell'd on to *Preſtina*, a moſt beautiful Town; but the Plague being there, we took a Gypſy for our Guide, who conducted us through a fruitful Country, but very ill peopled, and were much refreſhed with the fair Carnations that grew by the Way. On the right Hand we ſaw a Bath, which we found arched within; the Water had a red Sediment, and a petrefying Juice, as might be ſeen by the grey Stone it had produced. It is not above two Leagues from *Bellachorque*, or *Curſumde*, which has a Convent with an old Church near it, with two handſome Towers. From hence paſſing over the Hill *Jaſnebatz*, we came to *Eſhelleck*, betwixt the two Channels of the River *Maroſh*, and thence by a Caſtle upon a Hill, near which is a Convent famous in thoſe Parts for the Sepulchres of *Kenez Lazarus*, and of St. *Romanus*, whoſe Bodies were interred here. But it is Time to return to *Lariſſa*.

16. *Lariſſa*, the Capital City of *Theſſaly*, ſeated by the River *Peneus* (the moſt conſiderable of this Country) hath to the North the famous Mount *Olympus*, and to the South Part of the Plains of *Theſſaly*, being inhabited by *Chriſtians*, *Turks*, and *Jews*, the firſt of which have ſeveral Churches here; it has alſo many fair *Bezantens* or *Turkiſh Moſques*. Its Situation is very pleaſant, on a riſing Ground, on the upper Part whereof ſtands the Grand Seignior's Palace, having large jetting Windows, on all the four Sides, to give the freer Paſſage to the Air; here the Grand Seignior had kept his Court for ſeveral Years, to be nearer to *Candia*, and for the Convenience of Hunting and Hawking; he ſtaid there for ſome Months after we came away, and then removed to *Salonichi*, and afterwards to *Belgrade*. It is now an Archbiſhop's See, having divers Suffragan Biſhops under it. We went into the Cathedral of St. *Achilleus*, where we ſaw the reverend Father *Dionyſius* (who was then Archbiſhop) ſtanding in his Throne in his Epiſcopal Habit, and his Croſier in his Hand. The Summer being very hot, 1669, the Grand Seignior retreated for two Months to Mount *Olympus*, to enjoy the freſh Air, whence he had a Proſpect of part of the *Ægæan* Sea: This Removal proved deſtructive to a great many People, who being obliged to attend the Court, and being overheated by the aſcending of ſo high a Mountain, were ſo ſtruck by the ſudden Alteration of the cold Air, that they died ſoon after, eſpecially ſuch as had, in their Heat and Thirſt, drunk of a certain Spring of a whitiſh Colour, who were immediately ſeized with a Coldneſs at their Stomachs, and died in three or four Days after. Of Horſes and Camels there alſo died a great Number, and the Sultan himſelf was ill for ſeveral Days; he kill'd one of his beſt Horſes there, by forcing him up a cragged Peak called *Pythagon*, or *Kiſſagon*, where ſcarce any Body durſt follow him; and had he not been with-held by the Prayers of his beſt Friends, he would have leaped over a Fiſſure or Cleft in the Rocks.

17. The ancient *Greeks* (the beſt Romancers in the World, eſpecially when they ſpeak of their own Country) will have *Olympus* to reach beyond the Clouds, and therefore have aſſign'd *Jupiter*, and the Gods, their Reſidence thereabout: I am ſure I ſaw Clouds above it; and to me ſome Parts of the *Alps* appeared much higher; and in *September* there was no Sign of Snow upon *Olympus*, whereas the higheſt Peaks of the *Alps*, *Pyrenæan* and *Carpathian* Mountains, beſides ſeveral others in *Europe*, are never without it; of which *Olympus* alſo had a conſiderable Share upon the firſt Rain that fell hereabouts; it being well known, that when it Rains in the Valleys, it ſnows upon thoſe and all other high Mountains.

I ſaw, as I told you, the *Olympus* at ſeventy Miles Diſtance, and it conſiſts not of one high riſing Peak, as ſome deſcribe it, but is a long Ridge of Mountains, ſtretching out a great Way in Length: Its Extent from Eaſt to Weſt makes the Inhabitants at the Foot of the North and South Sides, as ſenſible of the Difference of the Air, as if they lived in very different Climates; which makes good the Words of *Lucan:*

Nec metuens imi Borean *habitator* Olympi,
Lucentem totis ignorat noctibus Arcton.

Paulus Emylius, the *Roman* Conſul, ſurprized King *Perſeus*, by marching about this Hill along the Seaſide. At the Siege of *Lariſſa* by *Antiochus*, *Appius Claudius*, by making Fires on many different Places of *Olympus*, ſo terrified the King, that he left the Place, and the Conſul *Martius* found Means to bring his whole Army over this great Mountain.

Lariſſa has been frequently viſited by ſeveral famous Princes; King *Philip* of *Macedon*, the laſt of that Name, kept his Reſidence here for a conſiderable Time. Whether *Xerxes* honour'd this Place with his Preſence, when his Army marched through *Theſſaly* towards *Thermopilæ*, the Hiſtories of thoſe Times do not expreſly mention; but certain it is, that *Philip*, the Father of *Alexander* the Great, having formed his Deſign againſt *Greece*, took the City of *Lariſſa* upon the River *Peneus*, and afterwards made good Uſe of the *Theſſalian* Horſe againſt the *Greeks*. Before the Battle of *Pharſalia*, *Scipio* was quartered here with a Legion; and this was the firſt Place of the Retreat of *Pompey*, after his Overthrow; according to *Lucan:*

Vidit prima tuæ teſtis Lariſſa *ruinæ*
Nobile, nec victum fatis caput.

And going down the River, went out to Sea in a Boat, and was taken in by a great Ship which was ready to ſail.

The River *Peneus* riſes from Mount *Pindus*, which running by *Lariſſa*, and being augmented in her Paſſage by ſeveral other Rivers of *Theſſaly*, exonerates itſelf into the *Sinus Thermaicus* or Gulf of *Salonichi*, paſſing by the famous Valley of *Tempe*, and running between Mount *Olympus* and *Oſſa*, into the Sea. Over this River, which (according to the Deſcription of *Homer*) has a very clear Stream and Bottom, is a handſome Stone Bridge, ſupported by nine Arches, with Holes or Paſſages in the ſolid Parts betwixt the Arches, to afford a Paſſage to the Water, when the Water riſes high by the Floods. The City being then crowded with People, by reaſon of the Grand Seignior's Reſidence here, many of the *Turks* had ſet up their Tents in the lower Grounds near the River; and theſe not coming within a Yard of the Ground, afford a free Paſſage to the Air. The neareſt Port of Note unto *Lariſſa* is that of *Vello* (the old *Pagaſæ*) in the *Sinus Pagaſicus*, or Gulf of *Armiro*; not far from whence ſtood the ancient *Argos Palaſgicum*, from whence the *Argonauts* ſail'd for *Colchos*; by this Way the Grand Seignior receives his Intelligence from *Candia*, and his *Aſiatick* and *African* Dominions. Near the Promontory *Sepias* (not far from hence) *Xerxes* loſt 500 Ships, by a Tempeſt from the Eaſt.

18. As the Grand Seignior *Mohammed* IV. went often abroad a Shooting and Hawking, attended by a great Number of his Huntſmen, Falconers, and others, and alſo went often to the great Moſque, I had many Opportunities of ſeeing him; among the reſt, I took once a full View of him, as he was coming out of the Palace to go to the Moſque. Before the Palace I ſaw ſeveral very fine Horſes richly accoutred, which were rode by ſome of his Attendants in the Court-Yard, till he looking out of the Window, made a Sign to let them know which he would make uſe of; he no ſooner appeared without, but he was received with great Acclamations, and very low Reverences, both near and at a Diſtance; the Streets were made clean, and a Janizary placed at every Corner, to remove any Thing which might be in the Way. The Chiauſes lead the Van on Horſeback, theſe were followed by twenty four Perſons of Quality on Foot; on each Side of his Horſe walked two Janizaries, with large ſpreading white Feathers of a Fathom high, faſtened to their Caps; and theſe ſhaking as they walked along, were high enough both to ſhade and fan his Face. After him followed many very fine lead Horſes, and ſeveral Perſons carrying Cuſhions and Pillows to the Moſque.

The Grand Seignior was then ſcarce thirty Years of Age, well proportioned, but ſomewhat ſhort necked, inclining to Fatneſs, of a ſallow complexion. For the reſt, he was of a ſtrong Conſtitution, delighted in hard Riding; his Countenance ſomewhat ſtern, yet he would invite with a kind Look, People to approach him. I heard of no Phyſician of Note he had about him; but the Grand Vizier had taken ſeveral Chriſtian Surgeons along with him to *Candia*. The *Caimachan*, or Deputy to the Vizier, had the chief Management of Affairs of State, in the Abſence of *Achmet* the Prime Vizier. I went with *Oſman Chiaus*, to ſee his Palace, which was a fine Structure; where I heard ten Men playing all at once in a high Room, upon large Wind Inſtruments, which they do at certain Hours every Day, making a very loud, yet not unpleaſant Noiſe, even to ſuch as do not underſtand their Muſick.

The Sultana was at the ſame Time at *Lariſſa*, by Birth a *Candiot*, and much beloved by the Grand Seignior; ſhe was but low of Stature, and ſomewhat mark'd with the Small-Pox; being then big with Child, great Preparations were made for her Delivery at *Monaſter*, a pleaſant Town in *Macedonia*, the Roads were then a Plaining, and the Hills laying level, with broad Bridges over the Rivers, for her more convenient Paſſage thither. The Grand Seignior's Son, who was with her there, was then ſix Years of Age.

I heard, at ſeveral different Times, the *Turks* ſing their uſual Songs, and, among the reſt, one concerning that famous *Jewiſh* Impoſtor *Sabata Sevi*, whom *Cuſſum Baſſa* forced to turn *Turk*. This *Cuſſum Baſſa* is a Man of great Reputation at the *Ottoman* Court, and much valued for his Skill in Phyſick, (a Thing not much known in *Turkey*.) He was formerly Vizier of *Buda*, and is now Vizier of *Erzrum*, upon the Frontiers of *Georgia* and *Perſia*, and married to one of the Grand Seignior's Siſters. Of *Padre Ottamanno*, a *Dominican* Friar, whom I had ſeen at *Turin*, and who was thought to be the Grand Seignior's Brother, I could learn nothing here.

19. The Wintering of that vaſt Army of *Xerxes* under *Mardonius*, is an undeniable Teſtimony of the ancient Fertility of *Theſſaly*, which continues to this Day; for notwithſtanding the vaſt Concourſe of People, occaſioned by the Sultan's Reſidence here, every Thing was ſo cheap, that one might dine at a common Victualling-houſe, upon roaſted and boiled, and have good Sherbet to drink, for Six-pence a Head; and an Officer arm'd with a Club, with twenty four Followers, kept the Streets ſo quiet, that not the leaſt Diſturbance was to be heard of there in the Night-time. The hot Weather which happened in *September*, 1669, occaſioned frequent Fevers and Agues in thoſe Parts, as about the ſame time other Parts of *Europe* were much infected with Quartan Agues. It being then their Vintage, I taſted of their Muſt, or new Wine; and I obſerved that ſome of the zealous *Turks*, who would not drink Wine, yet would take a plentiful Draught of this with a great Deal of Eagerneſs.

During the hot Seaſon, we uſed frequently to viſit the Barber, who performed his Buſineſs very well, and would trim every Man according to his Country Faſhion. The *Greeks* always leave a bare Place of the Bigneſs of a Crown-piece, on the Top of their Heads, round which they let the Hair grow to the Breadth of two Inches, and ſhave all the reſt of their Head. The *Croatian* ſhaves his Head on one Side, and on the other lets his Hair grow as long as it will. The *Hungarian* keeps only a Fore-top, the reſt being ſhaved all over the Head. The *Polanders* don't ſhave their Heads, but keep their Hair cut ſo as it comes down to the Middle of the Forehead, and the Middle of the Ears. The *Turks* ſhaves his whole Head, leaving only a Lock upon his Crown. The *Franks* wear their Hair long, without ſhaving their Heads, but to give no Offence to the *Turks*, generally turn up their Hair under their Caps; but the *Greek* Prieſts keep and wear their Hair long.

The Party to be ſhaved ſits low, ſo that the Barber, who lays on much Soap, takes off a great deal of Hair at once, and finiſhes the whole Buſineſs in a few Strokes. A Veſſel of Water, with a Cock, hangs commonly over the Head of thoſe that are to be ſhaved, ſo that the Barber lets out the Water upon them as he pleaſes. I ſaw accidentally in one of the Barbers Shop of *Lariſſa*, an ancient or very noble Monument, or Tomb-ſtone, of a Jaſper-green Colour, through the Top-ſtone of which the Barber had cauſed a Hole to be made to ſerve him for a Ciſtern.

In the Market-place ſit certain Money-changers, who exchanged our Duckats, and Rix-Dollars, into Medicines, Aſpers, and five Sols Pieces, of which great Plenty is to be found in thoſe Parts. All the Trading Streets were covered with Wood; their Shops were generally ſmall, but well enough provided, the Shopkeeper ſitting like a Taylor, and ſelling his Wares to the Buyers, who commonly remain ſtanding in the Street: Such Commodities as are not to be had in the Shops, are cried about the Streets by a Man on Horſeback, who at the ſame Time tells the People what Price they are to be ſold at.

20. I had been much pleaſed with the Sight of the ſeveral Stables of Chriſtian Princes, as that of the *French* King's, the Vice-Roys of *Naples*, the Elector of *Saxony's* at *Dreſden*, and that of Count *Walleſtein's* at *Prague*; but for Horſes, I muſt confeſs none of theſe could compare to thoſe I ſaw at *Lariſſa*, being choſen from among the beſt of the *Turkiſh* Empire, ſo richly equipped with moſt ſtately Saddles and Bridles ſet with precious Stones, and ſo tractable, that I could not but be ſurprized thereat. I ſaw among the reſt ſome *Italian* Horſes, valued chiefly for their Hardineſs and Swiftneſs, being for the reſt rather unſightly than beautiful. Some of the richeſt *Greek* Merchants are well verſed in the *Italian* Tongue, which is preferred here before either *Latin* or *French*. The *Jews* of *Macedonia*, *Servia*, and *Bulgaria*, commonly ſpeak *Spaniſh*; and thoſe of *Hungaria*, *High-Dutch*, for Conveniency in Diſcourſing with Strangers.

At our being there the Seaſon was ſo parching, that even the greateſt Rivers were very low, and the ſmall ones quite dry, except one, I took Notice of about ſeven Miles on this Side of *Tornovo*, which continued to flow plentifully in one copious Channel from under the Rocks. This general Drought however of the Country, put me in Mind of the Deluge which happened in the Time of *Deucalion* King of *Theſſaly* (as ſometimes we are apt to remember Things by Contraries,) when by the Stopping of the Current of the River *Peneus* (into which moſt of the other run) the whole Country of *Theſſaly*, which is plain, and encloſed on all Sides by Hills, was laid under Water for a whole Winter: I know ſome who are of Opinion, that all *Theſſaly* was, in the moſt ancient Times, under Water, till the Mountains *Oſſa* and *Olympus* being torn aſunder by a violent Earthquake, the River *Peneus* forced its Paſſage that Way by *Tempe*, into the Sea.

I remember, that as we were travelling in *Macedonia*, our Chiaus told me, that within a few Days I ſhould ſee *Frenchmen* in thoſe Parts; meaning the *Theſſalians*, the Country People wearing narrow brim'd Hats like the *French* Hats, then lately in Faſhion. The *Theſſalians* had always the Reputation of being Warlike, and are accounted ſo to this Day among the *Turks*, this Country having been very famous in ancient Times, not only for the Battles fought in the Plains of *Theſſaly*, but alſo for its having produced many great and worthy Perſons; and *Hippocrates*, the Father of Phyſicians, lived and practiſed here, and died about *Lariſſa*, being buried betwixt that Place and *Gyrton*. The *Theſſalians* are generally well made, have very black Hair and Eyes, with a freſh Sanguine Complexion; and their Women are much celebrated, among Strangers, for their Beauty; the *Macedonians*, who inhabit a Hilly Country, being of a much rougher Complexion; and the *Moreans*, or ancient *Peloponneſians*, who live more to the South, inclining to Swarthineſs.

21. The Country abounds in Horſes, and they have the largeſt Buffloes in all *Greece*, except thoſe of *Santa Maura* in *Epirus*. They have alſo Plenty of fine yellow and black Tortoiſes, which are good Meat; but the *Turks* uſe to laugh at the Chriſtians, for eating them, when they had ſuch Plenty of Mutton, and all Sorts of Fowl. This Country alſo produces very large and moſt delicious Figs, and the beſt taſted Water-melons that I ever met with; likewiſe Pomegranates, Oranges, Lemons, Citrons, and Vines, which grow low here like thoſe of *Montpellier*, and though not ſupported, bear large Branches, and Grapes as big as our Damaſcens, and of a moſt luſcious Taſte. The Wine of the Country is rich, but has a reſinous Twang.

The Tobacco they plant, they eſteem beyond what is brought from other Parts, being ſtronger and more pungent. Their Fields are cover'd with *Seſamum*, and Cotton-Trees, which though but low, make a glorious Show; as alſo with Almond and Olive-Trees; the *Greeks* pickle their Olives ripe, whereas ours are all green. The Gourds in the Hedges, with their large yellow Flowers, and the different Sorts of green Thorns, and *Sempervirent* Oaks, make the Ways exceeding pleaſant. The *Ilex Coccifera*, and *Chermes Berry*, or the Excretion ſerving for dying and making the Confection of *Alchermes*, are very plentiful in this Country. The high Hills produce *Aſclepias*, and *Helleborus*; and the ſtony Plains *Carduus Globoſus*, *Cyſtus*, Lavender, Sweet Marjoram, Roſemary, and other ſweet-ſcented Plants. The *Platanus*, or Plain-Tree, grows very fair and loſty in *Macedonia*.

They uſe a great deal of Garlick in their Diſhes, and their Onions exceed ours, not only in Bigneſs, but alſo in Taſte; being ſharp, and pleaſantly pungent upon the Tongue, without any offenſive Smell; they agreed very well with my Stomach, though I never uſed to eat Onions before. They are uſed here at moſt Collations; the *Turkiſh Chiaus*, who had travel'd almoſt through all the *Turkiſh* Dominions, told me, that the Onions of *Egypt* only, exceeded thoſe of *Theſſaly* in Goodneſs; which was the firſt Time I really underſtood that Paſſage in the Scripture, of the *Iſraelites* longing after the Onions of *Egypt*. They have alſo a Fruit call'd *Patlejan* or *Melanzan (mala inſana)* between a Melon and a Cucumber, out of which they take the Seed, and after having fill'd the Concavities with the Meat of Sauſages, they pare and boil them, which makes a very good Diſh.

The Foreign Miniſters who attended the Grand Seignor's Court at *Lariſſa*, were the Imperial Reſident, and the Ambaſſadors of *Raguſa* and *Wallachia*; thoſe Ambaſſadors that reſide at *Conſtantinople* chiefly on Account of Trade, being not obliged to follow the Court. The Imperial Reſident having got Leave of the Sultan (by Reaſon of the great Concourſe of People at *Lariſſa*) to chuſe which of the neighbouring Towns he pleaſed for his Reſidence, he pitch'd upon *Tornovo*, a large and pleaſant City of *Theſſaly*, twenty Miles to the Weſtward of *Lariſſa* near the Hills, where moſt of the Inhabitants are Chriſtians, having eighteen *Greek* Churches there, whereas the *Turks* had no more than three Moſques. The Chief Churches I took Notice of were, the Cathedral of St. *Stephen*, the Church of St. *Demetrius*, of *Coſmus*, and *Damianus*, of the Nativity of the Bleſſed Virgin, of St *Elias* (with a Monaſtery adjoining to it, of St. *Anaſtaſius*, of the Twelve Apoſtles, of St. *Nicholas*, (with a Convent alſo) and of St. *Anthony* the Hermite. The Biſhop of this City is a Suffragan to the Archbiſhop of *Lariſſa*.

22. Before I travell'd into theſe Parts, I could never conceive that the *Eaſtern Countries* contained ſuch vaſt Numbers of *Greek* Chriſtians as are to be found in *Grecia* and the *Greek* Iſlands; in the *Turkiſh* Parts of *Dalmatia* and *Croatia*, in *Raſcia*, *Boſnia*, *Servia*, *Thrace*, *Sagora*, *Bulgaria*, *Perſia*, *Beſſarabia*, *Coſſakia*, *Podolia*, *Moldavia*, and *Wallachia*; beſides the vaſt Dominions under the Juriſdiction of the Czar of *Muſcovy*: Which put me in Mind of what a certain learned Author ſays upon that Head, *viz. That if a true Computation were made of the* Greek *Chriſtians in* Europe, *they would far exceed thoſe of the* Roman *Religion*.

The Font or Baſon in the *Greek* Churches is generally made of plain Stone, and plac'd immediately upon the Floor of the Church, which ſeems to be done for Conveniency's Sake; for being not contented with ſprinkling of Water upon the Child's Head, the Prieſt, having firſt bleſs'd the Water, and dipp'd the Crucifix into it three Times, takes the naked Child by one Arm, and putting it into the Font up to the Waiſt, with the other Hand laves the Water thrice over his Head; which that it has been the ancient Cuſtom among them, may eaſily be gathered from what is related of the Emperor *Conſtantine* VI. *Conſtantinus ſextus, dictus Copronymus, quod Infans dum baptizaretur aquam ſacram ventrus ſolutione maculaſſet*; the Dipping of the naked Body in Water being apt to move it. Some of their Children I ſaw baptiz'd before the Navel ſtring was fallen off.

23. The Fields round this Place were full of Vines, Seſamum and Cotton-Trees. The Emperor's Reſident, named *Signore di Caſa nova*, lived here in great Splendor, with a Retinue of about thirty Perſons, ſome Chriſtians and ſome *Turks*, and has two *Janizaries* attending at his Gate. He was a *Milaneſe* by Birth, much addicted to Study, civil and courteous in his Behaviour, but reſerv'd. The Ambaſſador of *Raguſa* had made Choice of the ſame Town for his Reſidence; but they never viſited one another, by Reaſon that the *Raguſan* being here in the Quality of an Ambaſſador, would not give the Precedency to the other, who had only the Character of a Reſident; which ſometimes gave great Occaſion of Laughter to the *Germans*, who look upon the *Raguſans* no otherwiſe than as Vaſſals.

Here I muſt not paſs by in Silence the many Civilities I receiv'd from a certain *Greek* Merchant of *Tornovo*, whoſe Name was *Demetrius*, who entertained us with a great deal of Freedom at his Houſe, at ſeveral Times, and brought his two Daughters to bid us welcome, whom we ſaluted after the Cuſtom of our own Country. They were very well dreſs'd after the *Greek* Faſhion, with their Hair braided and hanging down their Back; their Shoes and Slippers painted, and (which ſomething ſurprized us) their Nails coloured with red, by a certain Tincture drawn with Water and Wine out of the Leaves of a certain Plant call'd *Cnà* or *Alcanna*, brought out of *Arabia* and *Ægypt*, and much uſed in *Turkey*, where ſome colour the Mains and Tails of Horſes with it. The *Græcians* of *Scio*, who wear Gloves, uſe alſo this Tincture to colour them upon thoſe Parts that touch their Nails. It muſt be confeſs'd, that the *Græcian* Countries bear now a days a quite different

Face from what they have done in ancient Times; the many Incurſions of barbarous Nations, and the late Conqueſt by the *Turks*, having laid deſolate many great and once famous Cities, and exchanged the Names of the reſt, not leaving even the ancient Names of the Rivers, which generally are beyond the Fate of Towns. Thus the Rivers of *Macedonia*, the *Axius*, *Erigonus* and *Aliaomon*, which I paſs'd, have now Names which have not the leaſt Affinity to thoſe of former Ages. The famous River *Peneus* has undergone the ſame Fate, as well as *Apidanos*, *Enipeus*, and others that join their Waters with it. *Lariſſa* is call'd *Jeni-Sabar* by the *Turks*; and *Theſſaly*, *Comenolitari*.

24. It ſeems to be one of the greateſt Delights that attends Travelling, to behold, as one moves along, a different Face of Things in Habits, Diet, Manners, Cuſtoms and Language: Of this we had our full Share after we had travelled a Day's Journey beyond *Raab* and *Comorrah*; for before we reach'd *Buda*, we enter'd upon ſo different a Courſe of Life, eſpecially as to Habit and Manners, (which, with ſome ſmall Alteration, continues to the utmoſt Part of *Aſia*, viz. *China*) that we thought ourſelves in a Manner in a new World. Though we were provided with good Paſſes, and had taken all other imaginable Care for our Security, yet we were not without Fear from the *Huſſars*, who knowing all the By-ways, commonly rob all they meet with as far as the Bridge of *Eſſeck*; neither were we in leſs Fear of the *Cingars* or *Gypſies*, who are noted here for their Robberies; though they live in the Towns of *Hungaria*, *Servia*, *Bulgaria*, *Macedonia* (and ſome alſo in *Theſſaly*) by Labour and handy-craft Trades. They are generally ſuppoſed to have their Original from the Frontiers of *Wallachia*. They have a Way of Colouring their Hands and Feet of a reddiſh Colour with *Cna*, and ſome of the Women colour the Extremities of their Hair alſo.

We were in no ſmall Danger of being robb'd as we travel'd from *Belgrade* into *Servia*, by three Horſemen, who coming up with us diſcharged their Piſtols; had it not been for our *Chiaus*, who knowing them to be *Spahies*, ſhew'd them his Feather, bidding me to diſcharge at the ſame Time my Piſtol, to let them know that we were not unprovided; whereupon they left us. *Caravanſera's*, or publick Inns, built by charitable Benefactors to the Publick, for the Lodging of Travellers upon the Road, we ſeldom made Uſe of, the Rooms being very ſpacious: We were but a few in Company, and not fitted for Places where we muſt provide every Thing one's ſelf; and therefore private Houſes were much more convenient for us: Beſides, that the Situation of thoſe *Caravanſera's* is often-time ſuch, as not to be ſecure againſt the Inſults of Robbers, which are too frequent in thoſe Parts, though puniſhed with the greateſt Severity; for which Reaſon, in moſt dangerous Paſſages, Drummers are appointed, who by Beat of Drum give Notice to Travellers, that the Roads are ſafe.

However, in the main, we had ſufficient Accommodation; for from *Comorrah* our Boat was towed by a Saick of twenty four Oars, till we came to the *Turkiſh* Frontier Town, where meeting with the *Turkiſh* Convoy, our Boat was faſten'd to their Saick with eighteen Oars, till we came to *Buda*, from whence we were carried in open Chariots, with two, three or four Horſes a-breaſt, and that very ſwiftly, through a very pleaſant Country, to *Belgrade*. Here we were mounted on good ſure footed Horſes, which would carry one ſafely twenty Miles in a Stage: They are very free, tender mouth'd, and tractable; which made the Owners not well pleaſed with our Spurs, which are ſeldom uſed by the *Turks*. They have generally a lighter and leſſer Shoe than our Horſes. Moſt of theſe Countries abound in good Horſes, which are very fleet; but they never dock them, looking upon a long Tail as a great Ornament to a Horſe, which they will handſomely make up, and adorn to render it more ſo.

The *Baſſa* of *Temeſwar* preſented *Ragotzi* with a Horſe, which he ſlighting, cut off the Horſe's Ears, Main and Tail, and ſo ſent him back again; which the *Baſſa* took for ſuch an Affront, that he did not deſiſt till he brought about the Ruin of *Ragotzi*, as he might have expected. They do not feed them out of high Mangers or Racks, but lay their Hay before them almoſt even with the Ground.

In the *Caravanſera's* they tie their Horſes to Rings, faſten'd to the Side of a long Place a little elevated, upon which the Travellers ſleep as they can, their Hay being laid ſomewhat lower at the Feet, whereon their Horſes feed. They plough generally with Oxen and Buffelo's, and have great Variety of Ploughs and Carts, ſome whereof I ſaw in *Macedonia* with Wheels of ſolid Wood, in the whole Piece, perhaps the better to reſiſt the rough and ragged Ways of a rocky Country. We obſerved among the People in general, that they will be much obliged with a ſmall Preſent, ſuch as Knives, Sciſſers, and other Toys; nay, we gave ſometimes a Glove to one, and the Fellow to another, which they took very kindly. Thus the *Bulgarian* Women would be well pleaſed with a ſmall Piece of Silver Foreign Coin, and put it as an Ornament to their Head-dreſs, though they had others of much more value there before.

25. In our Journey about the Mountains of *Servia*, we were in great Danger from Wolves, eſpecially in the Woods, where they would come very near us in the Night-time; ſo that we were forced to remain cloſe together, and keep our Fire-Arms in readineſs: Neither were the Dogs leſs troubleſome; for no ſooner came we near a Town, or left it, but they would either meet or follow us at a conſiderable Diſtance, and with Barking and Biting our Horſes Legs, be very offenſive. I remember, that at my coming to *Comorrah*, which happened to be about Midnight, we were ſo cloſely purſued by the Dogs, which were ſhut out of Doors on Purpoſe, that we were forced to ſeek for Shelter in the Guard-houſe.

The Fear, in which the poor Chriſtians live in theſe Parts, could not but move us greatly to Compaſſion, where we ſaw them retreat to the Woods, at the firſt Sight, to avoid us; which made us many Times ride after them to undeceive them. But the miſerable Condition of the Slaves and Captives is almoſt beyond Expreſſing, eſpecially if you conſider the Variety of their hard Fate, and the odd Chances that reduce them into this miſerable State; ſome by Treachery, ſome by Chance of War, others being ſtole by the *Tartars*; among all which, thoſe who belong to the Grand Signior ſeem to be in the worſt Condition, as being paſt all Hopes of being redeemed or exchanged. Of theſe I met with one at *Egribugia* in *Macedonia*, who, though he had a Tole-Table Place at the Poſt-houſe, yet was quite dejected upon that Account. In *Theſſaly* I met with an *Hungarian*, who being taken at the Battle of *Barchan*, firſt ſerved a *Turk*, and afterwards was ſold to a *Jew*, with whom he endured great Hardſhip; but being at laſt ſold to an *Armenian*, he behaved himſelf ſo well, that his Maſter gave him his Freedom, and coming to *Lariſſa*, he was entertain'd in the Imperial Reſident's Service. He was a very worthy Perſon, who had retain'd his Chriſtianity among all theſe Changes of Fortune. He ſpoke *Hungarian*, *Sclavonian*, *Turkiſh*, *Armenian*, and *Latin*, and notwithſtanding his ſlaviſh Condition, had been ſo curious as to take Draughts of many Monaſteries, Abbeys, Moſques, and other conſiderable Buildings in *Armenia*, *Perſia* and *Turkey*, which he ſhew'd me. The *Turks* make peculiar Obſervations upon the Captives of ſeveral Nations: Thus they ſay, a *Ruſſian* makes the beſt Galley-Slave, a *Georgian* a good Courtier, and an *Albanian* a good Counſellor, *&c.* I remember that the firſt Time I went to have a Sight of the Grand Seignior, *Oſman Chiaus* kept backwards; having aſk'd him the Reaſon, he anſwer'd, *I take no great Pleaſure in coming too near him.*

26. As the *Turks* are commonly buried near the Highways, Tombs and Sepulchres are met with every where hereabouts, but are not very ſplendid, conſiſting only of a Stone at the Head, and another at the Foot, ſome

of which are two, three or four Yards high; ſome have a Turbant cut upon the Stone at the Head; ſome alſo ſet up two Pillars of Stone, and ſometimes raiſe the Sepulchres after the *European* Faſhion, placing two Pillars upon them, one at the Head, and the other at the Feet. Of theſe I ſaw ſeveral at *Scopia*; but their neateſt Way is to erect a Pavillion, ſupported by four Pillars.

As we travel'd through *Servia*, I ſaw to the South of *Jagodna*, on the Side of a Hill, a *Turkiſh* Tomb of four Yards long, which, the *Chiaus* told me, was the Tomb of one of their Saints. As I could ſcarce conceive that the Length of a Man ſhould extend to that Height, ſo it put me in Mind of what I once heard Mr. *Wood* ſay upon this Account, *viz.* That he had ſeen ſeveral Graves in the Southern Parts of *America*, of four Yards in Length; and having never met with an *American* that came near that Height, he had the Curioſity to have one of the Sepulchres opened from one End to the other, wherein he found a Man and a Woman ſo placed, that the Woman's Head lay at the Man's Feet, and conſequently required a Grave of four Yards long. I thought I might, without the leaſt Hazard, relate this upon the Credit of a Perſon, who has given ſufficient Proofs of his Ingenuity to the World, by his accurate Maps of the Streights of *Magellan*, its Iſlands, and the Coaſt from the *Plate River* to *Baldivia* in the South Sea.

In our Travels in theſe Parts, we met often with *Turkiſh* Fairs, which are kept in ſome large Ground, encloſed and divided into Streets, where you may furniſh yourſelf with all Manner of Things not to be ſeen in theſe Weſtern Parts, and have Muſick at a cheap Rate; which, though none of the beſt, yet ſerves to paſs away the Time pleaſantly enough. We had the good Fortune, in all this Journey, to light upon no more than one Place infected with the Plague, *viz.* at *Preſtina*, in the Plains of *Coſſova*, which made us make what Haſte we could thence to a *Gypſie*'s Houſe among the Hills, where we met with a good Accommodation. The *Turks* were very well pleaſed to ſee me take out my Pocket-Book, to write down ſuch Obſervations as I had Opportunity to make, and were much taken with my Writing ſo quick with a Pen made of a Gooſe Quill; whereas theirs are made of Reed, wherewith they will write very well upon ſmooth Paper.

27. I would often, as Occaſion ſerved, look into ſuch Maps as I had brought along with me; whereat the *Chiaus* ſmiling, ſaid, There is but little Dependance to be had on Maps, for they do not mention many great Towns, and thoſe they do are often not rightly placed. We *Chiauſſes*, added he, who ſpend our Days in Travelling, take Notice of all Places, and know their *Turkiſh* Names, are the beſt Map-makers; and I muſt confeſs, that in ſeveral Particulars I was convinc'd he ſpoke nothing but the Truth; for I found the Maps of *Hungary* not exact, and thoſe of *Servia*, *Bulgaria*, *Macedonia*, and *Theſſaly*, very imperfect. In *Upper Hungaria* many Towns are omitted, and as many ill placed; in the *Lower* alſo not a few. The *Danube* ſeems to take too great a Circumference to the S. W. before the *Theyſſe* falls into it. In *Servia* I found *Hiſſargick* placed a good Way from the *Danube*, which runs juſt by it. *Procupia* or *Urchoop*, and *Leſcoe* or *Leſcovia*, conſiderable Towns (the laſt upon the River *Liperizza*) I found quite left out, as likewiſe *Kaplanly* or *Tygreſs Town*; in *Macedonia*, *Kupruly* or *Bridge* Town, *Urania*, *Pyrlipe*, *Comonava*, *Ecciſſo Verbeni*, as alſo the Lake of *Petriſki*; and the Towns of *Oſtrovo*, *Egribugia*, *Sariggiole*, and *Sarvizza*, and the River *Injecora* near it; thus I found neither *Aleſſon* nor *Tornova*, though one of the moſt conſiderable Cities in *Theſſaly*; and to confeſs the Truth, he that travels into *Macedonia*, will never be able to ſquare the true Situations of Towns and Rivers to their Poſitions and Deſcriptions in Maps, not excepting thoſe that have been very lately publiſhed of *Greece*.

It was one of my chiefeſt Pleaſures in this Journey to converſe with *Chiauſes*, who have (if they are come to any Age) ſeen much of the World in their Travels, and conſequently are good Company, and can give a good Account of Things. *Oſman Chiaus*, who was our Conductor, and then of about fifty Years of Age, ſpoke three Languages, *viz.* The *Turkiſh*, *Sclavonian*, and *Italian*, was a brave honeſt Fellow, who had travelled thro' the greateſt Part of the Grand Seignior's Dominions, and proving old, had ſeated himſelf at *Buda* as a *Chiaus* to the Vizier: He took a very obliging Farewell of me at *Buda*, conducting me without the Gates, with many *a Dios* and hearty Wiſhes of a happy Return into my own native Country; and I muſt ſpeak well in Honour of the *Turks*, that in all my Journey I met with very civil Uſage from them: I never came into a Room where the *Turks* were ſitting, but they would give the firſt Salute; and deſiring me to ſit down, offer ſome Coffee or Tobacco, except that now and then the Boys, and ſome few of the Scum of the People, would call us long hair'd Infidels: The worſt Language I ever received was from a *Jew* at *Lariſſa*, whom I had employed to buy ſome Things; but had it not been for the Grand Seignior's Reſidence in that City, ſome of the *Turks* that were preſent would have taught him better Manners.

I found the *Turks* much addicted to taking of *Tobacco* in thoſe Parts; they carried it in little Bags by their Sides, and uſed to take it in Pipes of an Ell long, made of Reed, with an earthen Bowl at the End, laying one End on the Ground, and holding the other in their Mouths. I was not much uſed to Tobacco, yet out of Complaiſance, I would now and then take a Pipe with them after their Manner, which by reaſon of the Length of the Pipe, I found cool, and leſs diſtaſteful than any other. I was alſo much taken with the Neatneſs and Cleanlineſs of the *Turks*, and with their waſhing of their Feet, Hands, and Faces; I uſed to be mightily pleaſed to ſee our *Chiaus*, at the Sight of a Spring, or any clear Water, alight and waſh himſelf. He was very curious in winding up his Turbant every Morning, and combing of his Beard; nay, they are ſo nice, that they carry a Pitcher with Water with them to the Houſe of Office; when they make Water, they reſt upon one Knee, ſtretching out the other Leg.

Juſtice is a Virtue much encouraged, as well as reverenced, in *Turkey*; of this we had an Inſtance in our Return to *Egribugia* in *Macedonia*; for coming to *Sariggiole*, we met by the Way with a *Turkiſh Aga*, who having a numerous Attendance, had taken up all the Horſes at *Egribugia*, ſo that not being likely to be ſupplied, we reſolved to continue our Journey upon the ſame Horſes to another Stage, finding our Horſes ſtrong and able enough to travel thro' the Plains we were to paſs; but we were ſcarce got without *Egribugia*, when we were ſtopt and carried by the Poſt-maſter of the Place before the Cadi or Judge. He alledged againſt us, that he being the Grand Seignior's Servant, who had given him a certain Allowance for every Horſe he provided, we were injurious to him in paſſing through the Town without taking Horſes from him; for which he deſired Reparation. We found the Cadi ſitting upon a Carpet in a contemplative Poſture, leaning his Elbow upon four or five Folio Books; he commanded his Servants to give us each a Diſh of Coffee, and aſking what we had to ſay in our Defence, the *Chiaus* urged, that we were going upon very urgent Buſineſs, had the *Chaimacham*'s Letters, and were employed by the Grand Seignior to the Emperor of *Germany*; and that he was the *Chiaus* to the Vizier of *Buda*, whither he was to conduct us. Upon mature Deliberation, the Cadi ſaid, *The Chiaus muſt not be ſtopped in his Journey, nor the Poſt-maſter unconſidered*; and ſo calling for the Poſt-maſter's Book, took his Pen, and ſet down a *Sultanine* to be allowed him in his Accounts to the *Teſtarder* or Treaſurer, and ſo wiſhed us a good Journey.

The *Turks*, it ſeems, make uſe of a Maxim contrary to that of *Auguſtus*, who thought fit to put ſome Limit to the *Roman* Empire; whereas their chief Aim is to enlarge their Dominions by new Conqueſts; unto which their hardy Education, ſober Courſe of Life, and unlimited Obedience to their Prince, ſeems to encourage them: Certain it is that their Aim is beyond *Hungary*;

and I have heard ſome *Turks* of Note often ſay, we muſt try our Fortunes again before *Vienna*; where the Star and Half-moon then remained upon the Steeple of the Cathedral Church of St. *Stephen*, above the Croſs; and I could not, without a great deal of Grief, take Notice of a particular Croſs (not known to our Heralds) lunated, to be ſeen in many Frontier Places, whereby the Inhabitants, as they teſtify their Chriſtianity by the Croſs, ſo they acknowledge the *Turkiſh* Sovereignty by the Half-moons.

A Journey from Comorrah *or* Gomorrah, *to the* Mine-Towns *in* Hungary, *and from thence to* Vienna.

28. Having ſatisfied my Curioſity at and about *Comorrah*, I purſued my former Reſolution of taking a Journey to the Copper, Silver, and Gold Mines of *Hungary*; and being unwilling to take ſo long a Journey as to *Preſburg* again, to bring me into the ordinary Road, towards them, I pitched upon a nearer, though not much frequented Paſſage; taking therefore my Way along the North Shore of the Iſle of *Scutz*, till I came to the Confluence of the Rivers *Waag* and *Danube*, I paſſed over to *Gutta*, a Fortification raiſed ſince the late War, in a marſhy Ground, between a Branch of the *Danube*, the *Waag*, and the *Swartz*, within a Mile of *Newhauſel*, which we plainly ſaw from the Steeple of the Church of *Gutta*. It had then a Fort of 130 Men, commanded by an experienced and brave Officer, whoſe Name was Mr. *Matthias Fruwurdt*. Their Boats in which they will paſs the greateſt Rivers, are only one Piece of Wood hollowed out.

From hence we went on by Way of *Forchatz* to *Schella*, where is another Fort to hinder the Incurſions of the *Turks* and *Tartars*, and about half a Mile from this Place is a certain Concavity in the Earth, which burns like the *Solfaterra* near *Naples*; and ſo forwards to *Schinta*, a large Fort which commands the River and the adjacent Country. It conſiſts of four Baſtions, and has a Tower in the Middle. At the Gate hangs a great Rib, a Thigh-bone, and a Tooth, which, they ſay, belonged to a Giant; but I judge them to be of an Elephant. We came afterwards to *Leopolſtadt*, a regular Fortification of ſix Baſtions, where the young Count *de Zouches* then commanded. Not far from hence, paſſing the Rivers, we came to *Frieſtadt*, a handſome large Town, but lately ruined by the *Turks*. I took a Draught here of the Caſtle and Palaces belonging to Count *Forchatz*, which was a Structure that would have been thought elegant in *Italy*.

The *Lutheran* School had been lately ruined by the *Turks*. They pay a yearly Tribute of four Pence a Head, whether of Men, Women, Children, Sheep, Oxen, or Horſes: They are much inured to Hardſhip, and their Women rarely marry above once. Bathing and Sweating naked in Stoves, with their Feet in warm Water, is much uſed here, as alſo Cupping and Scarrifications. There were only twelve Friars left in the Convent of the *Franciſcans*, the *Roman* Chriſtians having ſcarce any other Prieſts than Monks hereabouts. About fourteen *Engliſh* Miles from hence is *Banca*, which has fifteen Baths in a low Ground near the River, three of which are ſpoiled by the *Waag*, which has there tranſgreſſed its ordinary Bounds. About twenty Years ago there were alſo hot Baths on the other Side of the River, but theſe are likewiſe ſwallowed up by the overflowing of the River. The Water of theſe Baths caſts out a white Sediment, and tinges Copper and Silver in an Inſtant as black as Ink. Not far off is a Quarry of Stone, and ſeveral Chalk Veins, which being of all Sorts of Colours except Green, and curiouſly mixed or marbled, was very pleaſing to the Eye. It being the 18th of *March*, the cold Weather hinder'd us from bathing in ſo open a Place, though we ſaw ſeveral Women and Children in them, and our Charioteer bathed himſelf in one of them at Midnight.

March 21. Some Muſqueteers having been ſent us by Count *Zouches* for our Guard, we continued our Journey, and paſſing by *Ripnich*, a Caſtle at *Docatzi*, belonging to Baron *Barrini*, came the ſame Night to *Topolchan*, a Town upon the River *Nitra*, great Part whereof had been conſumed by Fire in the laſt Wars. At *Bellitz*, a Mile from hence, are likewiſe hot Baths. We paſſed the next Day by *Cleſcb*, and through a great Wood by *Hochwiſe*, inhabited by *Germans*, and came to *Sernewitz*, ſituate upon the River *Gran*, having a Caſtle built upon a Rock. It is tributary to the *Turks*. *March* 28. We paſſed the River *Gran* in the Morning, and travelling among the Hills, came to *Hodrytz*, by which runs a rapid Stream, of great Uſe to move the Engines employed in the pounding, waſhing, and melting of Silver Ore.

29. Hence we travelled over a Mountain called *Hell*, and ſo to *Schemnitz*, which claims the Precedency for Bigneſs before all the other Mine-Towns in *Hungary*, and where a great Quantity of Silver Ore is digged every Day. It is a well built Town, moſt of the Inhabitants being *Lutherans*, who have three very handſome Churches here. It has alſo three Caſtles; 1. The *Old Caſtle* in the Town, where there is all Sorts of Wind-Muſick at Six in the Morning, at Twelve at Noon, and at Six at Night. 2. The *New Caſtle*, built by a Lady in a Place where formerly the Gibbet ſtood. 3. On a high Peak, where a continual Guard is kept to diſcover the Approach of an Enemy, in which Caſe the Signal is given by the Diſcharge of a Culverin. The Country being very hilly, the Streets conſequently very uneven. There are hereabouts very good Mines, among which theſe are the moſt remarkable: The *Windſchacht*-Mine, the *Trinity*, that of St. *Benedict*, St. *John*, St. *Matthias*, and another called the *Three Kings*; but the *Windſchacht* and the *Trinity* are the beſt and moſt wrought. The *Trinity Mine* is at leaſt ſeventy Fathoms deep, built and kept open with Under-works, at a vaſt Expence, the greateſt Part of it being in an earthy Soil. The Ore is very rich, and generally blue, covered with a white Clay, which gives the Streams where they work it a milky Tincture, and is that Subſtance, as I ſuppoſe, commonly known by the Name of *Lac Lunæ*, or the Milk of the Silver.

Some of theſe Veins run to the North, and other rich Veins to the N. E. If two Veins happen to croſs one another, they count it lucky; ſo that the Veins of Ore keep not the ſame Point even in the ſame Mine; but as they have no certain Way to know where they are, or which Way they run, ſo they muſt proceed by Gueſs, and perſevere in their Labour till they light upon the Veins. They don't make uſe of the *Virgula divina*, or forked Hazel-ſtick to direct them (as they do in the Silver Mine at *Friburgh* in *Miſnia*) but dig on, according as they judge it moſt likely to ſucceed. They ſhew'd me one Place, where they had digged ſix Years together, when afterwards they found the Vein of Ore but two Fathom diſtant from the Place where they firſt began; and they ſhewed me another Place, where they digged twelve Years before they found the Vein, which proved ſo rich, that in a ſhort Time they were very well paid over and above their Charges. I went ſo far into this Mine, that I paſs'd quite under a Hill, and came out on the other Side.

I deſcended alſo into the *Windſchacht-Mine* as far as the Water would permit me, by 300 large Steps or Stairs of a Ladder; deep in the Earth I ſaw a large Wheel of thirty ſix Foot Diameter, turned by the Fall of ſubterraneous Waters; by the Help of this Wheel ſeveral Engines are moved, which pump out the Water from the Bottom of the Mine up to the Concavity, where this Wheel is fixed. The Water which turns the Wheel, does not fall lower into the Mine, but is convey'd thro' a *Cuniculus*, or a ſubterraneous Paſſage made for that Purpoſe, together with the Water pumped from the deepeſt Part of the Mine, to the Foot of a Hill, where it diſcharges itſelf into the Valley. Beſides this Wheel, there is another above Ground, which lies Horizontally, turned by twelve Horſes, which alſo ſerves to pump Part of the Water out of this Mine. I was told, that no leſs than 200 Men were employed in all the Works belonging to this Mine. I found ſome Places very cold; and others ſo hot, that I was forced to open my Cloaths, which were only Linen before: It being always hot where they work, they work eight Hours naked, if they can hold it ſo long, and then reſt eight Hours. They ſhewed me a Place, where ſix or ſeven Perſons were ſtifled by a Damp; to prevent which for the Future, they have placed a Tube there; the like they have over all Doors and Paſſages where they intend to dig for a great Space, and have no Paſſage through, whereby they let in, or let out the Air, or carried about according as the Miners under Ground ought to be ventilated. The blackeſt Ore is generally the richeſt, much of it is mix'd with a ſhining yellow Marchaſite, which if not in too great a Quantity, is very welcome, becauſe it renders the Ore fluid, and eaſy to be melted; but if this is found in too great a Proportion, they are of Opinion that it preys upon the Silver in the Mine, and in the Furnace over-volatilizing it, and whilſt it is a melting, carries it upwards with the Smoak; for which Reaſon they call it a Robber. There is alſo frequently found a red Subſtance growing to the Ore, call'd Cinnabar of Silver, which being ground with Oil, makes a Vermilion equal to, if not ſurpaſſing the common Cinnabar made by Sublimation.

30. Theſe Mines alſo produce *Chryſtals*, *Amethyſts*, and *Amethiſtine* Mixtures, ſometimes in the Clefts of the Rocks, ſometimes near or join'd to the Ore; as alſo a natural chryſtalliz'd Vitriol, particularly in a Mine in *Paradiſe Hill.* There is alſo great Variety in the Silver Ore, in reſpect of its Richneſs, or Proportion of Silver: A hundred Weight of ſome Ore yields not above half an Ounce of Silver, ſometimes two Ounces, three, four, five, even unto twenty Ounces; what is richer is very rare, though ſome have been found to hold half Silver, and I myſelf have ſeen ſome ſo rich as to be cut with a Knife.

To diſcover the Richneſs of the Ore, a certain Officer is appointed, whom they call the *Probieter*, (Eſſay-Maſter) which he does in this Manner. They bring him a Specimen of each Sort of Ore digg'd out of the Mine, of all which Sorts he takes an equal Quantity, and (the Ore being firſt dry'd, burn'd and pounded) adds to all an equal Proportion of Lead, melts and purifies them, and then by exact Scales, takes the Proportion between the Ore contained in it, of which he gives an exact Account to the Work-men employed in the great Melting Furnaces; who, according to his Report, add or diminiſh the Quantities of thoſe Subſtances, which are to be mixed with the Ores, to melt them in the melting Furnaces; as for Inſtance, to a 100 *Centen*, or 10,000 Pound Weight of Silver Ore, a hundred Pounds Weight, or a *Centen* of which contains two Ounces and a half of Silver, they add forty *Centen* of *Leich* (which is Ore pounded and waſhed) 200 *Centens* of Iron-Stone, which is not Iron Ore, but a Stone found in thoſe Hills of a Liver Colour (perhaps the *Lapis Hæmatites)* a certain Quantity of *Kis* (a Sort of *Pyrites)* in Proportion as there is a greater or leſs Quantity of Marchaſite mix'd with the Ore, and of the *Slacken* as much as they think fit. This laſt is nothing elſe but the Scum, taken off from the Top of the Pan, into which the Metals run, and is a Subſtance made out of the former mentioned, by Fuſion.

Whatſoever is melted in the melting Furnace, is let out through a Hole at the Bottom into the Pan, faſtned in the Earth before it; and thus expos'd, it acquires, as it cools, a hard Scum, Droſs or Cake, which being continually taken away, the remaining Metal becomes purer; unto this they add Lead, which carries all the Silver down to the Bottom, and after ſome Time the melted Metal is taken out, and afterwards melted again in the driving Furnace, where the Lead, or what elſe remain'd mix'd with the Silver, is driven off by the blowing of two great Pair of Bellows; and runs over from the melted Silver in Form of *Litharge of Silver*; but that which comes laſt, being longeſt in the Fire, turns red, and is call'd *Litharge of Gold*, though both be driven from the ſame Metal. Moſt of the *Schemnitz* Silver Ore contains ſome Gold: This they ſeparate after the Silver is melted, by granulating it, and afterwards diſſolving it in *Aqua fortis* made out of a peculiar Vitriol, prepared at *Chremnitz*, whereby the Gold is left at the Bottom, and is melted afterwards, and the *Aqua fortis* being ſeparated from the Silver by Diſtillation, ſerves again for the ſame Uſe.

But it is Time to quit the Subject for Fear of entangling myſelf too far in a Buſineſs, the accurate Deſcription of which would require entire large Volumes, as well as thoſe of *Miſnia*, ſo exactly deſcribed by *Agricola. Lenys*, in his Works concerning Minerals, is alſo worth Reading, and *Lazarus Erker* has given a very nice Account of the principal Ores, and other Mineral Bodies. But after all, it muſt be confeſſed, that there are few Places in the World to be compared with this, where Art and Nature ſtrive to ſhew their utmoſt Force, to procure Riches. The Emperor *Rodolphus* being a great Encourager of Mines, they work to this Day much after the ſame Manner eſtabliſhed in his Time, except that many of their Engines and Inſtruments are much improved ſince. It ſeems to be ſomewhat odd, yet is nevertheleſs very true, that in a Place where every Week a vaſt Quantity of Silver is digg'd up, and carried away by Cart Loads, I could not meet with one pure Silver Piece. This happened to me at *Schemnitz*; for being deſirous to ſee what Alteration ſeveral of thoſe Mineral Waters in that Country would make upon Metals, I would fain have had a Piece of pure Silver, which however the whole Town was not able to furniſh me withal, the current Money of the Country being all mix'd with Copper; ſo that I was forced to borrow ſome Silver Croſſes and Medals, to try the intended Experiment.

31. Near to *Schemnitz* (where old *Schemnitz* ſtood) I ſaw a high perpendicular Rock, Part of which from the Top to the Bottom is of a ſhining blue Colour, with ſome green and yellow Spots, which appear'd as beautiful to the Eye, as if it had been one entire Maſs of *Lapis Lazuli*, finely poliſhed: I was not a little ſurprized at the Sight thereof, and ſhould have been more ſo, had I not heard before from a certain *Spaniard*, who had lived a conſiderable Time in the *Weſt-Indies*, That there is a Rock like this, near the Silver Mines of *Peru*.

At *Glaſs-Hitten* (about ſeven *Engliſh* Miles from *Schemnitz)* there was formerly a rich Gold-Mine, but is loſt ever ſince the Inroad made by the *Tranſilvanian* Prince *Bethlem Gabor* into thoſe Parts, when the Inhabitants flying, the Entrance was ſtopp'd up, and has not been known ſince. The Owner thereof has however thought fit to leave ſome Directions and certain Marks behind him, whereby in Time, the ſame might be diſcovered again; with the Figures of his Inſtruments upon the Bark of the Trees; which Inſtruments having already been found by Digging, thus much is intimated, That where they find a Stone on which a Face is carved, They are near the Entrance of this rich Gold-Mine; and to open the Paſſage into it, they are only to remove a certain Part of the Rock thereabouts, which was made uſe of by the Owner, to ſtop up the Entrance into the Mine.

Glaſs-Hitten is alſo a Place very well known, and much frequented, by Reaſon of its natural Hot-Baths, of which five are conveniently built with handſome Steps into them, and cover'd with fair and lofty Roofs. The Springs are very tranſparent, having a red and green Sediment; the Wood and Seats under Water, being cover'd with a ſtony Subſtance, and Silver is gilt by being left in them. But that call'd the *Sweating-Bath* excels the reſt, its Spring being drain'd through a Hill before they iſſue forth into the Bath; at one End of which, is a Cave, into which you aſcend by ſeveral Steps, which being heated by the *Thermæ*, like a Stove, by chuſing your Seat either higher or lower, you may enjoy either a more remiſs or more intenſe Degree of Sweating at Pleaſure. The Sides of this Stove, as well as thoſe of the Bath, by the continual Exhalations of the hot Springs, are cover'd with a red, white and green Subſtance.

Whilſt I was bathing myſelf in the largeſt of theſe Baths, a certain Fellow who was ſhewing Tricks of Activity to the Men and Women that were then in the Bath, gave me a ſatisfactory Account concerning ſeveral Queſtions I aſk'd him about the natural Vitriol, which he told me was to be found in ſeveral Mines hereabouts, cryſtallized in Lumps, and fit for Uſe; but eſpecially in a certain Mine near *Schemnitz*, now given over by Reaſon of the Earth's falling in, in ſeveral Places. About two or three Days after he came to me at *Schemnitz*, and having brought along with him, Lamps, and Minemens Habits for me and two more, we went together into the Mine, where he ſhew'd me the Vitriol ſhooting upon the Stones and Earth, nay, upon the Floor and Sides of the Paſſages, in the ſame Manner as it does in the Pans, and about the Sticks, not hanging from the Top like to Icicles, as I have ſeen in ſeveral Places before. *Glaſs-Hitten* belongs to the Earl of *Lippey*, of whoſe Family was the famous *Polycarpus Procopius Bocanus*, who being ſent by the Archbiſhop of *Preſburgh*, to inveſtigate the Curioſities of theſe Countries, died before his Obſervations came to Light.

32. *Eiſenbach*, not above four *Engliſh* Miles from hence, and about ſix from *Schemnitz*, has alſo hot Baths, with a red Sediment, and containing a conſiderable Quantity of petrifying Juice, as may be ſeen by the Timber on the Sides of the Bath, ſome of the lowermoſt of which, near the Water, were quite turn'd into Stone; it bears the Spout through which the Spring was convey'd into the Bath, being under Water, though of Wood, yet not in the leaſt changed, the Reaſon of which muſt be aſcrib'd to the volatile Particles of theſe Waters, which are carried immediately upwards with their Exhalations. I remember, that in the Bath of the *Green Pillars* at *Buda*, theſe Vapours condenſed by the high *Cupola* built over it, and on the Irons extended from one Column to another, and on the Capitals of the Pillars were formed into long Stones like Icicles, hanging to all thoſe Places, ſuch as I have obſerved in many ſubterraneous Grotto's, and eſpecially in *England*, in *Okeyhole* in *Somerſetſhire*, and *Pooles-hole* in *Derbyſhire*.

This is evident from the ſulphureous Parts contained in theſe Waters, which however are not diſcoverable, if you either boil or evaporate the Bath-water, as being carried away with the Steam; and nothing is more common than to ſee the Sulphur of the hot Water ſtick on many Places over the Bath. I perfectly remember, that leaning one Day over the Baliſters of the Lower Bath at *Baden*, I found my Buttons, which were of Plate, tinged by the ſulphureous Particles, of a fair Gold-colour, though at a good Diſtance from the Water. This Accident tempted me to the Trial of another Experiment, *viz.* I took Care to hang ſome Money at one or two Foot Diſtance, which was colour'd likewiſe in leſs than a Minute; which made me conclude, that its petrifying Quality conſiſted chiefly in its volatile Particles. I brought away with me ſeveral Pieces of this petrified Water, of five or ſix Inches Diameter. But to return to *Eiſenbach*. It has in all three Baths; two of which are conveniently built; the third made by the Water let out of the former, is called the *Snakebath*, from the Number of Snakes coming into it immediately after it is fill'd with theſe Waters.

33. *March* 30. I ſet out from *Schemnitz*, and taking my Way from *Glaſs-Hitten* and *Apfelsdorff* (where the Archbiſhop of *Preſburgh* has a Palace) I afterwards paſſed the River *Gran*, and travelling among the Mountains, I ſaw certain Entrenchments caſt up from one Ridge of the Mountains to the other, to defend themſelves againſt any ſudden Incurſions; then following the Traces of the ſame yellow Silver, which owes its Colour to the Ore which it waſhes above, we came to *Chremnitz*, ſtanding very high, eſpecially the Church of St. *John*, at ſome Diſtance from it, which is ſuppoſed to ſtand upon the higheſt Ground in *Hungary*. The Town is but ſmall, but the Suburbs are of a pretty large Compaſs. As the Mine here is the oldeſt, ſo it is the richeſt in Gold of all the ſeven in theſe Parts, which are, *Schemnitz*, *Chremnitz*, *Newſol*, *Koningſbergh*, *Bochantz*, *Libeten* and *Tiln*.

The Gold Mine of *Chremnitz* has been work'd, for very near a thouſand Years, being nine or ten *Engliſh* Miles in Length. It has one *Cuniculus* or Horizontal Paſſage, call'd the *Erbſtall*, of 800 Fathoms in Length, its Depth being at leaſt 170 Fathoms; into which they do not deſcend by Ladders, but are let down in certain Seats of Leather, broad and conveniently contriv'd, faſtned to the End of a Cable, by the gentle Turning of a Wheel, to which the other End of the Cable is faſtned. This Mine has ſix perpendicular Schachts, Shafts or Pits, (1) That of *Rudolphus*, (2) of Queen *Anne*, (3) *Ferdinand*, (4) *Matthias*, (5) the *Windſhacht*, and (6) *Leopold*. I went into the Mine by the firſt, 108 Fathom deep, and after many Hours Stay there, was drawn out again by *Leopold*'s Schacht or Pit, in a ſtrait Line above 150 Fathoms, a Height ſurpaſſing that of the Pyramids by a third Part. It was kept up on all Sides with fair Trees, laid upon one another from the Bottom to the Top, in the ſame Manner as all the other Mines are here, that have not Rock on all Sides. Moſt of the Veins run to the North and Eaſt, and they work towards one, two or three, as they call it in the Miners Language, who direct themſelves Under-ground by a kind of Compaſs, not of thirty two Points (as is uſed at Sea) but by one diſtinguiſh'd into twenty four, which they divide into twice twelve, as we do our Days, and ſo compute by Hours.

The Gold Ore is ſome white, ſome black, ſome red and ſome yellow; but the white with black Spots is accounted the beſt, as alſo the Ore next to the black Veins. As this Ore is not rich enough to be made Trial of in ſmall Parcels, to inveſtigate the Proportion of the Gold it contains, ſo they take another Way for the Proof thereof; by pounding a conſiderable Quantity, and waſhing it in a ſmall River running by the Town; which being branch'd out into ſeveral artificial Channels, runs over the Ore continually, and thus waſhing away the earthy Part from the Metalline, becomes thereby tinged below the Town (after its Paſſage over ſo much Ore) with a dark yellow Colour, the ſame with the Earth over which it runs. This is manifeſt at *Chriſtmas*, *Eaſter* and *Whitſuntide*, on each of which Feaſts, the Miners ceaſing from their ordinary Works in the Mines for two Days together, the River flows as clear below, as it does above the Town.

There have been Pieces of pure Gold found in this Mine, of which I have ſeen ſome in the Emperor's and Elector of *Saxony*'s Repoſitories, one of the Breadth of the Palm of my Hand, others ſomewhat leſs; but theſe are eſteemed great Rarities. The yellow Earth of the Grounds about *Chremnitz*, but eſpecially of the Hills to the Town are not without Gold, which is the Reaſon that a great Part of one of thoſe Hills is quite digg'd away, the Earth having been waſh'd and managed in the ſame Manner as the pounded Ore, not without good Profit. *Matthias Dollinger*, the Surveyor of the Mine at *Chremnitz* (who entertain'd me very obligingly) has of late found out a certain Engine to pound the Ore much finer than it was before; by which Means they now obtain a conſiderable Quantity of Gold out of that Ore, which otherwiſe would have yielded none.

There are certain Paſſages in this Mine, cut through the Rock, which being long diſuſed, the Sides which were formerly ſpacious enough to carry the Ore through, were grown now ſo near one another, that we were ſcarce able to paſs. Their Way of conveying the Ore from Place to Place, or to the Bottom of the Pit (from whence it is drawn up) is performed by a certain Cheſt they call the Dog: It is higher behind than before, and runs upon four Wheels, having a Tongue of Iron at the Bottom, which being fitted into a Channel of Wood, cut in the Middle of the Bottom of each Paſſage, cannot deviate thence, ſo that a little Boy runs with 300 or 400 Pounds Weight of Ore in the Chariot before him, without any Light, through thoſe dark Paſſages, with great Swiftneſs, and coming out, turns out the Ore upon the Ground, and ſo back again thro' the ſame Way he came. They make uſe of another Engine or Cheſt, altogether like this, except that inſtead of an Iron Tongue, it has four Rowlers, beſides the four Wheels; with this they carry the Ore from the Mouth of the Mine, or down the Hills to the *Buchwerk*, (as they call it) where it is pounded and waſhed, the

Way being laid all along with Fir-trees, and ſo contrived, that the Rowlers muſt needs rowl upon the Fir-trees, without being able to overturn or run out of the Way, ſo as to be managed by a Child, and ſometimes a Dog, there paſſing ſcarce a Week but that betwixt 300 and 400 of theſe Chariots, containing each 400 Weight of Ore, are carried down thus to every *Buchworke.* There were then in this Mine, two very pernicious Damps, beſides others that were leſs dangerous; one was in a *Schacht*, *Shaft*, Pit or *Puteus*, the other in a *Stall*, as they call it, or Paſſage, or *Cuniculus*; no Lamp would burn in them for any Time, and ſo long as they did, the Miners would venture to ſtay there; but as ſoon as they went out, they were drawn up again: They find theſe Vapours more peſtiferous, where the Water is very high; but that in the *Cuniculus* they were in good Hopes to correct by Perflation, and digging another Paſſage into it.

They told me, that at one Time they loſt twenty-eight Men in four ſeveral Paſſages, *viz.* ſeven in each *Cuniculus.* At the firſt ſinking of *Leopold*'s *Schacht* or Pit, they were extremely troubled with pernicious Damps, which they qualified in this Manner: They fix'd a Tube reaching from the Top to the Bottom of the Pit, but this not anſwering altogether their Expectations, they were obliged to have Recourſe to another Invention, *viz.* by ſtopping the Pit, by Means of a broad flat Board, which covered all the Sides of it, except where the Tube was, and ſo forced out all the Air in the Pit, through the Tube, which they were forc'd often to repeat, till they made ſeveral other Paſſages into it, whereby the Air is render'd wholſome enough; for as I was drawn up through it, I found not the leaſt Difficulty in Breathing. *Altermans* Fore-ſtall or *Cuniculus*, 500 Fathom long, was, by the Careleſsneſs of a Boy, wiping the Snuff of his Lamp upon the Wood, burn'd in 1642, and fifty Men ſmothered in it; they were all afterwards taken up, except one, whoſe whole Body ſeem'd to have been conſum'd by the Corroſiveneſs of the Waters of the Mine; there remaining nothing but his Cloaths.

34. This Mine alſo contains red, white, blue and green Vitriol and vitriolate Waters. There is alſo in this Mine, a certain Subſtance, adhering to the Gold Ore, and conſiſting of ſmall pointed Parts like Needles of a purple Colour, and ſhining; the Colour of it being yellow like Brimſtone, they give it the Name of *Antimony* of Gold. Various Sorts of Chryſtals are alſo found here, and among them ſome yellow ones.

Near the Gold Mine in the ſame Hills, is a Vitriol Mine, at leaſt eighty Fathom deep; containing a red, and ſomewhat greeniſh Ore or Earth. This they infuſe in Water for three Days, and then pouring it off, boil it for ſeven Days ſucceſſively in Leaden Cauldrons, till it is coagulated to a white thick Subſtance, which being reduced to a Calx in a Furnace, they keep for the making of *Aqua Fortis*, or the *ſeparating Water* uſed at *Schemnitz.* Where they pound the Gold Ore, a Foundation of Wood is laid, at leaſt three Yards deep, upon which they ſpread the Ore. Over this are twenty four Beams, covered at the Bottom with Iron, for the better grinding of the Ore, which is always covered with Water, and the Work continued Day and Night without Intermiſſion, making Uſe of Fir, or ſome other reſinous Wood, inſtead of Candles.

This Grinding, as I told you, is performed by the twenty-four Beams, moved by four Wheels, *viz.* ſix Beams by each Wheel; the latter, which runs from the pounded one, being let into little Pots or Ciſterns, perhaps ſeven or eight one after another, and at laſt into a very large one, of perhaps half an Acre of Ground; which, after it is well ſettled, is let out.

The pounded Gold Ore they call *Slich*, among which they account that the richeſt, which is neareſt to the Beams, where it is firſt pounded: Then they take the *Slich* waſhed ſo long, as, perhaps, in a hundred Pounds Weight there may be half an Ounce, or perhaps an Ounce of Gold and Silver, two Thirds whereof are generally Gold, (the *Chremnitz* Ore being rarely without ſome Mixture of Silver, as the beſt of the *Schemnitz* Silver Ore contains, for the moſt part, an eighth Part of Gold, in Proportion of the Silver:) To this *Slich*, they add Lime-ſtone, and *ſlaken* and melt them together in the Melting-Furnace. This Melting produces that they call *Lech*, which *Lech* being burn'd with Charcoal to render it more porous, is then call'd *Roſt.* This *Roſt* they mix with Sand, and melt it again in the Melting-Furnace, then let it out into the Pan, and proceed as in the Melting of Silver.

Among ſeveral other Ways they have to ſeparate the Gold from the pounded Ore, they have one perform'd without the Uſe of Lead, *viz.* The pounded Ore being well waſh'd, they lay it in Powder upon Cloths, ſo that by the eaſy deſcending of the Water over it, and their continual ſtirring it, the earthy Parts are waſh'd away, and the heavier and metalline remaining on the Cloth. In the ſame Manner they proceed with Sheep-ſkins and Wool, being placed where the Rivulets come either from the Works, or the Hills. The Cloths in which the Ore is thus ſettled, they waſh in ſeveral Tubs, and the Water, after ſettling, is poured off from its Sediment: This Sediment being again waſhed ſeveral Times, and ſtirr'd up in ſeveral Veſſels, they at laſt ſprinkle Quickſilver upon it, and knead it well together for two Hours; then waſhing it again in a wooden Veſſel, (after they have firſt ſeparated good Part of it, which the Quickſilver touches not, by ſtriking the Veſſel againſt their Legs) they reduce the Mixture of Gold and Quickſilver into an *Amalgama.*

After this, having ſeparated again the Quickſilver, by ſtraining it through a coarſe Cloth firſt, and afterwards through a fine, they put the remaining Maſs upon a perforated Plate, which they ſet over a deep Pan placed in the Earth, in the Bottom of which is a good Quantity of Quickſilver: Over this Pan and Plate they lute a Cover, and making a Charcoal Fire upon it, force the Quickſilver, as yet remaining with the Gold, downwards to the reſt in the Bottom of the Pan, and afterwards taking out the Gold, purify it once more in the Fire.

35. Having paſſed ſeveral Days at *Chremnitz*, I travelled forward to *Newſol*; and as I paſſed over the Hills on the Eaſt-ſide of *Chremnitz*, upon the Top of one of them, I ſaw a vaſt Stone or Rock alone, near the high Road; theſe Hills being for the moſt Part covered with Wood, which are of great Service to the Gold Mine. Paſſing on further, we came in Sight of the Village of *Lila*, near which are the Quickſilver Hills. From hence we came to the River *Gran*, upon which *Newſol* ſtands, which has a handſome wooden Bridge over the River, and a handſome Row of Piles croſs the River to ſtop the Wood, which about ten Miles higher is thrown into the River, and without any further Labour, by Force of the Current, carried down to *Newſol*, for the burning, melting, caſting, and hammering the Copper in that Copper-Mine.

Newſol is a very handſome Town, having a ſpacious Piazza, at the upper End of which, ſtands a fair Tower. The Church, which ſtands within the Caſtle, is covered with Copper, and within it are many carved Figures of Wood and Stone Relicks, which, though not much reverenced, yet are preſerved by the *Lutherans*, who are in Poſſeſſion of this Church; the ſame being obſerved in moſt other ancient *Lutheran* Churches.

All about this Town, are the greateſt Copper Mines in all *Hungary*; but the Copper itſelf being ſo ſtrongly united to the Stone, or Ore, the Copper Ore of this Mine is burnt and melted fourteen Times before it produces Copper fit for Uſe. The firſt Melting is perform'd with a certain Stone they call *Fluſt-ſtein*, and its own Droſs, and with *Kis*, or a Sort of *Pyrites.* Then it is carried to the *Roſt-hearth*, as they term it, being great Stacks, or Heaps of Billets, upon which it is laid, and theſe being ſet a-fire underneath, the Ore is burned into a Subſtance called *Roſt*; which being repeated thus ſeven or eight Times, it is then melted again in the Melting-Furnace, and at two Furnaces more at *Miſmills*, and twice more at the Hammer. This *Kis* is brought hither from *Joſina*, which melted is uſed in the Melting of Silver.

At *Miſmills*, not far from hence, they have a Way of getting a certain Quantity of Silver out of the Copper, by adding Lead to it whilſt it is a melting, after which they take out the melted Metals, mixed together in Spoons or Iron Diſhes. After it is cold, they give it a quick Fire again as it lies upon croſs Bars, until the Silver and Lead melts and falls through. The Copper, after by many reiterated Meltings it is made fit for Uſe, is cut in Pieces by very large pointed Hammers, moved by Mills, and afterwards formed into Plates, with other flat and round Hammers.

36. The Surveyor of the Works of *Newſol*, did not only entertain me with a Preſent of Wine and Fowls, but alſo gave me a Letter to the Governor of the Copper-Mine of *Herrn-grundt*, to procure for me the ſame Treatment there. This is a ſmall Town ſeated very high between two Hills, about an *Hungarian* Mile from *Newſol*: He found the high Lands thereabouts, all cover'd with Snow, whereas in the Valleys, between this Place and *Newſol*, we met with none. We felt the Air very piercing at the Entrance of this Mine, being only in our Miner's Habits, which conſiſt only of a Linnen Coat and Drawers, a ſtiff round Cap, like the Crown of a Hat, a Leather Apron turn'd behind, and two Pieces of Leather faſtened to the Knees, to defend them againſt ſtriking upon the Rocks, or the Fall of any Earth upon them. But within the Mine it was warm enough.

I paſſed into this Mine through a *Cuniculus* called *Tachſtoln*, and viſited moſt of the remarkable Places in it; you deſcend into it by certain Trees ſet upright, with deep Notches cut into them to reſt the Foot upon. As this Mine lies very high in the Hill, ſo they are not troub'ed with Water, but often with Duſt, and ſometimes with very pernicious Damps. In one Place they ſhewed me how they had remedied a very peſtiferous Damp, by blowing a vaſt Pair of Bellows for ſeveral Days together. But what is moſt obſervable is, that thoſe Damps are not only to be found in thoſe Parts of the Mine where it is full of Earth and Clay, but alſo where it is rocky. I ſaw one Place where there had been a very bad Damp, ſurrounded on all Sides with ſo hard a rock, that they had been forced to open their Way with Gunpowder ram'd into long Holes, and ſo blown up; for it is to be conſider'd, that a great Part of this Mine is within the Rock, where conſequently they need no Timber to keep it up, as they are forced to do in thoſe Paſſages, that have either Earth on both Sides, or Rock on one, and Earth on the other Side. The Paſſages of this Mine are neither horizontal, nor near to a perpendicular, but moderately inclining up and down, having many large Cavities within.

In one Place where we deſcended, we found the Paſſage ſtop'd by ſome Earth lately fallen in; but one of our Guides finding the Earth yet looſe, without more Ado, digged his Way through, and, notwithſtanding the Earth fell continually upon him, got through, though a great Heap of Earth tumbled after him, which they ſoon carried off with their Engines call'd *Doggs*, and ſo clear'd the Paſſage. This Mine has very large Veins, ſuch as they call *Cumulatæ*, and the Ore is very rich, a hundred Pound Weight of Ore yielding commonly twenty Pounds of Copper, ſometimes thirty, forty, fifty, and even to ſixty in the Hundred; but a great Part of it is firmly united to the Rock, nay, in many Places, the Rock and Ore are one continued Stone, with this Difference only, that one Part of it will yield Copper, the other none; which is diſtinguiſh'd only by the Colour, and that at firſt Sight; the Copper Ore being for the moſt Part either yellow or black, the yellow being pure Copper Ore; whereas the black contains alſo a Proportion of Silver.

This Mineral produces white, green, and blue Vitriol, and a red clear tranſparent; as alſo a green Sediment of a green Water, call'd *Berg-Green*, uſed by Painters. Here are alſo found Stones of beautiful green and blue Colour, and one Sort upon which *Turcoiſes* have been found, and therefore call'd the *Mother of Turcois*.

37. But above all the reſt, there are two Springs of *Vitriolate Water* here (call'd the New and the Old *Ziment*) which turn Iron into Copper, and conſequently deſerve our peculiar Obſervation. Theſe Springs lie very deep in the Mine, and commonly the Iron laid in it, is turn'd into good Copper in about fourteen Days Time, with this further Advantage, that the worſt and moſt uſeleſs Iron is turn'd into the pureſt Copper, much exceeding in Goodneſs that of the Ore, which muſt run through many Fires before it is rendered uſeful, whereas this made by the Vitriolate Springs is very malleable, and eaſily melted; for I myſelf have melted it, without the Addition of any other Subſtance. I took a good Quantity of this Copper out of the Old *Ziment*, and among the reſt a Piece of Copper of the Figure of a Heart, which had been laid in it eleven or twelve Days before, having the ſame Figure, but was as perfectly Iron then, as it is Copper at this Day. Some will not allow this to be a Tranſmutation of one Metal into another, but that this Water being ſaturated with the *Vitriolum Veneris*, and meeting with a Body ſo apt to receive it, as the *Mars*, or Iron, it depoſes *Venus*, who immediately inſinuating herſelf into *Mars*, precipitates his Subſtance, and in Lieu thereof, ſubſtitutes her own Body. But this Opinion is ſufficiently contradicted by Experience; for though, in the Changing of Iron into Copper, many Parts are ſeparated, and lie at the Bottom of the *Ziment*, yet the ſame melted, produces no Iron, but an excellent Copper, as I found it by my own Experience. I have ſince ſeen ſuch a Kind of Tranſmutation attempted by Art, and not without Succeſs, which deſerves Conſideration. After having taken a full View of the Mine, I was reconducted to the Surveyor's Houſe, who entertain'd me very handſomely, preſented me with a Chain of Copper tranſmuted in thoſe Springs; and among other Curioſities, ſhew'd me an exact Map of this Mine, with moſt curious Delineations of all its Paſſages, with a Scale to meaſure the Diſtances of the Places in the Mine; which, for its Extent, Number of People, and admirable Order, might well be compared to a very conſiderable ſubterraneous City. I ſaw him take ſome Copper Ore, which being well heated, and caſt into common Water, made it like the natural Baths which ariſe near theſe Hills. At parting, we drank out of a Cup made of this tranſmuted Iron, gilt over, having a rich Piece of Silver Ore faſtened in the Middle of it, with this Inſcription engraven on the Outſide:

Eiſen ware ich, Kupſer bin ich
Silberg trag ich, Goldt bedeckt mich. i. e.

Copper I am, but Iron I was of old;
Silver I carry, cover'd I am with Gold.

The yearly Profit ariſing to the Emperor from his Mines, is computed at 120,000*l.* Sterling. But if more of thoſe Vitriol Springs ſhould be diſcovered (as ſome have already been at *Zolnock*, and other Places near the *Carpathian* Hills) the ſame would be conſiderably increaſed. But if like Springs ſaturated with the Vitriol of Silver, ſhould be diſcovered near the Silver Mines, and the ſame by a ſkilful Artiſt, improved to the beſt Advantage, the Profit likely to ariſe from ſuch a Tranſmutation, would amount to an immenſe Sum.

38. From *Herrn-grundt*, we travel'd to *Stubn*, about twenty *Engliſh* Miles from *Newſol*, and fourteen from *Chremnitz*. Here we ſaw, near a Brook, ſeveral hot Baths, highly eſteem'd, and much frequented; the Water is very tranſparent, of a ſulphureous Smell, with a green Sediment; it colours the Wood over it green and black, but does not change the Colour of Metals ſo ſoon as moſt others: I left Money in it a whole Night, which I found but faintly colour'd.

There are ſeven Baths here: 1. The Nobleman's Bath. 2. The Gentleman's. 3. The Country-man's. 4. The Country-woman's. 5. The Beggar's Bath. 6. For ſuch as are infected with the *French* Diſeaſe. 7. The Gypſies Bath. They are much of the ſame Degree of Heat as the King's Bath in *England*, in a fine Plain, ſurrounded with Mountains, thoſe to the Eaſt being the ſame, which on the other Side are ſo rich in Metals. From *Stuba* we went on to *Boinitz*, croſſing the River *Nitras*, and leaving *Privitz*, a large Town, to the Left of us. At *Boinitz* are alſo five natural Baths, of a very gentle Heat, covered all of them under one large Roof. Into the Nobleman's Bath you deſcend on all Sides by ſtrong Stairs, the other four being of Wood, but handſomely built.

From hence we continued our Journey to *Weſtonitz*, fourteen *Engliſh* Miles, and the next Day to *Trenſchin*, which they count four *Hungarian*, or twenty eight *Engliſh* Miles, which took us up a whole long Day's Journey. *Trenſchin* is a very handſome City upon the River *Waag*, having a very handſome wooden Bridge over that River, and a fair Piazza. The Jeſuits Church is a noble Structure, and the Caſtle (belonging to Count *Jellbaſey*,) ſeated very high; about a Mile from the City are two choice Baths, and the country hereabouts affords ſeveral good Springs of Mineral Waters. Here it was that we met with Count *Rothal*, who being then on his Way to *Eperies* in Upper *Hungary*, to treat in the Quality of the Emperor's Commiſſioner, with thoſe of *Abaffi* Prince of *Tranſylvania*; I engaged ſome of his Attendants to make an Enquiry into the Salt Mines there, of which they afterwards gave me the following Account.

39. About two *Engliſh* Miles from the ſaid City of *Eperies*, is a famous Salt Mine 180 Fathoms deep; for the moſt Part in an earthy, and not a rocky Ground.

The Miners deſcend it firſt by Ropes, and afterwards by Ladders. The Salt Veins are ſo large, that entire Pieces have been found of 10000 Pound Weight, which they commonly cut into long ſquare Pieces of two Foot in Length, and one in Thickneſs; which is afterwards ground betwixt two Stones. Tho' the Mine be cold and moiſt, yet is the Salt not eaſily diſſolved: Notwithſtanding which, great Part of the Water of the Mines is ſo much impregnated with Salt, that when boil'd, it affords a bluiſh Salt, which the Country People give their Cattle. The Colour of the Stone Salt of this Mine is ſomewhat inclining to a grey; but when ground to Powder is very white, and conſiſts of pointed Parts, or Foſſets. Another Sort of Salt there is alſo, which conſiſts of Squares and Tables; and they have a third Sort with long Shoots. There is alſo ſome Difference in the Colour of the Salt of this Mine, ſome of which is groſsly mix'd with the Earth participating much of its Colour; and even that which is as pure as Cryſtal, often receives divers Tinctures: I ſaw once in the Middle of a Cryſtal Salt, with long Shoots, a delicate blue; and at the Count of *Rothal*'s a large Piece of a tranſparent yellow; ſome Pieces are ſo clear and ſo hard, that they carve them into different Shapes and Figures like Cryſtal. Of all theſe Sorts I brought ſome Pieces with me to *England*. But it is Time to take our Farewell of the Mines, and to return to our Journey; which we continued near to the River *Waag*, to *Novo Mneſto*; and the next Day to *Tirnaw*, ſeated in a Plain. The following Day we reach'd the *Danube*, and took up our Quarters that Night at *Preſburgh*, (of which we have ſpoken before.) Here paſſing the *Danube* in two Ferry-boats, we travelled by *Homburg* Tower, by *Haimberg* Hill, by the Town of *Haimberg*, by *Rogelſbrun*, *Viſchet*, and *Swechet* to *Vienna*. We obſerved in thoſe Countries in Upper *Hungary*, through which we paſſed, Things wore a quite different Face from that of *Auſtria*, and from what in all Likelihood they have been formerly; moſt of them having been ſubject to the Ravages of the *Turks* and *Tartars* in the laſt War, and ſome of them being forced even now to pay a yearly Tribute to the *Turks*. The Inhabitants live ſo meanly, that they ſcarce afford themſelves neceſſary Furniture for their Houſes. Even in thoſe Countries under the Emperor's Juriſdiction, many of the Inhabitants being either *Lutherans* or *Calviniſts*, and in conſtant Fear from the *Roman* Clergy, are but little ſatisfied in their Condition.

Formerly almoſt all the Mine Towns were inhabited by *Lutherans*, but now the Officers are all *Roman Catholicks*. And at *Schemnitz*, one of the *Lutheran* Churches was taken from them. And we were informed, that Count *Palfi* had enjoin'd all his *Lutheran* Tenants, at and about *Boinitz*, either to change their Religion, or to quit their Houſes and Lands. You meet alſo in Places of *Hungary* with *Anabaptiſts*; and near the Frontiers of *Tranſylvania*, with *Unitarians*. Even the *Roman Catholick Hungarians* are not a little jealous of the *Germans*, and the Court of *Vienna*; becauſe they think them preferr'd before them, and that their Privileges are not well maintained, which is the true Source of almoſt univerſal Diſaffection.

APPENDIX to the former SECTION.

A Journey from *Vienna* to *Venice* by Land, with a diſtinct Account of the Quickſilver-Mines in *Friuli*, including the Author's Obſervations in his Paſſage through *Styria*, *Carinthia*, and *Carniola*.

By Dr. EDWARD BROWNE.

1. *The Deſign of the Author's Journey. A Deſcription of the Baths at* Baden, *four* German *Miles from* Vienna. *Remarks upon the Nature and Uſe of thoſe Baths.* 2. *A Deſcription of the City of* Neuſtadt, *and ſome other Places in* Auſtria. 3. *An Account of the Town of* St. Veit, *or* St. Faith, *the Antiquities in its Neighbourhood, and the ſingular Method of inſtalling a Duke of* Carinthia. 4. *A Deſcription of various Antiquities in this Neighbourhood, and of the Civilities paid to the Author, by ſeveral* Scotch *Officers in the* Imperial *Service.* 5. *The wonderful Paſſage into* Carniola *through Mount* Luibel, *reſembling that of* Pauſilipo *in the Kingdom of* Naples. 6. *An Account of the ancient* Nauportus, *famous for the Landing there of the* Argonauts. 7. *A curious and copious Deſcription of the* Zirchnitzer-See, *eſteemed the greateſt natural Curioſity of its Kind in the World.* 8. *The Author's Journey to, and Deſcription of the Quick-ſilver-Mines at* Idria *in* Friuli. 9. *The Author's Remarks upon the Country and Inhabitants.* 10. *An Account of* Palmanova, *a Fortreſs of the* Venetians, *held at this Time to be the beſt in* Europe, *and conſidered as the great Bulwark of that State againſt the* Turks. 11. *The Author continues his Journey to* Venice, *and after a ſhort Stay there, reſolves to return by Land to* Vienna. 12. *A curious Deſcription of the* Venetian *Dominions on that Side, and of the different Manners of the People on the oppoſite Sides of the Bridge over the* Fella. 13. *Some further Remarks upon the Country of* Carinthia, *and on the Lead and Quickſilver-Mines therein.* 14. *The Author's Remarks on the moſt conſiderable Paſſages in his Journey.* 15. *Some additional Obſervations upon the foregoing Sections.*

1. AFTER having taken a View of ſeveral Places about the City of *Vienna*, I made a Journey to *Venice* on Horſeback, for the Conveniency of ſtaying at a Place, or going out of the Road at Pleaſure. The firſt Place of Note we ſaw was *Baden*, four *German* Leagues from *Vienna*, a walled Town, ſeated near a Branch of Mount *Cetius*, the common Boundary of *Noricum* and *Pannonia*. Near the City paſſes a River call'd *Swecht*, which about a *German* League from *Vienna* falls into the *Danube*. It has three Churches, that of the *Auſtin* Friars, of *our Lady*, and St. *Stephen*. But what makes this Place moſt remarkable, are its nine Baths, two whereof are within the Town, five without the Wall, and two beyond the before-mentioned Rivulet.

The *Duke's-Bath*, being the chief and by much the largeſt, is twenty Foot ſquare, in the Middle of a Houſe of the ſame Figure built over it: The Vapours paſs through a wooden Tunnel at the Top, but the Water is carried in at one Corner of the Bath, near the Bottom, by wooden Pipes, under the Town-Wall from the Spring-head, which riſes not far thence to the Weſtward.

The Springs of all the other Baths are conveyed into them through Holes of the Plancher, they being on all Sides cover'd with Wainſcot. The Water is generally tranſparent, inclining ſomething to a Blue, and makes the Skin appear pale, like the Smoak of Brimſtone: It turns Metals black in a few Minutes, except Gold (the Colour of which it heightens,) but the Coin of the Country (which is a Mixture of Copper and Silver,) it turns in an Inſtant from a White, into a dark Yellow, which however ſoon after turns black.

The Water gives a delicious green Colour to the Plants it waſhes, and ſometimes leaves a Scum upon them, of a Purple mix'd with white. Near the Spring-head it has a great Reſemblance to the Sulphur River between *Tivoli* and *Rome*, but its Scent is not ſo nauſeous, nor does it incruſtate its Banks as that does.

This Spring-head is worth the Obſervation of a curious Traveller, in Regard it riſes under a rocky Hill, into which is cut an arched Paſſage of forty Yards Length, through which I paſſed, and found it as hot as a Stove, occaſioned by the hot Spring-Water running under it, (like that of *Tritola* and *Bajæ*) the greateſt Part of this Cave being incruſtated on the Tops with a white Subſtance, which towards the Entrance becomes harder and ſtronger. I had ſome of the Pipes which conveys the Bath-Water opened; and from the Upper Part of theſe Pipes took off a good Quantity of Powder like Flower of Brimſtone ſublimated; whereas nothing like it was found in the lowermoſt Parts of the ſame Pipes. I dropp'd *Oleum Sulphuris per Campanam* into this Water, which it received without the leaſt Agitation: But the *Oleum Tartari per deliquium* dropp'd into it, cauſed an Ebullition, as in the making of *Tartar Vitrolate*.

The (2d) Bath within the Wall is call'd, *Our Lady's Bath*, being about twelve Foot broad, and twenty four in Length, and one End of it under a Church of the ſame Name. This ſeems to be more impregnated with Sulphur than the reſt, and is bluer, leaving a yellow Flower upon the Boards, as the reſt do a white. The (3d) is the *New Bath* without the Gate. The (4th) the *Jews Bath*, having a Partition in the Middle to ſeparate the Men from the Women. The (5th) St. *John*'s *Bath*, of a triangular Figure. The (6th) the *Beggars Bath*; ſo ſhallow, that they are forced to be drawn in it. The (7th) is the *Bath of the Holy Croſs*, about two Fathoms ſquare, intended for the Clergy. The (8th) St. *Peter*'s *Bath*, the Waters of which are greener than the reſt. The (9th) is the *Sour Bath*, ſet about with Stone Balaſters, with a fair *Cupolo* and Lanthorn on the Top. The Water of it is very tranſparent, and will colour Money black without touching it; but if once cold, will not change the Colour of Metals although they be boil'd in it. The hotteſt of theſe Baths reach not the Heat of the Queen's Bath in *England*. They uſe no Guides here, but direct themſelves with a ſhort turn'd Staff.

2. A Captain in the Emperor's Service preſented me with a *Gempſkugel*, which is ſaid to be an Excreſcence upon the Liver of a *Rupicapra*, or wild Goat, in the Mountains of *Tyrol*, to which they attribute a ſignal Virtue in the Diſeaſes of the Liver, malignant Fevers, and the Plague itſelf. The Soldiers of theſe Parts make great Account of it, being poſſeſs'd with an Opinion, that it renders them invulnerable for two Hours after they have taken it. From hence I travelled on to *Newſtadt*, one of the moſt conſiderable Cities of *Auſtria*: It is of a ſquare Figure, having a Piazza in the middle; it has four Gates, three whereof are to be ſeen from the Piazza. St. *James*'s Church has two Steeples in the Front. The Emperor has a large ſquare Caſtle here, having a Tower on each Corner, which, as well as the greateſt Part of the Town, is to be ſeen at a great Diſtance, its Situation being in a low marſhy Ground encompaſs'd with a Ditch and a double Wall. Here Count *Peter Serini*, and *Frangipani*, the Heads of the late intended Rebellion in *Hungary*, were beheaded.

From hence we went on through the Plains towards Mount *Simeron* (Part of Mount *Cetius*,) upon the Top whereof you ſee a great Heap of Stones, which make the Boundary betwixt *Auſtria* and *Styria*; the Aſcent of it is very rocky, and ſo ſteep, that twenty four Horſes, or Oxen, are ſcarce able to draw up a Coach with Safety. In our Way we paſſed by *Newkirckel*, where is a Chapel with a little red Pinnacle, built, as they ſay, by an *Engliſh* King, and lodged that Night at *Schotwein*, or *Schadtwein*, a ſtrong Town, ſituate on the Paſſage leading up to the Rocks betwixt the Hills; the Houſes on the Sides of the Rocks being inacceſſible but from the Top. This Town having the Mountain on both Sides, and being ſhut up with a Gate at each End, is therefore by ſome ſtiled *Clauſtra Auſtriæ*; and a ſmall Brook coming down from the Hills, paſſes under the Wall of it. From hence we travelled to *Mehrzuſchlag*, where they beat out Iron into Bars: From thence paſſing by a ſwift Rivulet call'd *Murtz*, to *Keimburg*, and by a Caſtle belonging to the Family of *Stubnberg*, one of the moſt ancient in *Germany*, came to *Prug*,. or *Muripons*, a well built Town, with a fair Piazza, ſeated upon the River *Mur*, or *Muer*, a ſwift large River, but not navigable. There is another Town of the ſame Name upon the River *Leyta*, call'd *Prug* upon the *Leyta* for Diſtinction Sake.

3. We went on from hence to *Lubeim*, where the Staple of Iron is; and thence to *Knitelfeldt* and *Judenburg*, along the River *Mur*. The next Day to *Hundsmark* and *Newmark*, and ſo to *Freiſach*, ſuppoſed by ſome to have been *Virunum*, and by others *Vacorium*, in Sight of *Altenhofn*, the Caſtle of *Itrowitz*, and the Caſtle of *Tottenbrun*, which belongs to the Archbiſhop of *Saltzburg*. From hence we travell'd to St. *Veit*, or St. *Faiths*, (*Vitapolis*) formerly the Capital of *Carinthia*, ſeated at the Confluence of the two Rivers *Glan* and *Wanich*, encompaſſed with a Wall; it has ſix Churches, and a handſome Piazza, in which ſtands a noble Fountain, the Baſon being of white Marble cut out of one Stone, five Fathom in Circumference, which was brought hither from *Saal*, or *Zolfeldt*, a Place near it, abounding with *Roman* Antiquities, of which this is one.

In Sight of this City are four conſiderable Hills, *viz.* that of St. *Veit*, St. *Ulrick*, St. *Laurence*, and St. *Helena*, with a Chapel upon each of them; to all which, upon a certain Day in the Year, the Inhabitants, for thirty *Engliſh* Miles round, come in Pilgrimage on Foot. We had here the Diverſion of a *Latin* Comedy at the *Franciſcans* Convent; it being then in *May*, we found the higher Hills covered with Snow, whereas the lower were very green, and full of Fir and Larch-Trees. Many of the Inhabitants here are troubled with hard Tumours in their Throats, ſome as big as their Heads (*Strumatici*,) which they are obliged to cover in cold Weather, when they are much diſcolour'd. There is an Hoſpital without the City for thoſe, as well as ſome others that are Blind, Dumb, and Changelings. We obſerved however, that the better Sort of People, who uſe a good Diet, were ſeldom troubled with this Diſtemper, though their Throats much exceeded in Bigneſs thoſe I ſaw before in the *Alpine* Parts of *Savoy*.

From hence we continued our Journey to *Saal*, or *Solua*, an ancient *Roman* Colony, mentioned in the Map of *Wolfgangus Lazius*, by the Name of *Colonia Soluenſis*, with a Field near it call'd *Ager Soluenſis*, or *Zolfeldt*; a Place noted for *Roman* Antiquities, many of which have been carried away into other Parts. Here I ſaw that ſo much celebrated Piece of Antiquity of the King's Chairs; being of Stone, ſet together in the Form of two Elbow-Chairs, turn'd back to back. Upon three of the Stones are Inſcriptions, which appear to be much more ancient than the Fabrick of the Chair. At the inſtalling of the Duke of *Carinthia* (whether a King or Emperor) either he or his Repreſentative ſits in that Part of the Chair which faces the Eaſt, a Peaſant ſitting at the ſame Time in the other Part to the Weſt. Among other Ceremonies, the Peaſant riſing up, preſents the Duke with a fat and lean Ox; the Duke being obliged to return the fat one, and keep the lean one, receives afterwards a gentle Box on the Ear, from the ſame Peaſant; and the Inſtalment is thus concluded.

The Church of *Saal* having had the good Fortune to eſcape the Fury of the barbarous Nations, is very ancient; and on the Walls has many old *Roman* Antiquities of *Baſſo relievo*, taken firſt out of *Zolfeldt*. Among many others, I took particular Notice of theſe: *A Chariot drawn by two Horſes. A Chariot with a Man in it. A Wolf licking of Fruit fallen from a Tree.* Hector *drawn behind* Achilles *his Chariot about* Troy. *Four very fair Heads unto the Middle. Two Wolves, each holding a Horn and a Cup between them, out of which ſhoots a Vine with Leaves and Grapes*; this is over the Porch. Within the Porch is a *Cupid holding of a Bunch of Grapes*; Romulus *and* Remus *ſucking of a Wolf*. Two Figures over the Crucifix by St. *Chriſtopher*, with ſome others; all which, as I told you, were brought hither from *Zolfeldt*, where I alſo ſaw many Inſcriptions; one upon a Stone on the South-ſide of the Church was this;

HERCVLI. *E*
EPONAE. AVG.
PROSALUTE. IMP.
CAES. M. AVR.
ANTONINI. PII. FE.
LICIS. INVICTI.

As alſo ſeveral *Roman* Coins of Copper and Silver found in thoſe Parts. I brought away a Golden Medal of *Trajan*.

We went from thence to *Clagenfurt*, (the ancient *Claudia*) now the capital City of *Carinthia*, being a handſome four-ſquare Town, well fortified with a ſtrong Wall, and a broad Rampart. Its Streets are very regular; and the Piazza in the Middle, being adorned with a Marble Column hath a Statue of the Virgin *Mary* upon it, as alſo a Statue of the Emperor, and, what exceeds all the reſt, hath a moſt noble Fountain in the Center, over which is a Dragon of a prodigious Size, made out of one Stone, *Hercules* with his Club ſtanding before it. This was likewiſe brought from *Zolfeldt*. Theſe mountainous Parts afford three noble maſſy Fountains, *viz.* thoſe two of St. *Veit* and *Clagenfurt*, and that of *Saltzburg* of white Marble. *Clagenfurt* being at that Time full of Soldiers, we were very civilly entertained by ſeveral of the Officers, but more eſpecially by Count *Leſley* their Commander in Chief, Baron *Hay*, and Lord *Paiſley*, who carried me in the Count's Barge through an artificial ſtreight Channel into the *Werd Sea*, or Lake of *Clagenfurt*, to a Country Seat call'd *Loretto*, moſt pleaſantly ſeated; having a Chapel belonging to it, built in Imitation of that of *Loretto* in *Italy*, which I found exactly conformable to the Original.

5. From *Clagenfurt*, we turned to the South, and after ſix or ſeven *Engliſh* Miles, paſs'd the River *Drave* over two wooden Bridges with an Iſland in the Middle; and within two Hours after entring among the Hills at a Place call'd *Hammer*, (where the Iron is beat out) continued my Journey towards the high and great Mountain of *Luibel*. Soon after we ſaw ourſelves arrived by the oddeſt Deſert of Rocks that can well be imagined, at a great *Caſcata* or Water fall, which having worn out the Rocks underneath, appears at firſt Sight to be artificial. The Aſcent is very ſurpriſing, being encloſed with Walls, turning backwards and forwards, to the very Pinnacle of this great Mountain *Luibel*, Part of the *Carnick Alpes*, dividing *Carinthia* and *Carniola*. Coming up as high as the ſteep Rocks and Peaks would let us, we were amazed to ſee our Guide lead us Sideways through an artificial Road into a Paſſage cut quite through the Mountain, like the famous Grotto of *Pauſilipo* by *Naples*. It has a Roof of Wood-work in the Middle, which is continued unto the *Carniolian* Side. The Roof of this Paſſage is very high, its Length 156 Yards, and four Yards in Breadth, affording daily Paſſages for Country Carriages and Carts.

Having never heard or read of this ſurpriſing Paſſage, I at firſt imagined it to be ſome old *Roman* Work, till I was credibly informed, that it was much later, there being formerly no Paſſage into *Carniola* this Way; but People entred it by going about a great Way by *Villach*. In aſcending this high Mountain, being infeſted with much Rain, and a fierce Storm, till we came to the higheſt Part of it, I had the Opportunity to ſee the Clouds deſcend, and after it was paſs'd to aſcend again ſo high, as to get over Part of the Mountain, and a Stream of them paſs'd through the rocky Paſſage out of *Carniola* to the *Carinthian* Side, directly contrary to our Way, who came out of *Carinthia* into *Carinola*. As we reached this Grotto by a continual Aſcent, ſo no ſooner were we got through it, but we deſcended by Degrees, firſt to St. *Anna*, two *Engliſh* Miles downward, next to *Newſtattle*, ſix or ſeven Miles lower, and ſo deſcending ſtill till we came to *Crainburg*, (the old *Carnodunum*) a handſome Town, ſeated upon the River *Save*, from whence, through a very pleaſant Plain four *German* Leagues long, we came to *Labach (Lubiana)* the capital City of *Carniola*, through which runs the River of the ſame Name, which afterwards diſcharges itſelf into the *Save*. This is a very handſome City, its Caſtle, which is ſituate upon a Hill, overlooking two large Valleys to the N. and S. but being commanded by another Hill that lies near it, its Fortifications are neglected of late Years. Mr. *Toſh*, a *Scotch* Apothecary in this City, ſhew'd me various curious Minerals of thoſe Parts.

6. *Labach* is ſuppoſed to be the ancient *Nauportus*, ſo famous for the Landing of the *Argonauts*, who ſetting out from *Argos Pelaſgicum* in *Theſſaly*, ſail'd to *Colchos*, on the Eaſt ſide of the *Euxine Sea*; but being purſued by the Veſſels of the King of *Colchos*, ſteer'd their Courſe Northward to the Mouth of the *Danube*, and paſſing up that River, till they came to the Confluence thereof with the *Save*, they next went up the *Save*, and ſo the River *Labach*, till they landed at this Place call'd anciently *Naupertus*, from whence they return'd by the Way of the *Adriatick Sea* into *Greece*. So that in my Travels I had been near the Place of their ſetting out in *Theſſaly*, and at their Landing-place in *Carniola*.

From *Labach* we travel'd towards the *Zirchnitzer See*, or that famous and moſt ſurpriſing Lake of *Zirchnitz*, having the Marſhes on our Right, and the Hills on our left Hand, till we came to *Breunitza*; and then paſſing over them, we reach'd *Zirchnitz*, a Town ſcarce containing three hundred Houſes, but which has given its Name to that ſtupendous adjacent Lake. Here, having received the neceſſary Directions and Accommodations from the Hands of the Judge of the Place, for viewing of the Lakes, we went to *Seedorff*, a Village about half a Mile nearer the Lake, and thence to *Niderdorff*, where we took Boat, and ſpent ſome Time in taking an exact View of the Lake.

7. This Lake is about nine or ten *Engliſh* Miles long, and half as broad, encloſed with Hills at ſome Diſtance, and to the South-ſide with the *Birnbaumir* Foreſt, of a great Extent, and ſaid to abound with Deers, Wild Boars, Foxes, Wolves, and Bears.

What makes this Lake moſt remarkable, or rather ſurpriſing, is, that every Year, in ſome Part of the Month of *June*, the Water thereof deſcends through certain Holes at the Bottom, under Ground; and in the Month of *September* returns by the ſame Ways, with a very ſpeedy Aſcent, riſing up to the Height of a Pike, and ſo covering the Ground again. Whilſt the Water remains under Ground, the Earth produces very ſpeedily great Plenty of Graſs, yielding Food for Cattle in the Winter; and during that Time, you may ſee the Hares, Deer, and other Wild Beaſts, reſort thither from the adjacent Foreſts, of which great Numbers are then taken by the Country People.

The Lake affords vaſt Plenty of Fiſh, though that as well as Part of the adjacent Country being a Lordſhip belonging to the Prince of *Eckenberg*, the Country are not allow'd the Liberty of Fiſhing, except upon the retiring of the Water, when they take vaſt Numbers of them, by intercepting their Paſſages as they are going under Ground. As far as I was able to learn, this Lake brings not up any unknown Fiſh at the Return of the Waters, but only ſuch as went down, and are found in moſt other Lakes, ſuch as Carp, Tench, Eels, the which having ſpawn'd before they go down, the Fry has about three Months Growth, when they are brought up again through the ſame ſubterraneous Paſſages.

The Water in this Lake is of a very different Depth, in ſome Places not above four Foot, and not far thence perhaps twenty Yards; ſo that the Ground being as it were divided into ſmall Hills and Valleys, the Fiſhermen have given peculiar Names to ſeven of them, which in the *Sclavonian* (this Country Language) are, *Vodanas, Reſhetu, Sitarza, Ribiſhkiama, Nakniſhu, Leviſhe, Kottel.* I myſelf paſs'd over five of the aforementioned Valleys, and ſaw a remarkable Stone call'd the *Fiſhers Stone*, becauſe, by its Appearance, they gueſs when the Water will begin to retreat under Ground; as alſo by a peculiar Hill, which being higher than the reſt, becomes a pleaſant Iſland at the Return of the Water.

Upon the moſt exact Enquiry I could make, I could not find that this Lake had fail'd one Year to deſcend and aſcend again; or how long it was ſince this Property had firſt been obſerved; ſo that it ſeems more than probable, that this Lake does not owe its Riſe to any Earthquake, but has been the ſame from all Antiquity, and, if my Conjecture fails me not, is the *Lugea Palus* of *Strabo*, who, notwithſtanding this, as well as all the other ancient Geographers, make not the leaſt Mention of this ſurpriſing Quality.

The neareſt Part of the Sea unto this Lake is the *Sinus Tergeſtinus*, and *Sinus Flanaticus*, or the Gulph of *Trieſte*, and the Gulph of *Quevero*. At within a few Miles Diſtance, divers conſiderable Rivers have their Sources, as the *Labach*, the *Corkoras* or *Gurk*, the *Colapis* or *Culp*, which falls into *Save*, and the *Vipao* or *Amnis Frigidus*, which runs into *Lyſonſo* by *Goritia*, beſides divers others. I obſerved the Ground about this Lake very hollow, and full of Caverns: The like I took Notice of in ſeveral other Parts of *Carniola*, not unlike unto *Elden* Hole in *Derbyſhire*; and, if we may give Credit to what ſeveral of the beſt Perſons at *Zirchnitz* aſſured us, the Prince of *Eckenberg* had the Curioſity to go into one of thoſe Caverns, and came out again upon the Side of a Hill.

8. Being upon my Departure, I was in ſome Doubt, whether I ſhould go to *Threſte*, (*Tergeſtum*) a Sea-port in the *Adriatick Sea*, belonging to the Emperor, and thence by Ship to *Venice*; but having a great Curioſity to ſee the famous Quickſilver Mine at *Idria* in the Country of *Goritia*, I went from *Zirchnitz* to *Lovec*, and paſſing through the mountainous Parts of that Country, came to *Idria*, encloſed with Hills on all Sides, a River of the ſome Name running juſt by it; which is ſtiled by *Leandrio Alberti*, *ſuperbiſſimo fiume d' Idria*, though it was very ſmall and ſhallow then, and after great Rains ſcarce has Water enough to carry down the Fir-trees, and other Wood made uſe of in the Mines, for Building and Fuel, which being caſt into the Water above this Place, are ſtop'd by ſome Piles ſet croſs the River, as we obſerved in the River *Gran* near *Newſol*.

The only Thing that makes this Town worth taking Notice of, are the adjacent Quickſilver Mines; the Entrance into which being ſomewhat lower than the Town itſelf, this makes them ſomewhat ſubject to Water-floods, to empty which, they are provided with excellent Engines, and other Devices: The deepeſt Part of the Mine, from its Entrance, is betwixt 120 and 130 Fathoms. This Mine affords two Sorts of Quickſilver; one call'd the Virgin Quickſilver, the other plain Quickſilver. They call Virgin Quickſilver that which diſcovers itſelf without the Aſſiſtance of Fire, and is either found in the Earth or Ore naturally as it is, or falls in ſmall Drops, or ſometimes ſtreams out in a conſiderable Quantity down into the Mine. Thus ſeven Years before I ſaw it, they had ſuch a Stream coming from the Earth, which at firſt was as ſmall as a common Thread, and afterwards as big as a good Pack-thread, but did not continue for above two or three Days. They alſo reckon that Sort of Quickſilver, Virgin Mercury, which is ſeparated by Water in a Sieve firſt, and afterwards in a long Trough with ſmall Holes at one End, without the Help of any Fire.

Plain Quickſilver, or Mercury ſimply ſo called, is that, which being not at firſt perceivable to the Eye, is forced by Fire either out of the Ore or native Cinnabar of Mercury, which they dig out of this Mine. The Ore is of a dark brown Colour, mix'd with red, but the beſt is a hard Stone, which before they put into the Fire, is firſt groſly powder'd and work'd by the Sieve, to ſeparate the Virgin Quickſilver, if any be found in it. The Quickſilver Ore of this Mine is the richeſt of all that ever I ſaw, for it generally contains half Quickſilver, or in two Parts of Ore one Part of Quickſilver; and ſometimes, in three Parts of Ore, two Parts of Quickſilver. I deſcended this Mine by the Pit of St. *Agatha*, by Ladders, and came up again by that of St. *Barbara*; an Aſcent of 639 Staves or 89 Fathoms. I ſaw in the Laboratory, where the Quickſilver is ſeparated by the Force of Fire, 16,000 Retorts of Iron, each of which coſts a Crown at the Iron Furnaces in *Carinthia*. They employ at once 8000 Retorts, with as many Recipients, for the drawing over the Quickſilver in ſixteen Furnaces, fifty Retorts in each, *viz.* twenty-five on a Side, twelve above and thirteen below of each Side.

June the 12th, 1669, When I was there I ſaw them carry away into Foreign Parts forty Saumes of Quickſilver, each Saume containing 315 Pounds Weight, to the Value of 4000 Ducats: It is carried upon Horſes Backs, two ſmall Barrels upon each Horſe. In the Caſtle I ſaw 3000 Saumes of Quickſilver at once, all made up in double Leather, and in another Houſe as much of the beſt Ore as could be ſeparated in two Years Time, unleſs they ſhould have more than ordinary Plenty of Wood coming down by the Rains; though, by reaſon of the high Hills about them, it ſnows oftner here than it rains.

It is a Cuſtom for all the Strangers who come into the Caſtle of *Idria*, to have their Names ſet down in a Regiſter-Book kept for that Purpoſe, with the Names of their Native Country. In the large Catalogue thereof, we met with but few *Engliſh* Mens Names, and of late Years only with Mr. *Evelyn* and Mr. *Pope*'s Names, with their Companies, who after their Return, had their Obſervations inſerted in the *Philoſophical Tranſactions*. As the better Sort of the Inhabitants of this Town generally ſpeak five Languages, *viz.* the *Friulian*, *Sclavonian*, *German*, *Latin* and *Italian*, (beſides that ſome alſo ſpeak *French*) ſo it is very fit for the Reception of Strangers.

9. From *Idria* we paſſed the *Swartzenb.rg* or Black-Mountain, and deſcending ten Miles through a ſtony Country, came to *Adeſhini*, and ſo to *Goritia* (the old *Norja*) the chief City of the Country of *Goritia*, pleaſantly ſeated, over-looking a fair Plain to the South. The Imperial Governor reſides in the Caſtle, having a Guard to attend his Perſon. As we were travelling in the Night-time, we had ſometimes about us a great Number of large Glow-worms, which put in Papers, gave a dim Light, and in ſome Places in the Plains the Air was full of flaming Flies. There is Abundance of that neat kind of Acer, whereof Violins and other Mu-

ſical Inſtruments are made, as well in thoſe Parts as in *Carinthia*, and the Archbiſhoprick of *Saltzburg*, where they make Trenchers and Tables of it, and ſell them at a cheap Rate; I brought ſome of the fair broad Leaves from thence.

Leaving *Goritia*, I paſs'd the River *Soncius* or *Lizonſo*, which riſing near the Hills, empties itſelf into the *Adriatick* Sea, famous for the Death of *Odoacer*, who was ſlain near it in a Battle by *Theodorick* King of the *Goths*, and the Inroad of the *Turks* made hereabouts, in 1477, under the Reign of *Mahomet* the *Great*; after which, travelling through the Meadows, we came unto the ſtrong City of *Palma Nova*, built ſince by the *Venetians* to prevent the like Incurſions. All this long Circuit, till within a Mile of *Palma Nova*, we travelled through the Emperor's Dominions, which are much larger than generally apprehended; and as I have ſooner or later ſeen the greateſt Part of them, I can't but think him a great and powerful Prince, he being in Poſſeſſion of all *Auſtria*, *Styria*, *Carinthia*, *Carniola*, Part of *Croatia*; *Iſtria* and *Friuli*, Part of *Alſatia*; *Tyrol*, *Bohemia*, *Moravia*, *Sileſia*, Part of *Luſatia*; and a conſiderable Part of *Hungary*.

10. *Palma Nova* in *Friuli*, is the largeſt regular Fortification I ever met with in my Travels, having nine Baſtions, bearing the Names of as many noble *Venetians*; on each Courtain there are two Cavaliers, the Rampart is much higher than the Wall, and the Ditch thirty Paces broad, and twelve deep; being kept dry to render the Town more healthful, but may be fill'd in Caſe of Neceſſity. It has three Gates; viz. *Porta Maritima*, *Porta di Cividal*, and *Porta di Udine*. The three Baſtions *Foſcarini*, *Savorgnan*, and *Grimani*, lie betwixt the *Porta Maritima* and the *Porta di Udine*; thoſe three called *Barbara*, *Dona* and *Monte*, betwixt the *Porta di Udine* and *Porta di Cividal*; as thoſe of *Garzoni*, *Contarini* and *Villa Chiara* are betwixt the *Porta di Cividal* and the *Porta Maritima*. Each of theſe Gates were then covering with a very far Half-Moon. In the Middle of the City is a Sexangular *Piazza*, from whence there is a fair Proſpect to the three Gates, and ſix Streets quite through the Town. In the Centre of it is fix'd a Standard over a triple Well; the Front of the Cathedral facing the *Piazza*, which is alſo beautified with divers Statues; and a finely gilt Obeliſk. There is in the Middle of the Bridge an artificial Drawbridge, ſo contriv'd, that upon the Approach of any Force, the Centinel, by touching only an Iron Spring, can draw it up.

I have in my Travels made Obſervation of ſeveral Kinds of well-contriv'd Drawbridges, amongſt all which none pleaſed me better than thoſe of *Amſterdam*, which part in the Middle, ſo that the Maſt-head or Break-water of the Ship bearing againſt it, opens it, and affords a free Paſſage to the Veſſel without any other Help. The *Venetians* have made a Channel from *Palma Nova* to the Sea, capable of Veſſels of good Burthen. This Fortification, which was begun by the *Venetians* in 1594, is eſteem'd here one of the ſtrongeſt in *Europe*, having been contriv'd by the Advice of the beſt Engineers.

11. From *Palma Nova* I went to *Maran St. Vito*, a Port Town of the *Venetians* in *Friula*, ſo named from St. *Vito*, who is ſaid to have been buried in this Place. At this Town we took a *Felucca*, and ſailing by the Shore of *Friulia* or *Patria*, we paſſed by *Porto di Taiamento*, and came to *Caborle*. In this Iſland there is a Church dedicated to the bleſſed Virgin, ſeated upon the Sea-ſhore nigh the Waves, yet ſaid never to be overflowed by the Sea, being, as it were, the *Halcyon* Neſt of its Patroneſs, and a Place of remarkable Devotion. On this Shore we refreſhed ourſelves, and were diverted while at Sea, in ſeeing them take Shell-fiſh; and then paſſing by *Livenza*, where the Sea came formerly up as high as *Opitergium*, and afterwards by *Porto di Piave*, I arrived at *Venice*, entering by the *Porto de Caſtelli*, paſſing by the *Carthuſians* Convent, and landed at the Piazza of St. *Mark*. Here I found the whole City highly concerned for the hazardous State of *Candia*, which was loſt ſoon after; *Dominico Contarini*, the preſent Duke, was ſedulous in that Affair. The Voyage of *Ghiron Franciſco Marcheſe Villa*, General of the Infantry of *Candia*, with a Journal of a Siege, had been lately publiſhed, and was in many Hands. There was a Supply of Auxiliaries in good Readineſs. It was at that Time a more than ordinary hot Seaſon, and ſome of our *Engliſh* Sea-Captains and Maſters told me, that they had ſeldom met with ſuch hot Weather even between the Tropicks. Having formerly had a View of *Rome*, *Naples*, *Florence*, and the great Cities of *Italy*, and paſſed ſome Time at *Padoa* a few Years before, I made but a ſhort Stay about *Venice*; and having reviewed what was moſt conſiderable, and renewed my Acquaintance with ſome worthy courteous Friends at *Venice* and *Padoa*, Mr. *Hales* the Conſul, Mr. *Hobſon*, Dr. *Cadined*, and others, I diſpoſed my Affairs for my Return to *Vienna* the ordinary Way.

12. In order thereto, I took Boat at *Venice*, and landed at *Meſtre*, a pretty Town, and the beſt Place for Accommodation for ſuch as travel into *Germany* by *Tyrol*, or into *Auſtria* by *Friuli*; from hence I travelled ten Miles through a pleaſant plain Country, till I came to *Treviſo*, which gives its Name unto the Country about *La Marca Travigiana*, a handſome City adorned with good Houſes, Churches, Towers and Fountains. The clear River *Sile* or *Silo* runs through it, and afterwards into the Sea between *Meſtre* and *Murano*; it abounds in good Wines and Fruits, and was a chief Seat of the *Lombards* in theſe Parts. This old City, after having run various Fortunes, and being under the Subjection of the *Huns*, and other conquering Nations, and ſometimes obeyed the *Signiora della Scala*, and the *Carrareſi*, was united to the State of *Venice* in the Year 1388. It was converted to the Chriſtian Faith, by *Proſdochimus*, a Follower of St. *Peter*. Eight Miles from hence ſtood the ancient City *Altinum*, founded by *Antenor*, and deſtroyed by *Attila*. From thence I came to *Lovadina*, and croſſed the great River *Piave*, *Plavis*, or *Anaſſus*, which ariſing in the Mountains, paſſes by the Cities of *Belluna* and *Feltre*, then to *Concian* or *Coniglian*, and next to *Sacille* or *Sacillum*, formerly a Biſhop's See, under the Patriarch of *Aquileia*, a pleaſant and well built Place, eſteemed the Garden of the Republick, and ſeated by the River *Livenza*, or *Liquentia*, which paſſing by *Motta*, runs into the Gulf of *Venice*. Here I took a Guide to conduct me through the Plains and Meadows, and came to *Spilimbergo*, where I again took a Guide to croſs the ſwift River *Taiamento*, or *Tiliaventum*; this is eſteemed the greateſt River in *Friuli*, ariſing above in the *Julian Alpes*, and running down into the *Adriatick Sea*, and often overflowing a great Part of the plain Country. This ſwift River put a Stop to the Incurſion of the *Turks*, when *Scander*, Baſſa of *Illyria*, broke into *Friuli* with twelve thouſand Horſe, and deſtroyed all before him, in the Reign of Sultan *Bajazet* the IId. Not far from *Spilimbergo*, I paſſed a neat River or notable Cut, call'd, *La Brentella*, ſixteen Miles long, made by the *Venetians*, for the better bringing down of Wood from the Mountains, to be uſed in the making of Glaſſes at *Murano*: It is all paved with a good Stone Bottom and Sides; the Bottom is round, ſo that it is ſomewhat like a Tube opened or ſplit in two. Then I paſſed by St. *Daniel*, ſeated upon a Hill by *Hoſpitaletto*, and came to *Venſone*, a Town ſeated at the Beginning of the Hills, and formerly the Limit of the *Venetian* Dominions; thence by *Reſiuta* to *la Chiuſa*, a Place remarkable for the ſtraight Paſſage of the *Alps*, where the *Venetians* keep a Guard, and ſhut up the Paſſage every Night. From thence I came to *Ponteba* or *Ponte Fella*, upon the River *Fella*, the exact Confines between the *Venetian* and Imperial Dominions; and ſurely a Man can ſeldom paſs more clearly and diſtinctly, from one Country into another, than in this Town. On one Side of the Bridge live *Italians*, Subjects unto the State of *Venice*; on the other Side, *Germans*, Subjects unto the Emperor. Upon the one Side, their Buildings, their Manner of living, their empty Rooms, large Windows, Iron Bedſteads, ſhew them to be *Italians*: On the other Side immediately, their Stoves, higher Bedſteads, Feather Beds one over another, ſquare

Tables, and their Baſon and Cloth by the Wall, declare them to be *Germans*. The Bridge itſelf is alſo half *Italian*, half *Dutch*, one Part being built of Stone, and the other of great Trees laid over, after the *German* Faſhion of making Bridges. Between *Venſone* and *Ponteba* there are many great *Caſcata*'s, or Falls of Waters; but of ſeveral Paſſages of the *Alps*, this ſeemed unto me the beſt and moſt eaſy. In theſe mountainous Places I was entertain'd with ſtrange Stories of the Snow, which cover theſe Hills in the Winter; as how many Pikes Length the Snow was deep in ſome Places; how round the Country would look when all the craggy Rocks were cover'd; how a Snowball, thrown down from a Mountain, would ſo gather and augment in the Fall, as to do great Miſchief in the Valley; and that if the ſmalleſt Bird ſhould but ſcrape with her Foot at the Edge of an high Hill, that little Beginning might ſo increaſe in the Deſcent, upon a Thaw, as to overwhelm an Houſe at the Bottom.

13. From hence, by *Tervis* and *Tirl*, unto *Villach* or *Villack*, an handſome Town, and one of the chiefeſt in *Carinthia*; but before I came to *Villach*, I went to ſee the natural Baths, which were not much out of the Way, at the Foot of an Hill, about an *Engliſh* Mile from the Town, and in good Eſteem. There are two clear ſulphureous Baths, but very gently warm, and have an Acid, and no unpleaſant Taſte. The Bottom is not planchered nor paved, but hath its own natural Spring and Settlement with it; yet into one there is a hot Spring let in, which ariſes by it. They are large, and have Stairs to deſcend into them, with little Rooms of Wood about them for Accommodation: They are cover'd over, and they bathe in them cloathed with Shirt and Drawers, as in *Auſtria*. Not far fom hence is a Lake called the *Oſſiacker-See*, from *Oſſiack*, a Town upon the Side thereof, and is one of the moſt conſiderable Lakes in *Carinthia*, there being beſides it, theſe which are remarkable, the *White Lake*, the *Millſtatter*, the *Werd*, and the *Forchten*. This Lake doth not only abound in Fiſh, but affords great Plenty of *Oſſiacker* Nuts, which the People eat, and ſome make Bread of, which notwithſtanding, upon Examination, I found to be no other than very large Seeds of *Tribulus Aquaticus* or Water Gallthorps. From *Villach* I ſoon came to the *Werd-See*, and keeping it continually on my Right Hand, I travelled by the Side of it till I came to *Clagenfurte*, and then paſſed again to St. *Veits*, where I met Mr. *Donellan*, from whom, upon my former Deſires to him, I received an Account of the great Lead Mines in *Upper Carinthia*, at *Bleyberg*, where they have worked eleven hundred Years, and the Pits are deep. *Federnus Stollen* or *Cuniculus* is an hundred and ten Fathoms deep in the Earth, and the Hills ſo high about it, that upon the Melting of the Snow in the Spring, there is often much Hurt done, the Snow rolling and falling in ſuch vaſt Heaps, that nothing is able to reſiſt it; ſo that in the Year 1654, it fell ſo vehemently, that it deſtroyed and carried away ſixteen Houſes. He preſented me alſo with many handſome natural Curioſities, collected by him in thoſe Parts; one of which, among the reſt, I cannot but mention, which was a rich, large, fair Piece of natural Cinnabar, found in *Crewaltar*, in the Foreſt of *Cre*, two *German* Miles from St. *Veits*, in the Lordſhip of *Oſterwitz*, where there hath been great Quantities found out; for the *Herr von Standach* about thirty Years ago, as he was hunting in this Foreſt, being thirſty, and laying down to drink out of a Stream, which runs from the Top of the Hill, he perceived the Stream to be full of Cinnabar; but ſince it hath been ſo diligently ſearched after, that without working and digging for it there is none to be found. From St. *Viets* I continued my Journey by *Frieſach*, where formerly there was a Gold Mine, and then by *Newmark*, *Hundſmark*, *Peltſolz*, *Knitelfeldt*, *Luibm*, *Prug*, *Kemberg*, *Mehrz u Schlag*, *Schadtwien*, *Newkirckel*, *Newſtadt*, *Solnaw*, *Traſkirchell*, *Newdorff*, to *Vienna*.

14. This my Return from *Venice* to *Vienna*, about three hundred and fifty *Italian* Miles, was the moſt quiet Journey I ever made; for not meeting with good Company, I perform'd it alone, and upon one Horſe; and although there are ſeveral Nations, and no leſs than four Languages ſpoken upon this Road, yet I met with no Diſturbance from any, nor did any one aſk from whence I came, or whither I would go; no Trouble as to Bills of Health, and good Accommodations in the Inn at an eaſy Rate. They are, for the moſt part, a plain People, make good Soldiers, little mutinous, but obedient to Commands, and hardy, and are of good Uſe and Service unto the Emperor. In my Travels in *Germany*, I ſeldom failed to meet with *Jews*; but in this Journey I met with none, or ſuch as I could not well diſtinguiſh; for though there were then whole Villages of *Jews* in *Auſtria*, yet they were prohibited in *Styria*, and ſeverely baniſhed out of *Carinthia*; ſo that for thoſe *Jews*, who travelled between *Venice* and *Vienna*, the Emperor diſpenſes with them as to their Ruff, and the *Venetians* as to their Red Hat. I went this Journey when the Sun was in Cancer, in the hotteſt Time of the Year, and Heat was very offenſive to me in the great Plains of *Friuli* and *Auſtria*, but in the *Alps* it was much more moderate, and the Country was all green and pleaſant; when, on the contrary, all the Graſs in *Auſtria* was burnt up by the Sun; and if there were not a continual Breeze about the Middle of the Day, upon all great Plains, eſpecially in Southern Countries, the Heat would be intolerable; and I could not but take Notice, how pleaſantly the poor Peaſants in the *Alpine* Countries diverted themſelves in the Fields, and after their Labour would be lively and briſk, ſometimes play at Cards with Cards of a Span long, ſuch as they have in thoſe Countries; while the rich Countrymen in *Auſtria* were faint, and gaſping for Breath; nor did it any Thing avail them, that *Auſtria* was more Northern than *Styria* or *Carinthia*, for there may be as much Difference as to the Temperature of the Air, as to Heat and Cold in one Mile, as in ten Degrees of Latitude; and he that would cool and refreſh himſelf in the Summer, had better go up to the Top of the next Hill, than remove into a far more Northern Country. I have been ready to freeze on the Top of a Hill, and in an Hour's Time after have ſuffered as great Inconvenience from the Heat of the Valley at the Riſing of the Sun; I have been upon a Hill with a clear Sky and good Weather, and have ſeen a Valley encompaſſed with Mountains, and covered over with Clouds much below us; the Sun ſhining upon the upper Part of the Clouds made them appear like fine Down or Wool, and made the ſofteſt, ſweeteſt Lights and Shadows imaginable; afterwards, when we deſcended into this Valley under the Clouds, we had no ſuch pleaſant Proſpect, but were rained upon the moſt Part of the Day. In that hot Country of *Arabia*, Travellers complain moſt of the Cold they ſuffer in paſſing the Hills. The Mountains in *Italy* and *Spain* are, ſome of them, covered with Snow and Ice all the Summer long. I have heard that Mount *Atlas* is ſo alſo, from Dr. *Butler*, who lately travelled in thoſe Parts, and from others, when in *Great-Britain* there is no ſuch Thing. At *London* we have Winters for the moſt Part favourable; when Captain *James*, who went to diſcover the North-weſt Paſſage, and to ſearch if there were any Communication between the *Atlantick Ocean* and the *South-Sea*, in the Northern Part of *America*, as there is in the Southern, ſuffered more Hardſhip in the ſame Degree of Latitude, than the nine *Engliſhmen*, who were left all the Winter in *Greenland*; and *Baffin*, on the contrary, upon the ſame Deſign, had a pleaſant Voyage in an open Sea, and met with Inhabitants upon the Shore, till he came within nine Degrees of the Pole. But I ſhall wander too far out of the Way, and therefore will put an End to this Diſcourſe.

15. In the laſt Folio Edition of Dr *Browne*'s Travels, there are added, his Journey to *Cologne* in 1673, on Purpoſe to view the Baths of *Aix la Chapelle*, and to examine the mineral Waters of the *Spa*; as alſo his Travels through *Italy*, which were firſt made, and which had coſt him twelve or fourteen Years to digeſt and put in Order. It may not be amiſs however to inform the Reader, that in theſe he ſhewed himſelf a very

learned and curious Antiquary, of which, we have a clear and pregnant Inſtance in what he ſays of the City of *Padoa*, which, for that Reaſon, we ſhall tranſcribe for the Reader's Satisfaction and Entertainment, though otherwiſe much ſtraitned for Room, and very impatient to take our Leave of *Europe.* " The Landing place of *Padoa* is handſomely ſet off, with Stone Steps continued for a long Space along the Side of the River, after the Manner of the Landing-place at *Ghent*, and ſome other elegant Cities of the *Low Countries.* The outward Wall is ſtrong, being well-fortified according to the modern Rules of Fortification, in the Time of *Leonardo de Loredaro*, Duke of *Venice*; and to render it more ſtrong, the Rivers of *Brenta* and *Bacchiglione* are let into the Town-Ditch. The inward Wall is now moſt conſiderable for its Antiquity, and for retaining the Name of its Founder, it being ſtill call'd *Antenor*'s Wall: It contains a far leſs Space of Ground than the former *Padoa*, being built in this Reſpect like to the City of *Aix la Chapelle*, or *Aken*, having one Town within another. That *Patavium* or *Padoa* is one of the oldeſt Cities of *Europe*, built preſently after the *Trojan* War, is confeſſed by ancient Writers, and ſo generally believed of old, that *Livy* lays it down for the Ground-work of his Hiſtory, beginning in this Manner, *Tam primum omnium ſatis conſtat Troja capta*, &c. In the firſt Place it is ſufficiently manifeſt, that *Troy* being taken, the *Grecians* executed the utmoſt of their Rage upon the *Trojans*, *Æneas*, and *Antenor* only excepted, by reaſon of their ancient Friendſhip with the *Greeks*, and in Reſpect that they had always endeavoured to make Peace and reſtore *Helena*. After various Fortunes, *Antenor* brought a great Number of the *Heneti*, who having loſt their King *Pylemon* at the Wars of *Troy*, and being driven out of *Paphlagonia* by a Faction, were now ſeeking new Seats, and a Captain to lead them, and came along with them to the Bottom of the *Adriatick Gulf*, drove out the *Eugenians*, who inhabited between the Sea and *Alpes*, and eſtabliſhed the *Trojans* and *Heneti* in thoſe Countries.

" *Martial* alſo ſaluting *Flaccus*, a *Padoan* Poet, calls him

" *Flacce* Antenorei *ſpes & Alumine Laris.*

" And that you may more firmly give Credit to it, you may further alſo have the Authority of a Goddeſs for it, for *Venus* is introduced expoſtulating in theſe Terms with *Jupiter* in the Behalf of *Æneas.*

" *Quem das finem, Rex magne, laborum?*
" Antenor *potuit, mediis elapſus Achivis,*
" *Illyricos penetrare ſinus, atque intima tutus*
" *Regna Liburnorum et fontem ſuperare Timavi*
" *Unde per Ora novem vaſto cum murmure montis*
" *It mare proruptum et Pelago premit arva ſonanti.*
" *Hic tamen ille Urbem Patavi ſedeſque locavit*
" *Teucrorum et genti nomen dedit Armaque fixit.*

" What Time, great King, ſhall terminate our Woes?
" Safe could *Antenor* break through all his Foes;
" Pierce to the Bottom of the *Illyrian* Bay,
" View Kingdoms where *Lyburnian* Princes ſway;
" Paſs the nine Mouths of fierce *Timavus* Waves,
" Which roars upon the Hills, and o'er the Vallies
" raves,
" And there could fix, and on that foreign Ground
" Great *Padoa*'s Tow'rs for After-Ages found.
" New name the Race, and free from all Alarms,
" Hang up in Peace his conſecrated Arms.

" In thoſe Days, when the Art of Navigation was but in its Infancy, and the Mariners very unwillingly parted with the Sight of Land, *Antenor* was forced to keep cloſe, and creep along the Coaſt of *Peleponneſus* and *Epirus*, and then ſail by the *Illyrian* and *Liburnian* Shores, which are very uneven and troubleſome to deal with, being full of Creeks, unſafe Bays and Rocks, beſides very many Iſlands of various Shapes; whereas if he had croſſed over to the *Italian* Coaſt, he had had a nearer Voyage, and ſail'd with Pleaſure all along an even, bold, brave Shore. The People of *Padoa* are well pleaſed with the Thoughts of their ancient Founders and Progenitors; and they ſtill preſerve the Tomb of *Antenor*, near to which at preſent ſtands the Church of St. *Lawrence*, and in their publick Shows they will be ſtill repreſenting ſomething of *Troy* and the old *Trojans*; and in one Place I ſaw a Horſe of Wood, about twenty Foot high, in Imitation of the old *Trojan* Horſe, but I ſuppoſe nothing near ſo big as the firſt Original: Yet, when I conſider, that above eleven hundred Years after the Deſtruction of *Troy*, when Towns and Buildings were very much amplified and improved, *Pompey* coming in Triumph could not enter even the great Triumphal Gates of *Rome* itſelf in a Chariot drawn by Elephants, an Animal that ſeldom or never comes to be ſo high as this Horſe, it may well be ſuppoſed that they could not have received even this poor Model of the firſt great one into the old Town of *Troy*, without pulling down their Walls.

" The City of *Padoa* was always a Friend to the *Romans*, and did them great Service in their Wars againſt the *Galli Senones*, the *Umbrians*, *Boians*, *Inſubres*, *Cimbrians* and *Carthaginians*, and ſtuck cloſe to their Intereſt till the Time of the Declination of the *Roman* Empire; when *Attila*, the powerful King of the *Huns*, with Fire and Sword deſtroy'd it. After divers Years it was rebuilt by the Favour of *Narſes* the Eunuch, General to the Emperor *Juſtinian*, and was again lamentably ruined by the *Longobardian* Princes, who, by ſhooting Arrows with Firebrands fixed to them, ſet the City on Fire, and took it. But under the Empire of *Charles* the Great and his Succeſſors, it aroſe out of its Aſhes again, and flouriſhed for a long Time, being governed firſt by Conſuls, and then by a Podeſta, until the Time of their dreadful Tyrant *Ezzelin*, who harraſſed, baniſhed, tormented and maſſacred the Inhabitants, cramming their own Wells within the City full with mangled Bodies, and, amongſt other Severities, upon an angry Diſtaſte againſt them, ſlew ten thouſand of them in one Day at *Verona*. But notwithſtanding theſe Cruelties, they recover'd their Liberty again after the Death of *Ezzelin*, and by Degrees became very powerful, having under their Juriſdiction *Vicenza*, *Verona*, *Trent*, *Treviſo*, *Feltre*, *Belluno*, *Ceneda*, *Seravalla*, *Choſa*, *Baſſano*, with its Territories; all the *Poleſine* or *Peninſula*, and the greateſt Part of *Friuli*, with other important Places, when in the End *Marſilio de Carrara* made himſelf Captain or Governor of the City.

" This noble Family of the *Carrareſi*, very powerful in theſe Parts, came from their Caſtle of *Baſſano*, and lived in *Padoa*, where they became very conſiderable, and ſiding with the Pope againſt the Emperor *Frederick* the Second, they were driven out by *Ezzelin*; but when, upon the ſucceſsful Attempts of the *Roman* Legate, *Angedin*, a Commander under *Ezzelin*, was overthrown, they were again reſtored, dignified, and eſtabliſhed in the Government of *Padoa*, which they poſſeſſed with ſome Variety of Fortune from one to another, in their own Family, for about an hundred Years, in the Concluſion of which they were ſeized on by the *Venetians*, who thought fit to put *Franciſco Novello* and his Sons to Death in the Year 1405. And after this Manner, by having totally extinguiſhed the noble Family of the *Carrareſi*, without Fear of any farther Claim or Diſpute, they poſſeſſed themſelves of the City of *Padoa*, and hold it in their Hands to this Day.

" The Buildings of *Padoa*, both publick and private, are very conſiderable; for moſt of the City is built upon Arches, making handſome Portico's or Cloiſters on each Side of the Street, after the Manner of the Houſes in the Piazza of *Covent-Garden*, which at all Times afford a good Defence againſt the Sun and Rain, and many of the Houſes are painted on the Outſide with very good Hiſtory Painting in *Freſco*;

“ their Churches are fair, and divers well adorned. The Domo or Cathedral Church is large, ſeated near the Middle of the City, endowed and mightily enriched by the Emperor *Henry* the Fourth, whoſe Empreſs *Berta* lies buried here. The Revenues of this Church, at preſent, are reckoned to amount to a hundred thouſand Crowns a Year; and beſides the Monuments of many eminent Perſons, they preſerve here the Body of St. *Daniel*, of Cardinal *Pileo de Pratto*, and of Cardinal *Franceſco Zabarella*.

“ The Church of St. *Antonio* is viſited by Perſons far and near, and the exquiſite Deſign, artificial Carving in Marble, the handſome Choir and rich Ornaments make it worth the ſeeing. The Top of the Church is made up of ſix Cupola's cover'd with Lead. The Chapel of St. *Antonio* is nobly is ſet out with twelve Marble Pillars, and a rich Roof. Between the Pillars are carved the Miracles of this Saint, who lies interred under the Altar, upon which ſtand ſeven Figures made by *Titian Aſpetti*, a good Statuary of *Padoa*; and behind the Altar there is a moſt excellent *Baſſo relievo* done by *Sanſovinus*, *Tullius*, *Lomburdus*, and *Campagna Veronenſis*: Over againſt the Chapel of St. *Antonio* ſtands the Chapel of St. *Felix*, and his Tomb, nobly wrought with colour'd Marble, and the whole ſplendidly adorn'd with the Paintings of the highly celebrated *Gioto*. The chief Relicks in this Church are the Tongue and Chin of St. *Antonio*, a Cloth dipped in the Blood of our Saviour, three Thorns of his Crown, and a Piece of the Wood of his Croſs, ſome of the Hair and Milk of the bleſſed Virgin, and ſome of the Blood of the Marks of St. *Francis*. Before the Front of the Church there is a handſome Braſs Statue on Horſeback, repreſenting the great *Venetian* General *Gattamela*. St. *Antonio* lived ſix and thirty Years, died upon the thirteenth of *June*, 1231, and was canonized by Pope *Gregory* the IXth, in the City of *Spoleta*, 1237.

“ The Convent of the black Monks of St. *Benedict* may compare with moſt in *Italy*, and their Church dedicated to *Santa Giuſtina*, built by *Palladio*, is one of the faireſt in *Europe*. St. *Giuſtina* was a Virgin and Martyr, Daughter to *Vitaliano* of this City; ſhe ſuffered Martyrdom in the Time of *Maximianus* the Emperor. In this Church there are ſtill preſerved, as they ſay, the Body of St. *Luke the Evangeliſt*, of St. *Matthias* the Apoſtle, of two of the innocent Children, of *Prædochimus*, of the Converter of theſe Countries to the Chriſtian Faith, and firſt Biſhop of *Padoa*; of *Maximus* their ſecond Biſhop, and of *Santa Giuſtina*. The Front of this Church looks into a ſpacious Place, called *Prata della Valee*, where the Gentlemen meet in their Coaches in the Evening for their Pleaſure. In a handſome Room or Burying-place on the South-ſide of this Church, is a round old red Marble Stone, upon which the Heads of many Martyrs were cut off; and near to it, a fine white Marble Well, call'd, *Pozzo di Martiro*, or the Martyr's Well, a Place of great Devotion.

“ Where the Temple of *Juno* ſtood in old Time, there is now built a handſome Church dedicated to St. *Auguſtin*, wherein are divers Monuments of the Family of *Carrara*, the Tomb of *Charlotta*, Daughter to *James* King of *Cyprus*, and of *Petrus Aponenſis*, a great Philoſopher. *Il Ponte Melino*, where there are thirty Water Mills together, and the *Caſtello della Munitioni*, both built by *Ezzelin*, are worth the ſeeing. *La Corte del Capitanio* is ſplendid, and was the Palace of the *Carrareſi*. The *Palazzo della Ragione*, where the Courts of Juſtice are held, is very large, beautiful, and highly conſiderable, both without and within, being built of Marble, with Rows of Pillars without and within; there are Heads and Inſcriptions for divers eminent Perſons of this City; the Length thereof is two hundred fifty-ſix Foot, and the Breadth eighty-ſix, without any Pillar or Support in the Middle.

“ The Univerſity of *Padoa* was founded in the Year 1220, by the Emperor *Frederick* the IId, and the Schools are fair and large, containing one Quadrangle, with Rows of Pillars above and below, and beſides handſome Schools, on every Side, there is a very convenient anatomical Theatre. The Phyſick-Garden is large, of a round Figure, wall'd about, and well ſtored with Plants. The Prefects hereof have been men of Note, as, *Aloyſius Mundella*, *Aloyſius*, *Anguillard*, *Melchior Guilandinus*, *Jacobus Antonius Cortuſius*, *Proſper Alpinus*, and *Joannes Veſlingius*.

“ The Arena, or old Amphitheatre at *Padoa*, is an Antiquity very remarkable, and the Remains of ſome of the Arches are to be ſeen ſtill in the Gardens backwards, but the Arena itſelf, and the whole Podium, are preſerved intire and free and empty. And at one End thereof is built a handſome Palace, the Front of which looks directly into the open Amphitheatre, and is a Portion of an oval Figure, and the whole Area or Arena of the Amphitheatre ſerves for the Court to it, in ſuch Manner, that the Entrance being now at the End, directly oppoſite to the Houſe, the handſome Proſpect of it, and the clear Avenue to it, is extraordinarily ſurpriſing, and extremely noble; and I could not imagine that any Gentleman would ever deſire to have a fairer Court-yard to his Houſe, than the ſpacious Plain Arena of an old *Roman* Amphitheatre, nor a better Wall than a high, entire handſome Podium, the like to which perhaps is not at this Day any where elſe to be ſeen. And I muſt freely confeſs, that of the Remains and Ruins of twelve old Amphitheatres which I have ſeen myſelf, I have not met with any one that comes near it; for in the Amphitheatre at *Doué* in *Poictou*, which is cut out of a Rock, and being of a ſmaller Dimenſion, and Part of the Bottom being fill'd up, there is no viſible Beauty of the Podium; the like may be ſaid alſo of that at *Nizza*, near the River *Varus*, and that at *Pozzuolo*.

“ That at *Niſmes* is filled up with Dwelling-houſes in ſuch Manner, that the upper Seats only are diſtinctly viſible. The Amphitheatres of *Bourdeaux*. *Xainctes*, *Arles*, *Garigliano*, that at *Rome*, near the Church of *Santa Croce* in *Gieruſalemme*, and others are at preſent ſo much ruined, that nothing of this Nature diſtinguiſhable is to be expected, nay even about the Arena at *Verona*, and the great *Colliſeo* or *Domitianus*'s Amphitheatre at *Rome*, the Ground is now-riſen ſo high, that the Podium is at preſent either buried or disfigured. But as the Arena at *Padoa*, is clear and evident in this Part, ſo it is wanting in all the reſt, and he that deſires at this Day to view all the Parts of an Amphitheatre, muſt not ſee one but many; and by joining them together in his Thoughts, he may collect the Figure, Proportion and Dimenſions of this ſumptuous Sort of Buildings of the old *Romans*.

“ From the Walls of *Padoa* there is a pleaſant Proſpect of a plain Country to North-Eaſt and South, and of the *Euganean* Hills to the Weſt, which ſupply the Town with Variety of Plants, and great Numbers of Vipers. At a few Miles Diſtance are the hot Baths of *Abano*, and the Mineral drinking Waters of *Monte Ortone*, as alſo *Marcheſe Obizzi's* Country-Houſe, which we ſaw with great Delight, it being well deſign'd and accommodated with a good Armoury, a Theatre for Comedies, handſome Stables, and a Tennis-Court, and nobly painted both within and without by that Maſter *Paulo Veroneſe*.”

This large Extract ſhows his Manner of treating Antiquities, and may ſerve as a uſeful Memorial to young Travellers who are deſirous of knowing how to digeſt their Thoughts, and to unite the Knowledge they have brought from the Univerſities, with what they collect from viſiting the World. It is really a very difficult Thing to give our Author his due Praiſes; for the more we conſider what is written, the more Reaſon we ſhall ſee for commending him; and which is not a little extraordinary, the more we conſider what he has omitted, the greater Reaſon we ſhall have to admire his Prudence. There are however ſome Paſſages in his Writings, which perhaps may be a little obſcure, not from any Want of Knowledge in the Author, but rather from his Superabundance, which hinder'd him from diſcerning that what was extremely clear to him, might be very dark notwithſtanding to Perſons of leſs general Knowledge, and to ſuch as had not found an Opportunity of conſidering particular Subjects in ſuch a Light, as to be able to underſtand the Hints he gives about them.

As for Inſtance, what he ſays of the Miners Compaſs, ſeems to ſtand in Need of Explanation. They work, ſays he, towards One, Two, or Three of the Clock; for the Miners differs from the Mariners Compaſs, being not divided into thirty-two, but into twenty-four Points. This is very true, not only in regard to the *Hungarian* and *German* Mines, but with reſpect to our own Coal Mines, where, if you aſk any of the Workmen about the Courſe of the Veins, they anſwer you, that it dips towards Six o'Clock; which is utterly unintelligible to common People. The Truth of the Matter is, that the Miners and Mariners Compaſs is founded upon different Principles, though I very much doubt, whether a Method might not be found of uſing the Mariners Compaſs to very great Advantage in Mines; but at preſent we have not Room to inſiſt upon this, and ſhall therefore content ourſelves with obſerving, that in the Miners Compaſs the upper Twelve o'Clock anſwers to the Meridian of the Place where the Mine is, and from thence the Hours are mark'd on each of the Semicircles; ſo that Six o'Clock makes a Quadrant on each Side, and each of the Hour Lines is diſtant from the other fifteen Degrees; ſo that in Fact, the Miners Compaſs is a Kind of Dial, and when they ſay they have worked to ſuch an Hour, they mean that they work to ſuch a Point as the Sun bears from them at the Time of the Day which they mention.

There is another Paſſage in theſe Travels, which deſerves alſo to be inſiſted upon, and that is, the Hint given by the Author about the vaſt Advantages that might ariſe to the Houſe of *Auſtria*, from the Practice of a philoſophical Secret; in ſhort, his own Experience had convinced him, that the Vitriolate Springs really and effectually changed Iron into Copper; from whence he inferr'd, that Springs might be found in the Silver Mines, which might have the like Effect with reſpect to Copper, or rather with regard to Copper Ore, which might poſſibly be managed in ſuch a Manner, as to diſpoſe it to ſuch a noble Change; for the Doctor obſerves, that not the beſt, but the worſt Iron anſwered the former Experiment moſt effectually; for which many Reaſons might be given; but as what we have already ſaid will fully anſwer the End we propoſed, and let the Reader fully into the Senſe of what the Author delivers in the following remarkable Words, we ſhall dwell upon it no longer.

“The Profit which the Emperor makes by his Mines, ſays he, is reckoned to amount to an hundred and twenty thouſand Pounds Sterling, yearly. But when they come to deal with deeper and richer Veins of Ore, and that there ſhall be by Degrees more of theſe Vitriolate Copper Springs diſcover'd, this Revenue will be then increaſed. And it is more than probable, that Time will bring more of them to Light; for at *Zolnock*, and other Places near the *Carpathian* Hills, there are divers of the ſame Springs already made Uſe of. But if, furthermore, conſidering the Nobleneſs of theſe Springs, containing in them the true mature Salt of *Venus*, ſome Perſons hereafter ſhall be ſo fortunate, as moreover to diſcover and experimentally improve the Uſe of Springs and Fountains ſaturated with a *Vitriolum Lunæ*, and learn perfectly how to adapt metalline Bodies to the adequate Energy and Activity of ſuch Waters; the Improvement by Tranſmutation, as it is at preſent more than ten to one, ſo it will in thoſe Days amount to above a hundred to one; and the Uſe of theſe Mines and metalline Labours may hereby effectually prove, in Times to come, one of the richeſt Jewels in the Imperial Crown.”

We are now to take our Leave of Dr. *Edward Browne* and his Travels, with which we ſhall cloſe this Section, this Chapter, and this Book. We ſhall, indeed, in the firſt Chapters of the next, be obliged to enter into the Deſcription of ſeveral Parts of *Europe*; but as the Travels included in thoſe Chapters relate chiefly to *Aſia*; and as it would have been very difficult to divide them, without breaking the Thread of the Diſcourſe, and thereby deſtroying the Connection between its Parts, we judged it better to involve all ſuch Travels in the Third Book. The Reader will obſerve, the Uſes which may be made of this Collection are not only much more numerous, but more excellent alſo in their Nature, than thoſe which reſult from any Kind of Geographical Performance, how accurately ſoever performed, becauſe we do not dwell upon the Superficies, but go to the very Bottom of Things; and in the Accounts that we have given of the ſeveral Parts of *Europe*, we have taken all imaginable Care to treat ſuccinctly of what appeared trivial, and to be more copious upon Points of real Uſe, and which contribute to the Improvement of ſolid Knowledge. If we had been allowed more Room, we ſhould doubtleſs have anſwered all Purpoſes better; but we have made the beſt Uſe of what we had, and we may ſafely affirm, that no Collection of this Kind has, ſo far as we have already gone, treated every Country we have mentioned more fully, or given the judicious Peruſer an Opportunity of underſtanding its paſt and preſent State more clearly.

It ſhall be our Study to execute what is to come in the ſame Manner, ſo that every Part of this Performance may, as near as it is poſſible, correſpond with the Whole of it. Some ſmall Differences there may be, which lie out of our Power to hinder, becauſe of the Inequality in the Capacities of thoſe Authors we tranſcribe; but if we make the beſt Choice we can of theſe, and give their Accounts in the beſt Manner that we are able, it is all that can be expected, indeed all that can be performed by us; which every candid Critick will allow. In ſucceeding Times, there will no Doubt be Variety of Voyages and Travels ſent into the World, and amongſt them probably there will be ſeveral ſuperior in Value to thoſe that have gone before them; but with reſpect even to theſe we have provided, as far as it lay in our Power, for the Reader's Service, becauſe they may be eaſily digeſted according to our Method, and be ranged upon new Shelves in the ſame Library. We ſay this, that the Publick may be apprized of the true Value of what we have given them, and be ſatisfied, that this Collection can never be out of Date, the Authors which it contains, and thoſe which it will contain, not only have at preſent, but will always have their Value; and how neceſſary or how pleaſing ſoever it may be to peruſe new Voyages or Travels, or new Collections of them, yet it is impoſſible they ſhould ever ſuperſede the Neceſſity of reading theſe, becauſe the Peruſal of them will be always requiſite to the perfect Underſtanding of ſuch as are later in Point of Time.

Navigantium atque Itinerantium Bibliotheca.

Or, A Complete COLLECTION of

VOYAGES AND TRAVELS.

BOOK III.

Voyages to and Travels through the Dominions of the Grand Signior, and through the other Empires, Kingdoms and States in *Aſia*; with curious and copious Accounts of ſuch Parts of that great Continent as are leaſt known.

CHAP. I.

Voyages through the Iſlands of the *Archipelago*: Travels through moſt of the Provinces under the Dominion of the Grand Signior; with a full Account of the preſent State, Forces, Revenue, Commerce, *&c.* of the *Turks*.

SECTION I.

The Voyages and Travels of the Celebrated Mr. JOHN THEVENOT; from *Italy* to *Conſtantinople*, including a very curious and exact Deſcription of the ſeveral Places he touched at in his Paſſage; of the ſeveral Cities he viſited upon the Coaſts; and a moſt exact View of *Conſtantinople* at the Time he viſited it. Interſperſed with a great Variety of Hiſtorical and Political Remarks, equally inſtructive and entertaining.

Extracted from the laſt Edition of the Author's Travels printed at Amſterdam *in* 1727.

1 *An Account of the Author and of his Family; the Occaſion of his Voyages, and the Manner in which they were undertaken.* 2. *His Arrival in* Sicily, *and his Deſcription of that Iſland and its Coaſts, with ſome Account of* Scylla *and* Charybdis. 3. *An Account of the Iſland of* Malta, *and the Obſervations made therein by our Author during his Stay there.* 4. *He proſecutes his Voyage from thence towards* Conſtantinople, *and deſcribes the Iſlands touched at by the Way.* 5. *A curious Account of the celebrated Streights now called the* Dardanelles. 6. *Several Cities on the* Aſian *Coaſt between the* Streights *and* Conſtantinople, *deſcribed by the Author.* 7. *The ſeveral Cities on the* Thracian *Side of the* Streights *deſcribed in the like Manner.* 8. *An Account of the ſeveral Iſlands in the* Propontis. 9. *A Deſcription of the City of* Conſtantinople, *its Ports, Walls, Gates, Towers,* &c. 10. *Continuation of this Deſcription, with a large Account of the noble Cathedral called* Santa Sophia, *now turned into a* Turkiſh Moſque; *with an Account of ſeveral other* Moſques *and magnificent publick Buildings.* 11. *A very copious Deſcription of the* Seraglio, *taken not only from Mr.* Thevenot, *but from* Tavernier *and* Wiſher's *Accounts.* 12. *Of the* Divan, *or Grand Signior's Council of State, and the Manner in which Cauſes are heard there, and the Method in which Ambaſſadors are received in public Audiences.* 13. *The Secrets of the* Seraglio, *with the Manner of the Grand Signior's living with his Wives and Concubines.* 14. *The Policy of the* Seraglio, *comprehending the entire Detail of the Education of the Sultan's Servants there, by which they are qualified for the chief Places in the Empire.*

pire. 15. *The Government of the* Seraglio, *containing a curious Account of the Grand Seignior's Houſhold.* 16. *An Account of his Manner of Living, together with a Detail of the Expences and Proviſions of his Court.* 17. *The Cuſtoms and Rules of the* Seraglio, *and the Manner of the Grand Seignior's going abroad in State.* 18. *The Manner in which their* Bayram *or Carnival is kept.* 19. *A Deſcription of the* Old Seraglio, *and of ſeveral other Places.* 20. Galata *and* Pera *deſcribed, with ſeveral Places adjoining.* 21. *The reſt of the Country of the* Aſiatick *Side of the* Boſphorus *deſcribed.* 22. *An* Appendix, *conſiſting in a great Variety of entertaining and inſtructive Paſſages, extracted from other Authors.* 23. *Hiſtorical, Political, and Miſcellaneous Remarks on the foregoing Section.*

1. IT is impoſſible to read with any Satisfaction, the Travels and Adventures of an Author, without having ſome Knowledge of who or what he was, and of his general Character in the World. Mr. *John Thevenot* was of the ſame Family with the famous *Melchezidec Thevenot*, who publiſhed a large and curious Collection of Voyages, Part originally written, and the reſt very accurately tranſlated from *Spaniſh*, *Italian*, *Engliſh*, and other Languages, into *French*; which is the Reaſon they are very often confounded together, by ſuch as are not well acquainted with Literary Hiſtory, but borrow what little Knowledge they have, from Title Pages, Indexes, and Journals. The elder *Thevenot* travell'd, indeed, for ſome Time, but never without the Limits of *Europe*; nor did he think any Accounts of his Voyages worthy the Notice of the Publick. He was appointed Library-Keeper to *Lewis* XIV. and not only diſcharged the Duties of his Office with great Diligence and Fidelity, but likewiſe enriched that noble Storehouſe of Learning, with upwards of two thouſand Volumes from his own Study. He was particularly careful in collecting Manuſcripts in all Languages, and more eſpecially in the *Engliſh*, *Spaniſh*, *Italian*, *Latin*, *Greek*, *Hebrew*, *Syriack*, *Arabick*, *Turkiſh* and *Perſian* Tongues; all of which he underſtood perfectly. He died by too great Abſtinence, which he flatter'd himſelf would have cur'd an Ague, on the 29th of *October* in 1692, in the ſeventy-firſt Year of his Age.

Our Author had, from his very Youth, a ſtrong Inclination to travel, in Hopes of gratifying that Curioſity which excited him to enquire into, and examine after whatever appear'd new or curious, uſeful or entertaining. It was to gratify this inclination of his, that he went to *Rome*, where meeting accidentally with the celebrated Mr. *Herbelot*, the moſt learned man of his own, or perhaps of any Age, in every Branch of Oriental Literature, he caught from him ſo violent a Paſſion for penetrating into whatever was curious or extraordinary in the Eaſt, that he reſolved to continue his Travels to the moſt diſtant Part thereof; in which he flatter'd himſelf with the Hopes of having the Company of the very judicious Perſon before-mentioned; but ſome Family-Affairs, which required the Preſence of that learned Gentleman, obliged him at that Time to return into *France*; but Mr. *Thevenot* having made all the neceſſary Preparations for this long Expedition, and being encouraged to undertake it by his Friend, who promiſed to join him in the Iſland of *Malta*, reſolved to proceed in the Execution of the Deſign he had undertaken.

Accordingly, on *Monday*, *May* 1, 1655, he left *Rome*, in order to go and embark at *Civita Vecchia* on board the Galley commanded by Count *Gaddi*, in which he began that Voyage of which we intend to give the Reader an Account in this Section. He appears by his Writings, to have been a Man of great Accuracy and Diligence, as well as of wonderful Curioſity and Vivacity, of a bold and enterpriſing Spirit, merely for the Sake of Knowledge; for he does not appear to have had any Turn towards Profit or Glory. His ſole Aim was to know; and as to Wealth and Power, he left them to the Covetous and Ambitious. He was very careful in his Enquiries, took very little upon Truſt, examined all Things with his own Eyes, committed his Obſervations to Writing immediately, and, after his Return to *France*, reviſed and publiſhed them at ſeveral Times, at the Requeſt, and to ſatisfy the Importunity of his Friends. He appears to have had a large Share of uſeful Learning, which enabled him to make juſt and proper Enquiries, as well as very judicious, and at the ſame Time very entertaining Remarks. He was very inquiſitive, but very far from being credulous; he had a ſtrong Diſpoſition to learn, and was ready to ſubmit himſelf to be taught by any whom he found more knowing than himſelf. He was free from Prejudices or Prepoſſeſſions, was very deſirous of knowing the true State of Things, and very willing to communicate his Knowledge. In a Word, his Candour and Integrity procured him the general Eſteem of all who knew him, and have had the ſame favourable Effect with reſpect to his Writings, to which we ſhall now proceed.

2. He continued his Journey from *Rome*, and upon *June* the 2d, he embark'd at *Civita-Vecchia*, and came to an Anchor before the Port of *Meſſina* in *Sicily* in Seven Days. This Town lies oppoſite to *Rhegio* in *Italy*, from which it is diſtant about ſixty Miles. It was built by the *Meſſinians* of *Peloponneſus*, and from them took its Name, being anciently call'd *Zande*. It is a ſafe Harbour by Nature, and round it are ſeveral fair Palaces built very uniform, which form a pleaſant Proſpect. The Mole, which ſhuts in the Port has a Tower by it to ſecure the Entry, and another in the Midſt of it. This Town is but a melancholy Place, though the Streets are fair and large. Over the Door of the Cathedral Church is written, *Gran-Mercy a Meſſine*, in Memory of the Surrender of that City to the *French*, when they took *Sicily*. Before it is a great Piazza, with a Theatre in the Middle of it, where the Victory of *Lepanto* is repreſented in Braſs, and a Brazen Statue of *Don John* of *Auſtria* ſtands by it. The Noviciate of the Jeſuits ſtands upon an Hill that over-looks the Town.

There are eighteen ſtrong Caſtles in it, but four of them only are in the Hands of the *Spaniards*: The *Meſſineſe* have the reſt. The Town is very rich, by Reaſon of the great Trade in Silk driven there. There are no Inns for Strangers, ſo that they are obliged to lodge in a wretched Tavern by the Harbour. All Things are cheap, the Wines ſtrong, but bad. It is an Archiepiſcopal See. The *Streights* are made dangerous by *Scilla* and *Charybdis*, though anciently they were much more ſo than now, becauſe Navigation is improved. *Scilla* is a Rock near the Caſtle *Scyllio*, on the *Italian* Shore. *Charybdis* is the Meeting of two contrary Eddies, which by beating and claſhing one againſt another, make a Noiſe like the Barking of Dogs, and by cauſing Veſſels to turn round about, ſuck them down to the Bottom; nor is the Harbour itſelf ſafe from it, for the Currents will ſometimes carry the Ships out into it, and therefore the *Meſſineſe* have always a great many Pilots in Readineſs to aſſiſt Veſſels in Danger.

Sicily is of a triangular Form, each Angle making a Cape, which are now called *Diſaro*, anciently *Pelorus*, *Paſſaro*, anciently *Pachinis*, and *Bocho*, heretofore *Lilibæum*. It is but three Miles diſtant from *Italy*, being ſeparated from it by a dangerous Streight, call'd, *The Pharo of* Meſſina. It is the moſt conſiderable Iſland of the *Mediterranean* Sea, both for Bigneſs (being 700 Miles in Compaſs) and Fruitfulneſs, produces Plenty of Corn, excellent Wines, Olives, and other Neceſſaries of Life, inſomuch as that it was call'd one of the Granaries of *Rome*. It contains a great many fair rich Towns, but it is much annoy'd by Mount *Gibello*, or, as it is ſtiled by the Ancients, *Ætna*, which continually caſts forth Abundance of Flames, and covers the Land about it with Aſhes for a great Way; this Iſland is alſo much infeſted with Earthquakes. It has been under the Dominion of many Nations, *viz. Greeks*, *Carthaginians* and *French*; at this Time ſubject to the King of *Spain*, who has always a Vice-Roy there, that has his Reſidence half a Year at *Palermo*, and the reſt at *Meſſina*. From all theſe Nations the *Sicilians* have derived ſome Vices which makes them revengeful, haughty and jealous, eſpecially of the *French*, whom judging by their vindictive Temper, they ſuſpect not to have forgotten the *Sicilian Veſpers*, and for that Reaſon always wear their Daggers by their Side, even in their Shops and Work-Houſes. They are of a ſubtle and malicious Wit, ready to contrive or execute any Miſchief.

From *Meſſina* he ſailed to *Agouſta*, which is but an ordinary Town with one Street, but the Country about it produces excellent Wine, which has a ſtrong Flavour of Violets: Then coaſting along by *Syracuſe*, now corruptly called *Saragouſia*, formerly the Metropolis of *Sicily*, and Birth-place of *Archimedes*, the Country about which produces excellent Muſcadine, he made the Iſle of *Malta*, anciently call'd *Melita*, from the Plenty of Honey it yielded.

3. This Iſle is low, and the Soil a ſoft Chalky Rock, yet it produces very good Fruits, as Figs, Melons, which grow ſo eaſily, that they require no Care but to preſerve them; Grapes very good to eat, but not for Wine; Cotton, but little or no Corn, for that is brought from *Sicily* thither. The Air is ſo hot, that there is no Walking in the Sun; and the Nights are as intollerable, if not through the Heats, yet through the Stinging of Muſketoes; yet is ſo wholeſome for old Men, that they can hardly die. They drink their Wine with Ice. Head-aches and ſore Eyes, cauſed by the Whiteneſs of the Earth, are there common and dangerous. There are no venomous Beaſts in the Iſle, nor can any live in it, which the People attribute to St. *Paul*'s Benediction, and they give the Earth of the *Grott*, where he lived, for an Antidote againſt Poiſon, with greater Succeſs than *Terra Sigillata*. The Iſland is populous: The People are of a brown complexion and are very revengeful. The Women are beautiful, and familiar, for though they hide their own Faces with their Mantle, they ſee every Body's elſe.

They ſpeak *Arabick*, but *Italian* is alſo common. Here are ſeveral Ports and Creeks, but the chief Havens are the Great Port, and that called *Marſamouchet*. In the great Port are all the Gallies of the Order laid up, and all the Veſſels that are to make any Stay at *Malta*, either to load, careen or refit, put in there, ſhut with an Iron Chain: The Port of *Marſamouchet* is for Ships to perform their Quarantine in, before they have Acceſs to the Town, and for ſuch as by Reaſon of foul Weather can't get into the great Port, as alſo for the *Corſairs*, who come only for a little Time, and ſo will not go into the great Port, becauſe it is hard to get out again. As ſoon as the King of *Spain* had given the Iſland of *Malta* to the Knights of St. *John*, Sultan *Solyman* reſolving to extirpate them, who had given him ſo much Trouble, ſent a powerful Army to take it. The *Turks* landing near the Mount *Pelegrino*, attack'd the Caſtle of St. *Erme*, kill'd all that defended it, and took it. Then they turned againſt the Iſle *de Sangle*, but were aſſaulted ſo furiouſly by the Caſtle of St. *Angelo*, who firing their Cannon, level with the Water, upon them, ſunk their Boats and drown'd their Men, which being repeated ſeveral Times, the *Turks* deſpairing of Succeſs, and finding Recruits come to them out of *Europe*, drew off, and left the Iſle in the End of *September*, 1565.

After the *Turks* were gone, the Knights reſolv'd to build a new Town, where the Great Maſter with all the Order might conveniently dwell. They pitched upon the Tongue of Land where the Caſtle of St. *Erme* ſtands, from whence the *Turks* had ſo furiouſly driven them. The Great Maſter *John la Valetta* laid the firſt Stone of it, *March* 28, 1566, and from himſelf called it *Valetta*; it has been ſo fortified ſince, that none exceed, and few Places can equal it. The Entry into the Port is defended by the Caſtle of St. *Erme*, the *Baraque*, which has nine Pieces of Cannon, and the Baſtion of *Italy*, and on the other Side by the Caſtle of St. *Angelo*, and a Tower, which has two or three Pieces of Cannon. The Town is no leſs ſtrong by Land than towards the Sea, being begirt with good Walls, built upon very high Rocks, with ſeveral Baſtions and other Pieces of Fortification, which are equally fair and ſtrong. The *Baraque* is very delightful, being covered with lovely Orange and Lemon-Trees planted in Rows, and having a great many Fountains, where the Water-works playing very high, give mighty Diverſion.

From the Port you go up an Hill to the Town, which is ſmall, but very pretty. It hath but two Gates, one leading to the Port, the other into the Country. There are ſeveral Churches in it, but that of St. *John* is the Chief. On one Side of it is a lovely Piazza, and at each Angle a Fountain. It is a large Building, and pretty high, paved with beautiful Marble, and adorned above with many Colours taken from Infidels. In this Church they pretend to have many fine Reliques, *viz.* St. *John Baptiſt*'s Right-Hand, and many others.

There are ſeveral admirable Buildings in the Town, among others the ſtately Palace of the Great Maſter, in which is a Magazine of Arms for 35 or 40,000 Men, kept very clean and in great Order, and among them the Arms of ſuch great Maſters as have been wounded in any Action, are to be ſeen with the Marks upon them. This Palace looks into a large Square, in the Middle of which is a charming Fountain, which throws up Water in great Quantities, and very high, and ſupplies the whole Town. The Palaces of the Conſervatory and Treaſury are fair Buildings, and ſo are the Inns.

The Hoſpital is very well built, and the Hall for the ſick Knights is hung with Tapeſtry, where they are attended by Knights, and ſerv'd in Plate. Poor Travellers find Entertainment here, till they can get Paſſage to the Place they are bound to, and then they are furniſhed with Proviſion, and their Charges are borne through their Voyage. The Jeſuits have a very well built Houſe, and a College there, and even the meaneſt Houſes make a good Show, being built of a large ſquare white Stone, which retains its Colour long, and ſeems always new: They are all flat Roofed. The Streets of the Town are incommodious, becauſe one goes always up Hill and down, but they are wide and ſtrait. The faireſt reacheth from the Caſtle of St. *Erme* to the *Royal Gate*, which is almoſt a Mile long, and in it they make the Horſes and Aſſes run the *Pallio* upon their Days of Rejoicing. The Country about it is full of Gardens, and very agreeable Places of Pleaſure. About twelve Miles from the City the Grand Maſter hath a Palace, built in Form of a Caſtle, and very uniform, the Halls of which are adorn'd with excellent Paintings, and it has very neat Gardens full of Orange, Citron, and Olive-Trees, with ſeveral lovely Fountains. At a little Diſtance from the Houſe is a Grove ſtocked with Game for his Diverſion.

Five Miles from *Malta* is the Iſle of *Gozo*, which is thirty Miles in Circuit, twelve in Length, and ſix in Breadth. It is a very wholſome Air, and though mountainous, is almoſt all cultivated, for the Inhabitants delight more in tilling the Land for Corn, than any other Sort of Huſbandry, though it has many Places well watered, and fit for Gardening and Paſture. On our *Lady-Day*, *September* the 8th, the Knights keep a Rejoicing yearly for the *Turks* raiſing the Siege of *Bourg*, with Maſs, Shooting, Feaſting, Races of the *Pallio*, and many other Diverſions.

4. Leaving *Malta*, *Thurſday Nov.* 1655, he ſailed by the Iſle of *Sapienza*, and having weathered Cape *Matapan*, came to an Anchor in the Bay of St. *Nicholas*, in the Iſle of *Cerigo*. Cape *Matapan* is a Promontory of the *Morea*, formerly called *Tenarus*, where *Arion*, carried by a Dolphin, was put on ſhore. This Country is inhabited by the *Meinots*, a People who live in the Mountains without Law or Government, and are ſubject

ject to thoſe who have moſt Power in the Country, ſometimes the *Venetians*, and ſometimes the *Turks*. All their Buſineſs is to rob Travellers.

Cerigo was anciently called *Porphyris*, becauſe of the great Quantity of *Porphyrian* Marble found there, and *Cythera*. *Venus*, who is fabled to have been born of the Froth of the Sea, firſt dwelt here, and had a Temple near the Sea-ſide, the Ruins of which are ſtill ſhewn. It is the firſt Iſland in the *Archipelago*, or *Ægean* Sea, ſixty Miles in Compaſs, and five from the main Land. The *Venetians* are Maſters of it, and keep a good Garriſon there, becauſe it is a Paſs of very great Importance.

From *Cerigo*, where the Ship paid the Conſul a Piaſtre for Anchorage, he ſailed to *Zia*, leaving many inconſiderable Iſlands on the Right-hand, as *Melo*, *Antimelo*, &c. This Iſle was anciently called *Ceos*, or *Cea*, it is ſhaped like an Horſe-ſhoe, and fifty Miles in Circumference. The Soil is pretty good, producing Corn, Wine, Graſs, and a great many other Things, and the Harbour is full of Fiſh. The Inhabitants pay a Tribute to the *Turks* of 3400 Piaſtres, and to the *Venetians* 2600, beſides the Extortions and Robberies they meet with, which ſo impoveriſh them, that they are often forced to leave their Habitations. They are good People, and deſerve to be pitied, becauſe of the Miſeries they ſuffer both from Chriſtians and *Turks*. The chief Town of the ſame Name is five Miles from the Port; it is a large Place, containing ſeven hundred Houſes, but there is not above four hundred of them inhabited, the reſt being forſaken ſince the War of *Candia*. The Houſes are built of Stone and Earth, rank'd on the Side of an Hill like the Benches of an Amphitheatre. The Caſtle is ruinous, but ſtrong, ſo that ſixty *Turks*, with two Muſquets only, held out againſt the whole *Venetian* Army, under General *Moroſini*, till Want of Water forced them to yield.

From *Zia* he ſailed to *Andra*, anciently called *Andros*, ſixty Miles from it, and eighty in Circuit. It is reckoned the moſt fertile Iſland of the *Archipelago*. It produces almoſt all Things neceſſary, and Silk more eſpecially, for which they have a great Trade. The Port is pretty good, and the Town adjoining to it hath about two hundred Houſes. In the whole Iſland are about ſixty Villages, of which the moſt conſiderable are *Arni* and *Arnolacos*, inhabited by the *Arnauts* or *Albanians*, who are about twelve hundred Souls, and all of the *Greek* Church, differing in Language and Cuſtoms, yet all without any Diſcipline. Near theſe Villages is a large Monaſtery of an hundred ignorant Monks, called *Tagia*, who have a neat ſmall Church, which they ſupply, and ſix leſſer ones. There is a great Number of *Greek* Churches in the Iſle, which are under the Government and Diſcipline of a *Greek* Biſhop. The *Latins* alſo have a Biſhop there, and ſix Churches, of which the Cathedral is dedicated to St. *Andrew*. The Capuchins preach in them, and teach a School, to which the *Greeks* ſend their Children from as far as *Athens*.

The *Turks* diſpoſe of the temporal Affairs of this Iſle, and are but uneaſy Neighbours to the Chriſtians. The Jeſuits have a Church dedicated to St. *Veneranda*, and an Houſe near the Valley *Monites*, with a Garden full of Fruit-trees of all Sorts, which yield them conſiderable Profit. The Houſes in this Iſle are ill-built, and both the Air and Water bad. The Inhabitants are civil; their Women are chaſte, and ſpeak well, but their Apparel is unbecoming. The Inhabitants of the Towns love good Cheer and Diverſions, and care not much to labour, but the Peaſants are very induſtrious. Their Food is Goat's Fleſh, for though in their Woods there is good Veniſon and Wild-fowl, yet they have neither Huntſmen nor Fowling-pieces to catch them. The Sea affords them no Fiſh. They have neither Phyſician nor Chirurgeon, but when they are ſick, betake themſelves to the Mercy of God as their only Remedy.

5. From *Andra* he ſailed by the *Negropont*, *Sciro*, *Ipſicera*, *Chio* and *Tenedo*, to *Troy*, where there are ſtill conſiderable Ruins of that ancient and famous City, and thoſe of great Extent, *viz.* An Harbour, Pieces of large Pillars, and the Remains of a great Temple; but the Learned ſay, that they are only the Ruins of ſome Buildings erected there by the *Romans* long after the Deſtruction of *Troy*. From hence he paſſed the Mouths and entred the Channel of *Helleſpont*, where the *Turks* firſt paſſed over into *Europe*, and ſailing betwixt the Caſtles of the *Dardanels*, came to an Anchor. The *Dardanels* are two Caſtles, built on each Side the Channel of the *Helleſpont* by *Mahomet* II. Son of *Amurath* II. The one ſtands in *Europe*, in *Romania*, in the very Place where *Seſtos* formerly ſtood. This Caſtle is triangular, and beſides two Baſtions, hath three Towers covered with Lead, and twenty large Guns, which carry Stone Bullets of ſixty Pound Weight. The other is in *Aſia*, in a Plain where anciently *Abidos* ſtood. Theſe two Forts are the Keys of *Conſtantinople*, though at two hundred Miles Diſtance, for they can hinder any Ship, Friend or Foe, to paſs them without Leave, unleſs they will run the Hazard of being ſunk. All Ships that come from *Conſtantinople*, are ſearched here for contraband Goods and fugitive Slaves. Theſe Places are famous for the Loves of *Hero* and *Leander*, and *Xerxes*'s Bridge into *Europe*, which was made hereabouts. From *Andra* to this Caſtle is 280 Miles.

From thence he ſail'd to *Galliopoli*, which is reckoned thirty-five Miles. This Town was built by *Callias*, Prince of the *Athenians*, from whom it was called *Calliopolis*, which now is corrupted into *Gallipolis*. This Place is but thin peopled: The *Greeks* that dwell in it ſell *Raki*, or Brandy, for the moſt Part, and their Houſes have Doors not above two Yards high, to keep out the *Turks*, who will ride in elſe when they are drunk and turn all Things upſide down. It has a Tower and Arſenal, where are commonly laid up ſeveral Gallies.

6. Departing thence he paſſed the Iſle of *Marmora*, which gives Name to the Sea, that was formerly called the *Propontis*, and ſailing along by the *Seraglio* and *Conſtantinople*, came to an anchor at *Galata*, where is the Harbour of that City. The Sea of *Marmora*, or the *Propontis*, which is about 120 German Leagues in Compaſs, lies between the 38° and 41° of Northern Latitude, which makes the Clime ſo temperate, that is has neither the Inconveniencies of ſharp Cold, or burning Heats, which is the Reaſon that both Sides of it has been ſo well adorn'd with famous Cities: For on the *Aſian* Side ſtood *Ghizico*, a Town formerly famous not only for being built by the *Argonauts* 500 Years before *Rome*, but for its lofty Towers, magnificent Buildings, large Arſenals and Magazines, fine Amphitheatre and convenient Port, though Nothing now remains of all theſe Things but frightful Ruins, which are the Habitations of Owls.

Nice, called by the *Turks Iſnich*, famous for the firſt General Council. It is almoſt ſquare, and ſtands at the Extremity of a Bay in a fine Plain. On the N. E. is a Ridge of Hills, which abound with Wood, Vines, Fruits and Fountains. It is encompaſſed with Walls full of round Turrets, and had a Covert-Way that ran by them, but it is now ruined. The City is pretty large, the Streets neat, and has at leaſt 10,000 Inhabitants, as well *Greeks* as *Jews* and *Turks*, who trade in Corn, Fruit, Cotton, fine Cloth, *&c.* to *Conſtantinople*. There are here many Remains of Pagan and Chriſtian Antiquities, but theſe are ſo defaced by the *Turks*, that nothing admirable is to be diſcerned.

Montagma, or *Nicopolis*. It ſtands on a Bay anciently called *Cianus Sinus*, from the City of *Cium*, which once ſtood there. This Town is ſmall, but by Means of the Bay drives a great Trade to *Conſtantinople*, for its Nearneſs to *Burſa* brings all the Traffick of *Bithynia* to it. The Inhabitants are about five or ſix thouſand *Greeks*, *Turks*, and *Jews* and are all Merchants, and live by their Trade in Fruits, which they ſend to *Conſtantinople*.

Nicomedia, which, next to *Conſtantinople*, has the pleaſanteſt Situation of any City in the World. It ſtands at the Bottom of a Bay, and runs up the Side of an Hill, adorn'd with many Fountains, and is cover'd with Fruit-trees, Vineyards, and Corn. Their Garden-Fruits are extraordinary, and their Melons are thought by ſome to equal thoſe of *Cachan* in *Perſia* for Goodneſs, which are reckoned the beſt in the World. Here are Abundance of Remains of Antiquity, enough to ſatisfy the Curioſity of Travellers. It was built by the Nymph *Olbia*, but has its Name from *Nicomedes*, King of *Bithynia*, who enlarged it. It is famous for the Death of *Hannibal* and *Conſtantine* the Great, for the early Converſion of its Inhabitants to Chriſtianity, and the many Martyrs who ſealed the Faith with their Death.

It is called *Iſmit* by the *Turks*, and is a large and populous City, having about 30,000 Inhabitants, *Greeks*, *Armenians*, *Jews* and *Turks*, who moſt of them live by trading in Silks, Cotton-Wool, Linen-Cloths, Fruits, Earthen and Glaſs-Wares, and ſeveral other Commodities, which make it a City of great Traffick. There are a great many *Greek* Churches and fair Moſques, with ſeveral Inns and neat *Bazaars*, or Market-Places, in this Town. Moſt of the Ships and Veſſels which belong to *Conſtantinople* are built here, but they are ſorry Artiſts at it. On the right ſide of the Bay of *Nicomedia* is a Fountain of Mineral Water, which the *Turks* and *Greeks* ſay, cures all Diſtempers, and therefore flock to it mightily.

Chalcedon. This Town was once famous for the Temples of *Venus* and *Apollo*. Many Chriſtian Churches, and among them one dedicated to St. *Euphemia*, where the Fourth General Council ſate, and in Part of which, as it ſtill remains, the *Greeks* have yet their Religious Worſhip, and ſtrong Fortifications, and other fine Buildings it had; but is now reduced to a Village of 1000 or 1200 Houſes, and thoſe very ruinous. The City gives Name to the Streights adjoining, which are called *Fretum Chalcedonicum*, *Boſphorus Chalcedonius*, as well as *Boſphorus Thracius*, and near it is a Light-houſe and a Pleaſure-houſe belonging to the Grand Signior, called *Finari Kioſke*, which Sultan *Soliman* II. built for his Retirement with the Ladies of the *Seraglio*.

7. On the *Thracian* Side ſtands *Rodoſto*, or *Radiſto*, a Town well ſituated at the Extremity of a Bay, which affording it a very good Haven, fills it with Inhabitants, who drive a Trade all over *Thrace*, the *Propontis* and *Black Sea*. In it are three or four large Moſques, and ſome ſmall ones, ſome Chriſtian Churches belonging to the *Greeks*, and two *Jewiſh* Synagogues. The Town lies along the Sea-ſhore, where the Trade is, and toward the Land are many Gardens; but the Fruit is not very good, becauſe the Gardiners of *Turkey* are but unſkilful in their Art.

Perinthus, or *Heraclea*, which once gave Law to *Byzantium*, but now is ſubject to it. This Town hath two good Havens belonging to it, but one of them is ſo choaked up with the Rubbiſh and Filth of the City, that it ſerves only for Barks and Saicks. The Amphitheatre of *Heraclea* was one of the ſeven Wonders of the World; but now there are only ſome ſhatter'd Ruins of it. There are alſo ſeen many Pedeſtals with *Greek* Inſcriptions to *Severus*, *Trajan*, and other Emperors, who had conferred any ſignal Benefit upon the City; but the Statutes which once ſtood upon them are thrown down and demoliſhed. The Town at preſent is but thinly inhabited, and drives but a ſmall Trade, though they have many Commodities, ſuch as great Quantities of Cotton, Olives, Fruits, both green and dry, Skins and Wool. The Cathedral is one of the fineſt in all *Greece*, having a handſome Roof, and being very neat in the Inſide, and better contrived than the Patriarchal Church of *Conſtantinople*. There are five or ſix Churches beſides, but none of them in ſo good a Condition as the former, and two of them are wholly diſuſed. But though the Buildings and Trade of this City daily decay, and Time may blot it out of the World, yet the Sufferings of many Chriſtian Martyrs in it will keep up its Memory as long as the World endures.

8. In the *Propontis* are ſeveral Iſlands, *viz. Marmora*, which gives Name to the whole Sea, and is about ten Leagues in Compaſs. The chief Towns in it are *Gallioni* and *Craſtio*. The *Caloyers*, or *Greek* Monks, have ſeveral Convents or *Hermitages* in it. They are very auſtere in their Way of Living. 2. *Aveſia*, whoſe chief Town is of the ſame Name. It hath two other Villages called *Aloni* and *Arabi Kieny*, becauſe it is inhabited by *Arabians* only. 3. *Contalli*, which has a Town of the ſame Name: And, 4. *Gadoro*, which has only ſome Houſes and Cloyſters for Monks. Theſe four Iſlands go all by the Name of the firſt, and lie in a Cluſter, abounding with Cattle, Corn, Wine, Fruits, Cotton, &c. Their Fiſhery is alſo good, but they regard it only for their own Uſe, becauſe *Conſtantinople* is ſupplied from Places in its Neighbourhood. Nearer to *Conſtantinople* lies another Knot of Iſlands, called by the *Turks Papas Adaſſi*, by the *Greeks Papa Deniſſa*, or the Iſlands of the Monks; and by the *Europeans*, *The Pope's Iſles*. If *Conſtantinople* were in the Hands of the Chriſtians, they would be a perfect Paradiſe, and every one would have his Houſe of Pleaſure there; but being ſubject to the Ravages of the *Turks*, who often go thither to be drunk, and in their Heat rifle their Gardens and Vineyards, they lie in a Manner uncultivated, and only a few *Calayers* manure a little Bit of Land by the Monaſteries for Herbs and Roots for their own Uſe. Theſe *Caloyers* are Monks of St. *Baſil*, who retain the ancient Way of Living and Habit, without any Alteration. They lead a very retired and auſtere Life, and never eat any Fleſh. They obſerve four *Lents* in the Year, beſides ſeveral other Faſts; and ſome among them are ſo abſtinent, as to be ſatisfied with eating a little Bread and Pulſe, dreſſed with Salt and Water, once a Day; and others by Cuſtom have brought themſelves to eat once in two or three Days, during their *Lents*; and it is ſaid, ſome will eat but ſeven Times in the ſeven Weeks of their longeſt *Lent*, though this ſeems improbable; but theſe are only the moſt devout, which are but few. The reſt order Matters ſo cunningly, that they obſerve nothing leſs than Faſting; for though indeed they eat no Butter, Fiſh, Eggs, or Oil, and drink no Wine, yet they uſe other Things luxuriouſly, as Oiſters, Cavear, and Shell-fiſh, for Fiſh; Almonds, Piſtacho's, and Nuts, for Butter; *Aqua Vitæ*, Coffee, and Sherbet, for Wine, &c.

9. *Conſtantinople* has the happieſt Situation of any City in the World. It lies in *Europe* upon a Point of the main Land, jetting out towards the *Boſphorus* of *Thrace*, from whence it is but half an Hour's Paſſage into *Aſia*. On the Right-hand is the *White Sea*, or *Propontis*, by which there is an eaſy Paſſage into *Aſia*, *Ægypt*, and *Africa*, whereby it is ſupplied with all the Commodities of thoſe Places. On the Left-hand it hath the *Black* or *Euxine* Sea, and *Palus Mæotis*, by which it is furniſhed with all the Commodities of the North; inſomuch that there is nothing that can be neceſſary, uſeful, or pleaſant, which is not brought plentifully to *Conſtantinople*, the Winds always ſerving to bring in Commodities from one of thoſe Parts. The Port is by Nature the lovelieſt in the World, being ſix Miles in Compaſs, and a Mile over, and ſo deep in all Places, that a Ship may lay her Head a-ſhore without Danger.

It was anciently called *Byzantium*, and was built by *Pauſanias*, King of *Sparta*. The Emperor *Severus* demoliſhed it, to puniſh the Rebellion of the Inhabitants, and *Conſtantine* the Great rebuilt it, calling it *New Rome* firſt, and then *Conſtantinople*; being afterwards dedicated to the Virgin, it ſometimes bears the Name of *Parthenopolis*; the *Turks* call it *Iſtambol*, or *Stambol*.

After the Diviſion of the *Roman* Empire; it was the Seat of the Eaſtern Emperors, from whom, in 1209, it was taken by the *Venetians* and *French*, but recovered by the *Palæologi* fifty Years after, and fell into the Hands of the *Turks* on *Whitſunday*, 1453, who have kept it ever ſince. The Air in Summer would be very hot and incommodious, were it not cool'd by a Breeze which comes every Afternoon from the Mouth of the Port, by which it is render'd very healthful, ſo that no Diſeaſes are known here but the Plague, which makes a great Havock every Year. It is very ſubject to Earthquakes, ſo that ſometimes two happen in a Day. The Figure of it is triangular, one Side lying toward the *Propontis*, the other on the Port, and the third toward the Land. It is all encompaſſed with good Walls, and to the Land-ſide they are double, being built in ſome Places of Free-ſtone, and in others of Free-ſtone and Brick. It hath twenty-two Gates, ſix toward the Land, as many along the Port, and ten on the Streight of the *Propontis*, which have all Landing-places and Stairs, and the whole City is about twelve Miles in Compaſs.

The Caſtle of the Seven Towers joins the double Walls on the Continent Side to thoſe that lie upon the *Propontis*. It was anciently one of the City Gates, called *The Gilded Gate*, from the gilt Ornaments of it, and had four Turrets; but *Mahomet* II. becoming Maſter of *Conſtantinople*, added three new ones, and made it a Caſtle, ſtrong enough to keep the Treaſures of the Empire, and for that Purpoſe it ſerved a long Time; but at preſent it is only uſed as an honourable Priſon, where the Grand Signior ſhuts up ſuch Perſons of Quality and Slaves of Note as have incurred his Diſpleaſure. If any Chriſtians are confined in it, their Prieſts are allowed to come and ſay Maſs to them in a little Chappel; and if they are Knights of *Malta*, or other Perſons of Quality, they are allowed to go out, if an Ambaſſador, or other Perſon of Note, will be engaged for their Return. Sultan *Oſman* and *Heuſſein Baſha* were ſtrangled in this Caſtle.

Without the Walls, hard-by one of theſe Caſtles, are two large Statues of white Marble in Baſſe Relief, the one ſeems to be *Endimion*, and *Diana* coming down to ſee him, and the other the Nine Muſes, with the Horſe *Pegaſus*. They are done by a good Hand, but inferior to ſome Pieces in *Europe*. In going by Sea from this Caſtle to the *Seraglio*, there is a ſquare Tower ſtanding in the Sea, at about two Paces from the City-Walls, where, they ſay, *Juſtinian* impriſoned *Belizarius*, his famous General, out of meer Jealouſy, and having ſtript him of all, forced him to beg his Subſiſtence of charitable Paſſengers. Not far from this Tower is a Fountain, to which the *Greeks* always pay a great Veneration, and, upon the Day of Chriſt's Transfiguration, carry their Sick to it, to whom they give ſome of the Waters, and cover their Bodies a While with the Sand, and they ſay, wonderful Cures have been thus done by it. The *Greeks* have Abundance of theſe miraculous Fountains, which they ſuperſtitiouſly honour, and the Prieſts encourage them in it for their own Gain. Near this Fountain ſtands the *Kioſke*, or Pleaſure-houſe of the *Boſtangi Baſha*, or Overſeer of the Gardens. It is a Pavilion cover'd over juſt without the Walls of the Seraglio, and overlooks the *Propontis* and *Boſphorus Thracius*; but he, being in the fourth Poſt of the Empire, has no Time almoſt to take the Air. Beyond this *Kioſke* are a great many Cannon planted, ſo as to ſtrike any Ships that paſs between Wind and Water, to hinder the Entrance into the *Seraglio* or Port, if any ſhould attempt it by Force. Theſe Pieces are always charged, but never diſcharged, unleſs it be upon the firſt or ſecond Day of the Month *Bairam*, to give the *Muſſelmen* Notice of that ſolemn Feaſt, or upon the Account of publick Rejoicings, as the Taking of a City, or conquering ſome Province.

In the Middle of theſe Pieces of Cannon is one of the four Poſterns of the *Seraglio*, called *Boſtan Capi*, or the Gate of the Gardens. It is fortified with two large Turrets, and guarded by two Companies of *Boſtangi*'s, or Gardiners, who keep all from entring at this Gate, but the Sultanas and Officers of the *Seraglio*. After you have paſſed the Cannon, and doubled the Cape, where you paſs a Fountain, from which moſt of the Ships take in their freſh Water you come to two *Kioſkes*, built by Sultan *Soliman* to view the going out and coming in of the Men of War, and divert himſelf with his Women, of which he had Plenty. Both of them are well adorn'd and furniſhed with gilded Cupola's, Alcoves, Sopha's, Quilts, Cuſhions, Carpets, and all other Things fit for ſo great a Prince, but nothing can be imagined more noble than one of them. At theſe Pleaſure-houſes always attend ſome ſmall Galleys and Saick, ready to receive the Grand Signior and his Train whenever he pleaſes to divert himſelf. Theſe Galleys and Barks are very neatly gilded and painted all over, the Oars and Grappling Irons not excepted. Theſe are all the remarkable Things without the Walls, both of the City and *Seraglio*. We muſt now go into the City.

10. It ſtands upon ſeven little Hills, as old *Rome* did, and the Houſes are ſo diſpoſed, that one takes not away the Sight from the other. The Streets are narrow for the moſt part, but there are ſeveral ſtately Buildings in them. There are many magnificent Moſques in it, of which the moſt magnificent is that of *Santa Sophia*, which was anciently a Chriſtian Church, built by the Emperor *Juſtin*, enlarged, enriched, and adorned by *Juſtinian*, and dedicated to the Wiſdom of God, *Hagia Sophia*. The *Turks* have changed it into a Moſque, but retain the Name. This Fabrick is 114 Paces in Length, 80 in Breadth, and as many in Height, ſquare without, but round within. The Moſque is very ſpacious, hath a Dome in the Middle, in the Form of a flatted Globe, which is a ſingular Kind of Architecture. It is paved with fine Marble, and matted, that the Cold may not hurt ſuch as come to worſhip without Slippers, and ſquat down in their Service. There is a Tomb, which, the *Turks* ſay, is *Conſtantine*'s, and a Stone on which, they believe, the Virgin waſhed our Lord's Linen, and they bear a great Reverence to it.

The Church was painted in *Moſaic* with Croſſes and Images of Chriſt, the Holy Ghoſt, the Virgin, and other Saints, which yet appear, though the *Turks* have endeavour'd to deface them, for they ſuffer no Images. Within are two Galleries one over another, that go round the Church, and are ſupported by ſixty-two Pillars, which 'tis ſuppoſed, were for the Women when it was a Church. On the Out-ſide of the Church are four Steeples, very high and ſlender, on which are ſeveral Balconies, from whence the *Maezims* call to Prayers. It is big enough to hold 40,000 People, which Number uſually meet in it at their *Bairam* or Paſſover. In a little Street on the Back of this Church are two large thick Pillars, where, they ſay, Juſtice was wont to be adminiſtred, and by them an old Tower, where the Grand Signior's Beaſts are kept, *viz.* Lions, Wolves, Foxes, Leopards, a ſpotted Lynx, the Skin of a Giraff, and other rare Creatures.

Beſides this Moſque, there are ſeven others, call'd Royal or Imperial, of which the Chief is called *Solimania*, becauſe it was built by Sultan *Soliman*, whoſe Coffin remains in it, adorned with Carpets, a Turban ſet with Heron-Feathers and precious Stones, and Lamps burning. Several *Alcorans* are chain'd to it, that the People may read them, and pray for the Defunct's Soul, and ſome are hired to do it, for the Grand Signiors take care to leave a Fund for continual Prayers to be ſaid for them after their Death. Near this there is another, where lies the Body of a Sultana whom *Soliman* loved extreamly, as alſo of Sultan *Selim*, his ſecond Son. This Moſque hath a moſt lovely Cloiſter with Bagnio's and Fountains. The New Moſque, built by Sultan *Achmet*, is one of the faireſt and moſt magnificent in *Conſtantinople*. The Entry into it is through a large Court. It is a great Moſque, hath a ſtately Dome, and is full of Lamps, and many Curioſities in Glaſs-Balls.

The faireſt of all, are the Moſques of Sultan *Mehemmet*, Sultan *Selim*, and that which is call'd *Chahzadeh Meſdgidi*, i. e. The King's Son's Moſque, being built by one of *Soliman*'s Sons, and *Bajazet*'s. All theſe Moſques have Hoſpitals and Schools, where a great many poor Scholars are maintained, and educated. Moſt of the ancient Statues, Obeliſks and Pillars, ſet up by *Conſtantine* and his Succeſſors, are entirely ruined, yet the large *Hippodrome*, called by the *Turks*, *Atmeidan*, where they exerciſed their Horſes in Racing, is ſtill to be ſeen. It is a large Square, 550 Paces long, and 150 broad. In the Midſt of it is an Obeliſk pretty entire, mark'd with Hierogliphick Letters, and at a little Diſtance from it a pretty high Pillar, made of large Stones, laid one upon another without Cement, and towards the End of it is a Pillar made of three brazen Serpents twiſted together, and the Heads make the Capital. It was ſaid to be the *Taliſman* or Spell, raiſed by *Leo Iſauricus* the Emperor againſt Serpents, ſo that none would come near, till *Mahomet* II. when he took *Conſtantinople*, beat off the under Jaw of one of them with his *Zagaye*, and now they are ſaid to do no Hurt, becauſe it is ſtanding. The Occaſion of erecting it is as fabulous as the Virtue, and ſo the Relation may be ſpared.

The *Grand Beziſtan*, or *Exchange*, is a noble Building and a glorious Sight. It is a great round Hall, built all of Free-Stone, and ſurrounded with a thick Wall, by which are Shops full of the richeſt Commodities. It hath ſeveral Gates, which are ſhut faſt a Nights, and becauſe no Body lies in it, it is guarded by ſeveral Watchmen, till it is opened again. Each Body of Merchants or Tradeſmen have an Apartment by themſelves, and no Man may ſell the ſame Commodities in another Place. All Manner of Goods are here ſold, during the Time it is open.

There is alſo another *Beziſtan*, but neither ſo large nor ſo well ſtocked with Goods. There are alſo ſeveral *Bazaars*, or publick Markets, in one of which, called the *Auret Bazaar*, or Womens Market, is a Pillar of an extraordinary Height, called, the *Hiſtorical Column*, becauſe from the Top to the Bottom, which is 147 Foot, are repreſented in *Baſſa Relievo*, ſeveral Expeditions, Battles, and other remarkable Events, during the Empire of *Arcadius*. 'Tis all of Marble, but much defaced, and the Houſes ſtand ſo near to it, that one can't have room to examine or find out the Figures of it. There are Stairs in it to aſcend up to the Top, but the *Turks* will ſuffer no Man to go up them. In the Quarter of the *Janizaries*, near the Baths of *Ibrahim Baſha*, in the Court of a private Man's Houſe, ſtands the Column of the Emperor *Marcian*. It is all of ſpotted Marble, about fifteen Foot high, and its Capital of the *Corinthian* Order. On the Top is a ſquare hollow Stone, adorned with four Eagles at each Corner. It is reaſonable to think his Heart was put in this Stone, and his Body buried under the Column. The other is call'd, *The Burnt Pillar*, becauſe it has been lately burnt by a Fire that happen'd near it, which has ſo ſhatter'd it, that they have been forc'd to keep it tight with Iron-Bars. It is compoſed of eight Pieces of *Porphyrian* Marble, ſo neatly join'd, that they ſeemed but one Stone, till the Fire damag'd it, but now they are all ſeen.

11. The Grand Signior's *Seraglio*'s are alſo remarkable Buildings. They are the Palaces where the *Ottoman* Princes ordinarily keep their Courts. The Word is taken from *Serrai*, which ſignifies a noble Houſe. There are two *Seraglio*'s belonging to the Grand Signior, *viz.* The *Old*, and the *New*, which being much the more noble Building, though nothing ſo magnificent as the Palace of ſo great a Prince ought to be, is called the *Grand Seraglio*. It is of a triangular Form, two Sides whereof are encompaſſed by the *Thracian Boſphorus*, and the other divides it from the Town. It ſtands in the Place of the ancient *Byzantium*. It is three Miles in Compaſs, and is encloſed within a very ſtrong Wall, upon which are divers Watch-Towers, on which the *Agliam-Oglams* watch Night and Day. It hath many Gates both to the Sea and Land-ſide, but the chiefeſt is towards the City, and that is uſed daily, but the reſt are never opened but upon ſome ſpecial Occaſion; thoſe to the Sea-ward, when the Sultan or ſome chief Officer of the *Seraglio* open them for Pleaſure; and thoſe to the Land-ward, when the Grand Signior orders ſome Great Man to be put to Death, or upon ſome other great Deſign.

The chief Gate above-mention'd is guarded Day and Night by the Companies of *Capoochees*, or Porters, under the Command of the *Capoochee-Baſha*'s, or Captains of the Porters. A Company of *Janizaries* watch without the Palace, who are to give Notice of any Accident. And by the Sea-ſide, the *Agliam-Oglams* watch in Towers upon the Wall, and if any Shipping attempt any Miſchief they have Ordnance ready charged, and the Gunners lying cloſe by them. In this *Seraglio* are many ſtately Rooms, ſuiting the Seaſons of the Year, the greateſt Part whereof are built upon plain Ground, and ſome upon the Hills and Sea-ſide, which are called *Kioſks*, or Banquetting-Houſes. Among theſe is the Chamber where the Grand Signior gives Audience to Ambaſſadors, Baſha's, *&c.* This Room ſtands in a Court adorn'd with many delicate Fountains, and is furniſhed with rich Carpets and Crimſon Velvet embroidered with Pearls, and the Walls covered with fine white Stones, and by it is a ſmall Room covered with ſilver Plate hatch'd with Gold.

To theſe Lodgings of the Sultan belong fair Gardens, with all Sorts of Flowers and Fruits, pleaſant Walks and Marble Fountains. There are alſo Lodgings for the Women like a Nunnery, wherein the Sultana Queen, the other *Sultana*'s, and all the Grand Seignior's Women Slaves dwell, in which are Bed-chambers, Dining-Rooms, Bagnio's, and all other Buildings neceſſary for the Service of the Women. There are alſo convenient Rooms for the principal and inferior Officers, all well furniſhed, among which are the *Hazineh*, or King's private Treaſury and Wardrobe, both ſtrong Buildings with Iron Doors, which are kept continually ſhut, and the former is ſealed with the King's Seal. In the *Seraglio* are alſo Rooms for Prayer, Baths, Schools, Butteries, Kitchins, Diſtilling-rooms, Places to ſwim in, to run Horſes, and for Wreſtling and Shooting at Buts, and, in a Word, all other Conveniencies for a Prince's Palace.

At the Entrance into the *Seraglio* is a very large and ſtately Gate, where there is a Guard always ſtanding of fifty *Capigies*. This leads into a very ſpacious Court of near a Quarter of a Mile ſquare, but it is not paved. The *Baſha*'s, and other great Men may ride into it, and near the Gate is a Piazza for the Shelter of Men and Horſes. On the Right-ſide of it is an Hoſpital for all that fall ſick in the *Seraglio*, and an Eunuch called *Haſteler Agaſi*, looks after them. On the Left Side is a Place where they keep their Timber and Carts, to be ready for the Service of the Palace, and over it an Hall, where are hang'd up Weapons of Antiquity, as Cimitars, Javelins, Bows, Head-pieces, Gantlets, *&c.* which are lent to the Soldiers when the Grand Signior, or chief Vizier makes any ſolemn Entry into *Conſtantinople*.

After having paſſed through this great Court, you come to another Gate, leſs than the former, but neater and more coſtly, in which there is alſo a ſtately Porch, and a Guard of *Capoochees*. This leads into another Court leſs than the former, but far more beautiful and pleaſant, adorned with Fountains and Walks, Rows of Cypreſſes and Graſs-Plats rail'd in, where the Gazels, feed. It is near 300 Paces ſquare, and the Walks are paved. In this Court all muſt walk on Foot, except the Grand Signior. On both Sides of this Gate is an open Gallery, where the *Chiauſſes*, or Purſuivants, the *Janizaries* or Foot Guards, and *Spahi*'s, or Horſe-Guards, ſtand in their Ranks, very well apparell'd, when any Ambaſſadors enter, or on other ſolemn Occaſions. In this Court are ſeveral Kitchins, with their Offices and Larders, for the *Sultana*'s, and other Officers of the Court. On the Left Side is the Sultan's little Stable for about thirty five Horſes for his Highneſſes Uſe, and over it Rooms for their Furnitures, which are very rich, ſet with Jewels, to the Admiration of all Beholders. Next the Stable are Rooms for the Officers of the *Divan*, or Court of Juſtice, and by them the Chamber, where the *Divan* ſits, and a little behind that is the Gate that leads to the Womens Lodgings.

At the End of this Court is the Royal Gate, which leads to the Sultan's Lodgings, and may not be entred by any, but ſuch Gentlemen as attend him, and others that ſerve him, without Leave from the Sultan himſelf. This Gate is kept by the *Capee-Aga*, or chief Chamberlain, and a Company of white Eunuchs. The Court is paved with fine Marble, wrought with *Moſaic* Work, and adorn'd with curious Fountains, and a Lake where the Grand Signior has a fine gilt Boat for his Recreation. In the Buildings, which are ſumptuous, are a Chamber of Audience, a Row of Summer-Rooms ſtanding on a little Hill, and looking toward the Sea, a large Hall ſtanding on Pillars, and opening towards the Eaſt, and by it the Grand Signior's Bed-Chamber, the Walls of which are covered with the fineſt *China* Metal, and the Floors with very coſtly *Perſian* Carpets of Silk and Gold. The Poſts of the Bedſted are Silver, the Canopy, Bolſters, Mattreſſes, and Pallets, are all of Cloth of Gold. Behind the Hall is a Place to ſhoot in, where for that Purpoſe are laid up many Bows and Arrows.

12. The *Divan* ſits four Days in a Week, *viz. Saturday*, *Sunday*, *Monday* and *Tueſday*, upon which Days the *Vizier-Azem*, or chief Viſier, who is the ſupream Judge, and repreſents the Grand Signior; with all the reſt of the Viſiers, the two *Cadileſckers*, or Judges of the Armies in *Greece* and *Natolia*; the three *Teſterdars*, or Treaſurers; the *Reiskitaub*, or Chancellor; the *Neſhaunge*, or Keeper of the Mark, with their Secretaries and Clerks; the *Chiauſh-Baſha* and his Officers, are to be at the *Divan* by Break of Day. All Cauſes are determined by the *Vizier-Azem*, if he pleaſes, for the *Baſha's* do not ſpeak, but only hearken and attend till he refers any Thing to their Judgment, as he often does for Expedition, reſerving the Cauſes of the greateſt Conſequence and Importance to himſelf, as the *Caimekam* or his Deputy does alſo in his Abſence.

The Petitioners ſpeak for themſelves, or deſire the Help of a *Chiauſh*, for they have no Pleaders, or Attorneys. When the chief Viſier hath heard their Suits, he conſults with the *Baſhas*, and then reſolves and determines them as he will himſelf. This he doth uſually after Dinner, and then he repairs on *Sundays* and *Tueſdays* to the Chamber of Audience, to give an Account to his Sublime Highneſs of what Buſineſs he has diſpatched. Sometimes the Grand Signior will come privately to a little Window, which is cover'd with a Lattice, and looks into the *Divan*, to hear the Cauſes; and this forces the chief Viſier to act circumſpectly and juſtly in managing Affairs, while he ſits in the *Divan*, tho' at other Times his Hands are open to Bribery, and he will carry Buſineſs as he pleaſes; but all Things are diſpatched without Delay.

When an Ambaſſador from any great Prince is to kiſs the Grand Signior's Hand, the Grand Viſier calls a great *Divan* of all the Grandees of the Port, and all the *Chiauſhes*, *Mutafurrake's*, *Spahi's*, and *Janizaries* are order'd by the Captains to dreſs themſelves in the beſt Manner they are able, and ſtand in their Places in the ſecond Court. When the *Divan* is ſet in their Order, the chief Viſier ſends a *Chiauſh-Baſha* with many of his *Chiauſhes* on Horſeback, to conduct the Ambaſſador to the *Divan*, where he is placed cloſe to the Viſier, who having compli'mented him a while, entertains him at Dinner, and then conveys him to a Room by the Imperial Gate with his Attendants, till the Sultan is ready to receive him. In the mean Time the Ambaſſador's Preſent is carried about the ſecond Court, in the Sight of all People, and then is brought to the Sultan, and the Grand Viſier ſends the Ambaſſador ſeveral Veſts, appointed by the ancient Rule, for himſelf and Gentlemen, to put on for that Ceremony.

The Veſts for the Ambaſſador are of Cloth of Gold of *Burſa*, but for the reſt, they are of little or no Value; yet the Ambaſſador muſt make a Preſent to the Grand Signior of more than the Worth of them. Then the Ambaſſador is conducted by the Maſter of the Ceremonies to kiſs the Sultan's Hand, (which is, indeed, but his Hanging-ſleeve;) which done, the *Druggoman*, or Interpreter, declares the Ambaſſador's Commiſſion; to which the Grand Signior makes no Anſwer, (for he diſdains to ſpeak to a Chriſtian) but ſpeaking to the chief Viſier, refers all Proceedings to his Diſcretion, and ſo the Ambaſſador departs, bowing his Head to the Sultan, but pulls not off his Hat at all. Other Ambaſſadors of Petty Princes, or State, though they have Veſts given them alſo by the Grand Signior, yet come not to the *Divan*, but go privately with their Preſents. All Ambaſſadors are maintain'd by the Grand Signior, except thoſe from the States of *Venice*, during their Abode at the Port, but it is hard to get his Allowance through the Baſeneſs of the Officers.

13. All Perſons, that live in the Seraglio, are the Grand Signior's Slaves, as are alſo all that are ſubject to his Empire; for they all acknowledge, that whatever they enjoy proceeds from his Good-will, and that their Eſtates and Lives are abſolutely at his Diſpoſal.

There are in the Sultan's Court about twelve hundred Women old and young. The Sultan's Concubines, who are kept for their Beauties, are all young Virgins, ſtollen from foreign Nations, inſtructed in good Behaviour, Dancing, Muſick, Singing, and curious Sewing, and are given to the Grand Signior as Preſents by the *Tartars*, Baſhaws, and other great Men, and ſo their Number is uncertain. Theſe Virgins, immediately upon their coming into the *Seraglio*, are made *Turks* by uſing this Ceremony: They are to hold up their Finger and ſay theſe Words, *There is no God but God alone, and* Mahomet *is the Meſſenger of God*; and then being examined by an old Woman, called *Kabiyah Cadun*, i. e. the Mother of the Maids, they are placed in a Room with their Equals in Age and Diſpoſition. All the Women live like Nuns, but have large Apartments to dwell in. Their Beds are coarſe and hard, made of Flocks; and by every tenth Virgin lies an old Woman, and there are Lamps always burning by them. Near their Apartments they have Baths and Fountains for their Uſe, and, above their Bed-chambers, Places to ſit and ſew in. They dine in Companies, and are waited upon by other Women, wanting Nothing that is neceſſary for them. There are alſo Schools for ſuch as will learn to read or ſpeak the *Turkiſh* Tongue, work or play, and ſome Hours are allowed them for Walking and Recreations.

The Sultan never ſees theſe Virgins, unleſs when they are firſt preſented to him, or when he deſires to have one of them for his Bedfellow, and divert himſelf with Muſick, or ſome other Paſtime. When the Grand Signior deſires a freſh Mate, he gives Notice to the *Kabiyah Cadun*, who picks out the faireſt and moſt pleaſing, and having placed them in two Rows in a Room, brings in the Sultan, who walking four or five Times in the Midſt of them, views them, and as he goes out, throws his Handkerchief into the Virgin's Hand which he chuſes to lie with. This Choice is accounted a great Favour, and the *Cadun* uſes all the Art ſhe can to prepare her for it, by attiring, painting and perfuming her, and at Night ſhe is brought to ſleep with the Grand Signior in certain Chambers ſet apart for that Buſineſs in the Womens Lodgings. By the Bed they have great wax Tapers burning all Night, and *Mooriſh* Women ſitting by them. In the Morning when the Sultan riſes, he changes all his Apparel, and leaves them to her he lay with, and the Money in the Pockets, and then departs to his own Lodgings, from whence he ſends her immediately a Preſent of Jewels, Money and Veſts of greater or leſs Value, according to the Satisfaction he received from her.

If any conceive by him, and bring him forth his firſt begotten Child, ſhe is called *Sultana Queen*, and if it be a Son, ſhe is confirmed and eſtabliſhed by great Feaſts and Solemnities, and thenceforward has an Apartment, Servants, and a large Revenue appointed her, and all Perſons in the *Seraglio* muſt pay her the Reſpect of a Queen. The other Women that bear him Children are called *Sultana's*, but not Queens, yet live in ſeparate Apartments, are well ſerved and attended, and have no Want either of Money or Apparel, according to their Degree. But if it happens that the firſt-begotten Son of the Queen, Heir to the Empire, dies, and another of the Sultana's have a Son to ſucceed the deceaſed Heir, the former is deprived of her Revenue and Royalty, but remains a Sultana, and the latter becomes Queen, and ſo the Title runs from one Sultana to another by Virtue of the Son's Right to the Succeſſion.

In Times paſt the Grand Signior was married to the Queen, but now ſhe paſſes without celebrating any Nuptial Rites; yet the Mother of the Heir enjoys all the Prerogatives of a Queen, and has a Guard of thirty or forty black Eunuchs, under the Command of the Kizlar-Aga, their Maſter, to be employed on her Occaſions. Theſe Sultana's never go out of the *Seraglio* but in the Sultan's Company, and are never ſeen by any but ſuch as attend them, who are thoſe black Eunuchs, and have all cut off clear to the Belly, that there may be no Danger from them.

The Grand Signior's Daughters, Siſters and Aunts, have their Lodgings alſo in the ſame *Seraglio*, and being royally ſerv'd, and ſumptuouſly apparell'd, live by themſelves in continual Pleaſures, until ſuch Time as, at their Requeſt, the Sultan ſhall be pleaſed to give them in Marriage, and then they come forth, and carry each of them a Cheſt along with them, which the Grand Signior gives them full of rich Apparel, Jewels, and Money, to the Value of about thirty thouſand Pounds *Sterling*, beſides what they hoarded for themſelves before, which amounts ſometimes to a great deal; and if the Grand Signior be diſpoſed to deal generouſly with them, they are ſuffered to carry with them twenty Women Slaves, and as many Eunuchs, and he continues their Allowance of a thouſand or fifteen hundred Aſpers a Day, which they had in the *Seraglio*, and furniſhes their Houſes; and if the Huſband of ſuch a Lady has not an Houſe fit for her, the Sultan gives her one of his own.

As for the Huſband, he is to make her a Bill of Dowry of at leaſt 100,000 Checquins in Money, beſides Veſts, Jewels, and other Ornaments, which amount to a great Sum. Being married, they converſe with Men no more than they did before, except their Huſbands, but only with Women, viſiting their old Acquaintance in the *Seraglio*, but not without the Grand Signior's Leave. The *Sultana's* thus married, are for the moſt part their Huſbands Miſtreſſes, inſulting over them, and commanding them as they pleaſe, wearing an *Hanjar*, or Dagger, in Token of their Power over them, and ſometime they will put them away and take others, and ſuch a Divorce commonly proves the Death of the Huſband, whom the Grand Signior leaves to their Will.

The other Women either grow old in the *Seraglio*, and ſo are made Miſtreſſes of the young ones, or are ſent into the old *Seraglio*, which they account their beſt Fortune, becauſe from thence they may be married, with the Conſent of the Miſtreſs, and carry away the Riches they have got, which is very conſiderable, partly by ſaving out of the Sultan's Allowance, and by the Preſents made them upon their *Bairam*, and by the *Baſha*'s Wives. Hither alſo, after the Sultan's Death, are all the Sultanas ſent, except the Sultana Queen, and if they are wealthy, they marry to Men of reaſonable Quality, yet with the good Will of the Miſtreſs, and Conſent of the Grand Signior. The Women of the *Seraglio* are puniſhed for their Faults very ſeverely, and are ſoundly beat by their Overſeers, and if they prove diſobedient and incorrigible, they are by the Sultan's Order ſent into the old *Seraglio*, and the beſt Part of what they have, taken from them; but if they are found guilty of Witchcraft, Whoredom, or any ſuch notorious Crime, they are bound Hand and Foot, and being put into a Sack, are in the Night caſt into the Sea.

14. The *Seraglio* may be properly termed the Seminary or Nurſery of the beſt Subjects, for in it all have their Education, who afterwards become the principal Officers or ſubordinate Rulers of the State and Affairs of the Empire, and theſe are they which are called the *Agliam-Oglans, i. e.* unexpert and untutor'd Youths. There are ordinarily about 6 or 700 of them, from twelve to twenty five or thirty Years of Age at moſt, being all Chriſtian Children, gather'd up every three Years in the *Morea* and throughout all the Parts of *Albania*. They are taken from ſuch Families as are ſuppoſed to be of the beſt Spirit and moſt warlike Diſpoſition, and as ſoon as they are brought into the *Seraglio*, they are circumciſed and made *Turks*. They are at firſt put to very baſe and ſlaviſh Employments, ſuch as to ſerve in the Stables, Kitchens and Gardens, Digging and Cleaving Wood, and are made to row in *Saicks* or Barges, and to lead the Greyhounds to Courſing, or whatever elſe they are commanded to do by the *Oda-Baſhas*, or Captains. They are allow'd from two to five Aſpers a Day, but afterwards ſuch as have a Deſire to learn, are taught to read and write, and generally all of them are taught to wreſtle, leap, run, throw the Iron-Bar, ſhoot the Bow, diſcharge a Piece, and all other Exerciſes becoming a *Turkiſh* Soldier.

The Grand Signior makes uſe of them, when he intends a Journey to any Place for pitching his Tents, removing or carrying his Cheſts, and ſuch like Services, for which Employment he never takes with him leſs than three or four hundred of them. The *Boſtangee-Baſha* always takes with him a good Number of them, when by the Sultan's Order he puts ſome great Man to Death, which is commonly done by the Hands of theſe *Agliam Oglans*. They are capable of being made Stewards to the *Boſtangee-Baſha*, and may riſe to that great Office, which is an eminent Place, for he hath the Keeping of all the Grand Signior's Gardens, and Houſes, ſteers the Sultan's *Saick*, and wears a Turbant in the *Seraglio*, and if he be in Favour, he is preferred to higher Dignities, *viz.* to be *Captain-Baſha*, *Baſha* of *Cairo*, *Damaſcus*, *Aleppo*, &c. and ſometimes he comes to be *Vizier-Azem*, or Prime-Miniſter.

There are other Youths educated in the *Seraglio*, called *Itchoglans*, but in a far better Manner than the former. They are brought up in Learning, in the Knowledge of the Law and Military Exerciſes for the Sultan's and their Country's Service, and to underſtand thoſe Things which belong to the Government of the whole Empire. By the ancient Inſtitution they ſhould be always made of Chriſtian Renegado's and Captives of the nobleſt that can be found; but the *Capee Aga*, or chief Chamberlain, brings in ſome natural-born *Turks* of the beſt Aſpects, and who promiſe well, but with the Sultan's Conſent. The Number of them is uncertain, but it is ſaid, they are commonly about one hundred. As ſoon as they come into the *Seraglio*, they are exceedingly well inſtructed, and daily taught, as well polite Behaviour, as the Rites and Ceremonies of the *Mahometan* Law, and whatſoever may tend to the Improvement of their Minds, and for this Purpoſe there are four *Oda*'s, or Schools, being ſo many Degrees, every one higher than the other.

In the firſt, called the *Choukou-Oda*, they all come when they are but Children, and there learn Silence, the Poſtures of holding down their Heads and looking downwards, with their Hands before them join'd acroſs, which are expreſſive of ſingular Reverence, and are uſed by ſuch as are before the Sultan. Then they learn to write and read the *Turkiſh* Tongue, and are taught their Prayers by Heart in the *Arabian* Tongue, and that they may learn theſe Things well, are encouraged to Admiration. In this School they ſtay about five or ſix Years, and ſuch as are dull ſtay much longer.

In the ſecond School, called *Quilar Oda*, they are taught by more learned and ſufficient Tutors the *Perſian*, *Arabian* and *Tartarian* Tongues, and to that End the Profeſſors take great Pains in reading divers Authors in thoſe Languages. Here they begin to wreſtle, ſhoot the Bow, throw the Iron Mace, toſs the Pike, run and handle their Weapons, &c. and in theſe Exerciſes in ſeveral Orders and Places they ſpend certain Hours daily, and are ſeverely puniſhed if they are found negligent in the leaſt.

In this *Oda* they alſo ſpend four or five Years, and being become ſtrong Men fit for any Thing, they are removed to the third, where forgetting Nothing they have already learn'd, they are taught further to ride, and how to behave themſelves in the Wars. Beſides all this, every one of them learns a Trade neceſſary for the Service of the Sultan's Perſon, as to ſhave, make a Turbant, fold up Apparel handſomely, pare Nails, attend at the Bath, keep Hawks, to be Sewers, Querries of the Stables, Target-Bearers, wait at Table, &c. While they are in theſe three Schools they are but meanly apparell'd, having yearly only two Cloth-Veſts, ſomewhat fine, but their Linen is coarſe. In this *Oda* their Puniſhments are ſevere, for their Maſters will give them an hundred Blows for great Faults upon the Soles of their Feet or Buttocks, inſomuch that they are oftentimes left for dead. In this School none is ſuffered to be familiar with any but their Companions, ſo that none may ſpeak with them, but by Leave from the *Capee-Aga*, and that in the Preſence of an Eunuch. When they go alſo to the Bath, or about any other Buſineſs, they have Eunuchs attending them, to keep them from any Lewdneſs, and for the ſame Reaſon they have Eunuchs lying by them always in their Bed-Chambers.

Here alſo, before they are raiſed to the 4th *Oda*, the Eunuchs uſe all Arts to try whether they are firm to *Turciſm*, and have no Inclination to Chriſtianity, and being thus proved, they are preferr'd to what is call'd *Haz-Oda*, or, *The Prince's Chamber*. Here it is that all Puniſhments ceaſe, and they may freely converſe with all the Great Men of the *Seraglio*, and being cleanly and neat in their Apparel, the Grand Signior takes them along with him when he goes abroad upon Pleaſure, if none of his Women be with him. Out of the young Men thus perfected and compleated in their Education, the King chuſeth his *Aga's* and *Baſha's*, viz. the *Seliƈtar Aga*, the Sultan's Sword-Bearer; the *Chioadar-Aga*, he that carries his Yagmoorlick; *Rachi Aga*, Yeoman of the Stirrup; *Mataragee-Aga*, who brings him Water to waſh his Hands and Face; *Talbenter-Aga*, he that brings his Turbant; *Kembaſir-Aga*, he that looks to his Apparel and the waſhing of his Linen; the *Cheſhnegir-Baſha*, the chief Sewer; the *Dogangca-Baſha*, the chief Falconer; the *Zagargee-Baſha*, the chief Huntſman; the *Turnackgee Baſha*, he that pares the Sultan's Nails; the *Hamaumgee Baſha*, the chief Accomptant; and the *Teſkeregee-Baſha*, his Highneſs's Secretary.

All theſe are created out of the eldeſt of the *Itchoglans* of the fourth *Oda*. They are always in the Sultan's Preſence, holding their Heads down, and Hands a-croſs, never ſpeaking; but whatever the Sultan commands, they are wonderful ready to obey. They wait at the Sultan's Table, and he is pleaſed with their Service and Company. He will ride with them, and play at the *Jeerit* and other Sports, when he is ſo diſpoſed. He often gives them Preſents of Veſts, Swords, and Bows, and ſometimes ready Money. He entruſts them with the Diſpatch of Embaſſies, and though they muſt not go themſelves, yet finding out what Preſents the Prince, to whom the Embaſſy is to be ſent, uſes to give to Ambaſſadors, they ſell it to a *Chiauſh*; and this is done to enrich them againſt the Time he ſhall ſend them out of the *Seraglio*, to be Generals at Sea, or Baſha's of ſome great City, as *Babylon*, *Aleppo*, &c. or makes them Beglerbergs of *Græcia*, *Natolia*, &c. When any is thus ſent out, the next in ſtanding ſucceeds, unleſs his ill Behaviour has made him incapable; and ſo all live in Hopes of Greatneſs and Riches. Before their Departure, they ſtay a while till their Beards are grown (for they are always ſhaved in the *Seraglio*) and then they receive handſome Preſents of the Sultana's and Baſha's, and when their Beards are grown, they pay their Viſits to all the great Men of the Court.

15. In the *Seraglio* there are likewiſe other Miniſters for neceſſary Services, as alſo Buffoons, Tumblers, Muſicians, Wreſtlers, and Mutes. Theſe laſt are in great Requeſt, becauſe the Grand Signior thinks it below his Dignity to ſpeak to any about him familiarly, and therefore he makes himſelf merry with theſe Mutes, who though deaf and dumb, will reaſon and diſcourſe of any Thing by Nods and Signs, as other People do by Words; nay, many of them can write very ſenſibly and well, which is admirable.

There are alſo White Eunuchs, who attend the Grand Signior at his Gate. The chief of them is, 1. the *Capee Aga*, or Chamberlain, who is in greateſt Authority with the Grand Signior; for he alone is allowed to ſpeak to him, and preſent all Petitions, Meſſages, and Writings, and accompanies the Sultan where-ever he goes. His Salary is eight Sultana's a Day, *i. e.* about three Pounds *Sterling*, beſides Preſents from all that have any Buſineſs with the Sultan.

2. The *Hazinehdar-Baſha*, or the Treaſurer of the Houſehold, who keeps an Account of all the Treaſure brought into this inward Treaſury, which is only the Wealth of ancient Sultans, and the Revenue of *Egypt*, and the adjacent Provinces, and takes it out upon Occaſion. He hath the Cuſtody of all the Sultan's Jewels, which he either wears, or are preſented him, and keeps a Regiſtry of them, when received and when given away. He ſucceeds the *Capee-Aga*, when he dies.

3. The *Keelergee-Baſha*, i. e. Maſter of the Wardrobe, into which are brought all the Preſents of Cloth of Gold, Plate, Silk, Woollen Cloths, Furs of all Sorts, Swords, Raw Silks, Carpets, and whatever elſe ſerves for his Majeſty's Uſe, of which he keeps particular Inventories, as well as Servants under him, and his Salary is one thouſand Aſpers a Day, *viz.* 50 *s.* Sterling. He is commonly in Favour with the Sultan, and uſually ſucceeds to *Hazinehdar-Baſha*.

4. The *Sarai Agaſee*, i. e. the Keeper of the Seraglio. He ſees that all Things be prepared for the Service of the Palace, and that the Rooms be kept as they ought to be, and that all the Officers do their Duty. He is allowed to ride up and down the Seraglio, in the Courts, Gardens, and by the Sea-ſide, as the three former are: His Penſion is eight hundred Aſpres, or 40 *s.* a Day, beſides Veſts and Furs; he ſucceeds the *Keelergee-Baſha*. The three laſt may not ſpeak to the Emperor, unleſs in Anſwer to any Thing he aſks them.

The Number of theſe Eunuchs is about two hundred, and they are all not only gelt, but cut ſmooth when they are very young, and that with their own Conſent, which is obtain'd by aſſuring them what Great Men they will be, for otherwiſe they would be in Danger of Death, as the Workmen in that Buſineſs affirm. They are brought up with the *Ichoglans*, and are taken from the fourth *Oda* to ſerve the Grand Signior, who employs them in the Government of his other Seraglios, and his Seminaries of Youth at *Conſtantinople*, *Adrianople*, and other Places, makes them *Baſhas* of *Cairo*, *Aleppo*, and other Cities, and ſometimes Viſiers of the Bench. They are alſo truſted by the *Capee-Aga* to keep the King's Curioſities and valuable Rarities, as great Pieces of Ambergreeſe, Muſk, Balſam, Cups of Agat, *&c.* for though they are, generally ſpeaking, not of much Courage, yet they are accounted of great Judgment and Fidelity.

The Black Eunuchs and Black *Moor* Wenches ſerve the Sultana's and the reſt of the Queen's Women. Theſe Eunuchs, while they are Boys, are brought up as the White ones are, and after are ſet to ſerve and wait at the Sultana's Gate, under the Command of the Kiſlar-Aga. They are allowed a Penſion of fifty or ſixty Aſpers a Day, and two Veſts, with Linen and other Neceſſaries, yearly, beſides Preſents given them by ſuch Women as come to viſit the Grand Signior's Women. They are never ſent abroad in any Employment, but ſerve for ever in the *Seraglio*. They are called by the Names of Flowers, as *Roſe*, *Narciſſus*, &c. Their Buſineſs is to carry Meſſages and Notes from the Sultana's to the *Capee-Aga*, to be delivered to the Sultan, and attend upon the Ladies in Sickneſs and Health.

16. The Grand Signior's Sons by the Queen, are brought up by themſelves, by choice Nurſes, which are found out of the *Seraglio*, and if he has Sons by other Sultana's, they are brought up alſo by themſelves, but may play with them till they are ſix or ſeven Years old. They live with the Women nine or ten Years, and about fourteen are circumciſed with great Pomp, as Weddings are kept among Chriſtians. The Sons, from five to ten Years of Age, are taught to write and read by an *Hojah*, or School-maſter, who for that End is admitted into the Womens Apartment for certain Hours, but ſees them not, unleſs two or three old ugly black *Moriſh* Women; but Daughters are little regarded. When the *Shawhzawdeh*, or Sultan's Son, who is Heir to the Crown, is circumciſed, he is ſometimes ſent abroad with a ſuitable Equipage, and under the Care of his principal and truſty Eunuchs, to be Governor of *Magneſia*, and the Provinces about it, but as Deputy to his Father. The Eunuch is bound to give continual Advice to the Grand Signior of his Son's Deportment; ſo that if he tranſgreſs the Limits of his Commiſſion in the leaſt, he quickly falls into Diſgrace, and into a Suſpicion of Rebellion.

The Victuals in the *Seraglio* is dreſs'd by ſuch of the *Agliam-*

Agliam-Oglans as are brought up to this Service, called *Aſk es* or Cooks. They wear white Caps for Diſtinction, and are about two hundred from the higheſt to the meaneſt Officers of the Kitchen. They begin their Buſineſs early in the Morning, for the Grand Signior riſing betimes, they muſt have always ſomething ready for his Breakfaſt. He dines at Ten o'Clock in the Forenoon, and ſups at Six in the Evening, both in Summer and Winter. He ſits down with his Legs acroſs, according to the *Turkiſh* Faſhion, and has a rich Napkin laid before him. He carves for himſelf, but uſes neither Knife nor Fork, for his Meat is ſo tender and delicately dreſſed, that he eaſily pulls it in Pieces with his Fingers. He hath two wooden Spoons, the one to eat his Pottage, and the other to ſup the Syrups with, which he uſes to quench his Thirſt. He uſes no Salt nor Antipaſt. He taſteth of all the Diſhes one by one, and cloſes his Meal commonly with a *Boclava*, or Tart; and when he has dined or ſupped, waſheth his Hands in a golden Baſon, ſet with precious Stones.

His uſual Diet is wild Pigeons, Geeſe, Lamb, Hens, Chickens, Mutton, and ſometimes wild Fowl, and uſually as much boiled as roaſted of all of them, with Broths, Preſerves, and Syrups in Porcelaine Diſhes, and ſome Tarts and Pies. When he has done eating, he concludes with a Draught of Sherbet, and ſeldom drinks more than once at a Meal. He ſeldom or never ſpeaks at Table, but to favour ſome Aga, to whom he ſpeaks a Word or two, and throws him a Loaf. The Grand Signior's Diſhes are all Gold or yellow Porcelaine, ſcarce to be had for Money, in which he eats chiefly in their *Ramazan* or *Lent*, which laſts a whole Moon, and only by Night, as all the *Turks* do; but they make no Difference of Meats, excepting Swines Fleſh, and Things ſtrangled, which are forbidden by their Law at all Times. The Sultan ſeldom eats Fiſh, unleſs when he is by the Sea ſide with his Women, where he ſees it taken. The Meat which is left at the Grand Signior's Table is carried to the Aga's that wait; and after Dinner the Sultan diverts himſelf with the Mutes and Buffoons. The *Capee*-Aga hath a Table by himſelf, dreſſed in his own Kitchen, and with him the *Haſnehdar-Baſha*, *Sarai Agaſee*, the Sultan's Phyſicians, eat, and what he leaves, ſerves all the White Eunuchs. The Youths in the *Oda*'s have two Loaves a-piece, and boil'd Mutton, with Pottage made of Rice, Butter and Honey, allowed them daily.

The Queen and Sultana's are at the ſame Time ſerved by the Black Eunuchs, but in Copper Diſhes, unleſs the Sultan be with them. They drink their Sherbet with Snow, which coſts dear to bring it from the Hills, and keep it under Ground. They eat no Cheeſe but *Parmeſan*, ſent by the *Bailo*, or Reſidentiary of *Venice*. All theſe Things are done in ſuch Order, that all is finiſhed in leſs than two Hours Time. The Grand Signior's, Sultana's, and Baſha's Bread is made of Wheat, brought from *Burſa*, and ground there, and is very white and ſavoury; the reſt of the Bread for the Seraglio is made of Corn brought out of *Velo* in *Greece*. There are vaſt Quantities of Bread ſpent in the Seraglio, becauſe every one has a large Allowance made by the chief Viſier. The Rice, Lentils, and other Pulſe, is brought twice a Year out of *Egypt*, in Galleons. There is a vaſt Quantity of Sugar ſpent in Sherbets and Boclava's, but they eat little Spice, except Pepper. This is brought out of *Egypt*, with a great Quantity of Conſerves, Dates, Prunes, pickled Meats, and dried Plumbs, though four hundred *Halvagi's* are continually at Work to preſerve others.

The Honey uſed at the Sultan's Table comes from *Cio*, but the reſt comes from *Walachia*, *Tranſilvania*, and *Moldavia*, in great Earthen Jars. The Oil is brought from *Modon* and *Coron*, in *Greece*, and is much uſed in Meats and Lamps; but the Sultan eats only what comes from *Candia* and *Zant*, which is the deareſt and beſt. Their Butter comes by Shipping out of the *Black Sea*, from *Bog ano* and *Caffa*, in Ox and Buffalo's Hides. They eat very little or no freſh Butter, nor eat much Milk, unleſs it be *Yoghurd*, i. e. ſower or clotted Cream. In the Seraglio are ſpent in dried Beef of Cows of *Boſturnia*, killed when they are great with Calf, becauſe they ſay their Fleſh is then more tender and ſavoury, four hundred yearly; and the daily Proviſion is two hundred Sheep, one hundred Lambs and Kids in their Seaſon, ten Calves, fifty Geeſe, one hundred Hens, one hundred Chickens, and two hundred Pigeons. In the Seraglio there is little Fiſh eaten, though the Sea yields Plenty, and therefore the Chriſtians buy it cheap. The Seraglio is plentifully ſerved with Fruit from the Sultan's Gardens, and Preſents ſent to the Grand Signior from all Parts; ſo that they ſell a great deal, and the Money is given to the Sultan for his Privy Purſe.

The Furniture of the Sultan's Kitchens are of Braſs, but ſo well kept, and ſo large, that they are as fine a Sight as can be ſeen. The Grand Signior's Cloaths differ little in Faſhion from other Mens, only in Length and Richneſs. His Turbant is like the *Baſha's*, only he wears Plumes and Gold Claſps, which they do not. He ſleeps upon Matraſſes of Velvet and Cloth of Gold, cover'd in Summer with Sheets, embroider'd with Silk, and in Winter with Luſerns, or Sables. When he lies alone in his own Lodgings, he is watch'd by the Pages of his Chamber, two at a Time; and two old Women wait on him with burning Torches to light him, if he pleaſes to ſay over his Beads, which they pray by at the Hours of Prayer in the Night, *viz.* at Midnight, and two Hours before Day. The Women's Habit is much like the Men's, for they wear *Chachſhirs*, or Breeches, and Buſkins, and ſleep in them; but they have thin ones for the Summer, and thick for the Winter.

17. The ſeveral Stipends of the Officers of the Seraglio are paid by the *Teſterdar*, out of the outward Treaſury, who ſends them their Veſts againſt the Carnival; and if he fails at the Times appointed, upon any Complaint he will be utterly ruined, or at leaſt diſplaced. If any of the *Itchoglans* or *Agliam-Oglans* die, his Chamber-fellows are his Heirs; and ſo it is with the young Women that never lay with the Sultan: But if any of the Eunuchs, who are generally very rich, dies, all comes to the Grand Signior himſelf, except he be out of the Seraglio, for then the Sultan has only two Thirds, and the reſt he may diſpoſe of by Will, if the Sultan will conſent to it; but to ſecure his Parts, there is an Officer, called the *Beytel Mawlgee*, who, as ſoon as any one dies, enquires after their Eſtates, and certifies the *Teſterdar* of it, that he may ſeize it for the Grand Signior; yet the *Beytel Mawlgee*, for his own private Gain, will very often conceal a great Part of the Eſtate of the Deceaſed, to divide it privately between the Kindred and himſelf. If any falls ſick in the Seraglio, they are immediately carried, in a Cart cover'd with Cloth, and drawn with Hands, from their Chamber to the *Lazaretto* or Hoſpital belonging to the Palace, where they are kept ſo cloſe, that none can ſpeak with them without great Difficulty, but the Phyſician and Apothecary; and, when recover'd, they are carried back in the ſame Manner to their Chambers. The Grand Signior is at vaſt Expences in Gifts to the Sultana Queen, chief Viſiers, *Serdars* or Generals, and Captains of his Forces by Sea and Land, *Teſterdars* and others, in Veſts, Bows, Swords, Plumes, *&c.* and he allows the Sultana Queen and *Viſier-Azam* in the Wars, to be very generous, according to their Stations. He may go out of the Seraglio when he pleaſes, either by Water or Land. When he goes abroad by Water, he is carried in his Saick or Barge cover'd with Crimſon-Velvet, richly embroider'd, under which he ſits, his *Aga's* ſtanding all about him, and is row'd by the *Agliam-Oglans*, the *Boſtangee-Baſha* ſteering. When he goes by Land, he always rides on Horſeback, and commonly goes out of the great Gate of the Palace. When he goes to the Moſque on *Fridays*, he is accompanied through the City by all the *Baſha's*, and Grandees of the Port, beſides a large Retinue of Servants, who march at his Stirrup.

The People in his Way follow him with repeated Acclamations of Happineſs, which he returns by a Nod, and ſuch as are, or believe themſelves wronged, preſent to him their *Arzes*, or Petitions, which his

Highneſs orders to be received, and being read at his Return, he gives Command for Redreſs, to make good the Title he gives himſelf, that he is *Awlem Penawh*, i. e. *The Refuge of the World*. The Grand Signior at *Conſtantinople*, by the Sea-ſide, has a large Stable of a thouſand Horſes, for the Uſe of his Houſhold, of which the *Imrohor-Baſha*, or Maſter of the Horſe, has Charge, and leſſer Stables at his Houſes of Pleaſure in the Country, of ten Horſes each. He has alſo Studds in *Burſa*, *Adrianople*, and many other Places for Stallions, which furniſh him with very ſtately Colts, beſides ſuch as are daily ſent him from *Cairo*, *Damaſcus*, *Bagdat*, and other Places, by the Baſha's. For his meaner Servants, he has Horſes from *Walachia*, and for his Baggage five thouſand Mules to carry Pavilions, Cheſts, Water, and other Neceſſaries for Travelling; of which alſo the *Viſier-Azem* makes uſe when he goes in Quality of General in any Expedition.

18. Upon the firſt Day of their *Bairam*, or Carnival, the Sultan ſhews himſelf publickly, and lets all the great Men and better Sort of his Servants kiſs his Veſt, and then he is richly dreſs'd with all his beſt Jewels, and ſits down on a *Perſian* Carpet, where his *Tabt* or Throne is ſet, the Chief Vizier telling him the Names of the Perſons, that he may take Notice of them, and chiefly he reſpects the *Mufti*, *Cadeleſchers*, and other Doctors of the Law of the higheſt D gree. The Ceremony being ended, he goes to the Moſque of *Santa Sophia*, the Company attending him, and hears the *Mamaz*, or Divine Service, and a Sermon; which being concluded, tho' he retires to his own Lodgings, and dines alone, as upon other Days, yet he orders a ſumptuous Banquet in the *Divan* for the Baſha's and Grandees, and a great Dinner in the Court-yard for the reſt of the Company, and after Dinner ſends them a *Bairam-Lick*, i. e. a New-year's Gift, to all according to their Qualities. During the three Days of the *Bairam*, he cauſes Shews of Fire-works to be made all Night, and a Drum to be beaten all the while, the Sultan with his Sultana's, as well out as in the *Seraglio*, diverting themſelves with them, as well as with other Sports and Tricks, which the Sultan tolerates all that Time.

But as the Grand Signior gives, ſo alſo he receives Preſents at this Time from the Baſha's and great Perſons, who ſtrive to exceed one another in the Value of their Gifts, that they may gain Favour. The *Bairam* is celebrated alſo in all the Grand Seignior's Dominions at the ſame Time as well as at *Conſtantinople*, the Streets being ſet out with pretty Devices and *Salunjacks*, or Swings very artificially made to ſolace both Old and Young: But in this Fit of *Turkiſh* Mirth, it is dangerous for *Jews* or *Chriſtians* to ſtir out, for the *Turks*, putting off their wonted Sobriety, are very inſolent, and will do them a Miſchief, if they do not give them what Money they demand.

19. Beſides the *Seraglio* we have been deſcribing, there is another in *Conſtantinople*, as has been obſerved, ſtiled the *Old Seraglio*, ſo called, becauſe it was the firſt built by *Mahomet* the Second, when he took *Conſtantinople* to be his own Palace. It is a large Place, about three Quarters of a Mile in Compaſs, and ſeated in the nobleſt Part of the City. It is environ'd with an high Wall, and the Buildings are very fair. It hath but one Gate belonging to it, and that is of Iron, which is kept by a Guard of White Eunuchs. The Inhabitants of it are all Women and Eunuchs. The Women are only ſuch as have been put out of the Sultan's *Seraglio*, *viz.* the Sultana's of the deceaſed Grand Signiors, ſuch as are fallen into Diſgrace with the Sultan for their ill Conditions or rude Behaviour, or ſuch as are infirm or defective in ſomething that ſhould fit them for the Sultan's Bed. They are governed by an old Woman, called *Kabiya-Cadum*, i. e. the *Woman-Overſeer*, who is to take Care that they have all Things neceſſary for them according to the Cuſtom of the Houſe. The Sultana's have Lodgings apart, and are reaſonably well ſerved, though far ſhort of what they had in the Sultan's *Seraglio*. If they are rich when ſent thither, they take Care to make it known, and that procures them a good Huſband and Jointure. The Sultan will ſometimes go thither to viſit his Grandmother, Siſter, or other Relations, or when he is melancholy.

There are other *Seraglio's* in *Conſtantinople*, which belong to private Perſons, but built with an ugly Appearance for Fear of giving Jealouſy to the Grand Signior, though within the Walls, which are high, there are very beautiful Apartments, adorned with Gold and Azure, and the Floors cover'd with fine Carpets, the Walls faced with fine Tiles like *China*. In the Halls and Chambers they have a riſing about a Foot higher than the Floor, which they call a *Divan*, covered with richer Carpets than the reſt of the Room, and embroidered Cuſhions ſet againſt the Wall. Here they reſt, receive Viſits, and ſpend moſt of the Day. There are alſo many great Buildings in the City like Monaſteries, which they call *Hans*, with Galleries and Chambers, where Merchants have Lodgings and Warehouſes at eaſy Rates, *viz.* one or two Aſpers a Day. They bring in a great Revenue to the Owners. They are built of Free-Stone round a Court, which has generally a Fountain in it. The Walls are ſtrong and well barr'd to ſecure the Goods. The faireſt of them in *Conſtantinople* is the *Valida*, built by the Grand Signior's Mother. The Houſes of *Conſtantinople* are all of Wood, very indifferently built, and very ſubject to Fires from their taking much Tobacco. The Streets are crooked and narrow, ſtanding alſo up and down Hill. The *Caravanſera*'s are built as the *Hans*, but are uſed only to lodge poor Travellers and the Servants of the Caravan, who have Rooms there for little or nothing.

20. *Galata* is the Suburb of *Conſtantinople*, ſeparated by the Port only, in which there are *Saiks*, or ſmall Boats, and Wherries, to carry you at all times for a ſmall Matter. You may go by Land, but it is a little about, and you paſs by the *Atmeidan*, or Field where the *Turks* exerciſe their Archery, and go in Proceſſion to make Prayers to God for the Succeſs of their Arms, and whatever elſe they want. Then you go to *Caſſumpaſha*, a great Village, where is the Arſenal for building Galleys, Maones and Ships: It has 120 Docks, and a Magazine of Arms for 60,000 Men, but it is inacceſſible to Chriſtians. In it are, beſides the *Capoudan-Baſha*'s, or Admiral's Lodging, a ſpacious *Bagnio* for the Grand Signior's Slaves, of whom there are many Thouſands, and live very miſerably. This Town is divided from *Galata* only by the Burying-Places.

Galata is a pretty large Place; the Houſes are good and well built. Many *Greeks* live there, and the *Franks*, who cohabit with them, have five Monaſteries and as many Churches. It has a large Tower in it, and by the Sea-ſide the fineſt Fiſh-Market in the World, where there is great Plenty of all Sorts of Fiſh to be had cheap. The *Greeks* keep here a great many Taverns, which draw the *Turks* from *Conſtantinople* thither, who are very inſolent in their Drink, and dangerous then to be met with, ſo that this is one of the greateſt Inconveniencies in *Conſtantinople*.

Beyond *Gálata* lies *Pera*, a large Borough, which is ſeparated only by Burying-Places. In this Town reſide the Ambaſſadors from Chriſtian Princes, for the Emperor's, King of *Poland*'s, and the Republick of *Ragouſa*'s only may reſide at *Conſtantinople*. The Houſes are high and handſome, being inhabited only by *Greeks* of Quality. Over againſt the *Seraglio*, on the Right-Side, ſtands the *Tophana*, i. e. the Place where all the Guns and Artillery are caſt, and it gives the Name to all the Quarter. The Houſes of theſe three Places ſtand ſome higher and ſome lower, like an Amphitheatre, and form a pleaſant Proſpect from the Port or Sea.

21. In *Aſia*, if you croſs the Sea, which is about a Mile over, you come to *Scutari*, paſſing by *Leander*'s Tower. It is a large Town, and there the Grand Signior has a ſtately *Seraglio* and lovely Gardens. A little lower lies *Chalcedon*, once a City famous for the fourth General Council, but now a pitiful Village. *The Prince's Iſle*, which is four Hours Sail from *Conſtantinople*, and contains two little Towns of *Greeks*, has excellent Air, and the Channel of the *Black Sea*, call'd the *Thracian Boſphorus*, is very convenient to take the Air upon, being twelve Miles long, affording a delightful Proſpect

of ſtately Houſes and lovely Gardens. This Channel affords Plenty of Fiſh, eſpecially Sword-Fiſh and Dolphins. Six Miles from *Conſtantinople* are two Forts, built to hinder the Inroads of the *Coſſacks*, who would otherwiſe ſeek their Booty in that City. At the Mouth of the *Boſphorus* is a Rock, about fifty Paces from the Land, where ſtands a Pillar of white Marble, called *Pompey*'s Pillar, becauſe raiſed by him (as it is ſaid) in Memory of his Victory over *Mithridates*. Over againſt this Rock in *Europe* is a Village by the Sea-ſide, call'd *Fanare*, where is a Tower, with a Light on it always for the Convenience of Veſſels to keep them from the Rocks, on which they are in Danger from frequent Tempeſts and Currents, cauſed by the *Danube*, *Boriſthenes*, *Tanais*, and other Rivers falling into this Sea, to ſuffer Shipwrecks, and from thence it is called *Mauro-Thalaſſa*, i. e. *The Black-Sea*; and by the *Greeks*, the *Euxine*, or *Axene* Sea, *i. e. Inhoſpitable*. Near the Channel of the *Black-Sea* there are a great many *Siacalles*, or wild Dogs, ſomething like Foxes, but ſuppoſed to be engendered between Wolves and Dogs. They howl dreadfully in the Evenings and Nights, eſpecially in cold and bad Weather. They are very miſchievous, and as fierce as Wolves. The Land on the *Europe* Side is a fine Country, full of Gardens and good Paſture, and Villages inhabited by *Greeks*. A little further are the fine Aquæducts that ſupply *Conſtantinople* with Water in great Abundance.

22. As we are now conſtrained to think of every Method of ſaving Room, inſtead of giving ſeveral Travels thro' the ſame Country, we muſt be obliged to ſupply the Defects of ſuch as we inſert, by Additions from other Authors, at the Cloſe of every Section, and this plain Account of the Matter may very well ſerve for an Introduction. Our Author has given a very good Deſcription of the *Dardanelles*, which the *Turks* call *Bogar Heſſarleri*, that is, the Streights of the *Helleſpont*. It is certain, that they ſpeak in very high Terms of theſe new Caſtles, which they would have the World believe are the ſtrongeſt Fortreſſes in the World, as well as the great Security of *Conſtantinople*; but though they are right as to the Importance of theſe Caſtles, yet they are much out of the Way as to the Caſtles themſelves, which undoubtedly are very pitiful Fortifications.

There is Reaſon to believe, notwithſtanding this ſwelling Language in which they ſpeak of them, that the *Turks* are not in Reality perſuaded of the Truth of what they ſay, with Reſpect to theſe Caſtles, for they are ſo jealous of a Chriſtian's making any Draught of them, that if a Man looks at them more ſteadily than uſual, they preſently confine him; and if he ſhould be caught with a Pencil in his Hand, he would certainly be put to Death. The Batteries level with the Water, are terrible only to Sight, from the large Size of the Cannon, and the prodigious Stone Bullets which they diſcharge. It is indeed true, that after the great Victory gained near theſe Streights by the *Venetians*, in 1657, their Admiral *Mocenigo* was deſtroy'd in attempting to paſs, which hindered their victorious Fleet from going up to *Conſtantinople*; and this has raiſed their Credit with the Chriſtians, yet without any great Reaſon. There is a wide Difference between the Paſſage of a Galley, and that of a Man of War with a briſk Gale; for as theſe Cannon are fixed, and not upon Carriages, they can make only one Diſcharge, for to load them again takes a great Deal of Time, and the People employed in that Service muſt be expoſed all the while they are performing it.

In order to force this Paſſage, two different Methods may be made Uſe of, neither of which can be ſaid to be expoſed to inſurmountable Difficulties. In the firſt Place, the Caſtles may be attacked by Land, and that without any formal Siege, as they are no otherways fortified than by a ſimple Rampart and a Parapet, ſo that a Battery or two of large Cannon would quickly make a Breach; nor is at all impoſſible, that theſe Caſtles might be carried by a Scalade, and then the Paſſage would be free from all Interruption. The ſame Thing might perhaps be effected by a Bombardment, or rather there is no Doubt of it, and therefore there is no Neceſſity to run the Riſk of thoſe formidable Batteries. But, Secondly, even this might be very practicable, ſuppoſſing it neceſſary; for with a briſk Gale, a whole Fleet might paſs, and if two or three of the firſt Veſſels were old Ships laden with Wool, it is highly probable the Stone Bullets would not do them much Harm; ſo that after all, the impregnable Fortreſſes of the *Dardanelles*, as the *Turks* call them, are in Reality little better than Bugbears, and ſo it will certainly appear whenever an Attempt of this kind ſhall be made.

The Account our Author gives of the *Turkiſh* Name of the Capital of their Empire, is not very ſatisfactory, and indeed it is very hard to meet with any that is ſo, and therefore we will endeavour to clear up that Matter effectually. All the *Turkiſh* Authors of any Note, but eſpecially their Hiſtorians, call it, *Conſthanthinah* or *Conſtantiniah*, which is the City of *Conſtantine*, and is the Tranſlation of *Conſtantinople* into their Tongue. As to the Vulgar Name of *Stamboul*, it aroſe thus; The *Turks* hearing the *Greeks* often ſpeak in their Language of going to the City, for ſo emphatically they call *Conſtantinople*, miſtook the *Greek* Words, ἐις τὴν πόλιν, which they pronounced, *Is Stinpolen*, for the Name of the Place, and ſo called it corruptly, *Stanpoli* and *Stamboul*; but their learned Writers being aſham'd of ſo groſs a Corruption, and yet finding it impoſſible to rid themſelves of a Word ſo long in Uſe, have brought in a new Orthography, and write it *Iſlambol*, which ſignifies in their Language, the Aſſembly of the true Belief, or the Capital of Believers; and to the beſt of our Knowledge, this is the cleareſt and moſt correct Account that can be given of the Matter.

Our Author has barely touched as became a Traveller, on the ſeveral Changes that has happened to this famous City; but perhaps the Reader will be pleaſed to ſee theſe Matters placed in a clearer Light, the rather too, becauſe very few of our Books of Geography, or of general Hiſtory, are tolerably correct or exact in this Point. The City of *Conſtantinople* received that Name, according to *Euſebius*, *Anno Domini*, 328, from *Conſtantine* its Founder, who removed hither the Seat of his Empire from *Rome*. It was firſt beſieged under the Reign of the Emperor, or rather Tyrant *Phocas*, by *Chozroes*, King of *Perſia*, or rather it was blocked up by him for eight Years together, that is, from *An. Dom.* 603. to 611, when it was delivered by *Heraclius*, who thereby merited and obtained the Empire.

In the Year of the *Hegira* 52. *A. D.* 672. it was beſieged by *Yeſid* the Son of *Moavia*, the firſt Caliph of the Family of the *Ommiades*. This happened under the Reign of the Emperor *Conſtantine*, ſurnamed *Pogonates*, and it was at this Siege that *Abu Aiub*, the laſt of the Companions of the Prophet *Mahomet*, ended his Days. The *Greek* Emperor found himſelf ſo preſſed by this Siege, that he was almoſt in Deſpair; for at the ſame Time that the *Saracens* Army lay before it on the Land Side, it was blocked up by a prodigious Fleet of theirs at Sea. But the famous Engineer *Callinicus* invented a Sort of Wild-Fire, called from thence the *Greek* Fire, which would burn under Water, and therewith deſtroyed the whole Fleet.

A. H. 99. *A. D.* 717. It was again beſieged by *Moſlemah* the Brother of *Solyman*, the ſeventh Caliph of the Family of the *Ommiades*, *Theodoſius* the IIId. being then Emperor of the *Greeks*. It was relieved by *Leo*, the *Iſaurian*, who cauſed the Emperor to be ſhaved and ſhut up in a Cloiſter, ſeating himſelf upon his Throne. *A. H.* 164. *A. D.* 780. *Haroun Raſchid*, Son of the Caliph *Mahadi*, came before it with a vaſt Army of *Saracens*, the *Greek* Empire being at that Time governed by *Irene*, as Regent to her Son *Conſtantine* the VIth, ſurnamed *Porphyrogenetes*, who found herſelf ſo hard preſſed that ſhe was glad to deliver herſelf by a ſcandalous Treaty, in which ſhe promiſed to pay an annual Tribute to the Caliph, of Seventy thouſand Pieces of Gold.

The *Greek* Empire declining from this Time, and the Power of the *Mahometans* increaſing to ſuch a Degree as threatned all *Chriſtendom* with Slavery, produced thoſe famous Expeditions, that make ſuch a Figure in Hiſtory, under the Title of the *Croiſades.* And the People of *Conſtantinople* having firſt put out the Eyes of their Emperor *Alexis,* and then throwing him from a high Place, beat him to Pieces, when he had reigned only ten Weeks; *Baldwin* Earl of *Flanders* ſurpriſed the City, *A. D.* 1204. and was proclaimed Emperor of the Eaſt.

He did not reign quite a Year, and was ſucceeded by his Brother *Henry* Earl of *Flanders,* who held the Government ten Years. *Peter Courteney* (of that noble Family which ſtill ſubſiſts in *England)* having married his Daughter, ſucceeded him, and was killed in the ſixth Year of his Reign. His Son *Philip* yielded the Empire to his Brother *Robert,* who was murdered after a Reign of ſeven Years. His Son *Baldwin* II. ſucceeded, though a Child, under the Tutelage of *John de Brenne,* who ſtiled himſelf King of *Jeruſalem.*

A. H. 630. *A. D.* 1232. *Batu,* Grandſon to *Gengiſhkan,* the Founder of the *Tartar* Empire, after overrunning *Muſcovy, Poland, Sileſia, Bohemia,* and *Hungary,* advanced through *Bulgaria* to beſiege *Conſtantinople.* Upon this Occaſion, the *Eaſtern* and *Weſtern* Chriſtians joined, gave him Battle, routed him, and forced him to abandon his Deſign. In 1259, or, as ſome ſay, in 1262, *Michael Paleologus* recovered *Conſtantinople* from *Baldwin Courtenay,* and the *Greek* Emperors held it from that Time, though their Power was very weak.

A. H. 857. *A. D.* 1453. *Mahomet,* Emperor of the *Turks,* laid Siege to this City on the 9th of *April,* and took it by Storm on *Tueſday, May* the 29th, in *Whitſun-Week.* The *Turks* maſſacred forty thouſand Men in cold Blood, pillaged the Churches, Monaſteries, and Palaces, the *Greek* Emperor *Conſtantine Paleologus* being killed, as ſome ſay, in the Breach; or, as others report, trampled to Death by his own Soldiers in their Flight.

It is a Point out of all Doubt, that the *Chriſtians* in general are ſtiled FRANKS at *Conſtantinople,* and throughout all the *Eaſt,* but it is not quite ſo clear why they are called ſo; moſt People imagine it is a Corruption of *French,* and that the *Turks* do not diſtinguiſh between *Frenchmen,* and other Nations, who, like them, wear Hats, and not Turbants; but others who have lived long in *Turkey,* affirm, that it is from the *Italian* Word *Franco,* which ſignifies *Free.* In order to apprehend this clearly, we are to conſider, that once a Year the *Turks* collect a Tribute from all their Subjects that are not *Mahometans;* and this Capitation they hold to be very reaſonable, becauſe they enjoy the Protection of their Government without fighting for it in War, or undergoing any troubleſome Offices in Time of Peace; ſo that if it were not for this Tax, they would be in a better Condition than their Maſters, which in the *Turkiſh* Logic would be very unreaſonable.

Another Maxim of theirs is, that the Grand Signior is the great Judge of the whole World, the Redreſſer of all Wrongs, and hence his *Seraglio* or Court is ſtiled the *Port,* and upon this Principle they conſider his Dominions as the Refuge of Mankind in general; ſo that they admit all Stangers to come to them who will, and to ſettle amongſt them if they pleaſe, granting them immediately the ſame Privileges with their native Subjects. But then again it muſt be alſo underſtood, that all Subjects in *Turkey* are held to be Slaves, and therefore not at Liberty to quit the Dominions of the Grand Signior without his Leave; which if they do their Eſtates are forfeited. But the Subjects of Foreign Princes that come to reſide in the Grand Seignior's Country for the Sake of Trade, live there by Virtue of Capitulations granted by the *Turkiſh* Monarch to them at the Requeſt of their Sovereigns; and being by this Means free from the Capitation Tax, and all the Conſequences of being reputed *Turkiſh* Subjects, are from thence ſtiled *Franks.*

The Reader will pleaſe to obſerve, that though it be very true, that long before any ſuch Capitulations were made, *Chriſtians* might be called *Franks* in the *Eaſt,* upon the fore mentioned Suppoſition, yet this will by no Means prove that the latter Etymology is falſe, becauſe nothing is more common than this Kind of double Senſe of the ſame Word. As for Inſtance, amongſt us, a *Turk* ſignifies the ſame Thing with *Mahometan'* and what they call *Iſlaiſm,* many of our Writers tranſlate *Turciſm,* or the Religion of the *Turks;* and yet we make uſe of the ſame Word in a more reſtrained, and indeed in a more proper Senſe, for the Nation governed by the Grand Signior, who by our old Writers is commonly called from thence the *Great Turk.*

Theſe are Things that may appear to be but of ſmall Moment, but every Thing is of Moment that contributes to render what we read in Books of *Hiſtory* and *Voyages* perfectly clear and diſtinct; and I dare aſſure the Reader, that if he is very converſant in Books of this Kind, he will find theſe Remarks to be very uſeful: As to the *French* Writers they adhere unanimouſly to the firſt Senſe of the Word, and would perſuade us, that the *French* King is regarded at *Conſtantinople* as the firſt Prince in *Chriſtendom;* and for a clear Proof of this, they tell you, that he is ſtiled *Padiſha,* or Emperor, which is very true, but at the ſame Time proves nothing. For when the Lord *Chandois,* Anceſtor to the preſent Duke, was our Ambaſſador at *Conſtantinople* from King *Charles* II. he might have procured him the Title of *Padiſha* alſo for a Preſent, but he thought that the *Turks* aſked rather too much; and as he knew they ſet no great Value upon Titles, he thought it for the Honour of the *Engliſh* Nation to ſet leſs, or his *Britannick* Majeſty had been at this Day ſtiled *Padiſha* as well as he is King of *France,* and would have been alike the better for both. But it muſt be allowed, that the *French* have a much cloſer Correſpondence with the *Turkiſh* Court than any other of the *Chriſtian* Powers; the Reaſon of which is, that other Powers have nothing to do with them but in a Commercial Way; whereas the *French* treat with them alſo on a political Conſideration, and are in that Reſpect as good, perhaps I ſhould not much err if I had ſaid better Friends and Allies to thoſe Infidels than to any of their Chriſtian Neighbours; and if this has procured them greater Marks of Honour and Reſpect from the *Turks,* than are paid to other Nations, however it may flatter their Vanity, it adds but little to their Reputation.

23. The Account given by our Author of the Manner in which Perſons are educated in the Seraglio, plainly proves, that it is a mere vulgar Miſtake, which prevails as to the Ignorance of ſuch as are advanced to Employments in that Empire. It appears, that far from wanting Education, they are regularly bred up in all that Sort of Knowledge which is requiſite for the ſufficient Diſcharge of thoſe Offices to which there is a Probability of their riſing; and, perhaps, there is hardly a Nation in the World, where ſo much Care is taken. It is true, that theſe young People are brought up in a Manner very different from ours; but then their Government is alſo very different; and provided they are ſo educated, as to ſerve effectually that Government to the Service of which they are bound; this, with reſpect to them, is certainly a right Kind of Education. But I doubt whether our Author's Account of the *Turkiſh* Miniſtry is quite ſo exact, becauſe it is not eaſy for a Traveller (let his *Genius* be what it will) to gain in a few Weeks, or even Months, an exact Knowledge of ſuch Matters. Sir *Dudley North,* who reſided many Years in *Turkey,* and had many Opportunities of enquiring into and obtaining a perfect Acquaintance with the Manner in which Things are there adminiſtred, has given us, in very few Words, a clear and more diſtinct Account of this Matter, than is to be met with almoſt in any other Writer: Which runs thus.

" For the better Underſtanding of theſe Affairs, it
" is abſolutely neceſſary, Firſt, to ſay ſomething con-
" cerning the Nature of the Government, of the Office
" of *Vizier-Azem* or Chief Viſier, and of the ſeveral
" *Kaimachams,* which are his Subſtitutes, and act only
" in his Abſence. The *Turkiſh* Government is directly
" that of an Army, being under the ſame Methods in
" the City in Time of Peace, as in the Field during
" War. The Grand Signior is the General; he hath
" indeed a double Capacity, the one as Head of the
" Empire, the other as a private Perſon. As Head of
" the Empire, he hath a daily Pay out of the publick

Treaſury; and his common and ordinary Charges, both at home and abroad, are born by the *Teſterdar* or Treaſurer for the Empire. As he is a private Perſon, he receives Preſents, Fines, and Confiſcations, and defrays many extraordinary Expences, as Buildings for charitable Uſes, Jewels for himſelf and his Women, *&c.* Which Treaſury is under the Care of the *Haſna Kiiaſi* or Treaſurer of the Grand Signior. Here is to be noted, that in his private Capacity he is always vaſtly rich, and heaps up very great Treaſures, when many Times the Publick Treaſury is exhauſted; ſo that in Wars he is often forced to lend great Sums of Money to the Publick, which they are ſure punctually to pay back again.

“ The next in Office under the Grand Signior, in the Government, in the *Vizier-Azem*, or Chief Miniſter, who is of that Credit in the Empire, that the Grand Signior calls him Tutor; and, indeed, he acts all both in Peace and War. The Grand Signior minding his Pleaſures, leaves all to him: And this happens not more out of Luxury, than from the Maxims of their Policy: But when the Grand Signior is an active Prince, and will look into Buſineſs himſelf; or when he is jealous, and his Nature fickle, apt to hear and believe Complaints againſt his Great Miniſter, the Vizier ſignifies much leſs. When the Grand Signior goes to the War, he carries with him all the Officers of the Court, even the *Mufti*, Judges, and all. The like doth the Grand Vizier when the Grand Signior ſtays behind: But then he leaves a Subſtitute, which they call *Kaimacham*, to act like him in his Abſence; and all the other great Officers of State make their Subſtitutes in the like Manner; ſo that the Grand Signior hath as formal a Court as he had before. So alſo in caſe he doth not ſtay in the Imperial City of *Conſtantinople*, but removes to any other Part of the Empire, where-ever he goes, he carries with him his whole Court; but then, not to leave the great City deſtitute, a new *Kaimacham* and other Subſtitutes are appointed, whereby, notwithſtanding the Abſence both of the Grand Signior and Vizier, the City hath the ſame formal Government as if they were all there, with this Difference, that theſe are Underlings, and dare not meddle in great Matters.

“ But in all Buſineſs of Concern, they receive Orders from their Principals abroad, and act accordingly. The Government being thus ſupplied, there is no Need (unleſs upon extraordinary Occaſions) for the Ambaſſador of any Nation to attend the Perſon of the Vizier; but they may diſpatch their Buſineſs in *Conſtantinople*, the Reſident of *Germany* only excepted, who continually attends the Vizier's Camp at ſome reaſonable Diſtance.”

This gives us a clear Idea of the great Office of *Vizier-Azem*, and the Manner in which he executes in Perſon, and by his Subſtitutes. We are generally perſuaded, that as the Grand Signior is an abſolute Monarch, and accountable to none, ſo he governs entirely according to his Will and Pleaſure, which appears to us to be the ſole Cauſe of the frequent Changes that are made in the Adminiſtration; but in this we are certainly much miſtaken. I muſt confeſs, it is a little beſide the immediate Purpoſe of theſe Remarks, to inſiſt upon this Point; but as I have ſome Reaſon to be acquainted with the *Turkiſh* Polity, and the Diſcuſſing of it cannot fail of pleaſing the Reader, I cannot help indulging myſelf in ſetting this important Point in a true Light. A very wiſe and great Prince would be abſolute in any Country, let its Conſtitution be what it will; and in Deſpotick Governments, a Prince of no great Parts, that will ſuffer himſelf to be governed by an able Miniſter, may ſtretch its Authority to its utmoſt Bounds. But let the Government be ever ſo abſolute, an unſteady Prince would be ever a Slave; and in *Turkey* this is always the Caſe.

The Grand Signiors coming to their Power without any Acquaintance with the World, and under the Influence of an ambitious Mother or an intriguing Wife, ſeldom follow their own Choice in appointing a Vizier; and it is a Maxim in the Eaſt as well as the Weſt, that the Miniſter, who is raiſed by a Faction, is ruined by a Faction. Beſides, in all Deſpotick Governments the Populace or Mob is the *dernier Reſort*; and it muſt be ſo in the Nature of Things, for where all Men are Slaves, as they are by Law in the *Ottoman* Dominions, though the Grand Signior has the Name, yet the Commons, that is, the Soldiery and the loweſt of the People, have in Fact the Supreme Power. Thus then it appears, that a Grand Signior of limited Abilities has a very limited Power, being under the Influence of the Factions in the Seraglio on one Side, and under the Terror of the People on the other. The frequent Charges therefore in the Government are ſo far from being the Effects of Plenitude of Power, that in Reality they demonſtrate the Want of Power in the Sultan. But in Caſes of this Nature, it is beſt to recur to Facts.

In the Minority of the Emperor *Mahomet* IV. when the *Seraglio* was torn by Factions, Viziers were made and depoſed continually, and the greateſt Part of *Europe* looked upon this as the Effect of the Emperor's Will: At laſt a great Mutiny happened amongſt the *Spahis*, or *Turkiſh* Cavalry, who put the then *Vizier Azem* and all the Baſha's to Death, except one old Man, whoſe Poverty made him contemptible. This was the famous *Cuperli*, or, as the Name ought to be written, *Kioprili*. Yet in this Maſſacre the *Spahis* miſſed the chief Inſtruments of thoſe Miſchiefs which the Empire had ſuffered. Theſe were the *Kiſlar Aga* and the *Selicter*, who really governed the young Sultan, and made and depoſed Viziers at their Pleaſure. Theſe factious Men finding, as we ſay, that they had only *Hobſon's* Choice, declared *Kioprili, Vizier Azem*, upon a Promiſe that he would do nothing but by their Direction; to which he conſented, provided they gave their Directions in Writing. The Change of Men producing no Change of Meaſures, the *Spahis* mutinied again, and *Kioprili*, inſtead of ſheltering himſelf behind the Sultan's Throne, went directly to the Mutineers, and told them, that if they were diſpleaſed with the Government, it was fit they ſhould know who were the Governors, producing at the ſame Time the Directions he had received. This had its Effect; the *Spahis* went directly to the *Seraglio*, and demanded the Heads of the *Kiſler Aga* and the *Selictar*, which the Sultan was not in a Condition to refuſe. *Kioprili* had then a private Audience of that Monarch, who was exceſſively alarmed, and doubted even of his own Safety; but the old Man ſoon ſet his Heart at reſt; he told him he was now a Monarch, and himſelf a Miniſter; that the *Spahis* had done his Buſineſs, and he would do theirs; and he was as good as his Word, for in two Years Time there was not a Soul of them left alive.

He governed the Empire with great Dignity for ſeven Years; and as he lived, ſo he died, Prime Miniſter. His Maſter made him a Viſit when he was near his End, and deploring the Loſs of ſo good a Servant, he deſired he would recommend his Succeſſor; upon which he told the Grand Signior frankly, that his Son *Achmet Kioprili*, who had been hitherto employed wholly in Civil Affairs, was the fitteſt Man to ſucceed him. He was accordingly declared *Vizier Azem*, held that Employment ſeventeen Years, and was the greateſt and beſt Miniſter the *Turks* ever had. Under their Adminiſtration, which laſted near twenty-five Years, and ended with the Death of *Achmet*, the Emperor maintained his Power, and the Empire recovered its Credit. After his Deceaſe Factions revived, new Fluctuations in Government enſued, and at the laſt the unhappy Sultan was depoſed, and five years afterwards died in Obſcurity.

In all Governments, Court-Factions are dangerous, and the true Sources of popular Diſcontent and general Inſurrections. Great Princes and wiſe Miniſters know how to prevent, or to quell Factions if they cannot be prevented; and the Felicity of a People does not depend ſo much upon the Conſtitution under which they live, as the *Genius* and Capacity of thoſe who adminiſter Affairs under that Conſtitution, be it what it will. It is not therefore the Deſpotick Power of the Grand

Signiors that is the Source of their Subjects Miſeries and their own Misfortunes, but the Want of that Power in proper Hands, the ſhifting Miniſters continually, running from one Syſtem of Affairs to another, not as the Situation of Things directs, but as the Intrigues and Factions in the Seraglio compel; and though the Miniſters, and ſometimes their Maſters ſuffer, the Eunuchs and the Women are generally in Fault.

Timid Princes are commonly governed by theſe Sort of People; they liſten to Whiſpers in their Cloſets, and hold their Councils in their Bed-Chambers. Their *Divans*, where the Affairs of the Empire ought to be tranſacted, into which only Men of Buſineſs are admitted, become Things of Courſe, and the Grand Signior gives his Orders where he ought to conſult what Orders ſhould be given. It is departing from the *Genius* of the *Ottoman* Empire that has ſunk it into that low Condition that we ſee it at preſent, and what has happened in *Turkey*, will happen every where; for in all Climates, and in all Ages, the ſame Cauſes will produce the ſame Effects. A Government founded, as that of the *Turks* is, in Military Virtues and the Adminiſtration of the Government by a ſingle Perſon, muſt crumble by its own Weight, where thoſe Virtues and that Capacity, which are eſſentially neceſſary to direct it, are wanting.

Governments founded upon better and more rational Principles, ſuch as Juſtice, Liberty, and perpetual Regard to the publick Good, will decay more ſlowly; but will infallibly decay, when thoſe Virtues are loſt in factious Contentions for Power, Contempt of the Sovereign Authority, and Diſregard of publick Happineſs, from the mean and pitiful Ambition of raiſing private Fortunes. But we have wander'd too far from the Buſineſs of this Section, and into Reflections that cannot perhaps be purſued to the general Satisfaction of our Readers. Therefore we will here put an End to our Remarks, and return to the Obſervations of Mr. *Thevenot*, which will make the Reader Amends for this ſhort political Digreſſion, by leading him again into the flowery Paths of Amuſement. Yet why do we travel through every Part of the World but to know it? Or, what have we to do with the Cuſtoms, Manners and Policy of the *Turks*, if not to improve ourſelves, by conſidering the Miſtakes, and the Conſequences of thoſe Miſtakes in other Nations? This is, or at leaſt this ought to be, the End of Reading and of Writing.

SECTION II.

Containing an Account of the Cuſtoms and Manners of the *Turks*, their Learning and Religion, the Form of their Government, their Forces by Sea and Land; as alſo an Account of the *Chriſtians* and *Jews*, inhabiting Countries, that are ſubject to the Grand Signior.

Taken chiefly from the Travels of Mr. JOHN THEVENOT; interſperſed with many curious, uſeful and entertaining Particulars, extracted from the Works of other eminent Authors.

1. *Of the Perſons of the* Turks, *the Manner of their Dreſſing amongſt various Ranks of People, eſpecially amongſt the* Janizaries. 2. *The Manner of their eating and drinking, preparing their Victuals, and by what Explications they ſo far ſatisfy themſelves, as to drink Wine upon Occaſion.* 3. *Of the Language and Learning of the* Turks, *and of their Fondneſs for Aſtrology.* 4. *The Religion of this Nation, the Author's Account of* Mohammed *from the* Greek *Writers, and other Particulars.* 5. *Their Praying for the Dead, and the Reaſon of it; their Notions of a future State, and of the Happineſs of the Bleſſed, and Miſery of damned Spirits, with their Doctrine of univerſal Redemption.* 6. *Of the Ceremony of Circumciſion, the time when, and Manner in which it is perform'd.* 7. *Of the Manner of keeping their* Ramadan *or* Lent, *and of their Feaſt of* Bairam *or* Eaſter; *their Extravagance and Folly at that Seaſon, and the great Riſque* Chriſtians *run by appearing in publick at that Time.* 8. *Their Ablutions or ceremonious Waſhings, and publick and private Prayers, and the Manner of Preaching in their* Moſques. 9. *Of the charitable Diſpoſition of the* Turks, *and of their Readineſs to forgive each other, and to avoid long Enmity and haſty Quarrels.* 10. *Their Pilgrimages to* Mecca, *and other Precepts of their Religion.* 11. *Of the* Turkiſh *Clergy; their Offices, Credit, and Power, and of their* Derviſes *or* Monks. 12. *Of the ſeveral Kinds of Marriages practiſed amongſt them, and of their Divorces.* 13. *Slavery amongſt the* Turks *not near ſo grievous as it is generally repreſented, ſo that ſome Slaves have refuſed Freedom.* 14. *The Manner in which the* Turkiſh *Women paſs their Time, and the Caſes in which they are entitled to be divorced from their Huſbands.* 15. *Their Cuſtoms in burying the Dead, their Mourning and Praying for them.* 16. *The Virtues and Vices of the* Turks, *their good and bad Qualities very impartially ſtated.* 17. *The unlimited Power of the Grand Signior, upon what Principle founded, and how exerted.* 18. *Of the Office of* Vizier Azem, *the Viziers of the Bench, and other Officers and Governors.* 19. *The Manner in which Juſtice is adminiſter'd in the* Divan, *and within the Provinces.* 20. *The great Care taken to preſerve Peace and Plenty in the Capital, and other great Cities of the Empire.* 21. *Of the Money current in* Turkey, *and of the Weights uſed in Trade there.* 22. *Of the Puniſhments in Uſe in* Turkey, *both for Men and Women.* 23. *Of the Military Eſtabliſhment and different Sorts of Troops employ'd in the Grand Signior's Army.* 24. *Of the Manner in which his Forces are raiſed, and the Funds appointed for their Maintenance.* 25. *Of their Naval Affairs, and the Reaſon of their being in ſo indifferent a Condition.* 26. *Of the* Greek Chriſtians *that live in the Dominions, and are the Subjects of the Grand Signior.* 27. *Of the* Armenians, *and the Difference of their Faith from that of the* Greek *Church.* 28. *Of the ſeveral Orders of* Greek *Monks, and their Manner of living.* 29. *Of the reſt of the* Greek *Clergy, and their Influence over the People of their Communion.* 30. *Of the Virtues, Vices, Cuſtoms, Manners, and general Diſpoſition of the* Greek Chriſtians.

ſtians. 31. *Of the* Jews *that live in the Grand Signior's Dominions, their Manner of living, and the Cauſe of their being generally hated and deſpiſed.* 32. *Miſcellaneous Obſervations collected from various Authors, ſerving to explain the foregoing Articles.* 33. *Remarks hiſtorical, political and critical upon this Section.*

1. THE *Turks* are commonly well ſhap'd, and have none crooked or cripple among them, but are of robuſt and ſtrong Conſtitutions for the moſt Part. Their Habit is very fit to make them ſeem graceful, and to cover all Defects; for next their Skin they wear a Pair of Drawers, and over them a Shirt and Doliman, reaching down to their Heels, like a cloſe bodied Caſſock, made of Sattin, Taffata, or other neat Stuff, which is quilted in Winter, and this they gird about with a Saſh, or Leathern-Belt, adorned with Gold or Silver-Buckles. At their Girdles they commonly wear two Daggers, or *Cangiars*, their Handles and Sheaths being garniſhed with Gold and Silver, and ſometimes precious Stones, and their Pouch for Tobacco. Over the Doliman they wear a *Feredg* or Night-Gown, which in Winter-time they line with rich Furs, if they are able. Their Stockings are of Cloth, and the Feet are Socks of red and yellow Leather ſew'd to them. Their Shoes, which they call *Padouches*, are of the ſame Colour, like our Slippers. Their Heads are covered with a Crimſon Velvet Cap, without Brims, about which they wreath a white or red Turbant, which is a Scarf of Linen or Silk Stuff, many Ells long, and by the Faſhion of it the Quality of the Man is known.

The Attire of the Ladies of *Conſtantinople* hath a particular Air of Grandeur and Magnificence in it, and far ſurpaſſes the Dreſs of the other Women of that Country. Their *Tarpous*, or Head-Dreſs, is made up of many Handkerchiefs of various Colours, all wrought with Gold and Silver, beſet with all Manner of precious Stones, and adorn'd with ſeveral Sorts of Flowers. They can put it on or off without undoing it, and uſually wear it ſeveral Days, and then put it into another Faſhion, but it is often ſo heavy, that it is a Burthen to them. They wear outward a white Gown, edged at the Bottom with Gold-Laces and Fringes, and lined with Furs in Winter, as the Mens. The Ladies of the *Seraglio* wear ſometimes on their Heads a *Calpak*, or Fur-Cap, others a round *Platine*, as the *Jewiſh* Women, with a Feather on each Side, and Plumes at their Ears. The *Janizaries* wear upon ſome ſpecial Occaſions a *Sercola*, or Cap of Ceremony, which hangs down behind, and has a Pipe of gilt Leather before, half a Foot long, and reaches to the Middle of their Foreheads, otherwiſe they wear a Turbant of white, red, or other Silk, as the common Sort of *Turks* do.

They ſhave their Heads, and ſay the Devil neſtles in long Hair, but they ſuffer their Beards and Muſtacho's to grow, and have a great Eſteem for a Man with a lovely Beard, and account it a great Affront to take a Man by the Beard. They ſwear by the Beard or Head of their Father, Grand Signior, or the like. They ſalute one another by laying their Hands upon their Breaſts, and bowing a little, ſay, *Sela meon Aleicom*, i. e. *Peace be with you*, and the Perſon ſaluted returns the like Anſwer, which was the ancient Way of Salutation, as appears from Scripture, and is very grave. The Left Hand is the moſt honourable with the *Turks*, becauſe it is the Sword-ſide, ſo that the *Chriſtians* and *Turks*, though neither will give the upper Hand one to another, agree well in Walking together, through Difference of Opinion.

The *Turks* make great Uſe of Bathing, both for keeping their Bodies neat and clean, and for their Health's Sake; and in every Town they have many fair Bagnio's, the ſmalleſt Village being ſeldom without one. They are all made of the ſame Faſhion, differing only in Bigneſs and Ornaments. All that go into them ſhave off all the Hair of their Body, and go in naked, all but their Privities, which are cover'd with a Napkin. A Servant alſo rubs them well behind and before, to ſupple their Bones before they go in. Such as cannot ſhave themſelves, fetch off the Hair with the Powder of a certain Mineral called *Rusma*, which being mingled with Lime and hot Water, and laid upon any Place, will fetch off the Hair in half a Quarter of an Hour's Time. In *Malta* they uſe Orpiment for the ſame End. Having bathed, a Servant with Soap and Cloths cleanſes the Body from all Filth, and then they are dried with warm Cloths, and ſo dreſs. The Price of the Bagnio is two Aſpers for the Maſter, and as many to the Man, if he will be well ſerved. The pooreſt Perſon that is, Man or Woman, goes to the Bath at leaſt once a Week. The Women go in by themſelves, and are ſerved by Women only. It is a capital Crime for a Man to go into the Bath where the Women are. Great Perſons have them in their Houſes for themſelves and Wives.

2. The *Turks* have no ſumptuous Feaſts, but are contented with a ſmall Matter. They cook their Meat themſelves, for they have no Sauces but what are made at firſt Sight, as Oil, Pepper, *&c.* Their uſual Food is Pilau, which is Rice boil'd with a Pullet, a Piece of Mutton, Beef, or the like, and for want of Meat, with Butter. Their Bread is light, but coarſe, like our Biſcuit, and flat. They ſpread a Carpet of *Turkey* Leather on the Ground, called a *Sofra*, and ſquatting down upon the Ground like Taylors, eat it with Wooden Spoons, and inſtead of Napkins they uſe a long blue Cloth caſt round about the Table. They ſay, *Biſmillah*, i. e. *In the Name of God*, before they eat, as we do *Benedicite*. They pull their Meat in Pieces, (for they uſe no Knives) and then every one takes his Share. They ſeldom drink at their Meals, but, having eaten, riſe and fill their Bellies with Water, and then ſay, *Hamdillah*, i. e. *God be praiſed*. Having finiſh'd their Meal, they waſh their Hands.

They drink Water uſually, becauſe Wine ſeems to be forbidden by the *Alcoran*; but the Goodfellows ſay, it is a Council, not a Precept, and ſo drink it plentifully; but few do it in publick, except the *Janizaries* or ſome Deſperadoes. They never mingle Water with their Wine, and laugh at the Chriſtians for ſo doing. It is plentiful at *Conſtantinople*, and all over the *Archipelago*. The poorer Sort for Cheapneſs drink a Liquor made of Barley and Millet, ſomewhat like our Beer, but not ſo pleaſant. This Drink will make them drunk. They alſo drink Coffee all Hours of the Day. They make it of the Berry parch'd and peel'd. This Liquor they hold to be good to cure the Head-ach, and keep down Vapours from the Head; it comforts the Stomach, and helps Digeſtion; nay, they ſay it is good againſt all Maladies. To mix any Thing with it makes it leſs wholſome and uſeful. All Sexes and Ranks, Rich and Poor, drink at leaſt two or three Diſhes a Day in *Turkey*. At the Coffee-houſes the Maſter hath Muſick to divert his Cuſtomers, and draw others in. They have alſo Sherbet, which is a very good Drink, made in *Egypt*, of Sugar, Lemon-Juice, Muſk, Ambergreaſe and Roſe-water. At their great Treats they give Coffee, Sherbet, and Perfume for their Beards. They ſpread Quilts on the Ground for their Bedding, and every one lies on his own, and the Maſters lay them on their *Divans*.

Their Recreations are either to ſleep, ſmoak a Pipe of Tobacco, or play on the Tambour, which is a Kind of Lute; and though it be no pleaſant Muſick, they will play all Day on it; but Scholars read or write. They laugh at the *Franks* for walking backward and forward. They entertain their Company with Diſcourſe, or a Game at Cheſs, Draughts, Tables, or ſuch-like Plays; but they never play for Money, or any Thing of Value, becauſe they account it ſinful, and yet will ſpend whole Afternoons at their Games; but their moſt uſual Game is *Mancala*, at which they play with Shells in Boxes like our Tables. The Recreations of Soldiers are their Military Exerciſes, *viz.* ſhooting at Marks or Butts with Bows and Arrows, darting the *Zagaye*;

Zagaye, ſhooting with an Harquebuſe running. The other *Turks* make a great Diverſion of Puppet-Shews, which, though performed a different Way from ours, yet are more pleaſing; their Songs are pretty, but very obſcene; and ſo are many of their Poſtures.

3. The *Turkiſh* Language is a Primitive and Oriental Tongue, and though not very copious, yet is grave and pleaſant, and with a little Supply from the *Arabian* and *Perſian*, is rich and elegant enough. The *Turks* are not much addicted to Sciences, yet have Doctors of their Law, who explain it in all the Senſes that can be given it. Some affect Aſtrology and Poetry, in which they have pretty Conceits, but they generally uſe the *Perſian* Language, and the Tone they ſing in is agreeable enough through Cuſtom. Their Muſick is a little Lute with three Strings, and the Flute. Many among them pretend to Fortune-telling, and have good Luck at it. They divine by the *Alcoran*, and four Arrows, which they call conſulting the Book, and naming two of the Arrows *Chriſtians*, and the other two *Turks*, make them fight by reading the *Alcoran*; if the *Chriſtians* overcome, they look upon the Action, whether in War or Peace, which they are to undertake, to be unlucky, and ſo will not enterprize any thing. They never go out to War, but they make this Experiment. They alſo divine with Beans, by taking out an uncertain Number, and then counting them, conſult the Book to ſee what the Number ſignifies; and by a Piece of Timber almoſt ſquare, which they call *Eliph*, which having Letters written on each Side, he that ſeeks his Fortune, takes it, and rolling it three Times, puts the Letters together, and then conſults the *Fal*, or Fortune-book, what the three Letters ſignify.

They have few or no Phyſicians, being very healthy, becauſe of their frequent Bathings and Temperance. When they are ſick, they make Uſe of their common Receipts, and, if they fail, conſult the *Jews*, or ſome Renegado Chriſtians, who learn their Skill at the Coſt of many. When they have the Head-ach, they ſcarify, lance, or ſear the Place, and that cures them. In other Diſtempers they alſo uſe Burning, and endure a live Match applied to the Place with Patience. Doubtleſs, Phyſicians might do them more Service, and help them at an eaſier Rate; but they are ſuch bad Paymaſters of Men for their Skill, and beſides, if a Phyſician ſhould be unſucceſsful, and a Patient die under his Hands, they will accuſe him of killing him, which is a Diſcouragement to the Art among them.

4. The Religion of the *Turks* is full of Fopperies and Abſurdities, of which it would be no hard Matter to convince them; but that *Mahomet*, to prevent any better Information, hath commanded, that whoſoever contradicteth it ſhould be put to Death. *Mahomet* was an *Arab*, and illiterate, a Driver of Camels, and a Man of no Morals; but ſtriking in with a *Greek* Monk, who had forſaken his Monaſtery, and had ſome Smattering of Learning, he was by him enabled to lay the Foundation of that great Sect, which hath hitherto infected ſo large a Part of the World. He made Uſe of the *Old* and *New Teſtament* in compoſing the *Alcoran*, that he might draw both *Jews* and *Chriſtians* to ſubmit to it, though both are confuſedly applied; but the *Turks* hold, that it was written in Heaven by God himſelf, and brought Chapter by Chapter to *Mahomet* by the Angel *Gabriel*. No Chriſtian may touch it, and the *Turks*, by reading it, merit, in their Opinion, Paradiſe. It is written in pure *Arabick*, and the *Turks* believe it cannot be turned into any other Language; and for that Reaſon they account the *Perſians* Hereticks, becauſe they have tranſlated it into their Tongue.

This Book contains all their Laws, both Canon and Civil, but is full of *Rabbinical* Fables. According to this Book the *Turks* believe in and worſhip God, the Eternal and Almighty Creator of Heaven and Earth, but they will not acknowledge a Trinity, nor allow any Images in his Worſhip, either painted or graved. They have a peculiar Fondneſs for Predeſtination, which, they extend even to the moſt indifferent Actions. They are firmly perſuaded, that under the Reign of every Emperor the State will infallibly and perpetually have either a diſaſtrous or happy Fate. That Death is fatal both in War and Peace, and therefore as they willingly take up Arms, believing that if they are killed by their Enemies, they ſhould ſome Way or other have died at Home, ſo they take no Care to keep themſelves from the Plagues, or other infectious Diſeaſes, and are offended at Chriſtians for it.

They believe, that Jeſus Chriſt was conceived by the *Rauah*, i. e. The Breath or Spirit of God, in the Womb of the Virgin; but they deny him to be the Son of God, who is one, and hath no Companion; That he was a great Prophet, and wrought many Miracles among the *Jews*, and foretold the Coming of *Mahomet*, under the Name of the Comforter, but they deny that he was crucified; That Jeſus Chriſt ſhall come to judge the World, and ſhall reign forty Years in *Damaſcus*, marry and have Children, at which Time *Antichriſt* ſhall ariſe, and deceive many, ſetting a Mark on their Foreheads; but Chriſt ſhall deſtroy him, and ſhall next aſcend up into Heaven, and then the Day of Judgment ſhall come. In ſhort, they give great Honour to Jeſus Chriſt and the Virgin *Mary*, and if they hear any Man ſpeak ill of them, they will chaſtiſe him as ſeverely as if he ſpake againſt *Mahomet*; for they believe that the Goſpel was ſent to Jeſus, as the Law was to *Moſes*, and the Pſalms to *David*.

They believe all the Prophets, and that Paradiſe ſhall be filled with the Juſt, and Hell by the Wicked. They ſay moreover, That the Power of God is ſuch, that at the Creation of the World he prefix'd and appointed a ſet Time for every Man's End, that the Wit or Device of Mortals cannot divert nor prevent, which makes them not only very reſolute and courageous in their Wars, and upon all other Occaſions, but they laugh at and ſcorn all Means to drive away Diſeaſes and prevent Death, as if they oppoſed God's Will in ſo doing. They deny a Purgatory, but hold that there is a Place called *Araf*, between Paradiſe and Hell, where they ſhall be that have done neither Good nor Evil. In Paradiſe *Mahomet* promiſes the Bleſſed, delicious Gardens, full of pleaſant Fruits and Fountains, Rivers of Waters, Milk, Wine and Honey, Scarlet and Green Cloathing, and lovely Virgins, with Skins as white as a new-laid Egg, and black Eyes, always young and Virgins; That God ſhall appear to them every Week on *Friday*; That thoſe that are in Hell ſhall drink ſcalding hot Water, and eat of the Fruit of the Tree *Zacon*; That if they have Faith, after all their Sins ſhall be conſumed and waſhed in the Water *Selzaboul*, they ſhall be admitted into Paradiſe, where they ſhall receive and enjoy as much Happineſs as thoſe that entred at firſt; but ſuch as have no Faith, and are meer Atheiſts, ſhall burn everlaſtingly in Hell Fire.

5. They pray for the Dead, as the Papiſts do, and invocate their Saints to recommend them to God. They acknowledge Guardian Angels, not only to every *Muſſulman*, but to every Affair and Member, and attribute all that befals any Body to them, becauſe they wait upon them in all Places but when they go to do their Occaſions, and then they leave them at the Door. They alſo believe, that when a Man is buried, his Soul returns to his Body, and two Angels, called *Munker* and *Guanequir*, come to him, and if he has lived ill, they bring him an ugly Creature, that repreſents his Sins and bad Deeds, to torment him till the Day of Judgment; but if he hath lived well, they bring him a lovely Creature, which repreſents his good Actions, and which gives him a great deal of Content, and ſtays with him till the Day of Judgment.

They believe, that not only the good *Muſſulmen*, but ſome Beaſts and Fowls ſhall enter into Paradiſe, *viz.* The Prophet *Saleb*'s Camel, which he raiſed to Life in *Perſia*, *Abraham*'s Ram; *Moſes*'s Cow, whoſe Aſhes are mingled with the Water of Purification; *Salomon*'s Ant; the Queen of *Sheba*'s Parrot, which brought her the firſt News of *Salomon*; *Ezra*'s Aſs, which, they ſay, was raiſed to Life many Years after it had been dead, to prove a Reſurrection; *Jonah*'s Whale; the little

Dog

ſtians. 31. *Of the* Jews *that live in the Grand Signior's Dominions, their Manner of living, and the Cauſe of their being generally hated and deſpiſed.* 32. *Miſcellaneous Obſervations collected from various Authors, ſerving to explain the foregoing Articles.* 33. *Remarks hiſtorical, political and critical upon this Section.*

1. THE *Turks* are commonly well ſhap'd, and have none crooked or cripple among them, but are of robuſt and ſtrong Conſtitutions for the moſt Part. Their Habit it very fit to make them ſeem graceful, and to cover all Defects; for next their Skin they wear a Pair of Drawers, and over them a Shirt and Doliman, reaching down to their Heels, like a cloſe bodied Caſſock, made of Sattin, Taffata, or other neat Stuff, which is quilted in Winter, and this they gird about with a Saſh, or Leathern-Belt, adorned with Gold or Silver-Buckles. At their Girdles they commonly wear two Daggers, or *Cangiars*, their Handles and Sheaths being garniſhed with Gold and Silver, and ſometimes precious Stones, and their Pouch for Tobacco. Over the Doliman they wear a *Feredg* or Night-Gown, which in Winter-time they line with rich Furs, if they are able. Their Stockings are of Cloth, and the Feet are Socks of red and yellow Leather ſew'd to them. Their Shoes, which they call *Padouches*, are of the ſame Colour, like our Slippers. Their Heads are covered with a Crimſon Velvet Cap without Brims, about which they wreath a white or red Turbant, which is a Scarf of Linen or Silk Stuff, many Ells long, and by the Faſhion of it the Quality of the Man is known.

The Attire of the Ladies of *Conſtantinople* hath a particular Air of Grandeur and Magnificence in it, and far ſurpaſſes the Dreſs of the other Women of that Country. Their *Tarpous*, or Head-Dreſs, is made up of many Handkerchiefs of various Colours, all wrought with Gold and Silver, beſet with all Manner of precious Stones, and adorn'd with ſeveral Sorts of Flowers. They can put it on or off without undoing it, and uſually wear it ſeveral Days, and then put it into another Faſhion, but it is often ſo heavy, that it is a Burthen to them. They wear outward a white Gown, edged at the Bottom with Gold-Laces and Fringes, and lined with Furs in Winter, as the Mens. The Ladies of the *Seraglio* wear ſometimes on their Heads a *Calpak*, or Fur-Cap, others a round *Platine*, as the *Jewiſh* Women, with a Feather on each Side, and Plumes at their Ears. The *Janizaries* wear upon ſome ſpecial Occaſions a *Sercola*, or Cap of Ceremony, which hangs down behind, and has a Pipe of gilt Leather before, half a Foot long, and reaches to the Middle of their Foreheads, otherwiſe they wear a Turbant of white, red, or other Silk, as the common Sort of *Turks* do.

They ſhave their Heads, and ſay the Devil neſtles in long Hair, but they ſuffer their Beards and Muſtacho's to grow, and have a great Eſteem for a Man with a lovely Beard, and account it a great Affront to take a Man by the Beard. They ſwear by the Beard or Head of their Father, Grand Signior, or the like. They ſalute one another by laying their Hands upon their Breaſts, and bowing a little, ſay, *Sela meon Aleicom*, i. e. *Peace be with you*, and the Perſon ſaluted returns the like Anſwer, which was the ancient Way of Salutation, as appears from Scripture, and is very grave. The Left Hand is the moſt honourable with the *Turks*, becauſe it is the Sword-ſide, ſo that the *Chriſtians* and *Turks*, though neither will give the upper Hand one to another, agree well in Walking together, through Difference of Opinion.

The *Turks* make great Uſe of Bathing, both for keeping their Bodies neat and clean, and for their Health's Sake; and in every Town they have many fair Bagnio's, the ſmalleſt Village being ſeldom without one. They are all made of the ſame Faſhion, differing only in Bigneſs and Ornaments. All that go into them ſhave off all the Hair of their Body, and go in naked, all but their Privities, which are cover'd with a Napkin. A Servant alſo rubs them well behind and before, to ſupple their Bones before they go in. Such as cannot ſhave themſelves, fetch off the Hair with the Powder of a certain Mineral called *Ruſma*, which being mingled with Lime and hot Water, and laid upon any Place, will fetch off the Hair in half a Quarter of an Hour's Time. In *Malta* they uſe Orpiment for the ſame End. Having bathed, a Servant with Soap and Cloths cleanſes the Body from all Filth, and then they are dried with warm Cloths, and ſo dreſs. The Price of the Bagnio is two Aſpers for the Maſter, and as many to the Man, if he will be well ſerved. The pooreſt Perſon that is, Man or Woman, goes to the Bath at leaſt once a Week. The Women go in by themſelves, and are ſerved by Women only. It is a capital Crime for a Man to go into the Bath where the Women are. Great Perſons have them in their Houſes for themſelves and Wives.

2. The *Turks* have no ſumptuous Feaſts, but are contented with a ſmall Matter. They cook their Meat themſelves, for they have no Sauces but what are made at firſt Sight, as Oil, Pepper, *&c.* Their uſual Food is Pilau, which is Rice boil'd with a Pullet, a Piece of Mutton, Beef, or the like, and for want of Meat, with Butter. Their Bread is light, but coarſe, like our Biſcuit, and flat. They ſpread a Carpet of *Turkey* Leather on the Ground, called a *Sofra*, and ſquatting down upon the Ground like Taylors, eat it with Wooden Spoons, and inſtead of Napkins they uſe a long blue Cloth caſt round about the Table. They ſay, *Biſmillah*, i. e. *In the Name of God*, before they eat, as we do *Benedicite*. They pull their Meat in Pieces, (for they uſe no Knives) and then every one takes his Share. They ſeldom drink at their Meals, but, having eaten, riſe and fill their Bellies with Water, and then ſay, *Hamdillah*, i. e. *God be praiſed*. Having finiſh'd their Meals, they waſh their Hands.

They drink Water uſually, becauſe Wine ſeems to be forbidden by the *Alcoran*; but the Goodfellows ſay, it is a Council, not a Precept, and ſo drink it plentifully; but few do it in publick, except the *Janizaries* or ſome Deſperadoes. They never mingle Water with their Wine, and laugh at the Chriſtians for ſo doing. It is plentiful at *Conſtantinople*, and all over the *Archipelago*. The poorer Sort for Cheapneſs drink a Liquor made of Barley and Millet, ſomewhat like our Beer, but not ſo pleaſant. This Drink will make them drunk. They alſo drink Coffee all Hours of the Day. They make it of the Berry parch'd and peel'd. This Liquor they hold to be good to cure the Head-ach, and keep down Vapours from the Head; it comforts the Stomach, and helps Digeſtion; nay, they ſay it is good againſt all Maladies. To mix any Thing with it makes it leſs wholſome and uſeful. All Sexes and Ranks, Rich and Poor, drink at leaſt two or three Diſhes a Day in *Turkey*. At the Coffee-houſes the Maſter hath Muſick to divert his Cuſtomers, and draw others in. They have alſo Sherbet, which is a very good Drink, made in *Egypt*, of Sugar, Lemon-Juice, Muſk, Ambergreaſe and Roſe-water. At their great Treats they give Coffee, Sherbet, and Perfume for their Beards. They ſpread Quilts on the Ground for their Bedding, and every one lies on his own, and the Maſters lay them on their *Divans*.

Their Recreations are either to ſleep, ſmoak a Pipe of Tobacco, or play on the Tambour, which is a Kind of Lute; and though it be no pleaſant Muſick, they will play all Day on it; but Scholars read or write. They laugh at the *Franks* for walking backward and forward. They entertain their Company with Diſcourſe, or a Game at Cheſs, Draughts, Tables, or ſuch like Plays; but they never play for Money, or any Thing of Value, becauſe they account it ſinful, and yet will ſpend whole Afternoons at their Games; but their moſt uſual Game is *Mancala*, at which they play with Shells in Boxes like our Tables. The Recreations of Soldiers are their Military Exerciſes, *viz.* ſhooting at Marks or Butts with Bows and Arrows, darting the *Zagay*;

Zagaye, ſhooting with an Harquebuſe running. The other *Turks* make a great Diverſion of Puppet-Shews, which, though performed a different Way from ours, yet are more pleaſing; their Songs are pretty, but very obſcene; and ſo are many of their Poſtures.

3. The *Turkiſh* Language is a Primitive and Oriental Tongue, and though not very copious, yet is grave and pleaſant, and with a little Supply from the *Arabian* and *Perſian*, is rich and elegant enough. The *Turks* are not much addicted to Sciences, yet have Doctors of their Law, who explain it in all the Senſes that can be given it. Some affect Aſtrology and Poetry, in which they have pretty Conceits, but they generally uſe the *Perſian* Language, and the Tone they ſing in is agreeable enough through Cuſtom. Their Muſick is a little Lute with three Strings, and the Flute. Many among them pretend to Fortune-telling, and have good Luck at it. They divine by the *Alcoran*, and four Arrows, which they call conſulting the Book, and naming two of the Arrows *Chriſtians*, and the other two *Turks*, make them fight by reading the *Alcoran*; if the *Chriſtians* overcome, they look upon the Action, whether in War or Peace, which they are to undertake, to be unlucky, and ſo will not enterprize any thing. They never go out to War, but they make this Experiment. They alſo divine with Beans, by taking out an uncertain Number, and then counting them, conſult the Book to ſee what the Number ſignifies; and by a Piece of Timber almoſt ſquare, which they call *Eliph*, which having Letters written on each Side, he that ſeeks his Fortune, takes it, and rolling it three Times, puts the Letters together, and then conſults the *Fal*, or Fortune-book, what the three Letters ſignify.

They have few or no Phyſicians, being very healthy, becauſe of their frequent Bathings and Temperance. When they are ſick, they make Uſe of their common Receipts, and, if they fail, conſult the *Jews*, or ſome Renegado Chriſtians, who learn their Skill at the Coſt of many. When they have the Head-ach, they ſcarify, lance, or ſear the Place, and that cures them. In other Diſtempers they alſo uſe Burning, and endure a live Match applied to the Place with Patience. Doubtleſs, Phyſicians might do them more Service, and help them at an eaſier Rate; but they are ſuch bad Paymaſters of Men for their Skill, and beſides, if a Phyſician ſhould be unſucceſsful, and a Patient die under his Hands, they will accuſe him of killing him, which is a Diſcouragement to the Art among them.

4. The Religion of the *Turks* is full of Fopperies and Abſurdities, of which it would be no hard Matter to convince them; but that *Mahomet*, to prevent any better Information, hath commanded, that whoſoever contradicteth it ſhould be put to Death. *Mahomet* was an *Arab*, and illiterate, a Driver of Camels, and a Man of no Morals; but ſtriking in with a *Greek* Monk, who had forſaken his Monaſtery, and had ſome Smattering of Learning, he was by him enabled to lay the Foundation of that great Sect, which hath hitherto infected ſo large a Part of the World. He made Uſe of the *Old* and *New Teſtament* in compoſing the *Alcoran*, that he might draw both *Jews* and *Chriſtians* to ſubmit to it, though both are confuſedly applied; but the *Turks* hold, that it was written in Heaven by God himſelf, and brought Chapter by Chapter to *Mahomet* by the Angel *Gabriel*. No Chriſtian may touch it, and the *Turks*, by reading it, merit, in their Opinion, Paradiſe. It is written in pure *Arabick*, and the *Turks* believe it cannot be turned into any other Language; and for that Reaſon they account the *Perſians* Hereticks, becauſe they have tranſlated it into their Tongue.

This Book contains all their Laws, both Canon and Civil, but is full of *Rabbinical* Fables. According to this Book the *Turks* believe in and worſhip God, the Eternal and Almighty Creator of Heaven and Earth, but they will not acknowledge a Trinity, nor allow any Images in his Worſhip, either painted or graved. They have a peculiar Fondneſs for Predeſtination, which, they extend even to the moſt indifferent Actions. They are firmly perſuaded, that under the Reign of every Emperor the State will infallibly and perpetually have either a diſaſtrous or happy Fate. That Death is fatal both in War and Peace, and therefore as they willingly take up Arms, believing that if they are killed by their Enemies, they ſhould ſome Way or other have died at Home, ſo they take no Care to keep themſelves from the Plagues, or other infectious Diſeaſes, and are offended at Chriſtians for it.

They believe, that Jeſus Chriſt was conceived by the *Rauah*, i. e. The Breath or Spirit of God, in the Womb of the Virgin; but they deny him to be the Son of God, who is one, and hath no Companion; That he was a great Prophet, and wrought many Miracles among the *Jews*, and foretold the Coming of *Mahomet*, under the Name of the Comforter, but they deny that he was crucified; That Jeſus Chriſt ſhall come to judge the World, and ſhall reign forty Years in *Damaſcus*, marry and have Children, at which Time *Antichriſt* ſhall ariſe, and deceive many, ſetting a Mark on their Foreheads; but Chriſt ſhall deſtroy him, and ſhall next aſcend up into Heaven, and then the Day of Judgment ſhall come. In ſhort, they give great Honour to Jeſus Chriſt and the Virgin *Mary*, and if they hear any Man ſpeak ill of them, they will chaſtiſe him as ſeverely as if he ſpake againſt *Mahomet*; for they believe that the Goſpel was ſent to Jeſus, as the Law was to *Moſes*, and the Pſalms to *David*.

They believe all the Prophets, and that Paradiſe ſhall be filled with the Juſt, and Hell by the Wicked. They ſay moreover, That the Power of God is ſuch, that at the Creation of the World he prefix'd and appointed a ſet Time for every Man's End, that the Wit or Device of Mortals cannot divert nor prevent, which makes them not only very reſolute and courageous in their Wars, and upon all other Occaſions, but they laugh at and ſcorn all Means to drive away Diſeaſes and prevent Death, as if they oppoſed God's Will in ſo doing. They deny a Purgatory, but hold that there is a Place called *Araf*, between Paradiſe and Hell, where they ſhall be that have done neither Good nor Evil. In Paradiſe *Mahomet* promiſes the Bleſſed, delicious Gardens, full of pleaſant Fruits and Fountains, Rivers of Waters, Milk, Wine and Honey, Scarlet and Green Cloathing, and lovely Virgins, with Skins as white as a new-laid Egg, and black Eyes, always young and Virgins; That God ſhall appear to them every Week on *Friday*; That thoſe that are in Hell ſhall drink ſcalding hot Water, and eat of the Fruit of the Tree *Zacon*; That if they have Faith, after all their Sins ſhall be conſumed and waſhed in the Water *Selzaboul*, they ſhall be admitted into Paradiſe, where they ſhall receive and enjoy as much Happineſs as thoſe that entred at firſt; but ſuch as have no Faith, and are meer Atheiſts, ſhall burn everlaſtingly in Hell Fire.

5. They pray for the Dead, as the Papiſts do, and invocate their Saints to recommend them to God. They acknowledge Guardian Angels, not only to every *Muſſulman*, but to every Affair and Member, and attribute all that befals any Body to them, becauſe they wait upon them in all Places but when they go to do their Occaſions, and then they leave them at the Door. They alſo believe, that when a Man is buried, his Soul returns to his Body, and two Angels, called *Munker* and *Guanequir*, come to him, and if he has lived ill, they bring him an ugly Creature, that repreſents his Sins and bad Deeds, to torment him till the Day of Judgment; but if he hath lived well, they bring him a lovely Creature, which repreſents his good Actions, and which gives him a great deal of Content, and ſtays with him till the Day of Judgment.

They believe, that not only the good *Muſſulmen*, but ſome Beaſts and Fowls ſhall enter into Paradiſe, *viz.* The Prophet *Saleb*'s Camel, which he raiſed to Life in *Perſia*, *Abraham*'s Ram; *Moſes*'s Cow, whoſe Aſhes are mingled with the Water of Purification; *Salomon*'s Ant; the Queen of *Sheba*'s Parrot, which brought her the firſt News of *Salomon*; *Ezra*'s Aſs, which, they ſay, was raiſed to Life many Years after it had been dead, to prove a Reſurrection; *Jonah*'s Whale; the little

Dog *Catmer*, that attended the four Sleepers, who ſlept 372 Years; and *Mahomet*'s Camel, that carried him from *Mecca* to *Medina* to his Friends Houſe by a certain Inſtinct.

6. They circumciſe their Children as the *Jews* do, not at eight Days, but at eleven or twelve Years old, that they may make a Profeſſion of their Faith in theſe Words, *There is no God but God, and* Mahomet *is his Prophet.* The *Turks*, as well as *Jews*, make great Rejoicings at the Circumciſion of their Children; for upon the Day fixed for the Ceremony, the Child is ſet on Horſeback, and carried about the Town with Timbrels and Muſick, and being circumciſed in his Father's Houſe, he makes a Feaſt for all his Relations and Friends, at which they are merry, dance and ſing, and the next Day the Gueſts make Preſents to the Child according to their Quality. When a *Chriſtian* turns *Turk*, he is circumciſed after the Manner aforeſaid; but if a *Jew* turns, his former Circumciſion is ſufficient, and he only is obliged to make the afore-mentioned Profeſſion; for which the *Turks* have ſuch a Reverence, that if any *Jews* or *Chriſtians* pronounce them inconſiderately, they muſt turn *Turk*, or be burnt.

This Circumciſion, called by the *Turks*, *Schounnet*, is only a Mark of their Obedience to *Mahomet*'s Example and unwritten Command, for there is no mention of it in the *Alcoran*; but they take it to be ſuch a Token of Diſobedience to their Law not to be circumciſed, that ſuch as are uncircumciſed, whether Children or Chriſtians, are not allowed to be preſent at their publick Prayers; and though there be no Perſons to keep ſuch out of their Moſques, yet if any are ſo bold (as ſome have been) and are taken, they are burnt alive, or impaled. Upon ſome ſpecial Occaſions ſome are admitted to circumciſe at ſeven or eight Years old; but in Caſe of Poverty, it is more uſual to ſtay till fourteen or fifteen, till either the Parents of the Perſon to be circumciſed, or the Perſon himſelf, is able to defray the Charges of it; or if neither are able, they wait till ſome rich Perſon is circumciſed, that they may ſhelter themſelves from the Charge by his Purſe.

Men of Eſtates, at the Circumciſion of their Children, make many Preſents to the Youths that are circumciſed with them, and gave liberal Alms to their poor Neighbours, that by their Prayers the Grace of God may deſcend upon the new *Muſſelman*, and their whole Family. When any poor Renagado Chriſtian is circumciſed, two Baſons are carried after him to gather the Alms, which the Spectators freely give them, though they have a common Proverb among them, *That he that has been a bad* Chriſtian, *will never make a good* Turk. The Time and Place for Circumciſion is not fixed, for it may be done by a Prieſt or Chirurgeon, either at the Bath or Parents Houſe. They name their Children as ſoon as they are born, and do not ſtay till they are circumciſed, by putting ſome Grains of Salt into their Mouths, and ſo lifting them on high, as dedicating them to God, ſay, *God grant* N. N. *that God's holy Name may be as ſavoury in this Mouth, as this Salt is, and that he may preſerve you from being too much in Love with the World.* As to thoſe that die young, before they are circumciſed, they believe that thoſe are ſaved by the Circumciſion of their Father.

7. The *Turks* receive the Ten Commandments of *Moſes*'s Law, and cauſe them punctually to be obſerved by all; and to them *Mahomet* has added five, *viz.* 1. To believe One Only God, and to worſhip him as ſuch. 2. To faſt during the *Ramadan*. 3. To pray at the Hours appointed. 4. To give the Poor yearly the Fortieth Part of their Subſtance. And, 5. To go in Pilgrimage to *Mecca* once in their Lives.

The firſt of theſe they obſerve very punctually, ſhewing great Reverence to God and his Name, which they never pronounce, nor hear pronounced, but with great Reverence, and will not ſet about any Action, but they firſt ſay, *In the Name of God*; yet they ſwear much by God, when they would be believed.

The ſecond Commandment is to keep *Lent*, or *Ramadan*, in Faſting, whereby the Fleſh is mortified, Concupiſcence ſubdued, and the Soul purified. This Faſt laſts a Month, and is kept in the Month called *Ramadan*; becauſe (as they ſay) the *Alcoran* came down from Heaven in that Month. This *Lent* begins as ſoon as ſuch People as are ſet on Hills and high Places on Purpoſe can diſcover the New Moon, and the firſt Meſſenger of it, if a credible Perſon, hath a Reward given him for publiſhing it, and then the *Ramadan* is appointed all over the Town by publick Proclamation.

The Manner of keeping it is thus: It is ſaid in the *Alcoran*, That they may eat and drink all Night long, till they can diſcern a white Thread from a black by the Morning-Light; but after that it is unlawful for them to eat, drink, or ſmoak Tobacco, yea, to touch their Wives; and thus their Nights are turned into Days, their Minerets being all hung with Candles, and their Coffee-houſes are full all Night. In Summer-time this Faſt is very troubleſome, for though they are burnt up with Heat, they may not drink. Every one is obliged to keep this *Lent*, and ſome are ſo ſtrict as to keep it in their Travels, and in the Army, though they may defer it to a more fit Opportunity. There are many that do not keep it, but they muſt eat and drink privately; for if it be known, they will be at leaſt Baſtinado'd. The Puniſhment of drinking Wine in *Lent*, is to have melted Lead poured down their Throats; and it hath been executed, though rarely. None may marry in *Lent*.

When the *Ramadan* is ended, the *Bairam*, or *Eaſter*, begins with the next New Moon, which is publiſhed by firing of Guns, and public Bonfires and Rejoicings. At this Feaſt the Houſes and Shops are adorned with fine Hangings, Tapeſtries, and Sophas; the Streets are full of Swings, adorned with Feſtoons, in which they ſit down, and are toſſed in the Air, while Muſick both of Inſtruments and Voices, hired by the Maſters of the Swings, pleaſes their Ears. They have many other Diverſions, as Mills, Fire-works, *&c.* which they get ready ſome Days before the *Bairam*. Many Women, who never ſtir abroad the reſt of the Year, have Liberty to walk about theſe three Days; but it is dangerous for the *Franks* to appear, becauſe the *Turks*, being got drunk, will ſtab them with their *Cangiars*, or to be ſure make them pay dear for their Paſſage, by exacting Money from them.

One Thing very commendable is done at this Time, which is, that they pardon all their Enemies, and are reconciled to them; for they have made a bad *Eaſter*, if they keep Malice in their Hearts againſt any body; and for this Reaſon, when they meet any of their Acquaintance in the Streets, they kiſs one another, wiſhing a good *Eaſter*, and mutual Happineſs one to another. This they call the Great *Bairam*, to diſtinguiſh it from the Little *Bairam*, which they keep ſeventy Days after. Their other Feſtivals are, the Night between the 11th and 12th of the Moon called *Rebiul Ewell*, wherein *Mahomet* was born; as alſo the Night between the 26th and 27th of the Moon *Rebiul Ahher*, when they believe that *Mahomet* aſcended up into Heaven upon the *Alboraoh*, as he tells them in his *Alcoran*; and on *Thurſday* the 4th of the Moon *Regule*, they have Prayers in their Moſques till Midnight, and then return home and feaſt. On all theſe Feſtivals the Steeples of the Moſques are decked with Lamps in ſeveral Figures, which make a very pretty Sight.

8. The third Command of the *Turks* is, To pray at the Hours appointed; but becauſe they always waſh before they go to Prayers, 'tis neceſſary to ſpeak of their Ablutions. They are of two Kinds, one is called *Gouſl*, which is a general Waſhing of the whole Body, and this they are obliged to uſe after they have lain with their Wives, or after Nocturnal Pollutions, or when any Urine, or any other unclean Thing, hath fallen upon them. The other is called *Abdeſt*, which is performed by turning their Face to *Mecca*, and waſhing the Hands, Noſe and Mouth three Times. This they uſe after their Needs, or when they have handled any Thing that is unclean, and for both theſe they have Baths and Fountains near all their Moſques. If any one happens to break Wind upwards or downwards, or any Blood or Filth iſſue from their Body,

they vomit, fall into a Paſſion, faint, are drunk, laugh at Prayers, embrace a Woman, or touch any naked Part of her, ſleep at Prayers, touch a Dog, or any unclean Beaſt, all theſe Accidents make void the *Abdeſt*, ſo that it muſt be renew'd before they can legally go to Prayers.

The Places of Prayer are their Moſques, which on the Outſides are like our Churches. They have by them Towers or Minerets, which have a Balcony round them, from whence the *Muezim* call them to Prayers. In the Inſide there is nothing written, but the Name of God. When they pray they turn toward the South, becauſe *Mecca* lies on that Side. They have a Pulpit, for the *Imans* to preach in, and the whole Moſque is cover'd with Matts for the Eaſe of the People's Kneeling, and Carpets for the better Sort. Their Prayers are in an unknown Tongue. They have them five Times a Day, *viz.* at Break of Day, at Noon, between three and four a Clock in the Afternoon, at Sun-ſetting, and about an Hour afterwards in the Evening. On *Fridays* they have Prayers at Nine o'Clock beſides, and in the *Ramadan*, or *Lent*, at Midnight, and all are preſent at them, and then they may go to work, or open Shops, but moſt of them reſt and make merry, or viſit their Friends. When the Hour of Prayer is come, the *Muezim*, going up to the Mineret, ſings and cries with all his Force, putting his Fingers in his Ears, *Allah Ekber*, &c. i. e. *God is great, God is great, God is great*; *bear witneſs there is but one God, and that* Mahomet *is his Prophet*; *Come and preſent yourſelves to the Mercy of God, and aſk Forgiveneſs of your Sins*; *God is great*, &c. and this he does towards the four Corners of the World, beginning at the South, and ending at the Weſt.

While he is crying, every one goes to the *Abdeſt*, and then to the Moſque, or if they cannot go, ſay their Prayers at Home. They leave their Shoes at the Door of the Moſque, or carry them in their Hands with them. When they are entred they bow to the *Keble*, i. e. a Nich in the Southern Wall, and then go to their Seats, and wait till the *Iman* or Prelate begin Prayers, and then join with him. In praying the Men lift up their Hands to their Shoulders, and then lay them upon their Navels, and the Women lift up their Hands but half-way, and clap them on their Breaſts. When Prayers are ended, they bow both to the right and left Side, as to the two Angels, *Kerim*, and *Ki-atib*. When they are at Prayers they are ſo attentive, that they will turn neither this Way nor that. They never talk in their Moſques, but carry themſelves always with great Reverence. They are but few who go not every Day to Prayers at Noon, Afternoon and Night, for if they obſerve not theſe three Hours they are puniſh'd ſeverely, and this they muſt do in Travelling. All their Prayers do not laſt above half an Hour at moſt, and ſeldom above a Quarter. They are commonly of a very ordinary Compoſure, eſpecially in the leſſer Moſques, and upon ordinary Days; but during the *Ramadan*, and upon high Days, they are ſomething better.

The *Mahometans*, during the Time of their Prayers, obſerve a grave Silence and a modeſt Deportment, kneeling till the Prayers begin, and then joining with the *Iman* in repeating the Prayers ſoftly after him, and imitating his Geſtures with Kneeling and Proſtrations, which are more or leſs, according to the Hours; for in the Morning and Afternoon they uſe but ſix, but at Noon, Night and Evening, eight. When theſe are finiſhed, ſome Choriſters get up into the Galleries, and ſing in Parts a Sort of an Anthem of an indifferent good Air. On *Mondays*, *Wedneſdays* and *Fridays*, a Preacher mounts the Pulpit, to explain ſome Point or other of the *Alcoran*, which he underſtands and expounds as he thinks fit. Any one may be preſent at theſe Sermons, as well as thoſe made in the Market-place. They conclude all with ſome Prayers for the Sultan and the Succeſs of his Armies; to which all the People ſay, *Amen*.

9. The 4th Command is Charity, to give the fortieth Part of their Goods to their Kindred, if they have any, and if not, to their poor Neighbours, and for want of them, to the firſt they meet. This Command is well obſerved by them, ſo that Beggars in *Turky* are very rare. And, indeed, they perform great Acts of Charity in founding Hoſpitals, building Bridges, and Inns for the Caravans, bringing Water into the Highways, ſetting Slaves at Liberty; and they that have not Ability to do theſe Things, mend the High-ways, fill the Ciſterns with Water, and ſhew Travellers the Fords; and if offered Money, they refuſe it, for they ſay, they do it for God's Sake, and not for Money. Their Charity alſo extends to Birds and Beaſts, for ſome will buy Birds in the Market to let them fly, and they believe, that the Souls of thoſe Birds will one Day teſtify their Kindneſs to God. Others will leave conſiderable Means to maintain ſo many Dogs and Cats.

To this Command of Charity may be reduced that of forgiving Enemies, not of their State and Religion (for thoſe their Law obliges them to hate) but their particular and private Enemies. And indeed they obſerve this Law ſo well, that there are few Enmities among the *Turks*; for if there happen any Quarrel, they are obliged to uſe their utmoſt Endeavour to pacify it, and commonly they do not deſiſt till it is adjuſted; and that the Reconciliation may be firm, the Perſons at Difference are obliged, before they pray to God on *Friday*, which is the Weekly Sabbath, to proteſt, as in the Preſence of God, that they freely pardon their Enemies, or elſe they are taught, that their Prayers will not be heard. If the Perſons at Variance will not be reconciled, they part them by Force, and carry them before the *Cadi*, or ſome other Judge, who will give them two or three hundred Drubs on the Bottom of their Feet, and make them pay two or three thouſand Aſpers. The Severity of theſe Puniſhments generally keep the *Turks* ſo much within the Bounds of their Duty, that they ſeldom quarrel, or injure one another; nay, they do not ſuffer themſelves to be tranſported with Paſſion, or to ſwear.

10. The fifth Commandment of the *Turks* is to go to *Mecca*, which is the worſt obey'd of any of them, becauſe ſeveral for Want of Money, and others by their Affairs, are hindered from going ſo tedious a Pilgrimage; yet many go yearly, and ſuch are reverenced ever after under the Name of *Hagies*, or Pilgrims, and others get ready to do it. Next to theſe Commandments they have ſeveral Prohibitions, which they cannot break without Sin, as, 1. To make, or have any Figures of Man, Woman or Beaſt; and this they obſerve ſo ſtrictly, that they are angry at the Sight of any, and though they are great Lovers of Watches and Clocks, yet if they have any Figure on them, they will not accept of them, though given. 2. To lend Money upon Uſury, and they are careful to abſtain from it, but they will make Bargains that differ little from it. 3. To forbear unclean Meats, as Hogs, and ſuch Creatures as the *Jews* account unclean; and this they ſtrictly keep, and ſome will rather ſtarve than eat of them. 4. Not to drink Wine; but this they ſay, was only a Council of *Mahomet*, and ſo they often drink it, and are drunk; yet if any Wine be ſpilt upon their Cloaths, the greateſt Drunkard will labour to get out the Stain, and the moſt ſcrupulous will wear them no more, leſt they be found guilty of Sin.

11. The *Turks* have their Clergy, as all other Religions have, to reſolve their Doubts, and celebrate divine Service. They continually ſtudy the *Alcoran*, and are moſt of them knowing Men. The chief Eccleſiaſtick is the *Mufti*, whom they reverence as much as the *Romaniſts* do the Pope. He is choſen by the Grand Signior, and is always a learned Man in their Way, *i. e.* much verſed in the *Alcoran*, for he reſolves all Matters of Conſcience, and gives his Deciſions in little Writs, called *Feſta*, to which even the Sultan himſelf muſt ſtand; but by adding theſe Words, *God is the beſt Judge*, he ſhews that he pretends not to Infallibility. He is married, and had in ſo great Veneration, that the Grand Signior riſes to meet him and ſalute him when he comes to Court. It is unlawful by their Law to put the *Mufti* to Death, yet ſome Emperors have done it. There is but one *Mufti*, and his Reſidence is ordinarily at *Conſtantinople*, where finding Buſineſs enough,

the *Cadiliſquers*, *Moullah's* or *Cadi's*, or Juſtices and Naibs, perform his Office in other Places. The Sultan conſults with the *Mufti* about State-Affairs, as when he deſigns to put any Prime Miniſter to Death, diſgrace the Prime *Vizier* or *Baſha*, or undertake any other Buſineſs of Importance, becauſe 'tis a Notion among the People, that there is more Equity in a wiſe and pious Perſon's Judgment, than in the abſolute Power of a Prince, though as it is now uſed, 'tis meer Formality, for the *Mufti* muſt comply with the Will of his Prince. Every *Mufti* muſt have been a *Cadileſquer* firſt, and have diſcharged that Office well before he is raiſed to that Dignity. He has no Power over the *Imans*, or Prieſts, becauſe the *Turks* have no Hierarchy.

Thoſe who officiate in their Moſques, and read Prayers there daily, are the *Daniſchmend*, or as the *Franks* call them, *Taliſmans*, and the *Iman* is the Chief of them. The *Muezims*, or Church-Clerks, call them to Prayers from the Minerets of the Moſques, and the *Hodgia's* are old Men of Integrity, very knowing in the *Alcoran* and Civil Affairs. Theſe are conſulted in Affairs of Importance, and ſometimes preach on certain Feſtivals. They have ſeveral Sorts of Monks, of which the *Derviſes* are the Chief. They live in common, and have their Superior, as Popiſh Monks have. They go very mean in their Apparel, and wear on their Heads a Cap of white Felt, like our Night Caps. Every *Tueſday* and *Friday* they make a Dance in the Middle of an Hall, rail'd in ſquare, where are two Pulpits, the one for the Superior, and the other for the Vicar. At the other End of the Hall is a Scaffold, where ſeveral *Derviſes* are placed to play on the Flutes or Drums. When they have ſung ſome Prayers, the Superior makes a Sermon upon ſome Words of the *Alcoran* in *Turkiſh*, which are read to him by the Vicar in *Arabick*. When the Sermon is ended, the Superior with the Vicar, come down from the Pulpit, and having, with the reſt of the *Derviſes*, taken two Turns about the Hall, all the Inſtruments play in Concert, and then begins the Dance. They paſs before the Superior, and ſalute him humbly, and then making a Leap, fall a-turning upon their left Foot as a Windmill driven by the ſtrongeſt Wind, and though they ſtretch out their Arms, and ſometimes ſhut their Eyes, they never touch one another, but keep Time to the Muſick, and never make the leaſt falſe Step. The Author of this Dance was one *Hazreti Meulana*, a *Derviſe*, who is reckoned a Saint among them, but all their *Derviſes* and *Santo's* are Hypocrites.

12. The Marriage of the *Turks* is of three Sorts, and ſo they have as many Sorts of Wives. 1. Lawful Wives, and theſe they take after this Manner: The Man that deſires to be married agrees with the Parents or neareſt Relations of the Maid about the Dowry they will give their Daughter or Kinſwoman before a *Cadi*, who writes it down. This done he gets an *Iman* to bleſs his Marriage, and then the Bridegroom on the Marriage-day leads the Bride to his Houſe, her Baggage being carried on Horſes or Camels before them, and there they feaſt and are merry, the Men and Women by themſelves, and commonly they have Muſick and Poppet Shows, as alſo the Women called *Tebingene*, to ſhew Tricks for the Diverſion of the Company. Theſe Wives the *Turks* may divorce when they pleaſe, by going before the *Cadi*, and ſaying, *Alei talac be talati*, i. e. *I part with her for three Times*: But if a Man put away his Wife wrongfully, he muſt give her her Dowry; but if he does it upon juſt Grounds, or ſhe forſakes him, he gives her nothing. When a Woman is thus divorced, ſhe may not marry another Man till four Months be paſt, that ſhe may know whether ſhe be with Child, for if ſhe be, the Huſband that divorced her muſt keep it, and if ſhe be not, ſometime ſuch Matches are made up in that Time. A Man that hath divorced his Wife cannot marry her again, till ſhe hath been firſt married to another Man, and then he may take her back. When they are thus married, if the Huſband happen to die, the Wife takes her Dowry, and no more; and if the Wife dies, and leaves Children, they may conſtrain their Father to give them their Mother's Dowry. Of theſe Wives the *Turks* can have but one, though ſome have ſaid four.

They may alſo have Wives of *Keben*, which they take with leſs Ceremony than the former; for they only go to the *Cadi*, and tell him, that they take ſuch an one to be their Wife, promiſing to give her ſo much if they divorce her. This the *Cadi* writes down, and gives the Man a Copy, and he may keep her or divorce her as he pleaſes, performing his Promiſe, and maintaining the Children he hath by her. The *Turks* may have ſeven of theſe Wives, nay, as many as they can keep; but to ſave Charges, few of them will have more than one or two.

Their other Wives are *Haylaykes*, i. e. Women-Slaves, and of theſe every Man may have as many as he pleaſes, and the Children begotten of them are held as legitimate as thoſe of the former Wives, and have as much Title to the Inheritance of what their Father leaves behind him, if by his Will he infranchizeth them, otherwiſe they remain Slaves to the eldeſt by the lawful Wife; but if a *Turk* takes a Slave for his Bed, he may not ſell her again if ſhe have Children, but ſhe becomes a Member of his Family; if ſhe proves barren, ſhe may be ſold as often as her Maſters will.

The *Turks* may buy all Sorts of Slaves of every Religion and Nation, but *Chriſtians* and *Jews* may not buy a *Turk*. At *Conſtantinople* is a Market for Slaves in a Place near the *Beziſtan* every *Wedneſday*, and every one may buy freely for their ſeveral Uſes, their Luſt not excepted. Theſe Slaves are bought and ſold like Horſes, view'd, review'd, and felt all over their Bodies, and their Mouths look'd into, being alſo examin'd of their Country and Age. A beautiful Virgin at theſe Markets is held at an high Rate, but the Seller is anſwerable for her Virginity, for if ſhe prove otherwiſe, he muſt reſtore the Money ſhe was ſold for, and bear a ſharp Fine for his Fraud.

13. The Slaves of the *Turks* are not ſo miſerable as they are commonly ſuppoſed. They are frequently the Under-Maſters of Families, for if they light on a good Maſter, or are endued with any Talent, their Maſters will love them, and will ſeldom hinder them from going to Church to pay their Devotion: They are very frequently alſo in Favour with their Miſtreſſes, who through a tender Compaſſion, natural to their Sex, give them Preſents. Their Maſters, indeed, are obliged by their Law to exhort them three Times a Day to embrace the *Alcoran*, but they ſeldom force them to renounce their Faith. Theſe Things have made ſome Slaves to refuſe their Liberty, and being made free to return again to their Servitude.

14. The *Turkiſh* Women are commonly beautiful, ſtreight and well-ſhaped, for they never go abroad without their Veil to cover their Faces. They paint their Eye-brows with *Sarmee*, which gives them a blackiſh Colour, and their Nails with *El-hanna*, which is a reddiſh brown. They are very cleanly and neat, for going to the Bath twice a Week they have neither Hair nor Dirt upon their Bodies. Their Cloathing and Shoes are much like the Mens, but their Head-Attire is different, for they make a very long Treſs of their Hair, which hangs down to the Small of their Back, and if they want Hair, they uſe an artificial Treſs, or a Caſe of Sattin.

In the Houſe they cover their Heads with a Cap of red Cloth, like our Night-Caps, but with four Horns or Points on the Tops, to the Middle of which they ſtitch a Round of Pearls, and tie it below with a Handkerchief of fine Stuff wrought with Flowers of Gold and Silk; but when they go abroad, they change it for one made of gilt Paſte-board, and muffle up their Head ſo in a Linen Cloth, that nothing but their Eyes is uncovered, nay their Shift Sleeves cover their Hands, becauſe it is a Thing of ill Repute ſo much as to ſhew any Part of their Bodies; yet in a Corner of the Streets, they will venture to uncover their Face to a Friend, or a young Man they like, though, if they be diſcovered, they are baſtinado'd.

The *Turkiſh* Women are very haughty, and extreamly lazy, and though they do nothing but ſit on their Di-

vans embroidering an Handkerchief, yet they muſt go fine and have their Slaves, though their Huſbands be ever ſo poor. This Idleneſs makes them vicious, and ſeek only Ways of having their Pleaſure, of which the Huſbands are ſo jealous, that they will not ſuffer them to ſhew themſelves to Men; and if they do, they are ſure to receive the Baſtinado on their Buttocks. Upon theſe Accounts, no Women are ſuffered to go to the Moſques, Markets, or appear in their Huſbands Shops.

The Wives have not the Privilege of Divorcing their Huſband, as their Huſbands have of Divorcing them, unleſs they deny their Wives the Things which they are obliged to furniſh them withal, as Bread, Pilou, Coffee, and the Uſe of the Bed once in eight Days, and Money to go to the Bagnio twice a Week; for, if they fail in theſe Things, they may go to the *Cadi* and demand a Divorce, which if the *Cadi*, upon going to the Houſe, finds true, he grants her Suit, as alſo if ſhe complains, that he hath offered to uſe her contrary to the Courſe of Nature, which ſhe expreſſes by Turning up the Sole of her Slipper, without Saying a Word.

15. When any one is ſick, the *Imans* go and pray with him, and if he dies, all the Neighbours know it by the Howling of the Women, who cry out as if they were in Deſpair. The Friends and Neighbours go immediately to condole with them, weeping and mourning in a doleful Tone; but yet, as if they were ſinging, they rehearſe the Praiſes of the Dead, *viz.* The Wife will ſay of her dead Huſband, *He loved me ſo well, he gave me Plenty of every Thing I ſtood in Need of*, &c. and all preſent join with her, repeating her Words, and imitating her Geſtures. This laſts ſeveral Days, as often as any new Viſits are made; nay, ſometimes theſe Cries are renewed at the Year's End. After theſe Lamentations comes the Burial, for which the Relations waſh the Body, and ſhave off all the Hair, and then they burn Incenſe about it to ſcare away evil Spirits and Devils; and then praying God to be merciful to him, they wrap him up in a Sheet, and put him into a Coffin and Bier, like ours, but with his Face downward, and covered with a Pall, which is red, if the Perſon dead, be a Soldier; green, if a *Scheriff*, i. e. one of *Mahomet*'s Relations; black, with a Turban, which is red, if he be a *Janizary*; red and white, if a *Spahi*; green, if a *Scheriff*; and white, if any other Man.

As he is carried to the Burying-place, which is with his Head foremoſt, the Prieſts go before, ſaying certain Prayers, and often calling upon the Name of God: After the Corps, which is carried by four Bearers on two Sticks, follow the Relations and Friends, the Women come laſt howling like mad Folks: Being come to the Burying-place, they take the Body out of the Coffin, and bury it in the Earth, and leaving the Women to mourn, depart. When the Grave is filled up, the poorer Sort erect a Stone over the Head of the Deceaſed, for the Angel that examines them, to ſit on; but the richer Sort have Tombs of Marble, and at both Ends, a Turbant of Stone like that of the Deceaſed. Their Burying-places are always without their Towns, that the Air may not be infected by the corrupt Vapours of the Graves, and this was the Cuſtom of the Ancients. The *Turks* Burying places are commonly by the Highway-ſides, that Travellers may pray for them, and always diſtinct from the Chriſtians. After the dead Body is interred, the Relations and Friends, for ſeveral Days, come and pray upon the Grave, that God would deliver the Soul of the Deceaſed from the Torture of the Black Angels, exhorting him not be afraid. The Women alſo do the ſame with ſo much Paſſion, that one would think them abſolutely diſtracted. Many on *Fridays* bring Victuals and Drink to the Graves, and leave it there for Travellers, that they may pray for the dead Perſon, for whoſe Sake it is given them.

16. In fine, though in Chriſtendom the *Turks* are accounted barbarous, yet, in Truth, they are good People, and love honeſt Men, whether *Turks*, *Jews*, or *Chriſtians*. They do not think it lawful to cheat or rob a *Chriſtian* more than a *Turk*, but carefully obſerve that excellent Command, *To do to others only what we are willing others ſhould do to us.* They are, indeed, guilty of great Extortion from the *Franks*, but it is through the Inſtigation of the *Jews* and *Chriſtians*, who envy one another, and ſeek each others Ruin. Uſury is eſteem'd a very great Sin by the *Turks*, and is very little practiſed. They are very devout and charitable, very zealous for their Religion, which they ſeek to propagate all over the World; and whenever they love a *Chriſtian*, they exhort him to turn *Turk*.

They are ever loyal to their Prince, whom they highly reverence, and blindly obey, and are never known to betray him, but willingly die for him, whenever he commands it: They never quarrel or fight among themſelves, and know not what Duels are, which may be ſaid to proceed from *Mahomet*'s wiſe Policy, who forbad them Wine, and Gaming for Money; and the good *Turks* ſo religiouſly obſerve theſe Laws, that they will not drink a Drop of Wine, and always play for Diverſion. They are very temperate, and never commit any Exceſs in Quantity or Quality of Victuals; ſo that it may be truly ſaid of them, *They eat to live, and do not live to eat.* Yet are they not without their Vices, for they are ſo proud, that they think themſelves above all other Nations, and that the World was made for them. They deſpiſe the *Jews* and *Chriſtians* ſo much, that they call them Dogs; and the Rabble think they do a good Act, ſome of them are ſo ſuperſtitious, that if at their firſt going out in a Morning, they meet a *Chriſtian* or *Jew*, they return home again, ſaying, *God preſerve us from the Devil.*

The *Turks* love not hard Study, and think it enough to learn to read and write. They often ſtudy the *Alcoran*, which comprehends all their Law, both Canon and Civil, and ſome apply themſelves to Aſtrology and other Sciences. They are very amorous, but their Love is brutiſh, for they are the greateſt Sodomites, and boaſt of this infamous Vice. They are very covetous, ſo that Money will do any Thing among them, both at Court and in the Country. They are very friendly and civil, if they can gain by it; but common People are purchaſed at a cheaper Rate, for let them have but Drink enough, and they will do any Thing for you.

17. The *Turks* are ſubject to one Prince, called by them, *The Sultan*, and by other Nations, The *Grand Signior*, or *Emperor of the Turks*. He comes to the Empire by Inheritance, and is always of the *Ottoman* Family, for which the *Turks* have ſo great a Veneration, that they will not ſubmit to any other. When the Grand Signior dies, his Son ſucceeds him, or, if he have none, his Brother, who fixes upon a Day when he will go by Water to the Moſque of *Eſoup*, where being ſeated upon a Tribunal of Marble, raiſed upon Marble Pillars, the *Mufti* ſays ſome Prayers, girds him with a Sword, and then he makes his Entry into *Conſtantinople* with a Cavalcade to the Seraglio, and this Ceremony ſerves inſtead of a Coronation. The Emperor is no ſooner ſettled on the Throne, but he takes care to ſecure to himſelf the Poſſeſſion of it, by firſt ſhutting up all his Brothers ſo cloſe, that none can tell where they are, and, if he has Children, putting them to Death by ſtrangling them, making a Scruple of Conſcience to ſhed the Royal Blood. The chief Reaſon of this Fratricide is to ſecure the Militia to himſelf; for ſo long as he has a Brother alive, they are ever threatening him with a Revolt, unleſs he will augment their Pay as they pleaſe. When the Grand Signior is ſettled on his Throne, he frequently minds nothing but his Pleaſures, being attended with a great many Buffoons, *viz.* Mutes and others, who ſtudy continually to invent ſome new Pranks to divert him, and his *Baſha*'s ſend him Multitudes of the fineſt Women to gratify his Luſt. His Power is abſolutely and entirely deſpotick, and his Will is the only Law by which he rules. He is not curb'd by any written Law or Cuſtom, ſo that the Oppreſſed have not ſo much as a Right to complain. He may take away any Man's Eſtate, prefer the meaneſt Perſon to the higheſt Dignities, and ſend for the Heads of whom he has a Mind, without Trial

or Juſtice, and none has any Right to enquire the Cauſe.

This unlimited Power of their Sultan is founded on the *Mahometan* Religion, which enjoins a blind Obedience to all his Commands under Pain of Damnation; but the *Turks* are freed in a great Meaſure from the Effects of it, by his retiring ſo much from Civil Concerns to his Pleaſures; for as to all publick Buſineſs, he refers that to his Miniſters, who have the whole Management of his Affairs, yet are obliged, on certain Days every Week, to give him a ſummary Account of them. When the Grand Signior is weary of ſtaying in the Seraglio, he goes abroad to take the Air, either by Water or Land.

When he goes by Water he has little Attendance. His Galliot comes to the *Kioſke* of the Seraglio, and from thence he goes to *Scudaret*, or the *Black Sea*, to take the Air, being row'd by two *Boſtangi-Baſha's*, and twenty-four others, being their Favourites, on each Side. When he goes by Land, it is either in Pomp, as he does through *Conſtantinople* to the Moſque; but then he has ſo many Petitions put up to him againſt the ill Management of his Miniſters, that they hinder it all they can; but he will often go abroad *incognito* in Diſguiſe, to ſee if his Orders be punctually obſerved, and the Chriſtians are glad of it, for by this Means they are free from Affronts. Sultan *Amurath* went often out thus, and one Day cauſed a Butcher's Head to be cut off, for ſelling Meat above the Price fix'd, and two Men more to be beheaded, at another Time, for ſmoaking Tobacco, which he had ſtrictly forbidden, becauſe by taking it in their Beds, ſeveral great Fires had been kindled in *Conſtantinople*, which had burnt down great Part of the City.

18. The chief Miniſter of State is the Grand *Vizier*, who is called *King* by the *Turks*. He it is that receives Ambaſſadors, hears their Propoſals, and gives them an Anſwer, the two Audiences which the Grand Signior allows them, being only for Ceremony at their coming and Departure. He takes Care to pay the Army, decides Law-Suits, condemns Criminals, and manages the Government, having in his Cuſtody the Imperial Seal, and diſcharges the Office of the Grand Signior. This is a very heavy Charge, and requires a great deal of Sagacity and Prudence; and yet for all that, few can hold it above ſix Months before they are ſtrangled, they create themſelves ſo many Enemies; and they that do eſcape, muſt by their Gifts make great Friends at Court, and have the Protection of the Mother of the Grand Signior, the moſt beloved Sultana's, and others.

Next to this great Officer are the ſix Viziers, called *Viziers of the Bench*, who are properly the chief Counſellors of State, but intermeddle not with the Government, being only conſulted upon Points of Law by the Grand Signior and the Vizier *Azem*. The other chief Charges are the *Cadileſquers*, or Judges of the Army, which are as it were Chief Juſtices, or Sovereign Judges, both of Civil and Military Affairs, They have under them *Cadies*, or *Inferior Judges*, being Bailiffs or Provoſts, before whom are tried ordinary Cauſes, Marriages made, Liberties given to Slaves, and the Writings called *Heudgets*, or Decrees ordered.

The *Caimacan* is the Captain and Governor of *Conſtantinople*, Lieutenant of the Grand Vizier, but has no Authority but in his Abſence, and then he performs all the Offices of that important Charge. The *Baſha* of the *Sea* is the Admiral of the Naval Forces of the Grand Signior; and the *Beys* are the Governors of the Maritime Provinces, and are obliged to keep the Grand Signior's Gallies in good Order.

The *Aga* of the *Janizaries*, who is the Colonel-General, or Commandant of that formidable Body of the Soldiers called *Janizaries*, is a conſiderable Station. He is allowed to come into the Grand Signior's Preſence, with his Arms in abſolute Liberty, and with a confident Deportment, whereas all the other Grandees of the Port, appear with their Arms croſs their Bodies, in Token of profound Submiſſion.

The *Baſha's* are a Kind of Viceroys in the Provinces; their Office is to adminiſter Juſtice exactly, and to keep the People in Subjection to their Government. They are obliged to pay a Tribute of Money and Slaves yearly to the Grand Signior, beſides the *Carache* and other Impoſts. But they generally abuſe their Authority, and are more arbitrary than the Grand Signior himſelf, their Aim being to raiſe a Fortune ſpeedily by their Spoils and Oppreſſions. The Sultan is forced to diſſemble his Knowledge of theſe Diſorders, for Want of Power to ſuppreſs them, becauſe they have the Soldiers ſometimes more at their Service than he.

The five chief Baſha's are thoſe of *Babylon*, *Cairo*, *Buda*, *Natolia*, and *Romania*, who have a Privilege of having Horſe-tails carried before them.

The *Beglerbeys* are next to theſe, and are, as it were, ſo many Sovereigns in the general Government of the Empire, which the Grand Signior gives them. Under the greateſt of theſe are ſeveral *Sangiac-Beys*, who govern ſmall Provinces.

The *Spahi's* are a Body of 15000 Men, maintained out of the Revenues of the Grand Signior's Manor's, or *Timars*. They paſs for the Nobility or Gentry of the Country, and ſtand much upon their Honour. The *Zaims* differ not much from them.

19. The *Chiaux-Baſha* is the Chief of the Purſuivants, or Meſſengers, who carry the Prince's Commands to all Places, are ſent of Ambaſſadors, and have the Cuſtody of all Priſoners of Quality. The Government of Cities is managed by five Kinds of Officers; the *Baſha*, who judges criminal Cauſes; the *Sub-Baſha*, who is his Deputy; the *Waiwod*, who regulates Affairs in the City, walks the Rounds twice a Week, examines Weights and Meaſures, ſuppreſſes Tipling-houſes, puniſhes Drunkards, and all ſuch as commit any Diſorders, ſeverely; the *Cadi*, who is the Judge of all Civil Suits, and the Receiver of the Cuſtoms, and not only receives the publick Duties, but takes Cognizance of all fraudulent Practices relating to pecuniary Duties, and judges as he ſees fit. Theſe Officers make it their Buſineſs to ruin and diſcredit one another.

They have no written Laws but what are contained in the *Alcoran*, which they hold to be the Rule of Faith, and Standard of Juſtice; and every Thing that it forbids is eſteemed unlawful and puniſhable. Nevertheleſs the Baſha's and Cadies judge as they pleaſe, for the Book is ſhort, has but few Laws and moral Precepts, and thoſe it has are ſo ambiguouſly expreſs'd, and deliver'd in ſo looſe a Manner, that thoſe greedy Officers, cannot deſire a more favourable Opportunity to ſatisfy their Avarice, for they judge without Appeal, and cauſe their Sentence to be executed upon the Spot. It is true, ſome injured Perſons have appealed to the *Divan*, but it is ſo hard, as well as chargeable to carry a Cauſe thither, that few will attempt it.

The ***Divan*** is the great Council and Aſſembly of the Nation, where all Affairs of State are debated, all Suits are finally decided, for any body may be heard there, of what Country, Quality, or Religion ſoever he be, and the pooreſt Man has Liberty to aſk Juſtice of the Grand Signior in Perſon, and deliver him his Petition, which as ſoon as he has read, he gives Sentence according to Equity. If it be for Debt, the Vizier, upon Supplication, ſends a *Chiaux* to fetch the Debtor into Court, and the Creditor bringing his Witneſſes, the Priſoner is condemned, and the Sentence is immediately put in Execution; for all Things are diſpatched with ſo much Expedition, that a Matter no ſooner comes to a Hearing, but it is preſently judged, and finally determined.

No Trial, unleſs in a difficult Caſe, will laſt above four or five Hours without Sentence given one Way or other, ſo that no Man is wearied and ruined by Lawyers and Delays, as in other Places: Nor is there any Fear that Juſtice will not be adminiſter'd, becauſe at the End of the Hall where they ſit, is a Window covered with black Crape, where the Grand Signior hears and ſees when he pleaſes, without being diſcerned, and the Judges, fearing he may be there, dare not adminiſter partial Juſtice, for if he finds it out, it would immediately coſt them their Lives.

The Treaſury is opened upon all *Divan* Days, but firſt the *Chiaux-Baſha* looks whether the Seal be whole, and then takes it off; and when they have taken out, or put in what they think fit, he ſeals it again with the Grand Vizier's Seal. While the *Divan* is ſitting, the *Aga* of the *Janizaries*, the *Spahilar-Agaſi*, the *Cadileſquers*, the Officers of the *Divan* and the *Viziers*, being introduced by the *Capidgi-Baſha* and *Chiaux-Baſha*, are brought before the Grand Signior, to give an Account of their ſeveral Charges, and what they have done, and none of them can promiſe themſelves to bring back his Head again, becauſe the Grand Signior, for a ſmall Offence, will cauſe them to be ſtrangled on the Spot.

20. In all Things the *Turks* are great Lovers and Obſervers of Order. They take ſpecial Care of Proviſions, that all Things be had in Plenty and at reaſonable Rates, and he that has taken Pains to bring Fruit to the Market firſt, has no Advantage but to take his Money firſt; for he muſt not exact a great Price, or ſell dearer, unleſs he has a Mind to be ſoundly drubb'd, baſtinadoed and fined. They have Officers to examine every Man's Weights and Meaſures, who daily go their Rounds; and if they find any Man's Weights too light, or that he ſells his Goods too dear, they fail not to order him ſo many Blows with a Cudgel on the Soles of his Feet, and make him pay a Fine; ſo that moſt Sellers are ſo much afraid of offending, that they will give you ſomething above Weight, and they dare not cheat the leaſt Child.

Every one is obliged to hinder any Quarrels or Diſorders that happen in the Streets; for there is a Law, that if a dead Man be found before any Man's Door, he muſt pay for his Blood 500 Piaſtres, or 45000 Aſpers; ſo that every Man is obliged to ſee, that no Noiſe be made before his Door, and hinder all ill Effects of it. If he who committed the Fact be taken, and convicted of it, he is diſcharged of the Sum, and the Murtherer is puniſhed, unleſs the Relations of the deceaſed will hearken to an Accommodation, for then the Murtherer is allowed to ranſome himſelf, which is uſually done by paying three or four hundred Crowns.

To prevent any Accidents in the Night Time, all Perſons whatever are prohibited to go Abroad after Evening is ſhut, except in the *Ramadan* or *Lent*; and if the Under-Baſha, who is Captain of the Watch, and walks his Rounds all Night, as our Conſtables do, meets any Man, he is carried before the *Cadi*, who examines him, and if he cannot give a good Reaſon for his being out late, he is fined and baſtinadoed; and if he be diſmiſſed without Fining, it is a laſting Diſgrace to him, and he lies under Suſpicions.

21. The Money Current at *Conſtantinople* is, the *Mangour*, which is half a Quadrin, Copper-Money, and Six of them make an Aſper, which is a little piece of Silver, ſtamp'd with the Grand Signior's Name, and worth eight Deniers, or three Farthings Sterling. The *Iſolette* is worth fifty five Aſpers. The *Aſlani* or *German* Rix-Dollar, ſo called becauſe it is ſtamp'd with a Lion, in *Turkiſh Aſlan*, is worth eighty Aſpers, and the Piaſtre, or *Picade*, 90. The *Turkiſh Chequin* is worth two Piaſtres, and the *Venetian* ten Aſpers more. The Aſpers are many of them counterfeit. Their Weights are the *Quirat*, which is four Grains, and ſixteen of them make a Drachm; the *Medical* is a Drachm and an half, twelve Drachms make an Ounce; the *Rotte* is twelve Ounces; the *Oque* is three *Rottes*, or four hundred Drachms; and the *Cantar* is an hundred and fifty *Rottes*.

22. The *Turks* uſe ſeveral Sorts of Puniſhments for Offenders; thoſe for ſmaller Faults are Blows upon the Soles of their Feet, or Buttocks, with a ſmall Stick. The Feet of the Sufferer are ſo held up by two Men in a *Talacca*, or Wooden Inſtrument, that they cannot ſtir them, and then two more with Switches lay on the Blows upon them, as upon a Smith's Anvil, till he that is to ſee to the Execution ſays there is enough. Such as have received many Blows (as ſometimes they inflict three or four hundred) are not able to go for three or four Months after, but they'll bear thirty without any great Inconvenience.

Maſters dare give no other Correction to their Servants and Slaves than this, and they are uſually ſo ſevere that for Fear of Puniſhment, they are wonderfully well ſerved. You may ſee their Servants ſtand before them a whole Day together like Statues, with their Hands upon their Bellies, expecting their Maſter's Command, which at the leaſt Wink of an Eye is obey'd. School-Maſters do not whip their Scholars as we do in Chriſtendom, but baſtinade them on the Soles of their Feet. When they chaſtiſe any Perſon on the Buttocks, the Party is laid on his Belly, and the Blows are laid on over his Drawers. Sometimes they give five or ſix hundred Blows, but that is the higheſt; and if any Man hath been thus handled, a great deal of mortified and ſwollen Fleſh muſt be cut off with a Razor from his Buttocks, to prevent a Gangrene, and he muſt keep his Bed five or ſix Months before he is able to go about his Buſineſs.

Women are alſo chaſtiſed this Way, when they deſerve it: Such as deſerve Death for their Crimes, are puniſhed with Strangling, Hanging, Drowning, Beheading, Burning, Empaling, or Throwing upon Spikes of Iron. When any Man is to be hang'd, which is done for Robbery or Murder, they will make a Chriſtian the Executioner, if they can light of any. In Beheading, which is done for Rebellion or Sedition, they are ſo dextrous, that they never miſs cutting them off at one Blow. The *Ganche*, or throwing upon Spikes or Hooks, which is performed by letting the Malefactor fall upon them, and hang there ſeveral Days, till he expire with Hunger, Thirſt and Pain, is accounted ſo cruel a Death, that the *Turks* very ſeldom practiſe it.

The *Turks* that turn *Chriſtians* are burnt alive with a Bag of Powder hang'd about their Necks, and a pitch'd Cap upon their Heads; but *Chriſtians* that do or ſay any Thing againſt the Law of *Mahomet*, or are taken with a *Turkiſh* Woman, or go into a Moſque, are empaled, unleſs they will turn *Turks*; for they are ſo zealous for their Religion, that a *Chriſtian* may redeem his Life by turning *Turk*, whatever Crime he has been guilty of; but in theſe, as well as many other Caſes, if he will not turn *Turk*, he is put to Death; but a *Turk* has no Way to ſave his Life, if he happens to commit the like or even a leſſer Offence.

23. The Grand Signior's Arms have acquired him that vaſt Power and large Dominions he holds by their Means, taken from his Neighbours, for he always maintains a ſtanding Army both in War and Peace, to defend himſelf and ſurprize others: His whole Army, which conſiſts of Horſe and Foot, are punctually paid once in two Months. The Infantry are of ſeveral Orders, as *Capigi*'s, or Porters, who keep the Gates of the *Seraglio*, and ſtand round the Grand Signior when he gives Audience to Ambaſſadors: They are in all three thouſand, and have a Captain, called the *Capigi-Baſha*: They execute Death upon ſuch as are fallen under the Sultan's Diſpleaſure: They wear a Cap with a Cone half a Foot long. *Solaques*, which are the Grand Signior's Life-guard, and attend him when he goes abroad in the City: They wear a Doliman with hanging Sleeves, and a Cap ſtuck with Feathers in Form of a Creſt, their Bow always hangs on their Arm, and their Quiver is always full of Arrows ready to draw, if Need requires; but the chief of their Infantry are the *Janizaries*, who are either Children taken for Tribute, and educated in the *Oda*'s of the *Seraglio*, or Renegado *Chriſtians*, and ſome few *Turks*. This Order was inſtituted by *Ottoman*, the firſt Emperor of the *Turks*.

They call one another Brothers, and will not endure the meaneſt of their Body to ſuffer the leaſt Injury, and none but their Officers dare lift up an Hand againſt them, upon Pain of Death: They can beat any Man, and no body dare touch them; for no Intereſt or Money can ſave the Life of him that has beaten a *Janizary*; and upon this Account Ambaſſadors take them into their Retinue, and Travellers hire them for their

Guides: They are diſtinguiſhed from other *Turks* by their Caps, called *Zarcola*'s, which being made like the Sleeves of a *Caſaque*, hang down behind and have a Cone on the Forehead half a Foot long, gilt with Silver and embroidered. Their Pay is from two to ſix Aſpers a Day, and a Piece of Cloth every Year.

The *Janizaries* of the *Port* are 12000 in Number, and live in two Inns or Colleges, containing one hundred and ſixty Chambers, in every one of which are thirty, forty, or fifty Soldiers. Every Chamber has three Officers, *viz.* The *Chobargi*, or Captain; *Oda-Baſha*, the Chief; and the *Vikil Hardge*, i. e. the Steward. Over theſe is the *Kiaya-Bey*, or Lieutenant General of the *Janizaries*; and over all, the *Aga*, or General, who is always a *Muteſaraca*, or Perſon of Quality. He has not Power to puniſh any Soldiers by himſelf, but upon Complaint he delivers him to the *Oda-Baſha* to be puniſhed, which can be done only in the Night, for Soldiers can neither be beaten nor put to Death in Publick. They are beaten on the Soles of the Feet for ordinary Crimes, and if they deſerve Death, they are ſtrangled, and thrown into the Sea in a Sack, a Cannon being diſcharged for every one that ſuffers. The other lower Orders of Infantry are *Azapes*, or Pioneers; *Dgebegi*'s, or Men at Arms; *Topidgi*'s, or Gunners; and others.

The Grand Signior's Cavalry are the *Chiaux*; their Employment is very honourable, for they execute moſt of the Commands of the Grand Signior and his *Baſha*'s, and are ſent on Embaſſies to Foreign Princes: Their Caps are a Foot in Diameter, and are long and flat above: The Grand Signior and his *Baſha*'s wear them. The *Muteſaraca's* are all Perſons of Quality, and their Captain is the Grand Signior himſelf, and therefore they never go out to War but when the Grand Signior goes in Perſon.

24. The *Spahi's* are the ordinary Troopers, or Light-Horſe, and are of two Sorts. Some receive their Pay every two Months, which is from fifteen to forty Aſpers. They are divided into ſix Regiments, and have each a ſeveral Commander, called *Buluk Agaſi*, and different Colours. The others have, inſtead of Pay, a *Timar*, or Penſion, from the conquer'd Territories, where they reſide uſually, and obey the *Sangiac-Bey*, or Lord of the Manor, that rules that Quarter. They are very numerous, being diſperſed all over the Empire, and, being required by the Grand Signior, bring him many Horſe to his Wars. The Grand Signior is Heir to all in his Pay, if they die without Children; but he takes but two Thirds, if any leave Daughters.

Things being thus ſettled, it is eaſy for the Grand Signior to raiſe an Army of two or three hundred thouſand Men in a very little Time, by ſending his Orders to the *Baſha's* and *Sangiacs* only, who come in with their Servants, Soldiers of their Governments, and *Timar-Spahi's* inſtantly. Nor is he at more Charge in War than Peace, for all maintain themſelves and Servants; and ſo good Order is kept in their Camps, that where-ever they are they draw a Market, becauſe they pay exactly for what they have; nay, Merchants travel ſecu rely by or through them, without Fear of being plundered. All their Soldiers are both ſtrong and couragious. They live on a ſmall Matter, and are ſo hardy as never to be wearied with Travel, or long Marches.

They fight like Lions, chuſing rather to be cut in Pieces than retreat, unleſs the Enemy exceed them much in Number. That which makes them ſo couragious, is the Confidence they have in Deſtiny, believing, that they can't die before their Time is come, though an hundred thouſand Men ſeek their Lives, and if they die in the Field, they ſhould alſo have died at Home, which makes them fearleſs of all Diſeaſes and Dangers. They are alſo ſo zealous for their Religion, that they will chearfully die in Fighting againſt the Enemies of their Law, believing that they die Martyrs, and ſhall, after Death, enjoy the Delights that *Mahomet* hath promiſed them.

They will blindly obey the Orders of their Commanders, running into the greateſt Dangers of War as chearfully as to a Feaſt; and beſides, they are well armed with a good Muſket, and a handſome Sword, with other ſuitable Habits and Accoutrements, inſomuch, that it is not to be thought ſtrange, if they are very ſtrong by Land, and bring almoſt every Thing to paſs that they undertake.

25. But though the *Turks* are ſo potent by Land, and ſucceed well in their Wars there, yet are they neither fortunate nor ſtout by Sea, and always worſted, unleſs they be ſix to one; and the Reaſon is, becauſe they have neither good Ships nor good Men. They are very unſkilful in Building their Ships, and when they have done, they not only want good Sea-Officers to manage them, but Soldiers to man them; for even thoſe *Janizaries*, who know not what it is to give Ground on Shore, always go to Sea againſt their Wills, and if they can get off for Money, never fail to do it; and no Wonder, if their Navy can never be victorious, when all Things are ſo unfit for Battle. And hence it is, that the *Venetians* gain great Advantages over them, and particularly in 1656. gave them ſuch a ſignal Defeat at the *Dardanelles*, where they loſt twenty ſeven Ships, thirty ſeven Galleys, and eight Maones, that all the *Turks* were put into Conſternation by ſo great an Overthrow, and imagined themſelves to be Slaves to the *Venetians*, who, had they purſued their Victory, would certainly have driven the *Turks* out of *Conſtantinople*, and, perhaps, out of *Europe*; for the Grand Signior was preparing to fly into *Aſia*; and the *Turks* believing that God had decreed that Time for their Expulſion out of *Europe*, as one of their *Imans* had foretold, would eaſily have departed; but the *Venetians* neglecting the Advantage, ſuffered the *Turks* to reſume their Courage, and thereupon they grew more terrible to the Chriſtians, whom they could not ſee without Regret, and threatened them with Deſtruction at their next *Bairam*, according to their natural Inſolence.

But as the *Janizaries*, when obedient to the Grand Signior, render him one of the moſt formidable Princes upon Earth, ſo they ſtrangely limit his Power when they loſe that Reſpect to him, and revolt, which they pretty often do; and then, ſlighting all Commands, they follow the Dictates of their own furious Paſſions, and run down all that comes in their Way, for they have ſtrangled ſeveral Grand Signiors, and among others Sultan *Oſman*, becauſe they ſmelt out his Reſolution of diſſolving their Body, as the only Curb to his unlimited Power, and ſet up his Uncle *Muſtapha* in his Place; and in the next Succeſſion Sultan *Ibrahim*, his Brother, and Father of *Mahomet*, who reign'd in the Year 1655. And this Prince they reduced to ſuch Straits, that he was forced to grant them all that they demanded, and put many of the chief Officers of the Court to Death to appeaſe them; but whoever they attempt againſt, yet they always ſo reſpect the Royal Blood, and have ſo great a Veneration for the Race of *Ottoman*, that they never ſo much as dream of altering the Succeſſion from that Family.

26. The Subjects of the Grand Signior who are not *Muſſulmen*, are either *Chriſtians* or *Jews*. The *Greeks* are the chief of the *Chriſtians*. They wear the ſame Habit with the *Turks*, except that they may not wear green on any Part of their Bodies, without Danger of being ſoundly baſtinado'd and fined, nor a Turbant all white, leſt they be forced to turn *Turks*, or die for it; but all other Colours they may wear, though it be better not to uſe all red or all yellow, for Fear of offending the Soldiery. The *Papas*, or *Greek* Prieſts, are always clad in Black, but their Cap has a Liſt of white. They wear long Hair, and ſo do their Monks.

As for their Religion, they differ from the Church of *Rome* in theſe Points: 1. They maintain that the Holy Ghoſt proceeds only from the Father, and not from the Son, but at moſt by the Son; yet they believe him to be God, and the Spirit of the Son. 2. They deny the Pope to be Head of the Church, and have four Patriarchs of equal Authority, to whom they ſubmit in their ſeveral Juriſdictions, *viz. Conſtantinople*, *Antioch*, *Alexandria* and *Jeruſalem*; but they are all raiſed by Bribery to their Dignities by the Grand Signior, and confirmed by the Grand Viziers and Baſha's of thoſe Countries, as the Grand Signior's Deputies, from whom they receive a *Caſtan*, or Veſt, at their Confirmation. They have ſeveral Archbiſhops and Biſhops under them; but they muſt firſt have been *Caloyers*, or Monks, and obſerve their Rule during their Lives. The Prieſts are regular, who are not married, and Seculars who marry. 3. They admit of no Purgatory, but hold a third Place, where the Bleſſed remain in Expectation of the Day of Judgment, before which Time, though they believe not the Saints to be admitted into Paradiſe, yet they pray to them to intercede for them. 4. They uſe leavened Bread in the Sacrament, ſuch as they commonly eat, and communicate in both Kinds, as well Laymen as Prieſts, and Women and Children as Men, and condemn the *Latins* for depriving the Laity of the Cup. 5. They have four *Lents*, but the firſt, which begins ſix Weeks before *Eaſter*, and laſts till that Feaſt, they keep moſt ſtrictly, calling it the great and holy Faſt; for they eat nothing then that hath Blood, nor Oil, but only Herbs and Shell-fiſh, as the Cuttle-Fiſh and Oiſters. In the other three *Lents*, one of which is kept in Honour of the bleſſed Virgin, and the other of St. *Peter* and St. *Paul*, they may eat Fiſh and Oil.

27. The *Armenians* keep their Lent ſtricter than the *Greeks*, for they eat no Kind of Fiſh nor Oil, nor drink any Wine, but live only on Bread, Water, Herbs and Roots. Their Churches are like ours, except that the high Altar is divided from the reſt of the Church by a wooden Partition with three Doors, which make a kind of *Sanctum Sanctorum*. They have no Images, but Pictures only. They never kneel in their Churches, not ſo much as at the *Elevation of the Hoſt*, but lean upon Crutches, of which they have Abundance for that Purpoſe. No Man can be admitted into Prieſts Orders till he is full thirty Years old. Prieſts are allow'd to marry but once in their Life-time, and that to a Virgin, who is alſo under an Obligation not to marry, if her Huſband dies.

Their Maſs is much the ſame in Subſtance with that of the *Latins*, ſave that is much longer, for it takes them five Hours in a Day to read it over only, which occaſions ſo many of the Clergy to omit it, that there is ſcarce any Place where it is regularly read, unleſs it be in Mount *Athos* and *Neomagni*, a City of the Iſland of *Scio*, and in ſome few well regulated Monaſteries. Their whole Liturgy is divided into ſeven Books. 1. *Triodion*, which contains the Office for Faſt-Days. 2. *Euchologion*, which is a General Office for all Days, and all Occaſions. 3. *Paraclitiſks*, which contains all the Hymns. 4. *Pentecaſterion*, which is the Service of the Church from *Eaſter* to *Whitſuntide*. 5. *Meneon*, an Office belonging to each Month. 6. *Horologion*, the Service for all the Canonical Hours for every Day. 7. *Antoloion*, which comprehends all that uſes to be read in the ordinary Service of every Month throughout the whole Year. This Part of their Liturgy, they ſay, every Prieſt ought to have, and it ought to lie in every Church; but as to the reſt the Length of them is ſo tedious, and the Price ſo great, that moſt of the Biſhops, Prieſts, yea, even their *Caloyers*, never trouble themſelves with them.

28. Their *Caloyers*, or Monks, lead a very auſtere and exemplary Life. They make three Vows: 1. Of renouncing the World. 2. Abſtaining from Fleſh: And, 3. From Marriage; which they very ſtrictly obſerve, eſpecially in the larger Monaſteries of Mount *Athos*, St. *Michael* of *Neomagni*, Mount *Sinai*, St. *Saba*, and *Jeruſalem*, which are thoſe that are beſt governed. Their Food is the Product of the Earth, and Fiſh, except on Faſt-Days, when they will not eat any Thing that hath Life. Some of them, who are called *Aſcetai*, live only on the Fruits of the Earth, and to that End leave their Cloiſter to live on the Mountains, and never return but on great Feſtivals, to aſſiſt at the publick Service. All their Monks are divided into three Orders, viz. St. *Baſil*, *Elias*, and St. *Marcellus*; and in all of them they have three Sorts of Monks, Superiors or Elders, call'd *Egoumenoi*, the profeſſed and other Fathers, and the Novices, with the Lay-Brethren; but the Superiors, though had in great Veneration, have little Authority, except in impoſing ſome trivial Penances; for they are afraid leſt by Severity the Monks ſhould turn *Turks*, as they have had many Inſtances, and therefore their monaſtick Diſcipline is almoſt loſt; yet they ſtill retain the Prerogative of ſtripping ſuch Monks of their Habit, who have been guilty of ſome notorious Crimes, and will not ſubmit to their Rules.

The Profeſſed alſo take the ſame Liberty to lay down their Habits when they pleaſe, yet not without ſome Scandal to the others, and rendering themſelves contemptible; however, upon their Repentance, and undergoing ſome ſlight Penance, they are re-admitted. Theſe profeſſed Monks, ſo long as they are in the Convent, take care of the Fruit, Corn, Sheep, and other Things that belong to the Cloiſter. The Novices and Lay-Brethren work in the Fields, and though they return ever ſo weary from their Labours in the Evening, yet they muſt attend at a long Prayer, and make many Genuflexions, which they call *Netaniai* before they eat their Supper, or go to their Reſt. Over all theſe Monks are placed Provincials, or *Viſitors*; but inſtead of reforming the Abuſes of the Monaſteries, which ſhould be their Buſineſs, they only gather up the Money which the Patriarch exacts of them. And, indeed, theſe *Viſitors* come ſo often, that they are miſerably poor, and are become thereby ignorant and illiterate, becauſe the Time they ought to ſpend in their Studies, they are forced to employ in labouring for a Suſtenance.

But, notwithſtanding this general Poverty of the Monks, ſome few Monaſteries are ſo well endow'd, and their Monks are ſo rich, as to be able to raiſe great Sums of fifty or ſixty thouſand Crowns to purchaſe the Patriarchate, nay, ſometimes before the Poſſeſſor is dead, for the Grand Signior never refuſes Money. Their ſecular Prieſts, called by them, *Coſmicoi Iereis*, are thus made: Firſt they take their Tonſure upon them, *i. e.* are ſhaven on their Crowns the Breadth of one's Hand, and are thus taken into the Service of the Church. Then after ſome Months they are created *Anagouſta's*, or Readers, becauſe it is their Buſineſs to read the Mattins, Pſalms, and ſome other Things, which the Clerks uſe to ſing. When they have ſerved the Church ſome Months in this Office, the Biſhop confers upon them Deacons Orders, and a Power of waiting at the Altar, and chanting the Epiſtle. When they are Deacons, if they have a Mind to marry, they are allowed to do it, provided they give Notice to the Biſhop of the Woman and her Abode, that he may enquire after her; for if ſhe be not chaſte, wiſe, and handſome, ſhe is not a fit Wife for a Prieſt, nor will the Biſhop ſuffer their Marriage. And, indeed, the *Greeks* are ſo ambitious to beſtow their Daughters on the Prieſts, that if it be known that a Prieſt deſires to marry, all are forward to ſeek out the greateſt Beauty for him, as if they were to conſecrate it to God, and to court ſuch Women they are diſpenſed with in their Service, and, upon their Return into it, are made Prieſts.

29. The Under Miniſters of the *Greek* Church are, 1. *Seruophylaces*, or Sextons, who look after the conſecrated Plate, and other Utenſils of the Church. 2. The *Colonarchai*, who informs the Singers what Tunes to ſing. 3. The *Tyrreroi*, or Porters, who open and ſhut the Church Doors. 4. The *Canillaptai*, who take Care of the Tapers, of which they conſume many. The Service of the *Greek* Church is ſaid ſeveral Times a Day. In the Monaſteries they riſe at Midnight to perform a particular Form of Devotion, called *Meſonuction*, and to prepare them for ſome great Feſtival, they turn it into an *Holonuction*, or an All-night Service. After this they celebrate a Service at Break of Day, called *Oertos*; another at the firſt Hour, called *Protiora*; and ſo again at the ſecond Hour, called *Tritiora*; and at Nine o'Clock in the Morning, called *Ektiora*: Then follows the *Ennati*, the Liturgy, and the Euchariſt at Three o'Clock in the Afternoon, and *Eſpirenes*, or Evening-Service; after which they uſe ſome ſlight Exerciſe till they go to Supper, and when that's done, they return again to Church, to perform the Service called

Apodipne,

Apodipho, or, the Service of the Night, which in the *Romiſh* Church is called the *Complines*.

The Miniſters of Churches follow the Example of the Monks as near as poſſible, ſo that in all Churches, be they rich or poor, there is every Day performed the *Hagai Koinoma*, or Celebration of the Euchariſt, and ſome Churches more than once, but at different Altars. None of theſe Ceremonies or Uſages are performed in Conformity to the Church of *Rome*, for they abominate both them and all their Cuſtoms, and if a *Latin* Prieſt ſhould ſay Maſs at any of their Altars, they would waſh them as polluted. At the Cloſe of every *Thurſday* they excommunicate the Pope and all the *Latin* Biſhops, and damn them as ſo many Hereticks and Schiſmaticks.

They have ſo great a Number of Holidays, that there is no Day in the Year but is conſecrated to ſome Saint; but thoſe they have in greateſt Veneration, are, beſides the Feaſts of Chriſt and his Apoſtles, the Invention and Exaltation of the Holy Croſs, in *September*; the Feaſt of St. *Demetrius* in *October*; St. *John Chryſoſtom*, and the Virgin's Entrance into the Temple in *November*; St. *Nicholas*, St. *Spiridion*, and St. *Ignatius* in *December*; the Feaſt of St. *Baſil*, St. *Anthony*, St. *Athanaſius*, St. *Cyril*, St. *Gregory Nazianzen*, and Chriſt's Baptiſm, in *January*; St. *Simeon*'s Meeting with Jeſus and St. *Blaſius* in *February*; the Forty Martyrs in *March*; St. *George* in *April*; St. *Athanaſius*, *Conſtantine* the Great and *Helena*, and the Invention of St. *John Baptiſt*'s Head in *May*; St. *Marinus*, *Elias* the Prophet, St. *Paraſaua* and St. *Pantaleon* in *July*; Chriſt's Transfiguration, the Death of the Virgin *Mary*, and the Beheading of St. *John Baptiſt* in *Auguſt*.

On theſe Days they read in the Church the Life and Actions of theſe Saints in the vulgar Tongue, out of their *Synaxarion*, or Martyrology, and conclude the Service with the Diſtribution of the *Euchariſt*; and generally the People, who come to hear, bring an Offering of Bread, Wine, Oil, Tapers, and the like, for the Uſe of the Prieſts, and give liberally to the Poor, even beyond their Abilities. They celebrate *Eaſter*, which they call, Παχα αναστασίμον, *i. e.* the Paſſover of the Reſurrection, with great Demonſtrations of Joy. By the Laws of their Church, they are obliged to confeſs themſelves four Times a Year, but not ſo particularly as the Church of *Rome* requires, and after they have done ſome Penance, or promiſed, they are abſolved in Form of a Prayer: *Let thy Sins be forgiven.*

They look upon Baptiſm as indiſpenſibly neceſſary for Salvation; and though they baptize not till eight Days are paſſed after the Birth, unleſs in Caſe of Neceſſity; yet, when a Child is in Danger, they allow Laicks of both Sexes to baptiſe, becauſe they dare not hope well for Children who die unbaptiſed. They rebaptiſe Hereticks and Apoſtates, when they repent and deſire to come into their Church. Among the former they reckon the Papiſts: They have a great Averſion to Images in *Baſſo-Relievo*, and ſay, the Papiſts imitate the Heathens in the Uſe of them, but the Pictures of Chriſt and the Saints they account holy, and pay a Reverence to them, and to that End ſet them up in their Churches on their Feſtivals.

30. They condemn all the Weſtern Chriſtians for eating Things ſtrangled, and account them Hereticks for ſo doing. They follow the Doctrines of the ancient Fathers, and the Canons even of the firſt General Councils, very exactly, and think all others of no Force. The *Turks* make them pay very ſevere Capitations for their Religion Sake, and which is worſe to them, take their Children from them often by Force, to educate them in the *Mahometan* Faith, and make them *Ichlogans*. Though they have many Churches, yet they are obliged to take great Care to keep them in Repair, for Fear they ſhould have no Churches at all, for the *Turks* very rarely will ſuffer them to rebuild them, if they fall; but they are allowed to repair them. In their Churches they have a Candleſtick which holds three Candles, by which, they ſay, is repreſented the Holy Trinity; and another two, which ſignify the two Natures in Chriſt. Their Sacerdotal Veſtments, have alſo the like Myſteries. In giving the Bleſſing, they make the Sign of the Croſs from the Right to the Left, contrary to the *Latins*.

Maids ſhew not themſelves before they are married, even to their Relations, and therefore go not to Church for Fear of being ſeen. They are married by a Prieſt, and give a Ring like the *Latins*, but take Godfathers and Godmothers, which they do not. The Bride and Bridegroom being come before the *Papa* or Prieſt, he ſays ſome Prayers over them, while the Godfathers and Godmothers hold a Garland of Flowers, mixed with *Orpine*, over their Heads, and a Pall over it. The Father and Mother of the Bride give her; and when Prayers are done, the Bride and Bridegroom drink to one another, and the Glaſs being given to the Prieſt, he merrily drinks it off, and then breaking the Glaſs, ſays, *So may this Bridegroom break the Virginity of the Bride.* Their other Rites are like thoſe of the *Latin* Church.

Their ordinary Way of Living is much like the *Turks*, only they are more wicked, for they are covetous, perfidious, treacherous, *Sodomites*, revengeful to the higheſt Degree, very ſuperſtitious, and great Hypocrites, for which Qualities they are ſo much deſpiſed by the *Turks*, that they do not Value them though they turn *Mahometans*. They are greater Enemies to the *Papiſts* than the *Turks* are, and none would hinder them from being Maſters of *Turkey* more than they, if Providence ſhould ſo favour them to recover what the *Turks* hold in *Europe*. Their Women are beautiful, but a little too fat, and moſt of them very proud.

31. The *Jews* in *Turkey* uſe the ſame Habits with the *Turks*, only may not wear green, or a white Turbant, or red Veſts, and ſo are obliged to wear their Meſtes, Pabouches and Caps, which are ſhaped like an Hat, of a Violet Colour only. Their Religion is contained in the *Old Teſtament* and *Talmud*. As to their Manners, they are great Cheats in all Places, and their only Contrivances are to vex both *Chriſtians* and *Turks* with their Taxes and Tricks, which is the Reaſon they are hated and deſpiſed in all Places. All the *Jews* and Male *Chriſtians*, which are ſubject to the Grand Signior, pay the *Karadge* yearly which is a Tribute of four Piaſtres and an half, beginning to pay it about nine Years old; but the *Chriſtian* Prieſts and Monks are exempted from it, and ſo are the *Jewiſh Rabbis*; the Women alſo paying nothing. This Tax brings in a great Revenue to the Grand Signior, and no body can avoid it by changing their Habitation, for at whatever Place they come in their Travels, their *Karadge* is demanded, and if they have paid it in any other Place, they muſt ſhew their Acquittance, and if they can't produce one, they muſt pay it, and take a Note or Acquittance to ſerve them in other Places; but ſuch as are not Subjects to the Grand Signior, do not pay this Tribute, and to ſhew that they wear an Hat, and have a Certificate of their Abode from a Conſul.

32. The Accounts already given from the Works of the moſt authentick Authors that have been publiſhed, cannot fail of entertaining as well as inſtructing the Reader; but, perhaps, it may not be amiſs to make ſome Additions to theſe, from Materials of another Nature; ſuch as the Informations of thoſe who have reſided long in the Dominions of the Grand Signior, and Books written in or tranſlated from the Oriental Languages. To render theſe Remarks of the more Uſe, by keeping them in a certain Method, we will, as near as may be, purſue that which in the Courſe of this Section has been already laid down. The Dreſs or Cloathing of the *Turks*, though it appears odd and uncooth to us, is nevertheleſs founded upon Reaſon, and for that very Cauſe is not much affected by Faſhion; ſo as they have Nothing of Levity in their Nature, ſo there is Nothing can give Men a graver Appearance than the *Eaſtern* Habit; and in reſpect to all the Uſes of Cloathing in a Climate like theirs, it will be found, that it anſwers them perfectly well. By changing the Stuff of which their Robes are made, from Silk to Cloth, and from plain Cloth to Cloth lined with Furrs, the Change of Seaſons is provided againſt. Their Habit agrees likewiſe with their Manner of Living, they

ride without any Inconveniency. The Manner in which their Houſes are furniſhed is ſuited to their Garb, and every Part of that is well contrived for the great Uſe they make of Bathing. The only Thing in the *Turkiſh* Dreſs, that ſeems to deſerve Reprehenſion, is their Turbants, and it is obſervable, that this is the only Part of it that is ſubject to Fancy or Change; for as to the reſt, there has been little or no Difference introduced in the Courſe of many Years.

The modeſt and temperate Way of Living, in Uſe amongſt the *Turks*, is very commendable, and the more ſo, becauſe it is not carried to any Degree of Severity or Extravagance. They abſtain from all Animals that die of Diſeaſes, that are choaked, ſtrangled, or knocked on the Head, or that break their Necks; but in Caſes of great Neceſſity, they allow that even theſe may be eat; but from Blood and Swines Fleſh they moſt religiouſly abſtain. They have not many Diſhes, nor any great Variety of Dreſſing, but thoſe they have are ſavoury, cheap, provided with little Trouble, and their Meals are ſoon over. All this is alſo very agreeable to their Climate and Way of Life, but at certain times, when they have a mind to indulge, they have their Niceties, eſpecially in Paſtry and excellent Liquors, which they ſtile Sherbets, compoſed of a Variety of Ingredients, and always cool and pleaſant. But after all, their great Dainty is Water, and ſome, from a Principle of Charity, carry it in Stone Veſſels through the Streets of *Conſtantinople*, and offer it with great Civility to ſuch as deſire to drink; whence we diſcern the Propriety of that *Eaſtern* Expreſſion, which occurs in our ſacred Writings, of giving a Cup of cold Water; which, from the Difference of our Manners, does not appear to be any great Matter here.

As for the Practice of Drinking, the common People in thoſe Countries have it not; ſo that if you offer Workmen any Thing for that Purpoſe, they anſwer very naturally, that they are not dry; but ſtill you may oblige them, if you are diſpoſed, by calling the Coffee-Man, who ſtands at the Corner of every Street with his Utenſils, and all working People will be very grateful for a Diſh of Coffee. But that we may not deal altogether in Generals, we will take this Opportunity of ſpeaking particularly to three Heads, with reſpect to which we find very little in our printed Books that is exact and worthy of Credit. Theſe three Heads ſhall be *Coffee*, *Opium* and *Wine*.

As to Coffee, which the *Turks* call *Caphuab*, it was firſt uſed in the Country where it grows, in the Kingdom of *Yemen* in *Arabia-Felix*, which from its producing Coffee, our famous Mr. *Ray* delivers it as his Opinion, that it may be ſtiled not only *Felix*, but *Feliciſſima*, that is not barely the happy, but the moſt happy. A Multitude of Writers have deſcribed Coffee, and ſome have pretended long ago to give us diſtinct Accounts of their own Knowledge and Experience, and yet it is but a very little while that we have known any Thing of it with Certainty, ſo as to be diſabuſed in Reference to thoſe Fables that have gone current for many Years, though without having Foundation or even Colour of Truth. The Tree then that produces Coffee is in Reality a kind of Jeſſamine, which bears firſt a very beautiful and odoriferous white Flower, inclining to yellow, which is compoſed of five Leaves reſembling the *Spaniſh* Jeſſamine. As theſe Flowers drop off, the Fruit begins to appear, which is at firſt green, then of a pale red, turns next to a bright Crimſon, by Degrees of a very deep red, and at laſt inclines to a duſky Brown. In Size and Shape it reſembles a honey Cherry, but inſtead of a Stone, there lies within the Pulp two of thoſe that we call very improperly Coffee-Beans, with their flat Sides joined to each other, and their Convex Sides outward; as there are Flowers, green Fruit, and ripe, all upon the ſame Tree at once, there are ſeveral Coffee Harveſts; but the moſt conſiderable is that in *May*, when by laying Cloths under the Trees, and ſhaking them, the ripe Fruit drops off in great Quantities, out of which the Beans are taken, and very carefully dried, firſt in the Sun, and then in the Shade; and upon their curing in this Reſpect, their Goodneſs chiefly depends.

It is ſaid, that the Virtues of Coffee were firſt diſcovered by the Friſking of Goats that fed upon it, and their living almoſt wholly without Sleep, which put a Prior of a Convent upon trying what Effect they would have upon a much groſſer Animal, a fat, ſleepy, lazy Monk, upon whom having wrought a wonderful Cure, Coffee came into general Uſe. I cannot vouch for the Truth of this Story ſo well as for what follows. It paſſed from *Arabia* into *Egypt*, where it began to be much taken Notice of, the *Turkiſh* Doctors doubting whether the Uſe of it was not forbid by their Law, becauſe they held its Properties to be the ſame with thoſe of Wine. This Point was cleared up by a *Mufti*, who was a great Friend to that Liquor, and wrote a Treatiſe in Defence of it, *A. H.* 875. *A. D.* 1470. The Name of this learned *Mufti* was *Abda leader Ben Mohammed*, and his Sirname *Al Anſari*, and the Title of his Work, *Omdat al Safu át fi hall al Cabuat*: We have been the more particular in mentioning this Book, becauſe there is a Copy of it in the *French* King's Library amongſt the *Arabick* Manuſcripts, N° 944, and there are in it ſome very curious Obſervations.

It is ſaid that there are in *Grand Cairo*, no leſs than two thouſand Coffee-houſes; there are a vaſt Number at *Conſtantinople*, and in all the Cities in the *Turkiſh* Dominions; but ſometimes on Account of the diſtracted State of their Affairs, theſe Coffee-houſes are ſhut up; but in Times of Peace they are much frequented, more eſpecially in the Mornings and Evenings, when ſuch as are moſt at Leiſure, and are in tolerable Circumſtances, paſs an Hour or two there in Converſation, in hearing the Muſick which the Maſters of ſuch Places provide, or Books of Tales read, for which they have People on Purpoſe, who from a kind of Pulpit divert the Audidience with Collections of Stories of all kinds, good, bad or indifferent. I will for the Reader's Amuſement quote one, which is not much amiſs.

“ When the *Tartar* Slaves are croſſing a River, and find themſelves in Danger of being drowned, they catch hold of the Horſe's Tail that paſſes before them, and by this Means frequently eſcape. From hence comes the Proverb. *Lay hold of the Tail if you can, and be ſure keep it faſt.* There was an honeſt *Muſſulman* once, that by applying it luckily eſcaped being empaled, and the Caſe was thus; he had ſpent many Years in Study, had moſt Part of the *Alcoran* by Heart, was acquainted with many Sciences, but by attending to them, had ſlipt a very material Science, that of knowing how to live; ſo that when he grew in Years, though his Mind was well fed, his Body was in Danger of Want. He addreſſed himſelf to the Sultan *Mahomet* the IVth. on whoſe Memory be Peace! beſeeching him to ſave a Son of Science from ſtarving. The Sultan having conſidered his Caſe, gave him no other Anſwer than this; Friend, *with all your* Learning *don't you know, that the* World *is a Tail, and happy is he that gets* hold on it. The *Muſſulman* went Home in Deſpair, where after paſſing three Days in deep Meditation, he thus addreſſed himſelf to his *Ruſſian* Slave, from whom he had learnt that Tongue; Infidel, ſays he, let us change Cloaths, carry me to the Market, and ſell me to ſuch a one. His Orders were obeyed; he worked for ſix or eight Months in the Fields with the other Slaves, and appeared ſo very ſtupid, that he was the Jeſt of all his Companions. At the End of that Time he began to preach, affirm'd that he had Viſions, and that the Prophet, whoſe Name he bleſſed, had taught him the *Alcoran*, of which he repeated many Chapters. This made a very great Noiſe, he was viſited by every Body, and Nobody went empty handed; at laſt, the Grand Signior heard of it, and ſent for him. As ſoon as he came into his Preſence, the Sultan recollected him, *Friend*, ſaid he, *have I not ſeen you before?* For God's Sake, *cry'd he*, do not betray me; you know the World is a Tail, and I have but juſt got hold of it. The Iſſue of the Matter was, that the Man got a living by his Wit, and the World has got a good Story. My Friends, you'll be never the worſe for hearing it, and

" believe me, you will be much the better for remem-
" bring it; for of all Kinds of Knowledge, there is none
" more important than this, that the *World* is a *Tail*,
" and *happy* is he that can lay *hold* of it." I have ſeen a Book that belonged once to Sir *Roger Manly*, the true Author of the *Turkiſh Spy*, which contained the Stories that were read in a Week at a Coffee-houſe at *Damaſcus*, and it was in *Italian*. I wonder it has not been publiſhed, for in my Judgment it was much ſuperior to any Thing of the Kind that I have ſeen in Print, and I do not doubt but there are many ſuch Collections in the Cabinets of the Curious in *Italy* and *France*.

Every body knows that the *Turks* are great Takers of *Opium*, and much has been written upon thoſe Subjects, about which, however, there are many Miſtakes; we will endeavour to rectify ſome of them. The *Turks* call it *Aſſioun*, and the beſt comes from *Aboutige* in *Egypt*. It is very true, that as much as we have heard of *Opium*, there never was any of it in *Europe*. That which is uſed by the *Turks* of Diſtinction, is drawn by Inciſion from the largeſt Sort of *Black Poppies*, by laying new Ropes under them in the hotteſt Seaſon of the Year; when they are ſlit with a Lance, the Liquor falls on and ſticks to the Ropes in Drops of an Amber Colour, which are carefully collected, and ſold at a conſiderable Price; and this is the true *Opium*. They afterwards mow and extract the Juice from the Poppies, which over a ſlow Fire they reduce to the Conſiſtency of Turpentine, and afterwards make it up in Lumps and cover it with the Leaves; this is properly *Meconium*, but is what we receive for and generally call *Opium*. The beſt is of a black Colour, tough rather than brittle, of a pungent ſtupifying Smell, and free from Droſs and Sand. The worſt Sort is of ſeveral Colours, clammy in ſome Places, hard in others, and full of Droſs and Impurities. What is extracted from *Garden Poppies* in *Europe*, is what we ſtile *Diacodium*; and this, if it be carefully made, of the largeſt and beſt Poppies, properly cultivated, and in a very dry hot Seaſon, comes nearer *Opium*, and may be uſed with better Effect than the *Meconium*.

When the latter is purified and diſſolved in ſome convenient Vehicle, it is ſtiled *Laudanum*, and when compounded with other Ingredients, theſe are marked by a Variety of Epithets added to the Word *Laudanum*. There is alſo a ſolid *Laudanum*, which is only the *Meconium* well purified, and reduced again into a ſolid Form. The very beſt Method of doing this is by mixing the pureſt *Meconium* with Rain-Water, and then evaporating it over a ſlow Fire, to the Conſiſtence of a Syrup; after which it will ſoon grow dry of itſelf.

The *Turks*, the *Perſians*, and, indeed, all the Eaſtern Nations, take *Opium* as we do Wine or Drams; and the *Chineſe* are ſaid to have the beſt Preparations of it in the World. It exhilerates the Spirits wonderfully, and the Uſe of it is ſo bewitching, that when People have once got a Habit of taking it, they cannot leave it off; and as they feel the Effects of it leſs by Uſe, they are obliged to increaſe their Doſe, till at laſt they come to take amazing Quantities. Mr. *Gracin*, an Author of good Credit, ſays, that he ſaw a Fellow at *Bengal*, who for a Roupy took four Ounces of it, which made him ſleep all that Day; but the next Morning he came to himſelf, and appear'd not much the worſe for it. This, however, is very unuſual, and it is very rarely that any Perſon in *Turkey* ventures upon half an Ounce, and this muſt be after many Years Practice. Thoſe who take it while they are young, ſeldom live to be above fifty; but thoſe, who begin to take it at that Age, are not ſo much affected with it.

As to Wine, there is nothing clearer than that the Uſe of it is forbidden to the *Turks* by the Interpreters of their Law, except in Caſes of Neceſſity, when it is preſcribed them as Phyſick. The Clergy make a great Point of carrying the Edicts againſt the Uſe of it into the ſtricteſt Execution, but to very little Purpoſe; and what they do of this Kind, produces as bad Conſequences as Drunkeneſs; for upon the coming out of any new Edict, or once or twice in a Year to keep up a Show of executing the old ones, the Sub-Baſhaw and his Officers go into ſome miſerable Tippling houſe, let all the Wine about, take every Penny of Money they can lay their Hands on, break and deſtroy whatever they meet with in the Cabin; and, to complete all, treat the Maſter of the Houſe, at his own Door, with a delicate Baſtinadoe; of which, if he complains, or inſinuates that he depended upon the Officer's Protection, in Conſideration of an annual Preſent, he is probably ſent to Gaol into the Bargain. But notwithſtanding all this, there are every-where Tippling houſes kept by the *Greeks*, for the Sake of getting a little Money, where yet they are expoſed to a great many Inconveniencies, and to the daily Inſults of the *Turks* when in their Cups.

Their Hovels are both within and without the moſt deſpicable Places that can be imagined. Four Mud Walls compoſe the Houſe, plaiſter'd on the Inſide, painted over with bawdy Figures, drawn in Charcoal by drunken *Turks*, three or four rotten Benches, and a few Earthen Pots in which the Wine is both drawn and drank. Wretched as theſe Places are, they want not Company or Noiſe from Morning till Night, the *Greeks* being exceſſively abuſive, and the *Turks* brutally quarrelſome in their Liquor; which ſhews, that, from a political Principle, the Prohibition of Wine in theſe Countries is a very right Thing.

Almoſt all our Travellers agree, that the *Turks* are extravagantly ignorant; but the Queſtion is, whether themſelves are good Judges of this, and whether it lies much in their Way to be acquainted with ſuch as apply themſelves to Letters. It is, indeed, very true that the *Turks* are prodigiouſly fond of Aſtronomy, Geomancy, and other Arts of Divination, which are very juſtly mentioned as Proofs of their Ignorance; but in Excuſe of this, we ſhould conſider, that mean People practiſe this with Belief, and that Perſons of higher Stations do it out of Cunning. We ought alſo to reflect, that it is not ſo long ſince we ourſelves were addicted to theſe Fooleries, in which, after all, the *Turks* excel us extremely, not that their Aſtrology or other Arts are a Grain more certain, but the Cheat is managed with infinitely greater Dexterity. The *Turks* have Grammars and Dictonaries of their own Language; Books of Divinity, Hiſtory, Poetry, Phyſick, Mathematicks and Morality; ſo that after all, perhaps, they are not quite ſo barbarous in this Reſpect, or at leaſt not ſo univerſally ignorant as they are repreſented; nor do we find, that in any Negociations with their Viziers, they are apt to be over-reached in their Politicks.

Their Religion, indeed, is abſurd enough; but this is common to them and no other *Mahometans*; and, perhaps, they appear more abſurd to us, than they really are, from our Want of being acquainted with many of their Doctrines. It is moſt certain, that they entertain very odd Notions of the State of the Dead, and are actually perſuaded, that they have ſome Kind of Senſation in their Graves. An *Engliſh* Merchant once walking by a *Turkiſh* Village, with a *Janizary* before him, came to the Burying-place of the *Jews*, where a miſerable, ſhabby-looking Fellow was ſitting before one of the Tombs; upon which the *Janizary* ſtept up to him, and accoſted him in theſe Words: *You old Raſcal, what do you do out of your Grave? get into it again this Minute, and don't ſtink the World a ſecond Time!* The poor *Jew* marched off as faſt as he was able, and the *Janizary* took it for granted that he was ſneaked into his Grave again.

But with all their Superſtition, there is no Want of Free-thinkers amongſt the *Turks*, who take great Liberties with their Religion, and perhaps believe very little more of it than the *Chriſtians* themſelves. But they are obliged to keep their Notions very ſecret, for the Civil Government ſtanding upon the ſame Baſis with their religious Belief, any open Declarations of Infidelity would not only render a Man highly infamous, but ſubject him alſo to grievous Puniſhments. The *Derviſes* or Monks are ſometimes Enthuſiaſts, but, generally ſpeaking, they are notorious Cheats and Hypocrites; they commonly affect a very warm Zeal for their Religion, which they expreſs by being very rude to *Chriſtians*, and taking uncommon Freedom with Perſons of all Ranks among their own People, who very unwillingly ſubmit to their Impertinences for Fear of opening the Eyes of the Vulgar, who cannot but bear a great Reverence to Religion, when they ſee that the more ſtrict Profeſſion of it, ſets the meaneſt Man on a Level with the greateſt. Some of the enthuſiaſtical *Derviſes* are ſincere in their Way, and do ſome Service to Society by reproving the great People for their Offences.

As to the Slaves in *Turkey*, they are the moſt ſubmiſſive, tractable and obedient Creatures in the World, and tho' there are Maſters, that from the natural Brutality of their Tempers, treat them harſhly enough, yet generally ſpeaking they are tolerably well uſed; nor are they totally precluded from the Benefit of the Laws, for a Slave may ſummon his Maſter before the *Cadi* for ill Uſage, and if he alledges that their Tempers are ſo oppoſite, that it is impoſſible for them to agree, the *Cadi* will oblige his Maſter to ſell him; but then it muſt be allowed, that this Way of coming to Market does not much recommend him to the next Maſter; what affords theſe poor People moſt Ground of Complaint, is, the little Care taken of them in the Time of the Plague; for the *Turks* upon a Principle of Fatality, and a Belief that every Man's Fortune, as they phraſe it, is written in his Forehead, when they loſe one Slave by the Diſeaſe, put the next not only into his Room, but into his Bed, without taking any Precautions, and ſo loſe perhaps half a Score, one after another.

An *Engliſh* Merchant who was very intimate with an honeſt and ſenſible *Turk*, that was half ruined by this wild Way of acting, convinced him of the Folly of it, by a very eaſy and natural Experiment. He bid him take three large fine Lemons, one of which had juſt begun to rot, and place them ſo as that this rotten Lemon touched one of the ſound ones, and not the other; the next Day the ſound Lemon corrupted; the *Turk* ſaw the Force of the Argument, cauſed his Slaves Chamber and Bed to be well waſhed with Vinegar, all the Utenſils changed, and every Thing to be thoroughly perfumed, and theſe Precautions had their Effect, for the next Slave he had did very well, and it is to be preſumed, the Maſter was cured of his Folly ever after. By the Way let us obſerve, that the Price of Lemons is a ſure Way of knowing whether the Plague increaſes or decreaſes, when *Conſtantinople* is infected, for almoſt the ſole Nouriſhment they give the Sick, is the Juice of that Fruit, which they ſuck continually, and as ſoon as one Lemon is exhauſted, a freſh one is put into the Hands of the Patient, Experience having taught them, that Acids contribute moſt of any Thing to the Cure of this Diſtemper.

That the *Turks* are exceſſively jealous, is a Fact as certain, as that their Women are exceſſively lewd; and therefore if a Woman ſpeaks to a Man, they take it for granted, that ſhe has lain with him, or would lie with him, if ſhe had an Opportunity; and when a *Frank* attempts to perſuade a *Turk* of the contrary, by inſinuating that they may like the Company of a Man, for the Sake of Converſation, their common Anſwer is, Friend, if you catch a Perſon's Hand in your Pocket, would you think it was ſufficient Excuſe if he ſhould tell you he did it only out of Curioſity, to ſee what was in it. The beſt Security they have againſt their Slaves, the only Males that have any Opportunity of coming near their Women, is the Severity of their Chaſtiſements, for an Offence of this Kind he is puniſhed with Death without Mercy; yet even this dreadful Remedy is not always effectual, for their Women having ſo much Leiſure on their Hands, have Intrigues always in their Heads, and it is allowed that none in the World exceed them in their Skill of managing them with Dexterity and Secrecy. We have already obſerved, that the deſpotic Power of the Grand Signior, and the Vizier *Azem* is neceſſary according to the Scheme of their Conſtitution; and though it is not limited by Law, yet it finds a natural Reſtraint from the Fear of popular Inſurrections, which are more terrible in this than almoſt any other Country. As to the *Turkiſh* Juſtice, it is a Point of all others, the leaſt underſtood by Strangers, at which we need wonder the leſs, when we conſider, that even in *Europe*, one Nation knows very little of the Laws and Cuſtoms practiſed in another. But however it is certain, that the *Turkiſh* Law very much reſembles what is ſtiled the common Law in this Kingdom; that is to ſay it depends upon Maxims and Rules that are founded chiefly in Uſage.

But there is one Thing that deſerves particular Notice, and that is, that in no Country in the World there are ſuch Numbers of falſe Witneſſes, nor are theſe leſs uſed by the Chriſtian Merchants eſtabliſhed amongſt them, than by the *Turks* themſelves; for as every Thing in their Courts of Juſtice muſt be proved by two legal Witneſſes, that is, by *Muſſelmen*, Merchants would find it impoſſible to recover their Right, if they were ſo ſcrupulous as not to make Uſe of this Practice. In ſuch a Caſe they call in a Couple of *Turks* of their Acquaintance to their Aſſiſtance, and theſe having firſt very ſeriouſly aſked the Merchant, if the Fact be as he ſtates it; upon his anſwering in the affirmative, immediately tell him, Well, upon thy Credit we will ſwear it, and are as good as their Words, for which they are gratified with a ſmall Preſent; nay, in publick Cauſes, ſuch as Petitions for repairing a Church, if the Cauſe ſticks for want of a Witneſs, a grave *Turk* that ſtands by will come in a Volunteer, and tell a formal Story how he came to know ſo much of the Matter as will ſet the Thing a-going; but he expects to have his Preſent next Day, and it would be a Thing of very bad Conſequence to neglect it; but the greateſt Objection to the *Turkiſh* Law ariſes from the Corruption of thoſe who diſpenſe it; for every Man is at Liberty to apply to the *Cadi* privately, and then without Doubt what he ſuggeſts is ſupported by more weighty Arguments than can be delivered in Words. Yet with all theſe Diſadvantages, and without Doubt they are not inconſiderable, an *Engliſh* Lawyer who had great Opportunities of examining this Point to the very Bottom has ſuggeſted, that the *Turkiſh* Manner of Proceeding is not without ſuch Conveniences as balance all theſe Defects. The Reader no doubt would be glad to hear him, as his Remarks upon this Head are more to the Purpoſe, than thoſe that could be made by any other Man, not of the Profeſſion.

" One ſovereign Virtue, ſays he, of the *Turkiſh* Law, " is this, that every Man is his own Bailiff and Summoner, without the Plague of Proceſs, Returns, " *Alias*, *Pluries*, and I know not what Hooks or " Crooks, that often beggar a Suitor, before he can " bring his Adverſary to anſwer him. But a Man, in " this Country, requiring the Adverſary to go before " the Judge, he muſt without Shift or Delay go; and " if he offers to eſcape, a Thing ſcarce known there, he " muſt run quite away, for the very People will almoſt " deſtroy him if they catch him. Here is no ſuing out " a Writ, going to the Sheriff, from him to the Bailiff, " with a farther Train of ill Conſequences I am aſhamed to remember.

" Another Virtue, and a ſingular one, is, that no Man " anſwers by Attorney, but in proper Perſon only. " The Courſe is, when the Parties come before the " Judge, the Plaintiff makes his Demand for Money " lent, the Price of Goods ſold, or the like. The Judge " ſits all the while with his Paper upon his Hand, and " writes his Minutes. *What ſay you to it?* ſays he to " the other, and then he makes his Defence; if there " be a Writing ſhewed, the Defendant fails not to " own it; there are no *Non eſt factums* for pure Delay, " to be tried. It is there infamous in the greateſt Degree for a Man to deny his Writing, when ſhewed " to him before a Judge, or indeed any Matter of Fact " that is true, after it appears to have been ſo to his " Knowledge. What a vaſt Retrenchment of Delay " and Charge is this? Men anſwering in Perſon can " ſcarce be brought to ſpeak falſe; they muſt be " ſtrangely abandon'd to all Shame, that in the Face " of a Court, without ſtammering or bluſhing, will do " ſo. Whereas when they ſit at Home, and leave " their Attorneys and Council to plead for them, " there ſhall be falſe Pleas for Delays profeſſedly, and " no Concern at all to their Countenances.

“ The *Turkiſh* Law ſeems to have another Virtue, which lies in the Method of Proof; after the Judge hath heard the Demand and the Anſwer, he conſiders on which Side the Proof lies: If the Dealing be denied, as by the Defendant's ſaying he bought no Goods of the Plaintiff, or the like, the Judge bids the Demander prove it; and if Witneſſes are not ready, he gives a few Days to bring them, becauſe he might expect the other Party would have owned the Dealings; but if he ſaid, *It is true, I bought the Goods, but I paid him for them*, then the Judge bids the Defendant prove; but he will never let Witneſs come to ſwear on both Sides to one and the ſame Fact, for that is to make ſure of a Perjury; ſo in a *Turkiſh* Court, Witneſſes never confront and upon Oath contradict one another; but being once taken as Witneſſes, the Cauſe is at an End, the Demand is made and proved, What would you have more? But yet, if the Witneſſes are not credible, that Exception is allowed, and Witneſſes heard to prove it, and the Judge determines thereupon, whether he ſhall believe the Witneſſes or not, and accordingly judges of the Main.

“ Another admirable Virtue of the *Turkiſh* Law is, that Decrees or Deciſions never fight one with another; and yet the Party hath the Benefit of an Appeal. They call their Decree an Odgett, which is a ſmall Scrip or Ticket, which the Judge writes upon his Hand, and gives out to the Party that hath obtained Sentence. After this Odgett made and ſigned, and given out, no Judicature or Authority in the Empire can queſtion or diſcharge the Matter, or the Effect of it, no not the Great *Divan*, although the Odgett were made by the meaneſt Judge in the Empire. This ſeems very much to reſemble the Laws of the *Medes* and *Perſians*, when a Decree might not be revoked. It is certain, that in *Turkey* there cannot be more than one Odgett or Decree in one and the ſame Cauſe.

“ A *Turkiſh* Judge would laugh, if he were told of our Judgments, Writs of Error, and Error upon Error, Appeals, Reviews, *&c.* with full and entire Sentence of the Cauſe pronounced in all, and the latter giving the former ill Language, and looking as if a Judgment in a Cauſe were but a Foundation whereupon to commence a new Suit, to the incomprehenſible Delay and Expence wherewith the Parties, their Heirs and Aſſigns are tormented. But it will be ſaid, How then can the Parties have an Appeal? As to that, if either Side thinks the Judge unſkilful or partial, at any Time before Odgett made, he may appeal to a Superior Judge, and then the Cauſe is as if it had not been heard; but the Parties go before the Judge by Appeal, as if the Cauſe originally came before him, and then he makes the Odgett; but whoever makes it, the Odgett is irreverſible.

“ A farther Virtue of the *Turkiſh* Law is this: All Equity is comprehended in it. Men there are bound by their Contracts as well as here; but if a Contract prove very unequal, the Judge takes Notice of the Unreaſonableneſs, and gives Relief. As if a Man takes an Houſe to build at half the true Value; when the Work is done, he may ſue in a *Quantum meruit* for the Whole; and it is enough to ſay, I thought I might have done it for the Price, but was miſtaken. This goes farther than our Courts of Equity, for they do not relieve againſt any hard Bargains, without Fraud or Circumvention proved. It hath been ſaid, they do not ſit there to relieve Fools; but if we conſider well, it will be found, that all Perſons circumvented by Fraud, are ſo far within that Denomination. But granting full Relief may be had, what doth it coſt to come at it? In this Reſpect the *Turkiſh* Law is ſimple, for it not only diſallows all over-reaching Bargains, but the Judgment of them falls proper in one and the ſame Suit, which Party ſoever promotes it. And even here very good Patriots have declared it fit, that the Court having Juriſdiction of the Cauſe in Point of Law, ſhould alſo judge of the Equity emergent thereupon: But the preſent Conſtitution doth not allow it.

“ The Civilians reproach the common Law, ſaying, it wants Equity, and needs a particular Judicature to ſupply it. But I think theirs worſe, for they have no Mitigations, and all is *ſummum jus*. And then they contradict themſelves, ſaying, *Apices juris non ſunt jura*; and more groſly leap over their Law, judging as they ſay, *ex authoritate*, againſt Law, which in their Language, is *nobile Officium Judicis*. But the *Turkiſh* Law ſeems, in theſe Reſpects, to be moſt conſiſtent and complete. One Thing more I will venture to alledge in Favour of the *Turkiſh* Law, which is of admirable Uſe, and that is, their Diſpatch. A Cauſe ſeldom laſts a Week, and very often is opened and determined in a Day; and there is ſcarce any Means to prolong it, but demanding Time to produce Teſtimony to Facts, about which the Parties happen to differ; their alledging and anſwering for themſelves orally before the Judge, keeps down Difference of Facts. For the Pride or Shame of the Parties as well as Integrity, will make them ſave proving, and, for the moſt part, own what they know to be true, and ſo bring the Matter in Judgment upon the right Point.”

It may be objected here, “ That this Proceeding is precipitous, and Corruption apart, for Want of Advice and Deliberation of the Parties, as well as on the Part of the Judge, Wrong may be done; and Juſtice is a ſacred Thing, and ought to have the greateſt Regard. It is granted that Juſtice is a rare Thing, if it may be had; but if it is to be gained by ſailing through a Sea of Delays, Repetitions, and Charges, really it may be as good a Bargain to ſtay at home a Loſer. A wrong Determination expedite, is better than a right one after ten Years Vexation, Charge, and Delay. A good Cauſe immediately loſt, is in ſome Reſpects gained; for the Party hath his Time and Tranquillity of Mind reſerved to himſelf to uſe as he pleaſeth, which is a rare Thing in the Opinion of thoſe who have felt the Want of both, and of their Money into the Bargain.

“ The Reaſon why Juſtice is ſo ſacred, is not becauſe the Cauſe of Suit, or Thing claimed in itſelf is of any Regard, for that Argument will bring all Things to a Levelling, as why ſhould one Man have too much, and another want? But becauſe it preſerves Peace and Quietneſs among Men, which is the greateſt of all temporal good Things; and conſequently, wrong Judgments, ſoon and final, have the Virtue of Juſtice, becauſe Peace and Quietneſs is thereby preſerved. But Delays have an Effect directly to the contrary, for thoſe maintain Feuds and Hatred, as well as Loſs of Time and Money; ſo that if it be ſaid that in the End Juſtice is ſecured thereby (which I do not grant) I anſwer it is done by unjuſt Means, and comes to the ſame. *But is it not a ſad Thing*, ſay ſome, *for a Man to be hurried out of his Right?* As *Is it not a ſad Thing a Man ſhould have a Fever?* As the Body, ſo the Eſtate muſt be obnoxious to Infirmities; there is no Perfection in either State, and that is always beſt which is ſhorteſt, and hath the leaſt Anguiſh or Pain.

“ I ſhall alledge but one Inſtance farther, where I think the *Turkiſh* Law is remarkably diſtinguiſhed, and it is on the criminal Side: If a Man comes to the Judge, and with Clamour, as the Way is, complains that he is robbed of his Goods, the *Cadi* will aſk him, *By whom*, and *where is the Thief?* And if he ſays he does not know, perhaps puniſh him as a Knave, that pretends to be robb'd to cheat his Creditors. What, ſays he, doth not the Grand Signior protect his Subjects? If you are robbed, find the Thief, and Right ſhall be done; if you want Help, take an Officer, but do not accuſe the Grand Signior's righteous Government. Now to add here a Word or two of their criminal Juſtice, I ſhall obſerve, that it is executed with ſuch Rigour, as keeps down Offences ſo effectually, that in that great City of *Conſtantinople*, there

“ are not ſo many Men executed for Thievery in ſome Years, as in one, I may ſay, in one Seſſion, in *London*.

“ If a Thief is caught, they make more Account of him by diſcovering others, than by the Example of his Puniſhment; and they handle him at ſuch a Rate, that he cannot but diſcover all he knows. He ſhall ſometimes be ſecretly chained to an Officer, and ſo go about the City, and whom he points to is taken up. The firſt Thing done, is to ſee that he makes full Amends to the Perſon robbed, and when that Perſon declares he is ſatisfied, he is ſent away with a Menace, that he concern not himſelf for Favour to that Man. And, after all, what hath this poor Thief to reward him for all his Ingenuity and Service to the Publick, by diſcovering? Nothing but to die without Torment, for if the Judge be diſſatiſfied with his Behaviour, he makes ſuch a publick Torture of him, as muſt terrify all Rogues from the like Practices; otherwiſe he is committed to an Officer to be ſimply hanged, and then that Officer takes him into the Street, and chuſes what Man's Sign or Poſt he pleaſes, and conſtrains whom he thinks fit to perform the Ceremony; and a *Frank*, if he comes by unluckily at that Time, is not ſafe from being preferred to the Employment.

We have dwelt ſo long upon this Subject, that it is neceſſary for us to be the ſhorter in regard to the reſt. The general Accounts we have of the *Turkiſh* Manners are, at one and the ſame Time, both true and falſe. True in regard to the Relaters Knowledge, who delivers what he ſaw and knew; but falſe, as it is applied, by aſcribing what he collected from the narrow Circle of his Aquaintance to a whole Nation. The *Turks* are like other People, ſome are Men of Senſe, others Blockheads; there are Men of Learning amongſt them, as well as Multitudes that are ignorant. Drunkenneſs is common among the meaner Sort, and much worſe Crimes amongſt thoſe in an exalted Station. Their Paſſion for Women, and the effeminate Life they lead in their Apartments, has a very bad Effect even amongſt Perſons of the greateſt Diſtinction; and, to ſay the Truth, there is ſo little Felicity to be enjoy'd under their Conſtitution, that we need not wonder at the Pictures modern Travellers draw of the preſent State of the *Ottoman* Empire, in which all that have Power are Oppreſſors, and all that have it not, are oppreſſed.

The *Greek* Chriſtians, that live under the Yoke of the Grand Signior, are the moſt miſerable People in the Univerſe; and though all of them do not appear ſo, yet in Fact they are moſt miſerable Slaves. If they can get nothing, they muſt of Courſe paſs their Days in Meanneſs and Poverty; and, if they come to have any Thing, they muſt ſtill wear the Appearance of Meanneſs and Poverty to keep it. It is, indeed, true, that ſome of them lift up their Heads a little, and live in a State much ſuperior to what we have deſcribed; but they muſt have powerful Protectors to do this, and they muſt be continually acknowledging the Favour of this Protection by Preſents equal to, if not above their Abilities; and, after all this, if any Change happens, and ſuch Changes are continually happening to their Protectors, they are torn to Pieces, and ruined in an Inſtant. But before this happens, they are equally deſpiſed and hated by the *Turks*, and the very meaneſt of them will inſult the *Greeks* with Impunity. But in the Midſt of ſo much Calamity, and under the heavy Load of ſuch barbarous Oppreſſion, theſe People keep up their Spirits, if to be eaſy and merry may be ſo called, and will be as frolick and gay over their Cups, as if they had milder Maſters, or lived in abſolute Freedom, according to the common Proverb amongſt us, ſo much uſed and ſo little underſtood, *viz. as merry as a* Greek. The *Turks* have ſo much Policy as to indulge them in the free Exerciſe of their Religion, and to keep up their Hierarchy, which, generally ſpeaking, keeps them in the Intereſts of their Maſters, ſo as to prefer the *Turkiſh* Government (bad it is) to that of any Chriſtian Power not of their own Religion. But if ever the *Ruſſian* Empire comes to be ſettled on a firm Foundation, and there ſhould happen a Succeſſion of two or three great Princes, the *Turks* would run a conſiderable Hazard of finding that Prophecy true, which they have amongſt them, that the *Muſcovites* will one Day ſubvert their Empire.

The *Jews* in the Grand Signior's Dominions are pretty much the ſame that they are every where elſe, that is, a Kind of neceſſary Evils. At *Conſtantinople*, *Smyrna*, *Aleppo*, and other Ports, every Chriſtian Houſe, and, indeed, every Merchant of any Rank, has his *Jew*, who, if he has Goods to ſell, finds him Cuſtomers; and, if he wants to buy, finds out the Commodity is wanted. By their Uſefulneſs in this Reſpect, they have a Share, and not a trifling Share, in all Sorts of Dealings; and ſome of them arrive at Wealth, but never at Reſpect; for as they hate *Turks* and *Chriſtians* equally, ſo both *Turks* and *Chriſtians* hate them in Return; and for the far greateſt Part of the Nation, they are in as low and deſpicable a Condition as it is poſſible to conceive a People, and which ſeems to be the very Extent of human Miſery: They are deſtitute even of Hope, for no Revolution that can poſſibly happen in a Country, the moſt ſubject of all others to Revolutions, can ever prove favourable to them; but they muſt be content to drudge on under the ſame heavy Yoke, let who will be their Maſters.

33. We will cloſe this Section with ſome Remarks upon the Decadence of the *Turkiſh* Empire, which tho' its Dominions are very near as extenſive as ever, yet is very far from having the ſame Force that it had heretofore. This proceeds from a Multitude of Cauſes, but the principal is the Extinction of their ancient Spirit. It is very truly obſerved by an Eminent Author that has been already quoted, that theirs is a Military Government, and that the Conſtitution is formed upon this Plan. It is for this Reaſon, that a State of War is natural to, as well as perfectly conſiſtent with the Welfare of their Empire, which can never enjoy interior Peace, if the Arms of the Grand Signior be not employed on one Side or other. Almoſt every State beſides is oppreſſed by War, and recovers its Strength in Time of Peace; but the Reverſe of this is the Caſe in *Turkey*, where War is almoſt always beneficial, and Peace brings along with it the greateſt Danger. But for many Years paſt the *Turkiſh* Diſcipline growing relax, their Troops are no longer ſo formidable, and their being continually beaten by the *Chriſtians* and the *Perſians*, has made Peace neceſſary at leaſt, if not agreeable.

This has been attended with an innumerable Train of Miſchiefs and Inconveniencies, for their Soldiery being never diſbanded, as making a Part of their Conſtitution, grow more and more formidable at Home, in the ſame Proportion that they became more and more deſpicable Abroad, which muſt be the Caſe of all Countries that put their Truſt in a Standing Army. Their Officers alſo being no longer preferred for their Military Virtues, but in Conſequence of Cabals and Intrigues, are Soldiers only in Shew; and the ſame Diſpoſition ſpreads itſelf downwards, ſo that a *Janizary* is at preſent terrible only from his Staff and his Cap, and to thoſe he ſhould protect, who ſee Nothing in him now that is military except his Inſolence. The Government alſo is fallen of late Years into the Hands of the Men of the Law, who for that Reaſon do all they can to maintain Peace, notwithſtanding that they cannot but be ſenſible how much the Empire ſuffers from the Extinction of that Spirit, by which it roſe and extended itſelf to that prodigious Dominion it ſtill preſerves.

But we may ſafely affirm, that how large ſoever it may be, it is now no more than an infirm gigantick Body, which reels and totters under its own Weight, and would be infallibly overthrown, if its Neighbours ſhould unite to bring about its Deſtruction. The *Ruſſians*, the *Poles* and the *Hungarians*, would at this Day be a great Overmatch for the *Ottomans*, and it would be no difficult Thing for each of thoſe Nations, to bring ſixty or ſeventy thouſand Men into the Field, beſides Irregulars. The *Venetians* are now no longer what they were, and their Maritime Power is ſunk to ſuch a Degree, as to make no Figure at all in *Europe*, but even weak as it is, in Conjunction with the Pope's Gallies, thoſe of other *Italian* Princes, and the Naval Power of the Knights of *Malta*, it would be very capable of giving Diſturbance to the *Turks*, and of making a formidable Diverſion in Favour of ſuch a Confederacy.

This is very far from being a mere empty Scheme or viſionary Project, for moſt certainly, if theſe Powers were to conſider their own Intereſts, they would find it much eaſier to gratify their Ambition in its full Extent by attacking the *Turks*, than by injuring each other, ſince the Provinces depending upon that Empire, which by ſuch a Confederacy might infallibly be torn away, are in every Reſpect more fruitful and more valuable, as well as out of Compariſon more extenſive than thoſe Countries about which they have been for many Centuries diſputing. Beſides, this would change the general Face of Affairs extremely, and open many new Branches of Commerce to all the trading Nations in *Europe*, which would make them ample Amends for the Loſs of that Profit they make by dealing with the *Turks*. The Paſſage to the Black Sea would be then ſet open, and that noble Country which is now ſtiled *Crim-Tartary*, from being in the Hands of thoſe Barbarians, would be inhabited by a civilized and ſocial People, inſtead of ſerving for a Den of Thieves and Murderers, who ſubſiſt by Rapine, and the Ruin of their Fellow-Creatures.

If once that Spirit of Intrigue could be conjured down, which, for two or three Centuries has diſtracted and diſturbed *Europe*, ſuch a Deſign as this might be eaſily brought to bear; and there is the more Reaſon to wiſh it, becauſe it would not only contribute to the Glory of the Chriſtian Name, but to the common Eaſe and Benefit of Mankind. It would afford to Sovereigns that Satisfaction which is truly royal, of relieving diſtreſſed and injured Nations, and reſtoring them to thoſe Rights of which they were at firſt diſpoſſeſſed, and from which they have been ſo long witheld by barbarous and brutal Force. It would recover incredible Numbers of People from an abject State of Slavery, to a rational and induſtrious Way of living, which would change the Face of the Countries they inhabit, and make them appear once more adorned with all the Advantages that Art can procure, from the bountiful Diſpoſitions of Nature, not more profuſe in any Part of the Globe, than in thoſe neglected Territories, that groan under the Iron Sceptre of the Grand Signior; nor is it to be feared, that the Changes which ſuch a Revolution would produce, ſhould be attended with any of thoſe fatal Conſequences that commonly follow ſuch Events; becauſe inſtead of depopulating theſe Countries, it would certainly prove the Means of drawing into them prodigious Acceſſions of People.

The Weakneſs and Nakedneſs of the *Turkiſh* Government would then ſufficiently appear, for they would be neither able to carry off any Number of their Subjects from the Countries they loſt, nor would they dare to treat with the ſame Uſage as they now do, the Chriſtians remaining under their Power, becauſe in Proportion as that declined, they would be compelled to abate of the Inſolence that is ſupported by it. Nor would the Advantages derived from ſuch Conqueſts belong only to the Powers that made them, for every Part of *Europe* would feel the Benefits of ſuch a Change, ſince it muſt be attended by a vaſt Alteration of Manners, and a free Communication with Countries, that are now as much hidden and unknown, as either the Northern or the Southern Extremities of the Univerſe. Add to all this, that the apparent and extenſive Profits, which muſt redound from ſuch Expeditions, would excite a new Spirit in the Chriſtian World, and very probably procure freſh Settlements and Plantations in more favourable Climates, and at Diſtances far leſs remote than we are now forced to ſeek them.

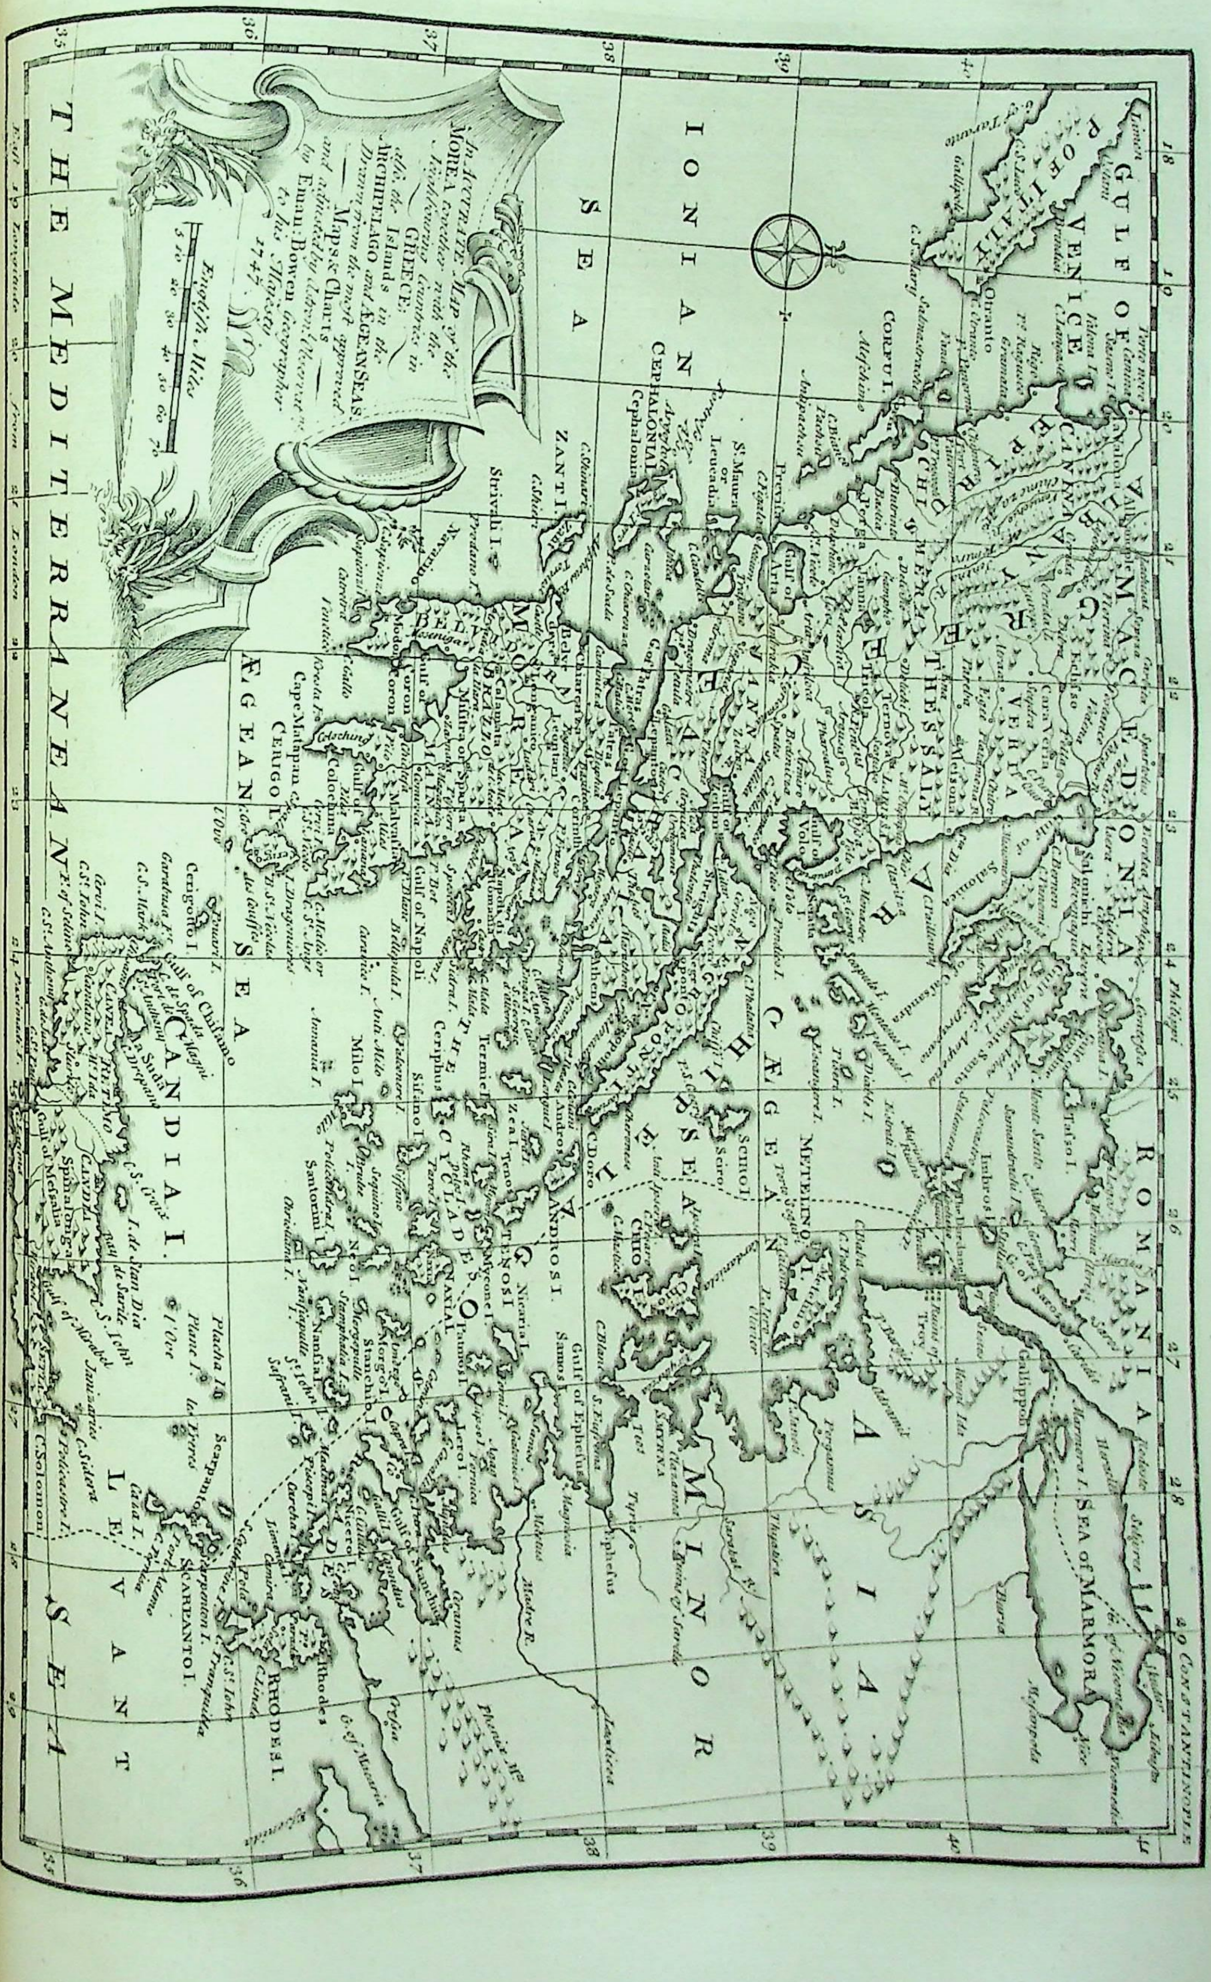
We ſhould then ſee the *Greek* Iſlands, that are now ſo many Deſarts, ſmile again in all their native Beauty; the venerable Remains of *Roman* and *Greek* Antiquities would be diſinterred, and new Structures riſe, however unequal to them, out of their Ruins. It would be eaſy to expatiate much further, on ſo agreeable and pleaſing a Theme; but what I have ſaid is ſufficient to awaken the Thoughts of the intelligent Reader, and therefore it is high Time that I ſhould call off my own, in order to reſume the Thread of our Narration, and return to the Travels from whence I have digreſſed. But before I do this, give me Leave to declare, that I am thoroughly perſuaded, that this Change is not at a very great Diſtance, but, that either the preſent or the next Generation, will infallibly ſee ſomething of this kind accompliſhed, which in all Probability had been attempted before this, if the Change in the *French* Conſtitution, which has brought them to act upon the *Turkiſh* Syſtem, had not called off the Attention of the Chriſtian Princes, to ſet Limits to that all graſping Power, which before it is long, will be alſo cruſhed by its own Weight; for Structures raiſed by Violence and Fraud, have ſuch Weakneſſes in their Foundations, that they cannot ſubſiſt for any Length of Time, but when at their greateſt Height ſink into Deſtruction, by the very Means whereby they were raiſed.

SECTION III.

An Account of ſeveral of the moſt remarkable Cities in *Aſia*, of various Iſlands in the *Archipelago*, and of Things moſt obſervable in them, both with Reſpect to their ancient and preſent Condition; with Remarks Hiſtorical, Phyſical and Geographical.

Extracted chiefly from the Writings of Mr. JOHN THEVENOT; but intermixed with Accounts from WHEELER and LE BRUN.

1. *A Deſcription of the City of* Burſa, *or as ſome call it,* Pruſia, *with an Account of the Seraglio's and Tombs of the* Turkiſh *Princes in its Neighbourhood.* 2. *The famous City and Port of* Smyrna *deſcribed.* 3. *A curious and copious Deſcription of the* Camelion, *from* Wheeler's *Travels.* 4. *A View of the noble City of* Epheſus, *from the Writings of* Le Brun. 5. *The adjacent Country deſcribed, with ſome Account of the famous River* Meander. 6. *A curious Deſcription of the Iſland of* Chio, *of the Maſtick Trees, and the Trade ariſing from the Sale of that Gum.* 7. *The famous Convent of* Niamoni, *one of the beſt belonging to the* Greeks, *deſcribed.* 8. *Of the chief City of the Iſland of* Chio, *which bears the ſame Name, from the Accounts given of it by ſeveral Authors.* 9. *A very particular and diſtinct View of the moſt remarkable Places in that Iſland.* 10. *Of the Inhabitants of* Chio, *their Manners, Cuſtoms, Trade,*



An Accurate Map of the MOREA together with the Neighbouring Countries in GREECE; also the Islands in the ARCHIPELAGO and ÆGEAN SEAS. Drawn from the most approved Maps & Charts and adjusted by latest Observations by Eman: Bowen Geographer to his Majesty 1747

Trade, and dreadful Oppreſſions by the Turks. 11. *The Iſlands of* Patmos *and* Naxos *deſcribed, with an Account of the Inhabitants, and of the State of the* Greek *and* Latin *Churches.* 12. *Of the Iſlands of* Paros, Delos, Micone *and* Tina. 13. *The Iſlands of* Nio *and* Santorini *deſcribed with ſome very curious Particulars relating to the latter.* 14. *An Account of the Iſland of* Polecandro, *and its Inhabitants.* 15. *A Deſcription of the Iſland of* Milo *and* Chimolo, *with a very curious Account of the Hot-Baths in the former.* 16. Siſanto *and* Thermia *deſcribed, with an Account of their Produce, and of the Cuſtoms of their Inhabitants.* 17. *Of the Iſlands of* Ajora *and* Scyra, *with an Account of their Inhabitants.* 18. *Of the Iſlands of* Samos *and* Nicaria, *and of the peculiar Privileges which the Women enjoy in the latter.* 19. *A Deſcription of the Iſland of* Coos, *now called* Iſola Longa, *and of the famous Caſtle of* Bodrou, *which formerly belonged to the Knights of St.* John. 20. *Of the famous Iſland of* Rhodes, *the Manner in which it was taken by the* Turks, *and the Remains of the Caſtles, Palaces, and other Structures erected there by the Knights of St.* John, *while they were Maſters of it.* 21. *A large and curious Deſcription of the noble Iſland of* Cyprus, *with an Account of its ancient and preſent State.* 22. Mr. Randolph's *Account of the Iſland and Kingdom of* Candia, *and of the long War ſuſtained by the* Venetians *againſt the* Turks, *in Defence thereof.* 23. *Miſcellaneous Obſervations and Remarks from various Authors.*

1. MR. *Thevenot* left *Conſtantinople, Auguſt* 30. 1656. and ſail'd in a Saique to *Montagna* from whence he rode to *Burſa*, which was called by the Ancients *Pruſia*, the Metropolis of the ancient Kingdom of *Bythynia*, and was the Capital City of the *Turkiſh* Empire in the Reign of *Orcan*, the Son of *Oſman*, the firſt Sultan, who took it in the 726th Year of the *Hegyra*, and in the Year of our Lord, 1325; but it was taken from *Bajazet* by *Tamerlane*. It is about ten Miles diſtant from Mount *Olympus*. It is pleaſantly ſituated, and Water is ſo plentiful, that beſides what they have in all their Dwellings, they have Fountains in their Houſes of Office for their Ablutions. They have ſome Waters that run through the Town, ſo hot, as to boil an Egg, of which they have made ſeveral Bagnio's, which ſerve for the Cure of many Diſtempers, and People come above 100 Miles to waſh in them. There are many fair Houſes in the Town, and above 200 Moſques; many *Hans*, very magnificently built and conſtantly inhabited, becauſe the Caravans from ſeveral Places paſs through this Town; but the moſt remarkable Buildings of this City are the Sepulchres of the firſt *Turkiſh* Emperors and their Sultana's, in ſo many Chapels built Dome-wiſe.

Among them is ſaid to be one of a *French* Sultana, who being taken Captive, and preſented to the Grand Signior, ſo much raviſh'd his Affections, that he enjoy'd her, but permitted her to exerciſe her Religion to her Death. The *Chriſtians* after her Deceaſe deſired to have the Care of her Burial, but it was not granted them, and ſo ſhe lies in a little Chapel, arch'd and incloſed with Walls among the reſt. This Town is about half a *French* League in Length, not entirely wall'd, and has a Caſtle ſtanding in the Middle on a little Hill, which has Baſtions that in their Opinion render it impregnable; but the Water that ſupplies it runs through the Town, and ſo may be cut off. No *Chriſtian* is allowed to go into it, leſt they ſhould endeavour to regain it, becauſe it was taken from them by ſtopping the Water. Within this Caſtle was formerly the *Seraglio* of the firſt Sultans of the *Ottoman* Family, but it is now demoliſhed. It is ſaid to be built by an Emperor's Daughter, who was cured of a Leproſy by waſhing in the hot Waters of this Town, being taught the Experiment by a meaſly Hog, that by waſhing in it was cured. Cloſe by the Town is an Hill, where a *Turkiſh* Hermit lives in a Chapel, which is encloſed with good Walls and Iron Gates. In it are the Tombs of one *Roland*, or *Orland*, and his Son, with his Sword and Mace lying on a Table juſt by, who valiantly defended this Caſtle againſt the *Saracens* in the Life of the Foundreſs, and ſlew many of them.

2. From *Burſa* he went to *Smyrna* with the Caravan, and becauſe Nothing is to be met withal upon this Road but Water, Travellers muſt carry all their Proviſions and Houſhold-ſtuff along with them, or want both. The Way lies through *Tabbitalie, Loubat, Suſurluc, Degelembe, Palamout*, and *Manaſia*, to *Smyrna*. This Town is a noted Place in *Ionia*, built at firſt by *Tantalus*, named ſo from an *Amazon* who took it, and when it was demoliſhed by an Earthquake, rebuilt by *Mark Anthony* nearer the Sea, to make the Harbour more commodious. It boaſts of being the Birth-place of *Homer*.

The *Turks* call it *Iſmyr*. It is a large Town, and well inhabited both by *Turks* and *Chriſtians*, but is neither pleaſant nor ſtrong. It is commanded by a Caſtle, at the Bottom of which, in the Way to the *Greek* Church call'd *Santa Veneranda*, is a great Amphitheatre, where St. *Polycarp*, St. *John*'s Scholar and Biſhop of *Smyrna*, ſuffered Martyrdom. Near it are the Ruins of St. *John*'s Cathedral Church, which had ſeveral large Chapels, and in one is ſtill a Tomb, which the People ſay is St. *Polycarp*'s; but it ſeems rather to be that of ſome *Turk*. The Port is but ſmall, but the Road is ſpacious and ſafe, and has a Caſtle lately built, to hinder what Ships they pleaſe from coming in, or going out. By the Road ſtands the Cuſtom-Houſe, and the Houſes of the Conſuls and Merchants, *Franks*, who have, for the moſt Part, a Back-door towards the Sea. In it is a *Cadi* to adminiſter Juſtice.

Beſides *Turks*, there live in it *Chriſtians* of all Countries, *Greeks, Armenians*, and *Latins*. The *Greeks* have two Churches, *viz.* St. *Veneranda*, where their Archbiſhop officiates, and St. *George*, which belongs to their Monks. The *Armenians* have alſo two Churches, and the *Latins* as many, one of them belonging to the *Capuchins*, which is over-againſt the *French* Conſul's Houſe, and the other to the *Jeſuits*, which has a lovely Houſe adjoining to it. The Country about it is plain and fertile in Olive-trees, and full of Gardens. All Things there are in Abundance, and their Wine is moſt excellent. It is very ſubject to Earthquakes, which happen every Year, and often ruin the Town; but it is ſoon Rebuilt again, becauſe of the Convenience of its Situation. The Air in Summer-time would be very hot, if it were not for the low Wind, or North Breeze, as they call it, which blows regularly every Day, and much qualifies the Heat.

We have a larger and more correct Account of this City in Sir *George Wheeler*'s Travels, which we will add in his own Words. *Smyrna* hath ſo many Advantages from its natural Situation, that notwithſtanding the great Calamities which have befallen it by War, and moſt prodigious Earthquakes, that no leſs than ſix Times have over-thrown and almoſt utterly ruined it: Yet it hath ſtill been thought worth the Repairing and Reſtoring to all the Beauty the Art of its Inhabitants could contrive to adorn it with; notwithſtanding alſo, that from ſome old Tradition they expect the Seventh ſhall be its utter Ruin, never to be repair'd. It is ſituated at the Bottom of a Bay, eſteemed twenty Miles to its Mouth, ſecured with high Mountains on every Side from all Winds but the Weſt; whence from Sea they can receive no Damage: For the *Hermus* which emptieth itſelf into it, maketh a Bank of Sand that barreth the raging of the Sea out, yet leaves ſuch a Paſſage in it, although but narrow, that he muſt be a very Ideot of a Pilot that cannot bring a Ship in ſafe into the inmoſt Part of the Bay; where he may find Room and Depth enough, with very good Moorage.

This Bay hath Mount *Sypilus North*. Another Mountain, which I judged to be the *M ſegiſmonds*, mentioned by *Ptolomy* and *Strabo*, *North-Eaſt*. The Hills whereon the Town ſtands, from *Eaſt* to *South*. From thence to the Promontory *Argenum*, winding about to the *Weſtern* Point. *Mons Mimas*, now called the *Brothers*, from the two higheſt Points. Here is indeed a little Gap, being the Mouth of the Bay, but thence Hills begin to riſe again to join to Mount *Sipylus*. Of this Entrance I ſhall have Occaſion again to ſpeak when I part hence. But as to the reſt, theſe Mountains are not ſo near, but that they leave fruitful Fields round about between the Bay and them, well planted with Olive-yards, Vineyards, and Corn Fields among them; and from the Town to Mount *Sipylus* is a Valley of four or more Miles in Length, and near a Mile broad in ſome Places, which with the Gardens about the Towns, and the Town itſelf, drink up two pretty Streams of good Water, one riſing *Northward* from the Mountain *Sipylus*, and the other *Southward* from Mount *Mimas*, which join together *North-Eaſt* of the Town, and what it ſpareth, which is but little, the Sea receiveth at the *North-Weſt-End* of the Town. That which cometh *Northwards* from Mount *Sipylus*, is a conſiderable Stream, driveth ſeven Mills, and hath Abundance of Fiſh in it. The other, coming from Mount *Mimas*, is the greateſt Part brought to the Town in Aquæducts, two of which are well built, with Stone Arches croſſing the Valley or deep Foſs, which itſelf hath dug between two Hills, whereof the *Northernmoſt* is where *Old Smyrna* ſtood, now only a Caſtle. The reſt of the Water is divided amongſt the Gardens.

Smyrna is a Place of great Antiquity, and is reputed to have had the *Amazon Smyrna* for its Foundreſs. They therefore ſtamped their Money with the Figure of her Head. I got ſeveral Pieces of them, very rare, and ſaw many more in the Cabinet of an ingenious Merchant there, Mr. *Falkener*, who deſigns his Collection for the Univerſity of *Oxford*. One ſmall one hath her Head crowned with Towers, and her two edged Hatchet on her Shoulder, almoſt worn out with Age, and about it are theſe Letters, ΣΜΥΡΝΑ, on the other Side the Prow of a Ship, and theſe, ΣΜΥΡΝΑΙΩΝ. From another I ſaw of the Empreſs *Tranquillina*, is to be ſeen her whole Habit, which is thus: Her Head is crowned with a Tower, as before, her two-edged Axe upon her Shoulder, holding a Temple in her Right-hand, perhaps referring to ſome Temple *Tranquillina* had built, in a ſhort Veſt down to her Knees, and Buſkins half Way her Legs. There is ſomething alſo ſhe holds in her Left-hand, beſides her Axe, which perhaps is her Bow. In another ſhe is dreſſed in the Habit of *Hercules*.

Of the ancient Situation and Beauty of this Place, *Strabo* giveth the beſt and ſhorteſt Account. Thence, ſaith he, (deſcribing it *Northward* from *Epheſus*) is another Bay, in which is *Old Smyrna*, twenty *Stadia*, or two Miles and half from the *New*. When the *Lydians* had deſtroyed *Smyrna*, the Country thereabouts was only adorned with Villages for four hundred Years together; after which, *Antigonus* reſtored it, and after him, *Lyſimachus*. At this Day it is, of all the *Aſian* Cities, moſt beautiful. Part of it is built upon the Mountain, but the greater Part on the Plain to the Haven, unto the Temple of the *Mother of the Gods*, and to the *Gymnaſium*. The Streets are moſt excellently built, and as much as poſſible, reduced into Right Angles, all paved with Stone. It hath great and ſquare Portico's both in the higher and lower Parts of the City. There is a Library, and the *Homerion*, which is a ſquare Portico, with a Temple containing his Statue; for the *Smyrnoites* are very zealous for the Nativity of *Homer* amongſt them, and have a Braſs Piece of Money called by his Name, *Homerion*. The River *Meles* runneth by the Walls. There is a Haven on the other Side of the City, which may be ſhut up at Pleaſure. Thus far *Strabo*.

The *Old Smyrna* that was in his Time, in all Probability, was on a Hill *South* of this that is now, and *Weſt* of the Caſtle-hill; for there are ſome Steps of Heaps of Stones laid in ſome Order, as if a Wall had been there. This *New Smyrna*, but the *Old* one of our Times, without Doubt, took up all the Hill the old Caſtle ſtandeth on and then adjoining to it, down to a Point running into the Bay *Southwards*, and of the Plain much more *North-Eaſt* than the *New Smyrna* of our Times; but *North*, I believe, not much more, if ſo much; for turning into *Frank-ſtreet*, is a Wall which ſeemeth to be Part of the ancient Walls of the City, although the Mouth of the River *Meles* is juſt without the preſent Buildings; which is not far, and might eaſily be turned thither, if nearer to the Walls formerly. Along this Wall, from the Sea, you come to the Foundation of a great Building of hew'd Stone they were then demoliſhing, which might have been the *Sybils* Temple, the great Mother of the Gods.

After diſcourſing largely of the Antiquities that ſtill remain here, and of the State of the ancient Chriſtian Church of *Smyrna*, he proceeds thus. The *Greeks* that are here have but two Churches, yet they are numerous, this Place being the Seat of their Metropolitan. But beſides them, here is a great Number of Chriſtians of all Nations, Sects and Languages. The *Latin* Church hath a Monaſtery of *Franciſcans*; the *Armenians* have one Church; but the *Engliſh*, which are the moſt conſiderable Number next the *Greeks* and *Armenians*, have only a Chapel in the Conſul's Houſe, which is a Shame, conſidering the great Wealth they heap up here beyond all the reſt: Yet they commonly excel them in their Paſtor; for I eſteem a good *Engliſh* Prieſt an Evangeliſt, if compared with any of the reſt. The *Hollanders*, I believe next to the *Engliſh*, are more numerous than any Nation of the *Franks*, and take no more Care, as I could learn, of their Religious Worſhip. But as to Trade, none ſtrive to outvy each other ſo much as the *Engliſh* and *Hollanders*, whereof *Smyrna* and *Aleppo* are now the chief Places in the *Levant*. The Trade was formerly pretty well divided between them; but ſince their War with the *French*, the *Engliſh* have much the greater Part of it.

The chief Commerce conſiſts in raw and *Perſian* Silks, Grograms, both in Yarn and alſo woven, brought to this Scale by the *Perſians* and *Armenians*, and much Cotton, raw and made in Yarn, *&c.* which groweth all about theſe Countries, and the Iſlands of the *Archipelago*, being brought by the *Greeks* and *Turks* to be ſold here. The *Engliſh* Factory conſiſts of fourſcore or an hundred Perſons, moſt of them younger Sons to Gentlemen, who give three or four hundred Pounds to ſome great Merchant of the *Levant* Company, and bind their Sons Apprentices for ſeven Years, three whereof they ſerve at *London*, to underſtand their Maſters Concerns, and then their Maſters are obliged to ſend them to negotiate in theſe Parts, and to find them Buſineſs, out of which they are allowed a certain Sum *per Cent.* where by their Induſtry in Traffick for themſelves, alſo upon good Gains, but little Loſs, they live genteelly, become rich, and get great Eſtates in a ſhort Time, if they will be but indifferent good Huſbands, and careful of their own and their Owners Buſineſs.

The Officers allowed over them by the King and the *Levant* Company, are a Conſul, a Chancellor, a Treaſurer, a Divine, and a Phyſician. The Conſul is allowed by the *Levant* Company, three thouſand Dollars a Year Salary, and five hundred of Gratuity, beſides other Perquiſites and honeſt Ways, whereby he may get much more. His Office is to maintain the Privileges granted by the Grand Signior to the *Engliſh* Nation, againſt the Injuries and Inſolencies of the encroaching *Turks*, inſtead of an Ambaſſador to decide all Differences that happen between Factor and Factor, to ſee that no Injury be done by any of the Factory to the *Turks*, and to puniſh Delinquents: So that he doth, in Effect, govern the Buſineſs of the whole Factory there; but yet from his Sentence, there may be an Appeal made to the Ambaſſador. Mr. *Ricaut* was then Conſul, who writ the State and Policy of the *Ottoman* Empire, and a Treatiſe of the *Greek* Church, an *Appendix* to the *Turkiſh* Hiſtory down to his Time, and alſo an Account of the ſeven Churches of *Aſia*. He was very obliging to us, amongſt other Favours, in directing and informing us, concerning theſe Parts. Their Chaplain is allowed five hundred Dollars a Year Salary by the *Levant* Company. He hath beſides, a Warehouſe allowed him to trade with, beſides cuſtomary Gifts of all the Merchants yearly, which amount commonly to much more. And indeed the whole Factory live together in the greateſt Amity, Peace and Freedom, of any of them I have ſeen beyond Sea.

The *French* and the *Venetians* have alſo their Conſuls here, but they are in no great Credit amongſt the *Turks*. The *Engliſh* have the beſt Reputation for their honeſt Dealing, and therefore ordinarily their Word is taken inſtead of Searching. But the *Armenians* pay more Cuſtom than any. The *Turks* have thirteen Moſques, and the *Jews* ſeveral Synagogues, all which make the Town populous, though ill-built, and without either Strength or Beauty. All that defends it from the Incurſions of *Corſairs*, is a little Fort at the Strait coming in about five Miles from the Town, whoſe great Guns are its beſt Security: For it hath but a little Ditch about it, and the Walls ſuch as by two or three great Guns would be beat to the Ground. As to the Caſtle on the Hill above the Town it is ſlighted, and although it hath the old Wall about it, I believe built by the *Greek* Emperors, yet it is only a Heap of Ruins within, with here and there ſome arched Caves, uſed anciently for Ciſterns or Granaries, as ſome think, having only two or three little Guns mounted againſt the Haven, to ſalute the Captain of the Gallies, or as Mr. *Smith* ſaith, the new Moon of *Bairam*. About the Walls are ſet one or two of the *Roman* Eagles well cut, and another *Baſſo relievo* of Men on Horſeback. Over the Door is an Inſcription in Marble, in the latter *Greek* Characters, but too high and difficult to be read.

There is another little old faſhioned Caſtle at the Harbour, for the Gallies and Boats. On the other Side of which Harbour is the Scale or Cuſtom-houſe for the Grand Signior's own Subjects. Beyond which, Southwards under the Hill, where St. *Polycarp*'s Tomb is, are the *Engliſh* and *Dutch* Burying-places, and North of the Caſtle along the Shore, is, Firſt, the new Bezeſtein, built out of the great Squared Stones of the Theatre. It is in Form like a Street, to ſhut up at each End; the Shops are little Rooms, with a Cupola over each of them covered with Lead, and little Holes on the Top, with Glaſs to let in the Light; oppoſite unto this is a very fine Kan now Building. After which is the Scale and Cuſtom-houſe of the *Franks*, and then follows *Frank-ſtreet* along by the Water-Side, with their Scales and Warehouſes, very convenient to lade and unlade their Goods, and is the pleaſanteſt and beſt built of any Part of this preſent *Smyrna*.

3. As it muſt be allow'd that no Author extant has given ſo clear, ſo curious, or ſo correct an Account of that wonderful Animal the *Camelion*, as Sir *George Wheeler* has done; and as he was led to this by his ſeeing ſo many of theſe Creatures at *Smyrna*, it cannot but be agreeable to the Reader, to peruſe his Remarks on ſo entertaining a Subject. About *Smyrna* ſays he, are Abundance of *Camelions*, which is an Animal ſomething reſembling a Lizard, but hath his Back gibbous like a Hog, and its Feet are divided like the Claws of a Woodpecker or Parrot, two Claws before, and three behind, which are not ſeparated from each other until near the Ends. A long Tail it hath like a Rat, and is ordinarily as big, but it hath very little or no Motion with its Head. They are in great Abundance about the old Walls of the Caſtle, where they breed, and lie in Holes and Heaps of Ruins. Several we ſaw, and two we kept twenty Days at leaſt, in which Time, we made theſe following Obſervations upon them.

Their Colour uſeth to be green, darker toward the Back, and lighter towards the Belly, inclining to a Yellow, with Spots, ſometimes of a reddiſh Colour, and ſometimes whitiſh. But the Green would often change into a dark Dirt Colour, without any Appearance of Green. The whitiſh Spots would ſometimes vaniſh, or turn into the ſame Dirt Colour, and ſometimes remain. Sometimes they would only change into a darker Colour, of a kind of Purple-like Tincture, which uſed often to happen when it was diſturbed. Sometimes from a green all over, they would be ſpotted with a pure black, which alſo happened ſometimes when it return'd from the black: ordinarily when it ſlept under a white Woollen Cap, it would, when uncovered, be of a white or Cream Colour. But this it would do alſo under a red Cap. I never ſaw any change red or blue, altho' they have been laid upon thoſe Colours often, and continued there a long Time. But upon green they would become green, and upon the dark Earth they would ſoon change to that Colour. One of the ſame Bigneſs, of which I made a Draught, I caught as I was walking on the Side of the Hill near the Old Caſtle, where I ſaw many which had changed themſelves from the Colour of the ſpeckled Stone Wall, to a grey, with Spots like Moſs. This I found on the Top of a green Buſh of *Prunella Spinoſa*, which, when I firſt caſt my Eye upon, it was of a bright green Colour; but as ſoon as it perceived that I ſaw it, immediately let itſelf drop to the Ground, and I as ſoon ſtopp'd to look for it, but could ſee nothing; yet continuing to look about earneſtly, at laſt I perceived it creeping away to a Hole in the Rock, being changed to a dark brown Colour, exactly like the Earth, which was then of that Colour after a Shower of Rain.

This changing of Colours is given to this Creature by Nature for its Preſervation. For it is very ſlow in its Pace, lifting up its Legs high and not quick, as if they ſaw not the Way before them, or rather, as if they ſearched for Hold to climb up by, which they can do very well on a Buſh, Tree, or Wall. When it ſaw itſelf in Danger to be caught, it opened its Mouth, and hiſſed like a Snake. In a ſmall Time after I put it into my Handkerchief, it turned of the ſame Colour, with ſome white Spots, and a little Tincture of red. This little one changed its Colour more nimbly than others that were greater. The Cauſe of which I attribute to the Wildneſs of it, the other having been kept a good while before it was given us, and conſequently tamer. The Eyes are as wonderful as the Colours, which are as my Lord *Bacon* hath remarked, large in Proportion to the Bigneſs of its Head, being commonly bigger and larger than a Pea. But that which ſeems moſt obſervable, his Lordſhip hath taken no Notice of. It is covered all over with a thick Skin, of the ſame Subſtance with the Body, the Grain being in Circles juſt to the Center or Middle, where there is a Hole no bigger than a ſmall Pin's Head, by which it receives Light, which muſt make the Angle of its Viſion very acute. The Head being immoveable, it cannot turn itſelf to the Objects as it liſteth. But to make Amends for all ſuch Inconveniencies, Nature hath given moſt wonderful Motions to its Eyes, beyond thoſe of any living Creature. It cannot only move them at the ſame Time, both forward and backward, upward and downward; but alſo one forward, the other backward, the one upward, the other downward, the one fixed on one Object, and the other moving according to the Motion of ſome other Object, and ſo is capable of all the Changes imaginable, which my Comrade Mr. *Spon* and I, often experimented with a great deal of Aſtoniſhment.

The Tongue is a kind of little Trunk, of a griſly Subſtance, above half an Inch long and hollow, join'd to his Throat by a ſtrong membranous and fleſhy Subſtance, in which it is ſheath'd when it is in the Mouth. It will dart this out of its Mouth above an Inch, being ſmeared with a glutinous Subſtance to catch Flies, which ſtick faſt to it as to Bird-lime, and ſo are brought into its Mouth. Theſe Flies are their ordinary known Food, although I never ſaw them catch any, but ſaw one that was almoſt dead, having a Fly in its Mouth. The reſt of its Suſtenance is Air, of which it will fill itſelf, being ſet out in the Sun, until it becometh much ſwollen. Of its Excrement I remarked Nothing. But my Comrade reported that a Perſon of Curioſity at *Lyons*, aſſured him from his own Obſervations, that although the *Camelion* did eat little or nothing, yet it nevertheleſs made much Excrement.

They will live without any Suſtenance beſides Air, a very great While, as will many other Animals of the like cold Nature, *viz.* Serpents and Lizards, &c. One that I open'd had Guts, but I perceived Nothing in them; but the Reaſon I believe was, becauſe it was even ſtarved, having been kept a great while, and then almoſt dead. Its Lungs reach near the Length of its Body, conſiſting of a thin ſkinny Subſtance, full of ſmall Veins, and divided into two Labels placed on each Side, and filled with Air, which being let out, thoſe Labels ſhrunk together. Its Tail is of very great Uſe to it in climbing. It will twine it about a Bone or a Stick ſo faſt, that if it lets go, or falls ſhort in reaching at any Thing elſe with its Claws, it will hang faſt by the Tail, and ſuſtain and recover its whole Body by it. The little one that I caught, I put into a Glaſs ſo deep, that it could not reach the Brim with its Fore-feet by much, nor could take any hold with its Claws; and yet it got itſelf out, and almoſt eſcaped from me, as I ſaw afterwards, by ſtanding upon its Fore-feet, and hoiſting itſelf up backwards, until it catched hold of the Brim of the Glaſs with its Tail; by the Help whereof it lifted all its whole Body out. And this is what I obſerved of this wonderful Animal, which thus challengeth Praiſe for its Creator the Lord of all Wonder.

4. *Epheſus* lies not above fourteen or fifteen Leagues from *Smyrna*. In the Way is a Village called *Sedequi*, about three Leagues from *Smyrna*, ſituated in a very pleaſant Country; for which Reaſon the *European* Conſuls of *Smyrna* have their Country-houſes there, and frequently retire thither to divert themſelves with Hunting. The reſt of the Way from *Sedequi* to *Epheſus* is over a very pleaſant and large Plain. *Epheſus*, once ſo noted a City, is now nothing but a confuſed Heap of Rubbiſh, Pieces of Marble, demoliſh'd Walls, broken Columns and Chapters. That Part, which is at preſent inhabited, is bounded on the Eaſt with a large Plain, which reaches as far as the *Archipelago*, and on the Sides with high Hills. The moſt remarkable Things in it are, the old Church of St. *John* the Evangeliſt. It had anciently four Gates, but two of them are wall'd up. You enter into the Church by a Deſcent of ſixteen Stairs, at the Bottom of which is a Fountain. Within it are four Pillars of Porphyry ſpotted with Black and Red, twelve Foot and a half in Circumference, and thirty-ſix Foot high, being one entire Piece of Stone, which bears up the Roof. There are alſo two other Pillars of *Samæan* Stone, and round about the Church, on the Outſide, is a Gallery having four Pillars a-breaſt, and ſix in Length, ſet off in the Middle with an *Octagon* Fountain, each of whoſe Sides are ten Foot long, and one Foot thick. The Church hath two Domes, and is cover'd with Lead. The *Turks* having converted it into a Moſque, have added a Mineret, and adorn'd it after their Faſhion; but the greateſt Rarities of it, when it was a Church, were carried to *Conſtantinople* to Sultan *Soliman*, to adorn the Moſque he had erected there.

The Caſtle ſtands on an Hill juſt by it, and has a very ancient Tower ſtill ſtanding, on the Top of which is a very curious Piece of Sculpture, or *Baſſo-relievo*, which, as ſome ſay, repreſents the Hiſtory of the famous *Roman*, *Marcus Curius*; but others ſay, the Deſtruction of *Troy*. The Truth is, none dare come near enough to take an exact View of it, and ſo they only gueſs at it. In paſſing it, you may diſcern three Pieces of Marble, one repreſents *Baubmal*, the ſecond a Man fallen dead from his Horſe, and a Perſon in a Senator's Habit ſtanding by, ſeems to lament the Accident, and the third is the Figure of a dead Body laid out ready for Interment.

A large Incloſure where anciently ſtood the Temple of *Diana*; but there is nothing remarkable of it, but one large Gate much ruined and defaced. Within it, on the North Side, is engraven on a Stone a Man on Horſeback, with a Dog by him, and a Serpent twiſted round a Tree. On the South-ſide are two Inſcriptions, the one within, in theſe Words, *ACCENSO. RENSI ET ASIÆ*; and the other, *M. P. VEDI NICERH. VEDIAE. PAVILLIMX. M. HIÆ VXORIS EI.* But the Learned cannot tell what they mean. On the Front of the Gate are theſe Words graven, *UNIOR CANTUSIUM*; but they are ſo mingled, that their Meaning is not to be gueſs'd at.

Two Amphitheatres, where Prizes uſed to be anciently fought; but nothing now remains of them, but Part of the Walls of one of them, built after the antique Manner of Large Free Stones. Hard by theſe Amphitheatres is a large Square, where are a great many Pieces of broken Columns, Chapters, Frizes and Pedeſtals, of a wonderful Bigneſs. Upon ſome of them are Arches of a prodigious Bigneſs, and in the Body of one of the Columns are a Pair of Stairs, which lead a great Way under Ground. Among the Ruins are ſome Remains of the ancient Baths.

The *Grotto*, called, *The Cave of the ſeven Sleepers*, who flying into that Place to avoid the Perſecution in the Reign of *Decius* the Emperor, two hundred and fifty Years after Chriſt, fell into ſo ſound a Sleep, that they did not awake again till the Reign of *Theodoſius* II. who was a zealous Protector of the Chriſtians, and ſuppoſed they had ſlept but one Night, though it was near two hundred Years.

A Tomb, or Monument, on which are ſeveral *Greek* Characters, and four little Children in *Baſſo-relievo*, with ſeveral Marble Statues buried under Ground, yet ſo careleſly, that the Feet of ſome of them appear'd above.

5. About a ſmall Hour's Journey from *Epheſus* are to be ſeen the Fonts, where, they ſay, St. *John* the Evangeliſt baptized the Chriſtians. It is a grey Jaſper-Stone, ſixteen Foot in Diameter, but a little mangled by Travellers, who uſually carry away a Piece of it. The *Greeks* have many like them. About half a League further, upon the Top of an Hill, is a Fabrick, ſaid to be the Place where St. *Paul* was impriſon'd. There are four Rooms curiouſly wrought in Marble, ſtill ſtanding. From this Caſtle is a pleaſant Proſpect over the Plains and Meadows, where the River *Meander* makes ſo many Windings and Turnings, as raviſhes the Spectator with Wonder and Delight at once. The Water of it is very pleaſant, and the Current of it ſo ſtill, that one can hardly diſcern which Way the Stream runs, unleſs it be at the Mouths where it empties itſelf into the Sea. Not far from *Epheſus* lies an Iſland called *Scala Nova*, but by the *Turks*, *Cous-Adaſi*, or the Iſland of Birds. Here are the richeſt *Muſcadine* Wines made, of all the Iſlands of *Archipelago*.

6. From *Smyrna* Mr. *Thevenot* went for a Diverſion to ſee the Wonders of *Chio*, ſo much talked of throughout all *Aſia*. This Iſland, which may be called the Paradiſe of *Greece*, is governed by *Chriſtians*, though under the Authority of the *Turks*, who command in ſmall Matters. They chuſe themſelves *COSS*, one half *Greeks*, and the other half *Latins*, who, during the Time of their Continuance, take Care of all Affairs. The People obtained theſe Privileges by ſubmitting voluntarily to *Mahomet* II. when he conquer'd *Greece*, and the *Turks* ſuffer them to enjoy them without Controul. Up and down the Country are ſeveral Churches, belonging either to the Popiſh Biſhops or Monks, but the *Greeks* have many more in ſeveral Places, the *Latin* Churches being reckon'd but three hundred and one, but the *Greeks* five hundred: They are all very well ſerved, and Divine Service is performed with as many Ceremonies, as if it were in the Heart of *Chriſtendom*, for the *Turks* moleſt them not, but they have a free Exerciſe of their Religion, inſomuch that on *Corpus Chriſti-Day* the Holy Sacrament is carried about the Streets under a Canopy, without any Fear of Indignity that may be offered by the *Turks*, though nothing is more odious to them than that Ceremony.

When any Man is found killed in this Iſland, whether *Chriſtian* or *Turk*, the Author of the Murther is diligently ſought for, but if he be not found, the Town muſt pay the Price of his Blood thus ſlain, at the Rate of 12,000 Aſpers which is aſſeſſed upon every Houſe by the *COSS*; but if the Murtherer be found, his Blood ſatisfies for all, and no Money is paid. The *Cadi* and *Turkiſh* Officers make Advantage of theſe Fines. In the Iſland are twenty two Villages that have Maſtick Trees, which are in all an hundred thouſand. They are Lentiſks, crooked like Vines, and creeping on the Ground.

They prick theſe Trees in the Months of *Auguſt* and *September*, and the Maſtick, which is their Gum, ſweating out by the Holes made in the Bark, runs down the Tree, and falls upon the Ground, where it congeals into flat Pieces, which they gather ſome Time after, and lay it in the Sun to dry, and then range and ſhake them in a Sieve to ſeparate the Duſt from them, which ſo ſticks to the Faces of thoſe that do it, that it cannot be got off but by rubbing their Faces with Oil. Theſe Villages produce above one thouſand Cheſts of Maſtick, of which they pay to the Grand Signior yearly three hundred Cheſts, or three hundred Weight, containing ninety Oques a-piece, every Village being aſſeſſed according to their Quantity of Trees, and the reſt they are obliged to ſell at a certain Rate, to the Farmer of the Cuſtoms. This Maſtick is by *Dioſcorides* allowed to be the beſt in the World, though it grows alſo in other Places. It is a white Gum which enters into the Compoſition of many Ointments, and the *Greeks* uſe to chew it much, becauſe it makes them ſpit, whitens their Teeth, and ſweetens their Breath; they put it alſo in their Bread to make it more delicate. The Chief of theſe Maſtick-Towns is *Callimacha*, which hath two Gates that ſtand always open, ſix *Greek* Churches, and a Nunnery. It is well peopled, and round it are ſaid to be thirty *Greek* Churches.

7. Some Miles from this Town lies *Niamoni*, i. e. the Old Virgin, where is a Convent of *Caloyers* or *Greek* Monks. It ſtands among Woods and Rocks, being built by *Conſtantine Monomancus*, Emperor of *Conſtantinople*, in 1050. The Church is adorned with a great many Pieces of Marble and Porphyry, and among others with thirty-two Marble Pillars. The Dome is full of Pictures of *Moſaick* Work, and the Church is kept in good Repair. The Convent is very ſpacious, and built in the Form of a Caſtle: No Woman may enter into it. There are commonly two hundred Monks in it, under the Government of an Abbot, and it muſt never exceed that Number.

When any Places are vacant, ſuch as will ſupply them, and become *Caloyers*, muſt pay one hundred Piaſtres, and carry what Eſtate they have into the Convent, which they enjoy for Life, and then leave it to the Convent, unleſs they have a Kinſman who will become a Monk, and then he may give one Third to him, on Condition, that at his Death it go to the Convent. The Convent gives to the Monks every Day black Bread, Wine, but not good, and rotten Cheeſe; and, if they will have any Thing elſe, they muſt provide it as well as they can; and ſome live well on their own Eſtates, and keep a Horſe to take their Pleaſure; the reſt muſt make a Shift with their Commons, yet on *Feſtivals* and *Sundays* they eat altogether in their Hall or Refectory. This Convent pays the Grand Signior five hundred Piaſtres a Year, for their yearly Revenue is above ſixty thouſand Piaſtres; and in their Treaſury they have above a Million of Gold, for two Thirds of the Iſland belongs to them. The Monks that die among them are laid in the Church of St. *Luke*, juſt without the Convent. They have two Bells, and there are little ones in every Village, but the *Turks* throughout their Dominions, allow them no where but here.

8. The chief Town of this Iſle is of the ſame Name. It hath good Houſes, and the Streets are wide enough for Coaches: It is not large, but well peopled, and moſt Part of the Inhabitants are Chriſtians, either *Greeks* or *Latins*, who have each of them a Biſhop, and ſeveral Churches; but the *Greeks* have moſt by far. They have alſo many Convents of Nuns, but not ſo ſtrictly ſhut up, but that Men may come at them, and they will be kind to them, ſometimes even beyond the Bounds of Chriſtian Charity. They may leave their Convent when they pleaſe; and their Buſineſs, while they are in it, is to embroider in Gold, Silver and Silk upon Handkerchiefs, Purſes, &c. and they are very ſkilful in it. The *Latins* have five Churches in the Town, the firſt is the Biſhop's, which is fair and large, but built ſince the *Turks* have been Maſters of *Chio*, according to an Agreement made between the *French* King and the Grand Signior.

To this Church belongs a Burying-place, where all the *French* that die in this City are interred; which was given to it by Mr. *John Dupuis*, of *Marſeilles*, the *French* Conſul there. The *Capuchins* alſo have a large and ſpacious Church, which ſtands over-againſt their Convent, which is neatly built, and has a large Garden, but wants Water. They are forced to keep their Gate continually ſhut, becauſe of the *Turks*, who, if they get in, ſpoil their Gardens, and commit many other Inſolencies. They teach the learned Languages and Chriſtianity to all Children that are ſent to them. The Jeſuits alſo have a Church and College, and are of three Congregations. The *Jacobins* and *Cordeliers* alſo have fair Churches. The *Turks* have their Moſques, and the *Jews* their Synagogues. The Town is but ſmall, and not ſtrong, but hath eight Gates, and a pretty good Caſtle to defend it. The *Turks* live in it, and are generally about eight hundred Men. No *Chriſtian* may lodge in it; but the *Jews*, for their Security, pay a certain Sum yearly to dwell in it, for they would find but bad Entertainment among the *Chriſtians*.

It was built by the *Genoeſe*, when they were Maſters of the Iſle, and commands the Port. Four Miles from the City, near to the Sea-ſide, is to be ſeen a vaſt Stone, which was cut out of ſome Rock; it is almoſt round, but the upper Part is flat, and ſomewhat hollow. On the upper Part are Places like Seats cut in the Stone, of which there is one higher than the reſt, like a School-maſter's Chair, where, as Tradition reports, was *Homer*'s School, where he taught his Scholars. M. *du Mont* ſays, he ſaw nothing but a ſquare Altar cut out of a Rock, with the Figures of an Ox, Wolf, Sheep, and Rabbit, in *Baſſo-relievo*, and thinks, that in all Probability there were no Schools there, but that it was a Place where Sacrifices were offered to the God *Pan*, or ſome other Rural Deity. The Iſle of *Chio* is eighty Miles in Circuit, and very populous, containing, beſides the chief Town *Chio*, already deſcribed, ſixty Towns and Villages, inhabited for the moſt Part by Chriſtians.

9. The chief Villages are *Cordomolo*, which contains about five hundred Inhabitants: The Country about it is very fertile and well watered, yielding annually one hundred and ſixty, or one hundred and ſeventy Tun of Wine. Some Years ago, ſeveral Pieces of Gold, Silver, and Copper Money, of the Emperor *Conſtantine*, were found there. Five Miles from it is a lovely Valley half a Mile long, where is a Spring of Water, to which there is a Deſcent by twenty-five beautiful Marble Steps. At the End of it was a Temple of fine Aſh-coloured Marble, but it is pulled down, and the Stones broken, and this only to get the Iron and Lead that joined them together.

Beyond it is *Vichi*, a Village inhabited by three hundred Souls, having a Church dedicated to the Virgin. Beyond it is *Cambia*, which has one hundred Inhabitants, and lies among Rocks, Hills, and Woods of wild Pine-trees, which they fell for Timber to build their Galleys. Among the Mountains are ſeveral Churches. Below this Village is a Valley, where ſtands a little Caſtle built upon a Rock, which is almoſt inacceſſible. Over-againſt this Caſtle is the Mount of St. *Elias*, which is the higheſt Place of all the Iſland, and is ſeen from *Tenedo*, which is above one hundred Miles diſtant. It has a Church dedicated to that Saint built on it, but is uſually covered with Miſts and Snow. In the Middle of this Mountain is a large Spring, which waters the Fields about it, and makes them very fertile and they are planted with all Sorts of Fruit.

In a Wood hard by lies *Spartonda*, a Village inhabited by about fifty Shepherds, but very pleaſant, affording Plenty of good Water and Fruits. Between *Calandre* and *Coronia* there is a Bath of Sulphur by the Sea-ſide, under extraordinary big Oaks. It is called *Hayaſma*, *i. e.* the Holy Water, becauſe the Water being drank, cures many Diſeaſes, but by the violent Operation it has killed many. Three Miles from the Sea, at the further End of the Iſland, is a Town called St. *Helena*, built on a Rock, containing two hundred Inhabitants, two Churches, and a Chapel. The Inhabitants of this Place firmly believe, that if a dead Body does not corrupt in forty Days, it turns *Zorzolacas*, or a *Nomolacas, i. e.* an *Hobgoblin.* The Chapel is highly eſteemed for its Sanctity by all the Villages round about.

From hence one goes to *Voliſſo*, which is a great Village, with about three hundred Houſes, and fifteen hundred Inhabitants. It is ſeated on an Hill, and has a Caſtle built by the famous *Beliſarius*, the Emperor *Juſtinian*'s General, who was forced aſhore there by a Storm. The Country about it is very pleaſant, open and fruitful, and the Inhabitants raiſe five thouſand Weight of Silk yearly, with which they pay their Tribute. They are vicious, and it is thought they lie under a Curſe of being always deſtitute of Bread.

Near this Place is *Varvariſo*, where there is a Church dedicated to St. *Marcella*, to whom they keep a ſolemn Feaſt, called *Panagirio*, and the Prieſts ſing Praiſes to her all Night long.

Three Miles from this Village is the Monaſtery dedicated to St. *John*, and by it a Village called *Fitta*, near which is a great Village, where there is a running Water that drives eight Mills, which ſerve all the Villages thereabout, for the Peaſants have Hand mills, and their Wives grind their Corn. From hence you go to *Sieronda*, which is an ancient ſpacious Tower, inhabited by fifty Shepherds, who have a Church in it. A little farther is *Lecimiliona*, a Village of one hundred and fifty Inhabitants, and a Church. There begin the Maſtick Trees. Two Miles from thence is *Elata*, the Inhabitants of which are famous for taming of Partridges.

10. At *Armolia*, which is a little farther, is made all the Earthen Ware uſed in the Iſle. It lies in a Plain full of Maſtick Trees, and contains five hundred Inhabitants and ſeveral Churches. Over againſt this Village ſtands a Caſtle, called *Apollieno*, very ſtrong to reſiſt the *Corſairs.* It was built in 1440 by *Nicholas Juſtiniani*, and has a Church in the Midſt of it. The Village *Meſta* exceeds all the reſt in Strength and good Building, and contains three hundred Inhabitants and ſeveral Churches. By it are two Harbours, *Aidinamy*, and *San Nichita*, but this laſt is neareſt *Pergi*, a great Village with a Tower, containing two thouſand Inhabitants and thirty Churches. The reſt of the Villages have the like Number of People and Churches, and in many of them are Caſtles and Towers, built to defend their Towns and Maſtick-Trees from the Ravages of the *Turks* of *Natolia*, who croſſing the Sea in Boats or Gallies, come and carry away both the People and their Goods; for which Reaſon they have built Towers all round the Iſland, at four Miles Diſtance one from another.

This whole Iſland is very ſubject to Earthquakes, yet would be very fertile were it not ſo ſtony, and had more Water, for it rains ſo little there, that every Spring the *Turks*, *Greeks*, *Latins*, and *Jews*, are forced to make Proceſſions to obtain Rain. But notwithſtanding the Hillineſs and Dryneſs of the Iſland, it has all Things neceſſary and good in ſufficient Quantities. It yields Corn and good Wine, but being thick, ſome do not like it, becauſe, they ſay, they muſt both eat and drink it. All Things are cheap there, and excellent Partridges may be had for little or nothing, for they keep them tame like Turtles, and have Keepers, who drive them out in the Morning, and whiſtle them in at Night, which Call they always obey. The Inhabitants of this Iſland are the only People who have preſerved their Liberty under the *Turks*, living as they think fit, and exerciſing their Religion with all imaginable Freedom, only paying them their ſettled Tribute.

They are generally *Chriſtians*, many of them are Papiſts, and the reſt of the *Greek* Church. They are apparell'd after the Faſhion of the *Genoeſe*, and have much of their Humour. They are in Countenance (that is, the Men) ſo ugly as would ſcare a Man, though their Perſons are proper and well ſhap'd. They are very proud, yet their Gentlewomen go to Market to buy Proviſions, and carry them openly in the Streets. They love the *Spaniards* better than the *French*, but had rather be under the Government of *Turks* than *Chriſtians.*

The *Chiots* make much Damaſk, Sattins, Taffata's, Fuſtians, and other Silk-Stuffs, and drive a Trade in many Places with their Saiques, *viz.* to *Grand Cairo*, and the Maritime Cities of *Barbary* and *Natolia.* Such as are not obliged to work or follow Buſineſs, ſit whole Days under the Trees talking together. Learning is out of Uſe in this Country, but profound Ignorance reigns among them, yet they have naturally a ſharp Wit, ſo that to avoid their Cheats in Dealing, a Man had need of all his Eyes about him. They are much given to Pleaſures, and love exceſſive Drinking.

The Women are very beautiful and well ſhaped, their Faces are as white as the Jaſmin they wear on their Head, and are very charming, but their Breaſts are ſcorch'd with the Sun, which is much to be wonder'd at, becauſe they take as little Care of their Faces as Breaſts. They are always very neat in their Dreſs, wearing on their Heads very white Linen. They have a very briſk and lively Wit, which renders them the moſt talkative Women in the World, but are extremely vain in their Apparel, wearing the fineſt Stuffs they can get; but whereas they uſed formerly to load themſelves with Rings and Jewels, eſpecially upon the Vigil of St. *John*'s Day, they are now forbidden it under the Pain of Excommunication by the Pope, becauſe the *Captain Baſha*, ſeeing this Finery, impoſed a Tax of 50,000 Piaſtres upon them, and made them pay it, ſo that they wear no Gold, Silver nor Jewels about them.

The *Chiots*, both Men and Women, are much given to Dancing, and on *Sundays*, and *Holidays* they dance all Night promiſcuouſly, both in the Cities and Villages, and a Stranger is freely allowed to put in with them. They are not at all jealous, but their Women and Maids are allowed to ſtand at their Doors to ſee and talk with ſuch Men as paſs by; and they will be as merry and familiar with Strangers, as if they had been acquainted with them all their Days.

11. Another Iſle of the *Archipelago*, bordering upon *Aſia*, is *Patino*, *Palmoſa*, or *Patmora*, anciently *Pathmos.* It is but eighteen Miles in Compaſs, and has but one well built Town in it, with a Caſtle in the Middle of it, called, *The Monaſtery of St.* John, where 200 *Greek* Monks live. St. *John the Evangeliſt* being baniſh'd into this Iſle, is ſaid to have wrote here his Revelations. They carefully keep in their Church a Body ſhut up in a Caſe, which they likewiſe ſay, is the Body of St. *John*, and ſhew a Grotto where they likewiſe ſay St. *John* wrote the *Apocalypſe.* There are about 3000 Souls in the Iſle, who have much ado to live, the Iſle being very dry and rocky. No *Turks* live in the Iſland, but they are all *Chriſtians* who pay Tribute to the Grand Signior. The *Corſairs* put into this Iſland to careen, and take freſh Water.

The Iſle of *Nixia*, anciently *Naxos*, is 120 Miles in Compaſs. It was ſubject to the *Sanudi* and *Somarigi*, *Venetian* Dukes, till the *Turks* took it under the Emperor *Solymus*, yet there are ſtill in it ſeveral noble Families deſcended of thoſe Dukes. The Land is fruitful in all Things, but eſpecially the Valley of *Darmilla*, which has eighteen Villages: They feed many Cows, Sheep and Goats, and their Country yields many Vines, of which they make great Quantities of Wine and Cheeſe, which they ſend to *Alexandria*, *Smyrna*, and *Chio.* Near the Town by the Sea, are Salt-pits and a Pond, which they farm out to Fiſhermen. In the Marſhes of the Valley of *Plietri*, they catch great Plenty of very fine Eels. Their Woods are full of Rocks and ſolitary Dens, where there lie large Stags. The Peaſants catch Partridges by ſtalking with an Aſs, trained up to it, and they have Plenty.

There are many Monaſteries in this Iſle, and one of them, which is built in Form of a Tower, is very ancient. There is alſo another called *Fanaromeni*, dedicated to the Virgin, which has ſeventy Rooms, and a ſmall Church, but the Monks are extremely ignorant, and by their Viciouſneſs one would judge they ſerved ſome *Unknown God.* By the Sea ſide, over-againſt the Iſland of *Nicaria*, is to be ſeen upon a very ſteep and ruggid Mountain, ſome Ruins of the Caſtle of *Apollo*; and it is a Wonder how Stones could be got up ſo high to build it. By it are four little Towns well inhabited.

On the Hills hereabout many Goats feed upon an Herb, called *Ledum*, which leaves a kind of viſcous Dew upon their Beards, that turns into a kind of Gum, of a very good Smell, called *Labdanum*, or *Laudanum*, and is gathered by cutting off their Beards.

As you go to the Town, there is a Caſtle upon a very high Hill, which commands the Villages of *Darmilla*. Near the Town, upon the Rock *Strongyle*, is the Palace or Temple of the God *Bacchus*, built of very white Marble, but the *Turks* and others carry it away daily for their private Uſes. *Bacchus* may well have a Palace at *Nexos*, where they are ſo great Drunkards. The Tower and Ducal Palace are ſtill in being in the Town. There are two Archbiſhops in it, a *Latin* and a *Greek*. The Cathedral Church of the *Latin* Archbiſhop, dedicated to the Aſſumption of our Lady, is very handſome, and very well ſerved by ſix Canons and ſeven Prieſts, but their Revenue is inconſiderable, for the Archbiſhop has no more than twenty Piaſtres of yearly Rent. He hath a Seat in the Country with a Church, at a Place called *San Mamma*; the Church is paved and lined with Marble, but not kept in very good Repair.

In the Caſtle the Jeſuits have a ſorry Houſe, and the *Greeks* a Chappel, that belonged formerly to the Dukes. Without the Town are *Recollets* and *Capuchines*, who make many Proſelites to the *Roman* Faith. The Inhabitants have ſuch violent Feuds among them, that ſometimes they will not ſpeak one to another as long as they live; but the Women are more obſtinate than the Men, and are great Medlers in other People's Buſineſs. The Women wear ſo many Coats one over another, that they are ſcarce able to go, and their Shoes are ſo ſtrait, that they can hardly get their Feet in, but they are ſaid to be pretty honeſt and chaſte. From the Sale of their Wine, Cheeſe and Silk, they raiſe their Tribute.

12. About ſix Miles from *Nixia* is the Iſle of *Paro*, anciently called *Paros*, which has three Caſtles, ſeveral Villages, and a good Harbour for all Sorts of Veſſels, fair Churches, and many *Greek* Prieſts and Monks. The Antiquities of this Iſle, conſiſting in Statues, Marble Cheſts, *&c.* were carried away by an *Engliſh* Gentleman, who took all he could find here, as well as at *Delos*, now called *Sedrille*, where was Plenty of them; but now there remains but one Image of a Woman ſo large that it cannot be ſtirr'd. This Iſle was famous for its noble Quarries of Marble, and for the Oracle of *Apollo* heretofore, but now it is the Reſort of the *Corſairs*. The Iſland of *Mycone*, anciently *Myconus*, was once a well peopled Iſle, but now is almoſt forſaken, becauſe of the rigorous Perſecution of the *Turks*. It is about three Miles round.

Over-againſt this Iſland is the Iſle of *Tine*, formerly *Tenes*. It belongs to the *Venetians*, is well peopled, and hath a very ſtrong Caſtle built upon a Rock, and the Houſes ſtand one above another. It is forty Miles in Circuit, and yields Plenty of Proviſions and Silk, but it is ſo overſtock'd with People, that many are oblig'd to go out of it, and dwell at *Smyrna* and *Chio*. There is a *Latin* Biſhop in it, and the Women are handſome and courteous enough.

13. *Nio*, called of old *Oliarus*, which was not long ſince inhabited by the *Albanians*, a barbarous and warlike People, who uſed to go all Night arm'd by the Sea-ſide, and is a fruitful Country in all Things, eſpecially Woods of Oaks, and other Trees, which they cut down and ſell to other Places. You ſail then to *Santorini*, formerly call'd *Theraſia*, which is thirty Miles about, and ſixty from *Candy*, from which it may be ſeen. There are ſeveral Caſtles in this Iſle, *viz.* That of St. *Nicholas*, the Houſes of which are built upon a black Rock, that is frightful. A *Greek* Biſhop has his Reſidence there, and about 500 Souls about him; but they live moſt of them in Caves made in Pumice-Stone, and it is pleaſant to ſee them come out of the Ground like Coneys, while others are plowing over their Heads.

Scaro, built on a frightful Mountain, ſo ſteep, that thoſe who go up to it muſt climb with their Hands and Feet. It contains 150 Houſes, and the *Greeks* have a Church there, in which are two Images of maſſy Silver, one of our Lady, and the other of St. *Michael*. It formerly belonged to the *Latins*, who have ſtill a Biſhop there.

Pirgo, near which is a Chapel of our Lady, with many large Caves, where about two hundred People live. Between theſe Caſtles lies an Hill, from whence one may ſee the whole Iſland, which is planted with Vines, but has no Trees, but Fig-trees and white Mulberries. They make more Wine than they ſpend, which their Neighbours fetch from them to carry to *Chio*, *Smyrna*, and other Places. They make all Sorts of Stuffs, and by the Sale of them they raiſe Money to pay their Tribute. In this Place are one thouſand Souls, almoſt all *Greeks*, and the *Cadi* reſides here. Their Houſes are well built, all white, and wall'd in, ſo that each looks like a Tower.

At *Scaro* there is an Houſe of the Nuns of St. *Dominick*, but their Lodgings are poor and Air bad: Their Church is kept in good Order, and ſerved by a Chaplain. On St. *Stephen*'s Hill, between *Pirgo* and *Nebria*, lived a Woman, that in ancient Times gave Victuals to all the People for a whole Year that a Plague and Famine laſted, and there are ſtill remaining ſeveral Statues of her.

Crotiri, inhabited by an hundred and fifty Souls, and about it there are ſeven Villages, but ill peopled. The Inhabitants of the Iſle live very meanly; their Bread, called *Schiſes*, which is made of Wheat and Barley, is as black as Pitch, and ſo harſh that one can hardly ſwallow it; for they bake it but twice a Year, becauſe they have no Wood but what they buy by the Pound from *Nio*. They have no Fiſh or Fleſh, but feed only on Beans, Peaſe, Eggs, and Biſcuit. They have little or no Friut but Grapes, which are plentiful. They know not what Phyſicians, Chirurgeons, and Apothecaries are; they are ſtout, and can defend themſelves from their Enemies with Stones. The People live a beaſtly Life, doing nothing but eat, drink, ſleep, and play at Cards.

The Iſle at a Diſtance looks like Hell, being on the Shores all black and ſcorched by an Eruption of Flames, which happened about an hundred and twenty Years ago. About the Year 1638, there was another Eruption of Fire in the Port, which, with an incredible Noiſe, was heard two hundred Miles from thence, caſt vaſt Numbers of Pumice-ſtones out of the Sea, like Bullets, and ſo infected the Air, that many on the Iſle died, and ſeveral loſt their Sight, but recover'd it ſome Days after; and all the Silver turned red, even in Mens Cheſts and Pockets, but in a few Days came to itſelf. *Seneca* ſays, this Iſland ſtands upon Mines of Sulphur, from whence theſe Fires proceeded. It is ſaid, that *Alexander* ſounded the Sea in this Place, but could find no Bottom; yet a Ship may come to an Anchor at *Tireſia*, a little Iſle by it.

14. The Iſle of *Policandro* is eight Miles in Compaſs, and a pleaſant Place: There is but one Village of one hundred Houſes, and three hundred Souls in it: It has three well built Churches, and two Monaſteries, one of Men and another of Women. The Convent of Monks is well ſituated, and dedicated to the bleſſed Virgin. It has a little Garden, and a Fountain of excellent Water in it. The Nuns obſerve no Rule, but live as Nature teaches them; their Church is dedicated to St. *John*, and a Monk ſays Maſs in it on all *Sundays* and Holydays. The Caſtle ſtands upon a very high Hill, but all the Houſes are ruinous, except a Chapel dedicated to St. *Michael* the Arch-angel. From it one may ſee all the Iſles of the *Archipelago*. The Inhabitants of this Iſle are honeſt, civil, and courteous People, eſpecially the Women, who are very handſome. They have good Bread, Fowl, Sheep, and other Things neceſſary, but no Wine; ſo that what they drink comes from *Santorini*, which is but thirty Miles diſtant. They have no

Trades among them, becauſe their Port, which is indifferent good, is infeſted by the *Mainots* and *Corſairs*, who lodge in a Church by the Sea-ſide.

15. The Iſland of *Milo*, which is ſo called from *Mylos*, a Mill, becauſe they have many Wind-mills in it, and it affords Abundance of Mill-ſtones, is thirty-ſix Miles about. It is fruitful in all Things, and exports yearly to *Candia*, *Venice*, and other Places, between three and four hundred Tun of Wine. They have a Mine of Brimſtone, and another of Pumice-ſtones, which they farm to one of the Inhabitants for one thouſand five hundred Piaſtres yearly. Three Miles from the Town are certain hot Baths of Sulphur, where diſeaſed People from ſeveral Places waſh and recover their Health. The Port is ſix Miles long, three over, and has a good Depth of Water, and two Miles from it, in a Grotto, is a Fountain of Luke-warm Water, which gives ſo much Heat, that an artificial Bath cannot make one ſweat more. In this Iſle is a Town were two thouſand five hundred Souls live, and an old Caſtle inhabited by five hundred more. They have a *Latin* and *Greek* Biſhop.

The *Latin* Cathedral is without the Town, dedicated to St. *Peter*, but without Ornaments; and the Biſhop celebrates in a Chapel that joins to a *Greek* Church. He has many Tithes, of which he gives to the *Greek* Biſhop, one third Part. He has alſo many well built Churches in good Repair under him, and many Prieſts to officiate in them. Moſt of the Inhabitants are *Greeks*, who live much at their Eaſe, and are civil, but, as uſual, wicked and perfidious. Their Women go in a very ugly Dreſs, ſpeak very ill, and cannot pronounce the Letter *L*. They are, however, very charitable and kind to Strangers. They have all Neceſſaries for Life, but no Phyſicians or Chirurgeons. There are no *Turks* in the Iſle, but it is govern'd by four Deputies of the Town.

Half a Mile from *Milo* is the Iſle called *Chimolo*, or *Argentara*, which hath a good Harbour, and a Village containing about two hundred Souls, which was burnt by the *Corſairs* in 1638. Theſe poor People live in great Miſery.

16. The Iſle of *Sifano*, or *Sifanto*, anciently *Sifanus*, is thirty-ſix Miles in Circuit, and has a Caſtle upon a Hill, with double Walls, inhabited by three thouſand Souls; and there are no other Houſes in all the Iſland, unleſs it be ſome Country-houſes of private Men. The Harbour is not good. There is upon it a *Latin* Biſhop, and a good *Greek* Vicar; but the Biſhop's Chapel is little and very poor. There is alſo a Monaſtery of *Greeks* built upon a Hill. The Iſle produces not Proviſions enough for above two Months in the Year, and for the reſt of the Year, the People fetch it in Barks from other Places. They are very great Rogues, but their Women are very honeſt, and go with their Faces cover'd. There are no Manufactories or Trades, but Weavers, Shoe-makes, Joiners, and ſuch-like.

The Iſle of *Thermia*, ſo called from the *Thermæ*, or hot Springs in it, which give a great Relief to ſick Perſons, is thirty-ſix Miles in Circuit. The Town contains about three hundred Houſes, inhabited by about two thouſand Souls. The *Greeks* have fifteen Churches in it, and a Biſhop, who reſides ſix Months here, and as many at *Zia*. There is alſo a Caſtle and a pretty Village, called *Meſi*. The Iſle is almoſt all plain, has few Trees, yet is fruitful, and abundant in all Things. The Inhabitants are reputed to be honeſt People, and trade in Stuffs, Threads, and other Commodities, raiſing thereby Money to pay their Tribute. The *Venetian* Corn only goes in this Iſle, as it doth in all the others, except *Naxia*, *Andro*, and *Scyra*, where *Turkiſh* Money goes. Their Women are virtuous, handſome, and wear a neat Dreſs. The People live pretty well there, and a *Cadi* commands, with four Procurators, choſen out of the Citizens of the Town.

17. *Ajora* is an Iſle eighteen Miles about, and depends on the Iſle of *Scyra*, who keep ſome Shepherds there to feed their Sheep. There are four Churches in it, but Divine Service is perform'd in them at *Eaſter* only, when the Shepherds communicate. The *Corſairs* hinder its being cultivated, becauſe they take away the Oxen, and ſometimes the Sheep.

The Iſle of *Scyra*, which in the vulgar *Greek* ſignifies *Signora*, or Miſtreſs, is ſo called, becauſe it ſtands in the Midſt of the other Iſles, and by its Height commands them all. It is thirty-ſix Miles in Compaſs, and, having a dry Soil, but few Trees, abounds with Plenty of Proviſions, as Fleſh, Fiſh, and Veniſon. The Water is good. They have no Villages of Note, but only ſome ſcattering Houſes up and down in the Country. The People are much addicted to Devotion, and eſpecially the Women, who are very ſilly. There is much Hatred and Envy always amongſt them, by reaſon of the Oppreſſion they ſuffer from the *Turks*, and Oppreſſion of the common Poverty. They are almoſt all *Latins*, and have ſeveral Churches. The Cathedral ſtands at the upper End of the Town, and is dedicated to St. *George*, and ſerved by ſeveral Prieſts, who have a Biſhop for their Superior, and he lives on his Revenue and Tithes. The *Capuchins* are diligent in Preaching, Catechizing, and hearing Confeſſions, by which they do much Good.

18. From *Chio* Mr. *Thevenot* failed into *Egypt*, and in his Paſſage, being left before the Iſle of *Samos*, he took a View of it. It is a very barren Country, though famous for having been the Birth-place of *Pythagoras*, *Polycrates*, and the *Sibyl*. It is eighty Miles in Circuit. Over-againſt *Samos*, and pretty near it, is the Iſle of *Nicaria*, anciently called *Icaria*, from *Icarus* the Son of *Dædalus*. It is of a long Figure, and the Land is very dry, and full of Rocks, in which are the Houſes of the Inhabitants, who are in all about three thouſand Souls, very poor and ill clad.

They are much addicted to Swimming and Fiſhing up Sponges and Wrecks, and the richeſt Men, or *Papa's* in the Iſle, give their Daughters to the beſt Swimmer, which is tried before the Damſel and her Father. He that can remain longeſt under Water wins the Maid. They pay the Grand Signior Tribute in Sponges. They have Vineyards among the Rocks here and there, and they make of the Grapes a Sort of white Wine, as clear as Water, which paſſes by Urine as ſoon as it is drunk. The Wine, as alſo Wax and Honey, they trade with to *Chio*. The Women are Miſtreſſes there, and as ſoon as the Huſband is arrived from any Place, the Wife goes to the Sea-ſide, and takes the Oars, and carries them Home, after which the Huſband can diſpoſe of Nothing without her Leave. The Inhabitants are well ſhaped and ſtrong. The old *Greek* Emperors of *Conſtantinople* baniſh'd Perſons of Quality that had offended them into this Iſle.

19. Leaving *Samos*, he came to the Iſle of *Stanchio*, otherwiſe call'd *Iſola Longa*, ninety Miles diſtant from it. It was anciently call'd *Coos*, is ſeventy Miles in Circuit, and very fruitful, eſpecially in good Wine. On the Port by the Sea-ſide is a pretty good Caſtle, where the *Turks* keep Garriſon. The Town lies behind it, where there is a prodigious Tree of that vaſt Extent, as to cover 2000 Men eaſily, for the Branches being ſupported with many Stones and wooden Pillars; there are ſeveral Barbers Shops, Coffee-houſes, and ſuch like Places, beſides Benches to ſit on under it. It was anciently famous for the Temple of *Æſculapius*, and the Births of *Hippocrates* the Prince of Phyſicians, and *Apelles* the Prince of Painters. The Knights of *Malta* held it, when they were Maſters of *Rhodes*, and there are ſtill many Monuments remaining in it. Strangers are here more regarded by the Women, than is grateful to their Huſbands.

From hence he ſailed to the Caſtle of *Bodrou*, which lies over-againſt *Stanchio* at twelve Miles diſtance. There is a good Port, but ſo ſhut up with Dirt, that great Ships can't get into it. You enter this Caſtle through ſeven Gates, over which are ſeveral Coats of Arms, which belonged to the Knights of *Rhodes*, that commanded there, for in ſome of them are Croſſes of *Malta*. There is above 300 of theſe Eſcutcheons. Beyond the ſixth Gate is a Platform, where there are ſix Cannon pointed toward the Sea. The laſt Gate is made of Iron, and there ſtands a Guard of fifteen or twenty Men continually. The Caſtle is ſtrong, and the Walls high, both built of a Sort of Stone, which great Guns cannot hurt. The Sea beats upon one Side of it, which has Port-holes, with great Guns mounted, which can eaſily hinder Ships from approaching it. It is alſo very ſtrong towards the Land, the Walls being as ſound as if they were lately built. No Horſe can approach it, and yet it may be eaſily taken, by cutting off the Water that is brought to it by an Aqueduct. The Houſes in it are ruinous, and there are many Pieces of Pillars found among them. The Country about it is fruitful in Grapes, Figs, and ſuch like Fruits.

20. From *Bodrou* he ſailed to *Rhodes*, which is 100 Miles from *Stanchio*. The Iſle of *Rhodes* has *Lycia* on the North, being parted from it by the Sea, which is twenty Miles broad, the Iſle of *Cyprus* on the Eaſt, *Candia* on the Weſt, and *Ægypt* on the South. It is 100 Miles in Circuit, lying in a temperate Climate. The Soil is fruitful, and hath ſeveral Villages in it well inhabited, beſides a ſmall City which is ſtrong. This Iſland has been under the *Greeks*, *Saracens*, who loſt it to the Knights Hoſpitallers of *Jeruſalem* in 1309, who held it 200 Years, and now is in the Hands of the *Turks*, who under *Solyman* II. took it in 1522, by Compoſition, and that more thro' the Treachery of *Andrea d' Amaral*, Chancellor of the Order (who being angry that he was not choſen great Maſter at the laſt Election, inform'd the *Turks* of their Weakneſs, by a Letter ſhot to them on an Arrow) than by Force, though his Army conſiſted of 200,000 Men.

The Town hath two Harbours, of which the Great Port, being ſquare and ſpacious enough, is not very ſafe, when the Wind blows from the E. N. E. or S. E. On the Right-Hand at the Entry of this Port is a new Tower, built by the *Turks*, in a Place where the old Tower of St. *Nicholas* ſtood. It is well furniſhed with Cannon, hath a Baſtion behind, and Curtine reaching to the Walls of the Town; over againſt this Tower ſtands the Caſtle of St. *Angelo*, but ſomewhat ruinous.

This Caſtle and Tower were built in the Place where ſtood the Feet of the great *Coloſſus*, one of the ſeven Wonders of the World, between the Legs of which a Ship under Sail might paſs. It repreſented the Sun, and was caſt by *Chares* the *Lyndian.* It was ſeventy Cubits high, ſtrided fifty Fathoms, and carried a Lighthouſe in one Hand. It was overthrown by an Earthquake, and being broke to Pieces by the *Saracens*, was ſold to a *Jew*, who loaded 900 Camels with the Metal, and carried it to *Alexandria*, in the Year of our Lord 954, and 1461 Years after it was made. The Port of the Gallies, which is covered by the Caſtle of St. *Erme*, is a good Harbour, and able to contain many Gallies, but the Mouth of it is ſo narrow, that one Galley only can enter at a Time. It looks to the E. N. E. and is every Night ſhut with a Chain. A little up-land above the Port is a Burying-place, and in it fifteen or twenty Domes of Free Stone well-built, and ſupported moſt of them by four Arches. Theſe are the Sepulchres of the *Beys*, or other Perſons of Quality in *Rhodes*, who have been killed in the Wars. On the Side of this Port is a Piazza with ſome Trees and a Fountain in it, and at the Bottom of it the Arſenal, where the Gallies and Saiques are built. The Town is ſmall, but ſtrong, having high and well-built Walls, planted with Faulcons on the Top, and below there are Port-Holes for great Cannon.

It hath three Gates, one to the Sea, where Corn is ſold, and two to the Land-ſide. Over the Water-Gate is ſet up the Dragon's Head, which was thirty-three Feet long, waſted all the Country round, and was ſlain by *Deogate de Gozon*, one of the Knights of St. *John.* The Streets of the Town are pretty broad, all paved with little Stones, and for the moſt Part covered with Pent-houſes on each Side. There are ſeveral fair Buildings in it. St. *John*'s Church is ſtill ſtanding, but is turned into a Moſque. Over the Gate is a Nich, which hath a round Cover, are the Figures of our Saviour and the bleſſed Virgin, and St. *John* holding the Croſs, cut in *Baſſe Relieſe.* No Chriſtian is now ſuffered to go into it. The Street of the Knights lay juſt as you come out of the Church, as the Arms upon the Houſes ſhew; but now *Rhodes* is inhabited only by *Turks* and *Jews*, for though the *Chriſtians* are permitted to keep Shops in Town in the Day-time, yet in the Night they muſt retire to Villages in the Country about it. *Lindo*, the Country of *Chares*, who made the *Coloſſus* of *Rhodes*, is a little Rock at the Point of the Iſle of *Rhodes*, ſixty Miles from the Town. It has a ſmall Town on it, with a very good Fort.

21. At the Bottom of the *Mediterranean*, lies the noble Iſland of *Cyprus*, famous in all Ages for the Fertility of its Soil, the Excellence of its Climate, and the Advantage of its Situation. It has been known in different Ages of the World, by very different Names, and ſome of theſe are ſuch, that it would be a difficult Thing to point out clearly the Authorities upon which they are founded. In the Holy Scripture it is called *Kittim*, from *Kittim* the Son of *Javan*, the Son of *Japhet*, the Son of *Noah*, who firſt poſſeſſed it; in ſucceeding Times it was called *Ceraſtis*, becauſe of the many Promontories it thruſts into the Sea like Horns; *Macaria*, becauſe of the Fruitfulneſs of the Soil, and Happineſs of the Climate; *Aſperia* from the Roughneſs of the Soil; *Collinia* from its numerous Hills; *Æroſa*, becauſe of the Mines of Copper or Braſs, which were firſt ſaid to be found there; *Amathuſia*, *Paphia*, *Salaminia*, *Lapithia*, from the Towns of *Amathus*, *Papho*, *Salamine*, and *Lapithus.* At Length it was called *Cyprus*, but from whence it is not very clear; ſome ſay from its Copper Mines, others from *Cypreſs* Trees, which were in a Manner peculiar to it.

In ancient Times it was conſecrated to *Venus*, who is ſtiled by the Poets, the *Cyprian* Goddeſs, and the Reaſon of this ſeems to have been from the Wantonneſs of its Inhabitants, as this again may be derived from the Excellence of its Climate, and from the Fertility of the Country. The longeſt Day is about fourteen Hours and a half, their Weather in Summer is prodigiouſly hot, ſo that ſometimes their Brooks, and even their Rivers have been dried up; and in the Reign of *Conſtantine* the Great, when they had no Rain for thirty-ſix Years, it was in a great Meaſure deſerted, but ſuch Accidents, or rather ſuch Judgments happen ſeldom, and therefore ought not to be mentioned as Objections to the general Repute this Country has been in for its great Fruitfulneſs. It was anciently governed by Kings, of whom there were nine when *Cyrus* reduced it; but it ſeems they remained Tributaries, and were not ſtripped of their Dominions; for long after his, we find the *Greek* Orator *Iſocrates*, addreſſing two of his Orations to two of the *Cyprian* Monarchs; and in the Time of *Alexander* the Great, the King of *Citium* is recorded to have preſented him a moſt excellent Sword, which he uſed afterwards during his Life.

Upon the Diviſion of his Empire, *Cyprus* fell under the Dominion of *Ptolemy*, and was governed ſometimes as a Province, ſometimes as a ſeparate Principality, by that Family, till conquered by *Portius Cato* for the *Romans*, who carried from thence ſeven thouſand Talents, which was more than ever came into the *Roman* Treaſury by any former Conqueſt. After the Diviſion of the *Roman* Empire, it belonged to the *Greeks*, from whom it was taken by the *Saracens*, recovered from them, and governed by Dukes or Princes. In 1191, it was conquered by our King *Richard* I. who firſt mortgaged it to the Knights of *Rhodes*, and then gave it to *Guy* of *Luſignan*, whoſe Family held it for many Generations.

Under theſe Princes it was divided into twelve Counties, containing forty-eight great Cities, and upwards of eight hundred Villages. *Charlotta*, the laſt Heireſs of that Family, was driven out by *James* II. her Baſtard Brother, who married *Catharine Cornaro*, of a noble *Venetian* Family, adopted Daughter of the Republick, to whom ſhe bequeathed this Kingdom, to which, however, her Right was but indifferent. The *Venetians* came into Poſſeſſion in 1473, and held it almoſt an hundred Years; but at laſt it was taken from them by *Solyman* II. Emperor of the *Turks*, after a long and glorious Defence, and with Circumſtances of moſt infamous Cruelty and Treachery on the Part of the *Turks*, who have kept it ever ſince.

It abounds with Wine, Oil, Corn, Sugar, Cotton, Honey, Wool, Turpentine, Alom, Verdigreaſe, all Sorts of Metals, and moſt excellent Salt. This Iſland affords ſeveral good Ports, all the Materials requiſite for building of Ships, all the Commodities that can be deſired for carrying on a great Trade; and, if it were under a right Government for one Century, might be able to defend itſelf againſt all its Neighbours. At preſent it is thinly peopled, and not half cultivated. A *Turkiſh* Baſha deſtroyed all the Sugar Canes, to prevent the *Cypriots* from having too much Wealth; an Evil which there is now no Reaſon to fear.

In a Word, it is at this Day the cleareſt Proof that can be given, how much a bad Government can defeat all the Kind Intentions of Nature; for in Spite of all the Advantages that a Country can poſſibly have, there never was a more diſmal or deſolate Place than this Iſland is at this Day, from having Millions of People, there are now in it ſcarce thirty thouſand; from a Climate that produced a perpetual Spring, it is become both unwholſome and unpleaſant; from Cities and Towns that touched each other, there are now only Villages and Heaps of Ruins; from Abundance of all Things, the Inhabitants are reduced to Indigence and Starving; ſo that except to conſiderate and intelligent Perſons, the Face of the modern *Cyprus* refutes all that ancient Authors have ſaid in its favour. Such are the Effects of a falſe Religion and tyrannical Government.

22. It would be inexcuſable of ſpeaking of theſe Iſlands, to ſuffer that which makes the greateſt Figure in Hiſtory, to remain hidden, and out of the Reader's View; I mean the Iſland of *Candia*, ſo long the Theatre of War between the *Venetians* and the *Turks*. The Inhabitants of this Iſland are allowed to be ſenſible as well as brave and hardy; whereas the *Sciotes*, or Inhabitants of the Iſland of *Scio*, are commonly called *Praſſinos* by the *Turks*, which is as much as to ſay *Green*. The Reaſon of this is, that a *Turkiſh* Baſha, much eſteemed for his Wiſdom, obſerving the Manners of the Inhabitants of that Iſland, ſaid, that *a wiſe Sciot and a green Horſe were Rarities equally hard to be met with*. By this unlucky Sarcaſm he ſtamped the Name of *Praſſimos* upon this whole Nation. But for the *Candiots*, though the *Turks* hate them, yet they cannot help owning, that they have both Courage and Underſtanding, of both which they gave ample Teſtimony in the Courſe of the long War before-mentioned.

Among others who have recorded the Events of that famous Diſpute, our Countryman Mr. *Bernard Randolph*, is thought to have done it with as much Fidelity as any. He ſpent upwards of twenty Years not only in the *Levant*, but amongſt theſe Iſlands; and upon his Return Home, he compoſed a Deſcription of them, which was printed in a thin Volume in *Quarto* in 1687, at the Theatre in *Oxford*. It appears from thence, that he was a plain well-meaning Man, more concerned about Matter of Fact, than the Stile or Manner of telling his Story. What he related was chiefly from his own Knowledge, which gives great Credit to his Accounts, and in ſome Meaſure excuſes the Roughneſs of his Language, and his Writing without any Method. It appears from the Works of the judicious Sir *George Wheeler*, that Mr. *Randolph*'s Book was printing, when he was writing his Travels; and for this Reaſon that worthy Gentleman ſpeaks very reſpectfully of that Performance, and refers his Reader to it, as a Kind of Supplement to his own: Yet in moſt Parts of his Book Mr. *Randolph* is wonderfully conciſe, and tells us more or leſs of a Place, not in Proportion to its Size, Situation, or Importance, but as he was little or much acquainted with it himſelf. Of this Iſland, however, he ſpeaks copiouſly enough, and has thrown together, in his Deſcription, the principal Actions in that War, which coſt the Grand Signior *Mahomet* IV. ſo much Trouble, and which broke the Force, and exhauſted the Treaſure of the *Venetians* to ſuch a Degree, that they have never been able to recover. We will give the Reader, therefore, his Account in his own Words.

'The Iſland of *Candia*, (which in old Time was, and alſo now is by the *Turks* called *Crete*) hath followed, for the moſt Part, that of the Empire of *Greece*, and is now ſubjected to the Tyranny of the *Turks*, after a War for above twenty-ſeven Years; in which Time the *Venetians* did bravely, and with unparallel'd Courage, defend the City of *Candia* to the laſt Extremity. After a cloſe Siege for near two Years Continuance, the Vizier there in Perſon, and with him the beſt of all the *Ottoman* Forces, they were forced to ſurrender, yet upon the moſt honourable Terms that themſelves could propoſe, carrying away with them not only their Cannon and all other Ammunition, but alſo the Bells which were in the Steeples, and whatever elſe they thought worth their Labour. The Vizier was ſo much overjoyed that the City was ſurrendred to him, that he appointed ſeveral of the *Turkiſh* Boats to aſſiſt the *Venetians*, if they ſhould have Occaſion for their Help in carrying their Goods to the Ships. He was ſo obſerving of his Word on the Ceſſation, that he cauſed two *Janizaries* to be put to Death for attempting to force their Way into the City.'

All *Europe* has heard of this great Siege, how many thouſand Bombs were caſt into the City; how many Mines and Forenellos were blown up; and how many bold Aſſaults the *Turks* made. They had at laſt worked themſelves ſo near the Walls, that it was impoſſible for the Beſieged to make uſe of any of their great Guns; for no ſooner could a Man appear to level a Gun, but there was a Shower of Bullets and Arrows; ſo that the *Turks* would often attempt to undermine, and the *Venetians* did countermine them; and when they met under Ground, they fought moſt deſperately. The *Venetians* have an Engine which they call *Trombo di Fuoco*, it is as long as a half Pike, the Staff bigger; at the End are two Irons about two Foot long, in the Form of a Fork, in which is faſtened a Trunk made of Iron, and ſome are of Wood; in it are five Charges, each firing ſeverally and at a certain Time, and carry ſeveral Bullets to do Execution as far as a Piſtol; they ſet Fire to it at the Fore-part, and have a Touch to reach from one Chamber to the other.

Another Invention they had to fiſh up the *Turks* when they attempted to undermine their Walls; they had Hooks made in the Form of a Boat's Grapling, the Points ſharp, faſtened to a Rope, and four or five Foot of Chain at the End; theſe Hooks they often caſt over the Walls amongſt the *Turks*, and ſeldom fail'd to bring up a *Turk*, ſome faſtened by the Cloaths, others by the Body. I have heard ſome of the Officers ſay they have taken ſeveral in a Night; for when the Hook was faſtened, they gave them not Time to unhook themſelves, but had them ſoon over the Walls. At the *Greeks* leaving *Candia*, there happened a moſt ſad Accident, a new Ship, called *La Fregatta Galliera*, or the *Gally Frigat*, was pitch'd upon for tranſporting moſt of the Principal of the Gentry, and the greateſt Part of the Riches of the Citizens; there was alſo (beſides what were mounted) fifty great Braſs Guns; the Paſſengers were between two hundred and fifty and three hundred, beſides two hundred Mariners and upwards. Being between an Iſland called *Obo* and the Port of *Cerigo*, the Ship opened, and not a Man was ſaved. The reſt of the Fleet got well, ſome to *Zant*, others to *Ceſfalonia*, *Corfu*, and *Venice*, landing the *Greeks* as they had a Fancy to the Place which they came to, or as they found Friends. Thus they left their Eſtates to the Enemy, and not above five or ſix *Greeks* remained, who being in Years, and ſickly withal, deſired Leave of the General that they might end their Days there. In the Articles of Peace it was concluded, that the *Venetians* ſhould keep Poſſeſſion of three ſmall Iſlets which are cloſe to the Iſland of *Candia*, and have each a very ſtrong Caſtle. The *Turks* laughed at their Propoſals, ſaying, *We have the Hen, and the Chickens will follow of Courſe.*

This Iſland had twenty Cities, and above one thouſand Towns, Villages, and large Monaſteries; now there is not above four Cities and three hundred Towns and Villages. To give you an Account of them, I will begin with the Eaſtern Part. This was formerly a Province called *Sitia*; the head City had the ſame Name, ſtanding in a Bay at the North Eaſt Part of the Iſland on the Weſt Side, extending from the North to the Bottom of the Bay Southerly above a Mile in Length. The Caſtle ſtood on a riſing Ground to the North Weſt of the Town, built of a Coarſe Marble Stone. The *Venetians* finding the Place was not tenable, cauſed ſeveral Mines to be made, by which they deſtroy'd the Caſtle and Town, and ſo went to *Candia*. By the Ruins it may be ſeen, the Builders had no Thoughts ſo ſoon to have left them. Moſt of the Walls are entire, and ſome have lower Rooms with Beams, which are patch'd up, and ſerve for Store-houſes to put Corn in, when any Ship comes to lade. In the Year 1680, I was here, and loaded a Settee of *Provence*, Capt. *Steppe Bremon*, who belonged to *Caſſis*, about ten Miles from *Marſeilles*. The Wheat was the Baſha's own, which he ſold at three Timens a Killoe, (*i. e.* about 14 *d.* the Buſhel.) The *Turk*, who came with me from *Candia*, was an ordinary Servant; but as we travelled the Road, and when we came hither, he would domineer at a ſtrange Rate. Here are no Inhabitants nearer than twelve Miles, at a ſmall Village called *Alona*, ſaving at a ſmall Houſe and Chapel, which is a *Metoiki*, (or Chapel of Eaſe to a Monaſtery up in the Mountains) about a Quarter of a Mile from the Sea: Amongſt others, the *Greek* Prieſts brought their Tenths to the *Turks*: They all deſire to have a Seaman to meaſure their Corn, rather than the *Turks*; for they will ſtir the Corn about with their Hands, and preſs it down: But the Maſter was content to take it with a juſt Meaſure, and favour'd the poor *Greeks* what he could.

At *Alona* reſides the Baſha's Lieutenant, who has one hundred Spahi's to guard the Coaſt from Privateers, but more to gather in the Tenths. The *Greeks* maintain them at their own Charge. To the Eaſtward of *Sittia*, on a Point of Land, is a Monaſtery dedicated to St. *Iſidore*, to which belongs a great Revenue; it maintains about forty Calojeros. There are ſeveral rich Lamps, and other Ornaments of Silver and Gold. Here they ſhew you the Picture of the Bleſſed Virgin, which, they ſay, was brought by Angels from *Stancoi*, and was found in a Cave of that Mountain. They have Lands on the Iſland of *Rhodes*, where they have a Metoiki and ſeveral Calojeroes to gather in the Crops of Corn, Oil, and Wine; the *Turks* allowing them to enjoy it, calling it *Vacofa*, or Poſſeſſions for God's Uſe; yet they will receive their Tenths from it. The *Gomina* or Overſeer of this Monaſtery had made his Eſcape, taking with him above two thouſand Pieces of Eight in ready Money and Plate; but being purſued, he was taken at *Scarpante*, an Iſland lying in the mid Way between *Candia* and *Rhodes*, and by the Baſha's Order put to Death.

To the South of *Alona*, about ten Miles, is a very high Mountain, called by the *Turks*, *Baſha Dogg*; from it may be ſeen the Sea to Eaſt, Weſt, North and South. Here are the Ruins of a Caſtle, called formerly *Barozza*, becauſe it was built by a Gentleman of that Name: It is ſquare, about ſixty Foot high, with a *Tarazzo* and Battlements on the Top; each Square is about forty Foot. The Wall is very thick, the Door about ten Foot from the Ground, having a dry Ditch about it. Of theſe there are ſeveral about the Iſland, like the old built Caſtles that are ſtill in *Ireland*: for formerly the *Candiots* uſed to war amongſt themſelves; but now all ſuch Quarrels are ended by their Subjection to a common Maſter.

The City of *Girapetra* is in the South Part of the Iſland, having no ſecure Port, but an open Road, where Veſſels in the Summer Time may lie with Security from the Weather, but not from Privateers. For while I was there, they carried away a Saike which came from *Alexandria*. The Town is walled round, and hath a ſmall Caſtle, which lies higher than the Town. Here is conſtantly a Garriſon of two hundred *Janizaries*, beſides there are ſeveral *Turks* who are Merchants, ſo that in all they can raiſe five hundred fighting Men. There is about it a very fine Plain full of Olive-trees, and ſome very pleaſant Gardens. Their Houſes are well-built of good Stone, the Rooms very lofty, but few Houſes above two Stories high. In the Year 1675, one Monſieur *Crevellier*, a famous Privateer, landed five hundred Men in the Bay of *Spina Longa*; travelling in the Night, he came next Morning, juſt at the Dawning of the Day, and found the *Turks* at their *Sabbah Namas*, or Morning Prayer, ſo he made himſelf Maſter of the Town, carrying away two hundred Slaves, nailing up the Guns which were in the Caſtle. The *Turks* who were at the South Part of the Town, betook themſelves to ſome ſmall Veſſels, for they had not the Heart to return home to fetch their Arms. Monſieur *Crevellier*, to retreat with this great Prize, reſolved to kill what Horſes he found, ſecuring twenty for himſelf and Officers to ride on and form the Rear.

This Enterpriſe was effected in leſs than ſix Hours after they entered the Town, for they did not make any Stay to ranſack the Houſes. After they were departed, about three hundred Men, *Turks* and *Greeks*, were got together, and marched a Mile or two out of Town, and had not *Crevellier* killed the Horſes, he could never have got out of the Iſland. It is very ſtrange, that ſo many Men could come with that Secrecy as not to be diſcovered, and that the Hearts of thoſe *Turks* ſhould be ſo ſunk. Immediately they diſpatched Expreſſes to the City of *Candia*, writing to the Baſha, that about fifteen hundred *Chriſtians* had landed, and carried away two hundred Priſoners, moſt of them Men of the Garriſon. The Baſha aſked the Meſſenger, if the reſt of the Inhabitants were aſleep, or dead? No, ſays the Meſſenger, but their Hearts were, being all ſurprized, ſome in their Moſques, and ſome in the Coffee-houſes, and not a Man that had his Senſes; moſt of the Horſes alſo being killed. The Baſha aſked him, how he eſcaped? He anſwered him, that he had the Wit to hide himſelf, as a great many others did. There were three Gallies in the Mole of *Candia*, under the Command of one *Bobba Haſſan*, who were ſent to look after *Crevellier*, but to no Purpoſe, for they returned without ſeeing him.

Since this there is an Order, that the Gates ſhall be ſhut an Hour before Sun-ſet, and not opened till an Hour after Morning Prayers; and now there are ſeveral Guards on the Mountains; beſides, the Baſha of *Candia* has threatened the *Providitore* at *Spina Longa* to complain to *Venice*, if he ſuffer any Privateers to come into that Bay; ſo as for ſome Years they have attempted nothing. The Country towards the South is not ſo mountainous as in the North and North-Weſt Parts; having ſeveral large and pleaſant Plains, which have many Ruins of fine Towns. To the Eaſt of *Girapetra*, about ten Miles, I went to ſee a Cave under the Mountain of *Tro*, as they now call it, where, they ſay, St. *Paul* preached. It is a large Chapel, having twelve Pillars, all cut out of the Rock by the Chriſtians in the Night-time. Some ſay, but without Grounds, it was finiſhed in leſs than a Month. Cloſe by is a Fountain, where, they ſay, he uſed to baptize; and it is now called St. *Paul*'s Fountain; the Water thereof is very good to cure ſuch as have ſore Eyes. From *Girapetra* to *Bonifacia* is 14 Hours Riding, moſt in Plains, very delightſome, there being very high Mountains to the North, with moſt pleaſant Vallies between, and Abundance of *Cypreſs* Trees. *Bonifacia* ſtands on a riſing Ground, having only the Walls of a Caſtle.

The Inhabitants are moſt of them *Greeks*, very poor; here is a Metropolitan who pretends to be next to the Archbiſhop of *Candia*. There are two *Italian* Churches, the Doors of which are now made up with Walls to keep Cattle from going in. The *Greeks* have four ſmall Churches, but one would contain more than all the Inhabitants. They have now new-named the Place, calling it, *Malafacia*, inſtead of *Bonifacia* (good Face) it being ſo much alter'd from what it was in former Time. From *Bonifacia* to the *Labyrinth* is about ten Miles, or three Hours Riding, Weſt, moſt a Plain. Several Men have ſeveral Opinions about this Building (if I may call it ſo.) But one Signior *Venetando*, who was born in a neighbouring Village, gives this Account, that a certain King of this Iſland had ſo great a Hatred for all Women, that he order'd this Place for his Court, and at laſt lived ſo privately, that he would not ſuffer any to come to him, but ſuch as adminiſtred Affairs, and ruled in his Stead; he would ſeldom come out, but to worſhip at a Temple dedicated to *Jupiter*, which ſtood cloſe by it. In this *Labyrinth* he ended his Days, and had a famous Tomb built for him, the Ruins of which they ſhew you.

The *Labyrinth* is about two Miles about, being ſo covered on the Top with Earth, as it ſeems to be all firm Land; we entered it with two Torches and Candles in Lanthorns, having a Line to direct us out again. The Way is plain under Foot, and arch'd over Head, ſome Arches being about ten Foot high, ſome more, ſome leſs, with ſeveral Windings. I made it my Buſineſs to obſerve, if there was any Thing of a Building in the Pillars or Sides, but found it moſtly an entire Stone, which they told me ſo well cemented together, that indeed it appeared ſo. Here are a great many ſmall Vaults, about four Foot long, two broad, and two over, which were for Burying-places. There are Abundance of Batts which hang in Cluſters, ſome are larger than ordinary. We endeavoured to fright them, ſcorching their Wings, by which we found there was Life in them; their Sleep is obſerved to be much more ſound with a North-Wind, than with a South-Wind; as the Spring comes on, they leave this their Palace. We had almoſt ended our Line, being about 100 Pikes, which is about eighty Yards, and then returned out, being a good Hour in the *Labyrinth*. The Damps are very great, againſt Rain it is always dropping, but very dry with Northerly Winds. At the End is a Lake, and they tell you, that ſome who have attempted to go to, have been drawn into it. Our Curioſity did not invite us to ſee it, for though it were not true, as in Probability it is not, the noiſome Smells are enough to ſtifle one.

To the South, and cloſe by, is a ſmall Village with two Churches, which ſeem to have been anciently Temples. To the South-Weſt, about ten Miles diſtant, is that famous and great Mountain, call'd *Pſilla Vuona*, formerly Mount *Ida*; at Four of the Clock it caſts a Shadow on the *Labyrinth*. On it are many pleaſant Monaſteries, with Groves of Cypreſs-trees, and Abundance of Fountains. Some ſay the Coaſt of *Barbary* may be ſeen from the Top. From the *Labyrinth* to *Candia*, is about ten Hours Riding, moſt in a Plain, till within ten Miles of the City. On the right Hand, about a Mile from the Road, is a moſt ſtately Monaſtery, dedicated to our bleſſed Saviour, which was built by Order of the Emperor *Conſtantine* the Great. It hath always been continued to the *Greeks*, and kept its Splendor till the late War, when it was much defaced.

There are in this Iſland Abundance of Monaſteries, but very poor, and ſome are ſhut up for Want of Monks. *Candia Novo* is about ſix Miles from the City of *Candia*, Southward, being a ſtrong Caſtle, having Mount *Jove* to the Weſt. Here the *Turks* kept their Treaſure and Ammunition in the Siege of *Candia*. It is ſeated very pleaſantly on a riſing Ground, giving a Proſpect to the Sea. It is now chiefly inhabited by *Greeks*; the Caſtle has a Garriſon of *Turks*, which the Baſha intended to bring to *Candia*, and demoliſh the Caſtle, having writ to the Porte about it, but he had no Anſwer. *Candia*, ſo famous and generally known for the brave Defence it made againſt the *Turks*, appears, by the Ruins, to have been one of the beſt Cities in the Mid-land Seas. It is ſeated on the Northſide of the Iſland, almoſt Mid-way between *Canea* and *Sittia*, in a pleaſant Bay, having an artificial Port ſecured from the North-wind by a Mole about 200 Yards long, with a ſtrong and large Caſtle at the Head, called *Caſtel del Molo*, having twenty Great Guns. From the South is a low Point of Land, which runs into the Sea, North, that ſecures it from the Eaſterly Winds, and makes the Entrance not above thirty Yards wide; upon this Point of Land, the *Turks* have built a cover'd Way, with a very thick Wall, full of Holes for ſmall Shot, ſtrongly arch'd over, reaching from the Arſenal to the Entrance into the Port, where is a ſmall Fort, with four great Guns, alſo very ſtrongly arch'd over, ſo as no Bomb can deface it. At the Right-hand at coming out of the Gate to the Mole, is a new Fort, built with four very great Guns, which lie level with the Water; over them are eight ſmaller Guns. This Fort is oppoſite to the Mouth of the Port, and is arch'd over to prevent Danger from Bombs or Wild-fire.

On the Mole are ſeveral great Guns, planted with Arches over them. To the Eaſt of the Arſenal is the old Caſtle, call'd *La Battaria del Arſenal*, which is built with a Ditch round it to bring in the Sea, moſt cut out of a firm Rock. The Port is almoſt round, and ſecure againſt any Wind, or Gallies and ſmaller Veſſels, but there is not Water enough for Ships of any conſiderable Bigneſs. It is filled very much with the Rubbiſh that the Rains carried into it from the City, and would certainly have been choak'd up in a few Years, had it not been for a *French* Merchant, one Monſieur *Dodei*, who to ingratiate himſelf with the Baſha, cauſed an Engine to be brought from *Marſeilles* to cleanſe it. There are the Ruins of twelve Arches of the *Arſenal*, and about ſix Arches are yet entire, but they uſe them only to work in when the Gallies are there; no Gallies having been built here.

The City is not repaired towards the Land, where the Walls are ſo much ſhaken, that it will require a great deal of Time and Coſt to fortify them. From the Port, towards the Weſt upon the Wall, are fifty large Guns planted. The Fort of St. *Andrea*, at the Northweſt of the City, is well repaired, having a double Wall toward the Sea. In all there are about 400 Guns planted on the Walls and Outworks, which are ſix Miles in Circumference. The Gates of *Candia* are the beſt I ever ſaw, the Arch or Gatehouſe being about 100 Yards long, and the Gates ten broad; the Arch is all built of firm Stone. It will take up three Hours to walk round the Outworks; there are ſeveral Mines which were never blown up; every Mine had a diſtinct Name. I was in one Mine, which was above a Mile in Length, being above ſix Foot high, and three broad. All the Plain for above two Miles without the Walls, is like a new plow'd Field, where you cannot walk, but muſt ſee Pieces of dead Men's Bones. None are permitted to walk round the Works, but ſuch as have a Licenſe, and a *Janizary* with them.

The *Turks* take a Delight to give an Account of the Strength of the Place, and eſpecially will ſhew you a ſmall Cave or Arch, where the *Venetian* General uſed to ſleep, (as they tell you) to ſecure himſelf from the Bombs. Not above one eight Part of the Houſes that formerly were, are now inhabited, very few being left entire; nor do the *Turks* repair any but thoſe where they dwell; the chief Moſque is well repaired; it was formerly a Church dedicated to St. *Mark*, and ſtands to the Eaſt of the great Piazza, to the South of it are Part of the Walls of old *Candia*, cloſe to which are built up a Row of Houſes, two Stories high, for the *Janizaries*.

The Baſha's Palace is a little below the great Moſque, on the other Side of the Way; oppoſite to it is the great Hall, formerly called *La Sala di Conſiglio*, which is a very ſtately Building, of white Marble, with ſeveral Works in *Baſſo Relievo*; to the South Eaſt of it ſtands the Church of St. *Franciſco*, with an entire Cloiſter, which is now a Moſque. The Street from the Mole to the chief Piazza is in good Repair, being broad, and paved with large even Stones; the Houſes are alſo well inhabited, but that Part towards the Weſt, is a Heap of Ruins, among which live the *Jews*, who have very large Houſes; but ſome of their upper Rooms have no other Shelter from the Weather, but a few Matts made faſt upon Poles. The Beams of the old Houſes are bought up and carried to *Venice*, *Zant*, and other Places; and being made of *Cypreſs* Wood, they ſerve to make Cheſts and Cabinets, many of which have been brought to *England*. The Number of the Inhabitants of the City is not reckoned to be above 10,000, including *Greeks*. There is a continual Garriſon of 2000 *Janizaries*, beſides the Baſha's Guards. Since the taking the Place, they have granted Liberty to all that will come to inhabit there, but all their Encouragement cannot bring the *Candiotes* to dwell there. Formerly the Plain was full of Olive-trees, with moſt beautiful Pleaſure-

Houſes and Gardens. Now nothing but Ruins are to be ſeen.

The City ſtands on a riſing Ground from the Sea, and the Houſes were ſo built with Terraſſes, that moſt from their Tops could have Sight of the Sea. From *Candia* to *Rettimo* is about twelve Hours Riding. The City ſtands on a Point of Land very pleaſantly, having a Port to the Eaſt, which is almoſt choak'd up, ſo as no Galley can get over the Bar, being laden, but Brigantines and ſmaller Veſſels are very ſecure againſt all Winds. Towards the Sea are no Walls, the Rocks there fortifying the Place, ſo that no Enemy can come but by Land. This Place was the firſt the *Turks* made themſelves Maſters of, putting all to the Sword, to ſtrike the greater Terror into the reſt of the Iſland. Since they poſſeſſed it, they have built three new Forts towards the Sea, and a Wall, with a dry Ditch to Landward.

It is now chiefly inhabited by *Turks*, who trade to *Conſtantinople* conſiderably. The Houſes are here entire, according to the *Venetian* Manner of Building. There are ſome *Greeks* that dwell in the City, but they have a ſmall Town about a Quarter of a Mile off, in which are two Churches, where they have the free Exerciſe of their Religion. The Country hereabouts is very pleaſant, full of Olive-trees, and from the Sea-ſide the Land riſes eaſily to the Foot of the Mountains of *Sfacia*, about eight Miles from the City, which from the Sea ſeems to be all a Wood; from which Mountains run ſeveral pleaſant Streams, and one very large River, called *Platonica*, which is continually full, being ſupplied from above a thouſand Fountains, which the Mountains produce.

Theſe Mountains of *Sfacia* are abounding in all Things neceſſary for Life, and Nothing can be more delightſome in the Summer-time. They reach near thirty Miles towards the South-Weſt, and in ſome Places about ten in Breadth, coming down cloſe to the Bay of *Suda*. The Cheeſe which is made here is bought up by the *Venetians* and other Merchants, and tranſported to *France*, *Italy*, *Zant*, *&c.* It is the beſt Cheeſe that is made in any of the Southern Parts, and generally as good as our *Cheſhire* Cheeſes, being made as big; beſides which, they have great Plenty of Honey, Wax, Silk, Wooll, *Cordovan* Leather, and a Sort of Goats-hair little inferior to that of *Angura* in *Aſia*. No Olives, Oranges, or Lemons grow here. There are above an hundred Villages on theſe Mountains, beſides ſeveral Monaſteries. The Inhabitants are a warlike People, and withſtood the *Turks* above twenty Years after *Rettimo* was taken, living as the *Mainiotes* in the *Morea*. There are ſuch difficult Paſſes to them that an Army cannot march. Now at laſt they are brought into Obedience, and by humbling themſelves to the Vizier, he granted them great Privileges to encourage them, leſt they ſhould take Part with the *Venetians*, who have the Iſland of *Suda* ſo near them.

As the Vizier paſs'd by, in his Way from *Canea* to *Candia*, they brought him ſeveral Preſents the Mountains produced, which he was ſo well pleaſed with, that he exempted them from going with him and paying their Attendance on him, only he obliged them to furniſh the Camp with Mutton at a certain Rate. Moſt of his own Proviſion was carried from hence; Sheep at three *Timins* (about a Shilling) a-piece; Butter at a *Timin* the *Oke* (a Groat for two Pound eight Ounces); Cheeſe at the ſame Rate, and at this Price they were obliged to carry it as far as the Camp before *Candia*, where an Officer gave them an Acquittance, which was abated them out of their Tribute. They have a certain Drug, called by the *Venetians Oldain*, much of the Colour of Liquorice in Balls; it is a very great Comforter of the Head, having a pleaſant Smell, being burnt it gives a pleaſant Scent. Moſt of this is bought up by the *Venetians*, and ſent to *Venice*. Here is alſo a Sort of Wood which the *Greeks* call *Plaete Excillo*: it burns like a Torch, and gives a moſt fragrant Smell; much of it was uſed to burn at the Siege. Every Night, at the Vizier's and other great Men's Tents, they had Fires of this Wood, the Wood being cut ſmall, and put into an Iron Grate at the End of a Poll faſtened in the Ground. If a Man be hot in the Plain, in riding two or three Hours up the Hills, he ſhall find ſo great an Alteration in the Air as is incredible.

About fifteen Miles from *Retimo* is a lovely Fountain called *Bognare Baſhe*, ſtanding ſo between two Mountains, that at Two in the Afternoon it is ſhady, continuing ſo all the reſt of the Day. The Water is ſo cold as will cauſe a Dew upon any Fruit that is put into it; and tho' a Man ever ſo hot ſhould drink of this Water, it will do him no Harm. In the Summer-time here are always ſome Perſons of Quality, who bring their Beds, and continue for ſeveral Days together. The *Sfacioti* are a healthy, ſtrong and ſtout People; they pretend to be of a very ancient Stock: Some there are, who derive their Families from before the Coming of our Saviour. I ſaw a Callojero that was one hundred and ten Years of Age; he was very luſty, and could walk very well with a Staff. Part of theſe Hills are under the Juriſdiction of the Biſhop of *Retimo*, and Part under that of *Canea*. From *Retimo* to *Canea* the Road is moſt by the Sea-ſide, paſſing by the Bay of *Suda*, having the Mountains of *Sfacia* on the Left Hand.

Canea is ſeated in a fine Plain, about three Miles from the Bottom of the Bay of *Suda*, and upon the Sea to the North, having a very fair Harbour, which may be called a double Port, the one being round, the other ſtretching away to the Eaſtward, where are two Arſenals. It is ſecure againſt the worſt of Weathers. The Entrance is narrow, and not above eighteen Foot Water; to the Weſt of which the *Turks* lately have built a new Battery with twenty very large Guns; and above it, to the South, is a great Citadel, in which are forty good Guns. To the Eaſt of the Entrance is another great Caſtle, which commands the Port called the *Sabioniera*, with the Arſenal. Round about the Port is a broad Key, which is always crowded with Merchandize, and is little inferior to the Port at *Marſeilles*. The Houſes are all well built, and not much battered. The Walls are in very good Repair, having a dry Ditch about thirty Yards broad, and ſix deep from the Land. On the other Side, the Walls are about thirty Foot high; within them the Earth is raiſed about ten Foot higher than the Walls, there being a Walk between. There is a Mount, which they call the *Marteningo*, where formerly were ten Guns; but now it is of no Uſe. Toward the Land there are four Baſtions; to the South is the great Gate called *La Porta di Retimo*; to the Weſt is a Mace placed on the Wall, to ſhew where a Baſha, at the Taking of the Place, firſt entred the City: Before the Gate is a Half Moon built of Earth, about twenty Foot high; at each End is a ſmall Pyramid of Mortar and Sculls, which are the Sculls of Chriſtians who were ſlain before the Place in the Year 1666.

The *Venetians* then attempting to regain the Place under the Conduct of Marquis *Vila*, a *Savoyard*, 5000 Men were landed at *Culatte*, at the Bottom of the Bay of *Suda*, and were encamped before the City ſeveral Days. The *Turks* ſallied out of the City to the Weſt, ſurpriſing the Chriſtians, and had a very great Victory, purſuing them to the Fort, which was built at the Bottom of the Bay. In this Flight there were above 1500 killed, and ſeveral taken Priſoners; amongſt the latter was one Captain *Scot*, a *Scotſman*, who had his Hand upon the Drawbridge of the City: He was carried afterwards to *Smyrna* in the Gallies, and there redeemed by the *Engliſh* Merchants: But when he came to *Venice*, his Arrears were paid him, and he returned his Ranſom to *Smyrna*, which remains there in Bank till another like Occaſion ſhould preſent itſelf. The City is near three Miles in Circumference, and is much better inhabited than *Candia*, having a Baſha and other Officers, as in *Candia*, only in all Councils the other hath the Precedence.

The Country about is very pleaſant, being all a Plain for above ſix Miles to the South and Weſt, planted with young Olive-trees, ſo that it ſeems to be a Garden. It is well ſupplied both with Fleſh and Fiſh; of the latter there is great Abundance, for beſides the Sea, there is a Lake about ten Miles to the South, which furniſhes them with great Variety of all Sorts. The Trade is much greater here than at *Candia*, it lying ſo convenient for the *Morea*, *Italy*, and other Places. The *French* have a great Trade for Oil, Wool, Wax, Cheeſe, and ſeveral other Commodities, having a Conſul and two Merchants. The *Venetians* have alſo a Conſul, but moſt of their Oil is ſhipped off from *Suda*, to which Place it is brought from *Retimo* and other Places thereabout. All great Ships come to an Anchor at a Place called St. *Todoro*, being two ſmall Iſlets, about five Miles to the Weſt of the Port of *Canea*. There is very good Anchorage, and a ſmall Fort to defend them. On one Iſland, notwithſtanding it ſeems to be all Stone, and is very low, there are ſeveral Fountains of good freſh Water.

No *Greeks* live within the City. They have a new Town built to the South, about half a Mile off, where are two long Streets very commodious, and here they enjoy entire Liberty; their Churches are open, and the Biſhop hath a very pleaſant Houſe, living in good Eſteem. Cloſe to this Town runs a pleaſant River, which is ſeldom dry; there are likewiſe ſeveral pleaſant Gardens well ſtockt with all Sorts of delicious Fruits. The *Turks* have alſo ſome Gardens here, but they muſt retire into the City an Hour before Sun-ſet, Winter and Summer, or elſe muſt remain out all Night, the Gates being then ſhut, and a ſtrict Watch kept about the Walls. The *Turks* of this Place are generally very rich, and incline to Trade, giving all Encouragement to have Merchants come and reſide amongſt them. There was an *Engliſh* Merchant here, one Mr. *Trenchard*, who was recommended to the *French* Conſul to have his Aſſiſtance, but in a little Time he grew weary of the Place.

Here they keep their Oil in great Veſſels called *Tini*, which are ſquare and made of Wood, ſome will hold twenty Tuns. They have a ſpecial Regard to preſerve the Eſteem of their Oil, nor will they force a Merchant to take any longer than it comes clear, not mixing the Bottoms, as in ſome Parts they will, by taking a hollow Cane, and putting it to the Bottom, by blowing through which they raiſe the Foot of the Oil, ſo that thick and thin goes together. Here they ſell the Foot of the Oil at an under Price, and this ſerves to make Sope. Moſt Parts of *Turkey* have an Eſteem for *Canea* Oil above others. Some will have it to be the better for that the Trees are all ſo young; others impute it to their Care in the making, for here they gather all their Olives, whereas in the *Morea*, they thraſh them down with Poles. The Wines are generally eſteemed above all others. The red Muſcadine they call here *Leattico*, it is a richer Wine than Tent at *Cadiz*, and much more pleaſant; I have ſeen it ſold at fifteen Gallons for half a Dollar. White Muſcadine is not ſo good, as that of *Luxuria* in *Ceſſalonia*. Some are of Opinion, that in the War, the true Muſcadine Grape was loſt; on the Mountains, there are ſmaller Sorts of Wines, ſo as a Man may have what Sort he pleaſes.

All Sorts of Proviſions are very plentiful, but in the Summer time the Mutton hath generally a bad Taſte, which proceeds from their Feeding on ſome Herb on the Mountains. Here are Fowls of all Sorts in Abundance, but eſpecially a Bird called *Beccha figgo*, which is almoſt a Lump of Fat; they are valued about four for an Aſper, or eight for a Penny. Turtle-Doves and Quails are very plentiful. Their Beef is ſmall, but very ſweet. Of Fruits there is no Sort but what they have. I never ſaw larger Pears than are brought from the Mountains, being a Sort of Sugar Pear. The Muſk Melons are very good, but their Water Melons are ſingular. Salating there is all the Year of all Sorts; no Place is eſteemed to have larger and better *Endive* and *Carduus* than there are here. I have ſeen Sugar Canes of a great Height, full as good as what are brought from *Grand Cairo*. There are Abundance of Simples which are bought here for *France* and *Italy*.

Some ſay the Reaſon why no venemous Thing will live on this Iſland, is the Quantity of *Dittamo* that grows here. Others ſay it has only been ſince St. *Paul* ſet Foot upon the Iſland. Moſt of the *Candiotes* pretend to have great Knowledge in Simples. The Women are experienced Doctreſſes. One I have Reaſon to ſay was very ſkilful, ſhe having in a little Time wrought a great Cure upon me; for by Accident a Bullet having paſt through my Leg, I applied myſelf to her, and in fifteen Days ſhe cured it. She did not allow me to eat any Fleſh till it was perfectly well. They have ſeveral Antidotes againſt the Plague, but they had not the Effect they pretend to, for ſeveral of the Doctreſſes were ſwept away by that Diſeaſe; but moſt certain it is, that after St. *John* Baptiſt's Day it did here abate, as they always obſerve it to do in moſt of theſe Eaſtern Parts.

There are ſeveral other Places that have had the Names of Cities, which are now Heaps of Ruins; many hundred ſtately Palaces there were, that now have only ſome Walls, and thoſe moſtly fallen down. The *Candiots* keep their Habit, that is, the Women; but the Men are dreſſed *alla Turcheſſa*, eſpecially the better Sort. They are as ignorant of the Antiquity of their Country, as the *Mereotes*, that have been above 200 Years in Slavery. There is no *Latin* Church upon the whole Iſland, as I was inform'd, but what is ſhut up, or converted to the *Turks* Uſe. Before the *Turks* conquered this Iſland, there were above a Million of Souls, whereas now there are not 80,000, of which not above 30,000 *Turks*, on the whole Iſland.

The Iſlets, which the *Venetians* have about the Iſland of *Candia*, are *Carabuſa* to the Weſt End of the Iſland, about ſix Miles from the *Main*, having a very good Port between the Iſlet and the main Land: The Caſtle is very ſtrong, mounting about eighty Guns. In the late War it withſtood ſeveral Aſſaults, but lying ſo far from any conſiderable City, the *Turks* did not ſo much Mind it as they did *Suda*. Here is a Garriſon of *Venetian* Soldiers, and a Proveditore, who is under the Inquiſitore at *Suda*. In Time of Peace with the *Turks*, they have a continual Trade and very good Correſpondence with them, having all Sorts of Proviſions at very reaſonable Rates.

Spina Longa lies about forty Miles to the Eaſt of the City of *Candia*, at the Entrance of a great Bay. The Iſlet is not above a Mile and a half about; it has a very good Fortification round it, beſides it is ſteep all round, ſo as an Enemy cannot well Land. It is not above a Mile from a Point of Land, where the *Turks* raiſed a Battery, and continued for a Week to batter the Caſtle, but to little Purpoſe, for moſt of their Dwellings are in Caves under Ground. Here and at *Carabuſa* there is no Water but what is brought them by Shipping, or what they ſave in great Ciſterns and Jarrs. Here is alſo a Proveditore, and a Garriſon of *Venetian* Soldiers.

Suda lies in a great Bay, about thirty Miles from *Retimo* Weſt, twelve Miles from *Canea*, and nine from the Bottom of the Bay South-Eaſt, having the Land to the South about a Mile, on the North North-weſt not above half a Mile diſtant. This Iſland is about two Miles in Circumference, not above fifty Foot above Water at the higheſt Part, being all rocky and ſteep. To the South-weſt lies a long Rock about ten Foot above Water, and not above twenty from the Iſland; againſt it is the Entrance up to the Caſtle, very ſteep and winding, having two Gates and a ſtrong Counterſcarp, before you paſs into the main Caſtle. The Wall about the Iſland is low but very thick.

To the Weſt is a Mount, called *Il Marteningo*, about thirty Foot high, and three hundred in Circumference, very ſtrongly built with ſmall Stone and Mortar, which has above 1000 Shot in it. They are ſo faſt in, that it would endanger its falling, if they ſhould be pulled out. The Fortifications of the Caſtle are quite round the Iſlet, wherein, and upon the *Marteningo*, are about 120 Guns planted. The *Turks* have ſeveral Times attempted to take this Place, and to that Purpoſe, in the Year 1659, they built ſix Caſtles, three on each Side of the Bay, from whence they continued to batter it, and ſecured the Harbour ſo as no Ship or Gally could come to bring them Succour, but what in the Night ſmall Veſſels would adventure to get in.

In the Year 1665, the Captain Baſha attempted to reduce it; he came with forty five Gallies, but durſt not adventure to land any Men. He cauſed the Gallies to batter that Part of it which is towards the Sea, while on the other Side they continually fired from the ſix Forts. The *Venetian* Fleet was ſo diſperſed, that they could not come to relieve them. The Beſieged were much ſtraitned for Proviſions, but moſt for Want of Water; for above a Month they had but a Pint a Day, and were ſo diſheartned, that they were near inclining to ſurrender the Place. But it pleaſed God to ſhew them his Goodneſs in a ſignal Manner, by a Shot from the Enemy, which ſtruck a Piece of Rock aſunder at the Bottom, a little above the Sea, out of which ſprang a Water which ſufficed them to drink. I have ſeen the Fountain, and drank of the Water, though it is not very pleaſant. Several Officers that were in the Iſland avowed this for a Truth, it being noted in the *Venetian* Hiſtory of *Suda.* The Winds coming about Northerly, the *Venetian* Fleet came from *Zante*, forcing the *Turkiſh* Gallies to retreat. The Captain Baſha was killed with a great Shot, upon which the Army broke up and retired to *Canea.*

The Vizier, in his March from *Canea* to *Candia*, paſſed by here, and with Admiration beheld the Place, but would not attempt any Thing at that Time, ſaying, it was not worth the Men which had been already loſt againſt it. The Port is very commodious, being one of the largeſt in all theſe Seas, and there is very good Anchorhold all over the Bay, at the Bottom of which are Saltpans. The *Turks* have here a ſmall Tower, where are two or three Servants of the Cuſtomer of *Canea*, to ſee that no Goods are carried away which have not paid Cuſtom at the City. In Time of Peace they have all Proviſions from *Canea* at the Market Price, and there is a good Correſpondence betwixt the Inquiſitore of *Suda* and the Baſha, who often ſend Letters to one another. The Governor of *Suda* hath the Title of *Inquiſitore Generale delle Iſole di Levante*; *Cerigo* and *Tine* being alſo under his Government, although there be Proveditors to both. The *Venetians* have no Benefit from theſe Iſlands, but are at a continual Charge to maintain the Garriſons in each. The Bottom of the Bay they call *Cullatte.*

23. In collecting the Materials for this Section, we have met with ſome more diſtinct and connected Accounts of the Military and Naval Forces of the *Turks*; which, as they come in properly enough at the Cloſe of this Deſcription of their Dominions, ſhall be here inſerted; the rather, becauſe they will enable the Reader to diſcern what Probability there is of thoſe Events happening, which were mentioned in the laſt Section. It is with Bodies Politick, as with the natural Bodies; they get over even violent Diſeaſes when attacked in their Youth; but when Infirmities grow upon them in their old Age, they ſeldom, if ever, eſcape. The moſt that can be hoped for in ſuch a Caſe, is a gentle and gradual Decay; but even this can hardly be expected in ſome Conſtitutions. That of the *Turks* has neither Food nor Phyſick, but continual Wars. If theſe are ſucceſsful, they thrive; if not, their Diſtempers increaſe, and their political Diſeaſes grow more and more dangerous. It is not with them as with States of another Texture, where the Laws themſelves will, for a long Time, maintain the Form of the Government by the Reſpect the People have for them. In theſe Countries, the Laws are derived from the Will of the Grand Signior, and conſequently they are good or bad, wiſe or otherwiſe, according to the Temper of the Prince. Whenever, therefore, it happens, and in the Decline of every Government, it generally happens, that a Race of weak and degenerate Princes ſucceed to the Empire; this alone muſt bring on its final Ruin, which might, perhaps, have been diverted by the Intervention of a great Genius. It would be no difficult Thing to bring many Inſtances in Support of this Doctrine, both from ancient and modern Hiſtory; but that it is high Time to leave our Reflections, and come to Matters of Fact, which, we dare promiſe the Reader, are important enough to deſerve, and ſufficiently curious and entertaining to command his Attention.

Though the greater Part of the *Turkiſh* Infantry carries the Name of *Janizaries*; yet it is certain, in all this great Empire, there are not above twenty-five thouſand who are true *Janizaries* or *Ianizaries* of the Porte. This Soldiery was once compoſed only of Tributary Children, inſtructed in the *Turkiſh* Religion; but at preſent this is not obſerved, and People are not moleſted on this Account, ſince the Officers take Money of the *Turks* themſelves to be entered in this Body. Formerly the *Janizaries* were not permitted to marry, the *Turks* being perſuaded, that the Cares of a Family render Soldiers leſs fit for the Exerciſe of Arms. Yet now-a-days, they who will marry, with the Conſent of their Chiefs, who alſo at the ſame Time give them a Sum of Money. The principal Reaſon, which keeps the *Janizaries* from marrying, is, that Batchelors only arrive at Offices, the moſt deſirable of which are to be Chiefs in their Chambers; for this Soldiery are all lodged in a large Quarter, divided into one hundred and ſixty two Chambers. Every Chamber has a Chief, who commands in it; but out of it he only performs the Office of Lieutenant of the Company, and receives Orders from the Captain. Every Chamber has its own Enſign-bearer, its Expenditor, its Cook, and its Water-carrier. Above the Captains there is only the Lieutenant-General of the *Janizaries*, who is ſubject to the Aga.

Beſides the common Pay, the Emperor gives the *Janizaries* every Year a compleat Suit of Cloth of *Salonica*, and every Day allows them a Quantity of Rice, Meat, and Bread. The Chamber lodges them for One half *per Cent.* upon the Pay they receive in Time of Peace, and ſeven *per Cent.* in Time of War. This Pay is but from two to twelve Aſpers a Day, and is never raiſed but by little and little, in Proportion to their Service. When they are diſabled they have an Allowance for Life. The Cap peculiar to the *Janizaries* is made like the Sleeve of a Coat, one End is put upon their Head, and the other hangs down upon their Shoulders; to this Cap before is faſtened a Sort of Spike half a Foot long, of Silver, gilded and adorned with ſome falſe Stones. When the *Janizaries* march into the Field, the Sultan furniſhes them with Horſes to carry their Baggage, and Camels to carry their Tents, to wit, one Horſe for ten Soldiers, and one Camel for twelve. At the Acceſſion of every Sultan, their Pay is augmented at leaſt one Aſper a Day.

The Chambers inherit the Effects of thoſe Members who die without Children, and the reſt, though they have Children, always leave their Chamber a Legacy. The *Solaes* and *Peyes* alone among the *Janizaries* are the Emperor's Guard; the reſt of the Corps never go to the *Seraglio*, but to attend their Officers upon Divan Days, and to prevent Diſorders that might happen in the Court; they are generally placed Centinel at the Gates and the Croſs-ways of the Town, to keep Watch there. They are feared every where, and reſpected, tho' they carry only a Cane in their Hand, for Arms are not delivered to them but when they take the Field. The greater Part of the *Janizaries* do not want for Education, being taken from the Body of the *Azamoglans*, which either through Impatience, or in ſome other Account, they frequently forſake. Thoſe who are to be admitted among the *Janizaries*, paſs along in Review before the Officer, and every one takes hold on the Bottom of his Companion's Veſt. Their Names are entred in the Grand Signior's Regiſtry, after which they all run up to the Maſter of their Chamber, who, to make them know they are under his Juriſdiction, gives them every one a Box on the Ear as they paſs by. At their Inrollment they take two Oaths; the firſt is to ſerve the Grand Signior faithfully; the ſecond, that they will not ſubmit to the Will of their Comrades in Matters relating to the Body.

There is no Order of Men in *Turkey* ſo united as that of the *Janizaries*; it is this ſtrict Union which preſerves their Authority, and gives them the Courage ſometimes to depoſe the Sultan. Though there are but twelve or thirteen thouſand in *Conſtantinople*, they are aſſured that their Brethren, what Part ſoever of the Empire they are in, will not fail to approve their Conduct. If they think they have Occaſion to complain, their Diſcontent begins to ſhew itſelf in the Court of the Divan, at the Time of the diſtributing the Diſhes of Rice to them, prepared in the Grand Signior's Kitchen: For they eat it quietly, if they are contented, and on the contrary, they throw the Diſhes on the Ground, and turn them topſy turvy, if they are out of Humour at the Miniſtry. There is no Inſolence they ſcruple to utter at ſuch a Time againſt the principal Miniſters, being well perſuaded they ſhall obtain Satisfaction; for this Reaſon the moſt favourable Opportunity is taken early to prevent their Riſing, eſpecially at the Time when they give them ſeveral Days Pay together.

The Mutinies of the *Janizaries* are much to be dreaded: For how often have they in an Inſtant changed the Face of the Empire? The fierceſt Sultans, and the moſt ſkilful Miniſters, have often found how dangerous it was to keep on Foot, in Time of Peace, a Militia who ſo well underſtand their own Intereſts. They depoſed *Bajazet* II. in 1512; and promoted the Death of *Amurat* III. in 1595. They threatned *Mahomet* III. with Dethronement. *Oſman* II. who had ſworn to deſtroy them, having imprudently diſcloſed his Deſign, was diſgracefully treated by them, for they made him walk on Foot to the Caſtle of the ſeven Towers, where he was ſtrangled in 1622. *Muſtapha* I. whom this impudent Soldiery put in *Oſman*'s Room, was depoſed two Months after, by the ſame Hands that advanced him. They alſo put to Death Sultan *Ibrahim* in 1649, after they had dragged him ignominiouſly to the ſeven Towers. His Son *Mahomet* IV. was not ſo unhappy indeed, but they depos'd him after the laſt Siege of *Vienna*, which miſcarried, yet only by the Fault of *Cara Muſtapha* the prime Vizier. In this Sultan's Stead was preferred his Brother *Solyman* III. a Prince of no Merit, who was alſo depoſed in his Turn ſometime afterwards, as others have alſo been.

With Reſpect to the Sultaneſs Mother, the *Viziers*, the *Caimacan*, the firſt Eunuchs of the *Seraglio*, the Grand Treaſurer, and their *Aga* himſelf, the *Janizaries* value them not, and demand their Heads upon the leaſt Uneaſineſs. All the World knows how they uſed, at the Beginning of this Century, the *Mufti Feſullah Effendi*, who had been Preceptor of Sultan *Muſtapha*. This Prince who loved his Tutor blindly, was not able to prevent his being drawn upon a Hurdle to *Adrianople*, and thrown into the River. The only Expedient which could ever be deviſed to repreſs the Inſolence of theſe Soldiers, was to encourage the *Spahi*'s againſt them, and thereby make them jealous one of another, but they agree together too well upon certain Occaſions. It ſignifies nothing to change their Quarters, for as the Abſent always ſtand to what their Fellows have done, it is impoſſible to avoid their Fury, when they have once taken it into their Head that they have ſuffered ſome great Injuſtice. The Hiſtory of the *Turks* can furniſh few Examples of their having been appeaſed, without conſiderable Largeſſes, or without its coſting the firſt Officers of the Empire their Lives.

They have never dar'd to confiſcate the Treaſure of the *Janizaries*, nor to ſhare the Goods their Officers poſſeſs in Property, in ſeveral Parts of *Aſia*, as at *Cataya*, at *Angora*, at *Caraiſſar*, and in other Places. When the General dies, the Treaſurer inherits his Goods; he is the only Officer whoſe Effects are not ſeiz'd to the Emperor's Profit. This General has the Privilege of preſenting himſelf before the Sultan with his Arms at Liberty, whereas the Prime *Vizier*, and the other great Men of the Port, never appear in his Preſence, but with their Arms acroſs their Breaſt, which is rather a ſervile than a reſpectful Poſture.

After the *Aga*, the Principal Officers of the *Janizaries* are the *Aga*'s Lieutenant, the Grand Provoſt, the Captain of the Serjeants, who march by the Emperor's Side upon Days of Ceremony, the Captain of his Foot Archers, and the Commander of his Pages, on Foot; theſe laſt, as well as the Archers, march by the Grand Signior's Perſon, when he walks through the City. They are but threeſcore, and wear Caps of beaten Gold, embelliſh'd before with Milk-white Feathers. As for the Foot Archers, or Archers of the Guard, they are in Number three or four hundred, and in a Day of Battle, they are about the Sultan, arm'd only with Bows and Arrows, that they may not frighten the Grand Signior's Horſe. Their Habit is a Coat of Cloth, tucked up at the Corners as high as their Waiſt, ſo as to ſhew their Skirts; their Cap is Cloth, and ends in a Point, and is adorn'd with Feathers, in Faſhion of a Plume. Theſe Archers ſhoot with their left Hand, as well as with the right, which they are taught, that ſo they may never turn their Back upon the Sultan: When he paſſes over Rivers, they ſwim by his Horſe, and ſound the Fordings with all the Diligence imaginable: As a Reward, the firſt Time the Sultan paſſes the River, he cauſes a Crown Piece to be given to every one who was up to the Knee in Water, and if they were up to the Middle, they have two Crowns, and three if they were above the Waiſt. Out of the Body of the *Janizaries* are taken the Gunners, and thoſe who take Care of the Arms.

The Gunners are about twelve hundred, and receive their Orders from the Grand Maſter of the Artillery; they live at *Topana*, in Apartments divided into fifty two Chambers; but it is very happy that they are not as dextrous as the Chriſtians in the caſting and managing Artillery. They who look to the Arms are ſix hundred in Number, divided into ſixty Chambers; they lodge in Apartments near *Sancta Sophia*. They not only take Care of the ancient Arms which are in the Arſenal, but of thoſe of the *Janizaries* and *Spahi's*, which they deliver out to them in good Order, when they are going into the Field.

Beſides the *Janizaries* now mentioned, all the Provinces of this vaſt Empire are fill'd at preſent with Foot Soldiers, who bear the Name of *Janizaries*; but theſe *Janizaries* of the ſecond Order, are not inrolled in the Body of *Janizaries* of the Port; and have nothing of the ancient Diſcipline of the *Turks*. All ill Perſons who would ſkreen themſelves from the ordinary Courts of Juſtice, and honeſt Perſons alſo who are willing to cover themſelves from the Inſults of others; they who would eſcape the Taxes, and be excuſed from publick Offices, purchaſe of the Colonels of the *Janizaries* who are in the Towns of the Province, the Title of *Janizaries*. They are ſo far from receiving Pay, that they give ſeveral Aſpers a Day to theſe Officers to enjoy thoſe Privileges; ſometimes they paſs for Invalids, or Penſioners for Life, and live quietly at Home, without being obliged to go into the Army. Is it ſurpriſing after this, that the *Turkiſh* Forces are ſo much diminiſhed? They never have had ſo many Soldiers, nor ſuch ſmall Armies. The Officers who are obliged to take the Field, paſs their own Domeſticks for Soldiers, and put the Pay of thoſe who ought to bear Arms in the Prince's Service into their own Pockets. The Corruption which is introduced into this great Empire, ſeems to threaten it with ſome ſtrange Revolution.

Neither muſt we confound with the *Janizaries*, another Sort of Infantry, call'd *Azapes* and *Arcangi's*. The *Azapes* are the old *Muſſulman*-Bands, more ancient than the *Janizaries* themſelves, but very much deſpiſed. They ſerve for Pioneers, and ſometimes are meerly a Bridge to the Horſe in marſhy Grounds, and ſo many Faſcines to fill up the Ditches of a Place beſieged. The *Arcangi*'s have no more Pay than the *Azapes*, but are appointed only to ravage the Frontiers of the Enemy. Yet in full Peace, (for the War is not eſteemed to be declared, unleſs the Artillery be drawn into the Field) they are perpetually making Incurſions and pillaging their Neighbours. If any one among theſe Troops happens to become a good Soldier, after ſome vigorous Action, he is entered in the Body of *Janizaries*. This is the State of the *Turkiſh* Infantry, nor is that of their Cavalry at preſent one Tittle better; it is compoſed of two Sorts, known by the Name of *Spahi's*, but they muſt be carefully diſtinguiſhed.

The one are upon the Emperor's Pay, and the other not. The *Spahi's* in Pay are divided into ſeveral Standards, the principal of which are the Yellow and the Red: Thoſe who have no Pay are of two Sorts, the *Zaims* and the *Timariots*. The Spahi's in Pay are taken from among the *Ichoglans* and the *Azamoglans*, who have been bred up in the Grand Signior's Seraglio's. Their loweſt Pay is twelve Aſpers a Day, and the higheſt a hundred. Thoſe who come from *Ichoglans* generally begin with twenty or thirty, which are increaſed according to their Merit or the Intereſt of their Friends. In Time of War all the Spahi's in Pay, who bring in Heads of the Enemy, are advanced two Aſpers a Day; and they who firſt acquaint the Sultan with the Death of any of their Comrades, are raiſed as much. The Spahi's are paid in the Hall, and in the Preſence of the Grand Vizier or his Chiaia, in order to avoid all Occaſion of Complaint.

Though the Spahi's are born of unknown Parentage, they may yet be looked on as the Nobility of the Country; their Education makes them more accompliſhed than the other *Turks*, and in every Place good Manners ought to conſtitute a real and true Nobility. Thoſe of the Red Standard were heretofore only Servitors to the Yellow; but now they are all equal, and the Red have even overtopt under *Mahomet* III. who in a Battle in which the Spahi's of the Yellow gave Ground and fled, reſtored the Fight by the Valour of the Red. The Arms of both are a Lance and a Scymiter, and they make Uſe of a Dart, which they manage with wonderful Dexterity, and the Dart has a Steel Point at one End, and is about two Foot and a half long. They alſo carry a Sword, but it is faſten'd to the Saddle, and hangs down upon the Horſes Thigh, ſo as not to hinder them in diſcharging their Piſtol and Carbine. Some likewiſe uſe Bows and Arrows, eſpecially the Spahi's of *Anatolia*; for thoſe of *Europe* or *Romelia* rather chuſe the Arms in Uſe with us. Theſe Troops, however, fight without Order and in a Crowd, inſtead of throwing themſelves into Squadrons, and rallying regularly.

Mahomet Kuperli the Grand Vizier, who was a great General, was ſo far from bringing them to Diſcipline, that he affected to humble them and keep them ignorant, for Fear of increaſing their Inſolence, ſince which Time they have extremely loſt their ancient Reputation. They baſtinade them now on the Soles of the Feet, leſt, if they ſcourged them, they ſhould be diſabled from mounting their Horſe; and for a contrary Reaſon the *Janizaries* are ſcourged, becauſe they are obliged to uſe their Feet in marching. When the Grand Signior goes to command his Army in Perſon, he cauſes large Sums to be divided among the Spahi's. One Spahi and a Janizary are placed Centries at each Cord of his Tent, and the ſame at the chief Vizier's. The other Standards of the Spahi's are the White, the White and Red, the White and Yellow, and the Green. The moſt famous Spahi's are thoſe called *Mutafaraca*, who receive forty Aſpers a Day. The Emperor is their Colonel; their Duty is to attend upon him: They are about five hundred.

As to the other Cavalry, called *Zaims* and *Tamariots*, they are Perſons to whom the Grand Signior gives certain Commands, term'd *Timar*, for Life, on Condition they maintain ſuch a Number of Horſe for his Service. The firſt Sultans, being Maſters of the Fiefs of the Empire, erected Baronies or Commands out of them, to reward any extraordinary Services, and principally for raiſing and ſubſiſting a Body of Troops without iſſuing Money. But it was *Solyman* II. who eſtabliſhed the Order and Diſcipline of theſe Baronies, and ſettled by his Decrees the Number of Men each one ſhould be obliged to find. This Body has been not only very powerful, but very celebrated alſo through the whole Empire. But Avarice, the common Vice of the Eaſt, has made them decline ſeveral Years ago. The Viceroys and Governors of Provinces prevail ſo far by their Intrigues at Court, that even the Commands which lie out of their Government are given to their Domeſticks, or to them who offer the moſt Money. The *Zaims* and the *Timariots* differ little more than in their Income. The *Zaims* have the moſt conſiderable Commands, and their Revenues make from 20,000 to 818,819 Aſpers. If they produce even an Aſper above this, it becomes the Property of ſome Baſha. Alſo when a Commander dies, his Command is divided, ſuppoſing the Income of it has been augmented under the Deceaſed, as it commonly happens to be, for they are generally improved rather than leſſened.

The *Zaims* are obliged to maintain at leaſt four Horſe; which is after the Rate of one Man for 5000 Aſpers of Rent. There are two Sorts of *Tamariots*, the one receive their Proviſions from the Port, the other from the Viceroy of the Place; but their Equipages are leſs than thoſe of the *Zaims*, and their Tents are ſmaller and proportioned to their Revenue. They who receive their Patents from the Court, have from 5 or 6000 to 19,999 Aſpers; if they ſhould receive one Aſper more, they would paſs into the Rank of *Zaims*. They who have their Patents from the Viceroys, have an Income from 3000 Aſpers to ſix thouſand. Every *Timariot* is bound to provide one Horſeman for every 3000 Aſpers his Income produces. The *Zaims* and *Timariots* are obliged to march in Perſon to the Army on the firſt Orders, and nothing can excuſe them. The Indiſpoſed are carried in Litters, and their Children in Baſkets and Cradles. The *Timariots* muſt furniſh Baſkets to their Troopers, to carry Earth for filling up Ditches and Trenches. Theſe are better diſciplined than thoſe who are properly called the *Spahi's*, though the *Spahi's* are more perſonable and luſty; and whereas the laſt never engage but in a Crowd at the Head of the ancient Cavalry, the *Zaims* and *Timariots* are divided into Regiments, commanded by Colonels under the Baſha's. The Baſha of *Alleppo* is Colonel General of this Body of Horſe when he is in the Army, becauſe being Seraſkier of the Army by his Place, it belongs to him to command in Chief during the Abſence of the Grand Vizier.

It is not ſtrange that the *Turks* are ſo weak at Sea, becauſe they want good Mariners, ſkilful Pilots, and experienced Officers. The Pilots of the Grand Signior ſcarcely know how to uſe the Compaſs, and thoſe of the Saicks, which are their Merchant-ſhips, certainly underſtand Nothing of it. They ſteer by their Knowledge of the Coaſts, which is very erroneous, and they generally truſt themſelves in long Voyages, as to *Syria* and *Egypt*, to *Greeks* who have run the Courſe with *Chriſtian* Privateers, and have got the Track of the Countries of *Aſia* and *Africa* by Rote. However, if the *Turks* would apply themſelves to Navigation, they would eaſily become Maſters of the *Mediterranean*, and chaſe away the *Corſairs* who do ſo much Miſchief to their Traffick. Without reckoning the Supplies they might draw from *Greece*, or the Iſles of the *Archipelago*, *Egypt*, and the Coaſt of *Africa*, the *Black Sea* alone would furniſh them with more Wood and Rigging than are needful for even a very formidable Navy. At preſent the Maritime Forces of this great Empire are reduced to twenty eight or thirty Men of War, and they arm not above fifty Gallies.

The *Turks* had much more powerful Fleets in the Time of *Mahomet* II. of *Selimus* and *Solyman* II. but they never made any great Expeditions. Since the War of *Candia*, they have mightily neglected the Sea, and perhaps would have done ſo much more, if *Mizomorto* the Captain-Baſha had not in our Days reſtored and improved their Navy. The Advantage which aroſe by the Sea to the Iſlands of *Spalmadori*, under the *Venetians*, made him ſet a wonderful Value upon the Iſland of *Scio*, and gave the *Mahometans* freſh Spirits. He was a Man of extraordinary Capacity for the Sea, and tried all Methods to engage Chriſtian Officers in the Grand Signior's Service. The Sultan may now have ſix or ſeven Renegado Captains, who are well experienced; but the Seamen know nothing of the Tackle, and the Gunners are miſerable to the laſt Degree.

The Succeſſor of *Mizomorto* was but little eſteemed. *Adram* a Baſha, who was named the Admiral upon the Death of the other, was able to have brought the Condition of the *Turkiſh* Navy to Perfection, if ſome, who envied him, had not got him ſtrangled a little after his Promotion. He was known among the *Turks* by the Name of the Baſha of *Rhodes*, and among the Chriſtians by that of the Butcher's Son of *Marſeilles*. He was taken very young in a Ship belonging to that City, and was ſo unhappy as to turn *Mahometan*. He had the Character among the *Turks* of a very upright Man, and very diſintereſted. It is ſaid, that as he was going the Round one Day to execute Juſtice at *Scio*, he aſked to whom three or four She-Aſhes belonged, which were loaded with weighty Stones, and were tied to the Door of a certain Houſe; and underſtanding their Maſters were hard-by at Breakfaſt, he paſſed on; but at his Return, being diſturbed to find the poor Creatures were ſtill in the ſame Condition, and that no Care had been taken to feed them, he ſent for their Owners, and told them, it was but juſt that the Aſſes ſhould eat in their Turn. The Peaſants readily aſſented; but were ſurprized, when he order'd each to bear one of the Stones upon his Back all the Time the Aſſes were eating. The ſame Story is alſo told concerning Sultan *Morat*.

The Poſt of Captain-Baſha is one of the nobleſt in the Empire. He is great Admiral and General of the Gallies; his Power is abſolute when he is out of the *Dardanelles*, ſo that he can ſtrangle the Viceroys and Governors who are on board, without waiting for the Sultan's Order. The Grand Vizier is the only Miniſter who is above him: It is the ſecond Poſt in the Empire, and he is accountable to the Grand Signior alone. Not only the Sea-Officers, but all the Governors of the Maritime Provinces likewiſe receive Orders from him. At *Conſtantinople* there are not above twenty eight or thirty Men of War. The Gallies are diſtinguiſhed into two Claſſes, namely, thoſe of *Conſtantinople* and thoſe of the *Archipelago*; thoſe of *Conſtantinople* are at Sea only in the Summer. At the Cloſe of the Campaign they are diſarmed, to be laid up in the Arſenal of *Caſſum Baſſa*; the greater Part of the Beys or Captains are Renegades. Beſides the Body of the Galley, Artillery, and Biſket, the Emperor alſo allows them Pay, and the reſt of their Equipage, which conſiſts of two hundred Oars, and a Boat to go on Shore.

If the Captains are rich enough to ſubſiſt their Slaves who row, they make a conſiderable Profit, for they are allowed twelve thouſand Livres for Rowers, and make an Advantage alſo of the Journeys in which they employ their Slaves by Land during the other Part of the Year. When there are not Rowers enough, they preſs the Slaves of private Men at *Conſtantinople*; but very little Service is done by theſe poor Wretches, who have no Experience, and periſh moſt of them at Sea, as the Service of the Sea requires much more Practice than that of the Land. To reinforce the Soldiers of the Gallies, the *Turks* add ſome of the Janizaries. The Gallies of the *Archipelago* are obliged to be in a Readineſs to put to Sea at all Times. The Captains are paid by Aſſignments upon the Iſlands, and are bound to find their own Slaves, and pay them, for the Grand Signior allows them only the Veſſel, Artillery, and Rigging.

They avoid an Engagement all they can, in order to preſerve their Slaves; and moſt of them have neither the Number of Gallies they ought to maintain, nor their Equipage compleat, becauſe the Captain-Baſha for a Sum of Money (which the others know proper Ways enough to hand to him) often winks at it, conſequently the Military Diſcipline is very indifferently obſerved. The Beys of *Rhodes* and *Scio* ought to provide ſeven Gallies for each Iſland; he of *Cyprus* ſix; thoſe of *Mytelene*, *Negropont*, *Salonica*, and *Caval* one a-piece. *Andros* and *Syra* only one, and *Naxos* and *Paros* the like. The Captain-Baſha ſails round the *Archipelago* in the Summer, to raiſe the Capitation Tax, and learn the State of Affairs which have happened. He commonly holds his Days of Audit in a Port of *Paros*, called *Drio*, which is the Center, as it were, of the *Archipelago*. The Officers of the Iſlands repair thither to make their Preſents to him, and pay in the Sums at which each Iſland is taxed. Here alſo the Captain-Baſha finally judges all Matters, as well Civil as Criminal.

The only Danger that can now be apprehended from the *Turks*, muſt ariſe from the Wickedneſs of *Chriſtian* Renegadoes, more eſpecially Men of deſperate Fortunes, who have had long Experience, and arrived at conſiderable Dignities either in Military or Naval Service; for theſe Men may, by repeated Memorials, awaken the *Turkiſh* Miniſters to a true Senſe of their Condition, and may alſo propoſe amending their Diſcipline, by introducing that of the *Germans*, and ſo the laſt Evil would be worſe than the firſt, ſince *Turkiſh* Infantry, thus diſciplined, would be infinitely more terrible than the *Janizaries* have ever been. That this is not altogether a groundleſs or idle Suſpicion, appears from two Inſtances in our own Time, *viz.* the Port's ſending an Aga into *Holland* to treat with Mr. *Langallerie*, a *Frenchman*, who quitting the Service of his own Prince, was raiſed in that of the Allies to that of a Lieutenant General; but growing diſcontented, as theſe Sort of People generally do, after the Peace was concluded, propoſed tranſporting a Colony into the *Morea*, and reviving the *Ottoman* Naval Power in the *Archipelago*. His Schemes were received, a Perſon ſent to treat with him in *Holland*, and conſiderable Sums of Money paid him; but ſome of his Practices requiring his Preſence in *Germany*, he went thither, was ſeized and impriſoned, and continued in that Situation, till in a deſperate Fit of Madneſs he put an End to his own Life.

The recent Example of Count *Bonneval* is another of the ſame Kind; he was a Man of one of the beſt Families in *France*, but profligate in his Morals, and without any Principles whatever. He too quitted the Service of *France* to enter into the Troops of the Allies, where he obtained very great Preferment, and if any Thing could have ſatisfied his Ambition, might have had it; but having conceived ſome Prejudice againſt his Patron Prince *Eugene*, he behaved in ſuch a Manner as forced the Imperial Court to proceed againſt him with Severity, which ſo exaſperated his haughty Spirit, that he retired to *Turkey*, where having ſome Differences with the *French* Ambaſſador, who refuſed to take him under his Protection, and being claimed as a Subject of his Imperial Majeſty, which by the Treaty of Peace then ſubſiſting would have obliged the *Turks* to have given him up, he found himſelf under the dreadful Neceſſity of abandoning the Chriſtian Faith to ſave himſelf from being thus delivered.

Theſe Circumſtances are not taken from the fabulous Hiſtory of his Adventures, but from his own Letters, and therefore the Reader may depend upon them. This Man might have proved as uſeful to the *Turks* as dangerous to the *Chriſtians*. He had ſerved againſt them in the laſt War in *Hungary*, was perfectly acquainted with the Errors in their Diſcipline, and without Doubt would have ſet them right, as appears from the Memorials that he preſented from Time to Time, and which muſt be allowed to be very judicious in their Kind; but he was never much eſteemed or greatly truſted by the Infidels; and to ſay the Truth, as Things ſtand at preſent in that Empire, it is very improbable that ſuch a Man ſhould ſucceed, for many Reaſons, out of which I will mention a few.

The Nation in general are ſtrongly wedded to their own Cuſtoms, and have an inſuperable Contempt for thoſe of other Nations. The Diſcipline of the *Janizaries* is now corrupted to ſuch a Degree, that there is nothing they dread ſo much as a Reformation; they no longer conſider their Kind of Life as a Military Profeſſion, in which Preferment is to be derived from Merit, but as a Trade of which they are inclined to make the moſt they can, and therefore deteſt all Thoughts of being put out of the Way in which they now are, and would certainly mutiny, if a new and ſtrict Diſcipline was inſiſted upon. The *Turkiſh* Miniſters are naturally ſuſpicious of Renegadoes, foreſeeing that if they ſhould riſe to conſiderable Employments, it muſt be at their Expence, the Thoughts of which they cannot bear; and therefore though they cannot refuſe ſuch People Protection and Countenance, yet they always ſtudy to depreſs and keep them under; but we know not what Time, and the Light of Experience may produce, and therefore we ought to be upon our Guard againſt all Accidents.

Beſides in a Country ſo ſubject to Revolutions, Nobody can pretend to decide about what may happen. A new Emperor may ariſe of a martial and enterpriſing Genius, and may take the Reins of Government into his own Hands, and pay very little Deference to his Miniſters. Such a Prince, from the Genius of the *Turkiſh* Conſtitution, would very ſoon become the Darling of his People, more eſpecially if Succeſs ſhould attend any of his Undertakings; and in that Caſe he might very poſſibly have Recourſe to Renegades, as Perſons the moſt capable of ſerving him, which if they were able to do, he would not fail to raiſe them in Spite of all Oppoſition; and this once accompliſhed, the Effects that muſt attend it would become terrible to *Chriſtendom*; for conſidering that general Depravity of Manners, and that dangerous Spirit of Irreligion, which prevails over all *Europe*, there is nothing more likely than that ſuch a Turn as this would draw all the turbulent and reſtleſs Spirits in this Part of the World to ſeek their Fortunes under the *Turks*, and then perhaps it would be too late to think of any Remedy for ſuch an Evil.

But if an oppoſite Spirit could be raiſed in Time, if Chriſtian Princes could be prevailed on to lay aſide their inteſtine Jealouſies and Diſputes, and think of augmenting their Subjects, and increaſing their Dominions, at the Expence of their common Enemy; we have already ſhewn, that this might be very practicable. We will conclude this Section with obſerving, that how little ſoever we hear of it, Things on this Side are really at a Criſis, and in the Space of a very few Years we ſhall ſee them take either one Turn or the other; that is to ſay, either the Chriſtian Princes, more eſpecially the two *Imperial* Powers of *Germany* and *Ruſſia*, the King of *Poland*, and the State of *Venice*, will think of recovering what has been torn from them by the *Ottomans*; or after ſome ſudden and great Revolution among the *Turks*, the Face of Affairs will change, and they will reſume their Deſigns againſt the *Chriſtians* too, which they are always encouraged by that Power, which, as it ſeems to have adapted the Maxims of their Policy, has for many Years acted as if it was the natural and unalterable Ally of the Infidels, and in that Light as well as others the common Enemy of *Chriſtendom*.

SECTION IV.

A Journey from *Aleppo* to *Jeruſalem*, containing a curious and accurate Deſcription of the *Holy Land* and *City*, interſperſed throughout with great Variety as well of Philological, Phyſical, and Philoſophical; as Hiſtorical and Critical Remarks.

By HENRY MAUNDRELL, M. A. late Fellow of *Exeter College*, and Chaplain to the Factory at *Aleppo*.

1. *An Introductory Account of the Author and his Performance, in which is ſhewn the Nature, Deſign,*
and Uſes of this Section. 2. *The Author ſets out in Company with fourteen* Engliſh *Gentlemen from*
Aleppo; *the Manner of their Travelling, and the Nature of their Accommodations.* 3. *They are ſur-*
prized in their Journey by a Storm, and obliged to take Shelter among the Tombs of Turkiſh *Saints.*
4. *An Account of the City of* Latichea, *and of a Nation called* Neceres, *who are of all Religions, and*
of no Religion. 5. *They continue their Journey to* Tripoly, *and meet with ſeveral Antiquities in their*
Paſſage. 6. *A Deſcription of that City, with an Account of the Entertainment they met with there.*
7. *Their Viſit to* Oſtan *Baſha of* Tripoly, *the Ceremonies of their Reception, and what paſſed at their*
Audience. 8. *A Deſcription of* Gibyle, *the* Byblus *of the Ancients, famous for being the Birth-place*
of Adonis. 9. *A very curious and learned Account of various Antiquities in this Neighbourhood.* 10.
A ſuccinct but curious Relation of the Emir Faccardine, *his Subjects and Succeſſors.* 11. *The Author's*
Account of Tyre *and* Sidon, *with ſome Remarks upon the Prophecies relating to thoſe Cities.* 12. *A*
Deſcription of Solomon's *Ciſtern, the City of* Acra *or* Ptolemais, *and other Places in that Neigh-*
bourhood. 13. *They paſs the River* Kiſhon, *and travel through the Country of* Samaria. 14. *Some*
very curious and ſatisfactory Remarks on the ancient Fertility and preſent Barrenneſs of the Land of
Judea. 15. *A very copious and circumſtantial Account of the Ceremonies annually uſed at the Church*
of the Holy Sepulchre *on* Good-Friday. 16. *The Celebration of* Eaſter, *and the Author's Viſit to the*
Sepulchres of the Kings. 17. *The Author's Journey to the River* Jordan *and the* Dead Sea, *with a*
Deſcription of both. 18. *A Journey to and Deſcription of* Bethlehem, *with Variety of critical Ob-*
ſervations and Remarks. 19. *His Journey to the Convent of St.* John *in the Wilderneſs, with a De-*
tail of the remarkable Places he ſaw therein. 20. *A very particular Account of the* Holy Fire *at*
Jeruſalem, *and of ſome very extraordinary Practices of the Monks and Prieſts.* 21. *A circumſtantial*
Account of the moſt remarkable Places in the Neighbourhood of Jeruſalem. 22. *The Author's Viſit to*
Mount Olivet, *and the Palace of* Pilate, *the Pool of* Bethſaida, *and other Places.* 23. *Their Depar-*
ture from Jeruſalem, *and Journey from thence to* Nazareth. 24. *A Deſcription of that Village, and*
of Mount Tabor. 25. *An Account of what happened in their Journey till their Arrival at* Damaſcus,
26. *A very large and accurate Deſcription of that City and the Country about it.* 27. *An Account of*
the great Turkiſh *Caravan of Pilgrims that go annually to viſit* Mecca. 28. *A very curious and co-*
pious Deſcription of the City of Balbeck, *the* Palmyra *of the Ancients.* 29. *An Account of the* Turk-
iſh *Puniſhment called* Empaling; *a Deſcription of Mount* Libanus, *and the Author's Return to* Aleppo,
30. *Another Journey of his from* Aleppo *to viſit the River* Euphrates, *the City of* Beer, *and the fruit-*
ful Country of Meſopotamia. 31. *Remarks and Obſervations upon the foregoing Section.*

1. THE Author of theſe Travels was a Gentleman who, during the Time he reſided in the Univerſity of *Oxford*, laid a Foundation of an extraordinary Character, in Point both of Learning and Manners. He applied himſelf with great Diligence to the Reading of *Greek* Authors, and a ſtrong Turn towards Antiquities and Church-Hiſtory; and though his Conſtitution was far from being ſtrong, and his great Patron Dr. *Spratt*, Biſhop of *Rochester*, had it in his Power to provide for him at home; yet, upon the very firſt Propoſal of his going Chaplain to the Factory at *Aleppo*, he very chearfully and gladly embraced it; and, during his Reſidence there, was equally happy himſelf, and agreeable to the Gentlemen who then reſided there, as I have been informed by ſeveral who were there at that Time, and by ſome that accompanied him in his Journey. It may not be amiſs to obſerve, that the worthy Biſhop *Frampton* was his Predeceſſor in this Employment; and as he was a Man of great Piety and Purity of Manners, ſo, on the other hand, his Converſation was ſo chearful and entertaining, and he had the Art of introducing learned Subjects with ſuch Eaſe, and of enlivening them in ſuch a Manner, that he diffuſed a Spirit of Literature through the whole Factory; ſo that when Mr. *Maundrell* came firſt amongſt them, he profeſſed himſelf aſtoniſhed at the ſtrict Order and perfect Regularity in which they lived; exhibiting, as himſelf ſays, in all their Actions the beſt and trueſt Signs of a Chriſtian Spirit, ſincere and chearful Friendſhip amongſt themſelves, a generous Charity towards others, a Converſation innocently chearful, addicted to no Pleaſures but ſuch as were honeſt and manly; and, in ſhort, in all Points ſo well diſpoſed, that it ſeemed rather a College, and a well-governed College too, in ſome famous Univerſity, than a Factory of Young Merchants, ſent there to make their Fortunes. We need not at all wonder, that in Company like this Mr. *Maundrell* rejoiced in his Situation, or that amongſt other Advantages he there enjoyed, he ſhould lay hold of viſiting the Land of *Judea*, and the Places conſecrated to the Reverence of all Chriſtians, by their having been the Scenes of the principal Acts of our Saviour and his Apoſtles in the firſt Ages of the Church. What he ſaw with Pleaſure, he has related with great Accuracy and Judgment; and the Learned, both of our own and of Foreign Countries, are agreed, that amongſt the numerous Relations of Journeys to the holy City, there are none that, in Point of Candour, Fidelity, and Exactneſs, ſurpaſſes this; which is the Reaſon that we have given it a Place in this Collection, and dare recommend it to the Reader as an excellent Performance of its Kind, filled not only with all that can be reaſonably expected from it; but alſo with a great Variety of curious and uſeful Learning, which can hardly fail to inſtruct and pleaſe.

2. On *February* 26, 1696, I ſet out with fourteen *Engliſh* Gentlemen from *Aleppo*, deſigning to viſit the *Holy Land* at the next *Eaſter*, and the firſt Night we took up our Quarters at the *Honey Kane*, about an Hour and a half Weſt of *Aleppo*. A very indifferent Lodging we had; for here it is to be noted, that in travelling this Country, a Man does not meet every Night with Inns as in *England*; but you muſt either lodge under your own Tent, or elſe in Publick-houſes, founded for the Uſe of Travellers, called by the *Turks*, *Kanes*; to which all Comers are welcome, paying a ſmall Fee to the *Kane*-Keeper, if they be able. And here you muſt expect nothing but bare Walls, for all other Neceſſaries muſt be carried by every one that travels.

On the 27th, we parted from the *Honey-Kane*, and paſſing by *Oorem* and *Keffre*, we entred into the Plains of *Keſteen*, of a vaſt Compaſs, and in moſt Places very fruitful. At our firſt Deſcent into them at *Effoyn*, we counted no fewer than twenty four Villages; and *Keſteen* itſelf is a large Village on the Weſt-ſide of the Plain, encompaſs'd with ſo many Fields of Corn, that the Inhabitants breed many Pigeons. At this Place we ſaw, over the Door of a Bagnio, a Marble-ſtone carved with the Sign of the Croſs, and the *Gloria Patri*, &c. which was probably the Portal of ſome Church formerly. On the 28th, we left *Keſteen*, and continuing in the ſame Plain, abounding with Corn, Olives and Vines, we came to *Harbonooſe*, and from thence to a very rich Valley called *Rooge*, which is wall'd on both Sides with high Mountains; and having travel'd in this Valley four Hours, we paſs'd through the Skirt of the Lake or Sea of *Rooge*, and from thence we came to *Te-ne-ree*, where we paid our firſt Caphar. Theſe Caphars are certain Duties paid by Travellers to Officers that attend in their Stations to receive them. They were at firſt levied by Chriſtians, for repairing the Ways, and ſcouring them from Robbers; but under that Pretence the *Turks* now exact unreaſonable Sums, though themſelves are often the greateſt Robbers.

After this Caphar, we croſs'd over the Mountains on the Weſt-ſide of the Valley of *Rooge*, and deſcending into a Valley, we paſs'd *Bell-maer*, and came to *Shoggle*, which is a large but filthy Town, ſituate on the River *Orontes*, over which you paſs to it by a Bridge of thirteen ſmall Arches. The River hereabouts is pretty deep, and yet ſo rapid, that it turns great Wheels, made for lifting up the Water by its natural Swiftneſs, without any Force added to it, merely by confining its Stream. We lodg'd here in a large and handſome *Kane*, founded by the ſecond Grand Vizier *Cuperli*, and ſo well endow'd, that it ſupplies every Traveller with a competent Portion of Bread, Broth and Fleſh. It was crouded with *Turkiſh Hodgees* or Pilgrims, bound for *Mecca*; but we found a peaceable Reception among them.

3. *March* 1. We parted from *Shoggle*, and croſs'd a Mountain on the Weſt-ſide of the Valley, from which we deſcended into a third Valley like the two former; and having paſs'd the Village *Bedame*, we entred into a woody Country, where our Road was very rocky and uneven, but yet pleaſant, becauſe it preſented us with the Proſpect of Plants and Flowers of divers Kinds, as Myrtles, Oleanders, Tulips, and other aromatick Herbs. After this we deſcended into a low Valley, at the Bottom of which there is a Fiſſure ſo narrow, that you cannot diſcern it till you come upon it, though you may hear the Noiſe of the Stream running into it at a great Diſtance. They call it the *Shecks Wiſe*, from a Woman of that Quality that fell into it. From hence we came in one Hour to a Place called the *Sultan's Stone*, where we pitch'd our Tents, and lodg'd for that Night.

On the 2d, we left our *Champagnia* Lodging very early, the Weather being yet moiſt and cold, and came in an Hour to the Caphar of *Cruſia*, and from thence in another to the Foot of a Mountain called *Occaly*, which we aſcended with great Difficulty, and then we found a fine Country planted with Silk-Gardens, through which we came to *Belulca*, and there repair'd to a Place which is both the *Kane* of the Village and the *Aga's* Houſe; but though we gave him a ſmall Preſent, we could hardly obtain a dry Part of the Houſe to lodge in. In the mean Time, being informed that there were ſeveral Chriſtians Inhabitants in this Place, we went to viſit their Church, which was only a Room about four or five Yards ſquare, wall'd with Dirt, and cover'd with Buſhes, in which was an Altar of the ſame Materials with the Walls, paved at Top with Potſherds and Slates; and in the Middle of the Altar ſtood a Croſs made of two laths nail'd together, on each Side of which there are two or three old Pictures of our bleſſed Lord and the Virgin, &c. a very mean Habitation for the God of Heaven, but yet held in great Eſteem by the poor People, who come hither with great Devotion, and hang the Room with Bags of Silk-worms Eggs, that by the Holineſs of the Place they may bring a Bleſſing upon them, and increaſe their Virtue.

On the 3d, we left *Belulca*, and arrived at *Sholfatia*, a poor Village, ſituate upon a ſmall River, now ſwollen ſo high with the late Rains, that it was not fordable; which put us to a Nonplus, not knowing what to do till the Rain abated; and then we pitched in the open Field, though thoroughly ſoak'd with Wet. But after the Rain had ceaſed a little While, it began to pour down a-freſh with Lightning and Thunder, and then we we ſent a *Turk* to a *Sheck*'s Houſe hard by, to try if by any Means we could get Admittance there; and at laſt, with good Words, having declared, that we had no Intention to defile their Faith, we were permitted to ſecure our Baggage in the Houſe, whilſt we ſhelter'd ourſelves among the Tombs from the Rain, which poured down all Night long. A *Sheck*'s Houſe is a Stone Fabrick, of ſix or eight Yards ſquare, roofed with a Cupola, erected over the Grave of ſome eminent *Sheck*, *i. e.* one who by his long Beard, whining Prayers, and *Pharaſaical* Pride, (the great Virtues of the *Mahometan* Religion) has purchaſed the Reputation of a Saint; of which Sort there are many in this Country, to which the People repair with their Vows and Prayers, which they offer in theſe Shrines, not to the Saints, as the Papiſts do, but to God only, whom alone they adore.

4. On the 4th: This Morning we found the River fordable, and got to the other Side of it with our Baggage, from whence aſcending a very ſteep Hill, at the Top of it we were preſented with the firſt Proſpect of the Ocean; and to the Weſtward, we had a View of the City *La ichea*, built by *Seleucus Nicanor*, and by him call'd *Laodicea*, which Name it ſtill retains with a little Corruption. After it was reduced to a low Condition, it now begins to flouriſh again, being put in a Way of Trade by *Coſlan* Aga, a Man of great Wealth and Authority in theſe Parts. From the Hill laſt mention'd, we deſcended into a ſpacious Plain, having the Sea on the Right-hand, and Mountains on the Left. In which Plain we diſcerned two ancient Tombs, which were Cheſts of Stone, two Yards and a half long each, cover'd over with large Tables of Stone, carv'd on the Out-ſide with Ox-heads, and Wreaths hanging between them, after the Manner of adorning Heathen Altars.

Above an Hour from theſe Tombs we were ſtopt by another Stream, but here we found a ſafe Paſſage to the other Side, and then we were forced by the Rain to make the beſt of our Way to *Jebilee*. After this Manner our Road continued for ſeveral Days, between the Sea on the Right, and the Mountains on the Left; but the Mountains go under different Names, and are inhabited by ſeveral rude People. In that Part of them above *Jebilee*, there dwell a People called by the *Turks Neceres*, of a very ſingular Character; for it is their Principle to adhere to no certain Religion, but to put on the Colour of that Religion which is profeſſed by thoſe with whom they converſe: And ſo with *Chriſtians* they profeſs themſelves *Chriſtians*, with *Mahometans* they are good *Muſſulmans*, and with *Jews* they paſs for *Jews*. All that is certain concerning them is, that they make very much and very good Wine, and are great Drinkers, but in Religion they are very *Proteus*'s.

On the 5th: This whole Day we ſpent in *Jebilee*, having a convenient new Kane to lodge in, built by *Oſtan* their Baſhaw of *Tripoly*. *Jebilee* is ſeated cloſe by the Sea, having a vaſt and fruitful Plain on the other Sides of it; its ancient Name was *Gabala*, and ſo it is call'd by *Strabo*. In the Time of the *Greek* Emperors it was a Biſhop's See, and is ſtill accounted a City, though it makes a very mean Figure at preſent. The moſt remarkable Things in it are a Moſque and an Almshouſe, built by Sultan *Ibrahim*; in the former is his Tomb, which we found to be a great wooden Cheſt erected over his Grave, and covered with a Carpet of painted Callico, trick'd up with a great many Ropes of wooden Beads, which is the *Turks* uſual Way of adorning the Tombs of their holy Men. In this Moſque we ſaw ſeveral Incenſe-Pots, Candleſticks, and other Furniture, being the Spoils of Chriſtian Churches.

The *Turks* reported, that he diveſted himſelf of his Royalty, and liv'd twenty Years in a Grotto by the Sea-ſide; and to confirm the Truth of their Relation, they ſhow the Cell where he abode, and another Grot twice as large, which had three Niches or Praying-places hewn in its South-ſide, as they always are, for that Way the *Muſſulmen* are obliged to ſet their Faces, in Reverence to the Tomb of their Prophet. From this Moſque our Guide carried us to a Chriſtian Church, which we found to be nothing but a ſmall Grotto in a Rock open towards the Sea, having a rude Pile of Stones for an Altar; which poor Chappel is the only Place, as the Curate told us, allowed to the *Greek* Chriſtians for Divine Service. But the moſt conſiderable Antiquity in *Jebilee*, is the Remains of a noble Theatre, of which the Semi-circle is all that's now ſtanding, being an hundred Yards in Compaſs, having in it ſeventeen Windows, between which are large maſſy Pillars ſtanding againſt the Wall, that is three Yards three Quarters thick of firm Stone, by which Means it has been preſerv'd thus long from the Jaws of Time, and the Ruin which the *Turks* bring upon moſt Places.

On the 6th, having done with *Jebilee*, our Road continued by the Sea-ſide, and baniſhed us in two Hours to a fair deep River, call'd the *King's River*; on both Sides of which we ſaw the Footſteps of ſome conſiderable Buildings. About half an Hour further we paſſed the River *Jobar*, and on the other Side ſtood a great Square Tower, and round about it there was the Rubbiſh of a great many other Buildings. And all along this Day's Journey we obſerv'd the Ruins of Caſtles and Houſes, which teſtify that this has been formerly a Place of great Strength and Beauty. *Strabo* calls that whole Region, from *Jebilee* as far as *Aradus*, the Country of the *Aradii*, and gives the Names of ſeveral Places ſituate along the Coaſt, which cannot be now diſtinctly known. Only the *Balanea* of *Strabo* ſeems to be that Place which the *Turks* now call *Beneas*, which ſtands about a Furlong from the Sea, and has ſuch a pleaſant Situation, ſuch Ruins, and ſuch a Bay, as ſhews it to have been a commodious Habitation. Leaving *Baneas*, we went by the Sea-ſide, and in one Quarter of an Hour we paſſed by an old Caſtle, on the Top of a high Mountain, built in the Figure of an equilateral Triangle, which the *Turks* call *Merchab*, which probably is the ſame Caſtle mention'd by *Aurichemius* under the Name of *Margath*, to which the Biſhops of *Balanea* were forced to tranſlate the See, by Reaſon of the Inſults of the *Saracens*. About an Hour and half from *Baneas*, we met with a ſmall clear Stream, which induced us to take up our Lodgings near it, about two or three Furlongs from the Sea, having in Sight on the Mountains above us a Village call'd *Sophia*, inhabited only by *Maronites*, and a little further, *Reſeck*, poſſeſs'd by the *Turks*; and a little further *Merakiah*, poſſeſs'd by *Chriſtians* and *Turks* together.

5. On the 7th: Next Morning we came in three Hours to a deep River call'd *Naher Huſſine*, having one Arch large and well wrought; and in an Hour and half more we reach'd *Tortoſa*, anciently call'd *Orthoſia*, being a Biſhop's See in the Province of *Tyre*, frequently mentioned by the Writers of the Holy Wars as a ſtrong Place, as it appears to have been. What remains of it is the Caſtle, waſh'd on one Side by the Sea, on the others fortified by a double Wall, between which there is one Ditch, and another compaſſing the outermoſt Wall. You enter this Fort over an old Draw-Bridge which lands you in a ſpacious Room, which on one Side reſembles a Church, having at this Day ſeveral holy Emblems, as that of a Dove deſcending, and that of the holy Lamb; but on the other Side it has the Face of a Caſtle, being built with Port-holes inſtead of Windows. On the South and Eaſt-ſide of it ſtood anciently the City, encompaſſed with a good Wall and a Ditch, of which there are ſome Remains; but of other Buildings there is nothing left, except a Church which is an hundred and thirty Foot long, ninety three broad, and ſixty one high, ſo entire, that it might eaſily be repaired; but it is now made a Stall for Cattle, in which we waded up to the Knees in Dirt when we went to ſee it.

From *Tortoſa* we ſent our Baggage before towards *Tripoly*, which we follow'd not long after, and within one Quarter of an Hour we came to a large Channel of a River, now almoſt dry; and in half an Hour more we came to a ſmall Iſland about a League from the Shore, call'd by the *Turks*, *Ruad*, which is ſuppoſed to be the ancient *Arphan* or *Arpad* (mention'd, 2 *Kings* xix. 13. *Gen.*

13. *Gen.* x. 18. *Ezek.* xxvii. 11.) and the *Aradus* of the *Greeks* and *Romans*, which ſeem'd to be fill'd with Buildings like Caſtles, and to have been anciently famous for Navigation. About a Quarter of an Hour further we came up with our *Muliteers*, who had pitch'd our Tents at a Place where we found ſeveral notable Antiquities, having in it a Fountain call'd the *Serpent Fountain.* The firſt Antiquity that we obſerv'd was a large Dike thirty Yards over at Top, cut into the firm Rock, whoſe Sides went ſloping down with Stairs form'd out of the Rock; and this was on the North-ſide of the Fountain; but on the other Side we found a Court of fifty-five Yards ſquare, cut in the natural Rock, and compaſs'd about with Walls of the ſame Rock on three Sides, but to the North it lay open. In the Center of this *Area* was a ſquare Part of the Rock left ſtanding, being three Yards high, and five Yards and half ſquare, which ſerv'd for a Pedeſtal to a Throne made of four large Stones, two at the Sides, one at the Back, and another hanging over the Top like a Canopy, which was five Yards and three Quarters ſquare, carv'd round with a handſome Corniſh. The Court we imagin'd to be an Idol-Temple, and the Pile in the Middle to be the Throne of the Idol, which ſeem'd the more probable, becauſe *Hercules*, i. e. *the Sun*, the great Abomination of the *Phœnicians*, was wont to be adored in an open Temple.

6. On the 8th, we got up early to take a nearer View of the two Towers, we ſaw the Night before, whereof one was thirty-three Foot high, on a Pedeſtal ten Foot high, and fifteen ſquare; the other was thirty Foot high, on a Pedeſtal ſix Foot high, and ſixteen Foot ſix Inches ſquare, ſupported by four Lyons, the upper Part rear'd upon the Pedeſtal, being all one ſingle Stone. Under theſe Monuments were ſeveral Sepulchres, to which we deſcended by Steps, having ſeveral Cells for Corps hewn out of the Rock, ſome of which we found to be eight Foot and half long. Having parted from theſe Antiquities, we entered into a ſpacious Plain between the Sea and the Mountains, reaching almoſt as far as *Tripoly*, which the Natives call *Junia*. We were ſeven Hours in paſſing it, and found it all along very fruitful, by Reaſon of the many Rivers that are in it; of which the firſt being about ſix Hours from *Tripoly*, has a Stone-bridge of three Arches, and is called the *Great River*.

About half an Hour further we came to another, called the *Leper*'s River: in three Quarters of an Hour more we came to a third, called *Nabor Acchar*; and two Hours more brings you to a fourth called the *Cold Waters*. Which Rivers I do particularly mention, becauſe it is probable, according to the Deſcription of the Ancients, that one of them is the River *Eleutherus*, though the Moderns do all agree, that it is the ſame with the River between *Tyre* and *Sidon*, called by the *Turks Caſimeer*, contrary to the Account of *Strabo* and *Pliny*, who place it near *Orthoſia*, or between that and *Tripoly*; and of *Ptolomy*, who places it yet more Northerly between *Orthoſia* and *Balanea*.

On the 9th, our *Muliteers* were afraid leſt their Beaſts ſhould be preſs'd for publick Service, as indeed they were, in Spight of all their Caution; and ſo we left them in the Plain of *Junia*, and arrived at *Tripoly* about Sun-ſet. It is ſeated about half an Hour from the Sea, and the major Part of the City lies between two Hills, one on the Eaſt, on which ſtands a Caſtle that commands the Place, and the other on the Weſt, between the City and the Sea, which is ſaid to be firſt rais'd, and ſtill increas'd by Sand blown to it from the Shore; whence ariſes a Prophecy, that the whole City ſhall in Time be buried with this ſandy Hill.

On the 10th, we were treated by Mr. *Fiſher* in a narrow pleaſant Valley by a River-ſide, about a Mile from the City: Acroſs the Valley there runs, from Hill to Hill, a lofty Aquæduct, carrying upon it ſo great a Body of Water as ſuffices the whole City. It was called the *Prince*'s Bridge, and is ſuppoſed to be built by *Godfrey* of *Buloign*.

7. On the 11th, we all dined at Conſul *Haſting*'s Houſe, and after Dinner we went to wait upon *Oſtan*, the Baſha of *Tripoly* having firſt ſent our Preſent, after the Manner of the *Turks*, to procure us a favourable Reception; for it is accounted uncivil in this Country, to viſit without an Offering in Hand, which all great Men expect as a Tribute due to their Character. And even the inferior People ſeldom viſit without bringing a Flower or an Orange, or ſome ſuch Token of Reſpect, according to the ancient Oriental Cuſtom; hinted in 1 *Sam.* ix. 7. *If we go*, ſays *Saul*, *what ſhall we bring the Man of God? there is not a Preſent*, &c.

On the 12th we went to viſit *Bell mount*, a Convent of *Greeks*; about two Hours to the South of *Tripoly*, and we came there juſt as they were going to Evening Service. The Church is large but obſcure, and the Altar is encloſed within Chancels, which none but the Prieſt muſt approach, after the Manner of the *Greek* Churches. They call the Congregation together by beating a Tune with two Mallets on a long Piece of Plank hanging at the Church Doors, Bells being an Abomination to the *Turks*. Their Service conſiſted in a haſty Chattering of certain Prayers and Hymns to our Bleſſed Saviour and the Virgin, and in ſome dark Ceremonies, for the Prieſt that officiated ſpent at leaſt a third Part of his Time in compaſſing the Altar, and perfuming it with a Pot of Incenſe, and then going round the Congregation, tendring its Smoke with three Vibrations to every one preſent. Towards the End of the Service, there was brought into the Body of the Church a ſmall Table, covered with a Linen Cloth, on which were placed five ſmall Cakes of Bread croſswiſe; and in a Hole made in each Cake was fixed a ſmall lighted Wax Taper. And then the Prieſt read the Goſpel concerning our Lord's feeding the Multitude with five Loaves; after which, the Bread was carried within the *Cancelli*, and being there broke in Bits, was again brought out in a Baſket, and preſented to every one in the Aſſembly, that he might take a little.

After this Collation, the Prieſt pronounc'd the Bleſſing, and ſo the Service ended. On both Sides of the Church there were Seats for the Monks, being about forty in all, and in each Seat there were Crutches (as there are in moſt Churches of this Country) which are uſed by the Prieſt to eaſe him, by leaning on them, in Caſe the Service be long, becauſe by the Rubrick he is forbidden to ſit down. We found the Monks good-natured, but very ignorant, for the Chief of them told the Conſul, that he was as glad to ſee him, as if he had beheld the Meſſiah in Perſon come to viſit him. Nor is this Ignorance much to be wondred at, ſince they are forced to ſpend all the Time, between their Hours of Devotion, in managing their Flocks, cultivating the Lands, and pruning their Vineyards, which they do with their own Hands; and this they are obliged to do, not only for their own Suſtenance, but to ſatisfy the unreaſonable Exactions of the *Turks*. And to ſhew what Kind of Men they are, I took particular Notice, that the ſame Perſon whom we ſaw officiating at the Altar in his embroider'd Prieſtly Robe, brought us the next Day on his own Back, a Kid, and a Goat's Skin of Wine, as a Preſent from the Convent.

On the 13th: This Morning we went again to wait upon *Oſtan* Baſha, by his own Appointment, and were receiv'd with great Civility after their Manner, which is this: When you would make a Viſit to a Perſon of Quality, you muſt ſend a Preſent by a Servant, who is to learn what Time may be moſt ſeaſonable to wait upon him: When you come to the Houſe, ſome Servants receive you at the outermoſt Gate, and conduct you towards their Maſter's Apartment, and others in their ſeveral Stations meet you as you draw nearer to him. Coming into the Room, you find him prepared to receive you, either ſtanding at the Edge of the *Duan*, or lying down at one Corner of it, as he thinks proper. Theſe *Duans* are low Stages rais'd about ſixteen or eighteen Inches above the Floor, ſpread with Carpets, and furniſh'd with Bolſters to lean upon; on which the *Turks* eat, ſleep, ſmoke, ſay their Prayers, receive Viſits, &c. Their whole Delight is in lolling on them, and their Luxury conſiſts in furniſhing them richly.

Being come to the Side of the *Duan*, you ſlip off your Shoes, and take your Place firſt at ſome Diſtance, and upon your Knees, laying your Hands formally before you; and there you muſt remain till the Man of Quality invites you to draw nearer, and to lean upon a Bolſter. When you are thus fix'd, he diſcourſes with you as Occaſion offers, the Servants ſtanding round with profound Reſpect and Silence. When you have talk'd over your Buſineſs or made your Compliments, he makes a Sign to have the Entertainment brought in, which is generally a little ſweet Meat, a Diſh of Sherbet, and another of Coffee, which is preſently brought in by the Servants, and tender'd to all the Gueſts in Order with great Care; for if any of them ſhould make the leaſt Slip in giving or receiving his Diſh, it might coſt him 100 Drubs on his bare Feet to attone for the Crime. At laſt comes the finiſhing Part of the Entertainment, which is perfuming the Beards of the Company; and for this Purpoſe, they have a ſmall Silver Chafing-diſh, with a Lid full of Holes, fix'd on a Plate, in which they put ſome freſh Coals, and upon them a Piece of *Lignum-Aloes*, and then the Smoke aſcends with a grateful Odour through the Holes of the Cover. This Smoke is held under every ones Chin, and offer'd as a Sacrifice to his Beard, which greedily drinks in the gummy Steam, and retains the Savour of it a good while after. This ceremony is intended to give a civil Diſmiſſion to the Viſitants, intimating that they may go away as ſoon as they pleaſe, and the ſooner after this the better.

Having ended our Viſit to *Oſtan* Baſſa, we rid out after Dinner to view the Marine, which is about half an Hour diſtant from the City. The Port is an open Sea, rather than an encloſ'd Harbour, but is partly defended by two ſmall Iſles, about two Leagues out from the Shore, one of which is called the *Bird*, and the other the *Coney-Iſland*, from the Creatures they ſeverally produce. And for its Security from Pirates, it has ſix ſeveral Caſtles on the Shore at convenient Diſtances. In the Fields, near the Shore, there are many Heaps of Ruins and Pillars of Granite, which are Indications of ſome great Buildings this Way; which agrees with what *Cauſabon* ſays upon *Strabo*, that *Tripoli* was anciently a Cluſter of three Cities, of which the firſt was the Seat of the *Aradii*, the ſecond of the *Sidonians*, and the third of the *Tyrians*, which may more probably be the Occaſion of the Name, than the Joint Intereſt of three Cities in Building it, as is commonly ſaid.

8. On the 14th, we reſted at *Tripoly*, and on the 15th our *Muliteers* having run away for Fear of the Baſſa of *Sidon*'s Servants, who preſs'd Mules every where for their Maſter's Service, we put ourſelves in a new Poſture of Travelling. We parted from *Tripoly*, and going cloſe by the Sea-ſide, we came in an Hour and half to *Callemone*, a Village juſt under *Bell-mount*, and from hence putting forward, we met with a high Promontory that lay in our Way, and forc'd us to turn off to the Left-Hand into a narrow Valley, where we took up our Quarters under ſome Olive-trees; which Promontory ſeems to be that which is call'd by *Strabo* the *Face of God*, and which he aſſigns for the End of Mount *Libanus*.

On the 16th, this Morning we croſs'd over the foremention'd Cape, which we did in an Hour, though it was very ſteep and rugged, and we came into a narrow Valley, which laid the Sea open again; and near the Entrance is a ſmall Fort that commands it, call'd *Temſeida*. And in half an Hour we came up with *Patrone*, which is thought to be *Botrus*, ſituate cloſe by the Sea, in which we found ſome Remains of a Church and Monaſtery. In three Hours more we came to *Gybile*, called by the *Greeks Byblus*, a Place once famous for the Birth and Temple of *Adonis*. It is compaſs'd with a dry Ditch and a Wall, with ſquare Towers at forty Yards Diſtance, and on its South-ſide it has an old Caſtle.

There is nothing elſe remarkable in it but many Heaps of Ruins, and the fine Pillars in the Gardens near the Town. It is probably the Country of the *Giblites*, mention'd *Joſh.* xiii. 5. whom King *Hiram* made uſe of in preparing Materials for *Solomon*'s Temple, as may be collected from 1 *Kings* v. 18. where the Word rendred *Stone-ſquarers* in the *Hebrew* is *Gib'im*, and in the Verſion of the Seventy *Byblii*, *i. e.* the Men of *Byblus*, the former uſing the *Hebrew*, the latter the *Greek* Name of the Place; which Difference may be obſerv'd likewiſe in *Ezek.* xxvii. 4. where our Tranſlation has the *Ancients of Gebel*, and the Seventy *the Elders of Byblus*. Leaving *Gybile*, we came to a River call'd by the *Turks Ibrahim Baſſa*, which is doubtleſs that ancient River ſo famous for the Idolatrous Rites perform'd here in Lamentation of *Adonis*, and we lodg'd on the Banks of it that Night.

9. The 17th, having had a very tempeſtuous Night of Wind and Rain, we had an Opportunity of diſcovering the Occaſion of that Opinion which *Lucian* relates, that this River, at certain Seaſons of the Year, eſpecially about the Feaſts of *Adonis*, is of a bloody Colour, as he ſays, from a Sympathy for the Death of *Adonis*, who was kill'd by a wild Boar in the Mountains out of which this Stream riſes; for we found the Water of a very red Colour, which doubtleſs was occaſion'd by a Sort of *Minium*, or red Earth, waſh'd into the River by the Violence of the Rain. In an Hour and a Quarter we paſſed over the Foot of Mount *Climar*, and entered into a large Bay call'd *Innia*, where we found an old Stone-Bridge, and at the Bottom the high Mountains of *Caſtravan*, chiefly inhabited by *Maronites*, and famous for producing an excellent Sort of Wine.

The *Maronite* Biſhop of *Aleppo* dwells here in a Convent, and there are many other ſmall Convents on the Top of theſe Mountains. Towards the further Side of the Bay we came to a ſquare Tower or Caſtle, at which we paid a fourth Caphar, which is receiv'd by the *Maronites*, who are more exacting Rogues than the *Turks* themſelves. In an Hour more we came to the River *Lycus*, call'd alſo ſometimes *Canis*, whoſe Name is deriv'd from an Idol in the Form of a Dog or Wolf, which was worſhip'd and gave Oracles. The Body of it is ſhewn to Strangers lying in the Sea, but the Head they ſay is to be ſeen at *Venice*. This River, which is certainly different from *Adonis*, (though ſome Moderns confound them) falls into the Sea from between two Mountains very high and rocky, where we found a good Bridge of four Arches, and near the Foot of it, a Piece of white Marble inlaid in the Side of a Rock, with an *Arab* Inſcription, that the Emir *Faccardine* was the Founder of it.

Having paſs'd the River we preſently aſcend the Rock hanging over it on that Side, where we met with a Path above two Yards broad, cut along its Side at a great Height above the Water, being the Work of the Emperor *Antoninus*, as appears by an Inſcription engraven on a Table, plain'd in the Side of the natural Rock. In paſſing this Way we ſaw ſtrange antick Figures of Men carved in the Rock, in *Mezzo relievo*, and in Bigneſs equal to the Life; and cloſe by each Figure there was a Table plain'd in the Side of the Rock, on which ſomething had been inſcrib'd, though the Characters are generally now defac'd, which may deſerve the further Scrutiny of ſome Traveller. The *Antonine* Way extends about a Quarter of an Hour's Travel; after which you come upon a ſmooth ſandy Shore, which brings you in an Hour and half to the River *Beroot*, which has over it a Stone-Bridge of ſix Arches; and on the other Side is a Plain near the Sea, which is ſaid to be the Stage on which St. *George* duell'd and kill'd the Dragon. In Memory of which, there is a ſmall Chapel built upon the Place, dedicated at firſt to that Chriſtian Hero, but now perverted to a Moſque. From hence in an Hour we arrived at *Beroot*, and quarter'd at a good Kane by the Sea-ſide.

10. On the 18th: This Day we ſpent at *Beroot*, anciently called *Berytus*, (from which the Idol *Baal-Berith* is ſuppos'd to have had its Name) which was honour'd with many Privileges, and the new Name of *Julia Felix* by *Auguſtus*. Its greateſt Happineſs at preſent conſiſts in its

Situation, being ſeated by the Sea-ſide in a fertile Soil, which abounds with freſh Springs flowing down from the Hills. The Emir *Faccardine* had his chief Reſidence here, in the Reign of Sultan *Morat*, the fourth Emir or Prince of the *Druſes*; who not contented to be penn'd up in the Mountains, enlarged his Dominions into the Plain, all along the Sea-Coaſt, as far as from this Place to *Acra*, but was driven back again to the Mountains by the Grand Signior. We went to his Palace, and found at the Entrance a Marble Fountain of greater Beauty than is uſually ſeen in *Turkey*.

The beſt Sight that the Palace affords, which is much runn'd, is the Orange-Garden, which contains a large quadrangular Plat of Ground, divided into ſixteen leſſer Squares, four in a Row, with Walks between them, which are ſhaded with Orange-trees of a fine Growth, on which the Fruit hung thicker than ever I ſaw Apples in *England*. Every one of theſe ſixteen Squares was bordered with Stone, and in the Stone-work were Troughs artificially contrived for conveying the Water all over the Garden, there being little Outlets cut at every Tree for the Stream, as it paſs'd by, to flow out and Water it. But the *Turks* have ſo little Senſe of ſuch refin'd Delights, that they uſe it now as a Fold for Sheep and Goats. In another Garden we ſaw ſeveral Pedeſtals for Statues, and at one Corner of it, a Tower about ſixty Foot high, whoſe Walls were twelve Foot thick, from whence we had a View of the whole City, and ſaw a large Chriſtian Church, which was ſaid to have been conſecrated to St. *John* the Evangeliſt, but is now the chief Moſque of the *Turks*.

There is another Church that, being a very mean Fabrick, remains in the Hands of the *Greeks*, which is adorn'd with many old Pictures; and among the reſt, I ſaw one with this Inſcription in *Greek*, *Coartus the firſt*, *Archbiſhop of* Berytus, and juſt by it the Figure of *Neſtorius*, who commonly makes one in the *Greek* Church of his Sect, though they do not now profeſs, nor, I believe, know, his Hereſy. But there was one very odd Figure of a Saint, at full Length, with a large Beard reaching down to his Feet, and the Curate told us, that this was St. *Nicephorus*, who wanting the Ornament of a Beard to ſet off his other Endowments, fell into a deep Melancholy; whereupon the Devil tempted him to comply with his Suggeſtions, by promiſing to give him a Beard; but this beardleſs Saint rejected the Temptation, and at the ſame Time taking the downy Tuft upon his Chin in his Hand, he found the Hair immediately ſtretch with the Pluck he gave it, and he never left pulling his Beard till he had drawn it down to his Feet. At the Eaſt-end of *Beroot* are to be ſeen ſeven or eight Pillars of Granite, and ſeveral Pieces of Marble, having *Greek* and *Latin* Inſcriptions, Fragments of Statues, and other poor Relicks of its ancient Grandeur. On the Sea-ſide is an old Caſtle, and ſome Remains of a Mole.

19th. Leaving *Beroot*, we came into a large Plain, and at the Entrance of it there is a Grove of Pine-trees of *Faccardine*'s Plantation, and at a Diſtance we ſaw a ſmall Village called *Suckfoat*, which belongs to the *Druſes*, who poſſeſs at this Day a long Tract of Mountains as far as from *Caſtravan* to *Carmel*. Their preſent Prince is *Achmet*, Grandſon to *Faccardine*, an old Man, and one who keeps up the Cuſtom of his Anceſtors, of turning Day into Night, from a traditional Perſuaſion among them, that Princes can never ſleep ſecurely but by Day, when Mens Actions and Deſigns are beſt obſerv'd by their Guards, and, if Need be, moſt eaſily prevented: but in the Night it concerns them to be always vigilant, leſt the Darkneſs ſhould give Traytors an Opportunity to aſſault them with Dagger or Piſtol.

Two Hours from *Faccardine*'s Grove brought us to the fifth Caphar, and another Hour to the River *Damer*, anciently called *Tanoras*. Here were Country Fellows who had ſtript themſelves naked to aſſiſt us in paſſing over; and to make their Help more neceſſary, they brought us to a Place where the Water was deepeſt, which Cheat we ſaw them impoſe upon other Travellers; but we found a Place of the Stream which was broader and ſhallower, where we paſſed without their Aſſiſtance, and juſt by we ſaw the Ruins of a Stone Bridge, which might have been ſtill entire, had not theſe Villains broke it down to make their Advantage of Paſſengers, either in conducting them over for good Pay, or elſe, if they have Opportunity, drowning them for their Spoils. On the other Side of the River the Mountains came cloſer to the Sea, leaving only a narrow rocky Way between.

From *Damer*, in two Hours Time, we came to another conſiderable River, not mentioned by any Geographer; but the *Maronite* Patriarch at *Canobine* told me it was called *Awle*, and had its Fountain near *Bareck* in Mount *Libanus*. At this River we were met by ſeveral *French* Merchants from *Sidon*, who have there the moſt conſiderable Factory they have in the *Levant*; and being arrived at *Sidon*, they conducted us to a large Kane cloſe by the Sea, where the Conſul and all the Nation are quartered together. Before this Kane is an old Mole running into the Sea, which was filled up with Rubbiſh by *Faccardine*, to prevent the *Turkiſh* Gallies from coming hither; ſo that all Ships that take in their Burthen here, are forc'd to ride at Anchor under a ſmall Ridge of Rocks about a Mile from the Shore.

Sidon is well enough ſtock'd with Inhabitants, but is very much ſhrunk from its ancient Extent, and more from its Splendor, as appears from many beautiful Pillars that lie in the Gardens without the Walls. On the South-ſide ſtands an old Caſtle, ſaid to be built by St. *Lewis* IX. of *France*; and not far from the Caſtle is an old Palace of *Faccardine*'s, which ſerves the Baſha for his Seraglio. Near to *Sidon* begin the Precincts of the *Holy Land*, particularly of that Part which was alloted to *Aſher*, the Borders of which Tribe extended from *Carmel* as far as *Great Zidon*, as appears from *Joſhua* xix. 26, 28. But the People on the Sea-coaſts were never actually maſter'd by the *Iſraelites*, being left to be Thorns in their Sides for a Reaſon given, *Judges* ii. 1, 2, 3, *&c.* He who is the *French* Conſul at *Sidon*, has alſo the Title of Conſul of *Jeruſalem*, and is obliged to viſit the holy City every *Eaſter*; with whom we deſired to join in this Year's Pilgrimage, but he ſet out from *Sidon* the Day before our Arrival there.

11. The 20th. We ſet out next Morning from *Sidon*, hoping to overtake the Conſul, and travelling in a fruitful Plain, in half an Hour we met with a large Pillar of Granite lying croſs the Highway, on which was a Fragment of an Inſcription; and ſome *Engliſh* Gentlemen, in 1699, found another Pillar with the like Inſcription, about Midway between *Jeruſalem* and *Sidon*, by which we may obſerve the Exactneſs of the *Romans* in meaſuring out their Roads, and marking down on every Pillar the Number of Miles, as 1, 2, 3, *&c.*

A little beyond this Pillar we paſs'd in Sight of *Korie*, a large Village on the Side of the Mountains, and in twelve Hours and half more came to *Sarphan*, ſuppoſed to be the ancient *Sarephath* or *Sarepta*, ſo famous for the Reſidence and Miracles of *Elijah*. From hence, in ſeven Hours, we arrived at *Caſimeer*, a large River running down to the Sea, which had once a good Stone Bridge, of which there remains Nothing now but the Supporters, between which are laid Beams and Boards to ſupply the Room of Arches. This River, by modern Geographers, is falſly thought to be the old *Eleutherus*, as has been ſhewn before; but it ſeems to be that River mentioned by *Strabo*, *p.* 521. falling into the Sea near *Tyre*, for within a Bow-ſhot of this River *Caſimeer*, is a Kane of the ſame Name, from which, keeping near the Sea-ſide, you arrive in an Hour at *Tyre*.

This City ſtanding in the Sea upon a Peninſula, promiſes ſomething magnificent at a Diſtance, but when you come to it, you find Nothing like the Glory for which of old it was ſo renown'd, as it is deſcribed, *Ezek.* 26, 27, 28. On the North-ſide it has an old *Turkiſh* Caſtle, beſides which there is Nothing here but a mere *Babel* of broken Walls, Pillars, Vaults, *&c.* there being not ſo much as one entire Houſe left. Its preſent Inhabitants are only a few poor Wretches that harbour in Vaults, and ſubſiſt upon Fiſhing, whereby God appears to have fulfilled his Word concerning *Tyre*, viz. *That it ſhould be as the Top of a Rock, a Place for Fiſhers to dry their Nets on*, Ezek. xxvi. 14.

In the Midſt of the Ruins there ſtands up one Pile higher than the reſt, which is the Eaſt-end of a great Church, probably of the Cathedral of *Tyre*, and may very well be the ſame that was erected by its Biſhop *Paulinus*, and honour'd with that famous Conſecration Sermon of *Euſebius*, recorded by himſelf in *Eccl. Hiſt. l.* 10. *c.* 4. And 'tis very obſervable that in all the ruin'd Churches which we ſaw, being perhaps no fewer than 100, though their other Parts were totally demoliſh'd, yet the Eaſt-end we always found ſtanding, and tolerably entire. How this came to paſs I cannot determine, but certainly a Thing ſo univerſally obſerv'd by us in our Journey, could not proceed from blind Chance.

But to return; there being an old Stair-caſe in the Ruin above-mention'd, I got to the Top of it, from whence I had a Proſpect of the Iſland-part of *Tyre*, the Iſthmus, and the adjacent Shore; and from that Height I could diſcern the Iſthmus to be a Soil of a different Nature from the other, it lying lower than either, and being cover'd all over with Sand, which the Sea caſts upon it. The Iſland of *Tyre*, in its natural State, ſeems to have been of a circular Figure, about Forty Acres in Compaſs, and the Foundations of the Wall that encompaſs'd it are ſtill to be ſeen. It makes with the Iſthmus two large Bays, one on its North-ſide, and the other on its South, which are in Part defended from the Ocean by a long Ridge, either of Walls or Rocks, reſembling a Mole, ſtretching out directly on both Sides from the Head of the Iſland. Coming out of theſe Ruins, we ſaw the Foundation of a very ſtrong Wall, running croſs the Neck of Land which ſerved as a Barrier to ſecure the City on this Side. And hence we paſt the ſandy Iſthmus, and came to the Place we thought the natural Shore, where we met with a fertile Plain, which extends to a vaſt Compaſs before *Tyre*, whence we arrived in three Quarters of an Hour at *Roſelayn*.

12. *March* 21ſt: *Roſelayn* is the Place where are the Ciſterns called *Solomon*'s, which according to the common Tradition are ſaid to have been made by that King, as part of his Recompence to King *Hiram*, for the Materials he ſent toward building the Temple: But though they are very ancient, yet they are of a later Date than this Tradition makes them, becauſe the Aquæduct which conveys the Water, is carried over that Neck of Land by which *Alexander* join'd the City to the Continent at his Siege of this Place, and ſo cannot be older than his Time. Of theſe Ciſterns there are three entire at this Day, one about a Furlong and half diſtant from the Sea, the other two, a little further up. The former is of an Octagonal Figure, being twenty two Yards in Diameter, and contains a vaſt Body of excellent Water, which is ſo well ſupplied from its Fountain, that though there iſſues from it a Stream like a Brook, driving four Mills between this Place and the Sea, yet it is always Brim-full. On the Eaſt-ſide was the ancient Outlet of Water by an Aquæduct, having a Channel one Yard wide, which is now ſtopt up by the *Turks*, who have broke an Outlet on the other Side, which makes a Stream for grinding Corn.

The Aquæduct, now dry, is carried Eaſtward 120 Paces, and then approaches the two other Ciſterns, of which one is twelve, the other twenty Yards ſquare, and they had each a Channel, by which they rendred their Waters into the Aquæduct, and ſo the united Streams of all the three Ciſterns were carried together to *Tyre*. There ſtill remains ſome Fragments of the Aquæduct, and in its Sides, and under its Arches, we obſerv'd ſome Heaps of Matter, produced by the Leakage of the Water which petrified as it diſtill'd from above, and by continual Acceſſion of new Matter were grown to a great Bulk. They were compos'd of innumerable Tubes of Stone, of different Sizes, cleaving to one another like Iſicles, each Tube having a Cavity in its Center, from which its Parts were projected in the Form of Rays to the Circumference, like the Stones call'd Thunder ſtones. The Fountain of theſe Waters is as unknown as the Contriver of them, though 'tis certain, from their Riſing ſo high, they come from ſome Part of the Mountains which are about a League diſtant.

From this pleaſant Place we came in an Hour and half to the white Promontory, over which you paſs by a Way about two Yards broad cut along its Side, from which the Proſpect is dreadful, by Reaſon of the Steepneſs of the Mountains, and the Raging of the Sea at bottom. This Way, and the Caſtle *Scandalium*, which is not far off, are ſaid to be built by *Alexander*; from whence we came firſt to *Nachera*, and then to the Plain of *Acra*, over a deep Mountain, ſuppos'd to be part of Mount *Sharon*. This Plain extends from Mount *Sharon* as far as *Carmel*, and is ſix Hours long, and two Hours broad, between the Sea and the Mountains, and was a delicious Plain, but is now, for Want of Culture, over-run with rank Weeds, which were, when we paſs'd it, as high as our Horſes Backs.

Having travell'd about an Hour in the Plain of *Acra*, we paſs'd by an old Town call'd *Zib*, which probably is the Old *Achzib*, mention'd *Joſ.* xix. 29. and *Jud.* i. 31. and ſeems to be one of the Places out of which the *Aſherites* could not expel the *Canaanites*. Two Hours further we came to the Fountain of the bleſſed Virgin, as it is call'd by the *French* Merchants at *Acra*, at which Place we arriv'd in an Hour more.

Acra, anciently call'd *Accho*, is another of the Places from whence the *Iſraelites* could not drive the Natives; but being in After-times enlarg'd by *Ptolemy* I. It was by him called *Ptolemais*. And ſince it was poſſeſſed by the *Turks*, like other Cities, having loſt its *Greek* Name, it is call'd by them *Acca*, or *Acra*. This City has often chang'd Maſters, and at laſt, by a long Siege, was taken and ruin'd by the *Turks*, in ſuch a Manner as if they had taken Revenge upon it for the Blood it coſt them. On the North and Eaſt it is compaſs'd with a ſpacious and fertile Plain, on the Weſt it is waſh'd by the *Mediterranean* Sea, and on the South by a large Bay, extending from the City as far as Mount *Carmel*.

But notwithſtanding theſe Advantages, beſides a large Kane in which are the *French* Factors, a Moſque, and a few poor Cottages, there is nothing now to be ſeen but vaſt Ruins, which ſhow its former Strength, for it appears to have been compaſs'd about with a double Wall defended with Towers, and without the Walls are Ditches, Ramparts, and a kind of Baſtions. In the Fields we find ſeveral large Balls of Stone, thirteen or fourteen Inches in Diameter, which were part of the Ammunition uſed in battering the City, Guns being then unknown. Within the Walls are the Ruins of the Cathedral dedicated to St. *Andrew*, of the Church of St. *John*, the titular Saint of this City, and of the Convent of the Knights-Hoſpitallers, and near to it the Palace of the Grand Maſter of that Order; and laſtly, ſome Remains of a large Church, formerly belonging to a Nunnery of which they tell this Story.

The *Turks* having preſs'd this City with a long Siege, at laſt entred it by Storm, *May* 19, 1291. In which Extremity, the Abbeſs fearing that herſelf and her Nuns ſhould be ſubjected to ſuch Beſtialities as is uſual in ſuch Caſes, exhorted them all to cut and mangle their Faces, as the only Way to preſerve their Virgin Purity; and to encourage them, ſhe made herſelf the firſt Example of her own Counſel, which the Nuns inſtantly follow'd, cutting off their Noſes, and disfiguring their Faces with ſuch terrible Gaſhes, as might excite Horror rather than luſtful Deſires. The Conſequence of this was, that the Soldiers breaking into the Nunnery, and ſeeing inſtead of beautiful Ladies ſuch ſad Spectacles, put them all to the Sword in Revenge for diſappointing their Luſts.

There are many other Ruins here of Churches, Palaces, Monaſteries, Forts, *&c.* for more than half a Mile in Length. But that which pleaſed us moſt was, to find the *French* Conſul *l'Empereur* here, who having ſtaid for us two Days, reſolved to ſet forward next Morning. But we were doubtful which Way to take, becauſe of the Factions of the *Arabs*, which are kept up by the *Turks*, to prevent their uniting under one

Prince, whereby they might be ſtrong enough to ſhake off the *Turkiſh* Yoke; for in theſe Diſcords Strangers are ſure to ſuffer, being a Prey to each Party.

13. The 22d, we ſet out early from *Acra*, having ſome *Turkiſh* Soldiers for our Convoy: And firſt we paſs'd by a ſmall River, which we took to be *Belus*, famous for its Sand, of which Glaſs is made. Here we declin'd from the Sea-coaſt to the Eaſt, and croſſing over the Plain, we arrived at its further Side, where it is bounded by Mount *Carmel*; and here we found a narrow Valley which led us out of the Plain of *Acra* into that of *Eſdraelon*. About this Place is the End of the Tribe of *Aſher*, and the Beginning of that of *Zebulon*, as their Borders are deſcribed, *Joſh*. xix. 26.

Paſſing through the ſaid narrow Valley, we arrived in two Hours at the River *Kiſhon*, which cuts its Way down the Middle of the Plain of *Eſdraelon*, and then continuing his Courſe by the Side of Mount *Carmel*, falls into the Sea at a Place called *Caypha*. We ſaw it when it was low, but we diſcern'd many Torrents falling into it from the Mountains, which muſt make it ſwell, as it did at the Deſtruction of *Siſera*'s Hoſt, *Judg*. v. 21. In three Hours and half from *Kiſhon*, we came to an old Village and good Kane called *Legune*, near to which we lodged that Night.

From this Place we viewed the Plain of *Eſdraelon*, which is very large and fertile, and about ſix Hours Diſtance ſtood within View *Nazareth*, and the two Mounts *Tabor* and *Hermon*; and here we felt the Dew of *Hermon*, as the *Pſalmiſt* calls it, our Tents being as wet with it as if it had rained all Night. About a Mile's Diſtance from us was encamped *Chibly*, Emir of the *Arabs*, with his People and Cattle; and below, upon the Brook *Kiſhon*, lay another Clan of the *Arabs*, being the adverſe Party to *Chibly*; and it was little to our Satisfaction, that we were ſeated in the Midſt between two ſuch bad Neighbours.

The 23d. Leaving this Lodging, we went to the Emir's Tents, to whom we paid two Caphars, one of *Lagune*, and the other of *Jeneen*, and whatever elſe he was pleaſed to demand. He very civilly eas'd us of ſome of our Coats, which begun now, by reaſon of the Heat, to be troubleſome. Getting quit of *Chibly*, we return'd out of the Plain of *Eſdraelon*, and entred into the Precincts of the half Tribe of *Manaſſes*. From hence our Road lay, for four Hours, through narrow Valleys, pleaſantly wooded on both Sides, and we lodg'd at *Caphar Arab*.

On the 24th, having paid our Caphar, we ſet out very early the next Morning; and leaving firſt *Arab*, and then *Rama*, on the Right-hand, we came to *Selee* and *Sebaſta*, where we leave the Borders of the Half Tribe of *Manaſſes*, and enter into thoſe of the Tribe of *Ephraim*. *Sebaſta* is the ancient *Samaria*, the Imperial City of the ten Tribes after their Revolt from the Houſe of *David*, and being raiſed by *Herod the Great* to a magnificent State, was by him, in Honour of *Auguſtus*, call'd *Sebaſta*.

It is ſituate on a long Mount of an oval Figure, and is now wholly converted into Gardens, having no other Remains of ſuch a Place but on the North-ſide a large ſquare Piazza, encompaſs'd with Pillars, and on the Eaſt ſome Ruins of a great Church, ſaid to be built by *Helena*, over the Place where *John the Baptiſt* was impriſon'd and beheaded. In the Body of the Church you go down a Stair-caſe into the Dungeon where that Blood was ſhed. The *Turks* hold that Priſon in great Veneration, and over it have erected a ſmall Moſque; but for a little Piece of Money they ſuffer any one to go into it.

Leaving *Sebaſta* we paſs'd by *Sherack* and *Barſeba*, and then entring into a Valley, we arrived in an Hour at *Naploſa*, which is the ancient *Sychem* or *Sychar*, as it is call'd in the *New Teſtament*. It ſtands in a narrow Valley between Mount *Gerizim* on the South, and *Ebal* on the North. From Mount *Gerizim* God commanded the Bleſſings to be pronounced upon the Children of *Iſrael*, and from Mount *Ebal* the Curſes, *Deut*. xi. 29. Upon the former the *Samaritans*, whoſe chief Reſidence is at *Sychem*, have a ſmall Temple, to which they are ſtill wont to repair for Religious Worſhip: But that their Religion conſiſts in worſhipping a Calf, as the *Jews* ſay, ſeems to have more of Spight than Truth in it.

Upon one of theſe Mountains alſo it was, that God commanded the Children of *Iſrael* to ſet up great Stones, plaiſter'd over and inſcribed with the Body of the Law, and to erect an Altar, and offer Sacrifices, Feaſting and Rejoicing before the Lord, *Deut*. xxvii. 4. But whether *Gerizim*, or *Ebal*, was the Place appointed for this Solemnity, there is ſome Cauſe to doubt; for the *Hebrew Pentateuch*, and ours from it, aſſign Mount *Ebal* for this Uſe; but the *Samaritan* aſſerts it was *Gerizim*. Our Company halting a little at *Naploſa*, I had an Opportunity to viſit the Chief Prieſt of the *Samaritans*, and to diſcourſe with him about this and other Difficulties.

And firſt, as to the Difference between the *Hebrew* and *Samarian* Copy, *Deut*. xxvii. 4. the Prieſt pretended, that the *Jews* had maliciouſly alter'd their Text out of Odium to the *Samaritans*, putting for *Gerizim*, *Ebal*, becauſe the *Samaritans* worſhipped in the former, which, for that Reaſon, they would not have to be the true Place appointed by God for his Worſhip. To confirm this, he alledged, that *Ebal* was the Mountain of Curſing, *Deut*. xi. 29. and an unpleaſant Place; whereas *Gerizim* was fertile and pleaſant, and the Mountain of Bleſſing; and therefore it was more probable, that this was the Mountain appointed for Religious Worſhip, and not *Ebal*. But he could not ſay that any of thoſe great Stones, which God directed *Joſhua* to ſet up, were now to be ſeen in *Gerizim*, which would have determin'd the Queſtion clearly on this Side.

I enquired alſo, what thoſe *Selavæ* were wherewith the Children of *Iſrael* were ſo long fed in the Wilderneſs, *Numb*. xi. He anſwer'd, They were a Sort of Fowls, which by his Deſcription appear'd to be Quails. Then I aſk'd him, what Sort of Plant or Fruit the *Dudaim* or Mandrakes were, which *Leah* gave to *Rachael* for the Purchaſe of her Huſband's Embraces? He anſwer'd, They were Plants of a large Leaf, bearing a Fruit like an Apple, ripe in Harveſt, but of an ill Savour and unwholſome, and that the Virtue of them was to help Conception, being laid under the genial Bed; to which Purpoſe they are often made Uſe of by Women at this Day.

Of theſe Plants I ſaw ſeveral in the Way to *Jeruſalem*; and if they were as common in *Meſopotamia* as here, we muſt conclude, that either theſe were not the true Mandrakes, or elſe it is hard to give a Reaſon why *Rachael* ſhould purchaſe ſuch common Things at ſo beloved a Price. *Naploſa* is at preſent in a very mean Condition to what it has been anciently; it conſiſts of two Streets lying parallel under Mount *Gerizim*, but is full of People. Having paid our Caphar here, we proceeded in the ſame narrow Valley between *Gerizim* and *Ebal*; and juſt without the City we ſaw a ſmall Moſque, ſaid to be built over the Sepulchre purchaſed by *Jacob* of *Emmor*, Father of *Shechem*, *Gen*. xxxiii. 19. It goes by the Name of *Joſeph*'s Sepulchre, his Bones being inter'd here, *Joſh*. xxiv. 32. About a Quarter of an Hour from *Naploſa* we came to *Jacob's Well*, famous not only for its Author, but for the Conſcience it had there with the Woman of *Samaria*, *Joh*. iv. Over the Well there ſtood formerly a large Church erected by *Helena*, of which remains nothing now but ſome Foundations. The Well is cover'd at preſent with a Stone Vault, into which you are let down through a very ſtraight Hole; and then removing a broad Stone, you diſcover the Mouth of the Well. It is dug in a firm Rock, and is about three Yards in Diameter, and thirty-five deep, five of which we found full of Water.

At this Well the narrow Valley of *Sychem* ends, opening into a wide Field, which is probably Part of that Parcel of Ground given by *Jacob* to his Son *Joſeph*, *Joh*. iv. 5. From *Jacob*'s Well we went through a large Valley, and having paſs'd by two Villages on the Right-hand, called *Howar* and *Sawee*, we came in four Hours to *Kane Leban*, near a Village of the ſame Name, one of which is ſuppoſed to have been the *Lebonah*, mentioned *Jud.* xi. 19. and here we lodg'd that Night.

14. On the 25th, from *Kane Leban*, our Road lay through a rocky Country; but having paſs'd by *Cinga*, we entred into a narrow Valley between two rocky Hills, at the further End of which we found the Ruins of a Village and a Monaſtery. In this Place *Jacob's Bethel* is ſuppoſed to have been, where he had his ſtrong Couch made eaſy by the Viſion of God, and of the Angels aſcending and deſcending on a Ladder between Earth and Heaven, *Gen.* xxviii. near which Place are the Limits that part between *Ephraim* and *Benjamin*, *Joſh.* xviii. 13. From hence we paſs'd through large Olive yards, and having left *Geeb* and *Selwid* on the Right-hand, we arrived at *Beer*; which is the Place to which *Jotham* fled from the Revenge of *Abimelech*, *Jud.* ix. 21. and is ſuppoſed to be the ſame with *Michmas*, 1 *Sam.* xiv.

Beer is ſeated on the Side of a Hill, which at the Bottom has a Fountain of the ſame Name, and at its upper Side, are the Remains of an old Church built by *Helena*, in Memory of the bleſſed Virgin, who being in Queſt of the Child *Jeſus*, *Luke* ii. 24. is ſaid to have ſate down here penſive and weary, becauſe ſhe could not find him; but after her Return to *Jeruſalem*, ſhe found him ſitting in the Temple with the Doctors, both hearing them, and aſking them Queſtions. Thro' the whole of this Day's Journey we had nothing in View in moſt Places but Rocks, Mountains, and Precipices, which aſtoniſhes Pilgrims, as being contrary to thoſe high Ideas they had form'd of the Pleaſantneſs and Plenty of this Country, and almoſt ſtartles their Faith, as thinking it hardly poſſible for a Land like this to feed ſo prodigious a Number as are ſaid to have been poll'd at one Time, being no leſs than 1,300,000 fighting Men, beſides Women and Children.

But to remove theſe Scruples, any one may obſerve that theſe Rocks and Hills muſt have been anciently covered with Earth and cultivated, and ſo they afforded a larger Space of Ground than if the Country were level, which they huſbanded by gathering up the Stones, and placing them along the Sides of the Hill in Form of a Wall, which kept in the Mould, and form'd many Beds of excellent Soil, from the Bottom to the Top of the Mountains; of which Form of Culture we ſee plain Footſteps in all the Mountains of *Paleſtine*. And there is Nothing upon Earth more fruitful, even at this Day, than the plain Country and Valleys, either for the Production of Corn or of Paſturage for Cattle.

The Hills, tho' improper for any Cattle but Goats, yet being diſpoſed into the Beds before-mention'd, ſerv'd very well to bear Corn, Melons, Gourds, Cucumbers, and ſuch-like Garden-ſtuff, which are the chief Food of theſe Countries for ſeveral Months of the Year. The moſt rocky Parts might ſerve for Vines and Olive-trees, which delight in ſuch dry and flinty Places; and the great Plain joining to the Dead Sea, which by reaſon of its Saltneſs could not ſerve for Corn, Vines, or Olives, was yet very uſeful for the Nouriſhment of Bees, and making of Honey, as *Joſephus* teſtifies, *Bell. Jud. l.* 5. *c.* 4. and I found by Experience, when I was there, finding in many Places a ſtrong Smell of Honey and Wax. Thus the Country might very well maintain the vaſt Numbers of its Inhabitants, being every where productive of Milk, Corn, Wine, Oil, or Honey, which are the principal Food of theſe Eaſtern Nations.

Leaving *Beer*, in two Hours and a Quarter we came to the Top of a Hill, from whence we had the firſt Proſpect of *Jeruſalem*; *Rama*, anciently called *Gibeah* of *Saul*, being within View on the Right-hand, and the Plain of *Jericho*, and the Mountains of *Gilead* on the Left. In an Hour more we came to the Walls of *Jeruſalem*, but durſt not enter without Leave of the Governor; which being obtain'd, we entred at the *Bethlehem* Gate, mounted and arm'd, becauſe we were in Company with the *French* Conſul, for otherwiſe all *Franks* that come not in with ſome publick Miniſter, are to diſmount at the Gate, deliver their Arms, and enter on Foot. We took our Lodgings at the *French* Conſul's, and our Board at the *Latin* Convent, while we ſtay'd at *Jeruſalem*.

15. The 26th, being *Good-Friday* in the *Latin* Stile, we were obliged to go with the Conſul into the Church of the Sepulchre, to keep the Feaſt with him, though it was a Week before our own *Eaſter*. We found the Church Doors guarded by *Janizaries*, who ſuffer none to go in until they have paid their Caphar, which for *Franks* is commonly fourteen Dollars *per* Head, unleſs they be Eccleſiaſticks, and then it is but half ſo much. This being once paid, you may go in and out *gratis* as oft as you pleaſe during the whole Feaſt at the ordinary Times when the Door is open. All the Pilgrims being admitted, the Church Doors were lock'd, and opened no more till *Eaſter-day*; and being confined for three Days, we viſited all the holy Places at Leiſure; therefore I ſhall relate what paſs'd during the Feſtival, and ſay of the Church, what is neceſſary to make my Account intelligible.

The Church of the Holy Sepulchre is founded on Mount *Calvary*, a ſmall Hill upon the greater Mount of *Moriah*; it was anciently appropriated to the Execution of Malefactors, and therefore ſhut out of the City as a polluted Place; but ſince it was made the Altar, on which the precious Sacrifice for the Sins of the World was offer'd, it ſtands in the Midſt of *Jeruſalem*, a great Part of the Hill of *Sion* being ſhut out of the Walls to make Room for it.

Though a great Part of this Hill was cut away to make it a fit Foundation for a Church, yet Care was taken that none of thoſe Parts concern'd in our Lord's Paſſion, ſhould be alter'd or diminiſh'd; and ſo that very Part of *Calvary* where Chriſt was faſtened to the Croſs, remains entire, being about ten or twelve Yards ſquare, and ſtanding ſo high above the Floor of the Church, that you have twenty one Steps to go up to its Top; and the holy Sepulchre, which at firſt was hewn into a Rock under Ground, is now a Grotto above Ground, the Rock being cut away from it all round. The Church is leſs than an hundred Paces long, and not more than ſixty wide, yet it contains twelve or thirteen Sanctuaries, conſecrated by ſome particular Actions relating to the Death or Reſurrection of Chriſt.

As, 1. The Place where he was derided by the Soldiers. 2. Where the Soldiers divided his Garments. 3. Where he was ſhut up, while all was made ready for his Crucifixion. 4. Where he was nail'd to the Croſs. 5. Where the Croſs was erected. 6. Where the Soldiers ſtood that pierced his Side. 7. Where his Body was anointed in order to his Burial. 8. Where his Body was laid in the Sepulchre. 9. Where the Angels appeared to the Women after his Reſurrection. 10. Where Chriſt himſelf appeared to *Mary Magdalene*, &c. All which Places, and many others of the ſame Nature, are contain'd within this Church, and adorn'd with ſo many ſeveral Altars.

In Galleries about the Church, and little Buildings annex'd to it, every Chriſtian Nation had anciently proper Quarters for a Society of Monks, but now, all except four, have forſaken theſe Quarters, becauſe of the ſevere Rents impoſed upon them by their *Turkiſh* Landlords; and of theſe four, the *Cophties* have only one to repreſent their Nation; and the *Armenians* are ſo much in Debt, that they are likely to deſert the Place quickly, and then the *Greeks* and *Latins* will only remain.

Beſides their ſeveral Apartments, each Fraternity have their peculiar Altars and Sanctuary for their own Uſe. But the great Prize now diſputed between the *Greeks* and *Latins*, is the Command of the Holy Sepulchre, in which Contention they have proceeded to Blows and Wounds, even at the Door of the Sepulchre; and as an Evidence of this Fury, the Father Guardian ſhew'd me a great Scar in his Arm, being the Mark of a Wound given by a *Greek* Prieſt; but at the Requeſt of the *French* King, this holy Sepulchre was appropriated to the *Latins* in 1690, they alone having the Privilege to ſay Maſs in it, though all other Chriſtians may go into it for the Celebration of their private Devotions.

The *Latins*, of whom there are always ten or twelve at Church, with a Preſident over them, make every Day a ſolemn Proceſſion, with Tapers and Crucifixes, to the ſeveral Sanctuaries, and ſing at every one a Hymn, relating to the Subject of the Place. Their Ceremony begins on *Good-Friday* Night, which is called by them the *Nox Tenebroſa*; and as ſoon as it grew duſk, all the Friars and Pilgrims met in the Chapel of the Apparition, (which is on the North-ſide of the Holy Grave) to go in Proceſſion round the Church.

After a Sermon, at which all the Candles were put out to make a lively Image of the dark Night, every one had a lighted Taper put into his Hand; and amongſt the other Crucifixes, there was one very large, which bore an Image of our Lord, as big as the Life, faſtned to it with great Nails, crown'd with Thorns, beſmear'd with Blood, and lively repreſented our Lord's Body as it hung upon the Croſs. The Figure was carried in the Head of the Proceſſion, after which all the Company followed to all the ſeveral Sanctuaries of the Church, ſinging at every one a Hymn.

The firſt Place was that of the Pillar of Flagellation, kept in a little Cell juſt by the Chapel of Apparition; there they ſung their Hymn, and a Friar preach'd in *Spaniſh* about the ſcourging of our Lord. From hence they proceeded to the Priſon of Chriſt, where they had alſo a Hymn and a Sermon. From the Priſon they went to the Altar of the Diviſion of Chriſt's Garments, where they only ſung a Hymn; and from thence to the Chapel of Deriſion, where they had a Hymn and a fourth Sermon. From this Place they went up to *Cavalry*, leaving their Shoes at the Foot of the Stairs. Here are two Altars, one where he was nail'd to the Croſs, at which they laid down the great Crucifix, and acted the Nailing of Chriſt to the Croſs. The other where his Croſs was erected, bearing the Image of our Lord's Body. At this Altar there is a Hole in the natural Rock, in which the Foot of our Lord's Croſs ſtood; and here they ſet up their Croſs, with the bloody crucified Image upon it, and then ſung a Hymn, and preach'd a very affecting Paſſion Sermon.

About a Yard and half from the Hole where the Foot of the Croſs was fix'd, is ſeen that Cleft in the Rock which was made by the Earthquake at Chriſt's Death, when *the Rocks were rent*, *Mat.* xxvii. 51. It appears to be a natural Breach, for the Sides of it anſwer each other like two Tallies, and it runs in ſuch intricate Windings as could not be counterfeited by Art. After the Ceremony of the Paſſion is over, two Friars perſonating *Joſeph* of *Arimathea* and *Nicodemus*, come with a grave and ſolemn Air, and take down the feigned Body from the Croſs. The Limbs of the Image were ſoft and flexible, and it was ſurpriſing to ſee the two Mourners bend down the Arms which were before extended, and lay them upon the Trunk, as is uſually done in Corpſes. The Body being taken down was receiv'd in a large Winding-ſheet, and carried from *Mount Calvary* to the Stone of Unction, *i. e.* the Place where our Lord's Body was anointed, *John* xix. 39. And here while they caſt over it ſweet Powders and Spices, they ſung a proper Hymn, and a Friar preach'd a Funeral Sermon in *Arabick*. After this they carried the feigned Corpſe and laid it in the Sepulchre, ſhutting up the Door till *Eaſter* Morning.

On the 27th: This Morning the Pilgrims had Leiſure to mark their Arms with the uſual Enſigns of *Jeruſalem*; and in the Afternoon, the Congregation was aſſembled in the *Area* before the Holy Grave, where the Friars ſung over the Lamentation of *Jeremy*, which with the uſual Proceſſion to the holy Places was all the Buſineſs of this Day.

16. On the 28th, being *Eaſter* Morning, the Sepulchre was again ſet open very early, and Maſs was celebrated juſt before it, being the higheſt Place in this Church, where the Father Guardian in his Robes gave the Hoſt to all that were diſpos'd to receive it, not refuſing Children of ſeven or eight Years old: Which Office being ended, we went out of the Sepulchre, return'd to the Convent, and din'd with the Friars. After Dinner we went to viſit ſome of the remarkable Places without the Walls; we began with thoſe on the North-ſide. And firſt, we were conducted to a large Grot, a little without *Damaſcus*-gate, which is ſaid to have been the Reſidence of *Jeremiah*: And here they ſhew'd us the Prophet's Bed, being a Shelve on the Rock about eight Foot from the Ground, and near it is the Place where they ſay he wrote his Lamentations. This Place is now a College of *Derviſes*, and is much honour'd by *Turks* and *Jews*.

The next Place we came to, was thoſe famous Grots called the *Sepulchres of Kings*, for what Reaſon I know not, unleſs they were the Sepulchres of the Sons of *David*, mentioned *Chron.* xxxii. 33. but it appears by the Labour and Expence to have been the Work of Kings. At the Eaſt-end you enter through a Rock into an open Court, about forty Paces ſquare, cut down into the Rock. On the South-ſide is a Portico nine Paces long, and four broad, cut out of the natural Rock, and at the End of it you deſcend into the Sepulchres, within which is a fair Room about ſeven or eight Yards ſquare, cut out of the natural Rock ſo exactly ſquare, that Nothing could be built more regular; and ſo firm, that it may be called a Chamber hewn out of one Piece of Marble.

From this Room you paſs into ſix more, one within another, all of the ſame Fabrick with the firſt. In every one of theſe Rooms, beſides the firſt, were Coffins of Stone placed in Niches on the Sides of the Chamber, and in each Room there was a ſmall Channel cut in the Floor, to drain the Drops that conſtantly fall into it. But the moſt ſurprizing Thing that belongs to theſe Rooms was their Doors, of which there is only one remains hanging to puzzle the Beholders. It conſiſted of a Plank of Stone about ſix Inches thick, of the Size of an ordinary Door; it was carved ſo as to reſemble a Piece of Wainſcot, but the Stone was viſibly of the ſame Kind with the whole Rock, and turned upon two Hinges like Axels, which were of the ſame Stone with the Door, and contained in two Holes of the Rock, one at the Top, the other at the Bottom.

It ſeem'd to be a Riddle to Pilgrims, whether theſe Doors were here cut out of the Rock, or brought hither; for reſolving of which, I obſerved that the Door left hanging, did not touch its Lintel by at leaſt two Inches, and ſo might eaſily be lifted up and unhinged, which intimates how this Work was done. From theſe Sepulchres we return'd towards the City, and juſt by *Herod*'s Gate were ſhown a Grotto full of Mire, which paſſes for *Jeremiah*'s Dungeon, out of which he was diſmiſſed by *Ebed Melech*, Jer. xxxviii.

17. The 29th. This Day, being *Eaſter Monday*, the Moſolem, or Governor of the City, ſet out with ſome Bands of Soldiers to convey the Pilgrims to *Jordan*, and to ſecure them from the Inſolence of the *Arabs* in thoſe Parts. The Fee to the Moſolem, upon this Occaſion, is twelve Dollars for each *Frank* Pilgrim, and ſix for Eccleſiaſticks, which every one muſt pay, whether they go the Journey or ſtay in the City. We went out at St. *Stephen*'s Gate, being in all, of every Nation and Sex, about 2000 Pilgrims; and having croſs'd the Valley of *Jehoſaphat*, and Part of Mount *Olivet*, we came in half an Hour to *Bethany*. At the Entrance into it there is an old Ruin called *Lazarus*'s *Caſtle*, ſuppoſed to be his Manſion-houſe, and not far from it is the Sepulchre out of which he was raiſed by Chriſt, which is held in great Veneration by the *Turks*, who uſe it for an Oratory, and demand of all Chriſtians a Caphar for their Admiſſion into it.

A little further you paſs by what they call *Mary Magdalen*'s Habitation, and then deſcending a Hill, you come to the Fountain of the Apoſtles, where they were wont to refreſh themſelves in their Travels between *Jeruſalem* and *Jericho*. After ſome Hours Travel in a barren Country, you come to the mountainous Deſart into which our Saviour was led by the Spirit to be tempted of the Devil; and from the Top of theſe Hills we had a Proſpect of the Mountains of *Arabia*, the *Dead Sea*, and the Plain of *Jericho*, into which we deſcended, and turning up on the Left-hand, we came to the Foot of the *Quarantania*, which they ſay is the Mountain into which the Devil took our Saviour, when he tempted him with that viſionary Scene of all the Kingdoms in the World, and the Glories of them.

Turning down hence into the Plain, we came to the Fountain of *Eliſha*, ſo called, becauſe by him it was miraculouſly purg'd of its Brackiſhneſs, at the Requeſt of the Men of *Jericho*, 2 *Kings* ii. 19. Its Waters now being receiv'd in a Baſon, divide themſelves into ſeveral ſmall Streams, which refreſh the whole Field that lies between this and *Jericho*. A little from hence is *Jericho*, at preſent only a poor naſty Village of the *Arabs*; and here we ſaw the Place where *Zaccheus*'s Houſe is ſaid to have ſtood, which is an old ſquare Stone Building on the South ſide of *Jericho*.

30th. We ſet out early for *Jordan*, and arrived there in two Hours. We found the Plain very barren, producing Nothing but Marine Plants; and in many Places of the Road, where Puddles of Water had ſtood, we obſerved a Whiteneſs on the Surface of the Ground, which we found to be a Cruſt of Salt raiſed by the Water out of the Earth. About a Furlong from the River *Jordan*, was an old Church and Convent dedicated to St. *John*, in Memory of his baptizing our Saviour. We were there in *March*, but could diſcern no Sign of its overflowing, though it was the proper Time for theſe Inundations.

One Bank of the River is ſo beſet with Buſhes and Trees, that ſeveral Sorts of Wild Beaſts are ſaid to harbour in them; whoſe being waſh'd out of their Covert by the Overflowings of the River, gave Occaſion to that Alluſion, *Jer.* xlix. 19. *He ſhall come up like a Lion, from the ſwelling of* Jordan. When we came to the River, ſome ſtript and bath'd themſelves in it, others cut down Boughs from the Trees, and every one was ſome Way employ'd to take a Memorial of this famous Stream. Its Breadth was about twenty Yards over, and in Depth it far exceeded my Height. By the Moſolem's Leave we went towards the Dead Sea with a Guard to attend us. The Dead Sea is encloſed on the Eaſt and Weſt with very high Mountains; on the North it is bounded with the Plain of *Jericho*, on which Side alſo it receives the Waters of *Jordan*. On the South it is open, and extends beyond the Reach of the Eye. It is ſaid to be twenty four Leagues long, and ſix or ſeven broad. On the Shore of the Lake we found a black Sort of Pebbles, which being held in the Flame of a Candle, ſoon burns, and yields a Smoke of an intolerable Stench; but by burning it loſes only of its Weight, and not of its Bulk. It is a common Tradition, that Birds attempting to fly over this Sea, drop down dead into it; and that no Fiſh, nor other Sort of Animal, can live in theſe Waters. The former Report I ſaw actually confuted, by ſeveral Birds flying over this Sea without any viſible Harm. The latter I have ſome Reaſon to ſuſpect as falſe, having obſerved on the Shore two or three Shells of Fiſh like Oyſter-ſhells. As for the Bitumen, for which the Sea is famous, there was none at the Place where we were, but it is gathered near the Mountains on both Sides in great Plenty. It is ſo like Pitch, that it cannot be eaſily diſtinguiſhed from it, but by its ſulphureous Smell and Taſte.

The Water of the Lake was clear, and not only ſalt to the higheſt Degree, but extreme bitter. To try its Strength I went into it, and found it bore up my Body Swimming with an uncommon Force. Though I diligently ſearched, I could not find any Remains of thoſe Cities here ſituated, which were made ſo dreadful an Example of Divine Vengeance; neither could I diſcern any Smoke aſcending above the Water, nor any Ruins. But the Father-guardian, and Procurator of *Jeruſalem*, both aſſured me, that they had ſeen one of theſe Ruins, and the Water being very ſhallow, they went to it, and found there ſeveral Pillars, and other Fragments of Buildings. On the Weſt-ſide of this Sea is a ſmall Promontory, near which, as our Guides told us, is the Monument of *Lot*'s Wife metamorphos'd.

As to the Apples of *Sodom*, I never ſaw nor heard of any ſuch hereabouts, nor is there any Tree near the Lake from which one might expect ſuch Fruit. In our Return, about an Hour's Diſtance from the Sea, we ſaw a ruin'd *Greek* Convent, and found a good Part of the Church remaining, with the Figures of ſeveral Saints, and a *Greek* Inſcription over the Altar. Hereabouts, and in many other Places of the Plain, I perceived a ſtrong Scent of Honey and Wax, the Sun being hot, and the Bees very induſtrious about the Bloſſoms of that Salt Weed the Plain produces. Among the Products of this Place, I ſaw a notable Fruit, called by the *Arabs*, *Zaccbone*; it grows on a thorney Buſh with ſmall Leaves, and both in Shape and Colour reſembles an unripe Wall-nut. The Kernels of this Fruit the *Arabs* bray in a Mortar, and then putting the Pulp into ſcalding Water, they ſkim off the Oil which riſes to the Top; which Oil they uſe inwardly for Bruiſes, and outwardly for green Wounds; and I have found it, upon ſome Trials, a very healing Medicine.

18. On the 31ſt: This Morning we went in Six Hours near the Walls of *Jeruſalem*, and thence to *Bethlehem* in two Hours, through the Valley of *Bephaim*, famous for being the Theatre of *David*'s Victories, 2 *Sam.* v. 23. In this Road we met, 1. With the Houſe of *Simeon*, who having our Saviour in his Arms ſung his *Nunc dimittis*. 2. The Turpentine-tree under which the Virgin is ſaid to have reſted, when ſhe carried Chriſt in her Arms to preſent him to the Lord at *Jeruſalem*. 3. A Convent dedicated to *Elias*, where the *Greek* Monks pretend to ſhew the Impreſſion of his Body in a Stone that ſerv'd for his Bed; near to which is the Well of the Star, that appear'd to the wiſe Men, which there re-appear'd to them. 4. *Rachel*'s Tomb, mention'd *Gen.* xxxv. 19. which is a modern Structure, but probably the true Place of her Interment.

Being arriv'd at *Bethlehem*, we went to all the Holy Places belonging to it, *viz.* the Place where our Lord is ſaid to be born, the Manger wherein he is ſaid to be laid, the Chapel of *Joſeph* his ſuppoſed Father, that of the Innocents, thoſe of St. *Jerom*, of St. *Paula* and *Euſtochium*, and of *Euſebius* of *Cremona*, and the School of St. *Jerom*; all which Places I only name, being afore deſcrib'd by Mr. *Sandys*.

From the Top of the Church we had a View of *Tekoah*, about nine Miles diſtant Southward, of *Engedi* about three Miles Eaſtward, and of a high Hill called the *Franks* Hill, being defended by the *Cruſaders* forty Years after the Loſs of *Jeruſalem*.

April 1. We went to ſee the remarkable Places near *Bethlehem*, and firſt to the famous Fountains, Pools and Gardens, which are ſaid to be King *Solomon*'s, to which he ſeems to allude, *Eccl.* ii. 5, 6. The Pools are three in Number, ſo diſpos'd, that the Waters of the uppermoſt deſcend into the ſecond, and the ſecond into the third. The Breadth in all is the ſame, being about ninety Paces, but the Length is different, that of the firſt being about an hundred and ſixty Paces, that of the ſecond two hundred, and the third two hundred and twenty.

About an hundred and forty Paces from them, is the Fountain from which they chiefly derive their Waters, which the Friars will have to be that ſeal'd Fountain to which the Spouſe is compar'd, *Cant.* iv. 12. Here you find four Places where the Water riſes, from which it is convey'd into a Baſon, and from thence is carried by a ſubterraneous Paſſage into the Pools; and by the Way there is an Aquæduct of brick Pipes, which receives Part of the Stream, and carries it by many Turnings about the Mountains to *Jeruſalem*. Theſe Pools may probably be the ſame with *Soloman*'s, becauſe there is not the like Store of good Spring-water to be met with any where elſe in *Paleſtine*. From theſe Memorials of *Solomon* we return'd to viſit ſome Places nearer *Bethlehem*, where we ſaw the Field in which they ſay the Shepherds were watching their Flocks, when they receiv'd the glad Tidings of Chriſt's Birth, and hard by the Village where they dwelt, and an old Nunnery built by St. *Paula*, in which ſhe died; all which Places lie Eaſtward about half a Mile from the Convent.

But to the Weſtward we ſaw *David*'s Well, which he ſo much thirſted after, 2 *Sam.* xxiii. 15. and a little beyond it ſome Remains of an old Aquæduct, which convey'd the Waters from *Solomon*'s Pools to *Jeruſalem*;

which is ſaid to have been the genuine Work of *Solomon*, but is now deſtroy'd by the *Turks*. Returning from this Place, we went to ſee the *Greek* and *Armenian* Convents, contiguous to that of the *Latins*, each of which has a ſeveral Door opening into the Chapel of the holy Manger; and then we went to the Grot of the bleſſed Virgin, within forty Yards of the Convent, where ſhe is ſaid to have hid herſelf, and her divine Babe, from the Fury of *Herod*, ſometime before their Departure into *Egypt*. This Grot is hollow'd into a chalky Rock, whoſe Whiteneſs they ſay proceeds from ſome Drops of the Virgin's Milk, that fell from her Breaſt while ſhe was ſuckling the holy Infant; upon which Account, they believe that this Chalk has a miraculous Virtue of encreaſing Women's Milk, and for that End it is often taken by Women, *Turks*, *Arabs* and *Chriſtians*, and they ſay with very good Effect.

19. On the 2d, having preſented the Guardian with two *Chequeens* for his Civilities to us, we went from *Bethlehem* to go viſit the Wilderneſs, and Convent of St. *John Baptiſt*, and in this Stage we firſt croſs'd that famous Valley in which the Angel is ſaid in one Night to have deſtroy'd many thouſands in the Army of *Senacherib*; and then we came to *Boatſh Ullah*, in which they ſay no *Turk* can live above two Years, by which Report the *Chriſtians* have it to themſelves. A little further we came to a Fountain, where they told us, but falſly, that *Philip* baptiz'd the *Ethiopian* Eunuch; and then to the Village of St. *Philip*, at which aſcending a ſteep Hill, we came to the Wilderneſs of St. *John*, which is very rocky, but is well cultivated, and produces great Plenty of Corn, Vines and Olive-trees. And here we ſaw the Cave and Fountain where the *Baptiſt* is ſaid to have led an auſtere Life, *Mat*. iii. 4. Near this Cell are ſome Locuſt-trees, which the Friars ſay yielded him Suſtenance, though they appear to be planted much later than his Time. After this, as we went to the Convent of St. *John*, we paſs'd along one Side of the Valley of *Elah*, where *David* ſlew the Giant, 1 *Sam*. xvii. and had a View of *Modon*, on the Top of a Hill, the Burying-place of the *Maccabees*.

When we came near the Convent, we viſited a Place which they call the Houſe of *Elizabeth*, Mother of the *Baptiſt*; and in the Ruins of the Convent that was formerly here, is a Grotto in which they ſay the bleſſed Virgin ſaluted *Elizabeth*, and pronounced her divine *Magnificat*, *Luke* i. 46. The Convent of St. *John* has been rebuilt from the Ground within theſe four Years, and is now a large ſquare Building, and neat all over; and has in it a very beautiful Church, at the North-end of which you go down ſeven Marble Steps to a ſtately Altar, erected over the Place where they ſay the *Baptiſt* was born. As we return'd from St. *John*'s to *Jeruſalem*, we ſaw a Convent of the *Greeks*, taking its Name from the Holy Croſs, becauſe they ſay here is the Earth that nouriſh'd the Root that bore the Tree that yielded the Timber that made the Croſs; and under the high Altar you are ſhown the Hole in the Ground where the Stump of the Tree ſtood. After this we return'd to *Jeruſalem*, and had our Feet waſhed by the Guardian, and kiſs'd by every Friar, who did all ſing *Latin* Hymns at the Time.

20. On the 3d, we went to ſee the Office of the Holy Fire, a Ceremony kept up by the *Greeks* and *Armenians*, who believe that every *Eaſter-Eve* a miraculous Flame deſcends from Heaven into the Holy Sepulchre, and kindles all the Lamps and Candles there. When we came to the Church of the Holy Sepulchre, we found it crouded with a numerous Mob, who began their Diſorders by running round the Holy Sepulchre with all their Might, crying out *Huia*, i. e. *This is he*, or *this is it*; by which they expreſs the Truth of the Chriſtian Religion. After this they began to act many antick Tricks, like Mad-men; ſometimes they dragg'd one another round the Sepulchre, ſometimes they ſet one Man upon another's Shoulders, and ſo march'd round; and ſometimes they tumbled round the Sepulchre like Tumblers on a Stage, and acting the rudeſt Things on this Occaſion.

This frantick Humour continued from twelve to four; and then the *Greeks* firſt ſet out in a Proceſſion round the Sepulchre, who were immediately follow'd by the *Armenians*, in which Order they thrice compaſs'd the Sepulchre, producing their Standards, Crucifixes, and embroider'd Habits, upon this Occaſion. Towards the End of this Proceſſion, a Pigeon came fluttering into the Cupola over the Sepulchre, at which there was a great Shout; and the *Latins* told us, this was let fly by the *Greeks*, to deceive the People into an Opinion that it was a viſible Deſcent of the Holy Ghoſt. The Proceſſion being over, the Suffragan of the *Greek* Patriarch, and the principal *Armenian* Biſhop, approach'd the Door of the Sepulchre, and cutting the String with which it was faſten'd and ſeal'd, entred in, ſhutting the Door after him, all the Candles and Lamps within having been before extinguiſh'd in the Preſence of the *Turks*. And then the Exclamations were double as the Miracle drew nearer, and the People preſs'd with ſuch Vehemence to the Door, that the *Turks* could not keep them off with the ſevereſt Drubs, which they did out of a great Deſire to light their Candles at the holy Flame, as ſoon as it is brought out of the Sepulchre, for that is counted moſt ſacred and pure, as coming immediately from Heaven.

The two Miracle-mongers had not been above a Minute in the Sepulchre, when the Glimmering of the holy Fire was ſeen through ſome Chinks of the Door, which made the Mob as mad as any in *Bedlam*. Then preſently came out the two Prieſts with blazing Torches in their Hands, which they held up at the Door of the Sepulchre, while the People thronged with mighty Zeal to obtain a Part of the firſt and pureſt Flame, and could not be kept off by the hard Blows of the *Turks* Clubs, who laid on without Mercy. Thoſe who got the Fire applied it to their Beards and Faces, pretending it would not burn like an earthly Flame; but I ſaw none that endured the Trial long enough to make good the Pretenſion. However, ſo many Tapers were preſently lighted, that the whole Church ſeem'd to be in a Flame; and with this Illumination the Ceremony ended. Thoſe within the Church acted their Part with great Quickneſs and Dexterity, but the Behaviour of the Rabble without, which would better become a *Bacchanale* than a *Chriſtian* Feſtival, very much diſcredited the Miracle.

The *Latins* take a great deal of Pains to expoſe this Ceremony as a ſhameful Impoſture, and a Scandal to the Chriſtian Religion; but the *Greeks* and *Armenians* pin their Faith upon it, and make their Pilgrimages chiefly upon this Motive; and it is the Unhappineſs of their Prieſts, that having acted the Cheat ſo long, they are forced now to ſtand to it for Fear of endangering the Apoſtacy of their People. After the Rout was over, when we went out of *Church*, we ſaw ſeveral People about the Stone of Unction, who, having Store of Candles lighted with the holy Fire, were daubing Pieces of Linen with the Weiks of them, and the melting Wax, which were deſigned for Winding-ſheets; for they believe, that if they are buried in a Shroud ſmutted with this Fire, it will ſecure them from Hell-fire.

The 4th being our *Eaſter*, we did not go abroad, the Time requiring Employment of another Nature.

21. On the 5th we went to ſee ſome new Curioſities; and firſt we came to that which is called St. *Peter*'s Priſon, from which he was deliver'd by an Angel, *Acts* xii. Next we came to an old Church, in the Place where the Houſe of *Zebedee* ſtood; then to the Place where ſtood the Iron Gate which open'd to St. *Peter* of its own Accord; and a little farther is a ſmall Church built over the Houſe of St. *Mark*, whither *Peter* went after his miraculous Gaol-delivery. The *Syrians*, who keep it, pretend to ſhow you the Window at which *Rhoda* look'd out when *Peter* knock'd at the Door. In the Church they ſhew a *Syriack* MS. of the *New-Teſtament*, pretended to be eight hundred and fifty-two Years old, and a little Stone-Font uſed by the Apoſtles in baptizing. Beyond this, in the ſame Street, is that which is call'd the Houſe of St. *Thomas*, formerly a Church now a Moſque.

A little further, in another Street, is the Place where they ſay our Lord appear'd after his Reſurrection to the *Maries*, *Matt.* xxviii. 9. And here the *Armenians* have their Convent and Gardens, which take up all that Part of Mount *Sion* that is within the Walls of the City. Their Church is built over the Place where they ſay St. *James*, the Brother of *John*, was beheaded, *Acts* xii. 2. and on the North-ſide of it is ſhown the Place of his Decollation. In this Church are two Altars ſet out with extraordinary Splendor, deck'd with rich Mitres, Copes, Croſſes of Silver and Gold, *&c.* and in the Middle a Pulpit made of Tortoiſe-ſhell, and Mother of Pearl, curiouſly mingled and inlaid in one another.

In the Anti-chapel are three large rough Stones, eſteem'd very precious, one of them being the Stone upon which *Moſes* caſt the two Tables when he broke them, the other two being brought, one from the Place of our Lord's Baptiſm, and the other from that of his Transfiguration. After this we went to another Chapel of the *Armenians*, which is ſaid to be founded in the Place where *Annas*'s Houſe ſtood; and in it is ſhown a Hole, denoting the Place where one of the Officers of the High-Prieſt ſmote our Saviour, *John* xviii. 22. whom the Friars will have to be the ſame *Malchus*, whoſe Ear our Lord heal'd. In the Court before this Chapel is an Olive-tree, to which they ſay Chriſt was chain'd for ſome Time by Order of *Annas* to ſecure him from eſcaping.

From the Houſe of *Annas* we went out of *Sion gate*, which is near to that they call the Houſe of *Caiaphas*, where is another ſmall Chapel of the *Armenians*. Here, under the Altar, they ſay is the Stone which was laid to the Door of our Saviour's Sepulchre, *Matt.* xxvii. 60. which the *Armenians* ſtole from the Church of the Sepulchre and brought hither; it is two Yards and a half long, one Yard high, and as much broad. Here is likewiſe ſhown a Cell, ſaid to have been our Lord's Priſon till the Morning, when he was carried hence before *Pilate*; and alſo the Place where *Peter* was frighted into a Denial of his Maſter. A little further without the Gate, was the Church of the *Cœnaculum*, where they ſay Chriſt inſtituted his laſt Supper, which is now a Moſque. Near this is a Well, which is ſaid to be the Place where the Apoſtles divided to go every one to his ſeveral Charge; and cloſe by it, is the Ruin of a Houſe, in which the Virgin is ſaid to have breathed her laſt. And a little lower is the Grot in which St. *Peter* wept ſo bitterly for denying his Maſter. After this, we return'd to the Convent, and by the Way, had a View of the beautiful Gate of the Temple.

On the 6th, we took another Progreſs about the City; and going out of *Bethlehem-Gate*, and turning on the Left-hand, we came to *Bethſheba*'s Pool, where ſhe is ſaid to be waſhing herſelf when *David* ſpied her from his Palace. A little below this Pool begins the Valley of *Hinnom*, on the Weſt-ſide of which is the Place call'd the *Field of Blood*, now called *Campo Sancto*, which is about thirty Yards long, and half as broad. The Corpſes are let down into it through five Holes left open for that Purpoſe, through which we could ſee the Bodies under ſeveral Degrees of Decay. A little below the *Campo Sancto* is an intricate Cave, in which the Apoſtles are ſaid to have hid themſelves when they forſook their Maſter and fled. The Valley of *Jehoſaphat* croſſes the End of that of *Hinnom*, in which is the Brook *Cedron*, which is always dry, except in the Winter.

In this Valley of *Jehoſaphat*, we firſt went to the Well of *Nehemiah*, ſo called, becauſe it is reputed the Place where he recovered the Fire of the Altar after the *Babyloniſh* Captivity, 2 *Mac.* i. 19. A little higher is the Place where *Iſaiah* is ſaid to be ſawn aſunder; and above that is the Pool of *Siloam*. A little farther is the Fountain of the Bleſſed Virgin, and over-againſt it the Village call'd *Siloe*, in which *Solomon* is ſaid to have kept his ſtrange Wives; and above it is a Hill call'd the *Mountain of Offence*, where *Solomon* built the high Places, 1 *Kings* xi. 7. Not far from it they ſhow another Field of Blood, where *Judas* met with his compounded Death, *Matt.* xxvii. 5. Here alſo they ſhow'd us two noble Antiquities, the Sepulchre of *Zachariah*, and the Pillar of *Abſalom*; and cloſe by is the Sepulchre of *Jehoſaphat*. From hence keeping in the Valley, we ſaw the Sepulchres of the Bleſſed Virgin, St. *Anna*, and *Joſeph*. After this, going up the Hill, we ſaw a broad Stone, on which they ſay St. *Stephen* was martyr'd, and not far from it a Grot into which the *Jews* caſt his Body; from whence we went to St. *Stephen*'s Gate of the City.

22. On the 7th, we ſet out again to ſee the holy Places upon Mount *Olivet*, and as we aſcended the Mount we ſaw certain Grotto's, call'd the Sepulchres of the Prophets. A little higher you come to the Place where they ſay Chriſt utter'd his Prophecy concerning the Deſtruction of *Jeruſalem*, *Matt.* xxiv. and on the Right-hand is the Place where they ſay he dictated a ſecond Time, the *Pater-noſter* to his Diſciples, *Luke* xi. 1, 2. At the Top of the Hill you come to the Place of our Lord's Aſcenſion. Here was anciently a large Church built in Honour of that Triumph, in which they ſhew the Print of our Saviour's Foot; but it is now uſed for a Moſque, as many other holy Places about *Jeruſalem* are, whether out of Devotion or Lucre I do not determine. Two Furlongs Northward is the higheſt Place of Mount *Olivet*, on which ſtood a high Tower, call'd *Viri Gallilæi!* in Memory of the Apparition of the two Angels to the Apoſtles, after Chriſt's Aſcenſion, which about two Years ſince was demoliſhed by a *Turk*, who bought the Field in which it ſtood. From this Place we deſcended the Mount by another Way, and about Midway they ſhow the Place where Chriſt beheld the City, and wept over it, *Luke* xix. 41.

A little lower they ſhow *Gethſemane*, about fifty ſeven Yards ſquare, lying between the Foot of Mount *Olivet* and the Brook *Cedron*. It is well planted with Olive-trees, which are believed to be the ſame that ſtood here in our Saviour's Time; which Opinion made theſe Olives and Oil an excellent Commodity in *Spain*. At the upper Part of the Garden is a flat Ledge of Rocks, which is ſaid to be the Place on which *Peter*, *James*, and *John*, fell aſleep during our Saviour's Agony; and juſt by is a Grotto, which is ſaid to be the Place in which our Saviour underwent that bitter Part of his Paſſion. Not far off is a ſmall Shred of Ground twelve Yards long and one broad, which is ſaid to be the Path on which *Judas* walk'd up to Chriſt, and ſaid, *Hail, Maſter!* and kiſs'd him: Which narrow Path is ſeparated by a Wall out of the Midſt of the Garden, as a *Terra damnata*; which is the more remarkable, becauſe it is done by the *Turks*, who, as well as *Chriſtians*, deteſt the Ground on which that infamous Treachery was acted.

On the 8th, we went to ſee the Palace of *Pilate*, which is not far from St. *Stephen*'s Gate, from whence we had a Proſpect of the Place where the Temple ſtood, which is all that is allow'd us, for we cannot go within the Borders of it, without forfeiting Life or Religion. It lies upon the Top of Mount *Moriah*, over-againſt Mount *Olivet*, the Valley of *Jehoſaphat* lying between. It was about five hundred and ninety of my Paces long, and three hundred and ſeventy broad; in the Middle of the Area ſtands now a Moſque which is ſaid to be built on the Ground where formerly ſtood the *Sanctum Sanctorum*.

In this pretended Houſe of *Pilate* is ſhown the Room where Chriſt was mock'd with the Enſigns of Royalty, and buffetted by the Soldiers. As you come out is a Deſcent, where was formerly the *Scala Sancta*. On the other Side of the Street is the Room where, they ſay, our Saviour was ſcourged, which is now a Weaver's Shop. Returning from *Pilate*'s Palace, we paſs'd along the dolorous Way, in which we ſaw, 1. The Place where *Pilate* brought our Lord forth to the People, and ſaid, *Behold the Man!* 2. Where Chriſt fainted thrice under the Weight of the Croſs. 3. Where the Bleſſed Virgin ſwoon'd at ſo tragical a Spectacle. 4. Where *Veronica* preſented him the Handkerchief to wipe his Bleeding Brows: And, 5. Where the Soldiers compel'd *Simon* to bear his Croſs. All which Places I need only to name, being deſcribed by others.

On the 9th, we ſaw the Pool of *Betheſda*, which is one hundred and twenty Paces long, forty broad, and eight deep, but no Water in it; and there we ſaw ſome Arches, which are ſaid to be the Porches in which the Lame, Halt, and Blind ſate, *John* v. From hence we went to the Convent of St. *Anne*, where there is a large Church, and under it a Grotto, where, they ſay, the Bleſſed Virgin was born. Near this Church they ſhew the *Phariſees* Houſe, where *Mary Magdalen* waſh'd Chriſt's Feet with her Tears, and wiped them with her Hair, *Luke* vii. 38. In the Afternoon we ſaw the ſtately Pool of Mount *Gihon*, which is one hundred and ſix Paces long, and ſixty-ſeven broad, lined with a Wall, and well ſtored with Water.

On the 10th, we went to take our Leave of the holy Sepulchre, which being the laſt Time, the *Turks* allow free Admittance to all People without any Fee, not only to the Poor, but to the Lewd, who prophaned it as much as when the Heathen celebrated here their *Aphrodiſia*. On the 11th, began the *Turks* Byram, and we kept at home to avoid the Affronts uſual at ſuch Feſtivals. On the 12th and 13th, we prepared for our Departure, and how to avoid the *Arabs*, by going along with the *Moſolem*.

23. On the 14th, we went with a ſmall Preſent to wait on the *Moſolem*, who ſet out the next Morning; and before our Departure I took the Meaſure of the City, going out at *Bethlehem-Gate*, and walking round about to the ſame Gate again, and found it in Circumference to be four thouſand ſix hundred and thirty Paces; and ten of my Paces, amounting to nine Yards, this Number makes four thouſand one hundred and ſixty-ſeven Yards, which is juſt two Miles and an half.

On the 15th in the Morning, having received our *Diplomata*, to certify that we had viſited the holy Places, and preſented the Convent with fifty Dollars a Man for their Trouble, we ſet out with the Moſolem, and lodg'd at Kane *Leban*. The Country People being at Plough, in order to ſow Cotton, us'd Goads of an extraordinary Size, being eight Foot long, having at one End a ſharp Prickle to drive the Oxen, and at the other a Paddle to cleanſe the Plough, which is held by the ſame Perſon that drives; and with ſuch a Goad it ſeems to be, that *Shamgar* made the great Slaughter, *Judg*. iii. 31.

The 16th. Leaving Kane *Leban*, we paſſed by *Naploſa* and *Samaria*, and came to the Fountain *Selee*, where we lodg'd. The 17th, we travelled in the ſame Road, we came to *Caphar-Arab*, and then we left that Road, reſolving to croſs the Plain of *Eſdraelon*, and viſit *Nazareth*, which we did, after paying our Caphar to Emir *Chiby*.

24. *April* 18. *Nazareth* is now a ſmall Village, on a high Hill, where we were treated at a Convent of ſome *Latin* Fathers, who live in perpetual Fear of the *Arabs*. The Church of *Nazareth* ſtands in a Cave, ſaid to be the Place where the bleſſed Virgin received the Meſſage from the Angel, *Hail thou that art highly favoured*, &c. *Luke* i. 28. It reſembles the Figure of a Croſs, whereof the Tree is fourteen Paces long, and ſix over, and the Traverſe is nine Paces long, and four broad; juſt at the Section are two Granite Pillars, whereof one ſtands at the Place where the Angel, the other where the bleſſed Virgin ſtood at the Time of the Annunciation.

After this we went to ſee the Houſe of *Joſeph*, where they ſay the Son of God liv'd for near thirty Years in Subjection to Man, *Luke* ii. 51; and near this they ſhew the Synagogue, where our Lord preached that Sermon which ſo much exaſperated his Country-men, *Luke* iv. Here are the Ruins of two Churches built by *Helena*.

On the 19th, about two Hours diſtant from *Nazareth* Eaſtward, is Mount *Tabor*, a high Mountain, round and beautiful, ſtanding in the Plain of *Eſdraelon*, about three Furlongs within the Plain. This is thought to be the Mountain on which our Lord was transfigur'd, *Mat*. xvii. which has a plain Area at Top very fertile, on which in ſeveral Places are Ciſterns of good Water, and three Grotto's repreſenting three Tabernacles, which St. *Peter* propos'd to erect, when he ſaid, *Let us make three Tabernacles*, &c.

And here I cannot but obſerve, that almoſt all Paſſages and Hiſtories of the Goſpel, are ſaid by them who ſhew the Places, to have been done in Grotto's. Thus the Places of the bleſſed Virgin's Birth, of the Annunciation, of the Virgin's Salutation of *Elizabeth*, of the *Baptiſt*'s and *Chriſt*'s Nativity, of St. *Peter*'s Repentance, and the Transfiguration; all theſe Places are ſaid to be Grotto's, though it is no Ways probable that ſo many various Actions, with ſuch Circumſtances as ſeem ſometimes to require Places of another Nature, ſhould be done in Grotto's.

From the Top of *Tabor* you have a moſt delightful Proſpect: On the North-weſt you diſcern the *Mediterranean*, and all round you have the beautiful Plains of *Eſdraelon* and *Galilee*, where you have a View of many Places memorable for the Reſort and Miracles of Chriſt; at the Bottom ſtands *Daberah*, which is ſaid to take its Name from *Deborah*, and near it is the Fountain of *Kiſhon*. Eaſtward you ſee Mount *Hermon*, and at the Foot of it *Nani*, famous for our Lord's raiſing the Widow's Son there, *Luke* vii. 14. and *Endor*, where *Saul* conſulted the Witch. Southward you ſee the Mountains of *Gilboa*, fatal to *Saul* and his Sons.

Due Eaſt you diſcover the Sea of *Tiberias*, and cloſe by it a ſteep Hill, down which the Herd of Swine ran and periſhed in the Waters, *Matt*. viii. 32. Towards the North appears that which they call the Mountain of *Beatitudes*, where our Saviour delivered his Sermon, *Mat*. v. 6, 7. And not far from this little Hill is the City *Saphet*, that ſtands upon a high Mountain, to which being then in View, our Saviour may be ſuppoſed to allude, when he ſays, *Mat*. v. 4. *A City ſet on a Hill, cannot be hid*. From Mount *Tabor*, we had alſo a Sight of the Place call'd *Dothaim*, where they ſay *Joſeph* was ſold by his Brethren, and of the Field where our Saviour fed the Multitude with a few Loaves, and a few Fiſhes. After Dinner we went to ſee the Mountain of the *Precipitation*, *i. e*. the Brow of the Hill where they ſay the *Nazarites* would have thrown down our Saviour, *Luke* 4. had he not made a miraculous Eſcape: And here the Friars ſhow ſome Holes, which they call the Prints of Chriſt's Fingers, made in the hard Stone, when he reſiſted the Violence offer'd him.

20. On the 20th, we directed our Courſe to *Acra*, paſs'd in View of *Cana* of *Galilee*, and came to *Sephoria*, the reputed Habitation of *Joachim* and *Anna*, Parents of the bleſſed Virgin; over which ſtands a good Part of a large Church. Here begins the Plain of *Zabulon*, from whence we came to *Acra*.

On the 21ſt: At *Acra* we were treated by the *French* Conſul, and came the firſt Night to our old Lodging at *Solomon*'s Ciſterns.

On the 22d: About three Hours from *Sidon*, we were carried to ſee a Place we had not obſerv'd before, which was a high rocky Mountain; on the Side of which were hewn a Multitude of Grots, to the Number of 200, as they were counted, which have an Entrance two Foot ſquare, and a Room within for the moſt part four Yards ſquare, which ſeem'd to be deſign'd for the Uſe of the Living, and not of the Dead, becauſe ſome of the Cells are no more than one Yard ſquare, and in the Rock are Ciſterns for ſtoring up Water. On the 23d, we continued at *Sidon*, being generouſly treated by the *French*.

26. On the 24th, having gone through the Olive-Yards of *Sidon*, we aſcended *Libanus*, till we came to a Fountain call'd *Ambus-lee*. On the 25th, we arrived at the higheſt Ridge of the Mountain, where the Snow lay cloſe by the Road; and then we begun to deſcend on the other Side, and came to a Village call'd *Meſgarab*, where a Caphar was demanded by the *Druſes*, who poſſeſs theſe Mountains. From hence, in one Hour, we entred into a Valley call'd *Bocat*: This ſeems to be the ſame with *Bicath-Aven*, mentioned *Amos* i. 5. together with *Eden* and *Damaſcus*, for there is very near it a Place call'd *Eden* to this Day; in this Valley there runs a large River call'd *Setane*, which falls at laſt

into the River *Caſimir*, falſly call'd *Eleutherus.* We croſs'd a Bridge, and pitch'd our Tents on its Bank.

On the 26th, we paſſed through the Valley *Bocat*, and came to the Foot of *Antilibanus*; and having paſs'd by ſeveral Villages, we went through a narrow Clift between two rocky Mountains to *Demus*, a ſmall Caphar. On the 27th in the Morning, we came to the River *Barrady*, which ſupplies all the Gardens and the City of *Damaſcus* with Water, we croſs'd over it at a Bridge, and our Road aſcending brought us to the Brink of a high Precipice, from whence the *Turks* ſay their Prophet took a View of the City *Damaſcus*, which he found ſo pleaſant and beautiful that he would not enter into it, becauſe he ſaid there is but one Paradiſe deſigned for Man, and he would not take his in this World.

It is, as near as I could gueſs, about two Miles long, but compaſs'd with Gardens, extending to thirty Miles round; in which are Fruit-trees of all kinds, and many Turrets, Steeples and Summer-houſes, peeping out from green Boughs. The River *Barrady*, near its Spring-head, is divided into three Streams, whereof the Middle-moſt runs directly to *Damaſcus*, and is diſtributed in the City; the other two are drawn round to the Borders of the Gardens, ſo that there is not a Garden but has a fine quick Stream, which ſerves not only for watering the Place, but for Fountains and other Water-works.

This River was call'd by the *Greeks* and *Romans* *Chryſorrhoas*; but as for *Arbana* and *Pharpar*, Rivers of *Damaſcus*, mention'd 2 *Kings* v. 12. I could find no Memorial of them, but doubtleſs they were Branches of the River *Barrady*. We continued a good While upon the Precipice, as being loth to leave ſuch a charming Proſpect, though it allur'd us down to the City. Coming down the Hill into the Plains, we were conducted by a *Janizary* into the City, where we obſerv'd the Garden-walls to be made of great Pieces of Earth, faſhion'd like Bricks, and hardned in the Sun, being two Yards long and one Broad, and half of one thick. We alſo obſerv'd their Method of ſcouring the Channels: They put a great Bough of a Tree in the Water, and faſten it to a Yoke of Oxen, upon the Bough there ſits a good heavy Fellow to preſs it down and drive the Oxen; and thus the Bough is dragg'd all along the Channel, and ſerves at once both to cleanſe the Bottom and alſo to fatten the Water, for the greater Benefit of the Gardens.

On the 28th, we walk'd out to take a View of the City: And here we found all the Houſes on the Outſide built either with Sun burnt Brick or *Flemiſh* Wall, very coarſely daub'd over; and ſo by the Waſhing of the Houſes upon a violent Rain, the whole City becomes as it were a Quagmire. But the Gates in theſe Mud-walls are adorn'd with Marble Portals, carv'd and inlaid with great Beauty; and on the Inſide you find generally a ſquare Court, beautified with Variety of fragrant Trees and Marble Fountains, and Duans floor'd with Marble, richly gilded, and furniſh'd with Carpets and Cuſhions.

In the next Place we went to ſee the Church of St. *John Baptiſt*, now converted into a Moſque, which no Chriſtian may enter into. Its Gates are vaſtly large, cover'd with Braſs, ſtampt over with *Arab* Characters; and within it is ſpacious and lofty, built with three Iſles, between which are Rows of poliſh'd Marble of great Beauty. In this Church is kept the Head of St. *John*, with other Reliques ſo holy, that it is Death for a *Turk* to go into the Room where they are. From the Church we went to the Caſtle, and being admitted within the Gate we ſaw Store of ancient Arms and Armour, and among the reſt a *Roman* Baliſta, and a Chain cut in Stone.

27. On the 29th, we went to ſee the Cavalcade of the *Hadgees* ſetting out for *Mecca*, which has been deſcrib'd before. After this we went to ſee the *Ager Damaſcenus*, a beautiful Meadow juſt without the City, divided in the Middle by a Branch of the River *Barrady*; and it is a current Tradition here, that *Adam* was made of the Earth of this Field. Adjoining to this is a large Hoſpital, encloſed on the South-ſide by a ſtately Moſque, and on the other Sides with Cloyſters and Lodgings. Returning hence Homeward we ſaw a beautiful Bagnio, and not far from it a Coffee-houſe capable of entertaining four or five hundred People.

It had two Quarters for Gueſts, one for Summer, and the other for Winter. That for Summer was a ſmall Iſland, waſh'd round with a large ſwift Stream, ſhaded over Head with Trees, and with Mats when the Boughs fail. And here we found a Multitude of *Turks* in the Duans, regaling themſelves with Greens and Water, which two, with a beautiful Face, according to their Proverb, are a perfect Antidote againſt Melancholy. In the Afternoon we went to viſit what they call the Houſe of *Ananias*, who reſtor'd Sight to St. *Paul*, *Acts* ix. 17. And the Place ſhown for it is a ſmall Grotto, containing a *Chriſtian* Altar and a *Turkiſh* Praying-place, ſeated too near one another.

Our next Walk was out of the Eaſt-gate, to ſee the Place of St. *Paul*'s Viſion, which is about half a Mile from the City, cloſe by the Way-ſide. A little nearer the City is a ſmall Timber-Structure with an Altar in it, where you are told St. *Paul* reſted ſome time in his Way to the City after the Viſion, *Acts* ix. 8. Being return'd to the City we were ſhown the Gate at which St. *Paul* was ſet down in a Baſket, *Acts* ix. 25. This Gate is at preſent wall'd up, by Reaſon of its Vicinity to the Eaſt-Gate, which renders it of little Uſe. In the City we ſaw the Patriarch of it, who told me there were more than twelve Hundred of the *Greek* Communion in that City.

On the 30th, we went to viſit the Gardens, and ſpent a Day in one of them, where we found a pleaſant Summer-houſe, with a plentiful Stream of Water running through it, and the Garden thick ſet with Fruit-trees. In viſiting theſe Gardens, the *Franks* are oblig'd either to walk on Foot, or ride on Aſſes, which ſtand there ready to be hir'd, for the *Turks* will not allow them to ride a Horſe. *May* 1. we ſpent in another Garden, whoſe Summer-houſe was more ſplendid, and had greater Variety of Fountains.

On the 2d, Some of us went to *Sidonaia*, a *Greek* Convent, about four Hours from *Damaſcus* to the Northward, and by the Way we ſaw on the Right-hand a very high Hill, reputed the ſame on which *Cain* and *Abel* offer'd Sacrifices, and where the latter was ſlain by the former. *Sidonaia* is ſituated at the further Side of a large Vale, on the Top of a Rock, which would be inacceſſible but for the Steps that are cut in it all the Way up. It is fenc'd at Top with a Wall (which encloſes the Convent, which was at firſt founded by *Juſtinian*, and is at preſent poſſeſs'd by twenty *Greek* Monks, and forty Nuns, who live promiſcuouſly together.

Upon this Rock, and in a little Compaſs round about it, are no leſs than ſixteen Churches or Oratories, dedicated to ſeveral Names, 1. To St. *John*. 2. To St. *Paul*. 3. To St. *Thomas*. 4. To St. *Babylas*. 5. To St. *Barbara*. 6. To St. *Chriſtopher*. 7. To St. *Joſeph*. 8. To St. *Lazarus*. 9. To the bleſſed Virgin. 10. To St. *Demetrius*. 11. To St. *Saba*. 12. To St. *Peter*. 13. To St. *George*. 14. To *All-Saints*. 15. To the *Aſcenſion*. 16. To the Transfiguration of our Lord; from all which we may conclude, that this Place was highly eſteem'd for Holineſs.

In the Chapel here made Uſe of by the Convent for their daily Service, they pretend to a great Miracle, of which they give this Account. In this Church they had once a little Picture of the bleſſed Virgin, very famous for the many Cures and Bleſſings granted to Supplicants. This Picture was ſtole away by a ſacrilegious Rogue, who had not kept it long but it turned into a Body of Fleſh; which wonderful Event ſtruck him with ſuch Remorſe, that he carried back the Prize, and begg'd Pardon for his Crime. The Monks having recover'd ſo great a Jewel, to ſecure it for the future, laid it in a Cheſt of Stone, and placing it in a little Cavity behind the high Altar, fix'd an Iron Grate before it.

Upon the Grates hang Abundance of Toys, being the Offerings of many Votaries for the Succeſs of their Prayers made at this Shrine. Under the ſame Cheſt, in which the Incarnate Picture was depoſited, they always place a ſmall Silver Baſon, to receive the holy Oil, which they pretend diſtils from the encloſed Image, and does wonderful Cures in many Diſtempers, eſpecially thoſe affecting the Eyes. On the Eaſt-ſide of the Rock is an ancient Sepulchre hollow'd in the firm Stone, which is about eight Yards ſquare, and contains twelve Cheſts for Corpſes. At the Entrance are ſix Statues in three Niches, two in each; at the Pedeſtals are ſome *Greek* Words very dark.

On the 3d, we went to ſee the Street call'd *Straight*, *Acts* ix. 11. in which is ſhown the Houſe of *Judas*, with whom St. *Paul* lodg'd; and in the ſame Houſe is an old Tomb ſaid to be *Ananias*'s, much reverenc'd by the *Turks*, who keep a Lamp always burning over it. On the 4th: In an Hour and half we came to a ſmall Village call'd *Sinie*, juſt by which, on the Top of a Hill, is an old Structure, ſuppoſ'd to be the Tomb of *Abel*, which is thirty Yards long, and thought to be but juſt proportion'd to his Stature; from whence the adjacent Country, in old Times, was call'd *Abylene*.

28. On the 5th we paſs'd by the Fountain of *Barrady*, and came to a Village called *Surgawch*, from whence we arrived a ſecond Time in the Valley of *Bocat*; and hence, going Northerly, we came in three Hours to *Balbeck*, which is ſuppoſed to be the ancient *Heliopolis*, or City of the Sun, and ſo the Word imports; for *Baal*, though it comprehends all Idols of whatever Sex, is very often appropriated to the Sun, which is the Sovereign Idol of this Country. The City has a pleaſant Situation on the Eaſt-ſide of the Valley of *Bocats*, of a ſquare Figure, compaſs'd with a good Wall, though its Houſes are mean, as they are uſually in *Turkiſh* Villages.

There is in it a noble Ruin, which was anciently a Heathen Temple, in which we obſerved, firſt, a round Pile of Building, all of Marble, encircled with Columns of the *Corinthian* Order, very beautiful, which ſupport a Corniſh that runs all round the Structure, of no ordinary State and Beauty; and what remains of it at preſent is in a very tottering Condition, but yet the *Greeks* uſe it for a Church, which ſhould excite them to a little more Fervour in their Prayers that they generally uſe, for they are ſeemingly the moſt indevout at their Divine Service, of any People in the Chriſtian World.

But beſides this Temple, here is another Curioſity, which is ſo ſtrange, that a Man may be thought to ſtrain the Privilege of Travellers in relating it, and that is a large Piece of the old Wall, which encompaſs'd all the Structures in the City; a Wall made of ſuch prodigious great Stones, that the Natives here aſcribe the Building of it to the Devil. Three of the Stones we meaſured, and found them to extend to ſixty one Yards in Length, whereof one was twenty one, and the other two twenty Yards long; theſe three Stones lay in one Row, End to End. Here was alſo a ſingle Column of the *Tuſcan* Order about fourteen Yards high, and one Yard and half diameter, having a Channel cut from the Bottom to the Top.

On the 6th we left *Balbeck*, and went a croſs the Valley; and as we paſs'd by the Walls of the City, we ſaw many Stones inſcribed with *Roman* Letters, which ſhow that the Walls are made of the Ruins of the old City. In two Hours we ſaw, near the Road, an old Pillar nineteen Yards high, and five Foot in Diameter. In an Hour more we came to the other Side of the Valley, at the Foot of *Anti-libanus*; and, aſcending the Mountain, we ſaw an old Lake called *Limone*, and thence in an Hour more we arrived at the Snow. Here we lodged all Night on the Top of *Libanus*, which is free from Rocks, but very barren, and cover'd with a Sort of white Slates.

It is ſo high, that it proves a Conſervatory of Abundance of Snow; which thawing in the Summer, ſupplies with Water the Rivers and the Fountains in the Valleys below; and in the Snow we ſaw the Print of the Fee of Wild Beaſts, the ſole Proprietors of theſe upper Parts of the Mountain.

On the 7th we went almoſt four Hours upon Snow, which being frozen, bore us and our Horſes, and then deſcending about an Hour, we came to a Fountain and a milder Region. From hence we deſign'd for *Canobine*, but our Guide being at a Loſs, we ſteer'd to *Tripoly*, where we were nobly treated.

29. On the 8th, Mr. Conſul *Haſtings* carried us to ſee the Caſtle of *Tripoly*, which is ſituate on a Hill that commands the City; but being now unprovided with Arms, it ſerves rather for a Priſon than a Garriſon. There was in it a poor Chriſtian called *Sbeck Eunice*, a *Maronite*, one that had formerly renounced his Faith, and turn'd *Mahometan*; but in his declining Age retracted his Apoſtacy, and died to attone it; for he was impaled by Order of the Baſha two Days after we had left *Tripoly*; which Kind of Puniſhment is certainly one of the greateſt Barbarities that can be offer'd to human Nature.

The Execution is done after this Manner: They take a Poſt about the Bigneſs of a Man's Leg, eight or nine Foot long, which they make ſharp at one End, and force the Criminal to carry to the Place of Execution; and there they thruſt in the Stake at his Fundament, and then taking him by the Legs, draw on his Body upon it till the Point of the Stake appears at his Shoulders; and then they erect the Stake, and faſten it in a Hole dug in the Ground. The Criminal ſitting in this Poſture, does ſometimes drink, ſmoke, and talk, for twenty-four Hours; but generally, after he has remain'd an Hour in this Poſture, one of the By-ſtanders is permitted to give him a gracious Stab to the Heart, which puts an End to his inexpreſſible Miſery.

On the 9th, having croſs'd the Plain of *Tripoly*, we came to the Foot of *Libanus*; and thence aſcending, in four Hours we paſs'd by a Village call'd *Eden*, and in two Hours and a Half more we came to the Cedars which grow amongſt the Snow, near the higheſt Part of *Libanon*, where we found ſome very old, and of a prodigious Bulk, of which Sort I counted ſixteen, and others younger, of a ſmaller Size. I meaſured one of the largeſt, and found it twelve Yards ſix Inches in Girt, and thirty-ſeven Yards in the Spread of its Boughs. It was ſtill ſound, and about five Yards from the Ground, was divided into five Limbs, and each of which was equal to a great Tree.

After we had ſtaid about half an Hour in this Place, the Clouds began to thicken and fly upon the Ground, which ſo obſcured the Road, that with much ado we found the Way that goes down to *Canobine*; which is a Convent of the *Maronites*, and the Seat of a Patriarch, and is pleaſantly ſituated near a Rupture in *Libanus*, cloath'd with Greens, and refreſh'd with Fountains. It is ſeated on the North-ſide of this Chaſm, about the Midway in the Mountain, and was founded by *Theodoſius the Great*, at the Mouth of a great Cave, having a few Rooms fronting outward that have the Light of the Sun, the reſt being all under Ground. The Valley of *Canobine* was anciently much reſorted to for Religious Retirement, as appears from the many Hermitages, Cells, and Monaſteries here to be ſeen.

On the 10th, I took my Leave of the Patriarch, and return'd to *Tripoly*, through a Path cut in the Side of the aforeſaid Rupture. On the 11th, we took our Leaves of our worthy Friends at *Tripoly*, and travelling the ſame Way we came, we arrived in eight Days at the *Honey-Kane*, and found many of our *Aleppine* Friends there. All that occurr'd to us new in theſe Days Travel, was a particular Way uſed by the Country-people in gathering Corn, which they pluck up by Handfuls from the Roots, that they may loſe none of their Straw, which is generally very ſhort, and neceſſary for the Suſtenance of their Cattle, no Hay being made here. This is their Practice in all Places of the Eaſt I have ſeen, and ſeems to give Light to that Expreſſion of the *Pſalmiſt*, *Pſal.* cxxix. 6. *which withereth afore it be plucked up*; and though there is Mention in the next Verſe of a Mower; yet being ſuch as fills not his Hand, this rather confirms the former Senſe.

30. We are next to take Notice of an Excurſion our Author made ſome Years after this, in order to take a View of the famous River *Euphrates*, and the Country near it on both Sides; which being ſo famous both in ancient and modern Hiſtory, might well excite his Curioſity, as the Plainneſs and Perſpicuity of his Account cannot but ſatisfy ours. We ſet out, ſays he, from *Aleppo*, *April* 17, 1699, and ſteering Eaſt North Eaſt ſomewhat leſs, we came in three Hours and a half to *Surbaſs*.

The 18th, we came in three Hours and a half to *Bezay*, paſſing by *Bab*, where is a good Aquæduct, *Dyn il Daab*, to which you deſcend by about thirty Steps, and *Lediſſ*, a pleaſant Village. Our Courſe was thus far Eaſt and by North. In the Afternoon we advanced three Hours farther, Courſe North Eaſt, to an old ruined Place, formerly of ſome Conſideration, called *Acamy*: It is ſituated in the Wilderneſs on a Hill encompaſſed by a Valley: It was large, and had the Footſteps of good Walls and Buildings.

The 19th we went Eaſt and by North, and in four Hours arrived at *Bambych*. This Place has no Remnants of its ancient Greatneſs but its Walls, which may be traced all round, and cannot be leſs than three Miles in Compaſs. Several Fragments of them remain on the Eaſt-ſide, eſpecially at the Eaſt Gate, and another Piece of eighty Yards long, with Towers of large ſquare Stone, extremely well built. On the North-ſide I found a Stone with the Buſts of a Man and Woman large as the Life, and under two Eagles carved on it. Not far from it, on the Side of a large Well, was fixed a Stone with three Figures carved on it in *Baſſo Relievo*. They were two *Syrens*, which twining their fiſhy Tails together, made a Seat on which was placed ſitting a naked Woman, her Arms and the *Syrens* on each Side mutually entwined.

On the Weſt-ſide is a deep Pit of about an hundred Yards Diameter: It was low and had now Water in it, and ſeemed to have had great Buildings all round it, with the Pillars and Ruins of which it is now in Part filled up, but not ſo much but that there was ſtill Water in it. Here are a Multitude of ſubterraneous Aquæducts brought to this City, the People atteſted no fewer than fifty. You can ride no where about the City without ſeeing them. We pitched by one about a Quarter of a Mile Eaſt of the City, which yields a fine Stream, and emptying itſelf into a Valley, waters it, and makes it extremely fruitful. Here perhaps were the Paſtures of the Beaſts deſigned for Sacrifice. Here are now only a few poor Inhabitants, though anciently all the North-ſide was well inhabited by *Saracens*, as may be ſeen by the Remains of a noble Moſque and Bagnio a little without the Walls. We were here viſited by a Company of *Begdelies*, who were incamped ſome Hours further towards *Euphrates*, having about a thouſand Horſe there.

20. For avoiding the *Begdelies*, we hired a Guide, who conducted us a By-way. We travelled North North Eaſt over a Deſert Ground, and came in three Hours to a ſmall Rivulet called *Sejour*, which falls into the *Euphrates* about three Hours below *Jerabolus*. In about two Hours more we came to a fine fruitful Plain, covered with extraordinary good Corn, lying between the Hills and the River *Euphrates*. In about an Hour and half's Travelling through this Plain on the Banks of the River, we came to *Jerabolus*. This Place is of a ſemicircular Figure, its flat Side lying on the Banks of *Euphrates*; on that Side it has a high long Mount cloſe by the Water, very ſteep. It was anciently built upon (and at one End of it I ſaw Fragments of) very large Pillars, a Yard and half Diameter, and Capitals and Corniſhes well carved. At the Foot of the Mount was carved on a large Stone, a Beaſt reſembling a Lion, with a Bridle in his Mouth, and I believe anciently a Perſon ſitting on it; but the Stone is in that Part now broke away; the Tail of the Beaſt was couped.

Round about this Place are high Banks caſt up, and there is the Footſteps of Wall on them. The Gates ſeem to have been well-built; the Whole was 2250 Paces, that is Yards, in Circumference. The River is here as large as the *Thames* at *London*; a long Bullet-gun could not ſhoot a Ball over it, but it dropt into the Water. Here is found a large Serpent, which has Legs and Claws, called *Woralla*. I was told by a *Turk*, that a little below this Place, when the River is low, may be ſeen the Ruins of a Stone-bridge over the River; for my own Part, I ſaw it not, nor do I much rely on the *Turk*'s Veracity. The River ſeem'd to be lately fallen very ſuddenly, for the Banks were freſh wet two Yards and more above the Water. It was here North and South.

On the 21ſt we kept cloſe on the Banks of *Euphrates*, and in two Hours and a half croſſed a fine Rivulet called *Towzad*, and in two Hours more arrived over-againſt *Beer*, and pitched on a Flat, cloſe by the River-ſide. Obſerving the Latitude of the Place by my Quadrant, I found the Angle between the Sun and the Zenith, to be twenty-two Degrees, and the Declination this Day being fifteen Degrees ten Minutes, the Whole is thirty-ſeven Degrees, and ten Minutes.

On the 22d, we continued at our Station, not daring to croſs the River for fear of falling into the Hands of the *Chiah* of the Baſhá of *Urfa*, who was then at *Beer*, ordering many Boats of Corn down to *Bagdal*. We were ſupplied at the ſame Time with Proviſions by *Sheck Aſſyne*, to whom we made Returns.

On the 23d, the *Chiah* being now departed, *Sheck Aſſyne* invited us over to *Beer*. We croſſed in a Boat of the Country, of which they have a great many, this being the great Paſs into *Meſopotamia*. The Boats are of a miſerable Fabrick, flat and open in the Fore-part for Horſes to enter: They are large enough to carry about four Horſes each: Their Way to croſs is, by drawing up the Boat as high as they know to be neceſſary, and then with wretched Oars ſtriking over, they fall a good Way down by the Force of the Stream before they arrive at the further Side.

Having ſaluted *Aſſyne*, we were conducted to ſee the Caſtle, which is a large old Building on the Top of a great long Rock, ſeparated by a great Gulph or natural Bottom, from the Land. At firſt coming within the Gates, which are of Iron, we ſaw ſeveral large Globes of Stone, about twenty Inches Diameter, and great Axles of Iron, with Wheels which were entire Blocks of Wood two Foot thick in the Nave, and cut ſomewhat to an Edge toward the Periphery and Screws, to bend Bows or Engines; as alſo ſeveral Braſs Field Pieces.

Aſcending up the Sides of the Rock by a Way cut obliquely, you come to the Caſtle. At firſt Entrance you find a Way cut under Ground down to the River. In the Caſtle the principal Things we ſaw were, firſt, a large Room full of old Arms. I ſaw here Glaſs Bottles to be ſhot at the End of Arrows; one of them was ſtuck at the End of an Arrow, with four Pieces of Tin by its Sides, to keep it firm: Vaſt large Croſs-bows and Beams, ſeemingly deſigned for Battering-Rams, and *Roman* Saddles, and Head-pieces of a large Size, ſome of which were painted, and ſome large Thongs for Bow-Strings, and Bags for ſlinging Stones. But the Jealouſy of the *Turks* would not permit us to ſtay ſo long as would have been requiſite for a perfect Examination of theſe Antiquities. From the Caſtle we returned to *Aſſyne*, and were civilly treated. In the Evening we went up into the Country of *Meſopotamia*. The Hills are chalky and ſteep, and come cloſe to the Water-ſide, without a Plain intervening, as it is upon the Side of *Syria*, ſo that *Beer* ſtands on the Side of a Hill. However, it has a Couple of fine Streams that run over the Top of the Hill; one of which drives two Mills, and ſo runs down to the City, which is well walled. In the Side of the Hill there is a Kane under Ground, cut into the Rock, with fifteen large Pillars left to ſupport its Roof.

24. We left *Beer*, and travelling Weſt, came in three Hours to *Nizib*, a Place well ſituated at the Head of the *Towzad*. Here is an old ſmall Church very ſtrong and entire, only the Cupola in the Middle of the Croſs is broke down, and its Space covered with Leaves to fit the Place for a Moſque. I believe the *Turks* made the Places to which they turn in Prayers, empty

Niches, to ſhew that they worſhipped one inviſible God, not to be repreſented by Images. In two Hours we came from *Nizib* to a good Chriſtian Village called *Uwur*, and in an Hour and half more to a Well in the Deſert.

25. We travelled Weſt near two Hours, and came through a fine Country diverſified into ſmall Hills and Valleys, to a Village called *Adjia*, having left *Silam* and two other Villages on the Right-hand. At *Adjia* riſes the River of *Aleppo* from a large Fountain at once, and juſt above it runs the *Sejour*, which might be let into it by a ſhort Cut of ten Yards. From *Adjia* our Courſe was Weſt North Weſt. The Banks of the *Sejour* are well planted with Trees and Villages. In two little Hours we came to *Antab*, having croſſed the *Sejour* at a Bridge, about three Quarters of an Hour before. Leaving the City on the Right-hand we paſſed under its Walls, and pitched about three Quarters of an Hour from it on a plain Field, on the Banks of the *Sejour*.

Antab ſtands moſtly on a Hill, having a Caſtle, on a round Mount at its North-ſide, and exactly reſembling that of *Aleppo*, though much leſs: It has a very deep Ditch round it, and at the Foot of the Mount within the Ditch, is a Gallery cut through the Rock all round the Caſtle with Portals for Shot, and it is faced with Stone Walls, where the Rock was not ſtrong enough. The Houſes have generally no upper Rooms, the *Bazars* are large. I ſaw here a fine Stone very much reſembling Porphyry, being of a red Ground with yellow Specks, and Veins very gloſſy. It is dug juſt by *Antab*.

Antab is doubtleſs *Antiochia penes Taurum*, in the Skirts of which it ſtands, and is not far diſtant from the higheſt Ridge: It is about two Thirds as big as *Aleppo*.

26. We paſſed through a fruitful mountainous Country, and came in ſeven Hours and a Quarter to *Rowant* Caſtle: It ſtands on the Top of a round ſteep Hill, and has been ſtrong for the Times it was built in. It is probably a *Saracen* Fabrick, and is now in Ruins. At the Foot of the Hill Weſtward runs the River *Ephreen*, its Courſe is South South Weſt; our Courſe from *Antab* to *Rowant* was North Weſt and by North.

27. We continued travelling through the Mountains, which were now ſomewhat more uneven and precipitous, but watered every where with fine Springs and Rivulets. In about ſix Hours we came to *Corus*; our Courſe was South-weſt, having croſſed the *Ephreen* about two thirds of an Hour before. Juſt by *Corus* is the River *Sabon*, that is, *Chor* or *Char*, which encompaſſes moſt part of the City.

Corus ſtands on a Hill, conſiſting of the City and Caſtle: The City ſtands Northerly, and from its North-end aſcending, you come at laſt to a higher Hill to the Southward, on which ſtands the Caſtle. The whole is now in Ruins, which ſeems to have been very large, wall'd very ſtrongly with huge ſquare Stones. Within are obſervable the Ruins, Pillars, *&c.* of many noble Buildings. On the Weſt-ſide there is a ſquare Encloſure of great Capacity, compaſſed with good Walls and five Gates, which admitted into it, as one may diſcern by the Ruins of them. I conjectured they might be the Cathedral.

Below the Caſtle-Hill to the Southward ſtands a noble old Monument. It is ſix ſquare and open at ſix Windows above, and is covered with a Pyramidal Cupola. In each Angle within is a Pillar of the *Corinthian* Order of one Stone, and there is a fine Architrave all round juſt under the Cupola, having had Heads of Oxen carved on it, and it ends a-top with a large Capital of the *Corinthian*; near this are ſeveral ſepulchral Altars.

28. We left *Corus*, and without the Town about half a Mile South Eaſt, we deſcended down through a Way cut obliquely on the Side of a Precipice, which leads to a Bridge of ſeven Arches, of a very old Structure, over the River *Sabon*. And about a Quarter of a Mile further we came to another Bridge of three very large Arches over the River *Ephreen*. Theſe Bridges are very ancient, and well built of ſquare Stone. Three Pillars have an acute Angle on the Side againſt the Stream, and a round Buttreſs on the other Side, and on both Sides are Niches for Statues. They were well paved a-top with large Stones, and are doubtleſs as well as that of the other Side of the Town, the Work of the excellent and magnificent *Theodorit*.

From this Bridge in about three Hours with a Courſe South-Eaſt, or South Eaſt and by South, we arrived at *Jan Bolads*. From *Jan Bolads* to *Chiblis* is one Hour and two Thirds, Courſe North, North-Eaſt. *Chiblis* is a large populous Town, and has fifteen Moſques that may be counted without the Town, and it has large Bazars. Many Medals are found here, which ſeem to argue it to be ancient; but under what Name I know not.

Aleppo bears from *Jan Bolads* South and by Eaſt, *Seck Berukel* South South Weſt. An Hour from *Jan Bolads* is *Azaſs*; and two Hours further we lodged in the Plain, which about *Chiblis* and *Azaſs* is very wide and no leſs fruitful. This Country is always given to the *Valide*, or Grand Signior's Mother. On *Saturday*, *April* 29, we arrived ſafe at *Aleppo*, having travelled about five Hours that Day.

There is at the Diſtance of about four Hour's Journey from this City, a very great natural Curioſity, much talked of in that Country, and which deſerves to be particularly deſcribed: It is called the *Valley of Salt*, and indeed is ſo ſtiled with great Propriety. This Valley is of two or three Hours Extent; we were three Quarters of an Hour in croſſing one Corner of it. It is of an exact Level, and appears at a Diſtance like a Lake of Water. There is a Kind of a dry Cruſt of Salt all over the Top of it, which ſounds when the Horſes go upon it like frozen Snow. There are three or four ſmall Rivulets empty themſelves into this Place, and waſh it all over about Autumn, or when the Rains fall. In the Heat of the Summer the Water is dried off, and when the Sun has ſcorched the Ground, there is found remaining the Cruſt of Salt aforeſaid, which they gather and ſeparate into ſeveral Heaps, according to the Degrees of Fineneſs, ſome being exquiſitely white, others alloy'd with Dirt. It being ſoft in ſome Places, our Horſes Hoofs ſtruck in deep; and there I found in one Part a ſoft brown Clay, in another a very black one, which to the Taſte was very ſalt, though deep in the Earth. Along on one Side of the Valley, *viz.* that towards *Gibul*, there is a ſmall Precipice, about two Men's Lengths, occaſioned by the continual taking away the Salt, and in this you may ſee how the Veins of it lie. I broke a Piece of it, of which, that Part that was expoſed to the Rain, Sun, and Air, though it had the Sparks and Particles of Salt, yet it had perfectly loſt its Savour, as in St. *Matth.* Chap. v. The inner Part, which was connected to the Rock, retained its Savour, as I found by Proof. In ſeveral Places of the Valley we found the thin Cruſt of Salt upon the Surface, bulged up as if ſome Inſect, working under it, had raiſed it; and taking off the Part, we found under it Effloreſcences of pure Salt, ſhot out according to its proper Figure. At the neighbouring Village *Gibul* are kept the Magazines of Salt, where you find great Mountains (as I may ſay) of that Mineral ready for Sale. The Valley is farmed of the Grand Signior at 1200 Dollars *per Annum*.

31. Our Author not only wrote this large and regular Account of his Travels, but was alſo ready on any Occaſion to explain whatever Difficulties aroſe in the Minds of his Friends, with reſpect to the Eaſtern Countries, in which he had lived ſo long, or the Manners of the People that inhabit them. Thus upon the Reverend Mr. *Oſborn*'s writing him a Letter, to deſire from him a general Character of the *Turks*, and a particular Account of the Manner in which the *Engliſh* Merchants lived amongſt them; he gave him the following clear and diſtinct Anſwer. " As to the former, it would fill
" a Volume to write my whole Thoughts about them, I
" ſhall only tell you at preſent, that I think they are very
" far from agreeing with that Character, which is given
" of them in *Chriſtendom*, eſpecially for their exact Juſ-
" tice,

“ tice, Veracity and other moral Virtues, upon Account of which, I have ſometimes heard them mentioned with very extravagant Commendations, as though they far exceeded Chriſtian Nations. But I muſt profeſs myſelf of another Opinion: For the Chriſtian Religion, how much ſoever we live below the true Spirit and Excellency of it, muſt ſtill be allowed to diſcover ſo much Power upon the Minds of its Profeſſors, as to raiſe them far above the Level of a *Turkiſh* Virtue! It is a Maxim that I have often heard from our Merchants, that a *Turk* will always cheat when he can find an Opportunity; Friendſhip, Generoſity, true Wit (in the *Engliſh* Notion) and delightful Converſe, and all the Qualities of a refined and ingenuous Spirit, are perfect Strangers to their Minds, though in Traffick and worldly Negociations they are acute enough, and are able to carry the Accounts of a large Commerce in their Heads, without the Help of Books, by natural Arithmetick, improved by Cuſtom and Neceſſity. Their Religion is framed to keep up great outward Gravity and Solemnity, without begetting the leaſt good Tincture of Wiſdom or Virtue in the Mind. You ſhall have them at their Hours of Prayer (which are four a Day always) addreſſing themſelves to their Devotions with the moſt ſolemn and critical Waſhings, always in the moſt publick Places, where People are paſſing, with moſt lowly and moſt regular Proſtrations, and a hollow Tone, which are, amongſt them, the great Excellencies of Prayer. I have ſeen them in affected Charity, give Money to Bird-catchers (who make a Trade of it, to reſtore the poor Captives to their natural Liberty, and at the ſame Time hold their own Slaves in the heavieſt Bondage. And at other Times they will buy Fleſh to relieve indigent Dogs and Cats, and yet curſe you with Famine and Peſtilence, and all the moſt hideous Execrations; in which Way theſe Eaſtern Nations have certainly the moſt exquiſite Rhetorick of any People upon Earth. They know hardly any Pleaſure but that of the ſixth Senſe. And yet with all this, they are incredibly conceited of their own Religion, and contemptuous of that of others, which I take to be the great Artifice of the Devil, in order to keep them his own. They are a perfect viſible Comment upon our Bleſſed Lord's Deſcription of the *Jewiſh Phariſees*. In a Word, Luſt, Arrogance, Covetouſneſs, and the moſt exquiſite Hypocriſy, compleat their Character. The only Thing that ever I could obſerve to commend in them is, the outward Decency of their Carriage, the profound Reſpect they pay to Religion, and to every Thing relating to it; and their great Temperance and Frugality. The Dearneſs of any Thing is no Motive in *Turkey*, though it be in *England*, to bring it into Faſhion. As for our living amongſt them, it is with all poſſible Quiet and Safety, and that is all we deſire, their Converſation being not in the leaſt entertaining. Our Delights are among ourſelves, and here being more than forty of us, we never want a moſt friendly and pleaſant Converſation. Our Way of Life reſembles in ſome Meaſure the Academical. We live in ſeparate Squares ſhut up every Night, after the Manner of Colleges. We begin the Day conſtantly as you do, with Prayers, and have our ſet Times for Buſineſs, Meals, and Recreations. In the Winter we hunt in the moſt delightful Campaign twice a Week; and in the Summer go as often to divert ourſelves under our Tents, with Bowling, and other Exerciſes; ſo that you ſee we want not Divertiſements, and theſe all innocent and manly. In ſhort, it is my real Opinion, that there is not a Society out of *England*, that, for all good and deſirable Qualities, may be compared to this.”

Thus we ſee, that very ſenſible Men differ very much in Reference to this Subject, and that as ſome entertain very high, ſo others again have very low and mean Opinions of *Turks*. This Diſparity muſt ariſe from that Inequality in Point of Underſtanding and Morals, which is natural to them and to all Nations; and therefore we are to make proper Allowances in reference to all ſuch general Characters. One Thing deſerves to be particularly remarked, which is this, that amongſt the *Turks* it is not uſual for the better Sort of People, by which I mean thoſe beſt bred and educated amongſt them, to betake themſelves to Trade; but, on the contrary, they commonly apply either to the Sword or to the Robe; that is to ſay, they endeavour to riſe in the Army, which is the ſpeedieſt Way; or in the Law, which is the ſafeſt; this may very well account for the Want of that Integrity and ſtrict Honour, complained of amongſt the *Turks*; and I apprehend, that it has appear'd amongſt the *Engliſh* in a very high Point of Light when our Author reſided at *Aleppo*, where he lived and converſed with Gentlemen, who, in Point of Birth and Fortune, were ſuperior to Temptations, and who were above leſſening their Characters to increaſe their Riches. I had the Honour to know more than one of theſe Gentlemen myſelf, and have ſpent ſome of the happieſt Moments of my Life in their Company: They were Perſons, who, from their long Experience, had juſt and excellent Notions of Trade; and never diſcourſed of it without obſerving, that the true Baſis of Credit was an irreproachable Behaviour: They thought, that in Foreign Countries, and more particularly in the *Levant*, Factors were not only truſted with the Effects of their Correſpondents, but alſo, in ſome Meaſure, with the Honour of their Nation, and that to injure the latter was as much a Crime, as to be falſe to the former. I hope and I believe, that the ſame Meaſures are ſtill purſued with the ſame Punctuality, and as much to the Profit and Honour as ever of the *Britiſh* Nation; but whoever reflects on the wide Difference between *Turkiſh* Traders and *Britiſh* Merchants, will not at all wonder that the former were ſo low in the Eſteem of the latter. But for all this, we may lay it down as a Thing certain enough, that amongſt the better Sort of *Turks* there are Men of great Probity and Honour, and who are very far from ſeeking to make an Advantage of the Ignorance or Credulity of Strangers. When I ſay this, I do not mean their great Miniſters and Baſhaws, who have roſe either by Accident, or by the Caprice of their Maſters; ſuch Men in *Turkey*, and in all other Nations, are frequently unworthy of the Poſts they hold, and exerciſe them with a Venality ſuitable to their vicious Diſpoſitions. Ambition, Pride, and a Spirit of Voluptuouſneſs, are Paſſions that inſpire Men with as mean Thoughts as Avarice can do, though certainly that is the meaneſt of all Vices, and moſt unworthy of the Mind of Man. We muſt likewiſe make ſome Allowances for the Nature of their Government, which has already been fully deſcribed; for in a Country where Money will do every Thing, it is natural for every Man to be deſirous of getting Money.

It may not be amiſs to conſider how great and dangerous an Evil this is, and how far it is capable of ſubverting the Conſtitution of every Country where it prevails. We know that in former Times this Humour did not prevail among the *Turks*; and that on the contrary, they were proud of their Poverty, or rather, being content with the Neceſſaries of Life, they deſpiſed thoſe who could not live without enjoying Superfluities; in thoſe Days the *Turks* were a great and a victorious People. The ſame Thing may be ſaid of other Nations with the ſame Truth, but we will confine ourſelves at preſent to the Eaſt. The *Saracens* or *Arabs*, in the Days of *Mahomet* and his immediate Succeſſors, were a Race of hardy People, and their Princes valued themſelves upon their Power, without dreaming of Magnificence. As that Spirit declined, and as their Caliphs began to affect ſtately Palaces, numerous Guards, and all the exterior Enſigns of unlimited Authority, they loſt thoſe Qualities which rendred them truly venerable. This created Diſſentions and civil Wars, frequent Inſurrections, and a Series of Revolutions, which by Degrees broke the Power of particular Princes, and in Proceſs of Time that of the whole Nation; ſo that now there is not the leaſt Footſteps of that Authority, which once appear'd ſo terrible to all its Neighbours. The *Mahometan* Empires of the preſent Age, ſuch as thoſe eſtabliſhed in *India*, *Perſia*, *Barbary* and *Turky*, have been raiſed on the Ruins of the *Saracen* Empire, and are all of them now grown old and infirm, ſo that they ſeem ready to crumble under their own Weight. No other Reaſon can be aſſigned for this, but the Prevalence of Corruption in them all, for wherever moral Virtues grow into Contempt, it is ſimply impoſſible that national Power ſhould long ſubſiſt; or that where Princes and great Men, inſtead of devoting their Cares to the Adminiſtration of Juſtice, become inſenſible of all Things, but what contribute to their Eaſe and Pleaſure, they ſhould for any Length of Time continue to enjoy even theſe. Innocent Divertiſements and manly Pleaſures are not at all inconſiſtent with good Government and publick Spirit; but ſenſual Delights, and a Propenſity to Indolence which always accompanies them, naturally begets Contempt in thoſe whoſe Reverence and Reſpect can only keep them in real and conſtant Subjection. Theſe Remarks may be confirm'd from what has happen'd within our View in all theſe Countries. The *Mogul* Empire has been over-run in leſs time than would have ſufficed in ancient Time for the Conqueſt of one of its Provinces; the *Perſian* Empire has been ſubverted over and over; nothing has been more unſteady of late Years than the Throne of the *Xeriffs* in *Africa*, and the depoſing of the Grand Signior is in ſome Meaſure become a Thing familiar. But let us now return to our Author for the laſt Time.

Mr. *Maundrell*, though he had lived long in a Country where Superſtition prevails to ſuch a Degree, that the ſeveral Nations who inhabit it ſeem to vie with each other in Credulity, yet he preſerved a juſt Regard for Evidence, and did not ſuffer his Judgment to be hurried away by Tradition, however ancient; or Aſſertions, however bold. He examined every Thing carefully, and then exerciſed his own Judgment freely, aſſiſted by all the Helps that could be derived from Converſation and Learning. Of this we have a remarkable Inſtance in an Anſwer he gave to a Gentleman who conſulted him upon theſe two Points, *viz.* Whether *Gehazi*'s Leproſy ſtill ſtuck to and diſtinguiſhed his Poſterity as ſome have reported; and what Ground there was to impute to the *Greek* Church, a Notion that Perſons who died excommunicated, did not conſume in their Graves. "When I was in the *Holy Land*, ſays he, I ſaw ſeveral that labour'd under *Gehazi*'s Diſtemper, but none that could pretend to derive his Pedigree from that Perſon. Some of them were poor enough to be his Relations, particularly at *Sichem* (now *Naploſa*) there were no leſs than ten (the ſame Number that were cleanſed by our Saviour not far from the ſame Place) that came a begging to us at one Time. Their Manner is to come with ſmall Buckets in their Hands, to receive the Alms of the Charitable, their Touch being ſtill held infectious, or at leaſt unclean. The Diſtemper as I ſaw in them, was very different from what I have ſeen it in *England*, for it not only defiles the whole Surface of the Body with a foul Scurf, but alſo deforms the Joints of the Body, particularly thoſe of the Wriſts and Ancles, making them ſwell with a gouty, ſcrophulous Subſtance, very loathſome to look upon. I thought their Legs reſembled thoſe of old battered Horſes, ſuch as are often ſeen in Drays in *England*. The whole Diſtemper indeed as it there appeared, was ſo noiſome, that it might well paſs for the utmoſt Corruption of the human Body on this Side the Grave. And certainly the inſpired Penmen could not have found out a fitter Emblem, whereby to expreſs the Uncleanneſs and Odiouſneſs of Vice. But to return to *Gehazi*. It is no Wonder if the Deſcent from him be by Time obſcured, ſeeing the beſt of the *Jews*, at this Time of Day, are at a Loſs to make out their Genealogies. But beſides, I ſee no Neceſſity in Scripture for his Line's being perpetuated. The Term *(for Ever)* is, you know, often taken in a limited Senſe in holy Writ, of which the Deſignation of *Phineas*'s Family to the Prieſthood, *Numb.* xxv. 15. may ſerve for an Inſtance. His Poſterity was, you know, cut entirely off from the Prieſthood, and that transferred to *Eli*, who was one of another Line, about three hundred Years after. I have enquired of a *Greek* Prieſt, a Man not deſtitute either of Senſe or Probity, about your other Queſtion. He poſitively affirmed it, and produced an Inſtance of his own Knowledge in Confirmation of it. He ſaid, that about fifteen Years ago, a certain *Greek* departed this Life without Abſolution, being under the Guilt of a Crime which involved him in the Sentence of Excommunication, but unknown to the Church. He had Chriſtian Burial given him, and about ten Years after a Son of his dying, they had Occaſion to open the Ground near where the Body was laid, in order to bury his Son by him; by which Means they diſcovered his Body as entire as when it was firſt laid in the Grave. The Shrowd was rotted away, and the Body naked and black, but perfectly ſound. Report of this being brought to the Biſhop, he immediately ſuſpected the Cauſe of it, and ſent ſeveral Prieſts, of whom the Relator was one, to pray for the Soul of the Departed, and to abſolve him at his Grave. Which they had no ſooner done, but (as the Relator goes on) the Body inſtantly diſſolved, and fell into Duſt like ſlack'd Lime. And ſo, well ſatisfied with the Effect of their Abſolution, they departed. This was deliver'd to me *Verbo Sacerdotis*. The Man had hard Fortune not to die in the *Roman* Communion; for then, his Body being found ſo entire, would have entitled him to Saintſhip: For the *Romaniſts*, as I have both heard and ſeen, are wont to find out and maintain the Relicks of Saints by this Token. And the ſame Sign, which proves an *Anathema Maranatha* amongſt the *Greeks*, demonſtrates a Saint amongſt the Papiſts; perhaps both equally in the Right." This ſufficiently proves what has been before advanced, that Superſtition prevails generally through the Eaſt, and that the *Chriſtians* are as far gone in it as the *Turks*; neither need it be at all wonder'd at among the *Greeks*, ſince it is natural for all Nations under Oppreſſion, to ſink into Superſtition; and there is certainly nothing that can be more evident, than that theſe unfortunate People are brought as low, and their Spirits as much broke, as it is poſſible to conceive in the Courſe of ſo many Ages as they have been under the Yoke: But however, it is certain, that even in *Ruſſia*, where their Religion is eſtabliſhed by Law, this Notion prevails, together with the Practice eſtabliſhed upon it, of abſolving the Dead, that their Bodies may rot in Peace, and not remain, as they apprehend they do, for a Covering or Receptacle to evil Spirits. Upon the ſame ſtrange Notion, collected from the ſame Nation, aroſe the wild and incredible Relations concerning *Vampyres*, or dead Bodies that ſuck the Blood of living ones, that appear'd in our News Papers ſome Years ago from *Hungary*. Yet I think it might be doubted, whether this ſtrange Opinion was not originally borrow'd from the *Mahometans*, who, as we have before obſerved, are ſtrongly perſuaded, that Men have a Kind of Senſation in their Graves, and that there is no ſuch Thing as abſolute Reſt even among the Dead.

We may learn from this Gentleman's Account of the *Holy Land*, the true State and Condition of it at this Day, independent of Fable and Prieſtcraft; and from thence it appears, that there could not be a more fruitful or pleaſant Region, better ſeated for all Purpoſes whatever, or more in the Heart or Center of the Univerſe, while that was a Thing of Conſequence to the Propagation of Religion, than this Land of *Iſrael*. It is no leſs evident from the Remains of a vaſt Variety of Antiquities, ſome of which extend to the very Country itſelf, where not only Buildings but Mountains are ſeen in Ruins; that this was truly what *Canaan* is repreſented to be in the holy Scriptures, a Land of Hills and of Valleys, abounding with Corn, productive of Wine, and flowing as it were with Milk and Honey. Yet now its State is ſo much alter'd, that if we were to meaſure the Wickedneſs of its Inhabitants by the Miſery of the Places that once furniſhed them with Habitations, we ſhould not in the leaſt doubt of the Repreſentations made by inſpired Writers of the Sinfulneſs and Obſtinacy of theſe People. There is another natural and plain Obſervation ariſes from contemplating the paſt and preſent State of this famous Country, and it is this; that the unanimous Inclination of *Jews*, *Chriſtians*, and *Mahometans*, upon very different Principles, to pay it an high Veneration, and to eſteem many Places therein as peculiarly ſacred, is a Kind of perpetual Teſtimony in Favour of Revealed Religion. It is impoſſible that Nations, differing ſo widely in their Manners and Cuſtoms, as well as in their Religious Notions, ſhould for ſo many Ages agree in obtruding Cheats upon each other. We may add to this, that the *Samaritan* Scripture is another ſtrong Proof of the Sincerity and Authenticity of the *Moſaick* Writings; for nothing but Truth could have united the *Samaritans* and *Jews*, whoſe Hatred to each other has now ſubſiſted for many Centuries, in concurring to vouch any Fact. To this, indeed, it may be objected, that they differ about the Mountains *Gerizim* and *Ebal*, in which they directly contradict each other: But when this Objection is maturely weigh'd, it will be found to fortify extremely the Credit of this Teſtimony, becauſe it is the cleareſt and moſt unexceptionable Proof, that there is no Kind of Colluſion between the two Nations, but that the reſpective Perſuaſions of each, with regard to the Copies of the Scriptures they have amongſt them, is founded upon Motives in which they cannot be deceived. It is very true, that there is a prodigious Mixture of fabulous Superſtition in the Traditions of all theſe Nations; but as this is natural, and indeed unavoidable in Things of this Kind, it is ſo far from derogating from the material and ſubſtantial Proofs, which are, if I may be allow'd the Expreſſion, over-grown and cover'd with this Bark of Folly, that it rather fortifies the Evidence in the Sentiments of a ſober and ingenuous Mind. For what Kind of Hiſtory is there, which has come down to us pure and unmixed with Fable? The Eaſtern Nations were always famous for it, the *Egyptians* had it in a high Degree, it paſſed from them to the *Greeks*; and as to the Hiſtory of the elder Ages of *Rome*, it was ſo intermixed therewith, that in the Times of *Cicero* they were ſcarce able to diſtinguiſh any beyond the capital Facts that were to be relied on. But does it follow that becauſe Men have always loved to amplify and extend the Truth, therefore there was no ſuch Thing? Shall we, becauſe it is very difficult to ſettle the preciſe Situation of ancient Cities that make ſo great a Figure in the beſt Authors, doubt whether thoſe Cities ever were in the World? Or, becauſe the Oriental Chronicles of all the ancient Empires differ widely from ours, ſhall we peremptorily decide, that there never were any ſuch, notwithſtanding that manifeſt Monuments of the flouriſhing State of thoſe ancient Empires remain even to our Times? Are the Antiquities at *Tchelminar* in *Perſia*, of *Tadmor* or *Palmira* in the Wilderneſs, of *Balbeck*, or *Heliopolis* ſeen by our Author, to be rejected as Fancies or Fables? And, if theſe are all Matters of Fact, do they not more clearly prove the Hiſtories of paſt Times, than all the Chronicles in the World? Men may write fabulous Hiſtories, or may forge Records, but ſuch Monuments of ancient Times are beyond the Reach of Fiction or Forgery; ſo that Incredulity, with reſpect to them, is not only irrational and abſurd, but downright Madneſs.

We may upon the whole reſt ſatisfied, that what our Author has delivered to us in his Travels, and in his Remarks, deſerve both Credit and Reſpect, and are capable of furniſhing us with Materials for very ſolid and uſeful Meditations. But it is now Time to proceed, and quitting the Limits of the *Turkiſh* Empire, to purſue our Journey with freſh Guides, and freſh Views, into other Regions, which will afford us new Pleaſures and additional Helps, to the Increaſe of our Knowlege, and the Improvement of our Underſtandings.

CHAPTER II.

Containing TRAVELS through the Empire of *Perſia*, and the Provinces depending thereon; with a large Account of their Climate, Soil, and Produce, the Conſtitution of the Empire, and Nature of the Shah's Government, the Laws, Manners, Religion, Commerce, Diverſions, &c. not only of the native *Perſians*, but of the ſeveral Nations living in their Country, and ſubject to the Shah, with a brief Account of the late Revolutions in that Empire.

SECTION I.

The Travels of Sir JOHN CHARDIN, by the Way of the *Black-Sea*, through the Countries of *Circaſſia*, *Mingrelia*, the Country of the *Abcas*; *Georgia*, *Armenia*, and *Media* into *Perſia Proper*; with a very curious and accurate Account not only of the Countries through which he travelled, but of the Manners and Cuſtoms, Religion and Government, Commerce and Inclinations of the ſeveral Nations that inhabit them; Relations ſo much the more curious, as theſe Countries, and the People dwelling in them, had not been tolerably deſcribed before by any Author.

1. *A ſuccinct Introductory Account of the worthy Perſon by whom theſe Travels were written, of the Value of them, and of the peculiar Excellencies by which they are diſtinguiſhed.* 2. *An Account of the* Thracian Boſphorus, *of the delightful Proſpects in ſailing through it, and the beautiful Countries upon the Coaſt.* 3. *The Author's Arrival at* Caffa, *a Deſcription of the Country of the* Crim Tartars, *and of the Condition, Cuſtoms, and Manners of that Nation.* 4. *The* Cherks, Abcas, *and other barbarous Nations that however ſtile themſelves* Chriſtians, *largely deſcribed, with ſome very curious Remarks on the State and Strength of thoſe Nations.* 5. *A more particular Relation of the* Mingrelians, Cara Cherks, *or* Black Carcaſſians, *and other Inhabitants of that Country, known to the Ancients by the Name of* Colchis. 6. *The large and fruitful Country of* Mingrelia *exactly deſcribed, with a View of the Government, Forces, Way of Living, and diſſolute Manners of all Ranks and Degrees of People who inhabit it.* 7. *Of the terrible Corruption in Point of Religion, which reigns amongſt them, and from whence it appears to be a wild and extravagant Mixture of Atheiſm and Superſtition, kept up by the Arts and Frauds of their Prieſts, who are little better than Cheats and Juglers.* 8. *The Principality of* Guriel, *and the Kingdom of* Imeretta, *anciently called* Iberia, *with the Countries adjacent, deſcribed, and the Manner in which they loſt their Independency, and became Tributaries to the* Turks. 9. *The Author continues his Journey through* Mingrelia, *is preſent at the Ceremony of Baptizing two Children, of which he gives a large and particular Account.* 10. *The famous Mountain* Caucaſus *deſcribed, and a View of the Condition of its preſent Inhabitants.* 11. *A large and circumſtantial Detail of the Country and Inhabitants of* Georgia, *with a Deſcription of the capital City of* Teflis, *and the State of the* Roman *Catholick Miſſionaries in that Country.* 12. *The Author's Travels through the Countries, at the Foot of Mount* Taurus, *forming a little Principality inhabited by the* Coſſacs. 13. *An Account of the famous City of* Erivan, *and of the Country of* Armenia, *of which it is the Capital, as well as of the People who inhabit it.* 14. *A Digreſſion concerning the Marriages of the* Perſians, *and the Reaſons why Divorces, though lawful amongſt them, are ſeldom practiſed.* 15. *The Author's ſubſequent Obſervations in his Travels through* Armenia, *and of the Fortreſſes erected to prevent the Incurſions of the* Turks. 16. *Of the noble Province of* Azerbeyan, *anciently called* Media, *with an Account of a ſpurious Kind of Cochineal prepared by the Inhabitants.* 17. *A Deſcription of the large, populous and magnificent City of* Tauris, *the prodigious Fertility of the Country round about it, and a Compariſon between the different Climates of* Media *and* Parthia, *with many other curious Particulars.* 18. *A Deſcription of the laſt-mentioned Province, and of the Cities of* Ebher *and* Caſbin, *in the Neighbourhood of which grow the fineſt Grapes in the World.* 19. *An Account of the famous City of* Rey, *formerly one of the largeſt in* Aſia, *of which there are now ſcarce any Ruins remaining.* 20. *The City of* Com *and the glorious*

glorious Tombs of the Perſian *Saints therein, fully deſcribed, with an Account of the adjacent Country.* 21. *A Deſcription of the City of* Caſhan, *with an Account of the ſeveral Manufactures carried on there, and of the fruitful Country about it.* 22. *The Author's Account of two other Roads leading from* Warſaw *to* Iſpahan, *and from* Iſpahan *to* Moſcow. 23. *Remarks and Obſervations upon the foregoing Section.*

1. WE have very large and conſiderable Collections of Travels through the Empire of *Perſia*, and the Provinces depending upon it; and indeed there are very few Countries that better deſerve to be viſited, or which afford either the Traveller himſelf, or whoever peruſes his Accounts, more Entertainment than *Perſia*. Notwithſtanding this, many Inconveniencies would ariſe from inſerting numerous Accounts of Travels through this Country, becauſe of Neceſſity it muſt produce many Repetitions, which would appear tedious and troubleſome, as well as perplexing to the Reader. The Method therefore that we ſhall take, is to give in this Section the Travels of Sir *John Chardin*, from *Conſtantinople* into the *Perſian* Dominions; and in the ſubſequent Sections, we ſhall give a Deſcription, in as regular a Method as is poſſible, of the whole Empire, diſtinguiſhed into its ſeveral Provinces, with whatever occurs remarkable or worthy of Notice in the Works of other celebrated Travellers, ſo as to preſerve the Marrow and Quinteſcence of their Relations, without embarraſſing ourſelves with Things of leſs Conſequence, and Particulars that without the leaſt Prejudice to the Deſign of this Work may be as well omitted. By this Means we ſhall bring into a reaſonable Compaſs all that is requiſite, and give a diſtinct and clear Notion of the paſt and preſent Condition of one of the moſt powerful and famous Empires of the Earth.

The Reaſon we made Choice of Sir *John Chardin*'s Travels, by way of Introduction, was his taking a different Route from moſt other Travellers, *viz.* by the *Black-Sea*, and the Countries that border upon it, which are ſcarce deſcribed by any other Traveller, or at leaſt are deſcribed by none with equal Plainneſs and Perſpicuity. It riſes from hence, that, generally ſpeaking, we have only confuſed and imperfect Conceptions concerning theſe Countries and their Inhabitants, which however it is of ſome Importance that we ſhould know more diſtinctly, becauſe as they made a great Figure in ancient Hiſtory, ſo it is not at all impoſſible, that as low and deſpicable as they now ſeem, they may hereafter come to change their Circumſtances, and appear with new Luſtre, if not in ours, yet in the Eyes of our Poſterity. It is very evident, that from their Situation they are very conſiderable, and if their Inhabitants were well governed, and lived in tolerable Correſpondence with each other, they might be now, as they were heretofore, equally formidable to the Grand Signior, Succeſſor to the *Greek* Monarchs of *Conſtantinople*, and to the *Perſian* Emperors. We have a late Inſtance of this in the Caſe of *Nadir Shah*, who received from theſe deſpiſed and barbarous People, that Check which proved firſt fatal to his Authority, and in the End to his Perſon. The Author of theſe Travels was a Gentleman of a good Family in *France*, and of a liberal Education; he applied himſelf to Commerce very early, and proſecuted with great Succeſs the moſt conſiderable Branch of Foreign Trade, that of dealing as a Merchant in Jewels, which he underſtood perfectly, and by which he acquired, with an unſpotted Character, a very large and affluent Fortune. He made ſeveral Excurſions into the Eaſt, by different Roads, and reſided ſeveral Years in *Perſia*, had very great and uncommon Opportunities of entring deeply into the Subjects of which he has treated, and digeſted his Accounts with great Accuracy and Perſpicuity, ſo that they have been eſteemed not only here, but in *France*, and throughout *Europe* in general, as the moſt perfect in their Kind that have hitherto appeared.

This Gentleman, when the Perſecution againſt the Proteſtants broke out in *France*, came over hither, and brought with him great Riches. He was received with much Reſpect at Court, and King *Charles* the IId, as a Mark of his Favour, beſtowed upon him in the Month of *March*, 1683, the Honour of Knighthood. He publiſhed the firſt Edition of his Travels in our Language, in a large Folio Volume, but they have been ſince ſeveral Times printed with many Corrections, great Improvements, and conſiderable Augmentations in *French*. He continued to reſide here, and purchaſed a conſiderable Eſtate, ſo that in the Reign of Queen *Anne*, we find him frequently mentioned by ſuch as took Occaſion to ſhow how much the Wealth of *England* was improved, and its Trade increaſed, by encouraging Foreigners of the Proteſtant Religion, to come and ſettle amongſt us. Sir *John* died at a good old Age, on *Chriſtmas* Day, 1712. He left behind two Sons, and ſeveral Daughters.

His eldeſt Son was created a Baronet of this Kingdom by his late Majeſty King *George* the Firſt, and having purchaſed from *Grantham Andrews*, Eſq; of *Sunbury*, the noble Seat of *Kempton-Park*, in the County of *Middleſex*, and not far from *Hampton-Court*, fixed there, and is ſtill living and unmarried. The old Gentleman employed a great Part of the latter Period of his Life, in compleating his Book of Travels, and intended, as himſelf informs us, to have written a diſtinct Treatiſe, explaining a great Variety of Paſſages in the Scripture, from the Cuſtoms and Manners of the *Eaſtern* Nations, with which no Man was better acquainted than he; but by many unlucky Accidents was hindered from fulfilling that Promiſe, to the no ſmall Concern of the learned World, who expected with great Impatience ſo uſeful and inſtructive a Book, of writing which he was extremely capable, and of ſeeing any Thing of the ſame Kind, the Public ſince his Deceaſe ſeem to deſpair.

2. Sir *John Chardin* left *Paris*, *Aug.* 17, 1671, with an Intention to go to the *Eaſt-Indies*, and travelling by way of *Milan*, *Venice*, and *Florence*, arrived at *Leghorn* in the End of *October*, and embarking in a Ship, under a *Dutch* Convoy, arrived at *Smyrna*, *March* 2, 1672, and twelve Days after at *Conſtantinople*. He remained in this City four Months, and in the mean Time there happening a Quarrel between the Grand Vizier and the *French* Ambaſſador, which cauſed a Report, that the Grand Vizier intended to arreſt the Ambaſſador, and all the *French* Nation, he was afraid that his Goods, which were very rich, and very conſiderable in Quantity, would be ſeized; and ſo ſought all Means to get out of *Conſtantinople*, and to proceed on his Journey to *Perſia*.

The Caravans in thoſe hot Months did not travel; but the Port being about to ſend a new Commander, with ſome Soldiers and Money, as they do yearly, to the Fort of *Azoph*, which ſtands upon the Lake *Mæotis*, he obtain'd a Paſſage in a *Turkiſh* Saick belonging to that Fleet, and embarked, *July* 27, at a Port in the *Thracian Boſphorus*. This Channel, which is about fifteen Miles in Length, and about two in Breadth, in moſt Parts, but in others leſs, ſo called, becauſe an Ox may ſwim over it, is certainly one of the lovelieſt Parts of the World; for the Shores are riſing, and covered over with Houſes of Pleaſure, Woods, Gardens, Parks, delightful Proſpects, and Wilderneſſes, watered with Thouſands of Springs and Fountains: The Paſſage through it, in fair Weather, is exceeding diverting, by reaſon of the great Number of Barks which are continually ſailing to and fro, and the Proſpect of *Conſtantinople* from the Top of it, which is about two Miles diſtant, is the moſt charming that ever Eyes beheld. There are four Caſtles ſtanding by it, all well fortified with great Guns, two of them eight Miles from the *Black-Sea*, and two at the Mouth of the Channel, which is the moſt dangerous Place for Shipwrecks in all the *Euxine-Sea*.

3. On the 3d of *Auguſt*, in the Morning, he arrived at *Caffa*, a Port in the *Tauric Cherſoneſe*, or *Peninſula*,

ſo called, becauſe it was firſt inhabited by the *Scythians* of Mount *Taurus*. It is thirty-five Leagues from North to South, and fifty-five from Eaſt to Weſt. The Iſthmus, that joins it to the Continent, is not above a League in Breadth. It is inhabited by the *Crim Tartars*, who dwell in Cities and Towns; whereas their Neighbours the *Nogays* and *Calmucs* dwell in Tents, as the reſt do on the Continent.

Caffa is a great Town built at the Bottom of a little Hill, upon the Sea-ſhore, and encompaſſed with ſtrong Walls, that advance a little into the Sea. It hath two Caſtles, the one, which ſtands on a riſing Ground on the South-ſide, is large, and commands all the Parts thereabouts, and is the Reſidence of a Baſha; the other is not ſo big, but is well furniſhed with Guns. They reckon about 4000 Houſes in it, of which about 3200 are *Mahometans*, *Turks*, and *Tartars*, and the reſt *Chriſtians*, *Greeks*, and *Armenians*. The Houſes are ſmall, and built of Earth; as are alſo their Bazars, Moſques, and Baths. The Soil about it is dry and ſandy, bearing little Fruit, and the Water is bad, but the Air is very pure and wholeſome. All Proviſions are very cheap and good, Mutton being not above a Farthing a Pound, and other Things proportionable. The Road of *Caffa* is ſheltered from the Winds, except on the North and South-Eaſt Sides, and the Ships lie cloſe to the Shore ſafely in ten or twelve Fathom Water. There is a great Trade driven here in Salt-fiſh and Caveare, which being taken out of the Lake *Mæotis*, that is twenty-ſix Miles diſtant from it, in great Quantities, are tranſported into *Europe*, and as far as the *Indies*. They alſo export Corn, Butter, and Salt, with which they furniſh *Conſtantinople*, and ſeveral other Places, for the *Caffa* Butter is the beſt in all *Turkey*.

From *Caffa* he went in a Ship bound for *Colchis*, *Aug.* 30. and the next Day arrived at *Donſlow*, or the Salt-pits, fifty Miles from *Caffa*, on the Shore. Here are great Marſhes of Salt, which is made by letting in the Sea-water, and ſuffering it to congeal by the Sun. The People ſay, that two hundred Veſſels are laden here with Salt yearly, paying only 3 *s.* a Day to thoſe that load it. About a Mile from the Shore is an Habitation of the *Tartars*, where there is not above ten or twelve Houſes with a little Moſque, and round about it a great Number of Tents, with ſeveral Waggons cloſe cover'd, which ſerve them inſtead of Houſes. The Tents for themſelves are very handſome, being made with Poles, and cover'd with large light Furs well-ſtretch'd upon them; their Inſide is commonly hung with Tapeſtry, and the Floor is laid with the ſame. Every Family hath two other Tents belonging to them, cover'd with a great Sarplar of Wool, one for their Servants, and Kitchen, in which is a Pit five Foot deep, to make a Fire in to dreſs their Meat, and the other for their Horſes and Cattle.

They ſtore up their Corn and Forage in Magazines under Ground, which they cover ſo exactly, that none can find them but themſelves. They can remove their Tents with a ſmall Trouble, and in a very little Time, and carry them away in Carts drawn by Oxen and Horſes, of which they breed a great Number. They profeſs the *Mahometan* Religion, but mix with it ſtrange ſuperſtitious and ridiculous Opinions of Fortune-telling and Divination. From *Donſlow* he ſailed all along in the Channel to *Cape Cuodos*, which *Ptolemy* calls *Cirocondoma*, where the Coaſts that bound the Lake *Mæotis*, which are very high Lands, are ſeen at about thirty Miles Diſtance.

4. From the Channel of the Lake *Mæotis*, to *Mingrelia*, is reckon'd 600 Miles along the Coaſts, which conſiſt of pleaſant Woods, inhabited by a Sort of *Tartars* called *Circaſſians*, and by the *Turks*, *Cherks*, but ſo thinly, that the Country looks like a Deſart. The Ancients called them *Zagæans*, or Mountaineers; and *Pomponius Mela*, *Sargacians*. They are neither Subjects nor Tributary to the Port, becauſe their Country producing nothing valuable, the *Turks* think it not worth the Toil of conquering it. The Veſſels that come from *Conſtantinople* to *Mingrelia* trade with this People, but with their Arms in their Hands, and by Hoſtages, for they are Infidelity and Perfidiouſneſs itſelf, and will never fail to ſteal where they find an Opportunity. The Trade with them is managed by Exchange, the *Cherks* bringing down Slaves of all Sexes and Ages, Honey, Wax, Leather, Jackals, Zandava, and other Beaſts Skins, for ſuch Commodities as they want.

Circaſſia is a pleaſant Country, and the Soil is very fruitful, bringing forth great Plenty of all Sorts of Fruit without Trouble, as Cherries, Apples, Pears, Walnuts; but their chief Wealth conſiſts in Cattle, as well-ſhaped Horſes, which are ſo ſwift and good, that they will tire the wild Beaſts, and catch them in plain Courſe; Goats, Deer and Sheep, the Wool of which is as fine as that of *Spain*, which the *Muſcovites* fetch to make Felts. They ſow no Grain but Millet for their own Bread, and Barley for their Horſes; and their Women till and manure their Ground: Their Drink is Water and Boza, which is a Liquor made of Millet, as intoxicating as Wine: They live in Wooden Huts, and go almoſt naked. Every one is a ſworn Enemy to thoſe that live in the Provinces round about him. Their Beds are made of Sheep-Skins ſowed together, and ſtuffed with Millet Leaves, beaten in the Threſhing as ſmall as Oat-chaff. They were formerly Chriſtians, but now have no Religion; no not ſo much as the Light of Nature among them, ſave what they place in the obſerving certain ſuperſtitious Ceremonies, borrow'd both from the *Chriſtians* and *Mahometans*.

The *Abca*'s Border upon the *Cherks*, poſſeſſing about an 100 Miles upon the Sea-Coaſts, between *Mingrelia* and *Circaſſia*. They are not ſo ſavage as the *Cherks*, but are as much inclined to Thieving and Robbery; ſo that the Merchants trade with them with the like Caution, and after the ſame Manner. *September* the 10th, he arrived at *Iſgaour*, a Port in *Mingrelia*, where all the Veſſels that trade thither lie. It is a Deſart Place, without any Habitations, only the Traders that come thither build themſelves Huts and Booths of Boughs for the Time of their Abode, which is uſually as long as they find themſelves ſafe from the *Abca*'s.

5. *Colchis* or *Mingrelia* is ſituated at the End of the Black-Sea: It is bounded on the Eaſt by the little Kingdom of *Imeretta*, on the South by the Black-Sea, on the Weſt by the *Abca*'s, and on the North by Mount *Caucaſus*. The *Corax* and *Phaſis*, two famous Rivers in the ancient Hiſtories, now called *Coddours* and *Rionne*, part it, the firſt from the *Abca*'s, and the other from *Imeretta*. The Length of it is about 110 Miles, and the Breadth ſixty. It was once fortified againſt the *Abca*'s, by a Wall of ſixty Miles in Length, which is long ſince demoliſhed, and become a thick Foreſt.

The Inhabitants of *Caucaſus*, that border upon *Colchis*, are the *Alanes*, *Suanes*, *Gigues*, *Caracioles*, or *Cara-Cherks*, i. e. Black *Circaſſians*, ſo called by the *Turks*, not from their Complection, for they are the faireſt People in the World, but from their Country, becauſe it is always darken'd with Fogs and Clouds. They were alſo anciently Chriſtians, but now profeſs no Religion, but live by Robbery and Rapine, having nothing that can entitle them to Humanity but Speech. They are very tall and portly, and their very Looks and Speech ſhew their Savage Diſpoſitions, being the moſt reſolute Aſſaſſins, and daring Robbers in the World.

The ancient Kingdom of *Colchis* was much larger than *Mingrelia* now is, extending itſelf to the Lake *Mæotis* on the one Side, and *Iberia* on the other. The Country itſelf is uneven, full of Hills and Mountains, Valleys and Plains. It is almoſt covered with Woods, except the manured Lands, which are but few, and thoſe preſerved by grubbing up the Roots, that are continually ſpreading into them. The Air is temperate, as to Heat and Cold, but very unwholſome by Reaſon of the continual Wet, which being heated by the Sun, breeds Peſtilences, and ſeveral other Diſtempers. It abounds with Waters, which deſcend from Mount *Caucaſus*, and fall into the Black-Sea. The principal Rivers are the *Coddours*, of old called *Corax*; the *Socom*, called by *Arrian*, *Terſſen*, and by *Ptolemy*, *Thaſſaris*; the *Langus*, of old *Aſtulphus*; the *Cobi*, called by *Arrian*, *Cianeus*; the *Cibo*; the *Cainiſcari*, called anciently, *Tacheur*,

Tacheur called by *Arrian*, *Sigemus*, and the *Scheniſcari*, i. e. River-horſe, called therefore by the *Greeks*, *Hippos: Caritus*; which two laſt mix with the *Phaſis* about twenty Miles from the Place where it falls into the Sea. And the *Abaſcia*, called by *Arrian*, *Caries*; and *Ptolemy*,

The Soil is very bad, and produceth little Corn, or Pulſe, and the Fruits are almoſt wild, without Taſte, and unwholſome, unleſs it be their Vines, which thrive well there, and produce moſt excellent Wine. The Earth is ſo moiſt in Seed-time, that when they ſow their Wheat and Barley, they never plough it at all, but ſprinkle it upon the Earth; for they ſay, that ſhould they plough it, the Land would be ſo ſoft, that all their Corn would fall. They plough their Lands for their other Corn with Plough-ſhares of Wood, which make as good Furrows as Iron, becauſe their Land is very moiſt and tender. Their common Grain is *Gomm*, which is as ſmall as Coriander Seed, and reſembles Millet. Of this they make a Paſte, which they uſe for Bread, and prefer it before Wheat; which is not to be wonder'd at, for it is very acceptable to the Palate, and conducive to Health, being cooling and laxative. They have alſo great Plenty of Millet, ſome Rice, with Wheat and Barley, but very ſcarce. The People of Quality eat wheaten Bread as a Rarity, but the meaner Sort very ſeldom or never taſte of it.

The ordinary Food of the Country is Beef and Pig, of which laſt they have great Plenty, and the beſt in the World. They have alſo Goats Fleſh, but it is lean, and not well taſted. Their Wild-fowl is very good, but ſcarce. Their Veniſon is the Wild Boar, Hart, Stag, Fallow Deer, and Hare, all which are excellent Food. They have Partridges, Pheaſants, and Quails in Abundance, with ſome River Fowl and wild Pigeons, which are good Meat, and as big as a cramm'd Chicken. Their Nobility ſpend their whole Time in the Field, uſing Lanner-hawks, Goſ-hawks, Hobbies, and others, for their Sports, to catch Water-fowl and Pheaſants; but their moſt delightful Paſtime is the Flight of the Falcon at the Heron, which they catch only for the Tuft upon his Crown, to put upon their Bonnets; for they let him go again when they have cut it off, that it may grow up a-new.

6. Mount *Caucaſus* produceth a great Number of wild Beaſts, as Tygers, Leopards, Lions, Wolves, and Jacals, which laſt make great Havock amongſt their Cattle and Horſes, and often diſturb their Houſes with their dreadful Howlings. They have large Numbers of Horſes, and thoſe very good ones, which every Man almoſt keeps in great Store, becauſe their Keeping ſtands them in little or Nothing, for they neither ſhoe them, nor feed them with Corn. They have no Cities nor Towns, except two by the Sea-ſide; but their Houſes are ſo thick up and down the Country, that you can hardly travel a Mile, but you meet with three or four. There are nine or ten Caſtles in the Country, of which the chiefeſt is called *Ruis*, and it is the Court of the Prince. Their Houſes are all built with Timber, which is plentiful, and the poorer Sort never raiſe above one Story, nor the Rich above two. The lower Rooms are always furniſhed with Beds and Couches to lie down on or to ſit upon, becauſe of the Moiſture of the Earth, but are inconvenient, becauſe they have no Windows nor Chimnies.

They have but one Room for their whole Family, and ſo lie all together. The Men are well ſhaped, and the Women ſo handſome, that they ſeem born for commanding Love. They all paint their Eye-brows, and their Faces abominably. They dreſs themſelves with all the Curioſity they can, their Habit being like the *Perſians*, and their Head Attire like the *European* Women, even to the Curling of their Hair. They are witty and civil, but to balance that, haughty, deceitful, cruel, and impudent. The Men have alſo as many miſchievous Qualities, and there is no Wickedneſs to which they are not addicted; but that which they moſt practiſe and delight in is Theft. This they make their Employment and Glory. They juſtify it as lawful to have many Wives, becauſe, they ſay, they bring us many Children, which we can ſell for ready Money, or exchange for neceſſary Conveniencies; yet when they have not wherewithal to maintain them, they hold it a Piece of Charity to murder Infants new born, as alſo they do ſuch as are ſick and paſt Recovery, becauſe, they ſay, they free them from a deal of Miſery.

The Gentlemen of this Country have full Power over the Lives and Eſtates of their Tenants, to ſell and diſpoſe of their Wives and Children as they think fit, and every Country-man is bound to furniſh his Lord with as much Corn, Wine, Cattle, and other Proviſions as he wants. The Lords decide the Quarrels of their Vaſſals; but if they themſelves are at Variance, they decide it by Arms, which makes them go all armed with a Lance, Bow and Sword. Their Habit is peculiar; they wear very little Beard, and cover their Heads with a thin Felt Cap in Summer, and a furr'd Bonnet in Winter: Over their Bodies they wear little Shirts, which fall to their Knees, and tuck into a ſtrait Pair of Breeches; but they never have above one Shirt, and one Pair of Breeches, which laſts them a Year, and in all that Time never waſh them above thrice, only once or twice a Week they ſhake it (for a certain Purpoſe) over the Fire.

The whole Family, without Diſtinction, eat all together, both Males and Females. The King with all his Train, to his very Grooms, and the Queen with her Maids and Servants. They dine in the open Courts in fair Weather, and if it be cold, they make a rouſing Fire, for Wood coſts them nothing. Upon Working-Days the Servants have nothing but Gomm, and the Maſters Pulſe, dried Fiſh, or Fleſh; but on Holy-days, or when they make Entertainments, they kill an Hog, Ox, or Cow, if they have no Veniſon. They are very great Drinkers, both Men and Women, and at their Feaſts provoke their Friends, as much as they can, to Drinking. They drink their Wine pure, and beginning with Pints, proceed to much greater Quantities. Their Diſcourſe at their Merry-Meetings is, with the Men, about their Wars and Robberies, and among their Women obſcene Tales of their Amours.

Mingrelia is but thinly peopled, by reaſon of their Wars, and the vaſt Numbers ſold to the *Perſians* and *Turks* by the Nobility. All Trade in it is driven by way of Barter, for they have no ſet Price of Money among them; the Species current are Piaſtres, *Dutch* Crowns, and Abaſſi's, which are made in *Georgia*, and ſtamp'd with the *Perſian* Stamp. The Revenues of the Prince of *Mingrelia* amount at moſt to 20,000 Crowns, which ariſes from the Cuſtoms of Goods exported and imported, the Slaves he ſells, Impoſitions and Fines; and this he lays up, for his Slaves ſerve him for nothing, and his Crown-Lands furniſh his Court with more Proviſion than he can ſpend. He is not able to raiſe above 4000 Men fit to bear Arms, and thoſe are all Cavalry for the moſt Part, for he has not above 300 Foot to join with them. His Court, upon ſolemn Feſtivals, conſiſts of 200 Gentlemen, but upon other Days of about 120.

7. The Religion of the *Colchians* was formerly the ſame with the *Greeks*, being converted, as the Eccleſiaſtical Hiſtorians ſay, in *Conſtantine*'s Time, by a Slave: But the *Mingrelians* ſay, St. *Andrew* preach'd among them in the Place call'd *Pigivitas*, where now ſtands a Church, whither the *Catholicos*, or chief Biſhop goes once in his Life-time to make the Oil call'd *Myrone* by the *Greeks*; but now the *Mingrelians* are fallen into a profound Abyſs of Ignorance and Darkneſs, and have not the leaſt Idea of Faith and Religion, but look upon Life Eternal, the Day of Judgment, and the Reſurrection, as meer Fables deviſed by Men. Nor do their Clergy perform any Eccleſiaſtical Duties, for there is hardly any one of them that can either write or read. They have utterly loſt the true Knowledge of the Service of God; but the Prieſts make a publick Profeſſion of foretelling Things to come, and make the People believe, that their Books ſhow them the Courſe of future Events.

The *Catholicos* of *Mingrelia* is Head of all the Clergy of that Country, as alſo of *Abca*, *Gureil*, Mount *Caucaſus*, and *Imeretta*; but the Prince appoints or depoſeth him as he pleaſeth. His Revenue is very great, for he has 400 Vaſſals under him, who furniſh his Houſe with all Things neceſſary for human Life, and many Superfluities. He ſells their Children to the *Turks*; and when he viſits the Dioceſes under his Juriſdiction, it is not to reform the Clergy, nor inſtruct the People, but to ſpoil them of their Goods, and rake together great Sums. He will not conſecrate a Biſhop for leſs than 600 Crowns, nor ſay a Maſs for the Dead under 800, nor any other Maſs under one hundred.

The Sanctity of this Prelate conſiſts in a continual Abſtinence from Fleſh and Wine in *Lent*, and in long Prayers Day and Night; but he is ſo ignorant, that he can hardly read his Breviary and Miſſal. He has ſix Biſhops under him, who take no Care of the Souls of their People, nor ever viſit their Churches and Dioceſes. They ſuffer the Prieſts to live in all Manner of Errors, and the People to contaminate with themſelves the groſſeſt Vices; they underſtand not the Form of Baptiſm, let Polygamy be practiſed, and permit the Mothers to bury their new-born Children alive. All their Buſineſs is in Feaſting and Banqueting, where they are drunk almoſt every Day. They are rich, and go very ſumptuouſly apparel'd, oppreſſing their Vaſſals, and ſelling their Wives and Children to maintain their Luxury. They abſtain from Fleſh, as the *Greek* Biſhops do, and place the whole Chriſtian Religion in the Practice of Faſting, and think not themſelves obliged to do any other Duty. Their Cathedral is pretty neatly kept, and well adorn'd with Images, which they deck with Gold and Jewels, believing, that in ſo doing they ſatisfy God's Juſtice, and atone for their Sins. They are cloathed in Scarlet and Velvet, as the Seculars are, and differ from them only in this, that they wear their Beards long, and their Bonnets black, round, and high.

There are alſo in *Mingrelia* certain Monks, of the Order of St. *Baſil*, who wear the ſame Habit, and live after the Manner of the *Greek* Monks, wearing black Bonnets, eating no Fleſh, and ſuffering their Hair to grow; but they mind nothing of Religion, but to obſerve their Faſts exactly. They have alſo Nuns of the ſame Order, who obſerve their Faſting Days, and wear a black Veil, but they have no Nunneries, nor are under any Vows or Subordination, but quit their Habit and Temperance when they pleaſe.

The Prieſts of *Mingrelia* are very numerous, but a Sort of miſerable Creatures. They till their own Ground, and the Lands of their Lords, being no leſs Slaves than the Seculars; nor have they any Reſpect ſhewn them, but when they bleſs their Food at Meals, or ſay Maſs. Their Pariſh-Churches have no Bells, but they call the People together by knocking with a great Stick upon a Board, and they are kept as naſty as Stables, the Images being foul and broken, and cover'd with Duſt. The Worſhip which they pay to their Images is idolatrous, for they adore them not with a relative Adoration, but pay their Devotion to the material Subſtance. They worſhip ſuch moſt, as are fineſt adorn'd, or fam'd for their Cruelty, and if they ſwear by any of theſe, they will never break the Oath. St. *Giobas* is one of their moſt formidable Images, and him they will not approach nearer than they can juſt ſee him, but pray to him, and leave their Preſent at that Diſtance; for they report, that he kills all that approach him very near.

The Chriſtian Saints they have no Value for, unleſs it be St. *George*, whom they account their chief Saint, as do alſo the *Georgians*, *Muſcovites*, and *Greeks*. Their Maſs is after the *Greek* Manner, and the Prieſts celebrate it without any other Sacerdotal Habit but their Surplices. Their Cup or Chalice is a Goblet of Wood, and the Cover is of the ſame Matter; and their Patten is a wooden Diſh. In *Lent* they never ſay Maſs, but on *Saturdays* and *Sundays*, for they hold, that the Communion ſpoils their Faſting. They conſecrate unleavened or leavened Bread, without any Difference, and never mix Water with Wine, unleſs it be very ſtrong.

They laugh at Tranſubſtantiation, and ſay, How can Chriſt get into a Loaf? For what Reaſon ſhould he leave Heaven to come down to the Earth? They anoint the Foreheads of their Children with the Oil called *Myrone*, as ſoon as they are born; but baptize them not till a long Time after, and then they waſh them all over with Water: but none will baptiſe their Children till he is able to make a Feaſt for the Prieſt, God fathers and Gueſts, and that is the Reaſon many of their Children die unbaptized. They do not believe that Ordination imprints a Character not to be defaced, and therefore they ordain a-new ſuch Prieſts as have been degraded. Their Marriages are a Contract by Way of Bargain and Sale, for the Parents of the Maid agree upon the Price with the Perſon that deſires her; the Price of a divorced Woman is the leaſt, of a Widow ſomething more, but of a Maid moſt. When the Bargain is made, the young Man may company with the Damſel till the Money is paid, and it is no Scandal if ſhe be with Child. If any one has married a barren Women, or of an ill Diſpoſition, they hold it not only lawful, but requiſite to divorce her, as a Match not made by God, who only does good. There is none that underſtands the Bible, or reads it, but the Women will repeat ſeveral Stories of the Goſpel, which they have by Tradition. They obſerve the ſame Faſts almoſt as the *Greeks*, for they keep the four great *Lents*, viz. the firſt before *Eaſter*, which is forty eight Days; that before *Chriſtmas*, which is forty Days; St. *Peter*'s Faſt, which is near a Month; and the laſt, which the Eaſtern Chriſtians obſerve in Honour of the Virgin *Mary*, which continues fifteen Days. They make the Sign of the Croſs when they drink Wine and eat Pork, but not as any Mark of Chriſtianity. Their Prayers are all addreſs'd to their Idols for their temporal Benefits, *viz.* their own Proſperity, or Ruin of their Enemies. They offer Sacrifices like the *Jews* and *Gentiles*. They never make Holiday upon *Sundays*, or abſtain from Works but at the Feſtivals of *Chriſtmas* and *Eaſter*, which they celebrate only in Eating and Drinking to Exceſs in their Houſes. Their greateſt Feſtivals are when an Idol is carried through their Country, when they put on their beſt Cloaths, make a great Feaſt, and get ready a Preſent for the Idol. Their Mourning for the Dead is altogether barbarous, and like that of People in Deſpair, the Women rend their Cloaths, tear their Hair and Fleſh, beat their Breaſts, cry, yell, and gnaſh with their Teeth, like People mad or poſſeſſed; the Men alſo tear their Cloaths, and thump their Breaſts.

8. Their Neighbour Nations live and act after the ſame Faſhion almoſt in all Reſpects, only they that live near *Perſia* and *Turkey* are more civil in their Manners, and more honeſt and juſt in their Inclinations, whereas thoſe that border upon the *Tartars* and *Scythians*, are more barbarous, having no Idea, or outward Form of Religion, and obſerving no Laws.

On the Confines of *Mingrelia* lie the Principality of *Guriel*, and Kingdom of *Imeretta*. The Country of *Guriel* is very ſmall, bordering upon *Imeretta* on the North, Mount *Caucaſus* on the Eaſt, *Mingrelia* on the Weſt, and the Black-Sea on the South. It lies all along by the Sea-ſhore from the River *Phaſis*, to the Caſtle *Gonie*, which is held by the *Turks*. The Inhabitants are of the ſame Nature and Manners as the *Mingrelians*, and have the ſame Inclinations to Lewdneſs, Robbery and Murther.

The Kingdom of *Imeretta* is ſomething bigger than the Country of *Guriel*, and is the *Iberia* of the Ancients. It is encompaſſed with Mount *Caucaſus*, *Colchis*, the Black-Sea, the Principality of *Guriel*, and Part of *Georgia*. It is twenty ſix Miles in Length, and ſixty Miles broad. The Country is full of Woods and Mountains, like *Mingrelia*, but the Valleys are more pleaſant, and Plains more delicious, producing Corn, Pulſe, Cattle, and Herbs of all Sorts. There are ſome Iron Mines. They have alſo ſome Money current among them, which is coined in their Kingdom, and ſeveral Towns; but their Manners and Cuſtoms differ little from the *Mingrelians*. The King has three good Caſtles, one called *Scander*, ſeated on the Side of a Valley, and two on Mount *Caucaſus*, call'd *Regia* and *Scorgia*, being both almoſt inacceſſible, as being built in Places that Nature itſelf has wonderfully fortified, the River *Phaſis* running between them. The Fortreſs of *Cotatis* was once in this Prince's Juriſdiction, but the *Turks* are now Maſters of it.

The King of *Imeretta* govern'd the *Abca*'s, *Mingrelians*, and People of *Guriel*, after they had all four freed themſelves from the Power of the Emperors, firſt of *Conſtantinople*, and then of *Trebiſond*: But in the laſt Age, ſetting up for themſelves, and revolting from one another, they were involved in continual Wars among themſelves, till calling in the Aſſiſtance of the *Turks*, they were all made tributary to them. The King of *Imeretta* pays eighty Boys and Girls, from ten to twenty Years of Age. The Prince of *Guriel* pays forty-ſix Children of both Sexes; and the Prince of *Mingrelia* ſixty thouſand Ells of Linen-Cloth made in that Country. The *Abca*'s ſeldom paid any Thing at firſt, and now pay Nothing. The King of *Imeretta*, and Prince of *Guriel*, ſend their Tribute to the Baſha of *Akalzike*, but a *Chiaux* gathers it at *Mingrelia*.

9. Leaving *Iſagour*, *October* 4, he paſſed by the Mouth of the River *Aſtolphus*, called *Langur* by the *Mingrelians*, one of the biggeſt Rivers in *Mingrelia*, and on the 5th came to *Anarghia*, a Village two Miles from the Sea, conſiſting of two hundred Houſes, but ſo far diſtant the one from the other that it is two Miles from the firſt to the laſt. Hither the *Turks* come to buy Slaves, and have Barks ready to carry them away. It is thought, that the fair and large City, called *Heraclea*, ſtood in the ſame Place. At this Town there is Plenty of Proviſions, and that very cheap, *viz.* Wild Pidgeons, Fowl, Porkers and Goats in Abundance, and Wine is plentiful. From *Anarghia* he ſail'd up the River *Aſtolphus*, and went to a Place called *Sapias*, which is the Name of two little Churches, of which the one is a Pariſh Church of *Mingrelia*, and the other belongs to the *Theatins*, a Sort of Friers, who firſt came into *Mingrelia* in 1627, and were admitted there as Phyſicians, and have built themſelves ſeveral Apartments about it, after the Manner of the Country. They have ſome Slaves, and two Families of Country People their Tenants. They have good Employment as Phyſicians, but none will embrace their Religion, their very Slaves refuſing to communicate in their Services; ſo that they would have long ſince left the Country, had it not been for the Honour of the *Roman* Church and their own Order.

After a Month's Stay with the Monks, it not being ſafe to travel, becauſe of the Troubles in the Country, he return'd again to *Anarghia*, and having hired a *Turkiſh* Feluke, for *Gonie*, November the 10th, ſtaid till th 27th to take in Loading and Paſſengers. While he ſtaid here he was invited to two Chriſtenings, and Curioſity engaged him to be preſent at them. The Manner was this: The Prieſt being ſent for about ten a Clock in the Morning, ſat himſelf down in the Buttery, and fell to reading a Book half torn, about the Bigneſs of a New Teſtament, in *Octavo*. He read very faſt, and with a low Voice, in ſuch a careleſs Manner, as if he regarded not what he did, any more than the reſt did what he ſaid, for the Father, Godfather and Child, who was about five Years old, went to and again all the Time.

When the Prieſt had read an Hour, there was a Bucket of warm Water got ready, into which when the Prieſt had poured about a Spoonful of Oil of Wallnuts, he bid the Godfather undreſs the Child; which done, he ſet him upon his Feet in the Water, and waſhed his Body all over well, and then the Prieſt gave him a ſmall Quantity of *Myrone*, or Oil of Unction, with which he anointed the Top of his Head, Ears, Forehead, Noſe, Cheeks, Chin, Shoulders, Elbows, Back, Belly, Knees and Feet, the Prieſt ſtill reading, till the Godfather dreſs'd the Child, and then the Father bringing in Wine, Bread and Pork, they all ſat down to eat and drink, and were all extremely drunk before they parted. Their Maſs they perform with the ſame Irreverence and Careleſsneſs.

Departing from *Anarghia* in fair and clear Weather, he diſcover'd the high Lands of *Trebiſond* on the one Side, and of the *Abca*'s on the other, and came to the River *Kelmbel*, which though not ſo broad nor rapid as *Langur*, yet is deeper.

10. On the 30th he came to the River *Phaſis*, which, taking its Riſe in Mount *Caucaſus*, runs at firſt in a narrow Channel, though ſwiftly, about *Cotatis*, and ſometimes ſo low, that it is eaſily fordable; but where it diſchargeth itſelf into the Sea, which is about ninety Miles from *Cotatis*, the Channel is a Mile and half broad, and ſixty Fathom deep, being augmented in that Courſe by divers Streams. The Water is muddy and thick, but very good to drink. There are ſeveral Iſlands at the Mouth of it, which being covered with thick Woods, make a delightful Proſpect. *Arrian* ſays, That upon one of theſe Iſlands ſtood the Temple of *Rhea*, but there are no Remains of it now, though there are ſome Hiſtorians who ſay, it was ſtanding in the time of the *Grecian* Empire, and was, in *Zeno*'s Reign, dedicated to the Worſhip of Chriſt. On this River, and the Black-Sea about it, are Plenty of Pheaſants, or *Phaſiani*, ſo called from the River *Phaſis*. All the Coaſts of this River are a low ſandy Soil, cover'd with Woods ſo thick, that one can hardly ſee ſix Paces up the Land.

On the 30th, he arrived at *Gonie*, which is about thirty Miles from *Phaſis*, the Sea-Coaſts being exceeding high Land and Rocks, ſome being woody, and others naked. *Gonie* is a large Caſtle, in the Territories of the Prince of *Guriel*, built four ſquare, of hard and rough Stones of a very large Size. It hath no Trenches, but Walls only, and two great Guns. In it are about thirty ſmall poor Houſes, made of Boards, and without is a ſmall Village of about as many more, all inhabited by Mariners, and other booriſh People. There is a Cuſtom-houſe here, the Officers whereof are extremely rude, and imperious, and ſevere to the People of the Country, but extravagant to the *Europeans*, not regarding any Man's Perſon, nor any Recommendations from the Port, but ſearching all Things ſtrictly, and exacting what they pleaſe.

From *Gonie* he went to the Caſtle of *Akalzike*. The Way lies over Mount *Caucaſus*, which is one of the higheſt Mountains, and one of the moſt difficult to paſs over in the World. The Top is always cover'd with Snow, over which the Natives paſs in a kind of Sandals, made flat like a Racket, to keep them from ſinking. It is uſual for the Guides here to make long Prayers to their Images to keep the Winds from riſing, for if the Wind be high, it buries all the Travellers in Snow.

This Mountain, though not inhabited for ſome Leagues together in many Places, yet is fruitful to the very Top, yielding Honey, Wheat, Gomm, Wine, and Fruits, and feeding Hogs, and large Cattle. The Vines are ſo luxuriant, that they run up to the very Tops of their higheſt Trees, ſo that the People cannot gather them. The Country People dwell in wooden Huts, of which every Family has four or five. The Women grind their Corn as they want it, and bake their Bread on Stones, or upon their Hearth, and yet the Cruſt is very white, and the Bread good. Theſe Inhabitants are for the moſt part Chriſtians, after the *Georgian* Ceremonies; they are freſh complection'd, and their Women are handſome. At the Bottom of the Hill is a very fair Valley, rich and fertile, being watered by the River *Kur*, which has many Villages, and in them the Ruins of ſeveral Caſtles and Churches, which, the People ſay, were deſtroy'd by the *Turks*.

Akalzike is a Fortreſs built upon Mount *Caucaſus*, fortified with double Walls, and flanked with Towers built with Battlements, after the ancient Manner, and defended with a few great Guns. Upon little Hillocks about it ſtands a large Town of 400 Houſes, which have nothing of Antiquity, but two *Armenian* Churches. It is inhabited by *Turks*, *Armenians*, *Georgians*, *Greeks* and *Jews*, who have their Churches and Synagogues. The River *Kur*, anciently called *Cyrus* and *Corus*, which riſes in the Mount *Caucaſus*, runs by it. A Baſha lodges in the Fortreſs, and his Soldiers are quarter'd in the adjacent Villages. It was built by the *Georgians*, from whom the *Turks* took it.

From *Akalzike* he went to *Gory*, and paſſed by *Uſker*, where the *Turks* have a Caſtle, built on a Rock, with a

Garriſon and Cuſtom-houſe, under the Command of a *Sanziac*, and two Leagues farther, you croſs over the Mountains which part *Perſia* and *Turky*, from whence you ſee ſeveral Villages, in which are the Ruins of many Caſtles, Fortreſſes and Churches, the miſerable Remains of the Grandeur of the *Georgians*, before the *Turkiſh* and *Perſian* Wars deſtroyed them.

At the Foot of the Mountain lies a Town and Fortreſs, both called *Surham*. It ſtands on a very lovely Plain, full of Cenſes, Villages, Hillocks, Houſes of Pleaſure and little Caſtles belonging to the *Georgian* Lords, and has a Fortreſs containing a Garriſon of 100 Men. All the Country is very well tilled, and mighty pleaſant and delightful, as far as *Gory*, except that on the Right-Hand lies a great City almoſt in Ruins, as not containing above 500 Houſes inhabited, whereas formerly, by Report, it had 12000.

Gory is a ſmall City, ſeated on a Plain, between two Mountains, upon the Bank of the River *Kur*, and by it is a Caſtle on an Hill, garriſon'd by native *Perſians*. The Houſes and Market-places are all built with Earth, but the People are all very rich and wealthy, and it is furniſhed with all Neceſſaries for human Life at a cheap Rate.

11. From *Gory* he departed *December* the 16th, and travelling upon the Banks of the River *Kur*, through pleaſant Plains, with great Numbers of Villages on all Hands, he paſſed through *Calicala*, a City almoſt totally ruined, and came on the 17th to *Teflis*, the Capital City of that Part of *Georgia*, lying in the Province of *Carthueli*. The Country of *Georgia*, which is under the Juriſdiction of the *Perſians*, borders at this Day to the Eaſt upon *Circaſſia* and *Muſcovy*, to the Weſt upon *Armenia* the Leſſer, and to the North upon the Black-Sea and the Kingdom of *Imeretta*. It is extended from *Tauris* and *Erzerom* to *Tanais*, and was anciently call'd *Albania*. It is a Country very Woody and Mountainous, unleſs in the Middle, where it is more even and level. The River *Kur* runs through the Midſt of it, and empties itſelf into the *Caſpian* Sea.

The *Grecians* are thought by ſome to have called it *Georgia*, from *Georgoi*, Huſbandmen; but others will have the Name deriv'd from St. *George* the Patron Saint of all the Chriſtians of the *Greek* Church. The Temper of the Air is very kindly in *Georgia*, being very dry, cold in the Winter, and hot in the Summer. The fair Weather does not begin till *May*, but then it laſts till the End of *November*. The Soil being well watered, produces all Sorts of Grain, Herbs and Fruits in Abundance, ſo that a Man may live there deliciouſly and cheap. Cattle are there very plentiful and good, as well the larger as leſſer Sort; their Fowl is incomparable, eſpecially their wild Fowl; their Boars Fleſh is as plentiful and good as any in *Colchis*; and, indeed, the common People live upon nothing elſe almoſt but young Pigs, which are excellent Meat, and never offend the Stomach. The *Caſpian* Sea, which is next to *Georgia*, and the *Kur*, that runs quite through it, ſupplies it with all Sorts of ſalt and freſh Fiſh. There is no Country that drinks more and better Wine, and they tranſport great Quantities of it into *Media*, *Armenia* and to *Iſpahan*, for the King's Table. They have great Quantities of Silk, but know not how to weave it, and therefore they carry it into *Turkey* to *Erzerom*, and the Parts adjoining, and drive a great Trade with it. The Complection of the *Georgians* is moſt beautiful, you can hardly ſee an ill-favour'd Perſon among them; and the Women are ſo exquiſitely handſome, that it is hardly poſſible to look upon them, and not be in Love with them. They are tall, clean limb'd, plump and full, but not over fat, and extreamly ſlender in the Waſte: But this Beauty they ſpoil with painting and dreſſing with ſumptuous Habits and Jewels. The *Georgians* are naturally very witty, and would be as learned Men and great Artiſts as any are in the World, if they had the Improvements of Arts and Sciences; but having a mean Education and bad Examples, they are drowned in Vice, are Cheats and Knaves, perfidious, treacherous, ungrateful and proud. They are irreconcileable in their Enmities, for though they are not eaſily provok'd, yet they preſerve their Hatred inviolable.

Drunkenneſs and Luxury are ſuch common Vices among them, that they are not ſcandalous in *Georgia*. The Church-men will be as drunk as others, and they keep male Slaves in their Houſes, which they uſe for their Concubines, at which No body is offended, becauſe it is ſo commonly practiſed, that Cuſtom makes it thought lawful; yea, and they ſay, he that is not drunk at their great Feſtivals of *Eaſter* and *Chriſtmas*, cannot be a good Chriſtian, and deſerves to be excommunicated. The *Georgians* are very great Uſurers, and will lend no Money without a Pawn. The loweſt Intereſt they take is two *per Cent.* for a Month. The Women are as vicious and wicked as the Men, and contribute more than they to that general Debauchery, which overflows the Country. In their common Converſation they are civil and courteous, grave and moderate. Their Habit is much like the *Polonian*, and their Bonnets like theirs, their Veſts are open before down the Breaſt, and faſtened with Buttons and Loops; their Hoſe and Shoes are like the *Perſians*, and their Womens Cloathing is wholly in the ſame Taſte.

The Houſes of their Grandees, and all their publick Edifices, are built according to the *Perſian* Model, and they imitate the *Perſians* in their Sitting at Table, in their Beds, and Manner of Diet. The Nobility exerciſe an abſolute Tyranny over the People, who are their Vaſſals, making them labour as long as they pleaſe for them, without Food or Wages, challenging a Right over their Eſtates, Liberty and Lives, and ſelling their Children, or making them their own Slaves. They were converted to Chriſtianity by an *Iberian* Woman, in the fourth Age, but have nothing left of Chriſtianity, but the Name; for they do not obſerve the leaſt Precept of *Jeſus Chriſt*; they place all their Religion in Faſting, and making long Prayers.

There are ſeveral Biſhops in *Georgia*, with a Patriarch, whom they call *Catholicos*, and an Archbiſhop, whoſe Sees, as often as they are vacant, are diſpoſed of by the Prince, though he be a *Mahometan*, and he generally gives them to his Relations, and the preſent Patriarch is his Brother. The Churches in *Georgia*, eſpecially in their Cities, are kept ſomething more cleanly than in *Mingrelia*, but in the Villages are full as naſty. The *Georgians* and their Neighbours build their Churches upon high Mountains, in remote and inacceſſible Places, and bow unto them at great Diſtances, but ſcarce go into them once in ten Years, leaving them to the Injuries of the Weather, and for the Birds to build their Neſts in. They can give no other Reaſon for all this, but that *it is a Cuſtom*; though we may ſuppoſe, it is rather to avoid repairing and adorning them. *Georgia* was made tributary to the *Perſians* by *Iſhmael* the Great, and though it has ſeveral Times revolted, yet ſtill continues in Subjection to them.

The City of *Teflis*, the Capital City of *Eaſt Georgia*, is one of the faireſt Cities in all the King of *Perſia's* Dominions, though not ſo big as ſome. It is ſeated at the Bottom of a Mountain, and on the Eaſtern-ſide of it runs the River *Kur*, which riſing in the Mountains of *Georgia*, joins itſelf to the *Araxes*. The moſt Part of the Houſes built by the River-ſide, ſtand upon a Rock, and the whole City is encompaſſed with ſtrong and beautiful Walls, except on the Side next the River, and is defended by a Fortreſs on the South-ſide, wherein are none but native *Perſians*. This Fortreſs is a Sanctuary for all Manner of Criminals.

Teflis has in it fourteen Churches, which is very much in a Country where there is ſo little Devotion. Six of them are appropriated to the *Georgian* Service, and maintained by them, and the other eight belong to the *Armenians*. The Cathedral called *Sion*, is built all of hewn Stone, and ſtands on the Bank of the River. It is an ancient Building, in good Repair, compoſed of four Bodies, and has a great *Duomo* in the Middle. The great Altar ſtands in the Middle of the Church, and the Inſide is full of Paintings, after the *Greek* Manner. The *Armenians* have alſo ſeveral Monaſteries here, in one of them, they ſay, they have St. *George*'s Skull.

There is not any Moſque in *Teflis*, though it be under a *Mahometan* Prince, and though the *Perſians* have attempted to build one ſeveral Times, they could never accompliſh their Deſign, for the People mutinied and beat down their Work; which Action, though very affronting to the *Perſian* Religion, yet the Emperor of *Perſia* is afraid to come to any Extremities with them, leſt they ſhould revolt to their Neighbours the *Turks*, and ſo *Teflis* and all *Georgia* enjoy their Liberty to retain almoſt all the exterior Marks of their Religion; for, on the Top of all the Steeples of their Churches ſtands a Croſs, and in them they have Bells, which they often ring. Every Day they ſell Pork openly, as well as other Victuals, and Wine, at the Corners of the Streets, which vexes the *Perſians* to ſee, but they cannot help it. Some few Years ſince they built a Moſque in the Fortreſs, and the *Georgians* could not prevent it: But when the Prieſt, after their Cuſtom, came up to the Top, to make Profeſſion of his Faith, and call the *Mahometans* to Prayers, the People ſo ply'd him with Vollies of Stones, that he was forced to fly down in Haſte, and never dared to appear there any more.

The publick Buildings, *viz.* their Market-Places, Inns and Magazines, are well-built of Stone, and kept in good Repair. The Prince's Palace is a noble and beautiful Building, being adorn'd with Halls and Rooms of State, Gardens, Aviaries, and ſpacious Courts, to which the Viceroy of *Caket*'s Palace is not much inferior.

The Out-parts of the City are adorned with ſeveral Houſes of Pleaſure, and many beautiful Gardens, of which the Prince's is the biggeſt; but the Trees are ſuch only as ſerve for Shade and Coolneſs.

The *Capuchins*, who were ſent into *Georgia* about the Year 1657, by the Pope, have an Habitation in this City, as alſo at *Gory*, where they are highly eſteemed as Phyſicians, which is the Title they give themſelves, but they make very little Progreſs in the Converſion of the *Georgians*; for beſides that theſe People are very ignorant, and take little Care to inſtruct themſelves, it is ſo rivetted into their Heads, that Faſting, as they obſerve it, is the eſſential Part of the Chriſtian Religion, that they do not believe the *Capuchins* to be Chriſtians, though they faſt as they do, becauſe they are informed, they do it not in *Europe*.

The City of *Teflis* is very well peopled, and there are as many Strangers reſort thither as to any Place in the World, for there is a great Trade driven there, and the Court is very numerous and magnificent, becoming the Capital City of a Province. The *Georgians* do not call it *Teflis*, but *Cala*, i. e. *The Fortreſs*, which is a Name they give to all Habitations encompaſſed with Walls, and ſome Geographers call it, *Tebele-Cala*, or *The hot City*, either by Reaſon of the hot Baths, or becauſe the Air there is not ſo cold and boiſterous as in other Parts of *Georgia*.

On the 28th he departed from *Teflis*, and paſſing thro' *Sogan-lou*, or the Place of Onions, ſtanding upon the River *Kur*, came to *Kupri-Kent*, or the Village of the Bridge, becauſe there is a very fair Bridge over the River *Tabadi*, in the Arches of which are made little Chambers and Portico's, and in every one of them a Chimney, on Purpoſe to lodge Strangers, and in the middle ones Balconies, to take the cool Air in the Summer; *Melick-Kent*, or, the Royal Village, and ſo to *Dely-Jan*, a Village of 300 Houſes, ſeated upon the River *Acalſtapha*, which runs at the Foot of an high and dreadful Mountain, Part of Mount *Taurus*. Here is Plenty of Water, and the Ground is very fertile, and a great many Villages to be ſeen on every Side, ſome of which ſtood ſo high upon the Points of the Rocks, that they were almoſt indiſcernable. They are inhabited by *Georgian* and *Armenian* Chriſtians, but not intermix'd becauſe they have ſuch an inveterate Enmity one againſt another, that they cannot live together in the ſame Villages. The moſt Part of the Houſes of theſe Villages are no better than Caverns or hollow Places made in the Earth; the reſt are built with Timber, and covered with Turf.

These Sort of Buildings are very convenient, being cool in Summer, and warm in Winter. The Borough of *Dely-Jan*, and all the Country round about for ſix Leagues, is govern'd by its own natural Princes, from Father to Son, and holds of *Perſia*, as *Georgia* does. It is called the Country of *Caſac*, the People being ſtout and fierce, deſcended from the *Coſaques*, who inhabit the Mountains on the North-Eaſt of the *Caſpian* Sea, and is at preſent under a Prince called *Kamſhi-Kan*. He lodg'd at *Kara-Phiſhiſh*, a large Borough, ſeated at the Bottom of the Mountains, which ſeparate *Georgia* from *Armenia*. It ſtands on the Banks of the River *Zengui*, and paſſing *Bickni*, where there is an *Armenian* Monaſtery, our Author arrived at *Erivan*, *Jan.* 7, 1673.

13. *Erivan*, is a great City, but dirty. The Vineyards and Gardens make the greateſt Part of it, there being no ornamental Buildings in it. It is ſituated in a Plain, encompaſſed with Mountains on every Side, between two Rivers, the *Zengui*, and *Queurk-boulack*. The Fortreſs itſelf may paſs for a ſmall City, containing 800 Houſes, inhabited by *Perſians* only; for though the *Armenians* have Shops there to work and trade in the Day-time, yet they return to their Houſes in the Evening. It is ſurrounded with three Walls of Earth, and Brick made of Clay, with Battlements, and flank'd with Towers, and ſtrengthen'd with Ramparts, according to the Cuſtom of the Ancients; and in it is conſtantly maintain'd a Garriſon of 2000 Men. The Governor of the Province's Palace is within this Caſtle, and is a very ſpacious and delightful Place in Summer.

The City ſtands about a Cannot ſhot from the Fortreſs, but the Space between is filled up with Houſes and Market-places, which are ſuch pitiful Structures, that they may be removed in one Day. There are ſeveral Churches in this City, of which the Epiſcopal See, called *Ircou-ye-rize*, and *Catovike* are the Chief; the reſt are ſmall, ſunk deep in the Earth. Near the Epiſcopal Church is an old Tower, built of Free-ſtone, of antique Work, with ſeveral Inſcriptions, but none can read them; nor is it known when, by whom, or for what Uſe it was built. At a little Diſtance from it is the *Grand Meydan*, or great-Market-place, 400 Paces ſquare, where they uſe all Exerciſes, both for Horſe and Foot, as Carouſels, Races, Wreſtling, and managing of Horſes for War. There are many Baths and fair Inns in it. The Air is good, but a little thick and cold, for their Winter laſts long, and they have Snow ſometimes in *April*. The Country is very delightful and fertile, and produces Fruits in great Plenty, eſpecially Wine, which is there good and cheap.

The *Armenians* have a Tradition, that *Noah* planted his Vineyard near *Erivan*, and ſome pretend to ſhew the Place, about a ſmall League from the City. The River and Lake, which is twenty-five Leagues in Compaſs, furniſh the City with excellent Fiſh of nine Sorts, of which the Trouts and Carps are famous all over the Eaſt. In the midſt of the Lake is a ſmall Iſland, where ſtands a Monaſtery, whoſe Prior is an Archbiſhop, and takes upon him the Title of Patriarch, refuſing to acknowledge the grand Patriarch. The *Armenians* hold this City to be the moſt anciently inhabited Place in the World; for they affirm, that *Noah* and all his Family dwelt there, both before the Deluge, and after he came out of the Ark, and that the earthly Paradiſe was there: But all this is a Story without Foundation, reported by Perſons equally ignorant and vain-glorious.

Two Leagues from *Erivan* ſtands the famous Monaſtery of the *Three Churches*, the Sanctuary of the *Armenian* Chriſtians. The *Armenians* call it *Ecs miazin*, which Name alſo the principal Church bears. It is a ſubſtantial, but dark Structure, all built of large Free-ſtone. The Monks ſhew ſeveral Reliques reſerved in it, as a Finger of St. *Peter*, and two of St. *John* the *Baptiſt*, a Rib of St. *James*, Biſhop of *Jeruſalem*, and an Arm of St. *Gregory*, &c. but they muſt be very credulous and ſuperſtitious, that can believe them ſuch. The two other Churches that ſtood near this are, St. *Caiana* and St. *Repſima*, the Names of two *Roman* Virgins, who fled into *Armenia*, as they ſay, in the 9th Perſecution, and ſuffered Martyrdom in the ſame Places where thoſe Churches ſtand.

Within the Territory of *Erivan*, which reaches about twenty Leagues round it, there are twenty-three Convents for Men, and five for Women, which are ſo poor, that being continually employ'd in getting a Livelihood, they never perform holy Duties but upon Holidays. They hold the Opinions of the *Monophyſites*, but in other Points are very ignorant. Two Leagues from *Erivan* Eaſtward, is to be ſeen the famous Mountain where *Noah*'s Ark is ſaid to have reſted. The *Armenians* hold, that the Ark is ſtill upon the Top of the Mount called *Maus*, but that no Man can aſcend to it. The Governor of *Erivan* is a *Beglerbeg*, i. e. a Lord of Lords, and has alſo the Title of *Serdar*, or General of the Army. His Revenue is 32,000 Tomans, which is above 112,000 *l.* Sterling a Year, beſides Fines, Preſents, and indirect Ways of enriching himſelf, which amount to 50,000 Pounds more.

14. While he ſtaid at *Erivan*, he ſaw a Wedding of the Governor's Steward's Brother. Matrimony in *Perſia* is very expenſive, ſo that only Men of Eſtates will venture upon it, leſt it prove their Ruin. The meaner Sort content themſelves with a Concubine or Slave. The *Mahometans* that follow the Tenets of *Haly*, take their Wives after three Manners, *viz.* By Purchaſe, Hire, or Marriage. All theſe Ways their Religion allows, and their Civil Law acknowledges the Children born in any of them legitimate. The Wives, who are Slaves, are called *Canize.* Of theſe the Law allows a Man as many as he can maintain, and takes no Cognizance how they are uſed. He is Maſter of their Chaſtity, yea, of their Lives, and it is their Honour to ſerve their Maſter as his Wives. The hired Wives are called *Moutaa:* Of theſe alſo a Man may take as many as he pleaſeth, and as long as he pleaſeth for the Price agreed on, and at the End of the Term he may part with them, or renew the Bargain. A handſome young Maid at *Iſpahan* may be hired for 35 *l.* a Year, beſides Cloaths, Diet, and Lodging. If any break off before the End of the Term, he muſt pay the whole Sum contracted for, and the Woman, after Diſmiſſion, muſt tarry forty Days before ſhe lets herſelf to another. Theſe Days they call, *The Days of Purification.*

The eſpouſed Wives are called *Nekaa*, and of theſe the *Mahometan* Religion allows a Man to marry four; but they never marry above one, to avoid Expence and Diſorder, for every one will command, and their mutual Jealouſy cauſes a perpetual Confuſion; wherefore, if they cannot content themſelves with one Woman, they uſe their Slaves. In *Perſia* they uſually marry by Proxy, becauſe the Man never ſees his Wife till after he has conſummated the Marriage, which ſometimes he does not till ſeveral Days after his Wife has been at home. One would think, that this Way of marrying ſhould produce unfortunate Matches; but it doth not, for Marriages are not more happy in any Country than this. If either of the Parties diſlike one another, and reſolve to unmarry themſelves, the *Mahometan* Religion permits a Divorce, and they may ſeparate either before a Judge, or a Churchman, giving each other a *Talaak*, or *Bill of Divorce*, and then the Parties are at Liberty to marry again where they pleaſe themſelves.

Upon this Diſſolution of their Marriage, if the Man has ſued the Divorce, he is obliged to return the Woman her Dowry; yet if the Woman ſought it, ſhe loſeth her Portion; but if the Perſons repent the Act, they may renew the Marriage again three Times: Yet, the *Perſians* rarely make Uſe of this Licence to part with their Wives, only ſome Citizens and Tradeſmen make their Advantage of it. Perſons of Quality count it ſo diſhonourable, that they will rather die, than divorce their Wives, and the meaneſt Sort cannot part with the Portion, and ſo, if they deſire a Divorce, which is rare, they effect it by ill-uſing their Wives, to force them to ſue for a Divorce, and thereby ſacrifice all to their Liberty.

The *Armenian* Patriarch lives in this City, and has an Epiſcopal Palace. He, with all the reſt of his Clergy, is much addicted to *Simony*, as are alſo all the Eaſtern Sects. Their chief gain lies in ſelling the Oil called *Myrone*, at a dear Rate, which, they teach the People to believe is a Remedy that phyſically cures all the Diſtempers of the Soul, and confers the Grace of Regeneration and Remiſſion of Sins, ſaying, that in Baptiſm it is the Oil, not the Water, which is the Matter preſcribed. The Patriarch conſecrates this Oil, and ſells it to the Biſhops and Prieſts, who get great Sums by it.

15. *April* the 8th he parted from *Erivan*, and travelling through a Country ſomewhat hilly, but full of Villages, came firſt to *Daivin*, and then to *Kainer*, leaving the Mountain of *Noah* on the Right-hand. On the 10th he went on the ſame Road, which led him through a fertile and fair Country, and leaving *Sederec*, a great Town, and the Capital of the Province of *Armenia*, called *Charour*, where the Sultan reſides, came through *Nouratchin*, and over the River *Harpaſony* to *Nacchivan*, which is thought to be the ancient *Artaxate.* It is now little elſe but a Heap of Ruins, not containing above two thouſand Houſes which are inhabited, and thoſe in the Heart of the City, with Inns, Baths, and other publick Houſes, where they ſell Tobacco and Coffee, whereas formerly the *Perſian* Hiſtory aſſures us, that it contained forty thouſand.

Five leagues to the North lies a great City called *Abrener*, i. e. *the fertile Field*, and ſeven others near to it, all whoſe Inhabitants are Papiſts, and their Biſhops and Curates *Dominicans*, who perform their Church Service in the *Armenian* Language. Theſe Towns were brought into Subjection to the Pope by an *Italian Dominican* of *Bologna.* Twenty Villages more acknowledg'd the ſame Eccleſiaſtical Juriſdiction, but are returned to their firſt Religion, and their Obedience to the *Armenian* Patriarch; and it is not likely that the reſt can hold out long, for the Governors of the Province uſe them violently, and lay heavy Impoſitions upon them, for withdrawing from their Juriſdiction.

From *Nacchivan* he paſſed to old *Julpha*, through a dry ſtony Country, where there is Nothing to be ſeen but Hills of Stones. It is a ruined City, and thought by ſome Authors to be the ancient *Ariammene.* It is ſaid to have contained four thouſand Houſes, though the Ruins do not ſhew above half ſo many. At preſent there is nothing but Holes and Caverns in the Mountains, fitter for Beaſts than Men to live in.

This City was ruined by *Abas* the Great, for the ſame Reaſon as *Nacchivan*, *viz.* to hinder the Invaſions of the *Turks* for Want of Proviſions. By *Julpha* runs the River *Araxes*, which ſeparates *Armenia* from *Media.* It riſes in the Mountain where *Noah*'s Ark is ſaid to have reſted, from which perhaps it takes its Name, and empties itſelf into the *Caſpian* Sea. It is very large, and of ſo rapid a Courſe, eſpecially when it is ſwelled by the Thaws of the Snows that come down from the Mountains, that no Bridges can ſtand upon it, nor Dams reſiſt its Force, and the Noiſe of the Waters aſtoniſhes the Ears of the Beholders.

16. *Media*, which formerly ruled all *Aſia* with an imperial Dominion, at preſent makes but one Part of a Province, though the largeſt in the *Perſian* Empire, called *Azerbeyan*, or *Aſapaican.* It borders on the Eaſt upon the *Caſpian* Sea and *Hyrcania*, on the South upon *Parthia*, on the Weſt upon *Araxes* and the Upper *Armenia*, of which *Aſſyria* is a Part, and on the North on *Dageſtan*, which is that Mountainous Country that borders upon the *Muſcovite Coſſacks*, and Part of Mount *Taurus.* The *Perſians* affirm, that the Name of *Azerbeyan* implies the *Country of Fire*, by reaſon of the famous Temple of Fire which was there erected, where was kept that Fire which the Fire-worſhippers hold to be a God. *Nimrod* is ſaid firſt to have brought in this Worſhip, and there is a certain Sect, called *Guebres*, which ſtill maintain it.

From *Julpha* he travelled through a Country full of little Hills, leaving a ſpacious Plain upon the Left-hand, where many bloody Battles between the *Turks* and *Perſians* were fought, and particularly that between *Selim* the Son of *Solyman* the Great, and *Iſmael* the Great, to *Alacou*, and from thence, through a more even Country, to *Marant*, a very fair Town, conſiſting

ing of about two thouſand five hundred Houſes, and which has ſo many Gardens as take up as much Ground as the Houſes. It is ſeated at the Bottom of a Mountain, at the End of a Plain, watered by the little River *Zelau-lou*, from which the People have drawn ſeveral Cuts into their Grounds and Gardens.

In the Places adjoining grow Plenty of Fruits, the beſt in all *Media*; but that which is moſt peculiar to theſe Parts, is this, that here they gather Cochineal, though in no great Quantities, nor for any longer Time than only eight Days in Summer, when the Sun is in *Leo*; for before that Time, the People ſay, it doth not come to Maturity; and after the Worm, from which they draw the Cochineal, makes an Hole in the Leaf in which it grows, it is loſt. The *Perſians* call Cochineal *Kermis*, from *Kerm*, which ſignifies a Worm, becauſe it is extracted out of Worms. The *Armenians* have a Tradition, that *Noah* lies buried here.

17. From thence he travelled among the Mountains to *Sophian*, a little Village full of Rivulets and Gardens, and fruitful to a Wonder, and ſo he went to *Tauris*, which is fifty three *Perſian* Leagues from *Erivan*. This City is very large and potent, being the ſecond in *Perſia* in Dignity, Grandeur, Riches, Trade, and Number of Inhabitants. It is neither walled nor fortified, and the little River *Spingtcha* runs a-croſs it, which ſometimes carries away the Houſes on the Side of it, and makes dreadful Havock. On the North-ſide runs the River *Agi*, or the Salt River, whoſe Water is made ſalt by the little Rivulets, which paſſing through the Salt Marſhes, fall into it, and ſo can nouriſh no Fiſh. It is divided into nine Wards, and has fifteen thouſand Houſes, and as many Shops in their Market-places, among which are three hundred Inns, and ſome ſo large, as to lodge three hundred People, and many Cabarets for Coffee, Tobacco, and ſtrong Liquors. There are three hundred and fifty Moſques, three Hoſpitals, which relieve the Poor with Victuals twice a Day; and a fair Hermi, called *Hali's Eye*.

The Inhabitants have been formerly computed to be five hundred and fifty thouſand. This City is full of Strangers, who come hither to trade from all Parts of *Aſia*, becauſe it is full of all Sorts of Merchandizes, and abounds with Artiſts in Cotton, Silk, and Gold. The faireſt Turbans in *Perſia* are made here; and it is ſaid, there are ſix thouſand Bales of Silk conſumed in this Manufacture. The Air of *Tauris* is good, healthy, and dry, but the Cold continues long, becauſe it is expoſed to the North, and the Snow lies nine Months in the Year upon the Mountains; the Winds blow every Day Morning and Evening, and Rains often fall.

It abounds with all Things neceſſary for human Support, as Corn, Fiſh from the *Caſpian* Sea, Veniſon, and other wild Beaſts. Bread may be bought there for three Pound a Penny, and Fleſh at three half Pence a Pound. There are ſaid to grow no leſs than 60 Sorts of Grapes in and about *Tauris*. Near it is a Quarry of white Marble, a Mine of Gold, and another of Salt. There are ſeveral Mineral Waters, all ſulphureous, of which ſome are cold, and others boiling hot. Moſt of our Geographers of beſt Note, as *Ortelius*, *Ananias*, *Molets*, &c. are of Opinion, that this City is the ancient and celebrated *Ecbatana*, ſo frequently mentioned in holy Writ, and in the ancient Hiſtory of *Aſia*, but there are no Remains of the magnificent Palace of *Ecbatan*, where the Monarchs of *Aſia* kept their Courts in Summer, nor of *Daniel*'s, to juſtify this Notion.

From *Tauris* he travelled firſt to *Vaſpinge*, a great Borough, ſurrounded with Gardens and Groves of Poplars and Tylets, and watered with ſeveral Brooks, which make it very pleaſant; then to *Agi-agach*, by which are the Plains which afford the beſt Paſture in all *Media*, and perhaps in the whole World, where the choiceſt Horſes in the whole Province are put to Graſs from *April* to *June*, to purge, refreſh, fatten and ſtrengthen them. Theſe Plains are the *Hippopothon* of the Ancients, of which they write, that the Kings of *Media* kept here a Breed of fifty thouſand Horſes.

The Road from hence leads by ſeveral Circles of large hewn Stones, which the *Perſians* affirm to be the Places where the *Caous* or Giants, when they made Wars in *Media*, held their Councils, it being a Cuſtom among theſe People, that every Officer that came to the Council brought with him a Stone, to ſerve him inſtead of a Chair, and ſo carries you over Hills and Dales, all fruitful and delightful, to Admiration, through *Turiman*, ſo called, becauſe that in the Fields about it there is a great Number of Shepherds with their Flocks, that are called by that Name, to *Purvare*, an handſome large Village at the Bottom of an Hill, and upon the Banks of a little River.

From thence he proceeded in his Journey, and croſſing the River *Miana* ſeveral Times, by Reaſon of its Windings, paſſed through the Town of the ſame Name adjoining, both ſo called becauſe they part *Media* from *Parthia*, and aſcended a Ridge of Mountains, which are a Branch of Mount *Taurus*, at the Top of which ſtands a Caſtle, call'd the *Virgin*'s *Caſtle*, becauſe *Artaxerxes* is ſaid to have built it on Purpoſe to impriſon a Princeſs of the Blood.

As ſoon as you have paſſed theſe Mountains, and the River *Keſil-bueſe*, which is at the Foot of them, you perceive a Change of the Air; for whereas *Media* is moiſt and cloudy, ſubject to high Winds and much Rain, the *Parthian* Air is dry to the higheſt Degree, without Clouds or Rain for ſix Months ſometimes, and the Soil ſandy, ſo that nothing will thrive without good Huſbandry and Pains.

18. *Parthia*, which was ſo long the Seat of the Empire of *Aſia*, is now a large Province of the *Perſian* Monarchy. It is the proper Demeans of the Shah, and therefore has no Governor, as the reſt of the Provinces. It is extended 200 Leagues in Length, and 150 in Breadth, being bounded by the Province of *Choraſſan* on the Eaſt; by *Fars*, which is properly *Perſia*, on the South, by *Azarbeyan* or *Media* on the Weſt, and *Guilan* or *Mezanderan*, which compoſe the Province of *Hyrcania*, on the North.

The Air is dry, and though the Mountains produce nothing but Thiſtles and Briers, yet the Plains are fruitful and pleaſant, where there is Water. This Province has above forty Cities, which is much in *Perſia*, becauſe it is not peopled according to its Extent. The *Parthians* took their Original from the *Scythians*, who were the *Tartars*, who now inhabit the North of *Perſia*, called *Uzbecs*, and formerly *Bactrians*. The firſt Village you come at is *Zerigan*, which is fam'd for its Antiquity, being founded, according to the *Perſian* Records, in the Reign of *Ardechir-babezan*, ſeveral Ages before *Chriſt*, and then paſſing over delightful Plains, you come to *Sultany*.

This City is ſeated at the Foot of a Mountain. It ſeems afar off a very neat well-built Place, but does not appear ſo when you are within it; yet ſome of the publick Buildings are very remarkable, both for the Materials and Architecture. It contains about three thouſand Houſes, and beſides, there are very vaſt Ruins, which makes it probable, that it was once the largeſt City of the Kingdom, as their Hiſtories relate. Proviſions are very plentiful and cheap there, and the Air wholſome, though very changeable, the Mornings, Evenings, and Nights being very cold, and Days hot. It is ſaid to be the moſt ancient City in *Parthia*. The Predeceſſors of *Iſhmael Sophi*, and the laſt *Armenian* Kings, reſided there, and then it is ſaid that it contained four hundred Chriſtian Churches; but being demoliſhed by *Tamerlane*, and ſeveral other *Turkiſh* and *Tartarian* Princes, the Chriſtians have deſerted it.

From hence he travelled through a lovely Country, and paſſing through ſeveral Villages, ſurrounded with Meadows, and Groves of Willow and Poplar, he came to *Ebher*, a ſmall City for the Buildings, as containing not above 2500 Houſes, but taking up a large Extent of Ground, becauſe they have ſo many large Gardens. A ſmall River runs through the Midſt of it. It is thought to be anciently called *Berontha*. The Situation is delightful, the Air wholſome, and Soil plentiful. It is govern'd by a *Darogue*, or Mayor; and the *Mirtſheki Baſhi* has his *Tahvil*, or Salary, charged upon the Revenue of this City. The *Perſian* Geographers aſſert, that this City was built by *Kei-Coſrou*, and that *Darab-Reheni*, or *Darius*, began to build the Caſtle; and that *Skender-Roumi*, i. e. *Alexander* the *Great*, finiſhed it. At *Ebber* they begin to ſpeak the *Perſian* Language, which is ſpoken all the Way to the *Indies*, more or leſs pure, as the People are more or leſs diſtant from *Schiras*, where it is ſpoken in the greateſt Perfection.

19. From *Ebber* he travelled to *Perſac*, leaving *Caſbin* five Leagues on the Left-hand. This great City ſtands in a delightful Plain, three Leagues from Mount *Alou-vent*, one of the higheſt and moſt famous Mountains in *Perſia*. It is ſix Miles in Circumference, containing 12,000 Houſes, and 100,000 Inhabitants, of which there are forty Families of Chriſtians, and one hundred *Jews*, but all very poor. It was formerly walled, but they are now all fallen down. The chiefeſt Ornament and Grace of *Caſbin* is the King's Palace, and the great Number of the Seats of the *Perſian* Grandees, who attend upon the Court, which has its continual Reſidence there. There are but few Moſques in *Caſbin*, but the Royal Moſque, called *Metſhid-ſha*, is one of the largeſt and faireſt in all *Perſia*. This City has no great Plenty of Water, but it is ſupplied, with all it has, by ſubterraneous Channels called *Keriſees*.

The Air is thick, and not very healthful, and the Soil dry and ſandy, yet it abounds with Meat, and all Manner of Proviſions, which are brought thither from the Countries adjoining, which having many well water'd Plains, feed a World of Cattle, and produce prodigious Quantities of Corn. The faireſt Grape in *Perſia*, called *Shahoni*, or the Royal Grape, being of a Gold Colour, and tranſparent, of which the ſtrongeſt and moſt luſcious Wine in the World is made, grows here. The Air is very hot in Summer all the Day long, but the Nights are ſo cold, that if a Man expoſe himſelf never ſo little to the Air, after he is undreſſed, he is ſure to fall ſick. Some of our *European* Geographers affirm it to have been the City, which the *Greeks* called *Ragea*, or *Rages*, afterwards *Europa* and *Arſacia*, and now *Caſbin*, from a King of that Name. It is govern'd by a *Darogue*, or Mayor, choſen every Year, whoſe Office is worth to him 600 Tomans, or 2000 Pounds.

Having paſſed *Caſbin*, he came to *Kaiare*, and having lodg'd there, travelled the next Night (for that's the general Way of travelling all over the Eaſt, to avoid the Heat of the Sun, which would hurt both Man and Beaſt in the Day-time) by *Segs-abad*, which ſignifies, *the Habitation of Dogs*, to *Sava*, a great City, ſeated in a ſandy and barren Plain. It is two Miles in Circuit, and walled round, but ſo miſerably built, that, unleſs it be in the Midſt, it runs to Ruin for want of Inhabitants. The Hiſtories of *Perſia* unanimouſly agree, that the whole Plain of *Sava* was formerly a Salt-Marſh, or Lake; but how it was dried is not certainly known: Some fabulouſly report, that *Haly*, *Mahomet*'s Son-in-Law, drain'd it by a Miracle; and to preſerve the Memory of it, the People built this City in the Midſt of it.

19. Juſt over-againſt *Sava*, Eaſtward, at four Leagues Diſtance, ſtands a Place of Pilgrimage, moſt famous for the Devotion of the *Perſians*. They call it *Echmeuil*, that is to ſay, *Samuel*; for they believe, that this Prophet was there interr'd, and over his Tomb is built a moſt ſumptuous *Mauſolæum*, in the midſt of a magnificent Moſque. Over-againſt it is ſtill to be ſeen ſome Remnants of the City of *Rey*, which is reported to have been once the biggeſt City of *Aſia*, next to *Babylon*. The *Perſian* Hiſtories relate, that it was divided into ninety-ſix Quarters, every one of which had forty-ſix Streets, and every Street 400 Houſes, and ten Moſques; that there were in it 6400 Colleges, 16600 Baths, 15000 Towers of Moſques, 12000 Mills, 1700 Channels, and 13000 Inns, and People almoſt numberleſs.

The Chronicles of the *Magi* make *Chus*, the Grandchild of *Noah*, to be Founder of it; and *Ptolemy* calls it *Raquaia*; but the vulgar Opinion is, that it was founded by *Houſheing Piſhdadi*, or the Chief Juſticiary, and enlarged by *Marroutſher*, his Succeſſor. It was deſtroy'd by the *Mahometans*, who being divided into two Sects, *viz.* Of *Shia* and *Sunnis*, made War one upon the other for ſixty Years together. The Sect of *Sunnis* called in the Aſſiſtance of the *Tartars*, and, by their Help, bore down the Sect of *Shia*. In theſe Wars the *Tartars*, by their frequent Incurſions, deſtroy'd the potent City of *Rey*, and reduced it to nothing before the 600th Year of their *Hegyra*. The Soil about it is fertile and pleaſant, and produces great Plenty of Fruits; but the Air is unhealthy, making the Skin ſwarthy, and breeding Agues.

Departing from hence, he paſſed by an Hill, called *Couk-Teliſm*, which has this remarkable and peculiar to it; that as you approach nearer and nearer to it, it ſhews a different Form, and varies both in its Bigneſs and Figure; that the Top or Point of it is always in Sight, and you would think, that it turned that Side, which Way ſoever you ſtood to look upon it. It conſiſts of a black Earth, that crumbles like that of the burning Mountains; but it is not known to have vomited Fire. The People of the Country ſay, that they that aſcend that Mountain never come back again.

20. Having paſſed it, he came to *Com*, a large City, ſeated in a Plain, by a River-ſide. It contains 15000 Houſes, as the People ſay, and is ſurrounded with a Moat and Wall, flank'd with Towers, but half ruined. On the River-ſide are two fair Keys, and at the Eaſt of the City a fine Bridge. It contains many large and beautiful Market-places, both for Wholeſale and Retale: Though it be a City of no great Trade, yet they export large Quantities of Fruit, dried and raw, and particularly Pomegranates; Soap, Sword-blades, and Earthen Ware, both white and varniſh'd, which hath this peculiar Property, that it cools the Water in Summer both wonderfully and ſuddenly, by Reaſon of its continual Tranſpiration. It contains a great Number of fair Inns, Mauſolæums and Moſques, wherein the Grand-Children and Deſcendants of *Ali*, which are the *Perſian* Saints, called *Yman-Zade*, Sons of the Apoſtles, lie interr'd. One of theſe Moſques is the moſt celebrated in the Eaſt: It has four Courts, of which the firſt is planted with Trees and Flowers, like a Garden, with Terraſſes on each Side; the ſecond is not ſo beautiful as this, but the third is nothing inferior to it, being ſurrounded with Apartments two Stories high, and having a Terraſs, Portico and Canal. In the fourth are the Chambers and Lodgings for the Prieſts, Governors and Students, that live upon the Revenues of the ſacred Place. Fronting theſe Courts ſtands the Body of the Structure, conſiſting of three great Chapels upon a Line. To the Middlemoſt belongs a Portal, eighteen Foot high, of white Marble. The Top is a large Half-Duomo, overlaid without with large ſquare *China* Tiles, painted with *Moreſco* Work, and embelliſh'd within with Gold and Azure. The Folding Doors are plated with Silver, gilt with Vermillion.

In it ſtands the Tomb of *Fatima* in the Midſt, which is overlaid alſo with *China* Tiles, painted *A-la-moreſco*, and overſpread with Cloth of Gold, which hangs down on both Sides. It is encloſed with a Grate of maſſy Silver, ten Foot high, diſtant half a Foot from the Tomb, and at each Corner are Apples of fine Gold. In the two Chapels on each Side ſtand the Tombs of the two laſt Kings of *Perſia*, viz. *Abas* and *Sophi*, both very magnificent; but on that of *Abas* are written in large Characters of Gold, ſeven Elegies upon *Mahomet* and *Haly*, made by the Learned *Haſan-Caza*.

Theſe are rare Pieces of Eloquence, and in them may be ſeen not only the Genius of *Perſian* Poetry, but the Tranſports of the *Mahometan* Devotion. This City contains ſeveral other beautiful and ſumptuous Edifices, and would be a very pleaſant Place, were it not for the Heat, which is exceſſive, there being no Place in all *Perſia* where the Sun ſcorches more violently, yet is the Air wholſome, and Soil fruitful, eſpecially in Piſtachio's. The People are very courteous and civil. The River that paſſeth by it is but a ſmall Current in Summer, but being ſwell'd with the Snow-waters that fall from the Mountains, it ſometimes overflows great Part of the City.

From *Com* he travelled four Leagues over very fertile Plains, abounding with fine Villages, to *Caſſem-abad*, a Town conſiſting of about 300 Houſes, belonging to the Queen-Mother, as her Dowry, from whence he paſſed over a dry ſandy Plain, without Villages or Water, to *Abiſhirin*, or Sweet Water, becauſe there is a Fountain of fair Water, and went from thence to *Caſhan*.

21. This City is ſeated in a large Plain, near an high Mountain, a League in Length, and a Quarter of a League in Breadth, running out from Eaſt to Weſt in Form of an Half-Moon. There is no River near the City, but it is ſupplied with Water by Canals, deep Wells, and Ciſterns. It is encompaſſed with a double Wall, flank'd with round Towers, after the old Faſhion, and hath five Gates. The City and Suburbs, which are the moſt beautiful, contain 6500 Houſes, as the People ſay, forty Moſques, three Colleges, and about 200 Sepulchres of the Deſcendants of *Ali*. The principal Moſque ſtands right againſt the Market-place, and has a Tower, like a Steeple, of Free Stone. The Houſes are built of Earth and Brick, but are none of them remarkable for their Beauty.

The Bazars and Baths are well-built and kept, and the Royal Inn is the faireſt in all *Perſia*. The Wealth and Trade of *Caſhan* conſiſts in the Manufactory of all Sorts of Stuffs, and Tiſſues of Gold and Silver, plain and flower'd, Sattin and Velvet; and there is no City in *Perſia* that makes more. *Caſhan* ſtands in a good Air, yet ſo violently hot, that it is ready to ſtifle you in Summer, which is occaſion'd by the Reflection of a Mountain, that ſtands on the South of it; but the greateſt Inconvenience that attends this City, is the great Number of Scorpions which infeſt it, and the Parts adjoining, when the Sun is in *Scorpio*, and therefore there is Nobody but has by him ſeveral experienced Remedies againſt the Sting of this Creature.

Cattle and wild Fowl are not plentiful, but the Country abounds in Corn and Fruits. They furniſh *Iſpahan* with Fruits, eſpecially Melons and Water-Melons, all the Seaſon. Several *European* Authors think this City to be *Ambrodux* or *Cteſiphon* of the Ancients. It is ſaid to be founded by a Virgin, who therefore laid the firſt Stone of it when the Sun enter'd *Virgo*, and nam'd it *Caſhan* from her Grandfather. It is govern'd by a *Darogue*, or Mayor, who holds his Place two Years.

From *Caſhan* he paſſed over a Mountain, and then deſcended into a deep Valley, very narrow, and about a League in Length, which is well fill'd with Houſes, Vineyards and Gardens, ſo cloſe one to another, that they all ſeem but one Village. Several delightful and clear Streams preſerve the Summer ſo wonderfully cool here, that the Roſes were not blown, nor Corn or Fruit ripe, when the Harveſt was quite got in at *Caſhan*. Several modern Authors aſſert, that *Darius* was murthered by *Beſſus* in this Valley, and that not improbably, becauſe Hiſtory ſays, *Beſſus* fled to *Bactriana*, and *Nabarzanes* to *Hyrcania*, and here the Road begins to theſe two Provinces, and ſo by *Moutſhacour*, a large Village of 500 Houſes, to *Iſpahan*, which is ſo thick encompaſſed with Villages, that you would think you are in the Suburbs two Hours before you come near them.

22. There are two other Roads, which it is neceſſary that Travellers ſhould be acquainted with, which I ſhall briefly deſcribe, *viz.* from *Warſaw* to *Iſpahan*, and from *Iſpahan* to *Moſcow*.

Warſaw, which is ſeated upon the Left-Hand of the *Viſtula*, is the ordinary Reſidence of the King of *Poland*. Beginning your Travels here to *Iſpahan*, you muſt go to *Lublin*, which is ſix Days Journey, and in five more you may get to *Iluove*, where the Cuſtomers open all the Bales of the Merchants Goods, and exact five in the Hundred. From *Iluove* you go to *Jaſlovicer* in twelve Days. This is the laſt City of *Poland* next *Moldavia*. Here, if you ſell any Goods, you muſt pay five *per Cent*.

From thence you go to *Yaſhe* in eight Days. This is the Capital City of *Moldavia*, and the Reſidence of the *Weywod*, which the Grand Signior ſends to govern that Country. Here all Bales of Merchandizes are opened, and there is a Roll of all that the Merchant is to pay, which amounts to five *per Cent*.

From *Yaſhe* the Way lies through *Ourſhaye*, to which you come in three Days. This is the laſt City in *Moldavia*. From hence to *Akerman* you go in four Days, and the Cuſtoms amount to four *per Cent.* but they take the Merchant's Account. From *Akerman* you go to *Ozou*, where they take two *per Cent.* and ſo to *Precop*, where they pay two and an half *per Cent.* but they truſt to the Merchant's Word at both Places.

From *Precop* the Road lies to *Kaffa*, where alſo the Cuſtom is three *per Cent.* And the Journey from *Warſaw* to *Kaffa* is fifty-one Days by the Waggon, which is the uſual Way of Carriage in that Country, and the Cuſtoms in all come to eighteen and an half *per Cent.* to which you muſt add the Carriage and Paſſage by Sea to *Trebiſond*, where you pay three Piaſters for every Mule's, and four for every Camel's Load. To avoid ſomething of this Charge, the *Armenians* ſhip their Goods uſually at another Port, called *Onnie*, which is a very good Port, and where they never pay above a Piaſter and a half for a Camel's Load.

There is another Road from *Warſaw* to *Trebiſond* ſhorter by three Days Journey, *viz.* From *Warſaw* to *Yaſhe*, in the former Road, and from thence by *Galas*, a City of *Moldavia*, *Megin* and *Mangalia*, the beſt Port in the Black-Sea to the Weſt, to *Trebiſond*, from whence to *Erzerom* five Days Journey, from which to *Iſpahan* you go the uſual Road.

The other Road from *Iſpahan* to *Moſcow* lies thus. You muſt travel the uſual Road before mention'd, to *Shamaki*, and from thence to *Derbent*, which the *Turks* call *Demir-Capi*. This is the laſt City in the *Perſian* Juriſdiction, by which the River *Shamourka* runs. From *Derbent* you may travel to *Tetark* in eight Days, where hiring Barks with twelve Oars, you may be at *Aſtracan*, by the Help of a little Sail, which they put up, if the Wind ſerves, in four or five Hours, but if you row only, it will take up nine. When you embark upon the *Caſpian* Sea, you muſt provide yourſelf Water for the firſt three Days, becauſe the Water on the Coaſt is bitter for that Time, but afterwards it is very good. At *Aſtracan* the Merchants are all ſearched by the Cuſtomers, and they take five *per Cent*.

From *Aſtracan* to *Moſcow* you take Shipping in great Barks, that make Uſe both of Oars and Sails, rowing againſt the Tide, and weigh all you carry aboard, for which you muſt pay fourteen Caya, and three Abaſſi's and an half for every Pound. From *Aſtracan* you ſail to *Corinya*, and ſo in Order by *Sariza*, *Sarataf*, *Samarat*, *Senur'ſkat*, *Coulombe*. *Caſan*, *Sabouk-ſha*, *Godamijan Triguna*, *Mouren* and *Caſin*, to *Moſcow*, which they count 2950 *Shagarons*, or 590 *Italian* Miles.

At *Sarataf* you may go a-ſhore, and ſo go by Land to *Moſcow* in Waggons when the Snow is gone, and on Sledges while it lies, and then the Way lies through *Inſerat*, *Tymnek*, *Canquerma* and *Valodimer*, a City bigger than *Conſtantinople*, to *Moſcow*, which Journey may be finiſh'd in thirty-five Days; but this Way is never uſed, but upon Neceſſity, when the River is frozen, becauſe in the Paſſage from *Sarataf* to *Inſerat*, which is ten Days Journey, there is nothing to be had for Man or Horſe. At *Moſcow* the Cuſtoms are the ſame as at *Aſtracan*, viz. five *per Cent.* and all the *Aſians*, viz. *Turks*, *Perſians*, *Armenians*, and others, lodge in a Sort of Inns; but the *Europeans* lie in a Place by themſelves all together.

23. There are few Countries in the World that are ſo little viſited by *European* Travellers as thoſe about the *Black Sea*, and indeed there are ſeveral Reaſons for it. In the firſt Place, the *Turks* will ſuffer no Trade to be carried on by Sea in any other than their own Veſſels, and ſo jealous they are on this Head, that when the *Ruſſians* were Maſters of *Aſoph*, and ſhared by that Means in the Navigation of the *Black Sea*, they were never eaſy. It is, in the next Place, a very rare Thing, even for ſuch as travel for Pleaſure through the Dominions of the Grand Signior, to ſtrike out of the com-

mon Road purely to gratify their Curioſity, nor indeed in ſuch a Country as this would that be always ſafe. And laſtly, The common Reports of moſt of theſe Countries, place both them and their Inhabitants in ſo bad a Light, that few have any Curioſity to be better acquainted with them. Our Author's Journey was by mere Accident; he took his Route to *Perſia* as the moſt convenient at that Time for his Purpoſe; and it was alſo by Accident *M. de la Motraye* took many Years after the ſame Route, and their Accounts agree, generally ſpeaking, very well; but ſome Points in both ſeem to ſtand in Need of Explanation.

Our Author has given but a very ſhort Account of the *Crim Tartars*, and therefore it is neceſſary to ſay ſomething more of them. Authors differ very much as to the Condition of this Nation, that is to ſay, whether they ought to be conſidered as free and independent, as Allies, or as ſubjects to the *Turks*. Inſtead of endeavouring to diſcuſs theſe Queſtions, we ſhall leave them to the Deciſion of the Reader, after reporting a few Matters of Fact. There are not many Towns in this *Tartary*, and in thoſe that have any Fortreſſes, the *Turks* have Garriſons. The *Tartar* Princes are rarely admitted into, and never allowed to lodge in them. *Caffa*, we have elſewhere ſhewn, was once a very fine City, and is ſtill a good Port, which is in the Power of the *Turks*; ſo is *Baluclawa*, which is ſtill a better Port, and, if we may depend upon the *Turkiſh* Writers, is not exceeded by any in the World, either for the Depth of Water, or Security from Winds. The Town of *Chirk*, upon the Streights of *Daman*, has alſo a very fine Port, but it is an open Place, and belongs to the *Tartars*. The Capital of this Country, properly ſpeaking, is *Baſcia Sarai*, which is the Reſidence of the Khan, was taken by the *Ruſſians* in the late War, and totally deſtroyed. The Khan of the *Tartars*, tho' a Sovereign Prince, is appointed and depoſed by the Grand Signior, but he is always ſucceeded by a Prince of his own Family, and this preſumptive Succeſſor, whether he be the Brother or Son of the reigning Prince, is ſtiled Sultan *Galga*. The ſecond Prince of the Family is ſtiled *Hor Bey*, the third *Noradin Bey*, and the reſt of the young Princes have particular Titles. It is to be obſerved of the *Tartars* in general, that even the meaneſt and moſt ſtupid of them is ſo much Maſter of his Genealogy, as to know exactly of what Family he is deſcended, and to what Tribe his Family belongs. The Truth of the Matter is, that they reſemble exactly *Highland* and *Iriſh* Clans, and, like them, are commanded by Chiefs.

Every diſtinct Family or Clan of the *Tartars* is by them ſtiled *Horda*, and the chief *Murſa*, or as others write it, *Mirza*. Amongſt the *Crim Tartars* there are four great Tribes, to which all their Hords belong, and the Chiefs of theſe four Tribes are the Councellors of the Khan, without whoſe Conſent he can undertake Nothing of Importance. Hereditary Right is the Fundamental Law of all the *Tartars*, and the Dignity of *Mirza*, or Chief, deſcends from Father to Son. The Khan of *Crim Tartary* can bring eighty thouſand Men into the Field, but his Contingent, when called to aſſiſt the Grand Signior, conſiſts of thirty thouſand Horſe. All the World knows, that theſe *Tartars* are very far from being handſome, but they are, generally ſpeaking, brave, hardy, active, and enterprizing, and their Horſes reſemble them, for worſe looking, or better Beaſts for Service, the World does not produce. As for Riches, they conſiſt in Horſes and in Slaves; and as for their Manner of Living, it is equally coarſe and barbarous in the Opinion of all other Nations, and honourable and happy in their own. They are very hoſpitable and kind to one another, ſo that every Man is at home in his Neighbour's Houſe. Neither are they leſs civil and reſpectful to ſuch Strangers as come among them, who are very welcome to what they have, and would be as welcome if they had more. One Thing is remarkable, when any Stranger comes to their Tents, he is ſerved by their Children, and not by their Slaves, let the Quality of the Maſter be what it will. A Gentleman who was in the Service of *Charles* XII. paſſing through this Country in his Way to *Bender*, where that Monarch then was, lodged in the Tent of a principal *Mirza*, and when it was Time to go to Reſt, his Son made up for the Stranger a Bed of Skins, by the Side of which he ſet a little Stool, with a Pipe, a Box of Tobacco, and a Bottle of excellent Sherbet. In the Morning he came and rolled up the Bed, preſented him Cakes, Butter, Coffee, and Milk, and brought him likewiſe his Boots. The Father, who was a Kind of Prince, when the Gentleman expreſſed ſome Aſtoniſhment at his putting his Son upon ſuch Offices, made him this Anſwer; "Friend, this World is a Lottery, in which there are many Blanks to a Prize; though I have many Slaves, yet by the Fortune of War my Son may become a Slave; it is fit therefore he ſhould learn to behave in all Conditions; the Khan does the ſame Thing; and beſides, let me tell thee, Stranger, that among the *Tartars*, we hold the meaneſt Office done to a Friend as the higheſt Honour, and therefore never Share it with our Slaves."

As the *Tartars* are chiefly known to the reſt of the World, by their Excurſions, we cannot deſcribe them better, than by ſhowing in what Manner they act on ſuch Occaſions, wherein, without doubt, they diſcover an extraordinary Genius for this Manner of making War, which, however barbarous it may ſeem to us, anſwers all the Ends of War to them, by furniſhing Slaves and Booty in Abundance, which ſupplies them with the Means of Happineſs in Time of Peace. It is very true that they run through great Hazards and Hardſhips in Time of War; but then theſe Hazards and Hardſhips are all that they ſuſtain, for when they return to their Tents, they are free and independent, have neither Care nor Solicitude, but are Princes in their own Family, and live in what Manner they like beſt, without any Apprehenſions or Conſtraint. To us, indeed, even their Repoſe and Luxury appears a moſt ſhocking and hideous Courſe of Life; but it appears otherwiſe to them; and, after all, if there be any Thing certain in this World, it is this, that the true Standard of Happineſs is Opinion. But to come to the Point; every *Tartar* that goes into the Field, carries with him two Horſes, which are taught to follow without being led, and are conſequently uſeful to, without embarraſſing their Maſter. On theſe Horſes they lay a Sack of Rye Meal, and another with Biſket and Salt, which is all the Baggage and Proviſions wherewith they are encumbred. It is only a few of the Commanders that are provided with Tents; the reſt paſs the Night in the following Manner. They carry with them four ſharp Stakes, which they drive into the Ground, and upon theſe they fix their Mantle, which ſerves for a Bed; their wooden Saddle ſupplies the Place of a Pillow, and a coarſe, thick Cloth, which is thrown croſs the Horſe's Back under the Saddle, becomes a Coverlid. The Horſes are tied to the Pickets with pretty long Cords; and while their Maſters ſleep, the Beaſts very handily remove the Snow with their Forefeet, and feed upon the Graſs that is under it, taking now and then a Mouthful of Snow to moiſten it. When a Horſe tires, his Maſter cuts his Throat upon the Spot, and diſtributes his Fleſh among his Friends, who make him the ſame Compliment when Occaſion offers. The beſt Part of the Fleſh they cut in Slices, of an Inch thick, and theſe they place very neatly under the Saddle of the Horſe they ride upon. When they have travelled three or four Leagues, they diſmount, turn all the Pieces of Fleſh, and mix them very carefully with the Sweat, which they turn up with their Fingers, then to Horſe again, and at Night they ſup upon this dainty Diſh, which they take ready dreſs'd from under their Saddles.

In this Manner they will traverſe two or three hundred Leagues of Ground, without ever lighting a Fire, which they carefully avoid, to prevent being diſcover'd; and they chuſe the Depth of Winter for their Expeditions, that the Bogs, Lakes, and Rivers being frozen, they may avoid all Interruptions, and proſecute their March with greater Expedition. Thus the *Tartars* march one hundred in Front, that is three hundred Horſes; every one of them has two, which ſerve for Relays,

lays, as has been ſaid before; their Front may extend eight hundred or one thouſand Paces, and they are eight hundred or one thouſand in File, which reaches four long Leagues, or three when they keep cloſe; for at other Times they extend above ten Leagues. This is wonderful to thoſe that have not ſeen it, for eighty Thouſand *Tartars* make up above two hundred thouſand Horſes. Trees are not thicker in the Woods than Horſes are at that Time in the Field; and to ſee them at a Diſtance, they look like a Cloud riſing in the Horizon, which increaſes as it riſes, and ſtrikes a Terror into the boldeſt; I mean thoſe who are not uſed to ſee ſuch Multitudes together. Thus theſe mighty Armies march, halting every Hour about half a Quarter of an Hour to give their Horſes Time to ſtale; and they are ſo well managed, that they do it as ſoon as they ſtop; then the *Tartars* alight and piſs too. They remount immediately, and go on, all which is done only by the Signal of a Whiſtle; and when they are come within three or four Leagues of the Borders, they lie ſtill two or three Days in ſome Place choſen for that Purpoſe, where they think they are concealed; there they give out Orders, and refreſh their Army, which they diſpoſe of in this Manner: They divide it into three Parts, two Thirds are to compoſe one Body, the other Third is ſubdivided into two Parts, each making a Wing, one on the Right, the other on the Left. In this Order they enter the Country.

The main Body moves ſlowly, which, in their Language, they call *Coche*, with the Wings, but continually without halting Day or Night, allowing but an Hour to refreſh till they are got ſixty or eighty Leagues into the Country, without doing any Harm. But as ſoon as they begin to march back, the Body holds the ſame Pace; then the General diſmiſſes the two Wings, which have Liberty, each on its own Side, to ſtray ten or twelve Leagues from the main Body; but that is to be underſtood Half of the Way forward, and the other Half Sideways. Each Wing, which may conſiſt of eight or ten thouſand Men, is again ſubdivided into ten or twelve Squadrons, of five or ſix hundred Men each, who run up and down to the Villages, encompaſs them, making four *Corps de Garde* about each Village, and great Fires all the Night for Fear any Peaſant ſhould eſcape them: Then they fall to Pillaging and Burning, kill all that make any Reſiſtance, and take and carry away all that ſubmit, not only Men, Women, and Sucking Babes, but the Cattle, Horſes, Cows, Oxen, Sheep, Goats, *&c.* As for the Swine, they drive and ſhut them up in a Barn, or ſuch like Place, and fire the four Corners; ſo great is the Loathing they have for thoſe Creatures. The Wings being allowed to ſtray but ten or twelve Leagues, (as has been ſaid) return with their Booty to their main Body, which is eaſily done; for they leave a great Track, marching above fifty in Front; ſo that they have nothing to do but to follow, and in four or five Hours they join their Body again, where, as ſoon as they are come, two other Wings, conſiſting of the like Number as the former, go out on the Right and Left, to make much the ſame Havock; then they come in, and two others go out, and ſo continue their Excurſions without ever diminiſhing their Body, which, as has been mentioned, makes two Thirds of the Army, and move gently, to be always in Breath and ready to fight their Enemy, if they ſhould meet them, tho' their Deſign is not to meet, but to avoid them as much as poſſible. They never return the ſame Way they broke in, but take a Compaſs, the better to eſcape; for they always fight in their own Defence, nay, and they muſt be forced to it, without they know themſelves to be ten to one; and yet would they conſider of it before they fell on; for theſe *Tartars* do not enter *Poland* to fight, but to pillage by way of Surprize. When the *Polanders* meet them, they make Work, forcing them to get home faſter than their uſual Pace. At other Times, after they have ſufficiently plundered and robbed, they enter upon the deſart Plains in the Frontiers, thirty or forty Leagues in Length, and being in that Place of Safety, make a great Halt, recovering Breath, and putting themſelves into Order, if they were in any Confuſion, on Account of meeting the *Polanders*.

At their Return from ſuch an Incurſion, the Khan receives his Tenth of the whole Booty, which is afterwards divided amongſt the ſeveral Hords, and every Mirza receives the Tenth of the Share that belongs to his Hord; after which, what remains is divided fairly and regularly amongſt all that ſerved in the Excurſion. It is, undoubtedly, one of the moſt ſhocking Spectacles that can be beheld, to ſee the unhappy People of all Ages, Ranks and Sexes, that have been thus carried away, ſeparated from each other, and torn away by their relentleſs Maſters, who either keep and employ them in ſervile Work, or ſell them, if they think proper, to the *Turks*, *Perſians*, *Circaſſians*, or any of the adjacent Nations, or to the Merchants who come up into their Countries on Purpoſe to buy Slaves. It is from their Fortune in theſe Kind of Excurſions, that the *Tartar* Princes become rich and potent; for what they receive from their Parents is very inconſiderable, and they make no Scruple of telling Strangers, when they admire the Number of their Tents, Horſes, Cattle and Slaves, that what they have, was acquired by their Sword and Bow; and that if they had been leſs lucky in their Expeditions, they had been as poor and as miſerable as any of their Subjects. By leading this Kind of Life they become very active and vigorous, capable of enduring prodigious Fatigue, ſo as to go without Sleep for many Nights together, and with little or no Food for many Days; but when they come to have more Leiſure, they will fetch this up by ſleeping forty eight Hours upon the Stretch, and will crowd three or four Meals into one. Their good and bad Qualities are peculiar to themſelves, and ſeem to be derived entirely from the Kind of Life they lead; for though they will fight very bravely, yet they muſt be forced to it, chuſing much rather to fly, if it be practicable. They will drink very freely upon certain Occaſions, but upon ſuch Occaſions only, for at other Times they are both abſtemious and ſober. The *Crim Tartars* are very far from being jealous, and are, generally ſpeaking, content with one Wife, ſeldom making uſe of their Slaves as Concubines; but then they are merciless Maſters, treat their Slaves in the ſame Manner as their Cattle, and ſell them with as little Ceremony. Under Misfortunes they are patient, or rather ſullen; but what little Education they have makes ſome Difference amongſt them, as appears by ſuch of their Khans as are baniſhed to *Rhodes*, which is the common Place of their Exile when depoſed, where they live very handſomely, and without any Dejection of Spirit. Indeed this Misfortune happens ſo frequently, that they cannot be much ſurprized at it. In the Court of the Khan's Palace at *Baſcia Saray*, there are two Tombs of Princes that died in Poſſeſſion of that Dignity, and, it is ſuppoſed, were erected there as Curioſities in that Reſpect. I have dwelt the longer upon this Subject, becauſe I take it to be both inſtructive and entertaining.

In order to apprehend clearly the Nature of our Author's Voyages and Travels, we muſt conſider the Countries that lie upon the *Black Sea*, which is every where ſhut in by the Land, except at the narrow Streights of *Conſtantinople*. On the Weſt-ſide lies the *European* Coaſt, *viz.* the maritime Parts of *Moldavia*, *Bulgaria*, and *Romania*, extending from South to North, that is, from *Conſtantinople* to *Oczakow*, in a ſtreight Line, about three hundred and twenty Miles. On the North-ſide lies the *Little Tartary*, the Peninſula of *Crim*, and the great Country of *Circaſſia*, that circumſcribe the *Palus Meotis*, which communicates with the *Black Sea* by the Streights of *Daman* or *Theman*, which have the Peninſula of *Crim* on one Side, and *Circaſſia* on the other. Thus it appears, that *Circaſſia* makes the North Eaſt Boundary of the *Black Sea*, and ſtretches itſelf quite to the *Caſpian*. The Countries lying on the Weſt-ſide of the *Black Sea*, and to the South of *Circaſſia*, are *Mingrelia*, *Immeretia*, and *Guriel*, of which our Author has given a large and very good Deſcription.

Theſe Countries are all mountainous and narrow, having behind them towards the *Caſpian*, the large Country of *Georgia*, which borders immediately on the *Perſian* Dominions, having *Circaſſia*, on the North, the Countries of *Mingrelia*, *Immoretta*, *Guriel* and *Armenia* on the Weſt, the *Caſpian Sea* on the Eaſt, and the Territories of *Perſia* to the South. The ſeveral Nations that inhabit theſe Countries are, properly ſpeaking, *Tartars*, or very little better; and though there are ſome Towns, and even Cities, yet moſt of the Inhabitants live in Tents. The Princes of the *Circaſſians*, are hereditary Chiefs of Clans, like other *Tartars*, and it is certainly a Degree of Complaiſance to eſteem them Chriſtians. It muſt be however allowed, that they are not quite ſo barbarous, or to ſpeak with greater Propriety, ſo far removed in their Manners from ours, as other *Tartars*, notwithſtanding their unnatural and deteſtable Cuſtom of ſelling their Children; for it is certain that they take a good deal of Pains in their Education, but with no other View than that of bringing them to a better Market. The Boys, beſides Riding, Hunting, Shooting and martial Exerciſes, are taught ſeveral Languages; and as they are very active in their Perſons, have quick Wits, and are of bold and enterprizing Natures, they riſe frequently to great Preferments, both in *Turkey* and in *Perſia*; as for the Girls, they are likewiſe taught the *Turkiſh* and *Perſian* Tongues, Muſic, Dancing, and to repeat amorous Novels and Romances. If it may be accounted wonderful to ſee Parents part with their Children with ſo much Eaſe as they do, it is certainly not at all leſs ſtrange, to ſee the Children quit their Fathers and Mothers not only without Pain, but with the utmoſt Alacrity, the Girls more eſpecially. This ariſes from the Stories they are told, of the vaſt Fortunes that their Countrywomen have made in different Parts of the World, which fills them with aſpiring Thoughts; and to ſay the Truth, their Slavery is none of the hardeſt, for the Merchants who buy them, take as much Care as is poſſible to improve their Education, and are ſo far from making any Attempts upon their Chaſtity, that they are the moſt jealous Guardians of it in the World, becauſe all the Hopes they have of ſelling them to Advantage, are founded in the extreme Fondneſs the *Mahometans* have for Virgins, and when they are ſold, it is at ſo high a Price, that thoſe who buy them, muſt be both able and diſpoſed to maintain them in Affluence.

There is no need to add any Remarks on the remaining Part of this Section, becauſe whatever requires farther Explanation, will be ſet in a clear Light in the ſubſequent Sections; only it may not be amiſs to obſerve, that ſince the Declenſion of the *Perſian* Empire, the *Ruſſians* have taken many of the *Circaſſian* and *Georgian* Princes under their Protection, and it is highly probable, that in Time the reſt will follow their Example, which perhaps may render the Country more acceſſible, and prove the Means of drawing the Inhabitants out of their preſent State of Barbariſm. If this could be done, and they once civilized, and brought under one Sovereign, or even two or three that lived in tolerable Harmony with each other, there is no doubt that they might be able to defend themſelves againſt any that ſhould attack them, and by the Happineſs of their Situation, between the *Euxine* and *Caſpian* Seas, and the many valuable Commodities their Country produces, they might very ſpeedily eſtabliſh a much more profitable, as well as reputable Commerce, than that which they have hitherto carried on. The late *Schah Nadir*, who had great Views with reſpect to Trade, was very deſirous of forcing a Paſſage to the Black-Sea, where he intended to have eſtabliſhed a Port from which he expected vaſt Things, but very probably theſe great Deſigns will fall with him; and as the preſent Generation is not like to ſee his Equal, we muſt leave to Poſterity the Hopes of beholding theſe Countries and their Inhabitants in a better Situation than they are at preſent, for which they ſeem to have been deſigned by Nature; in a worſe, however, they cannot well be.

SECTION II.

A copious and circumſtantial Deſcription of the great Empire of *Perſia*, its Situation, Extent, Diſtribution of its Provinces, Climate, Rivers, Seas, Soil, Produce, and the chief Cities throughout the Country, ſo as to afford a perfect Idea of its Condition, in paſt and preſent Times.

Collected from the Writings of the moſt famous Travellers, particularly from thoſe of HERBERT, CHARDIN, TAVERNIER, THEVENOT, LE BRUN, *and others, their ſeveral Remarks and Obſervations being all digeſted into a regular and eaſy Method.*

1. *The Situation and Extent of the* Perſian *Empire, with a ſuccinct Account of the Reaſons why a clear and perfect Notion of the Territories which compoſe this Empire, is of ſuch Importance towards a right Idea of general Hiſtory and Geography.* 2. *A diſtinct and accurate Deſcription of the ſeveral Provinces under the Dominion of the* Perſian *Emperor, their ancient and modern Names, Situation, Extent, chief Cities and Ports.* 3. *The Air and Climate of* Perſia *in its different Parts; with an Account of the hot and ſtifling Winds ſo dangerous to Travellers on the Sea-Coaſts.* 4. *The Rivers in this Country, and the various Methods made Uſe of to diffuſe the Water by Canals and Aqueducts; and an Account of the Seas upon which it borders.* 5. *Of the Appearance of the Country in general, and of the Diverſity of Soils in* Perſia. 6. *Of the particular Huſbandry uſed in this Country, the Produce of arable Lands and Gardens.* 7. *Of the Variety of Fruits, Trees, Flowers and Shrubs that grow therein.* 8. *Of medicinal Drugs that are brought from* Perſia, *particularly* Opium, Aſſa Fœtida *and* Bezoar. 9. *A large and curious Account of the Animals, tame and wild, in the ſeveral Provinces of* Perſia. 10. *Of the Fowls, Birds and Fiſh in this Country, and the Reaſon why the latter is ſo ſcarce at* Iſpahan. 11. *Of the Minerals in* Perſia, *and of precious Stones, particularly the* Turquois, *held to be peculiar to this Country.* 12. *Of the Manner of Building in* Perſia, *how well adapted to their Climate, and of the Methods*

Methods uſed to keep their Houſes cool and pleaſant, even in the hotteſt Seaſons. 13. *A particular De-*
ſcription of the Capital City of Iſpahan *or* Spahawn, *with its peculiar Beauties and Blemiſhes.* 14. *A*
diſtinct Deſcription of the Royal Palace and of the Imperial Moſque. 15. *Of the Bagnio's, Gardens and*
Bridges in the City of Iſpahan, *and in its Neighbourhood.* 16. *A large Deſcription of the Borough or*
Suburb of Julpha, *with an Account of the* Armenians *who inhabit it.* 17. *The noble City of* Schiraz
deſcribed, with an Account of the adjacent Country, and its Produce. 18. *An Account of the noble*
Antiquities at Tchelminar, *the Remains of the ancient* Perſepolis, *juſtly eſteemed the moſt glorious An-*
tiquity in the World. 19. *Of other Places of Note in* Perſia, *more eſpecially upon its Sea-Coaſt, and*
of the Deſign of Shach Nadir *to have removed the Capital of the* Perſian *Empire, with the Reaſons upon*
which that Project was founded. 20. *A Compariſon between the paſt and preſent State of* Perſia, *in Re-*
gard as well to the Fertility and Riches of the Country, as of the great Cities and Ports. 21. *Remarks*
hiſtorical, political and critical, upon the foregoing Section.

1. THERE is ſcarce any Country in the World, which makes a greater Figure in Hiſtories ſacred or prophane, ancient or modern, than this of which we are ſpeaking. In the Scriptures the Deliverance of the *Jews* by *Cyrus*, the Protection they received from his Succeſſors, the memorable Preſervation of the whole People from the dark and deep laid Plot of *Haman*, all refer to this potent Empire and its Monarchs. In Reference to the *Greek* Hiſtory, the earlier Parts of it turn entirely on the Diſputes between the free States of *Greece* and the great King, as the latter contain nothing more than the Hiſtory of the Subverſion of the *Perſian* Empire by *Alexander* the Great, and the Diviſion of its ſeveral Provinces after his Deceaſe, among his Captains. In Regard to the *Roman* Hiſtories again, we find the *Parthians* continually diſputing the Progreſs of their Arms in the *Eaſt*, and the moſt conſiderable Part of the *Conſtantinopolitan* Hiſtory before the Irruption of the *Saracens* proved fatal to both Empires, comprehends the Diſputes between the Succeſſors of *Conſtantine the Great*, and the Emperors of *Perſia*. From the Time the *Saracens* became Maſters of this Country, the Succeſſion of their Caliphs forms a principal Branch of the *Oriental* Hiſtory down to the Extinction of their Dominion. Since that Time the ſeveral Conquerors of this Empire have ſufficiently diſtinguiſhed themſelves to deſerve Notice, and even the Frequency of Revolutions in this Country, make the Hiſtory of it more curious and more entertaining. We know very little of the Etymology of the Word *Perſia*, ſome ſay it was ſo called from the Hero *Perſeus* Son of *Jupiter* and *Danae*, but that ſeems to be a very ridiculous Fable; others derive it from *Perſes*, a Nobleman of that Country, in Times of great Antiquity, but with Reſpect to this alſo, there wants both Probability and Proof; neither is the third Account of the Matter, which derives its Name from *Paras*, that ſignifies a Horſe, very ſatisfactory; and as for the modern *Perſian* Wood *Fars*, it is viſibly derived from *Perſia*, and therefore cannot help us to explain it. As to the *Oriental* Writers, they know it not at all by this Name, but ſtile it conſtantly *Iran*. In order to apprehend the Meaning of this Name, which is abſolutely neceſſary to the Underſtanding their Hiſtories, we are to know, that an ancient King of this Country, or rather of the Upper *Aſia*, whoſe Name was *Ferridoun*, had two Sons, *Tour* and *Irag*, who ſucceeded him in his Dominions, the former had all the Country on the other Side the River *Oxus*, which by the Way, the *Orientals* ſtile *Gihon*, and the other the Country on this Side. Hence ariſes the Diſtinction of all the Countries in the Upper *Aſia* (*China* and the *Indies* excepted) into *Touran* and *Iran*, the former comprehending great *Tartary*, and all the Countries bordering or depending upon it, and the latter *Perſia*, in like Manner, with all its Dependencies. As for the modern Writers in the *Perſian* Tongue, as they ſtile their Sovereign *Shah*, ſo they give his Dominions the Title of *Shahiſtan*, or the Territories of the *Shah*.

We will proceed next to the Situation of this Country, and this is beſt ſhewn, by marking the Dominions of theſe Princes that confine it; for as to the diſtinct and preciſe Limitations of this Empire, it is impoſſible to lay them down with Accuracy or Certainty, becauſe they depend upon the Power of its Monarchs, which fluctuates every Day. On the Eaſt it has the Dominions of the *Great Mogul*, the Ocean and the Gulph of *Perſia* towards the South, the Territories of the Grand Signior on the Weſt, and the Country of *Circaſſia*, the *Caſpian* Sea, and the River *Oxus*, which divides it from the *Uſbeck Tartary*, on the North. It may not be amiſs to obſerve, that the Northern and Southern Boundaries ſeldom or never vary, as being fixed by Nature, but on the Eaſt and Weſt the *Perſians* ſometimes encroach upon, but in later Times have been oftener encroached upon by their Neighbours, as will appear more clearly when we come to ſpeak particularly of its Provinces.

As to its Extent, it reaches from South to North about twenty Degrees, that is, from twenty-five to forty-five Degrees of North Latitude. It contains pretty near the ſame Number of Degrees of Longitude, the neareſt of its Provinces lying in the Longitude of forty-five, and the moſt diſtant about ſixty-ſix Degrees Eaſt from the Meridian of *London*. According to the ordinary Computation, allowing for the Diviſion made by the *Caſpian* Sea, it is a Square of between eleven and twelve hundred Miles, which ſhews plainly, that it is one of the moſt conſiderable Countries of *Aſia*; and if it was as thoroughly inhabited as the Excellency of its Situation, Climate, and Soil deſerve, its Monarchs would be, doubtleſs, as powerful as any ſovereign Princes in the World; though at preſent, from a Multitude of concurring Accidents, it ſeems to be thinner in People, and weaker in Point of Government, than any of the other four *Aſiatick* Empires. As *Perſia*, properly ſo called, is but a very ſmall Country in Compariſon of what now goes under that Name, ſo the different Times and Occaſions by which the other Diſtricts that now depend upon it were annexed thereto, render it extremely difficult to fix the Number, the Names, and the Situation of its Provinces, about which hardly any two Geographers or Travellers have been hitherto able to agree; therefore the Reader will not think it ſtrange, if the Account we give of them differs from thoſe he has met with before.

2. In order to deliver as plain an Account of this Matter as is poſſible, we ſhall obſerve, that the moſt accurate of the *Perſian* Writers themſelves divide their Country into thirteen Provinces, and therefore it appears moſt reaſonable to follow that Diviſion; and it may likewiſe be convenient to purſue their Method of deſcribing them, as this is a Thing altogether arbitrary, and there ſeems to be the ſame Cauſe to take it one Way as another, provided that when the Method is once choſen it is cloſely purſued, that the Reader may be able to trace it exactly, without Confuſion, and even to form in his Head, as it were, a Scheme of the whole Country that is laid before him. We ſhall begin then with the North Eaſt, and ſo paſſing along Southward, deſcribe all the Countries of *Perſia* that lie towards the Frontiers either of *Tartary* or *India*. We ſhall then deſcribe the Provinces on the Ocean and the *Perſian* Gulph, together with ſuch as lie within Land; thoſe on the Frontiers of the *Turkiſh* Empire will follow theſe, and we ſhall end with the Provinces that lie North Weſt and North on the Coaſt of the *Caſpian* Sea.

I. *Aſtarabat*, or *Eſtarabat*, is ſituated on the Coaſt of the *Caſpian* Sea, to the South of the Opening of the River *Amu* or *Oxus*; it hath *Choraſan* on the Eaſt, and on the South of the Province of *Maſanderan*, on the Weſt the *Caſpian* Sea, and Part of *Tartary* on the North. It is but ſmall, having thirty five Leagues in Length from Weſt to Eaſt, and fifteen in Breadth from North to South; for which Reaſon many of our Geographers include it within the great Province of *Chorasan*. In regard to Fertility, as well as to its Climate, there is not a finer Country in *Perſia*. A Ridge of Hills that run through it, furniſh Abundance of ſmall Rivulets, and ſome fine Rivers, that running through it into the *Caſpian* Sea, cloath the Country, for a great Part of the Year, with continual Verdure. The Capital of this Province has the ſame Name with the Province itſelf, and is one of the beſt built Cities in *Perſia*; and as it is a Frontier towards *Tartary*, it is tolerably fortified, and has commonly a good Garriſon. It ſtands upon a Gulph of the ſame Name, and has a very good Port for ſmall Veſſels that do not draw any great Depth of Water. There are in it both Silk and Woollen Manufactures, and the Inhabitants drive a great Trade in a Sort of Camblets, that are much eſteemed both for Beauty and Strength. The Country about is well cultivated, and as for the Weſtern Part of the Province, it is a perfect Orchard, abounding with Fruits of all Kinds, as well as with fine Trees for Shade and for Timber; but the ſame Thing cannot be ſaid of the Eaſtern Part of the Province, which being expoſed to the Inroads of the *Uſbeck Tartars*, is ſo depopulated, that in Spite of the Kindneſs of Nature, it looks like a perfect Deſart.

II. *Choraſan* is eſteemed the faireſt, richeſt, and moſt fertile Province of the whole Empire, and is the Country known to the Ancients by the Name of *Bactria*; it is divided by the Mountains of *Balck* from *Great Bucharia*, has the Principality of *Candahar* on the Eaſt, the Province of *Segiſtan* on the South, the Provinces of *Yerack* and *Maſanderan* to the Weſt, and the Province of *Eſterabat* and the River *Amu* on the North. It is thought to be about one hundred *German* Leagues in Compaſs. The Climate is very temperate, the Soil extremely fruitful, abounding with rich Fruits, fine Paſturages, producing excellent Corn, Wine, and Silk, and affording beſides rich Mines of Gold, Silver, and precious Stones. It was formerly the beſt peopled, the beſt planted, and the beſt built Province in *Perſia*, but of late the Incurſions of the *Uſbeck Tartars* have laid one half of it waſte; and though for a few Years they were kept in Awe by the Shah *Nadir*, who drove them out of this Country, for which he had a peculiar Affection, yet it is not to be ſuppoſed, while the Affairs of the *Perſian* Empire are in Confuſion, that they can be long reſtrained. The chief City of this Province is *Meſchid*, or *Thous*, of which we ſhall have Occaſion to ſpeak more hereafter; and beſides this, there are many other conſiderable Places, ſuch as *Nickabour*, *Herat*, *Tcharkez*, *Amonoye*, &c.

III. *Sabluſtan*, bounded on the North by the Provinces of *Choraſan* and *Candahar*, which latter is ſometimes reckoned a Part of this Province, on the Eaſt by the Dominions of the *Great Mogul*, and on the South and Weſt by the Province of *Segiſtan*. The Climate is tolerable, but the Soil is extremely mountainous and barren; the Inhabitants are, generally ſpeaking, booriſh and rude, at leaſt in Compariſon of the reſt of the *Perſians*, yet the Capital of the Province, which is the City of *Boſt*, is large, well built, well inhabited, and the Country about it is exceedingly well cultivated; all which ariſes from its lying in the direct Road to the *Indies*. It is a Place of great Trade, abounds with Manufactures and Strangers from all Countries, and with the Diſtrict about it, looks ſo very unlike all the reſt of the Province, that it ſeems to have dropt into it from the Clouds. Some other Towns there are, but of no great Importance, only it is fit to remark, that the People of this Country make the hardieſt Soldiers, and are the beſt Infantry in the *Perſian* Empire.

IV. *Segiſtan*, which ſeems to have been the *Drangiana* of the Ancients, is bounded by *Sabluſtan* on the North, the Territories of the *Great Mogul* on the Eaſt, by the Provinces of *Makeran* on the South, and by Part of the Province of *Kerman* on the Weſt. This Country is tolerably fruitful, and is particularly remarkable for its Palm-trees and its excellent Dates, but it is greatly expoſed to Winds, which ſometimes drive the Sands in ſuch a Manner, as to cover the Houſes, and even whole Villages. It was formerly famous for its Gold Mines, which, if we may truſt the *Perſian* Authors, were the richeſt in the World, the Veins ſometimes puſhing to the very Surface, in which they are countenanced by ſome very ancient *Greek* Authors. This Province has produced both Heroes and learned Men, who have from thence borrowed the Surname of *Segiſtani*, which by the Way is a Practice very common in *Perſia*. The Capital is the City of *Zereng*, more commonly ſtiled *Segiſtan*, but a Place of no great Note. There are beſides two other Places of ſome Figure in this Country, *Cabin* and *Maſtich*.

V. *Macran*, or *Macheran*, ſuppoſed to be the ancient *Gedroſia*, is bounded by *Segiſtan* on the North, by the Dominions of the *Great Mogul* on the Eaſt, by the Ocean on the South, and by the Province of *Kerman* towards the Weſt; it is looked upon as one of the worſt Provinces in *Perſia*, the Air being very indifferent, and the Soil barren; it is but indifferently peopled, and the Inhabitants are eſteemed barbarous and faithleſs. The chief Towns in it are *Makeran*, *Paſſir*, and *Geſt*; the North-part of it is entirely a Deſart of ten Days Journey; it has indeed a Port at *Guadel*, but of no great Conſequence, for it is capable of receiving only ſmall Veſſels, and is beſides not very ſecure.

VI. *Kerman*, which is without doubt the *Caramania* of the Ancients, a very large and noble Province, which may be well eſteemed one of the moſt beautiful in *Perſia*. It is bounded by *Segiſtan* and *Makeran* towards the Eaſt, the Ocean towards the South, the Province of *Fars* towards the Weſt, and by a Deſart which ſeparates it from the Province of *Yerac Agemi*, towards the North. Some Part of it is mountainous and barren enough, but the Valleys are wonderfully fertile, producing Fruits, Roots and Flowers in vaſt Abundance; it is in this Province that ſuch vaſt Quantities of Roſes grow, as enable the Inhabitants to carry on a conſiderable Trade in Roſe-water, which is highly eſteemed not only throughout all the Eaſt, but in *Europe*; they have alſo very rich Mines in this Country, particularly thoſe of *Turquoiſes*, of which we ſhall ſpeak hereafter; admirable Steel, out of which they fabricate all kind of Arms, and they have beſides great Manufactures of Tapeſtry. But after all, the principal Glory of this Country is its Sheep, the Wool of which is eſteemed the fineſt in the World, and they have a very ſingular Way of coming at it, for at a certain Seaſon of the Year they pull it from the Backs of the Animals with their Fingers, ſo that the Sheep are entirely naked; this Wool is all wrought in its natural Colours, and without Dye, it is of three Sorts, the firſt brown, the ſecond of a ſpeckled grey, and the third of a Milk-white; this laſt is the moſt eſteemed; but there is none of it that ever goes out of the Country, for it is intirely employed in making Garments for their *Moulhas*, or Men of the Law, and Prieſts, who wear nothing elſe. There are in this Province more of the *Gubers*, *Gaurs*, or Fire-Worſhippers, who are the Remains of the ancient *Perſians*, than in all the Empire beſide; and theſe frugal and induſtrious People manufacture from the other two Sorts of Wool, ſeveral Kinds of light Stuffs, which in Point of Beauty and Luſtre are not at all inferior to Silk. The City of *Kerman* is the Capital of the Province, it is large and well peopled, Proviſions are cheap there, and in the Neighbourhood they have a Manufacture of Earthen Ware, which comes very near *Porcelain*. The Fort of *Gambroon*, and the Iſland of *Ormus*, are by ſome Authors reckoned dependent upon this Province, which has produced ſeveral great Heroes, learned Phyſicians, excellent Poets, and in a Word, famous Men of every kind; amongſt the reſt, the celebrated *Achmet Kermani*, who was Poet Laureat to *Tamerlane*, and compoſed in *Perſian* Verſe the Acts of *Alexander* the Great, of *Gingiſchan*, and of his Patron.

VII. *Fars* or *Farſiſtan*, as the *Perſians* call it, is the ancient *Perſia Proper*, the *Orientals* ſay, that it derives its Name from *Fars*, the Son of *Azar*, that is, *Arphaxad*,

phaxad, the Son of *Shem*, the Son of *Noah*; but what Authority they have for this, is more than I can determine; it is bounded on the Eaſt by *Kerman*, by the Gulph of *Perſia* on the South, by the Province of *Chuſiſtan* towards the Weſt, and by a great Deſart called *Naubendighian* upon the North, which ſeparates it from *Yerac Agemi*. This ſandy Deſart is of a vaſt Extent, and reaches to the Frontiers of the Province of *Chorāſan*; it is the ſame we have mention'd before, in ſpeaking of the Province of *Kerman*. This is a rich and noble Country, abounding with all the Neceſſaries of Life, but more eſpecially famous for producing in the Neighbourhood of *Shiraz*, the richeſt and fineſt Wine in *Perſia*; but the Imperial Grape of *Tauris* is eſteemed moſt pleaſant and luſcious for Eating. They have alſo an admirable Glaſs Manufacture in this Province, where they blow Bottles of an enormous Size, ſome that are ſaid to hold three Gallons of our Meaſure; but they keep their Wine in earthen Veſſels, as we ſhall have Occaſion to ſhow hereafter. The chief Cities in this Country are *Shiraz*, which will be deſcribed elſewhere. *Lar*, formerly the Capital of a little independant Principality; *Bander Congo*, a Port upon the *Perſian* Gulph, to which we may add, though as I have ſaid ſome comprehend it under the Province of *Kerman*, the famous Port of *Gambroon*, or *Bander Abaſſi*. On the oppoſite Shore of *Arabia*, there is a ſmall Territory, called from the principal Place therein, *Elcatiff*, which formerly belong'd to the *Perſians*, and was ſometimes annexed to the Government of *Farſiſtan*, which is one Reaſon why I mention it here; another is, that in ſeveral Maps, and in many oriental Authors, the *Perſian* Gulph is from hence called the Sea of *Elcatiff*.

VIII. *Chuſiſtan*, the *Suſiana* of the Ancients is bounded on the Eaſt by the Provinces of *Farſiſtan* and *Yerac*, by the Gulph of *Perſia* on the South, by the Territory of *Baſſora* on the Weſt, and by the Province of *Curdeſtan* on the North; the Capital of this Country is *Schouſter*, believed with Reaſon to be the City of *Shuſhan*, mentioned in the Book of *Eſther*, famous for a noble Palace built here by the *Perſian* Monarch *Artaxerxes*, who is the *Ahaſuerus* of the Scripture, and for the Tomb of the Prophet *Daniel*, of neither of which, there are now any Remains, though a *Perſian* Author of great Credit aſſures us, that the latter was ſtanding in his Time, and that he had ſeen it.

IX. *Curdeſtan*, or *Curdiſtan*, Part of the ancient *Aſſyria*, bounded on the Weſt by the Dominions of the Grand Signior, by the Province of *Chuſiſtan* on the South, by *Erac Agemi* on the Eaſt, and by *Arderbeitzan* or *Media* on the North; it is with very little Reaſon that this Country finds a Place among the Provinces of *Perſia*, for the *Curds* are a Nation that ſometimes own the Protection of the *Porte*, and ſometimes profeſs a Dependance upon the Shah, but are in Reality Subjects to neither; they are, to ſay the Truth, a very extraordinary Race of *Highlanders*, governed by their own hereditary Chiefs; and the Reaſon that I ſtile them extraordinary is, becauſe their Force conſiſts in Horſe, of which ſome Chiefs can bring Hundreds, others Thouſands, and it has been known, that a Chief has brought twenty thouſand into the Field, where they behave as well as any Troops in the World. As to their Religion they call themſelves *Mahometans*, but except Circumciſion and Abſtinence from Wine, in both which they are very ſtrict, they obſerve no other Precepts of the *Alcoran*, and have neither *Moulahs* nor *Moſques*, except in two or three of their great Towns. The Mountains of which this Country is full, are rude and barren, but the Valleys are fertile and pleaſant, producing great Quantities of Tobacco and Vines; of the former they make a great Profit, but they make no Wine of the latter, which they convert into Raiſins. The chief City in this Country is *Betlis*, and beſides this, there are ſome other Places of Note, indifferently built, but well inhabited. *Thamas Kouli Kan* attacked theſe People often, but with very little Succeſs, and they have more than once defeated both the *Perſians* and the *Turks* in pitched Battles, yet they act generally on the Defenſive, and ſeldom fight out of their own Country.

X. *Erac Agemi*, or as ſome write, *Azemi*; the Reaſon of this Addition is to diſtinguiſh it from a Province of the *Turkiſh* Empire which is called *Erac Arabi*, and is preciſely the ancient Province of *Babylon*; whereas *Erac Agemi* is the ancient *Parthia*. This noble Province is bounded on the North by *Aderbeitzan* and *Ghilan*, by the Province of *Choraſan* on the Eaſt, by *Chuſiſtan* and *Farſiſtan* on the South, and by *Curdeſtan* on the Weſt. The chief City is the Capital of the *Perſian* Empire, *viz. Iſpahan*, or *Spahawn*, ſituate in the Latitude of 32 Degrees, 40 Minutes North, and in the 50th Degree of Longitude Eaſt from the Meridian of *London*; there are alſo in this Province ſeveral other conſiderable Places, ſuch as *Caſbin*, ſuppoſed to be the ancient *Arſaſia*, *Com*, deſcribed in the laſt Section; *Sava* mentioned there likewiſe; *Hamadan*, a very fine City on the Frontiers of *Curdeſtan*, the Country about it extremely fruitful in Rice, the Mountains in the Neighbourhood ſupplying ſeveral fine Rivulets, which render its Territory wonderfully fruitful. The *Turks* became Maſters of it by Storm in 1623, and almoſt totally deſtroyed both it and its Inhabitants. *Caſham*, which lies about ſeventy Miles North of *Iſpahan*; *Yezd*, which is ſituated one hundred and five Miles to the Eaſtward of that Capital.

XI. *Gilan*, under which the modern *Perſian* Geographers comprehend not only the Country properly ſo called, which comprehend preciſely the *Hyrcania* of the Ancients, but alſo the Provinces of *Mazenderan* and *Tabreſtan*; ſo that, conſidered in this Light, it is a very extenſive Country, bounded by the *Caſpian* Sea on the North, by the Province of *Choraſan* on the Eaſt, by that of *Erac Agemi* on the South, and by the great Country of *Aderbeitzan* on the Weſt. The whole of this Province is wonderfully fair and fruitful. It is diſtinguiſhed from almoſt all the Provinces of this great Empire by ſome very particular Advantages. In the firſt Place, its Situation is very peculiar, for on the one Side it is covered by the Sea, and towards the Land it is ſurrounded with Mountains and Rocks that riſe like ſo many natural Fortifications, with this ſingular Circumſtance, that while they are rude, inacceſſible, and terrible on that Side, which is turned towards the reſt of the Provinces of the Empire, they are on the Inſide reſpecting this Province, of gentle Aſcent, covered with perpetual Verdure and adorned with Groves of Citrons, Oranges, Olives, and Figs. The very Summits of the Mountains ſhaded by Cypreſs-trees and other excellent Timber, which may be eaſily tranſported to the Sea-ſide; for through this Rampart of Rocks, Nature has formed ſeveral Paſſages ſo wide, and with ſuch a Slope, as render them perfectly eaſy; and yet ſo well fenced on each Side, that a ſmall Barricade will render them impregnable. Another ſingular Benefit which this Country enjoys, is its unbounded and amazing Fruitfulneſs, which with very little Cultivation pours out ſuch prodigious Abundance of all Things neceſſary and deſirable, as is ſcarce to be believed; for it is equally famous for its Silk, its Oil, its Wines, its Rice, its Tobacco, and a vaſt Variety of Fruits. In other Parts of *Perſia* their Houſes are but mean, and the Moveables of the common People very coarſe; but here on the contrary, every Peaſant has a good Houſe, and moſt of his Furniture is made of Box, of which they have the largeſt and fineſt Trees in the World, and a large Garden full of Citrons, Oranges, Figs, and Vines, ſo large, that the Branches of them are frequently as big as a Man's Body. A third Commodity, in ſome Meaſure peculiar to this Province, is a vaſt Abundance of Fiſh in their Rivers, and in that Part of the *Caſpian* Sea which waſhes their Coaſts; from whence, as the People draw an immenſe Profit, ſo the Shah derives from thence a great Revenue. The Capital of this Province is *Reſcb*, which ſtands in the Latitude of 37 Degrees of North, a large and populous City; beſides which, there are *Keſker*, *Aſtara*, and other conſiderable Places within its Bounds. Two Things more deſerve our Notice; one is, that the People of this Province are of the *Turkiſh*, and not of the *Perſian* Religion, that is, they are Followers of *Omar*, and not of *Ali*: The other, That by the Treaty between the Emperor *Peter* the Great and the Shah in 1723, this Province was yielded to the *Ruſſians*. *Mazanderan* and *Tabreſtan* are alſo very conſiderable Countries, but ſo like to *Gilan* in their Produce, that it is not neceſſary to deſcribe them particularly.

XII. *Aderbeitzan*, which comprehends the greateſt and beſt Part of the ancient *Media*, is a very noble and beautiful Country, bounded by the Province of *Shirvan* on the North, by *Gilan* and the *Caſpian* Sea on the Eaſt, by *Erac Agemi* and *Curdeſtan* on the South, and by the River *Aras* or *Araxis* on the Weſt, which divides it from *Georgia*. The famous City of *Tauris* or *Tabris*, which is deſcribed in the foregoing Section, is the Capital of this Country, and was one of the fineſt Cities of *Perſia*, till deſtroyed by the *Turks* in their laſt War with the *Perſians*, when they are ſaid to have put one hundred thouſand Perſons of all Ranks, Ages and Sexes to the Sword. *Ardevil* is another great and fine City in this Country, ſtanding about thirty Miles from Mount *Tauris*; and *Sultania*, which was deſtroyed by *Tamerlane*, was ſcarce inferior to any City in *Perſia*, as the Ruins that ſtill remain ſufficiently teſtify at this Day. It is ſtill a good Town, containing about ſix thouſand Inhabitants, but is particularly remarkable for a moſt noble Moſque, in which is the Tomb of the Founder of this City, the famous Sultan *Mahomet Chodabende*. This Moſque has three great Gates, all of poliſhed Steel, and the Tomb is ſeen through a Grate of the ſame Metal, finely wrought in Foliages and Branches of Trees; and though ſome of theſe are of the Thickneſs of a Man's Arm, yet they are ſo exquiſitely finiſhed, that there is not ſo much as a Joint to be perceived in the whole; from whence the Inhabitants perſuade themſelves, and would willingly perſuade Strangers, that it is made of one entire Piece, and affirm that it was ſeven Years in making.

XIII. *Shirvan*, or according to the *Perſian* Orthography *Schirwan*, contains the Northern Part of *Media*, and is by many Authors made only a Part of the foregoing Province; but we comprehend within it, for the Sake of keeping within Bounds, the little Province of *Dageſtan*, and ſo much of *Georgia* and *Armenia* as belongs to the *Perſians*; and taking it in this Light, it is thus bounded; by *Circaſſia* and the *Ruſſian* Territories on the North, by the *Caſpian* Sea on the Eaſt, by *Aderbeitzan* on the South, and by the *Turkiſh Armenia* and *Georgia* on the Weſt. *Schamakie* is the Capital of this Province, and ſtands in the Latitude of 40 Degrees 50 Minutes North, between two Mountains well fortified, and is a Place of great Trade. *Derbent*, or *Debircan*, which ſignifies an Iron Gate, is a famous Paſs between the Mountains and the *Caſpian* Sea. *Baku* is the only tolerable Port on the Weſt-ſide of the *Caſpian*; it is large and ſafe, but not deep; the Town is ſmall, but well peopled, and commanded by a Citadel; it was given up to the *Ruſſians* by the Peace of 1723. The Province of *Dageſtan* is at preſent, for the moſt Part, in the Hands of the *Tartars*, and to curb this fierce Nation, who are able to bring twenty thouſand Men into the Field, the *Ruſſians* built the Fortreſs of St. *Andrew*, not far from *Tarku*, which is the Capital of this Country, as *Teflis* is of that Part of *Georgia* which belongs to *Perſia*. That Part of *Armenia* which belongs to this Country is ſtiled *Aran*, and the Capital of it is *Erivan*, which has been before deſcribed. Within the Bounds of this Province ſtands alſo the City of *Nackſivan*, which the Inhabitants are fully convinced is the oldeſt in the World, having been built by *Noah* and his Children upon their coming out of the Ark, of which, if you will credit them, there are ſtill ſome Remains on the Mountains that are not far from hence. Thus we have compleated a regular and Geographical Deſcription of all the Parts of this great Empire, which will enable the Reader to comprehend perfectly all that follows in the enſuing Section. And we dare alſo aſſure him, that he will find it of very great Uſe towards underſtanding all the Hiſtories of, and Travels through this Country, already publiſhed, as well as the Accounts we may hereafter receive from thence, which might otherwiſe appear very unintelligible.

3. *Perſia*, extending from the 25th Degree of Latitude to the 45th, the longeſt Day in the South is thirteen Hours and a Half, and in the North above fifteen Hours. In ſo great an Extent of Country it is natural to ſuppoſe that the Air and Seaſons are very different, as in Fact we find them to be. In the Middle of the Empire, their Winter begins in *November*, and continues till *March*, with ſevere Froſts and Snow, which falls in great Quantities on their Mountains, but not ſo much in the champain Country; for the Month of *March* till *May*, the Wind is uſually high, and from thence to *September* they have a calm ſerene Heaven, without ſo much as a Cloud; and though it be pretty hot in the Day-time, the refreſhing Breezes which blow conſtantly Morning and Evening, as well as in the Night, make the Summer very tolerable, eſpecially ſince the Nights are near ten Hours long. The Air is ſo pure, and the Stars ſhine with that Luſtre, that one Man may know another very well by their Light, and People travel much more in the Night, than the Day. In this Part of *Perſia*, there are very ſeldom any Hurricanes or Tempeſts, and very little Thunder and Lightning, nor is it ſubject to Earthquakes, and the Air is ſo extremely dry in the Summer Seaſon, that you will not find the leaſt Dew or Moiſture on any Thing that is laid abroad all Night, or even in the Graſs, and it very ſeldom Rains in the Winter. No Country is more healthful than the interior Part of *Perſia*, as appears by the hale Complexion of the Natives; they are ſtrong and robuſt, and, generally ſpeaking, enjoy conſtant Health. As for Foreigners, who come thither, it is a common Obſervation, that thoſe who are healthy at their Arrival continue ſo, and that thoſe who are ſick, ſeldom recover.

The Air in the Southern Part of *Perſia*, particularly about *Gombroon*, is very unhealthy in the Spring and Fall: Our *European* Factors never paſs a Year without a dangerous Fit of Illneſs, which frequently carries them off. It is an ordinary Thing for two of them to agree, that if one of them die, the Survivor ſhall poſſeſs the other's Fortune. Nor is this any great Prejudice to their Relations, for if a Man leaves private Truſtees, or makes the Company his Executors, the Heir of the deceaſed will meet with great Difficulties in Recovering the Teſtator's Effects. The Months of *June*, *July* and *Auguſt*, are healthy enough, but ſo very hot, that both Natives and Foreigners get up into the Mountains at that Time. The hot Winds which blow from the Eaſtward, over a long Tract of ſandy Deſerts, are ready to ſuffocate them, and ſometimes there happens a Peſtilential Blaſt, which ſtrikes the Traveller dead in an Inſtant. It rains but very ſeldom here, any Part of the Year, and the Water they ſave then is very unwholſome.

The Provinces of *Georgia*, *Shirvan* and *Adirbeitzan*, are very dry and warm in the Summer, but ſubject to Storms and Tempeſts in the Winter, and as ſevere Froſts for ſix Months as any Countries on the Continent, in the ſame Latitude; but as this Part of *Perſia*, is very mountainous, there is frequently a vaſt Difference between the Air on the North and the South-ſide of the Mountains, and in a few Miles travelling People think themſelves in a different Climate; but however cold the Mountains in the North may be, they are extremely healthful. On the contrary, the flat Country of *Gilan* and *Mezenderan*, which lies upon the *Caſpian* Sea, and was the ancient *Hyrcania*, is very damp, full of ſtinking Moraſſes, and unhealthful, inſomuch that the Inhabitants in the Summer retire into the Mountains, all the Water they have being foul and corrupted in the hot Seaſon; and here, and in *Chorasan*, it is ſaid Earthquakes are very common.

4. It is obſervable, that there is no Country in the World of ſo large an Extent as *Perſia*, where there are ſo few nagivable Rivers; there is not ſo much as one River in the Heart of the Country that will carry a Boat of any Burthen, and you may travel ſeveral Days Journey, without meeting with any Water whatever, in ſome Parts. The River *Oxus* indeed which divides *Perſia* from *Uſbeck Tartary*, is a large Stream, but as there are no Branches of it, that ariſe in the *Perſian* Dominions, it is of little Uſe to them. The Rivers *Kur* and *Aras*

Aras, anciently called *Cyrus* and *Araxes*, which riſe in the Mountains of *Ararat*, and run through *Georgia*, *Shirvan* and *Adirbeitzan*, and having joined their Streams, fall into the *Caſpian* Sea, are much the moſt conſiderable Rivers in the *Perſian* Dominions. However, there are ſeveral ſmall Rivulets which fall from the Mountains, and are conveyed by ſubterraneous Channels or otherwiſe to their principal Cities.

Water being ſo ſcarce in *Perſiá*, there is no Place, where they huſband it better, or have more ingenious Contrivances to convey it to their Cities, and into their Corn-fields and Gardens. This is the Care of the Government, and there is a great Officer in every Province, who has the Charge of the Conveyance and Diſtribution of the Waters. They turn all their little Rivulets and Springs to thoſe Parts of the Country, where they are moſt wanted; they dig Wells alſo of a prodigious Depth and Breadth, out of which they draw the Water with Oxen, in great leathern Buckets, which being emptied into Ciſterns, is let out as there is Occaſion for the Service of the Country. They have alſo vaſt ſubterraneous Aqueducts, through which they convey Water twenty or thirty Leagues to the Places aſſigned. Theſe are two Fathom high, and arched with Brick, and at every twenty Paces Diſtance, there are large Holes like Wells, which were made for the Conveniency of carrying on the Arch without Working under Ground too far, and the more eaſy repairing them. The Diſtribution of the River and Spring-water, is made one Day to one Quarter of the Town, and another Day to another, as Occaſion requires, when every one opens the Canal or Reſervatory in his Gardens to receive it, for which every Garden pays a certain Sum yearly to the Government, particularly about *Iſpahan*; and as it is very eaſy for one to divert his Neighbour's Water into his own Channel, this is a Fraud that is ſeverely puniſhed. They give a greater Rate for River Water, than they do for Spring-water, which is not found ſo proper for the Improvement of their Grounds.

Beſides the Ocean, there are two Seas belonging to *Perſia*, one on the North, and the other on the Southweſt, *viz.* The *Caſpian* Sea, and the Gulph of *Boſſora* or *Perſia*, which have been already mentioned. The *Caſpian* Sea is about a hundred Leagues in Length, from North to South, and ninety Leagues in Breadth, and has near a hundred Rivers running into it, of which the Chief is the *Wolga*, at the Mouth whereof ſtands *Aſtracan* but this Sea has no Communication with any other, and though ſo many Rivers fall into it, there is no viſible Way by which it diſcharges itſelf of its Waters, but they remain always of the ſame Height, and do not either ebb or flow. The *Ruſſians* have in a great Meaſure the ſole Navigation of this Sea, which is very profitable to them, and might be made much more ſo by the new Trade that has been ſet on Foot, from *Europe* to *Perſia*, through *Ruſſia*.

The *Shah Nadir* was very deſirous of becoming a maritime Power on this Side alſo, and employed a Gentleman of a certain Country, to build him Ships of Force for this Purpoſe, but conſidering the Revolutions that will probably attend his Death, theſe Deſigns are like to fall to the Ground. The *Perſians* were formerly entirely Maſters of the Gulph that ſeparates their Country from *Arabia*, for which they were in a great Meaſure indebted to us, who aſſiſted them in diſpoſſeſſing the *Portugueſe* of the Iſland of *Ormus*, upon which they had opened a very advantageous Port, allowing us half the Cuſtoms ariſing from the Goods imported and exported here. But *Shah Abbas* the Great, thought that Conſideration too large, and therefore when he tranferred the Commerce to his new Port of *Gambroon*, or *Bander Ambaſſi*, i. e. the Port of *Abbas*, he allowed the *Eaſt-India* Company no more than One thouſand *Tomans*, which makes three thouſand three hundred thirty three Pounds ſix Shillings and eight Pence of our Money. It was in this Gulph, on the Coaſt of the Iſland of *Baherem*, that they had the Fineſt Pearl Fiſhery in the World, which produced annually above fifty thouſand Pounds, but in the late unſettled State of their Empire, the *Arabians* have ſeiz'd or rather recovered this Fiſhery, and are in Poſſeſſion of it, at leaſt for the preſent.

5. As we have now given a clear Account of the Rivers and Seas of this Country, we will next ſpeak of the Soil and its Produce; and in the firſt Place we muſt obſerve, that there is not a Country in the World, which has more Mountains, and fewer Rivers than *Perſia*, and ſome of their Mountains are looked upon to be the higheſt on the Face of the Earth. Mount *Taurus*, which receives different Names as it branches itſelf out into different Provinces, runs quite through the Country, from Weſt to Eaſt. The loftieſt of theſe Mountains are thoſe called *Arrarat* in *Armenia*, the Mountains which ſeparate *Media* from *Hyrcania*, and thoſe between *Hyrcania* and *Parthia* or *Erak*. Thoſe alſo which divide *Fars* or *Perſis* from *Carmania* are exceedingly high, the moſt famous of which is called Mount *Jarron*, but they are generally dry barren Rocks, without Trees or Herbage upon them, except thoſe of *Gylan* or *Hyrcania*, and the Mountains of *Curdeſtan*, which are covered with Woods and very Fruitful, where they are manured. There are vaſt ſandy Deſarts, ſeveral Days Journey over in this Kingdom, where there is ſcarce a Drop of Water to be found, and the Land in general upon the Frontiers lies uncultivated to diſcourage their Enemies from invading them; and in Fact there is not the leaſt Subſiſtence to be met with for ſeveral Miles, whether you enter this Empire from *Turkey* or *India*. There are however ſome fruitful Plains and Vallies, in which their principal Cities ſtand, which yield Plenty of Grain and Herbage, and no Country is more fruitful than the Provinces which lie upon the *Caſpian* Sea, as has been already obſerved. But then *Hyrcania* is very unhealthful in Summer time, which ſome apprehend proceeds from the Multitude of Snakes and Inſects, which lie rotting upon the Ground, when the Waters are dried up, as well as from the Foulneſs of the Water itſelf, which is ſo thick and muddy, that there is no drinking it at that Seaſon of the Year.

As to *Perſia* in general, there is not a tenth Part of it cultivated, not but that there are many Valleys which bear neither Graſs nor Grain at preſent, which formerly when greater Care was taken to turn the Waters into them, were fruitful Countries. In ſome Provinces, there are hundreds of fine Aquaducts choaked up and buried in Ruins, ſo that it is not ſo much a Defect in the Soil, as the Want of People, or at leaſt of Huſbandmen, which renders *Perſia* barren. The Soil in ſome Parts is a hard Gravel, and in others a ſtiff whitiſh Clay, almoſt as hard as Stone, but either of them are fruitful enough, when well watered, and will bear often two Crops, and ſometimes three in the Compaſs of a Year; and if we give any Credit to ancient Authors, there was not a more plentiful Country in the World than *Perſia* was formerly; the Reaſon of this Alteration ſome aſcribe to the different Diſpoſitions of the People, who have inhabited it. The ancient *Perſians*, the Fire-worſhippers, it is ſaid, were obliged by the Precepts of their Religion, to cultivate the Soil, and it was by them accounted a meritorious Act, to plant a Tree, to bring the Water into a Field, and make a barren Spot of Earth produce Graſs or Grain, while the *Mahometans* ſeem to have no Genius for Improvements, or even to keep up what their Anceſtors have built or planted, but let every Thing run to Ruin; however, one Reaſon of this Neglect may be, that the Properties of the People are in no Security, and no Wonder they have but little Inclination to make Improvements, when they have no Certainty of reaping the Advantage of them.

6. Near great Towns they improve their Grounds with the Dirt and Dung of the Streets, but at a greater Diſtance they throw their Fields into little level Squares, which they bank about, and then turn the Water into them, letting it ſtand in the Field all Night, which having ſoaked it, the Water is let out next Morning, and the Sun ſhining with almoſt perpendicular Rays upon the moiſt Earth, renders it fit for the Production of any Sort of Grain or Plants. Where the Ground is Light

they plow with two or three Oxen or Buffalos; but in *Gilan* and other Countries, where they meet with a ſtiff Clay, it is as much as eight or ten Oxen can do to draw their Ploughs which are very large. Rice, Wheat and Barley, are almoſt the only Kinds of Grain growing in *Perſia*; Oats they have none, and little or no Rye. Their Seaſons are not the ſame in the North as in the South, but when they are Sowing in one Part of the Country, they are reaping in another, and in ſome Places, it is not more than three Months between Seed-time and Harveſt.

Their Land never lies fallow, but it is ſown once every Year, at leaſt, it is ſo meliorated and enriched by being flowed, and the Heat of the Sun afterwards working on the Mud, that it is never out of Heart. As to the Rice, it muſt be conſtantly ſupplied with Water till the Harveſt; but for other Grain, the Land is only flowed before the ſowing, to render it prolifick. Their Kitchen Gardens are well furniſhed with moſt of the Roots and Salads we have in *Europe*; they have no leſs than twenty ſeveral Sorts of Melons during the Seaſon they laſt, which is about four Months, the common People make them their conſtant Food, thoſe which come to Maturity firſt in the Spring are round and ſmall, thoſe that ripen in the latter Part of the Seaſon are the beſt and largeſt, ſome of them weigh eight or ten Pounds, and are as ſweet as Sugar itſelf. At the Tables of Perſons of Quality they have them all the Year round, there being a Way to preſerve them under Ground till the Seaſon returns again; and it is ſaid, ſome Perſons will eat eight or ten Pound of Melons at a Meal, without being ſick. The beſt Melons grow in *Choraſſan* near *Tartary*, and they are carried as far as *Iſpahan* for the Shah's Uſe, and as Preſents to their Friends. Cucumbers are another Fruit much eaten by the common People, one Sort of them has ſcarce any Seeds in it, and is eaten without paring or dreſſing, and is not reckoned unwholſome.

7. Of Grapes they have ſeveral Kinds, and ſome of them are ſo large, that a ſingle Grape is a Mouthful. They make their Wine at *Iſpahan* of the Kiſmiſh's, a little round Grape, and without any Stone that can be perceived, but much the beſt Wines are made at *Shiraz*. They keep their Grapes all Winter, and let them hang a conſiderable Time on the Vine, wrapped up in Linen Bags; the Air is ſo dry, that it preſerves all kinds of Fruit as long as they can deſire. Dates are reckon'd one of the moſt delicious Fruits in this Country, they are no where ſo good as in *Perſia*, the Pulp which encloſes the Stone, is a clammy Subſtance, as ſweet as Honey; they are laid on Heaps when they are ripe, and melting, candy or preſerve themſelves without Sugar. Foreigners are adviſed to eat moderately of them, becauſe they Heat the Blood, and occaſion Ulcers in thoſe who are not uſed to them, and ſometimes weaken the Sight, but have no ill Effects upon the Natives; the Tree which bears them is ſlender, but very tall, and like other Palms, has no Branches but on the Top, and the Fruit grows in Cluſters of thirty or forty Pounds Weight; the Tree does not bear till it is fifteen Years old, but continues bearing above a hundred Years. There are in *Perſia* moſt of the Fruits which are to be had in *Europe*, and they would be in much greater Perfection, if they knew any Thing of Gardening, but they underſtand neither grafting, inoculating, or the Art of managing Dwarf-trees; all their Trees run up very high, and are loaded with Wood. They have excellent Apricots of ſeveral Kinds, which are in Seaſon one after the other, and their Nectarines and Peaches weigh ſixteen or eighteen Ounces a-piece; there is an Apricot red within, which is call'd the Egg of the Sun; theſe are dried and exported in vaſt Quantities; they are boiled in Water, which is thickened by the Juice of the Fruit, and makes a perfect Syrup without Sugar.

Apples and Pears grow chiefly in the North Part of *Perſia*, they have alſo Pomegranates of ſeveral Kinds, with Oranges, Quinces, and Prunes, and ſuch Variety of Fruits, that Sir *John Chardin* ſays, he has ſeen above fifty Sorts at an Entertainment, ſome of which grew three hundred Leagues from the Place. The Piſtachio Nuts are almoſt peculiar to *Perſia*, and are tranſported all the World over; here are alſo ſmall-nuts Filberds and Almonds. Olives grow in *Hyrcania*, near the *Caſpian* Sea, but they neither know how to preſerve them, nor draw Oil in the beſt Manner from them. They have alſo Plantations of Sugar and Tobacco.

8. Among other Trees in their Gardens, they have the Cypreſs, the Palm, and the Mulberry, of the laſt there are large Plantations for their Silk Worms, which they dont ſuffer to grow up to be great Trees, becauſe the Leaves are beſt, when the Shoots are young. They root up the Trees therefore, when they grow old, and plant their Grounds afreſh. But the Tree which is in as great Eſteem as any in *Perſia*, is the *Senna*; the Body of this Tree is very large, and frequently forty or fifty Foot high, and ſtrait as the Maſt of a Ship, having no Branches but upon the Head of it; the Bark is of a bright Grey, and the Wood ſerves them to make Doors, Raft, and for other Uſes in Building. The Trees that are moſt common in *Perſia* are the Plane-tree, the Willow, the Fir, and the Cornell-tree; the Plane-tree the *Perſians* imagine is a Preſervative againſt the Plague, and other contagious Diſtempers, and obſerve, that the Plague has never raged in *Iſpahan* ſince this Tree was planted in their Streets and Gardens. The Trees alſo which bear the Gall Nut is very common in many Parts of *Perſia*, and there are Trees which yield Gum Maſtich, and Frankincenſe; that which produces Frankincenſe very much reſembles a Pear-tree, and abounds chiefly in *Carmania*.

There are likewiſe Trees which produce Manna of ſeveral Sorts: The beſt Manna has a yellowiſh Caſt, a large coarſe Grain, and comes from *Choraſſan* or *Bactria*; there is another Sort called *Tameriſk*, becauſe the Tree it drops from is ſo named, and is found in large Quantities in the Province of *Suſiana*; and there is a third Sort gathered about *Iſpahan*, which falls from a Tree much like the *Tameriſk*, but larger; the Leaves of this Tree drop liquid Manna in Summer-time, which the Natives take to be the Sweat of the Tree congealed upon the Leaf in the Morning; the Ground under it is perfectly fat and greaſy with it, and this has as ſweet a Taſte as other Manna.

The Cotton-Tree is common all over *Perſia*, and they have another little Tree, which yields a kind of ſilken Down, uſed for Quilting and Stuffing of Pillows; there is alſo a Plant called *Hainab*, that bears a Seed which they beat to Powder, and colour their Hands and Feet, and ſometimes rub over their Faces with it, apprehending it keeps their Skin ſmooth, and preſerves their Complexion; they ſometimes bruiſe the Leaves of it, which ſerves them for the ſame Purpoſe.

There are found in the Deſarts of *Carmania*, two little Shrubs of a poiſonous Quality, the firſt is called *Galbad Samour*, or the Flower that poiſons the Wind; ſome People imagining that it is this occaſions thoſe killing Winds which blow in this Province in the hot Seaſon; the other Shrub is called *Herz-bre*, the Trunk whereof is about as big as a Man's Leg, and grows about ſix Foot high; its Leaves are almoſt round, and it bears a Flower like the Sweet-Briar. There are ſcarce any Trees to be found on the Mountains, or wild Fields in *Perſia*; theſe are for the moſt Part deſtitute of all Manner of Verdure, while in their Cities, and the Villages for three or four Leagues round them, the Streets as well as Gardens are ſo well planted, that the Houſes are hardly to be diſcerned at a Diſtance; indeed when you have travelled ſome few Leagues, you meet not either with Houſe, Tree, or Shrub, for many Miles, but all looks like a barren Deſart, notwithſtanding which, great Part of this Soil, were it watered, would be as fruitful as the other, and actually was ſo ſome Ages ſince, when a more induſtrious Generation, than the preſent, poſſeſſed the Country.

From their Trees, I paſs on to their Flowers, and of theſe there is a great Variety to be found in ſome Provinces. The South Part of *Perſia* has much the feweſt; exceſſive Heat being as deſtructive to them, as extreme Cold; but nothing can be more beautiful than the Fields of *Hyrcania*, where are whole Groves of Orange-trees, Jeſſamins, and all the Flowers we have in *Europe.* The Eaſt Part of this Country, which is called *Mazenderan*, is one continued Parterre from *September* to *April*; the whole Country at that Time is covered with Flowers, and this, though it be their Winter Seaſon, is alſo the beſt Time for Fruits. In the other Months the Heat is ſo exceſſive, that the Natives find themſelves under a Neceſſity of retiring to the Mountains.

In *Media* the Fields produce Tulips, Anemonies, and Ranunculus's; about *Iſpahan*, and ſome other Towns, Jonquils grow wild. They have alſo Daffodils, Lillies, Violets, and Pinks in their Seaſon, and ſome Flowers which laſt all the Year round; but they have the greateſt Quantity of Lillies and Roſes; they export abundance of Roſe-water to other Countries; in the Spring, there is vaſt Plenty of yellow and red Gillyflowers, and another red Flower which reſembles a Clove of a beautiful Scarlet Colour, and every Sprig bears thirty of theſe Flowers, which form a fine Head as large as a Tennis Ball.

Their Roſes are white, yellow, and red, and others white on one Side and yellow on the other; but notwithſtanding all this great Variety of beautiful Flowers, their Gardens are not comparable to thoſe of *Europe.* As Flowers are ſo common they are very little regarded; you ſee them intermixed with Fruit-trees and Roſe-buſhes without any Order; but large Walks planted with Trees, Fountains, Canals, Caſcades, and Pleaſure Houſes at proper Diſtances, are all that muſt be expected in their fineſt Gardens; nor do the *Perſians* take any Manner of Pleaſure in walking in them, any more than in the Fields; but ſet themſelves down in ſome Alcove or Summer-houſe as ſoon as they come into them, totally negligent of that exquiſite Variety that every Foreigner is charmed with.

8. *Perſia* alſo affords great Plenty of phyſical Drugs, as *Caſſia*, *Senna*, *Antimony*, *Nux Vomica*, *Gum Armoniac*, *Galbanum*, *Sal Armoniac*, and a Kind of *Rhubarb*, with which they purge their Cattle; but the beſt *Rhubarb* comes from *China*, or rather from *Eaſtern Tartary*, which lies to the Northward of *China.* The *Perſian* Poppies are in great Eſteem from the Quantity of Juice they yield, and the Strength of it; they grow four Foot high in ſome Places, and have white Leaves. They extract the Juice from them in *June*, when they are ripe; by making little Inciſions in the Head of the Poppy, a thick Liquor diſtills from them, which is gathered very early in the Morning before Sun-riſe. It is ſaid to have ſuch an Effect on the People, who are employed in this Work, that they look as if they had been buried and taken up again, and their Limbs tremble as if they had the Palſy. The Liquor which is thus drawn from the Poppies, in a little Time grows thick, and is made up into Pills. The *Perſians* give it the Name of *Afioun*, and we, probably from thence, call it *Opium.* The *Perſian* Bakers ſtrew Poppy-ſeed on their Bread, which incline thoſe that eat it to Sleep, and the eating it is not reckoned unwholſome after their Meals; the common People eat the Seed at any Time almoſt for Pleaſure.

Saffron grows plentifully in *Perſia*, and *Aſſa Fœtida* is to be had every where almoſt, which is much admired by the Natives of *Perſia* as well as *India*, and frequently eaten with their Food; that which to us is moſt offenſive of all Scents, by them is eſteemed a Perfume. *Aſſa Fœtida* is a Liquor which diſtills from the Plant called *Hiltot*; it thickens after it is drawn, and grows as hard as Gum; there is the white and black Kinds of it, of which the white is reckoned the beſt to eat. The Smell of this Drug is ſo very ſtrong, that if any Goods be near it in a Ship, the Smell is communicated to them, let them be wrapped up ever ſo cloſe, and it is almoſt impoſſible to clear them of it; nay, it affects the Colour, and therefore Sir *John Chardin* tells us, the Veſſels uſed in tranſporting it are frequently broke up and burned, to prevent other Goods from being ſpoiled by being carried in them, from which no Package can ſave them.

The *Perſian* Bezoar is eſteemed preferable to that of *India*, which having already deſcribed, we ſhall not dwell upon it here. It is ſufficient to obſerve, that the Reaſons it is not ſo much eſteemed in *Europe* as it was formerly, are theſe; in the firſt Place, it is frequently ſophiſticated, notwithſtanding that ſeveral Methods are in Uſe for detecting theſe Frauds, of which I ſhall mention a few. The genuine Bezoar, at leaſt that which comes from *Perſia*, has a very fine Smell reſembling that of Ambergreaſe, but not near ſo ſtrong; if thrown into hot Water, and left there for three or four Hours, it loſes Nothing either of its Colour or Weight; if prickt with a hot Iron, no Smoke ariſes; if rubbed upon a Leaf of *Dutch* Vellum, it leaves a yellow Impreſſion; if broke or cut, it appears to be compoſed of ſeveral Coats unequally diſpoſed, in the ſame Manner as appears in cutting an Onion. Another Reaſon why it has loſt its Credit, is the Humour People have of embracing the contrary Extreme to that of their Anceſtors; heretofore Bezoar was ſold very dear, and was held to have many and great Virtues, and now it is faſhionable to affirm that it has little or no Virtue at all; which though it has driven it out of Uſe, has not much beat down its Price, becauſe in the Eaſt, and even in other Parts of *Europe*, it is ſtill in Eſteem.

A third Reaſon is, our giving it in too ſmall Doſes, ſo that its Virtues are not diſcernable. A famous *Perſian* Phyſician had a great Secret for curing Lunacy, which he ſold to a *French* Gentleman for a large Sum of Money, and this Secret conſiſted in giving equal Quantities of Bezoar, Muſk, and Camphire, as I found in a *French* Manuſcript of Receipts, in which it is ſaid, that very ſingular Cures were performed by it; but the Quantities of theſe Drugs in a Doſe were not mention'd.

In the Province of *Choraſan* they frequently find human Bodies preſerved in the Sand, the Fleſh of which they ſell under the Name of *Mummy*, for medicinal Uſes; and there are alſo ſuch Bodies found in a Cavern not far from the Borough of *Abin*, in the Province of *Farſiſtan.* It is however neceſſary to inform the Reader, that in the *Perſian* and *Turkiſh* Languages, the Word *Moum*, from whence we have formed *Mummy*, ſignifies literally a ſoft clammy Subſtance, of the Conſiſtency of Balſam, which explains ſufficiently what is meant by mineral Mummy, which is a kind of natural Balſam diſtilling thro' the Rock of a large Cavern in the Province of *Lar*, eſteemed ſo precious that the Shah keeps it entirely for his own Uſe, the Doors of this Cave being ſealed by the Governor of *Lar*, who opens it only once a Year, to take out the Balm, the Quantity of which ſeldom exceeds ten Ounces. A Multitude of Virtues are aſcribed to it, particularly in the Cure of Fractures, in which it is ſaid to perform Wonders; but it may very well be doubted, whether any of this was ever brought into *Europe.*

9. We will now proceed to ſpeak of the Animals that are found in *Perſia*, and in Reference to theſe, the Camel, for a Beaſt of Burthen, much excells all the reſt, whether we conſider the Weight he carries, the Diſpatch he makes, or the little Charge of keeping him. Of theſe Camels there are ſeveral Kinds; ſome have two Bunches upon their Backs, and others but one, and there is a third Sort, engender'd between a Dromedary or Camel, with two Bunches, and a Female with one, which are eſteemed much the beſt, and ſold for twenty or thirty Pounds a-piece, for they are ſeldom tired, and will carry nine hundred or a thouſand Weight. Thoſe which travel between the *Perſian* Gulph and *Iſpahan* are of a much leſs Size, and do not carry above five or ſix hundred Weight; but theſe, notwithſtanding, are almoſt as ſerviceable as the other, for they are much ſwifter, and will gallop like a Horſe, whereas the others ſeldom go faſter than a Foot Pace. Theſe ſwift Camels are kept by the Shah and great Men, and ſerve to tranſport their Women from Place to Place, and carry their Baggage; they are uſually adorned with embroidered Cloths, and ſilver Bells about their Necks; a String of ſix or ſeven of them are tied together when they travel, and governed by one Man; they uſe neither Bridles nor Halter to hold them, or Whips to drive them, but they are directed by the Driver's Voice, who ſings or plays to them as they travel; good

Uſage only moves them, for they are naturally ſo obſtinate, it is in vain to beat them if they tire.

When they are to take up their Burthen, the Driver touches their Knees, whereupon they lie down on their Bellies till they are loaded, groaning however, and giving Signs of Uneaſineſs, under a Senſe of the Fatigue they are about to undergo; they let them graze by the Road-ſide, with their Burdens on their Backs, on Weeds and Thiſtles, and ſometimes they feed them with Balls made up of Barley Meal and Chaff, into a Paſte, with which they often mix the Cotton-Seed; but the Camel is the leaſt Feeder of any Beaſt, conſidering his Bulk. It is very happy alſo that they can live without Water two or three Days together, there being ſcarce any to be met with in thoſe Deſarts the Caravans are forced to croſs. They ſhed all their Hair every Spring, and are perfectly naked. Of the Camels Hair, abundance of fine Stuffs are made, as we ſhall ſhew in ſpeaking of Manufactures; theſe Creatures are very tame and tractable, except when the luſtful Fit is upon them, which laſts thirty or forty Days, and then they are very unruly, which makes their Drivers increaſe their Burthens at that Time, to keep them under. When once the Male has cover'd the Female, he grows ſluggiſh, and does not care for ſtirring out of the Stable: They go with young eleven Months, and ſome ſay twelve.

Oxen, Buffaloes, Aſſes and Mules, are alſo uſed indifferently for carrying of Paſſengers, or Burthens, and their Land being plowed by Buffaloes and Oxen, theſe Beaſts are very ſeldom killed for Food, though ſome *Perſian* Governors, in the South of *Perſia*, have extorted conſiderable Sums out of the *Indian Banians*, who reſide thereabouts, under Pretence they would order them to be butchered, if the *Banians* did not redeem their Lives by a conſiderable Preſent. The Aſſes of *Perſia*, are much larger and ſwifter than ours, and will perform a Journey very well.

But the fineſt Beaſts are their Horſes, theſe are beautiful Creatures, and no where better manag'd than in *Perſia*. They have fine Foreheads, and are exactly well proportion'd, light and ſprightly, but only fit for the Saddle, or at leaſt, not uſed for any other Purpoſe; they are never gelt, and wear their Tails at their full Length; but though they are lovely Creatures to look on, they are neither ſo ſwift as the *Arabian*, nor ſo hardy as the *Tartar* Horſes, and the *Shah* therefore has always a Stable of the *Arabian* Breed. Horſes are very dear in *Perſia*, ſome of them being ſold for two or three hundred Pounds, and ſeldom any that are good for leſs than Fifty. It is not ſo much the Scarcity of them, as the ſelling ſuch Numbers to *India* and *Turkey*, which enhances the Price.

They have Mules alſo that carry very well, and are valued, ſome of them at thirty or forty Pounds a-piece, and ſome Aſſes at not much leſs, after they have been taught to pace. The ordinary Food for Horſes is Barley and chopt Straw: they have no Mangers in their Stables, but give their Horſes their Corn in Bags. In the Spring they cut green Graſs for their Horſes, but never make any into Hay to be eaten dry; ſometimes they feed their Horſes with Balls made of Barley-Meal, as in *India*; inſtead of Litter their own Dung is dried, and beaten to Powder, and laid a Foot deep for them to lie on; and if any of it be wetted, it is dried in the Sun the next Day. Their Horſes Hoofs are much ſounder and harder than ours, and they are ſhod with thin Plates as the Oxen are, on Account of their travelling over the ſtony Mountains. They daub their Horſes Legs in Winter, with a yellow Herb, called *Hannah*, and ſometimes anoint their Bodies with it as high as their Breaſt, to keep out the Cold as it is ſaid; but it ſeems to be rather by Way of Ornament, for in ſome Places it is done all the Year round.

The *Shah* has large Stables of Horſes, diſperſed throughout the Kingdom, almoſt in every City, for the Publick Service. A Horſe is ſeldom denied to any Man that demands one, if he will keep him, but then ſuch Perſons are accountable to the Government for them, when they ſhall be called out into the Field; but they have the Liberty of riding them in the mean Time. Theſe Troopers Horſes are ſometimes quartered upon People, who would gladly be excuſed from the Trouble and Charge of keeping them, and if any Horſe dies in their Hands, Oath muſt be made, that it did not die for Want of Corn, or looking after. Their Horſes are ſubject to many Diſtempers, ſometimes their Legs ſwell, and a Humour riſes on the Breaſt, which proceeds from eating too much Barley; and in this Caſe, they clap a hot Iron to the Swelling, or lance it, and keep the Sore open, by running a Willow Twig through it, but a hot Iron applied to the Part is the moſt general Remedy for lame and diſtemper'd Horſes.

Of Sheep and Goats there are great Plenty in *Perſia*; the Natives ſeldom eat any other Meat, their Sheep are large, and remarkable for their fat Tails, which weigh eight or ten Pound, and ſome it is ſaid are above twenty Pounds in Weight; they are remarkable alſo in ſome Parts of *Perſia* for having more Horns than ours. Some have ſix or ſeven Horns ſtanding ſtrait out of their Forehead, ſo that when the Rams engage, there is uſually a great Deal of Blood ſpilled in the Battle. The *Perſian* Goats are not only valuable for their Fleſh, but the fine Wool they yield, of which great Quantities are annually exported, more eſpecially from *Carmania.* Hogs there are ſcarce to be met with, for as the *Mahometans*, who are the governing Part of the Country, abhor this Animal, their Chriſtian Subjects do not endeavour to encreaſe the Breed, unleſs towards *Georgia* and *Armenia*, where the Chriſtians are numerous.

Wild Beaſts there are not many, either in the Middle or the Southern Part of *Perſia.* Deer they have ſome, and Antelopes, which are much of the ſame Nature, except that they are ſpotted, and have finer Limbs. In *Gilan* and *Curdiſtan*, the woody Parts of the Country, wild Beaſts abound, ſuch as Lions, Tygers, Leopards, wild Hogs, Jackalls, &c. And in *Media* and *Armenia*, there are Abundance of Deers, wild Goats, Hairs and Rabbits, and there are ſome found on the Mountains almoſt all over the Country, but not many.

Inſects they are not much troubled with in the Heart of *Perſia*, which is very dry, unleſs it be with Swarms of Locuſts, which viſit them ſometimes in ſuch Numbers, that they look like a Cloud, and perfectly obſcure the Sun, and wherever they light deſtroy the Fruits of the Earth; but there are certain Birds which generally viſit the Country about the ſame Time, and eat up the Locuſts, and ſo prevent the Ruin of the Huſbandmen. That Part of the Country which lies upon the *Caſpian* or *Hyrcanian* Sea, is full of Serpents, Toads, Scorpions, and other venomous Inſects, which in Summer-time die, many of them for want of Water, and infect the Air, rendring that Part of the Country very unhealthy at that Seaſon.

Scorpions particularly there are of an immoderate Size, and their Sting is mortal, if proper Remedies be not immediately applied, and at beſt a Perſon ſtung by one of them, is in ſuch Torture, that he becomes raving mad for ſome Time. Muſketoes or Gnats are very troubleſome in the flat Country, near the *Caſpian* Sea; and there is a white Fly no bigger than a Flea in *Perſia*, which makes no Noiſe, but its Sting is like the Prick of a Pin. Here is alſo the Millepedes, almoſt like a Caterpillar, and whoſe Bite is as pernicious as the Sting of a Scorpion, the *Perſians* call them *Hezar-pai*, or a thouſand Feet.

10. There are the ſame Sorts of tame and wild Fowl in *Perſia* as in *Europe*, as Geeſe, Hens, Ducks, Partridges, Snipes, &c.; but more of them in the North than in the South Part of the Country. Turkeys have been carried to *Iſpahan*, but they do not thrive. The Breed of Pidgeons they take all imaginable Care to increaſe and propagate, on Account of their Dung, with which they raiſe their Melons. Their Dove-houſes are five Times as large as ours, of a round Figure, and handſomely built of Brick; of theſe, it is ſaid, there are not leſs than three thouſand in the City of *Iſpahan* only. The Dung is always ſold for four Pence the Biſty, or twelve Pounds Weight, and the Government, it ſeems,

lay a ſmall Tax upon it. Their Partridges are reckoned the largeſt and beſt taſted that are to be met with.

The Pellican, which the *Perſians* call *Tacob*, or the Water-drawer, is as remarkable as any of their Fowls, for the Body of it is ſaid to be as large as a Sheep, its Head at the ſame Time wondrous ſmall, but a large Bill of ſixteen or eighteen Inches long, as big as a Man's Arm, and under the Bill there is a large Bag, Travellers tell us, which will hold a Pail of Water; they build their Neſts in the Deſarts, where there is no Water, and conſequently no Inhabitants, for their Security, and frequently go two Days Journey for Water for their young ones; but then they bring enough in their Receptacle above-mentioned to laſt for ſome Time, if we may give entire Credit to theſe Accounts.

There is another extraordinary Bird, mentioned by Travellers, in the Province of *Choraſſan*, which has ſuch an Appetite towards the Water of a certain Spring in that Country, and ſuch Sagacity in diſcovering it, that they will follow any Perſon that carries it in a Bottle, ſeveral Hundred of Miles. As to Eagles, Hawks, Falcons, and other Birds of Prey, there is no Country where they have more, or where they are better inſtructed than in *Perſia*. The Shah has eight hundred or a thouſand of them, and there is no Man of any Figure without his Hawks and his Falconers; and their Hawks are taught not only to fly at Birds, but at Hares, Deer, and all Manner of wild Beaſts, and by fixing themſelves on the Head of the Animal, and beating him with their Wings, he is ſo terrified and diſtracted, that the Dogs and Huntſmen which follow have very little Difficulty in taking him; and the *Perſians*, it is ſaid, breed up the very Crows to fly at Game.

There are the ſame Kinds of Singing-birds in *Perſia* as with us, ſuch as the Linnet, the Chaffinch, the Nightingale, the Lark, *&c.*; and ſome Birds there are which are taught to ſpeak, but no Parrots or Parrokeets on this Side *India*. However, there are ſeveral party-coloured Birds to be ſeen in *Perſia*, with a Plumage of blue, green, and yellow, beautifully mixed. Of Sparrows there are ſuch Numbers, that they are very troubleſome to the Huſbandmen, who are forced to place their Servants in the Fields all Day long when the Harveſt approaches, to keep them from their Corn.

In the Heart of *Perſia* there are ſcarce any Fiſh to be met with, the few Rivulets they have hardly ſupplying the Country with Water for neceſſary Uſes, and in the Summer time they are almoſt all dried up; even the River *Zenderhood*, to which the Government, at a prodigious Expence, have joined other Streams for the Supply of the City of *Iſpahan*, is perfectly loſt in the ſandy Deſarts about twenty Leagues from thence; and it may be doubted whether there be one Stream which riſes in the Middle of the Kingdom that ever reaches the Sea in the Summer; though in the Spring, when the Snow melts on the Mountains, they make a conſiderable Figure. In the *Caſpian* Sea and the *Perſian* Gulph, there are Great Plenty of Sea-fiſh of all Kinds almoſt, and the Rivers *Kur* and *Arras*, which fall into the *Caſpian*, have Plenty of River-fiſh, but they lie at too great a Diſtance from *Iſpahan* to ſupply that City; ſo that Fiſh is very rarely eaten there.

11. We are to ſpeak next of the Metals and Minerals in this Country; and to proceed methodically, we ought to begin with thoſe of Gold and Silver, if any were now wrought in *Perſia*, but there are not; for, notwithſtanding what old Writers relate of the rich Mines in *Bactriana*, and that almoſt all the *Perſian* Authors agree that there are Mines of this Metal in *Choraſan*, yet from the Neighbourhood of the *Tartars* they have been long neglected; and it is the ſame with reſpect to the Silver Mines in other Places, tho' from the Accounts lately given by *Tavernier*, one would ſuſpect that the *Perſians* are but indifferently ſkilled in the Art of Mining, and that of refining of Metals; they have, however, good Mines of Iron, Steel, Copper, and Lead. The Iron and Steel Mines are in *Hircania*, *Media*, and the Provinces of *Erak* and *Choraſan*; their Steel is ſo full of Sulphur, that if the Filings are thrown into the Fire, they will give a Report like Gunpowder; it has a fine Grain, but is as brittle as Glaſs, and the *Perſian* Artificers, who do not underſtand how to give it a due Temper, cannot for that Reaſon make Wheels or Springs, or any minute Pieces of Workmanſhip. Their Copper Mines are moſt of them near *Seris*, in the Mountains of *Mazenderan*; they mix it with *Swediſh* and *Japan* Copper, and the Proportion is one Part foreign to twenty of their own Metal.

The Lead Mines are, moſt of them, near the City of *Yeſd*, and in theſe are found the greateſt Quantity of Silver. Sulphur and Saltpetre are dug in the Mountain *Damaverd*, which divides *Hircania* from the Province of *Erak*. Antimony is found in *Carmania*, but it is a baſtard Sort. Emery is had near *Niris*; Vitriol and Mercury they have none, and their Tin is imported from abroad. There are two Kinds of Salt in *Perſia*, the one upon the Surface of the Ground, the other dug out of the Rock: There are Plains of ten or twelve Leagues over quite covered with Salt, as others are with Sulphur and Alom. The Salt is ſo hard in ſome Parts of *Carmania*, that the poor People make uſe of it inſtead of Stone to build their Cottages.

Their Marble is either white, black, or red, and ſome veined with white and red; it is dug near *Hamadan*, and in *Chuſiſtan* ſome of it will break into large Flakes or Tables like Slate, but the beſt comes from *Tauris*, which is almoſt as tranſparent as Cryſtal. This Kind is white mixed with green. In the Country about *Tauris* alſo is found the mineral Azure, but this is not ſo good as that which comes from *Tartary*, loſing its Colour by Degrees. In the Provinces of *Fars* and *Shirvan* there is found abundance of Bole Armoniack, and ſo rich and fat a Marl, that the Country People uſe it inſtead of Soap. There are ſome Mines of Iſinglas in the ſame Country. In ſeveral Parts of *Perſia* we meet with *Naptha*, both white and black; it is uſed in Painting and Varniſh, and ſometimes in Phyſick, and there is an Oil extracted from it which is applied to ſeveral Uſes. The moſt famous Springs of *Naptha* are in the Neighbourhood of the Town of *Baku*, which furniſh vaſt Quantities; and there are alſo upwards of 30 Springs about *Shamaschy*, both in the Province of *Schirwan*. The *Perſians* uſe it as Oil for their Lamps, and in making Fire-works, of which they are extremely fond, and in which they are great Proficients.

But the moſt valuable Product of the *Perſian* Mines is the *Turqueiſe*, concerning which there have been ſo many Miſtakes made, that notwithſtanding we find ourſelves preſſed for Room, we cannot avoid treating ſomewhat largely upon this Subject. In the firſt Place, it is aſſerted, that it derives its Name from *Turkey*, which is true enough when rightly underſtood, but abſolutely falſe according to the common Acceptation; for there neither is, nor ever was, any of theſe Stones found in the Dominions of the *Turks*, but in the Country of *Turcomania*, which was indeed the Seat of that Nation, tho' for any Thing I know, this has never been obſerved by the Writers upon this Subject. Theſe Stones are diſtinguiſhed into *Oriental* and *Occidental*. The *Oriental* Turquoiſes come from *Perſia*, and from *Perſia* only; and theſe are diſtinguiſhed into thoſe of the old, and thoſe of the new Rock; the former are taken out of the Mines of *Nichapour* and *Caraſſan*, and, as Sir *John Chardin* juſtly obſerves, differ greatly from other Stones that bear the ſame Name. They are hard, firm, of a beautiful Blue, inclining a little to a Green, take a fine Poliſh, and are never obſerved to loſe their Colour. The Shah endeavours to preſerve theſe entirely for himſelf; and though after chuſing the largeſt and the fineſt, he permits the ſmaller Turquoiſes to be ſold, yet foreign Merchants are not contented with that Manner of Dealing, but have ſtruck out a better. The Officers belonging to the Mines, and their Servants, frequently deceive the Shah, and, inſtead of ſending him the fineſt and largeſt, vend thoſe for their own Profit, but always to *Europeans*, that they may be leſs liable to Diſcovery; and by this Means very fine Turquoiſes find their Way into theſe Parts of the World. The new Rock is at five Miles diſtant from the old, and the Stones are ſofter, leſs firm, veiny, of a green, inclining to blue, and are apt, in Proceſs of Time, to loſe their Colour. The occidental Turquoiſes are found in *Bohemia*, *France*, and other Countries, but they are not valued, and have generally the ſame Faults with thoſe taken from the new Rock.

Dr. *Cromwell Mortimer*, in the laſt Tranſactions of the Royal Society, for the Months of *January* and *February*, 1747. has given us a much better Account of theſe Stones than I have ever met with before, and diſtinguiſhes them very juſtly into true and falſe Turquoiſes; the former, he ſays, is a true mineral Subſtance, impregnated with Copper Ore, which is highly probable, for there is no Country in the World that has more Copper Mines than *Perſia*; the latter is an Ivory or bony Subſtance, tinctured alſo with ſome metallick Juice, and probably that of Copper, which is a Diſcovery worthy of Notice, as it frees this Subject from Abundance of Difficulties, under which it has hitherto laboured.

12. After having taken a View of the Country, and of its Produce, we will ſpeak next of the Habitations erected upon it, and this will naturally lead us to the principal Cities that yet remain to be deſcribed; but without taking a previous View of what with them paſſes for magnificent Buildings, ſuch Deſcriptions would be in a Manner unintelligible. The Houſes of Perſons of Quality here, are generally built in the Middle of a fine Garden, and make little or no Appearance to the Street, for there you ſee nothing but a dead Wall, with a great Gate in the Middle of the Wall, and perhaps a Skreen or Wall within the Gate, to prevent People looking in; ſo fond are they of Privacy and Retirement. Another Thing that the *Perſians* differ from us in, is, that they ſeldom have more than one Floor, which is laid out in this Manner; in the Front of the Houſe ſtands a little Piazza or Cloiſter open before, where they ſit and tranſact their ordinary Affairs; beyond this is a large Hall, eighteen or twenty Feet high, which is uſed at great Entertainments, or on any ſolemn Occaſions: On the farther Side of the Houſe is another Piazza with a Baſon or Fountain of Water before it, beyond which runs a Walk of fine Trees, as there does alſo from the Street to the Houſe: At each Corner of the Hall, is a Parlour or Lodging-room (for it ſerves for both Purpoſes;) between thoſe Parlours on the Sides, there are Doors out of an Hall into an open ſquare Space, as large as the Rooms at the Corners; there are alſo ſeveral Doors out of the Hall into the Piazza, before and behind the Houſe; ſo that in the hot Seaſon they can ſet open nine or ten Doors at once in the great Hall, and if there be any Air ſtirring they will have the Benefit of it.

In ſome Palaces there is a handſome Baſon, and a Fountain playing in the Middle of the Hall, which contributes ſtill more to the Coolneſs of the Place. The Walls of their Houſes are built ſometimes of burnt Bricks, but more commonly of Bricks dried in the Sun. The Walls are of conſiderable Thickneſs, and the Roof of the great Hall is arched, and five or ſix Foot higher than the other Rooms about it. The Roofs of the Buildings on every Side of the Hall are flat, and there is a Pair of Stairs up to the Top, where the *Perſians* walk in the Cool of the Day, and ſometimes carry up a Mattreſs, and lie their all Night, there being Balliſters all round the Top of the Building. As for the Kitchens and other Offices, they are at a Diſtance on the right or left, and it is obſervable, that all their Rooms, except the Hall, ſtand ſeparate, and there is no Paſſage out of one into another, but only from the Hall; Chimnies there are ſome, but uſually, inſtead of a Chimney, there is a round Hole, about four or five Foot broad, and a Foot and a half deep, in the Middle of the Room, in which a Charcoal Fire is made, and the Place covered with a thick Board or Table, about a Foot high, ſo cloſe, that no Smoke can get out, and over that Table is thrown a large Carpet, under which they put their Legs in cold Weather, and ſit round, there being a Paſſage for the Smoke by Pipes laid under the Floor. The Doors of their Houſes are narrow, and ſeldom turn upon Hinges as ours do, but there is a round Piece left at the Top and Bottom of the Door, which are let into the Frame above and below, on which they turn, and the very Locks and Bolts are frequently made of Wood.

As to their Furniture, it conſiſts only in Carpets ſpread on the Floor, with Cuſhions and Pillows to lean on, and at Night, there is a Mattreſs brought to ſleep on, and a Quilt or two to cover them, but very ſeldom any Sheets are uſed. As to their Servants they lie about in any Paſſage upon Mats, and take up very little Room. The Floors of the Rooms are either paved or made of a hard Cement, on which they lay a coarſe Cloth, and over that a Carpet: The Sides of ſome of their Rooms are lined with fine Tiles about a Yard high, and the reſt of them well painted, or hung with Pictures.

13. *Iſpahan*, or as it is pronounced *Spahawn*, is ſituated in thirty-two Degrees, forty Minutes, North Latitude, and in the fiftieth Degree of Longitude, reckoning from the Meridian of *London*. It ſtands in a fine Plain almoſt ſurrounded with Mountains, which lie about two or three Leagues from it, and the Form is pretty near oval. The River *Zenderhood* runs by it at about a Mile Diſtance, but there are ſeveral Channels and Pipes above the Town, which convey the Water from it into Canals and Baſons, for the Service of the Court and City. The Town is without Walls, and about ten or twelve Miles in Circumference. Thoſe who extend it ten Leagues, take in the Town of *Julpha*, and ſeveral others. There were formerly twelve Gates to the Town, but four of them are now cloſed up, the others are always open; as for the Walls which ſome Travellers mention, it is probable there was a Mud-Wall formerly, but there is no Part of the Wall viſible at preſent. There is an old Caſtle, it is true, without Artillery, which runs to Ruin, but is no more tenable than the Town.

The Streets of *Iſpahan* are for the moſt Part narrow and crooked, and either exceeding Dirty or Duſty, for ſcarce any of them are paved, and though there are no Coaches or Carts, yet all People of Faſhion riding through them with great Trains of Servants, renders the Paſſage not very pleaſant. There are however ſome very fine Squares in the Town, particularly the royal Square or *Meydan*, into which there opens two of the Palace Gates. On the Sides of this Square, which is one third of a Mile in Length, and more than half as much in Breadth, are Buildings with Shops on both Sides, where every particular Trade has a Quarter aſſigned, and there is a ſecond Story where the Mechanicks have their Working-Shops. There ſeems to be little Difference between theſe Exchanges and ours, but that thoſe of *Iſpahan* have no Windows, but great Openings at proper Diſtances to let in the Light, and People ride through them as they do along the Streets.

In the Middle of the Square there is a Market for Horſes and Cattle, and all Manner of Goods and Proviſions are expoſed to Sale, though the great *Shab Abbas*, who built the Square, deſigned it for manly Exerciſes, and particularly thoſe of Horſemanſhip, and handling the Bow and Lance, at which no People are more dextrous than the *Perſians*. On that Side of the Square next the Palace, there is a fine Row of Trees planted, and a handſome Baſon of Water, and ſome great Braſs Guns, which were taken from the *Portugueſe* at *Ormus*, ſerve to make a Show.

There ſtands a great Moſque at the South End of the Square, and another Moſque on the Eaſt Side over againſt the great Gate of the Palace; ſeveral Streets in *Iſpahan* are covered and arched over, which makes them pretty dark, and this ſeems to be peculiar to the *Perſian* Towns. Another Thing they ſeem to be particular in is, that their Houſes and Shops are never in the ſame Places, and it is a common Thing for a Tradeſman to go have a Mile in a Morning to the *Bazar*, or Market-place, where his Shop is, and in the Night-time, they lock up their valuable Goods in Cheſts and Counters, and the reſt they leave packed up, ſometimes in the open Square, and it is very rare any Thing is loſt; ſo careful are the Watch appointed to guard their Market-places, or ſo very little given to Thieving are the People in this Part of the World, and no Doubt the ſpeedy and exemplary Puniſhments inflicted upon Pilferers, is one great Means to deter them from it.

As to Foreign Merchants they lodge their Goods in the publick *Caravanſera's* about the City, which ſerve them alſo inſtead of Inns for Lodging and Diet; but there is this Difference between an Inn and *Caravanſera*, that every Perſon finds his own Bedding and Cookery in the *Caravanſera*, whereas in our Inns we have not that Trouble. There are two Things, however, that render a *Caravanſera* preferable to an Inn; one is, that a Perſon is not ſubject to the Extortions of an Innkeeper, but buys his Proviſions at the beſt Hand; and the other, that let the Merchant take up ever ſo many Rooms, he ſhall not be diſturbed in them, and pays but a Trifle for his Warehouſe or Lodgings; and upon the Road he pays Nothing. There are not, it ſeems, leſs than fifteen hundred of theſe publick *Caravanſera's* in *Iſpahan*, which have been erected by charitable People for the Uſe of Strangers; moſt of them are built after one Model, and differ only in the Dimenſions. There is a handſome Portal at the Entrance, on each Side of which are Shops, from whence you enter into a Square, about which there is a Cloiſter or Piazza, and within are Lodging-Rooms and Warehouſes for Goods: There is alſo Stabling and Conveniencies for Horſes and other Beaſts on the outſide, or they may be brought into the Square and faſtened there, as is frequently done upon the Road, more eſpecially where there is Danger of Robbers.

As to Taverns, there are none at *Iſpahan*, their Religion prohibiting Wine. However, ſome of the *Perſians* will drink pretty plentifully in private. There are very handſome Coffee-houſes in the principal Parts of the Town, where People meet and talk Politicks, though they have no printed Papers in them, and there we meet with ſome Amuſements peculiar to the Country, as the Harangues of their Poets, Hiſtorians, and Prieſts, who hold forth and get a Crowd about them; and it ſeems they expect a ſmall Preſent from their Audience for their Amuſements and Inſtructions.

14. The Buildings of the Palace, with the Gardens belonging to it, take up above a League in Compaſs. The two Gates which come up to the Royal *Meydan*, or Square, are, one of them called *Alicapi*, and the other *Doulet Cuna*; over one of them is a Gallery, where the Shah uſed to ſit and ſee martial Exerciſes performed on Horſeback. No Part of the Palace where the Court reſides comes up to the Royal Square; but having entred the principal Gate, there is a Hall or Court on the Left-hand, where the Vizier and other Judges adminiſter Juſtice on certain Days; and on the Right are Rooms where Offenders are allowed to take Sanctuary. From hence to the Hall, where the Shah uſually gives Audience, is a handſome Walk: It is a long Room well painted and gilded, and ſupported by forty Pillars; it is divided into three Parts, one a Step higher than the other, on which the great Officers ſtand according to their Rank. As to hereditary Nobility, there is no ſuch Thing in *Perſia*. On the third Aſcent is the Royal Throne, raiſed about a Foot and a half above the Floor, and about eight Feet ſquare, on which is ſpread a rich Carpet; here the Shah ſits on it croſs-legged upon ſolemn Occaſions, having a Brocade Cuſhion under him, and another at his Back.

As to the reſt of the Apartments of the Palace, and particularly the *Haram*, or Womens Apartment, neither Foreigners or Natives can give an exact Deſcription of them, none being permitted to enter but the Eunuchs; but in general we are told, that they conſiſt in ſeparate Pleaſure-houſes diſpers'd about the Gardens, much of the ſame Form with the Houſes firſt deſcribed, and that their great Beauty conſiſts of the fine Walks, Fountains and Caſcades about them. Beyond the Gardens the Shah has a large Park walled in, where the Ladies hunt and take their Pleaſure with the Prince. In this City are above one hundred and fifty Moſques or Temples, covered with Domes or Cupola's, which appearing through the Trees that are planted almoſt all over the Town, in the Streets and Gardens, afford a noble Proſpect; but the common Buildings are ſo low, that they are hardly diſcerned by one who takes a View of the Town on the Outſide.

All Chriſtians being prohibited to enter their Moſques, or even to come within their Courts, under ſevere Penalties, it is not eaſy to meet with a particular Deſcription of them. There is a Gate which leads to the great Moſque covered with ſilver Plates. Through this Tower you proceed to a Court with a Piazza or Cloyſter on each Side, where the Prieſts lodge who belong to the Moſque. Oppoſite to the great Gate are three large Doors which open into it. The five Iſles the Moſque is compoſed of are beautified with Gold and Azure. In the Middle is the Cupola, ſupported by four great Square Pillars; the Iſles on the Sides are lower than that in the Middle, and born upon thick Columns of Free-ſtone; two great Windows towards the Top of the Middle Iſle give Light to the whole Moſque; on the Left-hand towards the Middle ſtands a kind of Pulpit, with ſtone Steps to go up to it; the Bricks and Tiles on the Outſide of the Building are painted with various Colours, after the Manner of *Perſia*, and the Floor of the Moſque is covered with Carpets, all People putting off their Shoes as they enter it; there are no Seats or Pews as in the Chriſtian Temples, or any kind of Imagery or Pictures. The Outſide is Stone, and the Walls lined fifteen Foot high with white poliſhed Marble; and in the Middle of the Square before the Moſque is a large Baſon, where they waſh themſelves before they enter the Temple. The Moſques have, moſt of them, Cupola's, with Steeples or Towers, whither the *Molla's* go up to ſummon the People to their Devotions, according to the *Mahometan* Mode, making no Uſe of Bells.

15. The numerous Hummums or Bagnio's in this City are another Subject of Travellers Admiration; ſome of theſe are ſquare Buildings, but moſt of them globular. The Stone of which they are built is uſually white and well poliſhed; the Tops are covered with Tiles painted blue; the Inſides are divided into many Cells or Chambers, ſome for Pleaſure, and others for Sweating, and the Floors are laid with black and white Marble. The *Perſians* bathe almoſt every Day, looking upon it to be extremely conducive to Health, an effectual Remedy for Cold or Aches, and many other Diſtempers. But what is admired as much by Foreigners as any Thing about *Iſpahan*, is the *Charbag*, being a Walk above an hundred Yards wide, and extending a Mile in Length, from the City to the River *Zenderhood*; on each Side are planted double Rows of Trees, and in the Middle runs a Canal, not continued upon a Level, but at every Furlong's Diſtance the Water falls into a large Baſon and forms a Caſcade, and the Sides both of the Canal and Baſons are lined with hewn Stone, broad enough for ſeveral Men to walk a-breaſt upon them. On each Side of this Walk are the Royal Gardens, and thoſe of the great Men, with Pleaſure Houſes at ſmall Diſtances, and altogether form as agreeable a Proſpect as can be imagined.

At the End of this Walk is a Bridge over the River *Zenderhood*, which leads to the Town of *Julpha*; there are alſo two other Bridges, one on the Right, and the other to the Left, by which the Neighbouring Villages have a Communication with the City, and which moſt of our Travellers are pleaſed to call its Suburbs, though they are diſtant a Mile from *Iſpahan*, and on the other Side the River. Theſe Bridges are taken Notice of for the Oddneſs of the Architecture, for it ſeems, on each Side, both above and below, are arched Paſſages, thro' which People ride and Walk from one End of the Bridge to the other, as in the covered Streets of the City; and at little Diſtances there are Openings to admit the Light. The Arches of theſe Bridges are not very high, there being no Veſſels to paſs under them, for this River is not navigable any more than the reſt of the *Perſian* Streams. It is true, in the Spring on the melting of the Snows in the Mountains, it makes a pretty good Appearance, but at the latter End of the Summer the Channel is exceeding narrow and ſhallow, inſomuch that there is not Water enough for the Gardens which belong to the City; to ſupply the Want whereof they have abundance of Wells about *Iſpahan*, of very good Water for all Domeſtick Uſes.

16. The Town, or rather the Borough of *Julpha*, ſtands on the South-ſide of the River *Zenderhood*; and though there are many who look upon it as a Suburb of *Iſpahan*, yet it certainly deſerves to be conſidered by itſelf, as being a very large and a very conſiderable Town, the Buildings of which are more regular, and to the full as magnificent as thoſe of *Iſpahan*. It is generally reckoned two Miles in Length, and about a Mile in Breadth, and is beyond Compariſon, taking all Circumſtances together, the fineſt Place in *Perſia*; for, with reſpect to Houſes, Trade, Manufactures, and Induſtry, there is nothing comes near it; and as to beautiful Walks of Trees, cooling Shades, delightful Fountains, pleaſant Gardens, and magnificent Summer-houſes, they are every where to be met with. The principal Inhabitants are the *Armenians*, and beſides theſe, there are *Georgians*, *Circaſſians*, *Mingrelians*, and other Chriſtians, but no *Mahometans*, who dwell in it. The Foundation of this Place, and the Riſe of the *Armenians*, who are now as conſiderable Merchants as any in the World, are Events that deſerve our Notice.

It was the famous Shah *Abbas* who firſt took Notice of the Candour, Affability, Diligence, Penetration, and Integrity of the *Armenians*, in the Management of their little Concerns in their native Country, where they were liable to the Incurſions of the *Perſians* and the *Turks*. He was not only an ambitious and powerful, but a very wiſe and prudent Prince; he was deſirous of introducing Trade into his Dominions, where, till his Reign, it was hardly known; and no leſs deſirous of inſpiring his Subjects with the ſame Views, who were little acquainted therewith. In order to accompliſh theſe great and laudable Deſigns, he thought it proper to eſtabliſh a Staple Commodity, by Way of Foundation, and for that Purpoſe, fixed upon Silk. He then tranſported twenty or thirty *Armenians* into the Province of *Gilan*, where they acquitted themſelves ſo well, that in a very ſhort Space of Time vaſt Quantities of Silk were made there. Encouraged by this happy Beginning, he demoliſhed the Town of *Old Julpha* in *Armenia*, as has been ſhewn in the former Section, and tranſported the Inhabitants into the Neighbourhood of *Iſpahan*, where, by his Royal Munificence, and under his powerful Protection, they built the Place of which we are now ſpeaking, and by his Direction undertook to diſtribute all the Silk that was not wrought up by *Perſian* Manufacturers, through *Aſia* and *Europe*, a reaſonable Price being firſt fixed, which at their Return they were obliged to pay, all the Profit being left to themſelves; when it was neceſſary, the Shah advanced them Money for carrying on their Commerce, but by Degrees, and as they grew wealthy, the Government no longer took any Share in their Trade.

In this Manner, from the right Notions of one Man, and from his juſt Views for the Benefit of his Subjects, aroſe all the Trade of the *Armenians*, who are now become a Nation of Merchants, and carry on the moſt extenſive Dealings of any People in the World; for beſides their Eſtabliſhments here, and in all the great Cities of *Perſia*, they ſpread over the whole Eaſt, carry on a prodigious Trade in *Ruſſia*, and have Factors of their own Nation in moſt of the great Trading Cities in *Europe*. In ſhort, they are become as noted in this reſpect as the *Jews*; but what redounds eternally to their Reputation, their Application to Trade, and their Dealings as Brokers, has not in the leaſt leſſened their Character for Candour or Probity; they are diligent, affable and diſcreet, but content with a moderate Profit, ſerve thoſe that employ them faithfully, are grateful to their Benefactors, love each other as Brethren, and are extreamly uſeful to all the Countries in which they are ſettled. This Digreſſion in Favour of ſuch a Sort of Men, and in order to explain the Prudence and publick Spirit of *Shah Abbas* their Patron, and ſuch of his Succeſſors as choſe to tread in his Steps, we thought might be agreeable to the Reader, though it carried us a little out of our Road, to which we ſhall now return, in order to continue the Deſcription, we have promiſed of the Principal Cities in *Perſia*, before thoſe Confuſions began that have produced ſuch fatal Alterations.

The City of *Schiras* or *Sheraz*, as we pronounce it, lies about two hundred Miles to the Southward of *Iſpahan*, in twenty nine Degrees, fifty Minutes of North Latitude, and is uſually reckoned the ſecond City of the Kingdom. It is the Capital of the Province of *Fars*, or the ancient *Perſia*; ſome will have the Name derived from *Cyrus* the Great, there being a Tradition that he was buried there; others ſay it is derived from *Sherab*, which in the *Perſian* Tongue ſignifies a Grape, becauſe that Fruit abounds in this Place; and others from the Word *Sheer*, which ſignifies Milk; but as it is not very material from whence the Name is derived, ſo I believe it is impoſſible to determine at this Day. The Town is ſeated in a pleaſant fertile Valley, about twenty Miles in Length, and ſix in Breadth, and has a Rivulet running through it, which in the Spring has the Appearance of a large River, and ſometimes encreaſes to ſuch a Torrent as to bear down the Houſes in its Way, but in the Summer is almoſt dry. There are no Walls about the Place, nor does it contain above four thouſand Houſes at preſent: The Compaſs of it is reckon'd to be about ſeven Miles, but then it is to be conſider'd that much the greateſt Part of this Space is Garden.

The publick Buildings taken Notice of, are the Viceroy's Palace, the Moſques, Bagnio's, the vaulted Streets and Caravanſera's, which being of the ſame Model as thoſe of *Iſpahan*, do not need a particular Deſcription here; only it is obſervable, that they let moſt of their Buildings run to Ruin, as in other Towns of *Perſia*; every Generation chuſing to build new Houſes, rather than uſe thoſe of their Anceſtors. It is remarked alſo, that there is no Place where the *Mahometan* Superſtition prevails more than here, there being a Moſque or Temple to every twenty Houſes almoſt; their Domes covered with blue varniſhed Tiles, make a pretty Appearance among the Trees; here is alſo a College where the liberal Arts are ſtudied, of which the Fame is great for breeding many Perſons of renown'd Learning.

The Streets of *Sheraz* are, for the moſt part, narrow and duſty, but there are ſome broad ones with Canals and Baſons, faced with Stone: But what *Sheraz* is moſt remarkable for, is, the fine Gardens and Vineyards about it. The Cypreſs-Trees, of which their Walks are chiefly compoſed, are the talleſt and largeſt that are any where to be found, and grow in a pyramidal Form; intermix'd with theſe are ſeveral broad ſpreading Trees, and all Manner of Fruits, as, Pomegranates, Oranges, Lemons, Cherries, Pears, Apricots, Dates, &c. None of theſe are planted againſt Walls, as with us, but ſtand in the Allies, and ſometimes irregularly, as in a Wilderneſs. They have alſo Abundance of ſweet Flowers of various Colours, but not planted in that regular Order as in the Gardens of *Europe*. Their Vineyards and Wines are preferable to any in *Perſia*, and the Canals, Caſcades, Fountains, and Pleaſure-Houſes in their Gardens, are not at all inferior to thoſe of *Iſpahan*. The Shah's Garden here is no leſs than two thouſand Paces ſquare, and ſurrounded with a Wall fourteen Foot high, but of late Years, the Gardens, as well as the Buildings of *Sheraz*, have been pretty much neglected.
